

Metadata to be Used in the Public Viewer Table of Contents

After considering the comments at the April 28, 2009 technical conference and the space limitations of the Public Viewer, we intend to use the following fields, in the listed order, to create the table of contents for the Public Viewer:

Field	Characters	Usage	Notes
Record Content Description	25	Required	
Record Version Number	10	Required	
Tariff Record Title	60	Optional, except for limitation as stated in the Data Dictionary	May be truncated in the Public Viewer

In looking at the information that will appear in the table of contents, we determined that we need at least one mandatory text field so that the table of contents will identify each tariff section or sheet that is displayed. The Record Content Description code, therefore, will remain a “required field.” The longer Tariff Record Title field is currently defined in the *SOC Implementation Guide*’s Data Dictionary as optional except when the Tariff Record is a first level parent or the Tariff Records’ Record Binary Data is in Whole Document Format.<sup>1</sup> The rationale for requiring a Tariff Record Title entry for first level parents or whole documents is that this field would provide additional information to help identify the tariff, rate schedule or agreement to those using the Table of Contents. Therefore, no change is required in the *SOC Implementation Guide*’s Data Dictionary.

Below are examples of how these fields can be used for section and sheet based tariffs:

---

<sup>1</sup> Note that the Whole Document Format may consist of either a whole document in PDF or RTF electronic format.
