Options: Ph

Investment Strategy

Key financial variables to consider in assessing the investment merits of an industrial company are the following:

Sales: What is the trend? Is future sales growth expected to be greater than the past 5-year and 9-year growth average? Accelerating sales growth ultimately provides the fuel behind earnings growth.

Net Margin: As a key measure of company profitabilty, a rising net margin assesses management capability to wring out more net income from incremental sales.

% LT Debt to Capitalization: A rising percentage implies greater financial risk, all else being equal. Rising debt leverage without a concomitant rise in Return on Equity should raise warning signals of potential cash flow problems. Percentages above 40%-50% should also be considered a warning.

% Return on Equity: A key perfomance measurement of capital efficiency assesses what investment returns management can earn on a company's existing capital base. A sustained percentage above 20% is considered above average.

Quantitative Stock Report
Feb 14,2009
NYSE SYMBOL:**BWP**

Boardwalk Pipeline Ptnrs LP

S&P Quality Ranking: **NR**   Standard & Poor's Fair Value Rank : **NR**

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

October 28, 2008
Boardwalk Pipeline Partners, LP announced earnings results for the third quarter and nine months ended September 30, 2008. For the third quarter the company reported net income of $73.6 million an 84% increase from $40.0 million in the comparable period of 2007. Operating revenues of $191.6 million a 42% increase from $134.8 million in the comparable 2007 period. Earnings before interest, taxes, depreciation and amortization of $116.1 million a 67% increase from $69.6 million in the comparable 2007 period. Operating profit was $89 million when compared to $48.6 million for the same period last year. Net income less general partner's interest was $70.1 million or $0.47 per share when compared to net income of $38.5 or $0.35 per share million for the same period last year. For the nine months the company reported net income of $226.4 million, an 46% increase from $155.6 million in the comparable 2007 period. Operating revenues of $579.2 million a 22% increase from $473.4 million in the comparable 2007 period. Earnings before interest, taxes, depreciation and amortization of $362.5 million a 47% increase from $246.5 million in the comparable 2007 period. Operating profit was $271.3 million when compared to $185.2 million for the same period last year. Net income less general partner's interest was $216.7 million or $1.58 per share when compared to net income of $151.1 or $1.32 per share million for the same period last year.

June 4, 2008
02:50 pm ET ... S&P REDUCES RECOMMENDATION ON SHARES OF LOEWS CORP TO HOLD FROM BUY (LTR 50.5***): Our downgrade is based on valuation following a sizable recent increase in the share price. We believe LTR will continue to benefit from 50.5%-owned Diamond Offshore (DO 131.19***) and 70%-owned Boardwalk Pipeline Partners (BWP 27.82, NR). However, we are concerned that the slowing economy may hinder revenue growth in its hotel operations. We are maintaining our '08 EPS forecast from continuing operations of $4.83, but we are increasing our 12-month target price to $54 from $50, 11.2X that estimate and in line with its historical multiples. /T.Shafi

May 12, 2008
On May 8, 2008, Boardwalk Pipeline Partners, LP and John C. Earley entered into a Separation Agreement and General Release in conjunction with Mr. Earley's resignation as Senior Vice President of Operations.

April 29, 2008
Boardwalk Pipeline Partners, LP reported earnings results for the first quarter ended March 31, 2008. For the quarter, the company reported net income of $88.1 million or basic and diluted earnings of $0.60 per limited partner unit against net income of $80.2 million or basic and diluted earnings of $0.61 per limited partner unit for the same period in 2007. Total operating revenues were $197.3 million against $188.1 million for the same period in 2007. The company reported asset impairment of $1.4 million in the first quarter ended March 31, 2008.

February 12, 2008
Boardwalk Pipeline Partners LP announced earnings results for the fourth quarter and year ended December 31, 2007. For the quarter, the company reported net income of $72,095,000 or $0.54 basic and diluted net income per limited partner unit on total operating revenues of $169,883,000 against net income of $65,272,000 or $0.55 basic and diluted net income per limited partner unit on total operating revenues of $171,489,000 for the same period a year ago. For the full year, the company reported net income of $227,756,000 or $1.87 basic and diluted net income per limited partner unit on total operating revenues of $643,268,000 against net income of $197,550,000 or $1.85 basic and diluted net income per limited partner unit on total operating revenues of $607,642,000 for the same period a year ago.

December 20, 2007
Boardwalk Pipeline Partners, LP announced several changes as part of the organizational realignment that was begun early this year, including the consolidation of senior management in Houston and certain operational functions in Owensboro, Ky. President H. Dean Jones II announced his retirement effective March 1, 2008. In order to have Boardwalk's senior management team in the same location, three officers will be moving from Owensboro to Houston. They are Jamie Buskill, Senior Vice President, Treasurer and Chief Financial Officer; Steven Barkauskas, Vice President, Controller and Chief Accounting Officer; and James Jones, Vice President of Tax.

S&P Quality Ranking: **NR** Standard & Poor's Fair Value Rank : **NR**

Glossary

S&P Quality Ranking - Growth and stability of earnings and dividends are deemed key elements in establishing S&P's quality ranking for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted that, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings, The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Lower
A	High	B-	Below Average
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank - Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process. A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stock with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

Funds From Operations (FFO) - FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Fair Value Calculation - The current price at which a stock should sell today as calculated by S&P's computers using our quantitative model based on the company's earnings, growth potential, return on equity relative to the S&P 500 and its industry group, price to book ratio history, current yield relative to the S&P 500, and other factors.

Investability Quotient (IQ) - The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long-term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

Standard & Poor's IQ Rationale:
Boardwalk Pipeline Ptnrs LP

	Raw Score	Max Value
Proprietary S&P Measures	25	115
Technical Indicators	29	40
Liquidity/Volatility Measures	14	20
Quantitative Measures	71	75
IQ Total	139	250

Volatility - Rates the volatility of the stock's price over the past year.

Technical Evaluation - In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank - Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS) - An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups , 67 Industries, and 147 Sub-Industries.

Dividends on American Depository Receipts (ADRs) and American Depository Shares (ADSs) are net of taxes (paid in the country of origin).

Analysis prepared by **Tanjila Shafi** on February 04, 2009, when the stock traded at **$ 29.80**.

Highlights

➤ In 2009, we believe that operating income will be driven by EEP's expansion projects. The partnership plans to spend more than $2.2 billion on expansion projects between 2009 and 2010. The $635 million Clarity pipeline in the East Texas System will move increasing production of natural gas from the region and is scheduled for completion in the first quarter of 2009. This project is expected to generate $80-$100 million in EBITDA annually.

➤ With completion expected in early 2009, the $2.1 billion Southern Access Expansion is designed to deliver up to 400,000 bpd of heavy crude from Wisconsin to the Lakehead System in the Chicago area and to the Patoka Hub in southern Illinois and is expected to generate $240 million in EBITDA annually. The $1.2 billion Alberta Clipper Expansion is expected to deliver up to 800,000 bpd of heavy crude between Canada and Wisconsin beginning in mid-2010.

➤ EEP declared a fourth quarter 2008 distribution of $0.99, or $3.96 annualized, representing an increase of 4.2% from a year earlier. Our cash distribution estimate for 2009 is $3.96.

Investment Rationale/Risk

➤ We believe that the improving performance of the Lakehead pipeline system's volumes foreshadows a durable trend of increasing throughput from the oil sands production in Alberta, based on the new Southern Access Expansion project and the Alberta Clipper pipeline. EEP's natural gas transmission business is accessing some of the fastest growing domestic producing areas, including the Barnett Shale and Anadarko Basin in Texas. We believe the partnership's plans to invest significant capital in organic growth projects from 2008 through 2010 will limit EEP's ability to raise its cash distribution.

➤ Risks to our recommendation and target price include higher interest rates, and a decrease in economic activity that lowers demand for energy commodities and EEP's transportation volumes.

➤ Our 12-month target price of $34 is based on 11.6% target yield (in line with peers) on our one-year-out annualized distribution estimate of $3.96 per unit.

Qualitative Risk Assessment

LOW	**MEDIUM**	HIGH

Our risk assessment reflects that EEP and most MLPs in general are exposed to cyclical swings in demand for commodity transportation, potential conflicts of interest between MLP holders and the general partners, and a tendency toward excessive use of debt to fund dividend payments and capital expenditures. These risks are offset by the maturity of the business, and our view of EEP's exceptional revenue and cash flow visibility.

Enbridge Energy Partners LP

STANDARD &POOR'S

Business Summary February 04, 2009

CORPORATE OVERVIEW. Formed in 1991 by the general partner, Enbridge Energy Co., Inc., EEP owns and operates crude oil and liquid petroleum transportation assets and natural gas gathering, treating, processing, transmission and marketing assets in the U.S. Its principal asset is the Lakehead Pipeline System, which is the U.S. portion of a crude oil and liquid petroleum pipeline system extending from western Canada through the upper and lower Great Lakes region of the U.S. to eastern Canada.

Since May 2001, the partnership has diversified its operations both geographically and by industry. The North Dakota System, acquired in May 2001, connects to the partnership's Lakehead System and accessed a different crude oil supply basin in North Dakota and Montana. The East Texas System, acquired in November 2001, was the partnership's first entry into the natural gas gathering and processing business and diversified the geographic focus of the partnership to include the southern United States. In October 2002, the partnership continued its diversification through the acquisition of the Midcoast System, which included natural gas gathering, treating, processing, transmission and marketing activities located in the southern United States. On December 31, 2003, the partnership acquired the North Texas System, a natural gas gathering and processing business in Texas. In January 2005, additional North Texas assets were purchased from Devon Energy for $165 million. In June 2005, EEP completed the construction of a pipeline to connect its East Texas System to the Carthage, TX, hub. The new properties are allowing the partnership to achieve a larger scale and geographic profile from its East Texas System into the Texas Panhandle, where it can pursue commercial and operating synergies.

The partnership's $2.1 billion Southern Access Expansion, which will supply additional heavy crude oil capacity to the Lakehead system, is expected to add 190,000 bpd of capacity in 2008 and an additional 210,000 bpd of capacity by early 2009. The $1.2 billion Alberta Clipper pipeline project, between Alberta and Wisconsin, will increase capacity by 450,000 bpd in 2010. These projects result from the need for additional capacity based on forecasts of oil sands production growth.

PRIMARY BUSINESS DYNAMICS. Entry into the interstate pipeline business requires substantial upfront capital for construction, thus providing a formidable barrier to entry, in our view. Consequently, the transportation rates charged are regulated in the U.S. by the Federal Energy Regulatory Commission (FERC). Pipeline companies must formally present a detailed proposal for the construction and management of their transportation vehicle; the FERC sets the transportation rates to allow for the recovery of costs plus a proscribed return on investment. In many cases, customers of a particular pipeline have very limited substitute transportation vehicles, resulting in a franchise for the pipeline company whose profitability is governed by the production growth inherent in the source end of the pipeline and the demographic growth of the other end.

While most northern master limited partnership (MLP) pipeline projects were originally financed to transport Canada's vast natural gas resources to the U.S., the increasing economic viability of its oil sands resources has led to their rapid development, in our opinion, into commercial oil uses, which ultimately has led to increased demand for petroleum transportation. While we believe the location of EEP's pipeline directly in the path of the great Alberta fields and its destination in Chicago -- the most central transfer location for the world's largest consumer of energy -- to be the most compelling, we do acknowledge the existence of significant pipeline capacity already directed at the oil sands and to the U.S. market.

FINANCIAL TRENDS. EEP has underperformed some other MLPs during the past few years, due, in our opinion, to the transition of Canadian petroleum production from conventional sources to the vast and still developing unconventional oil sands. We think the Lakehead system has thus been underutilized in anticipation of substantial oil sands production. We believe the performance during 2007 illustrated a turning point toward higher volume growth. Given that the rates on much of this traffic are regulated, we believe EEP has planned significant capacity expansion such that returns on invested capital could approach 8% over the next three to five years, from about 5.5% over the past five years.

