

ETariff Section “Meta data”

The following is a listing of section-related data items in the eTariff database. This data is stored (or available) to each section, and each section modification. Note that each change to a section is a new record in the database, which has its own set of metadata, etc. Changes to sections are packaged into ‘filings’ – so these items include data more specifically pertaining to filings.

Field Item	General Information
company ID	System identifier for company
company name	
tariff ID	System identifier for tariff
tariff title	
section ID	System identifier for section
filing number (ID)	Associated filing number where section was submitted to FERC
option letter	Associated option under which section was submitted
special type	Code field for ‘specific’ types of sections (e.g. the Title page)
section number	Primary section number. This is used in sorting for display and output
section title	User-entered title of section
alternate section number	User-entered alternate section number
owning (parent) section	The ‘parent’ ID of the section. E.g. the ‘next higher’ branch in the ‘tree’ (contents)
effective date	The date when the specific section is to go into effect
superceded date	The date when the specific section has been retired
section status	The status of the section (e.g. in effect, rejected, suspended, etc)
priority order	When identical effective dates specified, this field determines which specific section will be the one in effect (with the highest priority)
section text (formatted)	A ‘binary’ image of section data – aka word processor formatting
section text (ascii only)	Plain text version of the formatted section text
related FERC order	The FERC Order (if applicable) that determined action taken on section
FERC order date	The date of the FERC Order
linked filing ID	Link to associated Filing (if applicable – aka Motion filings)
linked section ID	Link to associated Section (if applicable – aka Motion filings)
linked option letter	Link to associated Filing option (if applicable – aka Motion filings)
section modification type	System code for type of modification being performed to section (if applicable)
last author of section	Logon ID of last person who saved changes to the specific section.
filing number (ID)	System identifier for a filing
filing type	The type of filing (as per FERC ‘rules’ and user selection)
filing title	User-entered title of the filing
filing status	General status code of filing (e.g. open/revising, filed, ...)
available options	List of ‘letters’ (A, B, C, ...)
poc name	Name of POC for filing
poc email	Email of POC
poc phone	Phone of POC
authorizing name	Name of Authorizing person
authorizing title	Title of Authorizing person
authorizing email	Must be registered at FERC
date filing submitted	The date a filing was submitted to FERC
FERC docket number	FERC-assigned Docket number (assigned to a filing)
FERC docket date	Date the FERC Docket number was assigned
FERC response	System code of FERC response
FERC response date	Date (and time) of last FERC response (on any part of a filing)
option approved	Which option approved by FERC (if applicable)
associated filing	Link to associated Filing (if applicable – aka Motion filings)
various system-specific	The system uses various other fields for various data/process functions, and as validity checks for the data itself.
