Northeast Natural Gas Region

Source: Velocity Suite Intelligent Map

Updated October 15, 2009

October 2010
Overview:

Market Description
Natural gas use is increasingly important to the Northeast. Though traditionally the Northeast has been a winter peaking region, increased reliance on natural-gas fired generation has evened out annual gas use. Increased dual requirements for natural gas as a space heat fuel and utilization of gas-fired plants has imposed greater challenges on the Northeast, compared to other regions, in aligning commercial and operating conditions between the gas and power industries. The Northeast has little indigenous production (mainly in the Appalachian basin) and none in New England although this trend could begin to change with the successful exploitation of the Marcellus Shale play located in the heart of Appalachia.

Beginning in 2009 the Rockies Express Pipeline began service to the Northeast opening up less expensive Rockies gas to the market. To take advantage of the additional supply pipeline operators added over 3 Billion Cubic Feet per day of additional capacity to the market between 2008 and quarter one 2009, the most in over a decade. Despite increased gas use for power generation, pipeline utilization remains highly seasonal; major regional pipelines often operate at high load factors during the winter resulting in basis differentials to upstream liquid trading points that may greatly exceed firm transportation tariff levels. Rockies and Marcellus Shale supply to the Northeast will become increasingly competitive with traditional supply from the Gulf. The influx of natural gas supply could help moderate the severe basis spikes that traditionally occur during winter peak demand days. The Northeast relies upon conventional and LNG storage to meet peak-day gas needs. LNG plays a critical role in the overall supply mix and at times accounts for up to 30 percent of peak-day gas needs in New England. Market participants in the Northeast can draw upon the nation’s most extensive portfolio of dual, gas-oil fired power plants to flexibly respond to market price and load changes.

Geography
Major Trading Hubs
Algonquin Citygates, Columbia Gas Appalachia, Dominion South Point, Dracut, Iroquois Zone 2, Niagara, Texas Eastern M3, Transco Zone 6 NY, and, Transco Zone 6 Non-NY.

Pipeline Flows

**Average Daily Southern Zones Deliveries to the Northeast**
- 2005: 6.9 Bcf/d
- 2006: 6.6 Bcf/d
- 2007: 7.3 Bcf/d
- 2008: 7.7 Bcf/d
- 2009: 8.2 Bcf/d (Jan-June)

Major Pipelines: Transco, Tennessee, Texas Eastern and Columbia carry a significant amount of gas from the Gulf coast to the Northeast.

**Average Daily Mid-Continent Deliveries to the Northeast**
- 2005: 1.6 Bcf/d
- 2006: 1.6 Bcf/d
- 2007: 1.5 Bcf/d
- 2008: 1.5 Bcf/d
- 2009: 1.3 Bcf/d (Jan-June)

Major Pipelines: Columbia, Texas Eastern and Dominion move gas from the Midwest to the Northeast
Imports and Exports

Average Daily Imports from Canada into the Northeast
2005: 2.8 Bcf/d
2006: 2.7 Bcf/d
2007: 2.7 Bcf/d
2008: 2.5 Bcf/d
2009: 2.0 Bcf/d (Jan-June)

Major Importers
Maritimes and Northeast pipeline, Tennessee Gas Pipeline and Iroquois Gas Transmission System flow the majority of the gas from Canada to the Northeast. In 2009 the Brunswick Pipeline began service delivering LNG from the Canaport LNG terminal into New England. Together, they represent the following percentages of pipeline gas imports:

2005: 83%
2006: 85%
2007: 88%
2008: 89%
2009: 84% (Jan-June)
Average Daily LNG Send out:
2005: 0.3 Bcf/d
2006: 0.3 Bcf/d
2007: 0.5 Bcf/d
2008: 0.2 Bcf/d
2009: 0.3 Bcf/d (Jan-June)

Note: Represents daily receipts from Everett to Tennessee and Algonquin. 2009 numbers also represent the addition of Northeast Gateway Terminal deliveries to Algonquin. Excludes volumes delivered via truck, consumed at Mystic or other distribution.