&POOR'S

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

February 2, 2009
11:43 am ET ... S&P MAINTAINS HOLD OPINION ON LP UNITS OF ENBRIDGE ENERGY PARTNERS (EEP 31.18***): EEP posts Q4 earnings per unit of $1.04 vs. $0.59, ahead of our $0.68 estimate and Street's $0.65. Results benefited from the start-up of the company's Southern Access Expansion Stage 1 and Clarity projects. The company also gained from higher tariffs at its liquids business segment. We are maintaining our '09 earnings per unit estimate at $2.95. We also keep our 12-month target price at $34, based on a target yield of 11.6% on our estimated 12-month forward distributions projection of $3.96. /T.Shafi

January 8, 2009
02:22 pm ET ... S&P MAINTAINS HOLD OPINION ON LP UNITS OF ENBRIDGE ENERGY PARTNERS (EEP 29.49***): Ahead of EEP's Q4 results, we are decreasing our Q4 earnings per unit forecast to $0.68 from $0.81, based on expected lower operating margins from the company's natural gas segment. We expect that the recessionary environment in 2009 will impact EEP's natural gas business and we are lowering our 2009 earnings per unit estimate to $2.95 from $3.42. We are also decreasing our 12-month target price to $34 from $42, based on a target yield of 11.6% on our projected 12-month forward distributions of $3.96. /T.Shafi

January 8, 2009
02:41 pm ET ... S&P MAINTAINS HOLD OPINION ON SHARES OF ENBRIDGE ENERGY MANAGEMENT (EEQ 28.47***): Ahead of Q4 results, we are reducing our Q4 earnings per unit forecast to $0.62 from $0.80, to reflect lower margins at Enbridge Energy Partners (EEP 29.43***). EEQ's only earning asset is its 14.5% interest in EEP. We also expect the recessionary environment to impact EEP's natural gas segment in '09 and we are lowering our '09 earnings per unit projection for EEQ to $2.46 from $3.25. We are cutting our 12-month target price to $33 from $43, based on a target yield of 12% on our estimate of 12-month forward distributions. /T.Shafi

October 31, 2008
10:23 am ET ... S&P MAINTAINS HOLD OPINION ON LP UNITS OF ENBRIDGE ENERGY PARTNERS (EEP 38.32***): Q3 earnings per unit of $1.09 vs. $0.75 is higher than our view of $0.80. Results reflect better-than-expected performance at the liquids segments. Operating income for liquids segment rose 66% to $95.5 million, reflecting a new surcharge at Lakehead system and higher tariffs. Reflecting Q3 results, we are raising our '08 earnings per unit estimate to $3.39 from $3.10, but cut '09's by $0.58 to $3.42 in slowed economy. We are also raising our target price to $42 from $29, based on a target yield of 9.5% on our estimated 12-month forward distributions projection. /T.Shafi

October 31, 2008
03:09 pm ET ... S&P MAINTAINS HOLD OPINION ON SHARES OF ENBRIDGE ENERGY MANAGEMENT (EEQ 37.88***): EEQ posts Q3 earnings per unit of $0.67 vs. $0.48, two cents above our estimate of $0.65. EEQ's only earning asset is its 14.5% interest in Enbridge Energy Partners (EEP 37.58, Hold). EEP benefited from strong results at its liquids segment, and based on its Q3 results and improving performance, we are increasing our '08 earnings per unit estimate for EEQ to $2.70 from $2.58. We are also raising our 12-month target price to $43 from $28, based on target yield of 9.2% on our estimated 12-month forward distributions projection. /T.Shafi

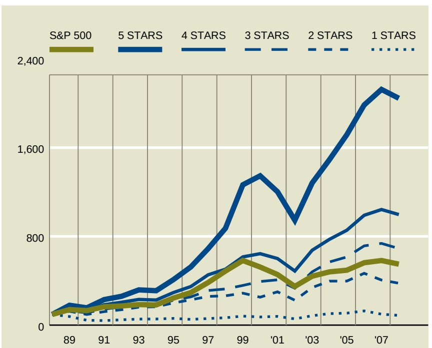
STANDARD & POOR'S

Glossary

S&P STARS
Since January 1, 1987, Standard and Poor's Equity Research Services has ranked a universe of common stocks based on a given stock's potential for future performance. Under proprietary STARS (STock Appreciation Ranking System), S&P equity analysts rank stocks according to their individual forecast of a stock's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350 Index or S&P 500 Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective.

STARS Average Annual Performance



S&P 12-Month Target Price
The S&P equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Investment Style Classification
Characterizes the stock as Growth or Value, and indicates its capitalization level. Growth is evaluated along three dimensions (earnings, sales and internal growth), while Value is evaluated along four dimensions (book-to-price, cash flow-to-price, dividend yield and sale-to-price). Growth stocks score higher than the market average on growth dimensions and lower on value dimensions. The reverse is true for Value stocks. Certain stocks are classified as Blend, indicating a mixture of growth and value characteristics and cannot be classified as purely growth or value.

Qualitative Risk Assessment
The S&P equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices.

Quantitative Evaluations
In contrast to our qualitative STARS recommendations, which are assigned by S&P analysts, the quantitative evaluations described below are derived from proprietary arithmetic models. These computer-driven evaluations may at times contradict an analyst's qualitative assessment of a stock. One primary reason for this is that different measures are used to determine each. For instance, when designating STARS, S&P analysts assess many factors that cannot be reflected in a model, such as risks and opportunities, management changes, recent competitive shifts, patent expiration, litigation risk, etc.

S&P Quality Ranking
Growth and stability of earnings and dividends are deemed key elements in establishing S&P's Quality Rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank
Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process.A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stocks with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

S&P Fair Value Calculation
The price at which a stock should trade at, according to S&P's proprietary quantitative model that incorporates both actual and estimated variables (as opposed to only actual variables in the case of S&P Quality Ranking). Relying heavily on a company's actual return on equity, the S&P Fair Value model places a value on a security based on placing a formula-derived price-to-book multiple on a company's consensus earnings per share estimate.

Insider Activity
Gives an insight as to insider sentiment by showing whether directors, officers and key employees who have proprietary information not available to the general public, are buying or selling the company's stock during the most recent six months.

Funds From Operations FFO
FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Investability Quotient (IQ)
The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

S&P's IQ Rationale:
Enbridge Energy Ptnrs L.P.

	Raw Score	Max Value
Proprietary S&P Measures	25	115
Technical Indicators	30	40
Liquidity/Volatility Measures	15	20
Quantitative Measures	23	75
IQ Total	**93**	**250**

Volatility
Rates the volatility of the stock's price over the past year.

Technical Evaluation
In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank
Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS)
An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups, 68 Industries, and 154 Sub-Industries.

S&P Issuer Credit Rating
A Standard & Poor's Issuer Credit Rating is a current opinion of an obligor's overall financial capacity (its creditworthiness) to pay its financial obligations. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. In addition, it does not take into account the creditworthiness of the guarantors, insurers, or other forms of credit enhancement on the obligation. The Issuer Credit Rating is not a recommendation to purchase, sell, or hold a financial obligation issued by an obligor, as it does not comment on market price or suitability for a particular investor. Issuer Credit Ratings are based on current information furnished by obligors or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any Issuer Credit Rating and may, on occasion, rely on unaudited financial information. Issuer Credit Ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or based on other circumstances.

Analysis prepared by **Tanjila Shafi** on February 05, 2009, when the stock traded at **$ 22.73**.

Highlights

➤ We expect rising pipeline volumes to boost earnings and cash flow over the next several years, as EPD has a large portfolio of organic projects that we think offer high potential returns at relatively low risk. Its largest single project, the Independence Hub/Pipeline, began production in early 2007. We project double-digit revenue growth continuing in 2009 as the impact of slower economic growth is partly offset by the inclusion of the Hub/Pipeline. We estimate earnings per unit of $2.10 in 2009, versus 2008's $1.85.

➤ We believe that EPD will benefit from its diversified fee-based assets and from investments in offshore pipeline infrastructure such as the Phase V expansion of the Jonah Gas Gathering System, the Barnett Pipeline project and the Independence Hub and Trail.

➤ EPD announced a fourth-quarter 2008 distribution of $0.53 per unit, a 1.4% increase from a year earlier. We estimate cash distributions for 2009 at $2.15, supported by the company's projects.

Investment Rationale/Risk

➤ EPD has built one of the largest midstream master limited partnerships, partly through acquisitions. We believe EPD's size and financial resources place it in a better position than most peers for expansion without relying on acquisitions. It has a strong asset base, in our view, with access to high-demand markets and major supply sources. EPD has focused on expanding infrastructure to capitalize on strong NGL fundamentals and natural gas drilling in the Rockies and Permian Basin, in our view, and access to growing production in the Gulf of Mexico.

➤ Risks to our recommendation and target price include a greater-than-expected rise in interest rates, and a decline in economic activity that reduces demand for energy commodities and EPD's transportation volumes.

➤ Our 12-month target price of $27 is based on a target yield of 8.0%, on projected cash distributions of $2.15, in line with peers.

Qualitative Risk Assessment

LOW	MEDIUM	HIGH

Our risk assessment is based on EPD's large and diversified asset portfolio, stable, fee-based businesses, and a track record of increasing distribution. This is only partially offset by some exposure to cyclical swings in demand for commodity transportation.

Enterprise Products Partners LP

Business Summary February 05, 2009

CORPORATE OVERVIEW. Enterprise Products Partners L.P., a publicly traded limited partnership, is an integrated provider of natural gas pipeline and processing services and natural gas liquids (NGL) fractionation, storage, transportation and terminalling services. EPD believes it is a leader in developing midstream infrastructure in the deepwater of the Gulf of Mexico.

EPD was formed in April 1998 to acquire, own and operate the NGL business of Enterprise Products Co. (EPCO). Enterprise Products GP, LLC, a wholly owned subsidiary of EPCO, is the general partner; it holds a 2% general partner interest in both EPD and the operating partnership.

The NGL Pipelines segment (54% of gross operating profits in 2007) includes natural gas processing and related NGL marketing, 13,758 miles of NGL pipelines, and NGL fractionation facilities located in Texas and Louisiana. The core business includes the Mid-America, Seminole and Dixie pipeline systems.

The Onshore Natural Gas Pipelines segment (22%) includes interests in about 17,758 miles of pipelines that gather and transport natural gas in Alabama, Colorado, Louisiana, Mississippi, New Mexico and Texas. In addition, EPD owns two underground salt dome natural gas storage facilities in Mississippi.

The Petrochemical Services segment (12%) includes four propylene fractionation facilities, an isomerization complex and an octane additive production facility. This segment also includes 683 miles of petrochemical pipeline systems.

The Offshore Pipelines segment (12%) owns an interest in about 1,555 miles of natural gas pipelines, 914 miles of crude oil pipeline systems, and six multi-purposed offshore hub platforms serving the Gulf of Mexico.

CORPORATE STRATEGY. EPD's business strategy is to capitalize on expected increases in natural gas, NGL and crude oil production resulting from development activities in the Rocky Mountain region and Gulf of Mexico; maintain a balanced portfolio of midstream energy assets and expand this asset base through growth capital projects and accretive acquisitions of complementary midstream assets; share capital costs and risks through joint ventures or alliances with strategic partners that will provide the raw materials for these projects; and increase fee-based cash flows by investing in pipelines and other fee-based businesses and de-emphasize commodity-based activities.

On August 18, 2008, EPD and TEPPCO Partners, L.P. (TPP) and Oiltanking Holdings Americas, Inc. announced that they had formed a joint venture to design, construct, own and operate a new Texas offshore crude oil port and pipeline system for the delivery of waterborne crude oil to refining centers along the upper Texas Gulf Coast. Each company is expected to invest $600 million in the project, which is scheduled for completion in 2010.

In August 2006, EPD and TEPPCO Partners, L.P. (TPP) announced a joint venture through their respective subsidiaries in which they will be partners in Jonah Gas Gathering Company (JGG). JGG owns the Jonah Gas Gathering System, located in the Greater Green River Basin of southwestern Wyoming, which gathers and transports natural gas produced from the prolific Jonah and Pinedale fields to natural gas processing plants and major interstate pipelines that deliver the natural gas to end-use markets.

PRIMARY BUSINESS DYNAMICS. Part of EPD's business strategy involves expansion through business combinations, growth capital projects and investments in joint ventures. EPD believes it is well positioned to continue to grow through construction of new facilities and acquisitions that will expand its system of assets through growth capital projects.

Growth spending in 2005 was $743.8 million, which included $338.6 million for the Independence Hub offshore platform and related Independence Trail Pipeline and $90.1 million for the Constitution Oil and Constitution Gas Pipelines. In addition, EPD completed $327 million of acquisitions during 2005, the largest of which was the $145.5 million purchase of underground NGL storage facilities and propane terminals from Ferrellgas LP (FGP).

EPD's net capital spending in 2006, including cash and equity issued for acquisitions and investments in unconsolidated affiliates, was $1.8 billion, which also included $119 million of sustaining capital expenditures and $181 million of equity issued in association with the acquisition of assets from Cerrito Gathering Company, Ltd.

Capital spending totaled $2.5 billion in 2007, with some $2.0 billion used for growth projects, $142 million for ongoing operations, $343 million for unconsolidated affiliates and $47 million for acquisitions. Capital spending totaled $2.3 billion in 2008, with about $2.1 billion for growth projects. The company plans to spend $800 million on capital expenditures in 2009.

FINANCIAL TRENDS. In January 2009, EPD announced an increase in its quarterly cash distribution rate to partners to $0.53 per common unit. This distribution represents a 6.0% increase over the $0.50 per unit quarterly distribution paid a year earlier. Our estimated 2009 coverage ratio is 1.1X.

Quantitative Evaluations

S&P Fair Value Rank 1-

1	2	3	4	5

LOWEST — HIGHEST

Based on S&P's proprietary quantitative model, stocks are ranked from most overvalued (1) to most undervalued (5).

Fair Value Calculation $19.30

Analysis of the stock's current worth, based on S&P's proprietary quantitative model suggests that EPD is overvalued by $3.93 or 16.9%.

Investability Quotient Percentile 87

LOWEST = 1 — HIGHEST = 100

EPD scored higher than 87% of all companies for which an S&P Report is available.

Volatility LOW | **AVERAGE** | HIGH

Technical Evaluation NEUTRAL

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

February 2, 2009
02:35 pm ET ... S&P MAINTAINS HOLD OPINION ON LP UNITS OF ENTERPRISE PRODUCT PARTNERS (EPD 21.96***): EPD reports Q4 earnings per unit of $0.44 vs. $0.30, below our $0.50 estimate. The effects of Hurricanes Gustav and Ike lowered Q4 earnings by $36 million, or $0.08 per unit. We are encouraged by the 4.0% growth in natural gas liquids, crude oil and petrochemical transportation volumes. We are maintaining our 2009 earnings per unit estimate at $2.10. We are also keeping our 12-month target price at $27, based on expected 12-month forward cash distributions of $2.15 and a target yield of 8%. /T.Shafi

January 26, 2009
Enterprise Products Partners LP announced the departure of James H. Lytal, Executive Vice President, effective January 15, 2009.

January 20, 2009
On January 15, 2009, Enterprise Products Partners LP announced that James H. Lytal notified of his resignation as the general partner of the company, effective immediately.

