

OE ENERGY MARKET SNAPSHOT

National Version – January 2010 Data

- **Special Report**
- **Natural Gas and Fuel Markets**
- **Electricity Markets**

Office of Enforcement
Federal Energy Regulatory Commission
February 2010

Special Report:

Agenda Update

- **Order 720A**
- **Electric Transparency Notice of Inquiry**
- **Credit Notice of Proposed Rulemaking**

Order 720A Promotes Greater Transparency in Gas Markets

- Commission voted to reaffirm and clarify Order No. 720 at January meeting
- Requires most “non-interstate pipelines” that deliver ≥ 50 million MMBtu (Bcf) annually to post daily scheduled flows at receipt and delivery points on a publicly accessible website
 - Postings to occur for receipt and delivery points with design capacity $\geq 15,000$ MMBtu/d
- Exemptions primarily for:
 - 1) Pipelines that deliver < 50 million MMBtu (Bcf) annually
 - 2) Pipelines that deliver more than 95% of natural gas directly to “retail end-users” (primarily LDCs)
 - 3) Pipelines that fall entirely upstream of a processing or treatment plant (primarily gatherers)
 - 4) Storage providers
 - 5) Pipeline owned or operated by end-users
- Requires interstate pipelines to post no-notice service

Electricity Market Transparency NOI

The Commission is seeking comment on whether it should extend the EQR filing requirements to market participants that are excluded from FERC jurisdiction under Section 205 of the FPA.

- Authority under Section 220 of the FPA.
- To include publicly owned utilities, municipal utilities, public utility districts, rural cooperatives, and federal entities.
- Why? 1) Ability to monitor power sales for market power and manipulation, 2) Ex Ante analysis (granting MBR authority), and 3) Ex Post analysis (after the fact).

Additionally, the Commission is seeking comment on whether FERC should consider other refinements to the existing EQR filing requirements. Including:

- Reporting the trade date and type of rate;
- Reporting resales of financial transmission rights in secondary markets;
- Standardizing the unit for reporting energy and capacity transactions; and
- Omitting the time zone from the contract section of the EQR.

