Northwest Electric Market Overview and Focal Points

Northwest Electric Market

This map was created using Platts PowerMap.
Overview

Geography

States covered: All or most of Washington, Oregon, Idaho, Utah, Nevada, Montana, Wyoming and part of California.

Reliability region: Northwest Power Pool Area (NWPP) sub-region of the Western Electric Coordinating Council (WECC).

Balancing authorities: See page 5.

Hubs: California-Oregon Border (COB), Mid-Columbia (Mid-C)

RTO/ISO

None

Generation/Supply

Marginal fuel type: Hydro and natural gas

Generating capacity (winter 2005): 57,120 MW

Capacity reserve (winter 2005): 16,822 MW

Reserve margin (winter 2005): 42%

When taken together, hydro, fossil fuels, nuclear energy, and renewable resources, were adequate to provide electricity in excess of in-region needs.
**Northwest Electric Market: Overview and Focal Points**

**Demand**

- All time peak demand (2005): 40,298 MW
- Peak demand growth: 1.5% (2004–2005)

**Prices**

Index Annual Average of Daily Bilateral Day Ahead On-Peak Prices:

**Platts California-Oregon Border (COB) Hub:**

- 2004: $49.02/MWh
- 2005: $66.95/MWh
- 2006: $55.58/MWh
- 2007: $62.14/MWh

**Platts Mid-Columbia (Mid-C) Hub:**

- 2004: $44.50/MWh
- 2005: $62.95/MWh
- 2006: $50.18/MWh
- 2007: $56.57/MWh

Physical and financial electricity products are traded through brokers using the Mid-Columbia (Mid-C) and California-Oregon Border (COB) hubs as pricing points.

**Interconnections/Seams**

The region relies on hydroelectric production for approximately two thirds of its electricity needs. In most years, Northwest sells surplus power into California and the Southwest.
## Balancing Authorities in the Northwest Electric Market

[^1]: Net summer capacity in megawatts by state (EIA).

[^2]: Approximate electric capacity created by water flow through the downstream states (From EIA and BPA). The capacity estimates reflect the water flow pattern of the series of hydro facilities on the Snake and Columbia Rivers.

[^3]: Snow Water Equivalent, in percent of the historical average for the same date, is the ratio of current snow water daily data (collected by the Natural Resources Conservation Services’ Snowtel Telemetry sites) compared to the average snow water for the same day between 1961-1990. Total Hydro Capacity figures by state do not tie precisely to Snow Water Equivalent data due to such factors as snow basin terrain and complex distribution of run-off to neighboring state hydroelectric dams or shared facilities (e.g., Columbia River hydroelectric dams on the border of Washington and Oregon) (Bloomberg, California Dept. of Water Resource and Government of British Columbia Ministry of Environment).

+ Correction: The data reported for 3/1/10 in British Columbia is revised from 69% up to 78% due to a data error.