January 16, 2009
11:20 am ET ... S&P MAINTAINS HOLD OPINION ON LP UNITS OF ENTERPRISE GP HOLDINGS (EPE 19.41***): Ahead of Q4 results, we continue to forecast earnings per unit for the quarter of $0.28 vs. year-ago $0.18. The company's growth in distribution depends on profits and distributable cash flow from its ownership stakes in Enterprise Products Partners (EPD 21.51***), TEPPCO Partners (TPP 24.05***), and Energy Transfer Equity (ETE 17.02, NR). We keep our '09 earnings per unit forecast of $1.47, and we maintain our 12-month target price of $25, based on a target yield of 7.5% on estimated 12-month forward distributions of $1.88. /T.Shafi

December 17, 2008
11:12 am ET ... S&P MAINTAINS HOLD OPINION ON LP UNITS OF ENTERPRISE PRODUCT PARTNERS (EPD 21.14***): Affiliate Enterprise Products Operating LLC, and Questar Pipeline Company, a subsidiary of Questar Corp. (STR 33.72, NR), announce that White River Hub joint venture has commenced services. We note the positive effects of the hub in expanding EPD's western operations and increasing its ability to meet producer needs. We are maintaining our estimate of '09 earnings per unit at $2.10, and keep our 12-month target price at $27, based on projected cash distributions of $2.15 and a target yield of 8%. /T.Shafi

November 11, 2008
11:18 am ET ... S&P MAINTAINS HOLD OPINION ON LP UNITS OF ENTERPRISE GP HOLDINGS (EPE 21.43***): EPE posts Q3 earnings per unit of $0.34 vs. $0.10, ahead of our $0.28 estimate. Growth in the company's distribution to holders depends on profits and distributable cash flow from its ownership stakes in Enterprise Products Partners (EPD 23.90***), TEPPCO Partners (TPP 26.40***) and Energy Transfer Equity (ETE 18.44, NR). Based on Q3 results, we are increasing our '08 earnings per unit estimate to $1.40 from $1.34. We maintain our target price at $25, based on a target yield of 7.3% on estimated 12-month forward distributions of $1.82. /T.Shafi

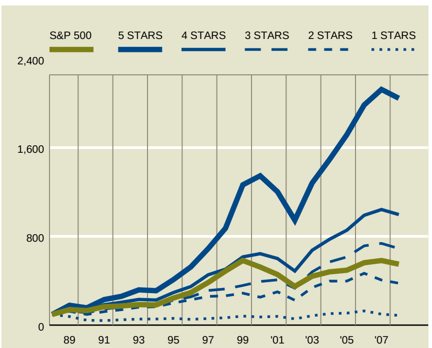
Glossary

S&P STARS
Since January 1, 1987, Standard and Poor's Equity Research Services has ranked a universe of common stocks based on a given stock's potential for future performance. Under proprietary STARS (STock Appreciation Ranking System), S&P equity analysts rank stocks according to their individual forecast of a stock's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350 Index or S&P 500 Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective.

STARS Average Annual Performance



S&P 12-Month Target Price
The S&P equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Investment Style Classification
Characterizes the stock as Growth or Value, and indicates its capitalization level. Growth is evaluated along three dimensions (earnings, sales and internal growth), while Value is evaluated along four dimensions (book-to-price, cash flow-to-price, dividend yield and sale-to-price). Growth stocks score higher than the market average on growth dimensions and lower on value dimensions. The reverse is true for Value stocks. Certain stocks are classified as Blend, indicating a mixture of growth and value characteristics and cannot be classified as purely growth or value.

Qualitative Risk Assessment
The S&P equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices.

Quantitative Evaluations
In contrast to our qualitative STARS recommendations, which are assigned by S&P analysts, the quantitative evaluations described below are derived from proprietary arithmetic models. These computer-driven evaluations may at times contradict an analyst's qualitative assessment of a stock. One primary reason for this is that different measures are used to determine each. For instance, when designating STARS, S&P analysts assess many factors that cannot be reflected in a model, such as risks and opportunities, management changes, recent competitive shifts, patent expiration, litigation risk, etc.

S&P Quality Ranking
Growth and stability of earnings and dividends are deemed key elements in establishing S&P's Quality Rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank
Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process.A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stocks with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

S&P Fair Value Calculation
The price at which a stock should trade at, according to S&P's proprietary quantitative model that incorporates both actual and estimated variables (as opposed to only actual variables in the case of S&P Quality Ranking). Relying heavily on a company's actual return on equity, the S&P Fair Value model places a value on a security based on placing a formula-derived price-to-book multiple on a company's consensus earnings per share estimate.

Insider Activity
Gives an insight as to insider sentiment by showing whether directors, officers and key employees who have proprietary information not available to the general public, are buying or selling the company's stock during the most recent six months.

Funds From Operations FFO
FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Investability Quotient (IQ)
The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

S&P's IQ Rationale:
Enterprise Products Partners

	Raw Score	Max Value
Proprietary S&P Measures	54	115
Technical Indicators	35	40
Liquidity/Volatility Measures	13	20
Quantitative Measures	24	75
IQ Total	**126**	**250**

Volatility
Rates the volatility of the stock's price over the past year.

Technical Evaluation
In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank
Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS)
An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups, 68 Industries, and 154 Sub-Industries.

S&P Issuer Credit Rating
A Standard & Poor's Issuer Credit Rating is a current opinion of an obligor's overall financial capacity (its creditworthiness) to pay its financial obligations. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. In addition, it does not take into account the creditworthiness of the guarantors, insurers, or other forms of credit enhancement on the obligation. The Issuer Credit Rating is not a recommendation to purchase, sell, or hold a financial obligation issued by an obligor, as it does not comment on market price or suitability for a particular investor. Issuer Credit Ratings are based on current information furnished by obligors or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any Issuer Credit Rating and may, on occasion, rely on unaudited financial information. Issuer Credit Ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or based on other circumstances.

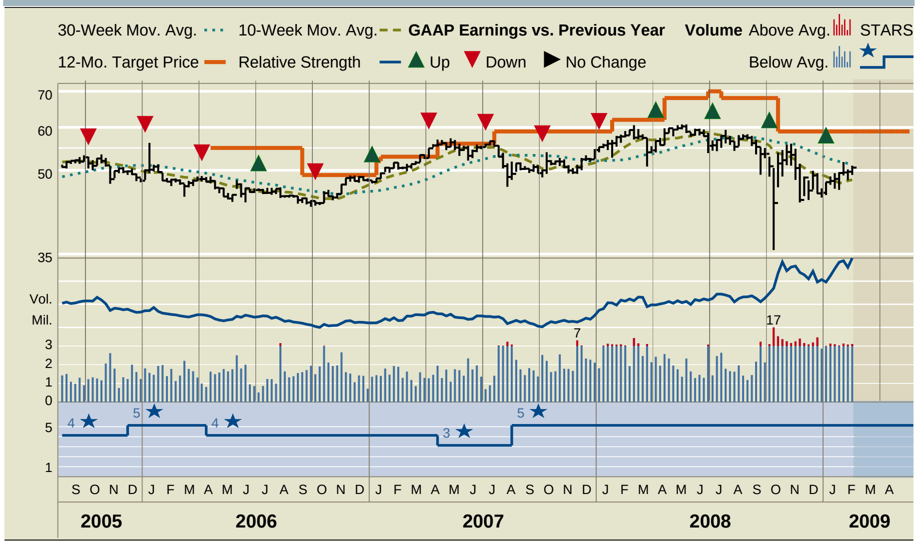
Price Performance



Options: CBOE, P

Analysis prepared by **Tanjila Shafi** on January 23, 2009, when the stock traded at **$ 48.96**.

Highlights

- We expect KMP's natural gas pipelines and terminal operations to be the main earnings drivers in 2009, benefiting from the first segment of the Rockies Express Pipeline now in service, terminal expansions in Houston, TX, Charleston, SC, Louisiana and Illinois, and acquisitions in Chicago and Vancouver. We expect product pipelines to benefit from the December 2007 completion of the East Line additional expansion project that increased pipeline capacity from Texas to Arizona and the increase in ownership to 100% (from 50%) of the Cochin NGL Pipeline from Canada to the U.S. We expect the impact of new projects to boost revenues by roughly 6% in 2009.
- With increased volumes from new projects, mainly in the natural gas pipeline segment, 2008 earnings before partnership interest rose more than 70%. We expect EBITDA to rise about 20% in 2009, to over $2.9 billion.
- KMP declared a cash distribution of $1.06 per unit for the 2008 fourth quarter, 14% above the 2007 fourth-quarter distribution of $0.92. For 2009, we forecast distributions of $4.20.

Investment Rationale/Risk

- We believe KMP's long-term growth profile is favorable, based on over $7 billion of investment planned for the next four years. The Rockies Express Pipeline and the Kinder Morgan Louisiana Pipeline should allow KMP to benefit from natural gas production in the Rockies and from the growing importance of LNG. In addition, KMP recently entered into a joint venture with Energy Transfer Partners (ETP: buy, $43) to build a new natural gas pipeline called the Midcontinent Express. We view positively the recent privatization of Kinder Morgan, Inc. (KMI). KMP should benefit from asset dropdowns from KMI, such as the recently announced acquisition of the Trans Mountain pipeline system.
- Risks to our recommendation and target price include sharply higher interest rates, and a decline in economic activity that reduces demand for energy commodities and leads to lower transportation volumes.
- Our 12-month target price of $59 is based on an above-peer target yield of 7.1% on estimated 2009 forward distributions of $4.20, which we believe is warranted given the partnership's diverse assets and dividend growth rate.

Qualitative Risk Assessment

LOW	MEDIUM	HIGH

Our risk assessment reflects our view of KMP's large and diversified asset portfolio, its stable, fee-based businesses, and its long-term record of increasing cash distributions.

Kinder Morgan Energy Partners LP

STANDARD &POOR'S

Business Summary January 23, 2009

CORPORATE OVERVIEW. Kinder Morgan Energy Partners, L.P. (KMP) is a publicly traded limited partnership formed in August 1992. The partnership is one of the largest publicly traded pipeline limited partnerships in the U.S. in terms of market capitalization. In total, it transports refined petroleum products and natural gas through over 25,000 miles of pipeline. In addition, it operates approximately 165 terminals handling refined products, coal, and other materials. Kinder Morgan, Inc. (KMI), one of the largest U.S. midstream energy companies, and its subsidiaries, owned a 13.9% interest in KMP at December 31, 2008. KMI was recently privatized. KMP's objective is to grow its portfolio of fee-based energy transportation and storage assets, while increasing the utilization of its existing assets. As a result, we believe it does not face significant risks relating to the short-term movement of commodity prices.

MARKET PROFILE. KMP, through its general and limited partner interests, has leveraged the resources of KMI to enable it to evolve into a leader in several core business segments, in our opinion. It is the largest independent U.S. owner and operator of pipelines transporting refined products as well as the largest independent operator of terminals. Its pipelines transport more than 2 million barrels per day of gasoline and other petroleum products and up to 7 billion cubic feet per day of natural gas. KMP's terminals handle over 90 million tons of coal and other dry bulk materials and have liquids storage capacity of about 70 million barrels for petroleum products and chemicals. In addition, KMP is a leading provider of carbon dioxide used for enhanced oil recovery projects in the United States. The natural gas segment was significantly expanded in November 2004 through the purchase of TransColorado Gas Transmission Co. from KMI for $284.5 million. TransColorado owns a 300-mile interstate pipeline extending from Colorado to New Mexico.

We believe KMP's size and financial resources have enabled it to distinguish itself from most other master limited partnerships (MLPs) through a balanced program of both acquisitions and internal expansion projects. During 2007, KMP spent $1.7 billion for additions to property, plant and equipment, including expansion and maintenance projects. KMP's total capital expansion program in 2007 was about $2.6 billion, and including acquisitions totaled $3.3 billion.

IMPACT OF MAJOR DEVELOPMENTS. Since 2005, KMP has laid the groundwork for three new capital projects that offer significant long-term growth potential, in our view. In total, we believe that KMP's $3.3 billion share of investments in these three projects will add at least $0.15 to $0.20 per unit in distributable cash flow by 2010.

In August 2005, KMP announced a 67.7%/33.3% joint venture with Sempra Energy to pursue the development of a new natural gas pipeline called the Rockies Express Pipeline, providing needed take-away capacity from producing areas in the Rocky Mountains. The planned 1,675-mile pipeline would originate in Wyoming and extend to eastern Ohio at an estimated total construction cost of $4.4 billion. The February 2006 acquisition of Entrega Gas Pipeline LLC added two connecting pipelines in Colorado and Wyoming. In February 2006, binding commitments were secured from shippers for all of the 1.8 billion cubic feet per day of capacity. In June 2006, ConocoPhillips joined the joint venture with a 24% share, reducing KMP's and Sempra Energy's shares to 51% and 25%, respectively. The project should be brought on line in segments and is expected to be completed by June 2009, subject to regulatory approvals. After completion, it will be one of the largest natural gas pipelines in North America.

In September 2006, KMP requested government approval for its proposed Louisiana Pipeline, which will provide approximately 3.2 billion cubic feet per day of natural gas take-away capacity from the new Cheniere Sabine Pass liquefied natural gas (LNG) terminal in Cameron Parish, LA. At a cost of $500 million, the pipeline would provide access to new supplies of imported LNG. The pipeline's capacity is fully subscribed with long-term commitments from Chevron and Total, and is expected to be completed in 2009.