Link: <http://www.ferc.gov/whats-new/comm-meet/2010/012110/E-3.pdf>

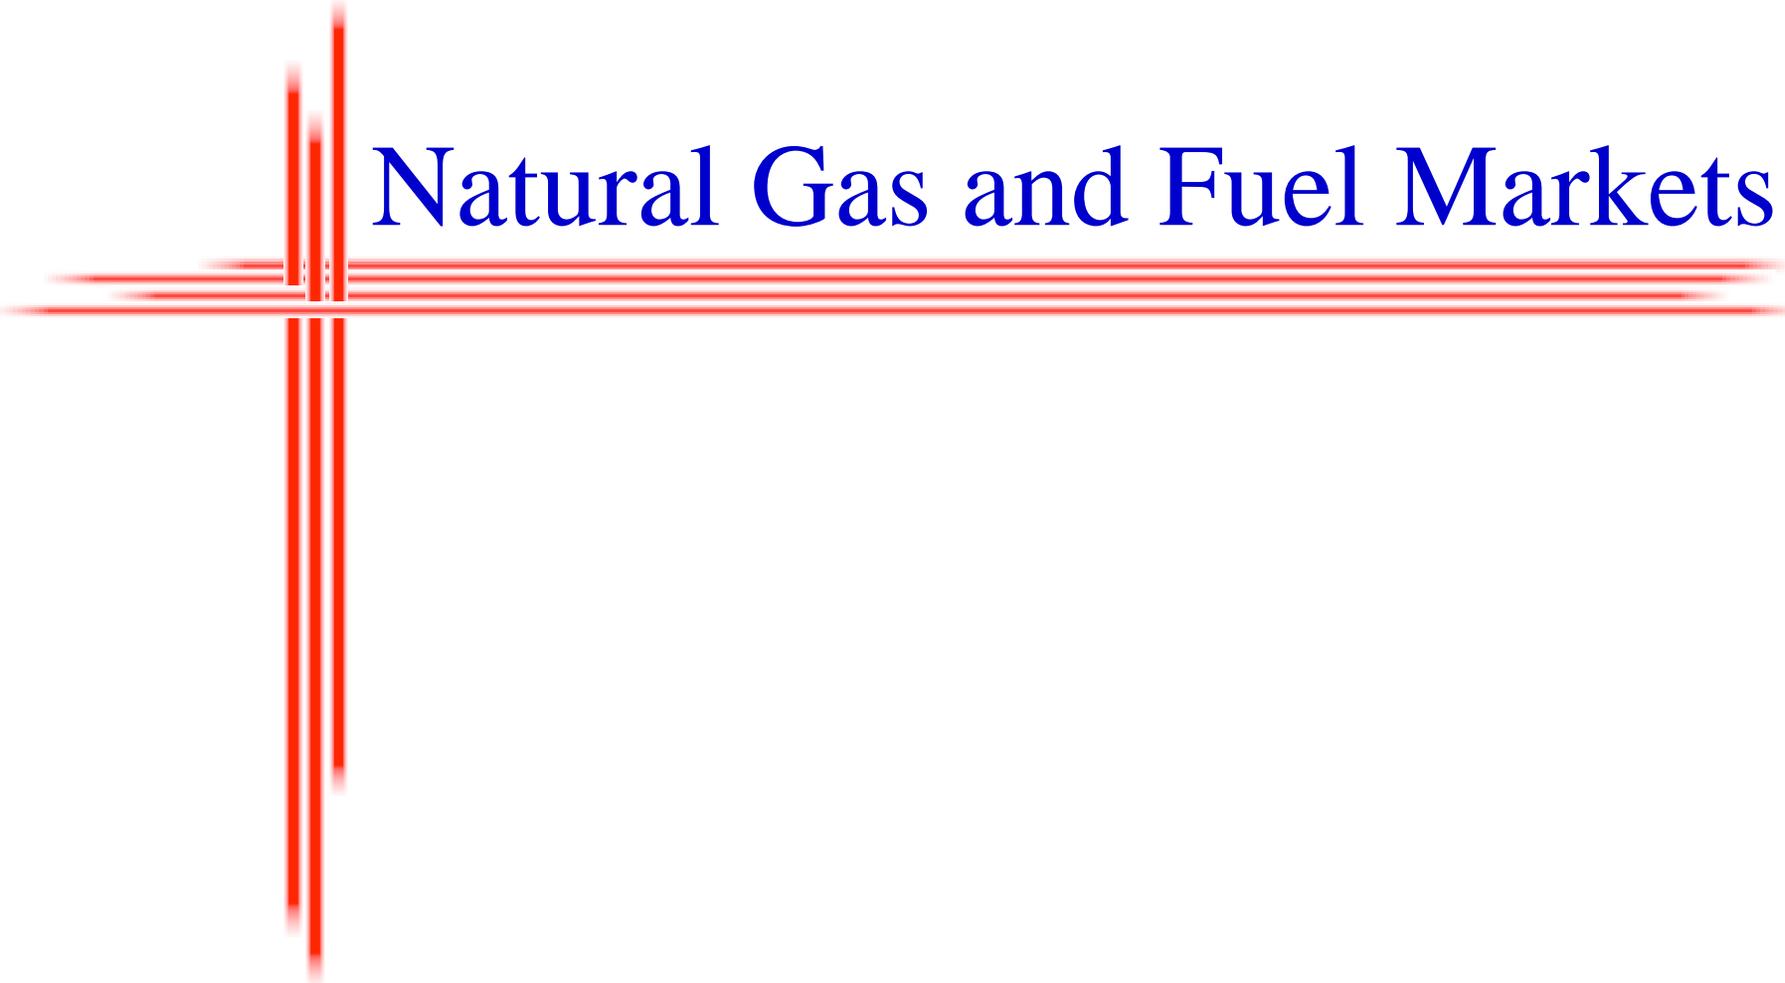

Credit Reforms in Organized Wholesale Electric Markets

The Commission is seeking comment on the following proposals:

- Shorten the settlement cycle to no more than seven calendar days with no more than an additional seven calendar days for final payment;
- Limit unsecured credit to no more than \$50 million per market participant in energy markets and eliminate unsecured credit in Financial Transmission Rights (FTR) markets; Clarify the ability of market administrators to offset amounts owed to market participants against amounts owed by market participants and to manage defaults;
- Establish minimum participation criteria for market participants;
- Specify circumstances in which a market administrator may invoke “material adverse change” to require a market participant to post additional collateral;
- Limit time period allowed for posting additional collateral when additional collateral is requested; and
- Whether the credit reforms should be applied differently to certain market participants depending on their characteristics.

