2007 Review of Renewable Energy Portfolio Standards

Notes: Alaska has no RPS; DG is distributed generation; * Iowa has a goal of 1,000 MW of wind by 2010
Sources: Derived from data in: EEI, EIA, LBNL, PUCs, State legislative tracking services, Database of State Incentives for Renewables and Efficiency, and the Union of Concerned Scientists.

Renewable Energy Portfolio Standards

- A Renewable Portfolio Standard (RPS) requires a percent of energy sales or installed capacity to come from renewable resources.
- 26 states and D.C. have renewable energy standards.
- Four states have enacted renewable goals without financial penalties.
- Indiana, Michigan, and Ohio re-introduced RPS legislation which didn't pass in 2007; Michigan's and Ohio's include energy efficiency.
- Iowa, which long ago met its RPS mandate, has an additional goal of 1,000 MW of installed wind by 2010. Kansas' Governor called for wind to be 20% of generation by 2020.
- North Dakota passed a renewable goal in 2007, but has no mandate.
- Some states with an RPS are revisiting earlier goals. Arizona's governor called for its RPS to cover all utilities. D.C. introduced amended legislation. A "green bill" in Massachusetts would increase the use of renewable energy and add energy efficiency. A report from the Maryland Energy Administration called for increasing the RPS and the compliance payment. It also called for energy efficiency and advanced metering measures.
- 54% of U.S. load is located in states with a renewable energy purchase obligation; an additional 6% is in states with a renewable energy goal.
- Eleven states include energy efficiency in their RPS or renewable goals.