In December 2007, KMP entered into a 50/50 joint venture with Energy Transfer Partners (ETP) to build a $1.25 billion natural gas pipeline called the Midcontinent Express, extending 500 miles from the Midcontinent Basin in Oklahoma to Alabama, with another connection through an ETP pipeline to the Barnett Shale natural gas region in northern Texas. The pipeline's 1.4 billion cubic feet of capacity is fully subscribed by multiple shippers. The expected completion date is February 2009.

FINANCIAL TRENDS. KMP has compiled what we view as an impressive history of increasing cash distributions to common unit holders. The distribution payout in 2008 was $4.02, 15.5% higher than the previous year's payout. Reflecting its diversified operations, KMP maintains coverage somewhat lower than the average MLP. We also note that as a relatively mature partnership, KMP pays 50% of incremental cash flow as incentives to the general partner, a higher level than most of its peers. KMI, through its ownership of the general partner and limited partnership units, received a total of 40% of all quarterly distributions in 2007. In comparison, Enterprise Products Partners, another large MLP, has capped its incentive distribution at a maximum of 25%.

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

January 26, 2009
On January 21, 2009, Kinder Morgan Energy Partners LP board of directors has elected C. Berdon Lawrence as a director to fill the vacancy left by Edward O. Gaylord, who passed away on September 28, 2008. Mr. Lawrence is expected to be appointed to each board's audit committee, compensation committee and nominating and governance committee.

January 22, 2009
02:22 pm ET ... S&P MAINTAINS STRONG BUY OPINION ON LP UNITS OF KINDER MORGAN ENERGY PARTNERS (KMP 49.15*****): KMP reports Q4 earnings per unit of $0.26 vs. $0.50, lower than our $0.59 estimate and consensus of $0.54. The shortfall reflects lower-than-expected results at the company's products pipelines and CO2 businesses. We continue to believe that 2009 earnings will be driven by expansion projects, and we are maintaining our 2009 EPS estimate of $2.48. We are also maintaining our 12-month target price of $59, based an above-peer target yield of 7.1% on estimated 2009 forward distributions of $4.20. /T.Shafi

January 5, 2009
02:18 pm ET ... S&P MAINTAINS STRONG BUY OPINION ON LP UNITS OF KINDER MORGAN ENERGY PARTNERS (KMP 48.57*****): Ahead of KMP's Q4 results, we continue to forecast Q4 operating earnings per unit of $0.59. We expect earnings to be driven by expansion projects such as Rockies Express, and terminal acquisitions. Our earnings per unit estimate for '09 is $2.48. We have a favoragle long-term outlook for KMP, reflecting its diverse asset base and strong balance sheet. We are maintaining our 12-month target price of $59, based an above-peer target yield of 7.1% on estimated '09 forward distributions of $4.20. /T.Shafi

November 25, 2008
DOWN 2.29 to 45.75... KMP says it expects to declare cash distributions of $4.20 per unit for 2009. KMP also says it anticipates its business segments will generate approximately $2.85 billion in distributable cash flow in 2009, an increase of about $250 million over the 2008 budget. Morgan Keegan downgrades to market perform from outperform....

November 25, 2008
11:24 am ET ... KINDER MORGAN ENERGY PARTNERS, L.P. (KMP 46.1) DOWN 1.94, KINDER MORGAN (KMP) SETS '09 DISTRIBUTION GOAL. MORGAN KEEGAN DOWNGRADES... Analyst John Edwards tells salesforce he's downgrading KMP to market perform from outperform on KMP's distribution guidance. Notes KMP is still basing its 2008 distribution budget of $4.20/unit on $68/barrel, which he believes is optimistic in light of a $60 strip for 2009 and negative economic headwinds that are likely to pressure the outlook for commodity price recovery. Assumes $50-$60/barrel for WTI for 2009, and cuts his distribution growth view for KMP to -1.5% for 2009 from his former view of 7.6%./B.Egli

October 16, 2008
10:48 am ET ... S&P MAINTAINS STRONG BUY OPINION ON LP UNITS OF KINDER MORGAN ENERGY PARTNERS (KMP 48.07*****): KMP posts Q3 earnings per unit of $0.48 vs. $0.21, below our $0.60 estimate on lower results than we expected at its product pipelines business. The company increased its third quarter dividend by almost 16% to $1.02. We believe that the company's expansion projects will drive growth in 2009. But based on Q3 results, we are lowering our '08 earnings per unit estimate to $2.35 from $2.47. We are also reducing our 12-month target price to $59 from $68, based on an above-peer target yield of 6.9% on estimated 12-month forward distributions of $4.08. /T.Shafi

Kinder Morgan Energy Partners LP

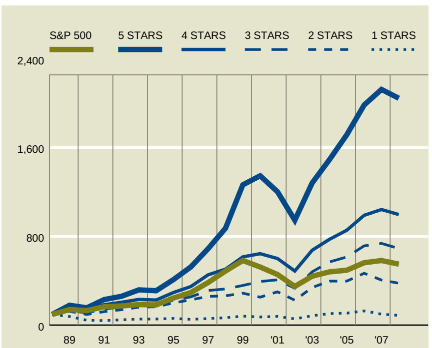
Glossary

S&P STARS
Since January 1, 1987, Standard and Poor's Equity Research Services has ranked a universe of common stocks based on a given stock's potential for future performance. Under proprietary STARS (STock Appreciation Ranking System), S&P equity analysts rank stocks according to their individual forecast of a stock's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350 Index or S&P 500 Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective.

STARS Average Annual Performance



S&P 12-Month Target Price
The S&P equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Investment Style Classification
Characterizes the stock as Growth or Value, and indicates its capitalization level. Growth is evaluated along three dimensions (earnings, sales and internal growth), while Value is evaluated along four dimensions (book-to-price, cash flow-to-price, dividend yield and sale-to-price). Growth stocks score higher than the market average on growth dimensions and lower on value dimensions. The reverse is true for Value stocks. Certain stocks are classified as Blend, indicating a mixture of growth and value characteristics and cannot be classified as purely growth or value.

Qualitative Risk Assessment
The S&P equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices.

Quantitative Evaluations
In contrast to our qualitative STARS recommendations, which are assigned by S&P analysts, the quantitative evaluations described below are derived from proprietary arithmetic models. These computer-driven evaluations may at times contradict an analyst's qualitative assessment of a stock. One primary reason for this is that different measures are used to determine each. For instance, when designating STARS, S&P analysts assess many factors that cannot be reflected in a model, such as risks and opportunities, management changes, recent competitive shifts, patent expiration, litigation risk, etc.

S&P Quality Ranking
Growth and stability of earnings and dividends are deemed key elements in establishing S&P's Quality Rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank
Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process.A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stocks with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

S&P Fair Value Calculation
The price at which a stock should trade at, according to S&P's proprietary quantitative model that incorporates both actual and estimated variables (as opposed to only actual variables in the case of S&P Quality Ranking). Relying heavily on a company's actual return on equity, the S&P Fair Value model places a value on a security based on placing a formula-derived price-to-book multiple on a company's consensus earnings per share estimate.

Insider Activity
Gives an insight as to insider sentiment by showing whether directors, officers and key employees who have proprietary information not available to the general public, are buying or selling the company's stock during the most recent six months.

Funds From Operations FFO
FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Investability Quotient (IQ)
The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

S&P's IQ Rationale:
Kinder Morgan Egy Ptnrs L.P.

	Raw Score	Max Value
Proprietary S&P Measures	25	115
Technical Indicators	36	40
Liquidity/Volatility Measures	16	20
Quantitative Measures	26	75
IQ Total	**103**	**250**

Volatility
Rates the volatility of the stock's price over the past year.

Technical Evaluation
In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank
Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS)
An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups, 68 Industries, and 154 Sub-Industries.

S&P Issuer Credit Rating
A Standard & Poor's Issuer Credit Rating is a current opinion of an obligor's overall financial capacity (its creditworthiness) to pay its financial obligations. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. In addition, it does not take into account the creditworthiness of the guarantors, insurers, or other forms of credit enhancement on the obligation. The Issuer Credit Rating is not a recommendation to purchase, sell, or hold a financial obligation issued by an obligor, as it does not comment on market price or suitability for a particular investor. Issuer Credit Ratings are based on current information furnished by obligors or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any Issuer Credit Rating and may, on occasion, rely on unaudited financial information. Issuer Credit Ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or based on other circumstances.

Options: P, Ph

Analysis prepared by **Tanjila Shafi** on January 15, 2009, when the stock traded at **$ 49.48**.

Highlights

- In 2009, we believe OKS will benefit from projects placed into service in 2008. A major driver for growth will come from the natural gas liquids (NGLs) Overland Pass Pipeline, which the partnership estimates will move 100,000 barrels per day by the end of the first quarter of 2009. We see OKS benefiting from contributions from projects that are expected to come on line in 2009. These include the 440-mile Arbuckle pipeline from Oklahoma to the Texas Gulf Coast, which is expected to be placed into service in the first quarter, and the 150-mile Piceance Lateral Pipeline, which is slated to come on line in the third quarter.
- The partnership expected $1.2 billion in capital investments in 2008, followed by capital expenditures projected at $350 million to $375 million in 2009.
- OKS announced a fourth-quarter cash distribution of $1.08 per share, up 5.4% from $1.025 in the fourth quarter of 2007. Our forecast for total cash distributions in 2009 is $4.32.

Investment Rationale/Risk

- We think the transactions with ONEOK (OKE: strong buy, $28) and TransCanada (TRP: hold, $27) have allowed OKS to redeploy its capital toward more promising interstate pipeline ventures such as gathering pipelines, processing operations and storage facilities. OKS is using surplus cash from these transactions to reduce debt and increase distributions. We believe OKS is well positioned for continued cash flow and distribution growth, given its organic growth projects.
- Risks to our recommendation and target price include events that would cause a persistent decline in natural gas prices; a sharper-than-expected rise in interest rates; and a decline in economic activity that reduces demand for energy commodities and therefore cuts transportation volumes.
- Our 12-month target price of $62 is based on a target yield of 7.0% and our 12-month forward distribution estimate of $4.32, a premium to peers that we believe is warranted given what we see as OKS's solid financial standing.

Qualitative Risk Assessment

LOW	**MEDIUM**	HIGH

Our risk assessment reflects OKS's exposure to cyclical swings in demand for commodity transportation, potential conflicts of interest between MLP (master limited partnership) unitholders and the general partners, and a tendency of MLPs to use excessive debt to fund dividend payments and other capital expenditures. These risks are offset by the maturity of the business and the strong visibility of revenues and cash flow.

ONEOK Partners LP

STANDARD &POOR'S

Business Summary January 15, 2009

CORPORATE OVERVIEW. ONEOK Partners, L.P. (formerly Northern Border Partners, L.P.) is a publicly traded partnership formed in 1993. OKS is a leading transporter of natural gas and natural gas liquids (NGLs) in the Mid-Continent area to market centers in the U.S. The company also owns a 50% equity interest in a major transporter of natural gas imported from Canada to the U.S. The partnership currently has four strategic business segments: Natural Gas Gathering and Processing (42% of 2007 operating income), Natural Gas Pipelines (25%), Natural Gas Liquids Gathering and Fractionation (25%), and Natural Gas Liquids Pipelines (8%).

The Natural Gas Gathering and Processing segment gathers and processes raw natural gas in the Mid-Continent region of Oklahoma and Kansas as well as the Rocky Mountain area of the U.S. and Canada. The Natural Gas Pipelines segment operates regulated natural gas transmission pipelines, natural gas storage facilities, and non-processable natural gas gathering facilities. The interstate pipeline assets are located primarily in the Midwest and Southwest. The Natural Gas Liquids Gathering and Fractionation segment gathers, treats, and fractionates NGLs produced by natural gas processing plants located in Oklahoma, Kansas and Texas, and stores and markets NGL products. The Natural Gas Liquids Pipelines segment operates regulated natural gas liquids gathering and distribution pipelines and associated above- and below-ground storage facilities.

OKS's general partner ONEOK, Inc. (OKE) owns the general partner of ONEOK Partners and 45.7% of the partnership. In April 2006, OKS purchased from OKE the gathering and processing, natural gas liquids and pipelines and storage segments for approximately $3 billion. In exchange, OKE received cash and limited partner units. In conjunction with this transaction, OKE sold a 20% interest in Northern Border Pipeline Company to TC Pipelines (TCLP: hold, $23). TCLP and OKS each now own a 50% interest in the pipeline, a 1,249-mile interstate pipeline system that transports natural gas from the Montana-Saskatchewan border to gas markets in the U.S. Midwest. The gas gathering and processing segment provides services for the gathering, treating, processing and compression of natural gas, and the fractionation of natural gas liquids for third parties and related field services. The partnership owns extensive natural gas gathering, processing and fractionation operations in Montana and North Dakota, and gas gathering operations in the Powder River Basin in Wyoming.

On July 2, 2007, OKS announced the acquisition of an interstate NGL and refined petroleum products pipeline system from Kinder Morgan Energy Partners for approximately $300 million. The system connects Bushton and Conway, KS, with Chicago, IL, and transports, stores and delivers a full range of NGL and refined products, directly linking the company's Mid-Continent supply and storage network to the upper Midwest. The acquisition is also OKS's first move into the refined petroleum products market.

MARKET PROFILE. Entry into the interstate pipeline business requires substantial upfront capital for construction, thus providing a formidable barrier to entry, in our view. Consequently, the transportation rates charged are regulated in the U.S. by the Federal Energy Regulatory Commission (FERC). Pipeline companies must formally present a detailed proposal for the construction and management of their transportation vehicles; FERC sets the transportation rates to allow for the recovery of costs plus a proscribed return on investment. In many cases, customers of a particular pipeline have very limited substitute transportation vehicles, resulting in a franchise for the pipeline company whose profitability is governed by the production growth inherent in the source end of the pipeline and the demographic growth of the other end.

