

FERC

Major Storage Projects on the Horizon

This page shows major natural gas storage projects that are being planned by storage companies and have been reported on in the trade press. Specific information about any of these projects is best obtained from the individual companies. None of these projects have been filed with the FERC.

If any of these projects reach a point in their development where the project sponsor files an application with the FERC, that project will be removed from this page at the next update. Additionally, some planned projects shown here may eventually be deemed no longer viable by its developer; this would also result in its removal from this page.

This information has been obtained from publicly available sources and will be updated as necessary.

For questions or suggestions for how this page can be improved, please contact Cyrus Zarraby at cyrus.zarraby@ferc.gov or call (202) 502-8218.