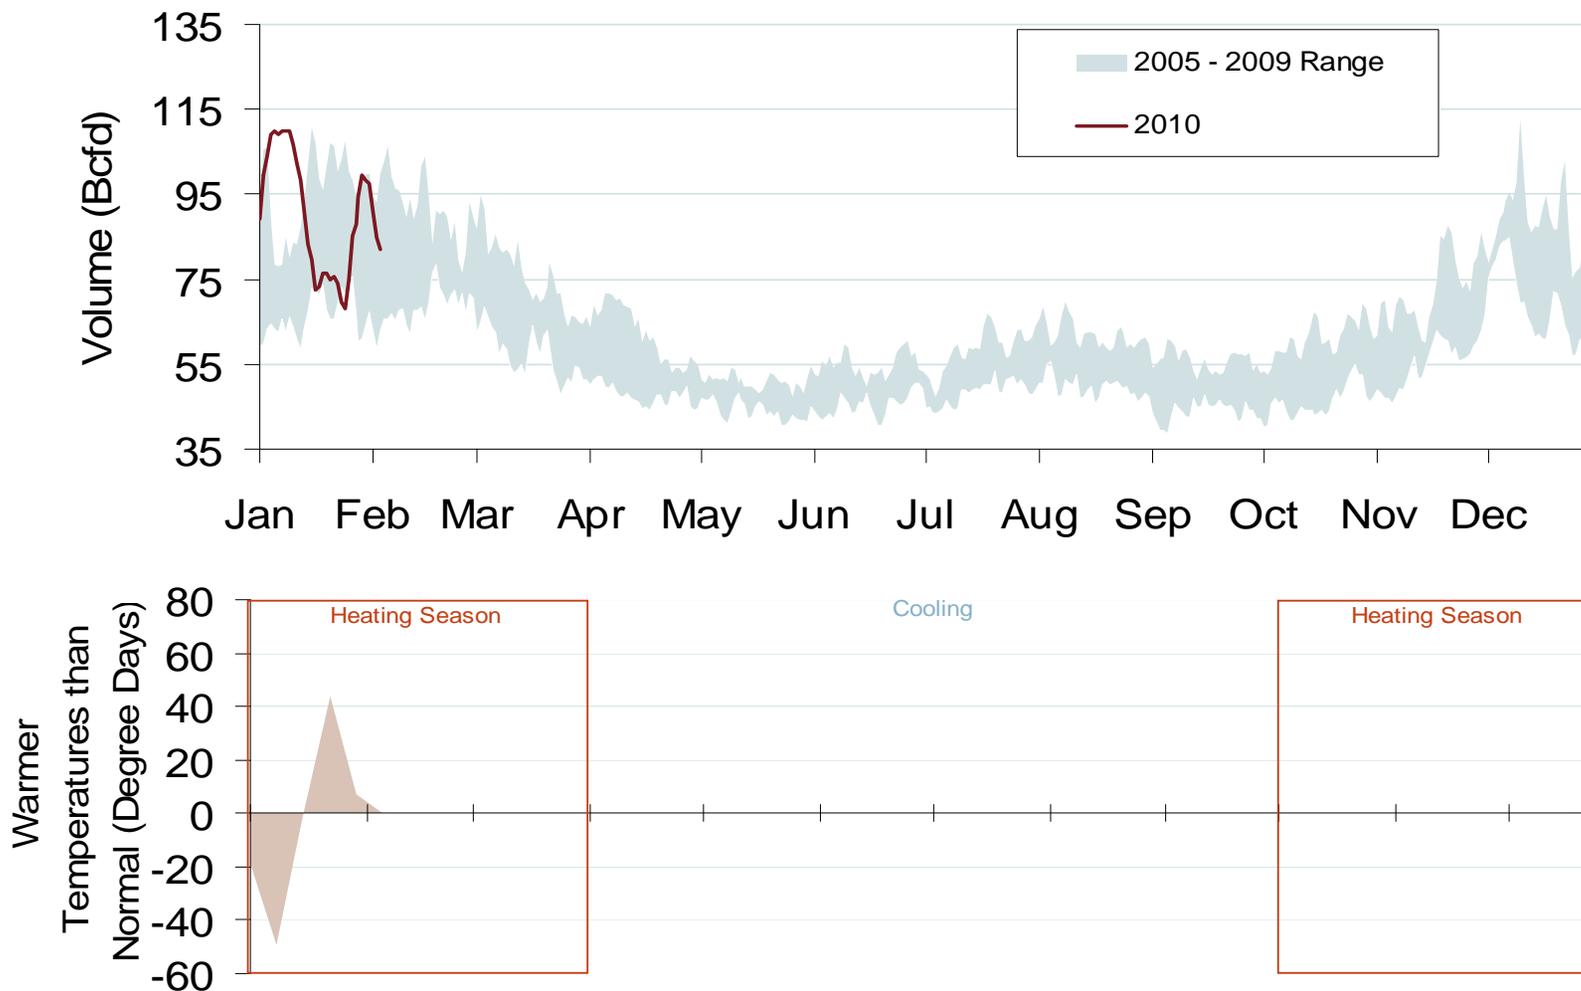

Comments are due March 29, 2010.