While most northern master limited partnership (MLP) pipeline projects were originally financed to transport Canada's vast natural gas resources to the U.S., the increasing economic viability of its oil sands resources has led to an increasing proportion of Canadian natural gas resources remaining in the country to be utilized in oil sands development infrastructure. We believe Northern Border Pipeline Co. has been directly hurt by this development, as it is a substantial transportation vehicle for Canadian natural gas into the U.S. However, we think the transformational transactions with OKE and TransCanada (TRP) have significantly altered the impact of this trend, by de-emphasizing Canadian-U.S. traffic and adding significant gathering and processing assets in the Mid-Continent and the Rocky Mountains.

FINANCIAL TRENDS. OKE has underperformed other MLPs during the past few years, due to, in our opinion, the gradual loss of aggregate Canadian natural gas cross-border traffic with a shift toward domestic Canadian uses. We think the recent redeployment of capital toward domestic U.S. interstate pipeline assets and upstream natural gas infrastructure should lead to returns on invested capital in the low teens, up from the low single digits for most of the past decade.

ONEOK Partners LP

STANDARD &POOR'S

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

February 17, 2009
02:28 pm ET ... S&P MAINTAINS STRONG BUY OPINION ON SHARES OF ONEOK INC (OKE 26.72*****): We are trimming our '09 EPS estimate by $0.60 to $2.67, as we expect weaker results from OKE 46%-owned subsidiary ONEOK Partners (OKS 46****), driven by substantially lower prices and lower volumes. We expect OKE's distribution segment and energy services segment to have higher earnings in '09, partly offsetting the weakness at OKS. For '08, we are keeping our EPS estimate for OKE at $3.05. We continue to see value in ownership of OKS and see benefits from its growth projects. We are cutting our 12-month target price on OKE by $3 to $34, based on the reduced '09 EPS outlook. /CMuir

February 6, 2009
DOWN 2.88 to 47.53... OKS reaffirms previously issued '08 EPS guidance, seeing earnings per unit within lower half of $5.95-$6.15 range. OKS also sees '08 distributable cash flow (DCF) of $625M-$655M. OKS's '09 earnings per unit is seen at $3.15-$3.75, with DCF at $490M-$550M.

January 14, 2009
12:01 pm ET ... S&P MAINTAINS BUY OPINION ON LP UNITS OF ONEOK PARTNERS (OKS 49.9****): Ahead of Q4 results, we are increasing our earnings per unit forecast to $0.99 from $0.69. We believe that the company will benefit from better-than-expected earnings in its natural gas liquids pipeline segment with the Overland Pass project coming online and wider natural gas liquids price differentials. However, we are trimming our '09 earnings per unit estimate to $4.85 from $5.00, reflecting macroeconomic headwinds. We maintain our target price at $62, based on a target yield of 7.0% from estimated 12-month forward distributions of $4.32. /T.Shafi

November 21, 2008
03:57 pm ET ... S&P MAINTAINS STRONG BUY OPINION ON SHARES OF ONEOK INC (OKE 25.75*****): Based on lower peer valuations, we are cutting our 12-month target price by $7 to $37. We continue to see value in OKE's stake in ONEOK Partners (OKS 41.54****), with large cash flows from limited and general partnership distributions. We see OKE's utility business as providing a stable operating base for the more volatile earnings from OKS. We keep our '08 and '09 EPS estimates at $3.05 and $3.27. We think the shares, currently trading at about 7.3X our '09 EPS estimate, a 40% discount to peers, are substantially undervalued. OKE's dividend is yielding 6.2%. /CMuir

November 6, 2008
03:29 pm ET ... S&P MAINTAINS BUY OPINION ON LP UNITS OF ONEOK PARTNERS (OKS 53.64****): OKS posts Q3 earnings per unit of $1.97 vs. $0.98, ahead of our $1.20 estimate. All of the company's segments performed better than expected. OKS' natural gas gathering and processing segment benefited from higher commodity prices and volumes, while the company's natural gas liquids businesses experienced increased volumes and wider price differentials. Based on Q3 results and company guidance, we increase our '08 earnings per unit est to $5.60 from $5.50. We also raise our target price to $62 from $56, on a target yield of 7.0% from estimated 12-month forward distributions. /T.Shafi

October 16, 2008
03:49 pm ET ... S&P MAINTAINS BUY OPINION ON LP UNITS OF ONEOK PARTNERS (OKS 47.91****): Ahead of Q3 results, we are maintaining our EPS forecast at $1.20 vs. year-ago $0.98. We believe OKS is well positioned to benefit from its $2 billion of internally generated growth projects. In addition, we expect the company to weather the upheaval in the credit markets better than many of its peers, given its solid financial condition. We are maintaining our '08 earnings per unit estimate at $5.50, but lower our target price to $56 from $62, based on a target yield of 7.7% from estimated 12-month forward distributions. /T.Shafi

Q4'08	1.07	1.21	0.84	11	43.0
Q4'09 vs. Q4'08	▲ 0.9%	▲ 4%	▼ -5%	▼ -36%	▼ -0.9%

A company's earnings outlook plays a major part in any investment decision. Standard & Poor's organizes the earnings estimates of over 2,300 Wall Street analysts, and provides their consensus of earnings over the next two years. This graph shows the trend in analyst estimates over the past 15 months.

Wall Street Consensus vs. Performance

For fiscal year 2008, analysts estimate that OKS will earn $5.85. For the 3rd quarter of fiscal year 2008, OKS announced earnings per share of $1.97, representing 34% of the total annual estimate. For fiscal year 2009, analysts estimate that OKS's earnings per share will decline by 25% to $4.37.

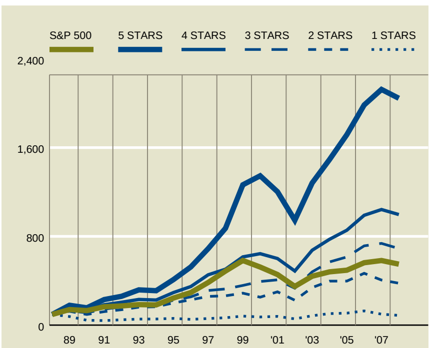
Glossary

S&P STARS
Since January 1, 1987, Standard and Poor's Equity Research Services has ranked a universe of common stocks based on a given stock's potential for future performance. Under proprietary STARS (STock Appreciation Ranking System), S&P equity analysts rank stocks according to their individual forecast of a stock's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350 Index or S&P 500 Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective.

STARS Average Annual Performance



S&P 12-Month Target Price
The S&P equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Investment Style Classification
Characterizes the stock as Growth or Value, and indicates its capitalization level. Growth is evaluated along three dimensions (earnings, sales and internal growth), while Value is evaluated along four dimensions (book-to-price, cash flow-to-price, dividend yield and sale-to-price). Growth stocks score higher than the market average on growth dimensions and lower on value dimensions. The reverse is true for Value stocks. Certain stocks are classified as Blend, indicating a mixture of growth and value characteristics and cannot be classified as purely growth or value.

Qualitative Risk Assessment
The S&P equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices.

Quantitative Evaluations
In contrast to our qualitative STARS recommendations, which are assigned by S&P analysts, the quantitative evaluations described below are derived from proprietary arithmetic models. These computer-driven evaluations may at times contradict an analyst's qualitative assessment of a stock. One primary reason for this is that different measures are used to determine each. For instance, when designating STARS, S&P analysts assess many factors that cannot be reflected in a model, such as risks and opportunities, management changes, recent competitive shifts, patent expiration, litigation risk, etc.

S&P Quality Ranking
Growth and stability of earnings and dividends are deemed key elements in establishing S&P's Quality Rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank
Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process.A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stocks with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

S&P Fair Value Calculation
The price at which a stock should trade at, according to S&P's proprietary quantitative model that incorporates both actual and estimated variables (as opposed to only actual variables in the case of S&P Quality Ranking). Relying heavily on a company's actual return on equity, the S&P Fair Value model places a value on a security based on placing a formula-derived price-to-book multiple on a company's consensus earnings per share estimate.

Insider Activity
Gives an insight as to insider sentiment by showing whether directors, officers and key employees who have proprietary information not available to the general public, are buying or selling the company's stock during the most recent six months.

Funds From Operations FFO
FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Investability Quotient (IQ)
The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

S&P's IQ Rationale:
ONEOK Partners L.P.

	Raw Score	Max Value
Proprietary S&P Measures	25	115
Technical Indicators	33	40
Liquidity/Volatility Measures	14	20
Quantitative Measures	71	75
IQ Total	**143**	**250**

Volatility
Rates the volatility of the stock's price over the past year.

Technical Evaluation
In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank
Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS)
An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups, 68 Industries, and 154 Sub-Industries.

S&P Issuer Credit Rating
A Standard & Poor's Issuer Credit Rating is a current opinion of an obligor's overall financial capacity (its creditworthiness) to pay its financial obligations. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. In addition, it does not take into account the creditworthiness of the guarantors, insurers, or other forms of credit enhancement on the obligation. The Issuer Credit Rating is not a recommendation to purchase, sell, or hold a financial obligation issued by an obligor, as it does not comment on market price or suitability for a particular investor. Issuer Credit Ratings are based on current information furnished by obligors or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any Issuer Credit Rating and may, on occasion, rely on unaudited financial information. Issuer Credit Ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or based on other circumstances.

Exchange Type
ASE - American Stock Exchange; NNM - Nasdaq National Market; NSC - Nasdaq SmallCap; NYSE - New York Stock Exchange; BB - OTC Bulletin Board; OT - Over-the-Counter; TO - Toronto Stock Exchange.

S&P Equity Research Services
Standard & Poor's Equity Research Services U.S. includes Standard & Poor's Investment Advisory Services LLC; Standard & Poor's Equity Research Services Europe includes Standard & Poor's LLC-London and Standard & Poor's AB (Sweden); Standard & Poor's Equity Research Services Asia includes Standard & Poor's LLC's offices in Hong Kong, Singapore and Tokyo, Standard & Poor's Malaysia Sdn Bhd, and Standard & Poor's Information Services (Australia) Pty Ltd.

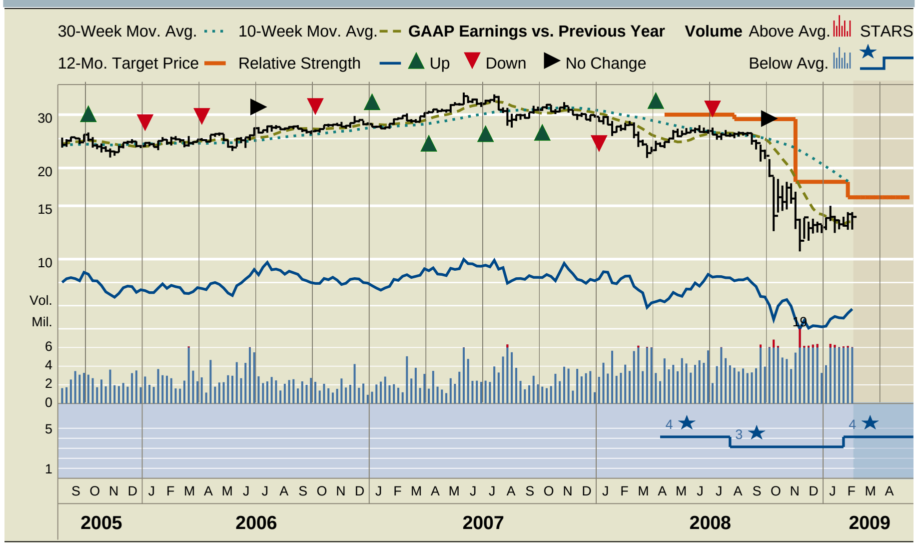
Price Performance



Options: Ph

Analysis prepared by **Christopher B. Muir** on February 04, 2009, when the stock traded at **$ 13.76**.

Highlights

- We expect revenue growth of 19% for 2008, with SUG benefiting from strong growth at its gathering and processing unit, helped by higher volumes and prices, pipelines and storage segment revenues aided by higher volumes, and utility segment revenues strengthening on customer growth and higher rates. We see 2009 revenues falling 4.1% on lower commodity prices.
- We estimate operating margins of 15.1% in 2008 and 16.1% in 2009, after 16.3% in 2007. For 2008, we expect higher per-revenue cost of gas to be partly offset by lower per-revenue operating and maintenance expenses and slightly lower other non-fuel operating costs. We see pretax margins of 10.7% in 2008 and 11.4% in 2009, versus 11.7% in 2007, as we expect mostly unchanged interest expense offset by lower non-operating income.
- Assuming an effective tax rate of 31.6% and no share repurchases, we expect 2008 operating EPS of $1.80, up 2.9% from 2007's $1.75. We forecast 2009 EPS of $1.84, up 2.2%.

Investment Rationale/Risk

- We recently upgraded our recommendation on the shares to buy, from hold. We like SUG's growth strategy, as well as its investments in LNG, storage and pipelines. The company operates the largest of only a handful of LNG terminals in the U.S., and has contracted the capacity so that it gets paid whether or not the facility is used. While current plans to form an MLP from SUG's gathering and processing business are on hold, we think a recovery in the equity markets would lead the company to go forward with the process. In addition, SUG is interested in making more acquisitions.
- Risks to our recommendation and target price include milder-than-expected winter weather, low gas processing margins, and a sharp rise in interest rates.
- SUG's shares recently traded at 7.2X our 2009 EPS estimate, a 44% discount to its natural gas utility peers. Our 12-month target price of $16 is 8.7X our 2009 EPS estimate, or a 35% discount to our peer target. We believe this discount is appropriate given our expectations for EPS growth close to that of peers, offset by volatility in gas gathering segment results.

