

Renewable Electricity Standards – 19 States

Impacts of State RPS Policies

Over 2,300 MW of new capacity as of 2004

- Texas: **Over 1100 MW of wind installed since RPS established**
- Minnesota: **425 MW wind/33 MW biomass installed, more on the way**
- Iowa: **Policy met with 250 MW of wind some time ago**
- Wisconsin: **140 MW of RE so far, with more on the way**
- California: **Interim procurements resulting in lots of RE contracts, a fraction of which are coming from new RE**
- Nevada: **Initial procurement led to 277 MW of RE contracts**
- Arizona: **7 MW PV, 5-10 MW LFG, 3 MW biomass, 15 MW wind (contract), 20 MW geothermal (contract)**
- New Mexico: **Contributor to 204 MW wind project installed in 2003**
- Massachusetts and Connecticut: **Merchant LFG, wind development, biomass repowering and re-development**
- New Jersey: **Mostly supported existing LFG so far, but some new wind and LFG indirectly affected by policy**