Southeast Infrastructure Additions

- Regency Energy Partners announced the initiation of service on the new Haynesville Expansion and Red River Lateral. This 1.2 Bcfd intrastate line is designed to move Haynesville shale gas to interconnects with Texas Gas, Tennessee, Trunkline, Sonat, Columbia Gulf and ANR at the Perryville Hub.
- CenterPoint CP Line Phase IV Stage 4 compression expansion will add 340 MMcfd of capacity to the CP Line.
- Texas Gas Greenville Lateral Stage 2 Expansion adds 250 MMcfd of capacity in Mississippi through additional compression, giving Fayetteville shale producers increased access to markets served by ANR, Trunkline, Sonat and TETCO.

High Winds Briefly Shut Down 8 SPP Wind Farms December 24, 2009

- Wind gusts of 40-60 mph triggered automatic shutdown of 8 wind farms in western Oklahoma, @ 3:15 and 5:15 am.
- Both times, approx. 625 MWs were dropped when the wind farms had been running at full capacity.
- 4 farms returned 325 MWs to service within 5 minutes of tripping. While the remaining 4 farms remained out 20 minutes to several hours.
- Flowgates in Kansas and Oklahoma encountered intermittent congestion.
- Negligible price impacts.

Pacific/Northwest Hydro and Snowpack Levels

	Hydro Generation		Snow Water Equivalent ³		
	In-State Capacity (MW) ¹	Additional Capacity Created Downstream (MW) ²	One Year Ago (2/2/09) (% of historical average)	1/4/10 (% of historical average)	2/3/10 (% of historical average) *(percentage point change from 1/4/10)
British Columbia	10,000	16,200	84%	98%	91% (-7)*
Idaho	2,700	19,700	90%	68%	68% (0)
Montana	2,700	16,200	91%	76%	67% (-9)
Washington	21,500	0	79%	85%	73% (-12)
Oregon	9,100	0	84%	80%	79% (-1)
California	10,400	0	67%	92%	115% (+26)

- ¹ Net summer capacity in megawatts by state (EIA).
- ² Approximate electric capacity created by water flow through the downstream states (EIA and BPA). The capacity estimates reflect the water flow pattern of the series of hydro facilities on the Snake and Columbia Rivers.
- ³ Snow Water Equivalent, in percent of the historical average for the same date, is the ratio of current snow water daily data (collected by the Natural Resources Conservation Services' Snowtel Telemetry sites) compared to the average snow water for the same day between 1961-1990. Total Hydro Capacity figures by state do not tie precisely to Snow Water Equivalent data due to such factors as snow basin terrain and complex distribution of run-off to neighboring state hydroelectric dams or shared facilities (e.g., Columbia River hydroelectric dams on the border of Washington and Oregon) (Bloomberg, California Dept. of Water Resource and Government of British Columbia Ministry of Environment).

California Increases Market Transparency

- CAISO notified market participants, nearly one month ahead of implementing a market process change, by issuing a Technical Bulletin on January 11th and a Market Notice on January 26th.
- Beginning on trade day February 5th generation resources needed South-of-Lugo and in Orange County will be committed in the day-ahead market.
- Previously, market participants were not notified when market changes were implemented, instead discovering that changes had been made when market results deviated from expectations, such as when:
 - Commitment requirements were moved into the Residual Unit Commitment process (RUC) from the Exceptional Dispatch mechanism this past summer.
 - Physical transmission constraints in the Southern California Edison (SCE) area were added into the market model this past fall.
- In early February 2010, the CAISO began an effort to increase transparency by hosting a monthly Market Performance and Planning Forum, aimed at:
 - Reviewing market performance issues.
 - Providing information and enabling dialogue on upcoming market changes and implementation planning.
 - Consolidating information for multiple forums for stakeholders.
- The CAISO has also initiated a Data Release & Accessibility stakeholder initiative, the first of three phases addresses transmission constraint management.