Qualitative Risk Assessment

LOW | **MEDIUM** | HIGH

Our risk assessment reflects our view of the company's steady cash flow from its regulated utility and pipeline operations, offset by its unregulated gathering and processing business and LNG regasification operations.

Southern Union Co

Business Summary February 04, 2009

CORPORATE OVERVIEW: Southern Union Company (SUG) engages in both regulated and unregulated businesses that include gathering, processing, transportation, storage and distribution of natural gas in the central and southern regions of the United States. The company operates in three segments: Transportation and Storage (25.2% of 2007 operating revenues), Gathering and Processing (46.7%), and Distribution (28.0%). The remainder of operating revenues comes from other and corporate operations.

CORPORATE STRATEGY: SUG continues to evaluate strategic options to maintain financial flexibility and identify organic growth opportunities. These options include possible acquisitions, partnership or joint venture opportunities with other investors, and/or exploring financial strategies. The company plans to utilize a master limited partnership structure for its gathering and processing business as a tax reduction strategy, but has placed the plans on hold until equity markets rebound. SUG says that it aims to maintain its creditworthiness to keep financial flexibility. The company said that it will use its financial flexibility and free cash flows for investing in growth projects, share repurchases, dividend increases and debt repayments.

MARKET PROFILE: The Transportation and Storage segment primarily operates interstate pipelines and various storage facilities along those pipelines. It also operates LNG terminals that provide regasification services. The 2.8 billion cubic feet per day (Bcfd) Panhandle Eastern Pipeline is 6,500 miles and connects the Panhandle region to major midwestern markets and pipelines to the Northeast. The 1.5 Bcfd Trunkline pipeline is 3,500 miles, connecting the Gulf Region to major midwestern markets and pipelines to the Northeast. Trunkline LNG is a liquefied natural gas import terminal in Lake Charles, LA, that has a peak capacity of 2.1 Bcfd and a sustainable capacity of 1.8 Bcfd. The LNG facility can store up to 9.0 Bcf equivalent of LNG. The 450 mile, 1.0 Bcfd Sea Robin Pipeline carries gas from deepwater Gulf cost supplies to the Gulf Coast, including the Trunkline pipeline. Storage facilities totaling 74.4 Bcf owned and 19.9 Bcf leased with a peak withdrawal capacity of 1.1 Bcfd serve the Panhandle Pipeline. The 50%-owned 5,000 mile, 2.3 Bcfd Florida Gas Transmission pipeline delivers gas collected in the Gulf Region throughout Florida.

Southern Union Gas Services (SUGS) engages in gas gathering and processing in Texas and New Mexico. It operates approximately 4,800 miles of natural gas and natural gas liquids gathering pipelines, primarily in the Permian Basin. SUGS has approximately 410 million cubic feet per day (MMcfd) of cryogenic processing capacity and an additional 470 MMcf/d high-pressure treating capacity.

The company's Distribution segment is primarily engaged in the local distribution of natural gas in Missouri, through Missouri Gas Energy, and Massachusetts, through New England Gas Company. The utilities serve over 550,000 residential, commercial and industrial customers through local distribution systems consisting of 9,068 miles of mains, 6,096 miles of service lines and 45 miles of transmission lines. Gas revenues from residential customers (68% of total revenues) increased 4.8% in 2007, from commercial customers (26%) decreased 1.5%, from industrial customers (1%) decreased 2.2%, and from gas transportation customers (2%) increased 3.4%. Remaining revenues were from other sources and unbilled revenues.

LEGAL/REGULATORY ISSUES. The utilities' natural gas rates and operations in Missouri and Massachusetts are regulated by the Missouri Public Service Commission (MPSC) and the Massachusetts Department of Telecommunications and Energy (MDTE), respectively. On April 3, 2007, Missouri Gas Energy implemented a $27.2 million rate increase. New England Gas implemented a $4.6 million rate increase on August 1, 2007. The company has a rate increase request pending at the Sea Robin pipeline.

FINANCIAL TRENDS. The company's cash and cash equivalents, excluding restricted cash, decreased from $5.8 million in 2006 to $5.7 million in 2007. Its capital expenditures rose from $277 million in 2005 to $333 million in 2006 and $689 million in 2007. We believe SUG has sufficient funds and access to the capital markets to meet its capital spending and debt requirements.

STANDARD &POOR'S

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

February 3, 2009
10:05 am ET ... RETRANSMIT - S&P UPGRADES OPINION ON SHARES OF SOUTHERN UNION TO BUY FROM HOLD (SUG 12.92****): Ahead of SUG's Q4 report, expected on 2/27, we maintain our EPS estimate of $0.48. We like SUG's growth strategy, as well as its investments in LNG, storage and pipelines. The company operates the largest of only a handful of LNG terminals in the U.S. and it has contracted the capacity so that it gets paid whether or not the facility is used. We are keeping our '08 EPS estimate at $1.80, but we are lowering our '09 forecast to $1.84 from $2.01 due to a reduction in our revenue projections. We are lowering our 12-month target price by $2 to $16. The stock is yielding 4.6%. /CMuir

February 3, 2009
09:24 am ET ... S&P UPGRADES OPINION ON SHARES OF SOUTHERN UNION TO BUY FROM HOLD (SUG 13.03****): Ahead of SUG's Q4 report, expected on 2/27, we maintain our EPS estimate of $0.48. We like SUG's growth strategy, as well as its investments in LNG, storage and pipelines. The company operates the largest of only a handful of LNG terminals in the U.S. and it has contracted the capacity so that it gets paid whether or not the facility is used. We are keeping our '08 EPS estimate at $1.80, but we are lowering our '09 forecast to $1.84 from $2.01 due to a reduction in our revenue projections. We are lowering our 12-month target price by $2 to $16. The stock is yielding 4.6%. /CMuir

November 20, 2008
SUG to be added to S&P MidCap 400 after the close of trading on Nov. 21, replacing AVIS BUDGET GROUP (CAR), which being removed due to its low market cap.

November 10, 2008
SUG posts $0.34 vs. $0.34 Q3 EPS (reported) on 25% revenue rise. Street was looking for $0.33. Reaffirms '08 adj. EPS guidance of $1.80-$1.90 (excl. items).

November 10, 2008
09:53 am ET ... S&P MAINTAINS HOLD OPINION ON SHARES OF SOUTHERN UNION (SUG 15.98***): Q3 recurring EPS of $0.36 vs. $0.34 misses our estimate by $0.06. Revenues were higher than we expected due to high commodity prices, and per-revenue depreciation expense was lower, but other per-revenue operating costs were higher than we expected. We continue to like SUG's growth strategy, as well as its investments in LNG, storage and pipelines, but we see EPS growth rates close to the peer average. We are lowering our '08 EPS estimate by $0.06 to $1.80, but keeping '09's at $2.01. We are cutting our 12-month target price to $18 due to lower peer valuations. /CMuir

November 3, 2008
03:49 pm ET ... S&P MAINTAINS HOLD OPINION ON SHARES OF SOUTHERN UNION (SUG 17.23***): We like SUG's growth strategy, as well as its investments in liquified natural gas, storage and pipelines. The company operates the largest of only a handful of LNG terminals in the U.S., and has contracted the capacity so that it gets paid whether or not the facility is used. We expect SUG on 11/10 to report Q3 EPS of $0.42, reflecting strong growth at its gathering & processing, and transportation & storage segments. We see operating margins slightly increasing from a year ago. We keep our '08 and '09 EPS estimates at $1.86 and $2.01 and our 12-month target price at $19. /C.Muir

A company's earnings outlook plays a major part in any investment decision. Standard & Poor's organizes the earnings estimates of over 2,300 Wall Street analysts, and provides their consensus of earnings over the next two years. This graph shows the trend in analyst estimates over the past 15 months.

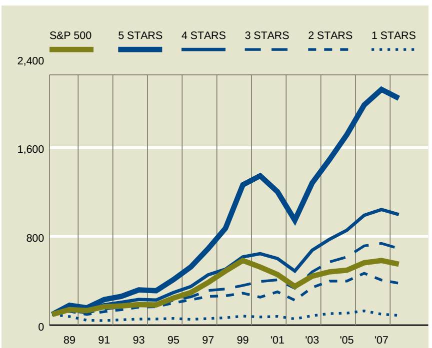
STANDARD &POOR'S

Glossary

S&P STARS
Since January 1, 1987, Standard and Poor's Equity Research Services has ranked a universe of common stocks based on a given stock's potential for future performance. Under proprietary STARS (STock Appreciation Ranking System), S&P equity analysts rank stocks according to their individual forecast of a stock's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350 Index or S&P 500 Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective.

STARS Average Annual Performance



S&P 12-Month Target Price
The S&P equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Investment Style Classification
Characterizes the stock as Growth or Value, and indicates its capitalization level. Growth is evaluated along three dimensions (earnings, sales and internal growth), while Value is evaluated along four dimensions (book-to-price, cash flow-to-price, dividend yield and sale-to-price). Growth stocks score higher than the market average on growth dimensions and lower on value dimensions. The reverse is true for Value stocks. Certain stocks are classified as Blend, indicating a mixture of growth and value characteristics and cannot be classified as purely growth or value.

Qualitative Risk Assessment
The S&P equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices.

Quantitative Evaluations
In contrast to our qualitative STARS recommendations, which are assigned by S&P analysts, the quantitative evaluations described below are derived from proprietary arithmetic models. These computer-driven evaluations may at times contradict an analyst's qualitative assessment of a stock. One primary reason for this is that different measures are used to determine each. For instance, when designating STARS, S&P analysts assess many factors that cannot be reflected in a model, such as risks and opportunities, management changes, recent competitive shifts, patent expiration, litigation risk, etc.

S&P Quality Ranking
Growth and stability of earnings and dividends are deemed key elements in establishing S&P's Quality Rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank
Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process.A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stocks with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

S&P Fair Value Calculation
The price at which a stock should trade at, according to S&P's proprietary quantitative model that incorporates both actual and estimated variables (as opposed to only actual variables in the case of S&P Quality Ranking). Relying heavily on a company's actual return on equity, the S&P Fair Value model places a value on a security based on placing a formula-derived price-to-book multiple on a company's consensus earnings per share estimate.

Insider Activity
Gives an insight as to insider sentiment by showing whether directors, officers and key employees who have proprietary information not available to the general public, are buying or selling the company's stock during the most recent six months.

Funds From Operations FFO
FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Investability Quotient (IQ)
The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

S&P's IQ Rationale:
Southern Union

	Raw Score	Max Value
Proprietary S&P Measures	54	115
Technical Indicators	29	40
Liquidity/Volatility Measures	16	20
Quantitative Measures	7	75
IQ Total	**106**	**250**

Volatility
Rates the volatility of the stock's price over the past year.

Technical Evaluation
In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank
Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS)
An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups, 68 Industries, and 154 Sub-Industries.

S&P Issuer Credit Rating
A Standard & Poor's Issuer Credit Rating is a current opinion of an obligor's overall financial capacity (its creditworthiness) to pay its financial obligations. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. In addition, it does not take into account the creditworthiness of the guarantors, insurers, or other forms of credit enhancement on the obligation. The Issuer Credit Rating is not a recommendation to purchase, sell, or hold a financial obligation issued by an obligor, as it does not comment on market price or suitability for a particular investor. Issuer Credit Ratings are based on current information furnished by obligors or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any Issuer Credit Rating and may, on occasion, rely on unaudited financial information. Issuer Credit Ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or based on other circumstances.

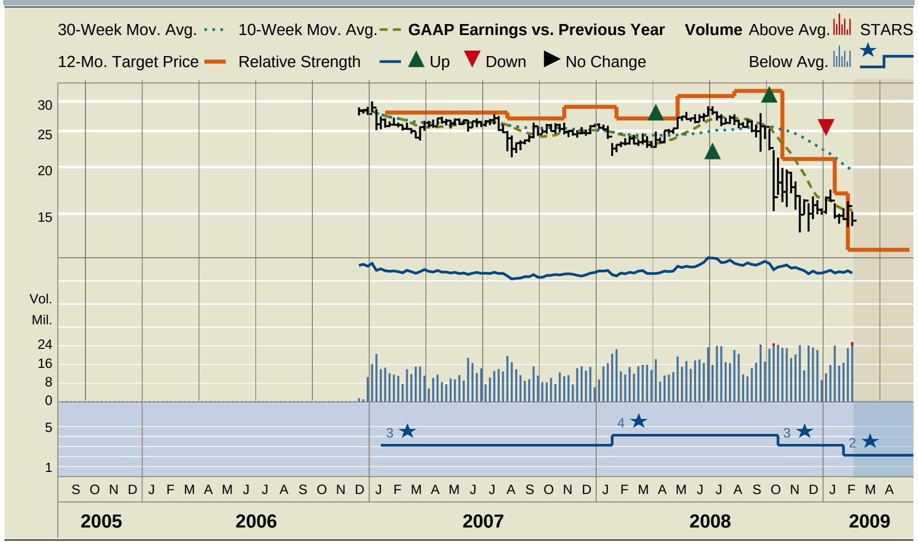
Price Performance



Options: ASE, CBOE, Ph

Analysis prepared by **Tanjila Shafi** on February 10, 2009, when the stock traded at **$ 14.65**.

Highlights

- We expect revenues in 2009 to decline due to lower volume, reflecting recessionary headwinds. By the end of 2008, a number of key projects in the U.S. Transmission segment were placed in service, including Gulfstream Phase III, Egan Storage Cavern 4, Southeast Supply Header, Maritimes & Northeast Phase IV, Glade Spring Expansion, TIME II, and Ramapo. By the end of the first quarter of 2009, the company expects that Phase III of the Dawn-Trafalgar expansion and the Dawn Storage Deliverability project should come on line. We expect that the new projects will add $130 million in EBIT this year.

- The company allocated approximately $1.8 billion for expansion capital expenditures during 2008. We believe it will incur $500 million in capital expenditures in 2009.

- SE declared a cash distribution of $0.25 per unit for the 2008 fourth quarter, 13.6% above the 2007 fourth quarter distribution of $0.22. For 2009, we see distributions of $1.00.

Investment Rationale/Risk

- Our recent downgrade to a sell recommendation is based on our concern that the challenging operating climate will limit earnings in 2009. We see volumes moderating in 2009 due to the recessionary environment. SE was formed on January 2, 2007, after Duke Energy spun off its natural gas businesses. SE operates a large and diverse portfolio of natural gas transportation and storage assets in the U.S. and Canada. In July 2007, SE spun off some assets into Spectra Energy Partners L.P. (SEP, $20) and received $345 million.

- Risks to our recommendation and target price include an acceleration of natural gas production growth, increases in long-term natural gas prices, and a favorable credit environment.

- Our 12-month target price of $12 is a blend of 11X our 2009 EPS estimate, 9.0X enterprise value-to-EBITDA, based on our 2009 estimate, and a target yield of 8.5% on projected dividends, in line with peers.

Qualitative Risk Assessment

LOW	**MEDIUM**	HIGH

Our risk assessment reflects the company's large market capitalization and the lower risk inherent in its regulated gas transmission and distribution businesses, offset by its investments in higher-risk gas gathering and processing businesses.

The McGraw-Hill Companies

Spectra Energy Corp

STANDARD &POOR'S

Business Summary February 10, 2009

CORPORATE OVERVIEW. SE owns and operates a diversified portfolio of natural gas-related energy assets and is primarily a natural gas midstream company. The company operates in three areas of the natural gas industry: transmission and storage, distribution, and gathering and processing. SE also owns a natural gas distribution company, Union Gas, and participates in a 50%-owned joint venture, DCP Midstream.

MARKET PROFILE. The company manages its business in four segments: U.S. Transmission, Distribution, Western Canada Transmission and Processing, and Field Services.

The U.S. Transmission segment provides transportation and storage of natural gas for customers in the eastern and southeastern U.S. and the Maritime provinces of Canada. The segment has 12,915 miles of natural gas pipelines and 85 billion cubic feet (bcf) of storage capacity. The company's largest pipeline, Texas Eastern Transmission, is 9,040 miles, has a capacity of 6.2 billion cubic feet per day (bcf/d), and has 75.1 bcf of storage capacity. The pipeline connects Gulf Coast gas supply to demand centers in the Northeast, as well as to the East Tennessee Natural Gas and Algonquin Gas Transmission pipelines. The Algonquin pipeline can transport 1.9 bcf/d and connects to both the Texas Eastern and Maritimes and Northeast pipelines to provide gas to areas between Boston, MA, and northern New Jersey. The East Tennessee pipeline brings gas from the Texas Eastern pipeline through eastern Tennessee as far as Roanoke, VA. The 50%-owned Gulfstream pipeline brings natural gas into the fast growing state of Florida. The Maritimes and Northeast pipeline provides Sable Island area Canadian natural gas down into the Boston area and helps to supply the Algonquin pipeline. The segment also operates other pipeline interconnection assets and storage assets.

The Distribution segment provides retail natural gas distribution in Ontario, Canada, as well as natural gas transportation and storage services to other utilities and energy market participants in Ontario, Quebec and the U.S. Union Gas is the company's regulated transmission and distribution subsidiary, serving 1.3 million customers in 400 communities throughout Ontario, Canada. Union Gas distributes its gas through 21,600 miles of distribution pipelines and owns 2,750 miles of transmission pipelines and 150 bcf of high deliverability storage.

The Western Canada Transmission and Processing segment provides transportation, gathering and processing of natural gas and natural gas liquid (NGL) extraction, fractionation, transportation, storage and marketing to customers in western Canada and the northern U.S. It owns and operates BC Field Services, BC Pipeline and Natural Gas Liquids. BC Field Services operates 1,800 miles of gas gathering pipelines and five natural gas processing facilities with a capacity of about 2.0 bcf/d for delivery to the western Canadian, Midwestern U.S. and U.S. Pacific Northwest regions. BC Pipeline stretches 1,600 miles, has a capacity of 1.9 bcf/d, and connects to four other pipelines. The pipeline transports gas gathered in British Columbia to the U.S. border and points in between. Natural Gas Liquids has a natural gas liquids (NGLs) extraction capacity of 2.4 bcf/d and a fractionation capacity of 55,000 b/d. The NGLs can be transported through 580 miles of pipelines to major NGL sales pipelines in Canada and the U.S. The NGLs can also be stored in an underground facility with a capacity of 4 million barrels and seven trucking and three rail shipping facilities. WCT also has a 46% stake in the publicly traded Spectra Energy Income Fund and operates the natural gas gathering and processing facilities owned by the fund.

The Field Services segment gathers, compresses, processes, transports, trades, markets and stores NGLs. It conducts operations primarily through DCP Midstream, a 50%-owned joint venture with ConocoPhillips. DCP gathers raw natural gas through 56,000 miles of gathering pipe and processes it through 53 owned or operated plants. DCP also owns 10 fractionating facilities.

CORPORATE STRATEGY. SE aims to create shareholder value through a three-pronged approach. First, the company plans to emphasize cost control, while maintaining its emphasis on growing customer and other external stakeholder relationships. The company has said it plans to utilize tax efficient financial structures, such as master limited partnerships, to improve its cost of capital. Second, the company plans to invest about $1.0 billion annually to build organic and greenfield expansion projects. Finally, the company intends to pursue accretive third-party acquisitions.

FINANCIAL TRENDS. As of December 31, 2007, SE had a long-term debt-to-total capitalization ratio of 55%, which is at the low end of management's targeted ratio of 55% to 60%. Based on the company's cash and cash equivalents and its ability to draw on large revolving credit facilities, we believe liquidity is ample.

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

February 5, 2009
12:12 pm ET ... S&P DOWNGRADES OPINION ON SHARES OF SPECTRA ENERGY TO SELL FROM HOLD (SE 15.03**): SE posts Q4 earnings per unit of $0.28 vs. $0.46, missing our $0.40 estimate. The shortfall reflects lower volumes, higher costs, a decline in spreads, and a weaker Canadian dollar. We are lowering our 2009 earnings per unit estimate to $1.15 from $1.78, to reflect the macroeconomic headwinds and company guidance. We are also reducing our 12-month target price to $12 from $17, based on a blend of 11X our 2009 earnings estimate, a 9.0X enterprise value-to-our '09 EBITDA estimate, and a target yield of 8.4% on projected dividends. /T.Shafi

January 14, 2009
03:25 pm ET ... S&P MAINTAINS HOLD OPINION ON SHARES OF SPECTRA ENERGY (SE 14.8***): Ahead of Q4 report scheduled for February 5, we are decreasing our earnings per unit forecast to $0.40 from $0.46. We believe that the recessionary environment will reduce volumes and impact the company's revenue growth. We are lowering our '09 earnings per unit estimate to $1.78 from $2.05, reflecting macroeconomic headwinds. We are lowering our 12-month target price to $17 from $21, based on a blend of 9X our '09 EPS forecast, 8.5X enterprise value-to-our '09 EBITDA estimate, and a target yield of 5.3% on projected dividends. /T.Shafi

December 18, 2008
Spectra Energy Corp. has announced the senior executive team that will lead the corporation following current President and CEO Fred Fowler's retirement at the end of 2008. In addition to the previously announced appointment of Greg Ebel as President and CEO, Dorothy Ables, currently VP of Audit Services, will take on a new role of Chief Administrative Officer, John Arensdorf, currently VP of Investor Relations, will become Chief Communications Officer, Doug Bloom will continue in his current role as President of Spectra Energy's Western Canadian business, Julie Dill will continue as President of Union Gas, Spectra Energy's Ontario distribution business, Mark Fiedorek continues as Group VP, US Southeast Transmission and Storage, Alan Harris, currently Chief Development Officer, will take on additional responsibilities as Chief Development and Operations Officer, and Bill Yardley will continue as Group VP, US Northeast Transmission.

December 15, 2008
Spectra Energy Corp. announced the appointment of John Patrick (Pat) Reddy as its new chief financial officer. Reddy, currently senior vice president and CFO with Atmos Energy Corporation in Dallas will join Spectra Energy on January 1, 2009. Reddy has more than 28 years of finance experience in the energy industry. Prior to his current role, Reddy held the position of vice president, corporate development, and treasurer, with Atmos Energy Corporation, where he has been since 1998.

December 3, 2008

Spectra Energy Corp

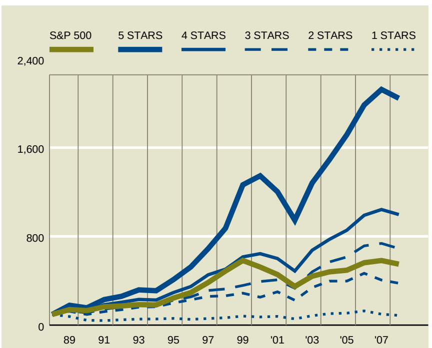
Glossary

S&P STARS
Since January 1, 1987, Standard and Poor's Equity Research Services has ranked a universe of common stocks based on a given stock's potential for future performance. Under proprietary STARS (STock Appreciation Ranking System), S&P equity analysts rank stocks according to their individual forecast of a stock's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350 Index or S&P 500 Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective.

STARS Average Annual Performance



S&P 12-Month Target Price
The S&P equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Investment Style Classification
Characterizes the stock as Growth or Value, and indicates its capitalization level. Growth is evaluated along three dimensions (earnings, sales and internal growth), while Value is evaluated along four dimensions (book-to-price, cash flow-to-price, dividend yield and sale-to-price). Growth stocks score higher than the market average on growth dimensions and lower on value dimensions. The reverse is true for Value stocks. Certain stocks are classified as Blend, indicating a mixture of growth and value characteristics and cannot be classified as purely growth or value.

Qualitative Risk Assessment
The S&P equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices.

Quantitative Evaluations
In contrast to our qualitative STARS recommendations, which are assigned by S&P analysts, the quantitative evaluations described below are derived from proprietary arithmetic models. These computer-driven evaluations may at times contradict an analyst's qualitative assessment of a stock. One primary reason for this is that different measures are used to determine each. For instance, when designating STARS, S&P analysts assess many factors that cannot be reflected in a model, such as risks and opportunities, management changes, recent competitive shifts, patent expiration, litigation risk, etc.

S&P Quality Ranking
Growth and stability of earnings and dividends are deemed key elements in establishing S&P's Quality Rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank
Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process.A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stocks with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

S&P Fair Value Calculation
The price at which a stock should trade at, according to S&P's proprietary quantitative model that incorporates both actual and estimated variables (as opposed to only actual variables in the case of S&P Quality Ranking). Relying heavily on a company's actual return on equity, the S&P Fair Value model places a value on a security based on placing a formula-derived price-to-book multiple on a company's consensus earnings per share estimate.

Insider Activity
Gives an insight as to insider sentiment by showing whether directors, officers and key employees who have proprietary information not available to the general public, are buying or selling the company's stock during the most recent six months.

Funds From Operations FFO
FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Investability Quotient (IQ)
The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

S&P's IQ Rationale:
Spectra Energy

	Raw Score	Max Value
Proprietary S&P Measures	35	115
Technical Indicators	29	40
Liquidity/Volatility Measures	14	20
Quantitative Measures	16	75
IQ Total	**94**	**250**

Volatility
Rates the volatility of the stock's price over the past year.

Technical Evaluation
In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank
Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS)
An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups, 68 Industries, and 154 Sub-Industries.

S&P Issuer Credit Rating
A Standard & Poor's Issuer Credit Rating is a current opinion of an obligor's overall financial capacity (its creditworthiness) to pay its financial obligations. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. In addition, it does not take into account the creditworthiness of the guarantors, insurers, or other forms of credit enhancement on the obligation. The Issuer Credit Rating is not a recommendation to purchase, sell, or hold a financial obligation issued by an obligor, as it does not comment on market price or suitability for a particular investor. Issuer Credit Ratings are based on current information furnished by obligors or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any Issuer Credit Rating and may, on occasion, rely on unaudited financial information. Issuer Credit Ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or based on other circumstances.

Exchange Type
ASE - American Stock Exchange; NNM - Nasdaq National Market; NSC - Nasdaq SmallCap; NYSE - New York Stock Exchange; BB - OTC Bulletin Board; OT - Over-the-Counter; TO - Toronto Stock Exchange.

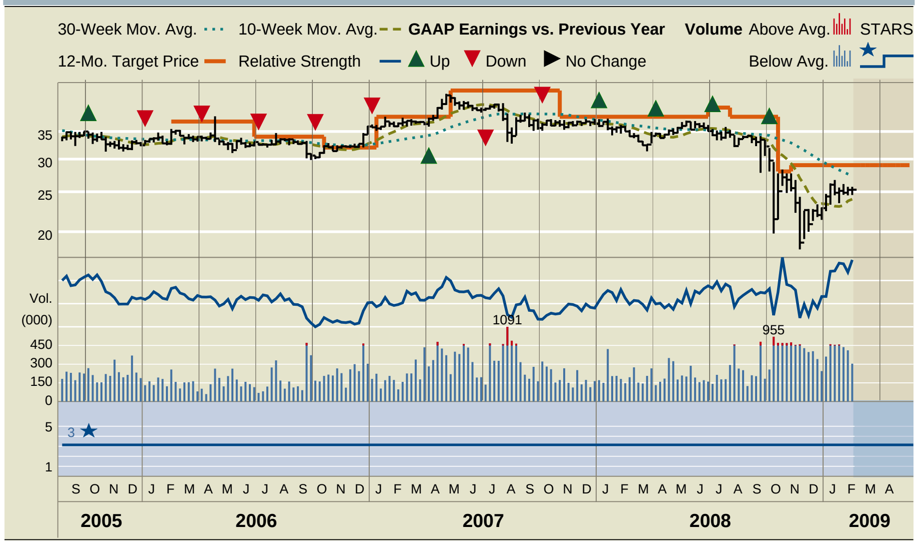
Price Performance



Analysis prepared by **Tanjila Shafi** on January 12, 2009, when the stock traded at **$ 25.68**.

Highlights

- We believe that the company's 100% interest in Tuscarora Gas Transmission Company will add stable cash flow and earnings in 2009 as this segment generates revenues through long-term contracts and is generally not affected by changing natural gas fundamentals. We see the company's 46.45% equity interest in Great Lakes Gas Transmission L.P. benefiting from solid demand for its services.

- We see the company's expansion projects adding to its earnings growth in 2009 and 2010. Its Northern Border interest started construction on the Des Plaines Project in September 2008, with the facilities expected to come online in early 2009. The company's Chicago IV Expansion Project will provide increased downstream capacity, with service expected in 2010.

- TCLP declared a cash distribution of $0.705 per unit for the 2008 third quarter, 6.8% above the 2007 third quarter distribution of $0.66 and the same as last quarter's distribution. Our cash distribution estimate for 2009 is $2.82.

Investment Rationale/Risk

- We think TCLP needs to continue making new acquisitions to maintain its earnings growth. During 2007, the partnership more than doubled its pipeline assets with the purchase of an equity interest in the Great Lakes pipeline. Even so, we believe higher financing costs and tariff rate pressures on the Northern Border Pipeline will pressure profit margins. The company has what we see as a solid balance sheet with a debt-to-capitalization ratio of 38%. And we believe that the company's distribution is adequately covered, providing, by our analysis, the potential for positive total return over the next 12 months.

- Risks to our recommendation and target price include sharply higher interest rates, and a decline in economic activity that reduces demand for energy commodities and thus drives transportation volumes lower.

- Our 12-month target price of $29 is based on a target yield of 9.7% and an estimated 12-month forward distribution of $2.82, in line with its peers.

Qualitative Risk Assessment

LOW	MEDIUM	HIGH

Our risk assessment reflects our view of the partnership's stable financial position and the maturity of principal assets and cash flow produced, partially offset by corporate governance issues inherent in the limited partnership structure.

TC PipeLines LP

STANDARD &POOR'S

Business Summary January 12, 2009

CORPORATE OVERVIEW. TC Pipelines LP was formed in 1998 to acquire, own and participate in the management of U.S.-based pipeline assets. TC Pipelines GP, Inc., an indirect wholly owned subsidiary of TransCanada Corporation (TRP), is the general partner of the partnership.

TCLP owns a 50% general partner interest in Northern Border Pipeline Company (NBP), with the remaining 50% general partner interest held by ONEOK Partners, L.P. (OKS), a publicly traded partnership controlled by ONEOK, Inc. (OKE). TRP holds a minority general partner interest in NBP that entitles it to 12.3% of the voting power of NBP. TCLP also owns a 99% general partnership interest in Tuscarora Gas Transmission Company, including a 50% interest acquired on December 19, 2006 for $137 million. TCLP had acquired a 49% interest from TCPL Tuscarora Ltd., an indirect subsidiary of TRP, in September 2000. TRP has the remaining 1% interest in Tuscarora.

On February 22, 2007, TCLP acquired a 46.45% interest in Great Lakes Gas Transmission L.P. from El Paso Corp., for $942 million, including the assumption of $209 million of debt.

PRIMARY BUSINESS DYNAMICS. NBP owns a 1,249-mile interstate pipeline system with capacity of 2.4 billion cubic feet per day that transports natural gas from the Montana-Saskatchewan border to natural gas markets in the U.S. Midwest. NBP had revenues of $309.4 million and net income of $124.1 million in 2007. The primary source of gas transported on the system is in the Western Canadian Sedimentary Basin located in the provinces of Alberta, Saskatchewan, and British Columbia. TCLP estimates that in 2006, the pipeline transported about 20% of the total amount of natural gas imported into the U.S. from Canada. In April 2006, NBP's Chicago III Expansion Project went into service, adding about 130 million cubic feet per day (MMcf/d), or 6%, to its capacity from Harper, Iowa to Chicago. Capacity is fully subscribed under long-term contracts with terms of 5 1/2 to 10 years.

Tuscarora owns a 240-mile, 20-inch diameter, U.S. interstate pipeline system with a subscribed capacity of approximately 180 MMcf/d that originates at an interconnection point with existing facilities of Gas Transmission Northwest Corporation, a wholly owned subsidiary of TransCanada, near Malin, Oregon, and runs southeast through northeastern California and northwestern Nevada. The Tuscarora pipeline system terminates near Wadsworth, Nevada. Tuscarora had revenues of $27.2 million and net income of $11.6 million in 2007.

Great Lakes Gas Transmission L.P. owns a 2,115-mile U.S. interstate pipeline system with capacity of 2.6 billion cubic feet per day, which receives natural gas from TransCanada at the Canadian border near Emerson, Manitoba and serves markets in Minnesota, Northern Wisconsin, Michigan, and eastern Canada. The pipeline reported revenues of $236.2 million and net income of $105.5 million in 2007. TransCanada is the operator of each pipeline.

Shipping rates are regulated by the Federal Energy Regulatory Commission (FERC). NBP serves customers in North and South Dakota, Minnesota, Iowa, Illinois and Indiana. NBP's customers include natural gas producers, marketers, industrial facilities, local distribution companies and electric power generating plants.

Competition among natural gas pipelines is based primarily on transportation charges and proximity to natural gas supply areas and markets. NBP's interstate natural gas pipeline competes with other pipelines that transport Western Canadian natural gas to markets in the West, Midwest and East in North America. NBP also competes with other pipelines that provide access to natural gas storage facilities, alternate supply basins, such as the Rockies, the Mid-Continent, the Permian Basin and the Gulf Coast, and liquefied natural gas.

IMPACT OF MAJOR DEVELOPMENTS. On April 6, 2006, the partnership completed the acquisition of an additional 20% general partnership interest in NBP for approximately $297 million plus a $10 million transaction fee, bringing the partnership's total interest to 50%. Through the acquisition, TCLP indirectly assumed about $120 million of NBP debt. The partnership funded the transaction through a bridge loan credit facility and intends to refinance the loan with a combination of equity and debt. In connection with this transaction, a subsidiary of TransCanada became the operator of NBP in April 2007.

FINANCIAL TRENDS. The partnership uses the equity method of accounting for its investments in NBP and Great Lakes; following the acquisition of an additional 49% interest in Tuscarora, the partnership now consolidates its interest in Tuscarora. In our opinion, TCLP has been able to deliver stable, sustainable cash flow growth, while maintaining a relatively low-risk profile.

TCLP in February 2007 sold a private placement of 17.4 million common units at $34.57 each for gross proceeds of $600 million, which closed concurrently with the acquisition of Great Lakes L.P.

Quantitative Evaluations

S&P Fair Value Rank 4

1	2	3	4	5

LOWEST — HIGHEST

Based on S&P's proprietary quantitative model, stocks are ranked from most overvalued (1) to most undervalued (5).

Fair Value Calculation $27.10

Analysis of the stock's current worth, based on S&P's proprietary quantitative model suggests that TCLP is slightly undervalued by $1.81 or 7.2%.

Investability Quotient Percentile 79

LOWEST = 1 — HIGHEST = 100

TCLP scored higher than 79% of all companies for which an S&P Report is available.

Volatility LOW | AVERAGE | HIGH

Technical Evaluation BULLISH

Since February, 2009, the technical indicators for TCLP have been BULLISH.

Insider Activity NA — UNFAVORABLE | NEUTRAL | FAVORABLE

TC PipeLines LP

STANDARD
&POOR'S

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

January 8, 2009
03:38 pm ET ... S&P MAINTAINS HOLD RECOMMENDATION ON LP UNITS OF TC PIPELINES (TCLP 25.07***): Ahead of Q4 results, we are reducing our Q4 earnings per unit forecast to $0.65 from $0.70, to reflect higher operating expenses expected in the company's Great Lakes segment. We see TCLP's Tuscarora segment benefiting from increased transmission revenues from a new contract in service. We are trimming our '09 earnings per unit estimate to $2.59 from $2.61 on weakening macro fundamentals. But we maintain our 12-month target price at $29, based on our targeted yield of 9.7% on estimated 12-month forward distributions. /T.Shafi

October 31, 2008
12:27 pm ET ... S&P MAINTAINS HOLD RECOMMENDATION ON SHARES OF LP UNITS OF TC PIPELINES (TCLP 26.27***): TCLP posts Q3 earnings per unit of $0.72 vs. $0.64, ahead of our $0.65 estimate. Equity income increases in the company's Northern Border and Tuscarora segments more than offset a decline in equity income from its Great Lakes segment. Financial charges were down in Q3 on declines in interest rates and average debt outstanding. Based on Q3 results, we are increasing our '08 earnings per unit to $2.78 from $2.71. We also raise our target price to $29 from $28, based on our targeted yield of 9.7% on estimated 12-month forward distributions. /T.Shafi

October 15, 2008
02:29 pm ET ... S&P MAINTAINS HOLD RECOMMENDATION ON SHARES OF LP UNITS OF TC PIPELINES (TCLP 24.8***): Ahead of Q3 report, we continue to forecast earnings per unit for the quarter at $0.65 vs. year-ago $0.64. We believe the company will benefit from improving income at its Tuscarora and Great Lakes pipelines interests. However, we do not expect the company's Northern Border segment to turn around in Q3, based on higher operating costs. We are maintaining our '08 earnings per unit estimate at $2.71. But we reduce our 12-month target price to $28 from $38, based on a target yield of 10% on our estimated 12-month forward distributions. /T.Shafi

July 31, 2008
11:17 am ET ... S&P MAINTAINS HOLD RECOMMENDATION ON LP UNITS OF TC PIPELINES (TCLP 34.66***): TCLP posts Q2 earnings per unit of $0.47 vs. $0.45, below our $0.57 estimate, reflecting lower revenues than we projected. Equity income for the company's Northern Border segment fell 16% to $8.7 million, reflecting lower transmission revenues. The company raised its second quarter cash distribution to $0.705 from year-earlier $0.655. Based on Q2 results, we are lowering our '08 earnings per unit to $2.71 from $2.81. We reduce our 12-month target price by $2 to $38, based on our targeted yield of 7.4% from estimated 12-month forward distributions. /T.Shafi

June 26, 2008
02:26 pm ET ... S&P MAINTAINS HOLD RECOMMENDATION ON SHARES OF LP UNITS OF TC PIPELINES (TCLP 35.68***): Ahead of Q2 results, we still see earnings per unit of $0.57 vs. year-ago $0.45. We believe that earnings will benefit from contributions from both TCLP's Northern Border Pipeline and Great Lakes operations, reflecting improving volumes. We also expect the Tuscarora pipeline expansion, which went into service on April 1, 2008, to add to revenue growth. We are maintaining our '08 earnings per unit estimate of $2.81. We are increasing our 12-month target price by $2 to $40, which is based on our targeted yield of 7.0% on estimated 12-month forward distributions. /T.Shafi

A company's earnings outlook plays a major part in any investment decision. Standard & Poor's organizes the earnings estimates of over 2,300 Wall Street analysts, and provides their consensus of earnings over the next two years. This graph shows the trend in analyst estimates over the past 15 months.

Wall Street Consensus vs. Performance

For fiscal year 2008, analysts estimate that TCLP will earn $2.67. For the 3rd quarter of fiscal year 2008, TCLP announced earnings per share of $0.72, representing 27% of the total annual estimate. For fiscal year 2009, analysts estimate that TCLP's earnings per share will decline by 4% to $2.57.

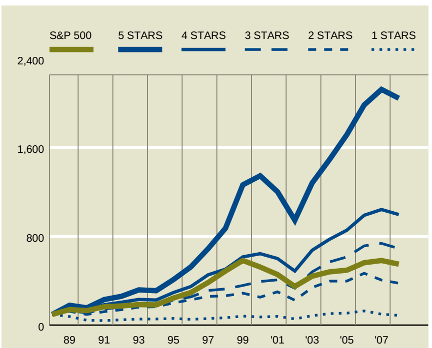
STANDARD &POOR'S

Glossary

S&P STARS

Since January 1, 1987, Standard and Poor's Equity Research Services has ranked a universe of common stocks based on a given stock's potential for future performance. Under proprietary STARS (STock Appreciation Ranking System), S&P equity analysts rank stocks according to their individual forecast of a stock's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350 Index or S&P 500 Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective.

STARS Average Annual Performance



S&P 12-Month Target Price

The S&P equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Investment Style Classification

Characterizes the stock as Growth or Value, and indicates its capitalization level. Growth is evaluated along three dimensions (earnings, sales and internal growth), while Value is evaluated along four dimensions (book-to-price, cash flow-to-price, dividend yield and sale-to-price). Growth stocks score higher than the market average on growth dimensions and lower on value dimensions. The reverse is true for Value stocks. Certain stocks are classified as Blend, indicating a mixture of growth and value characteristics and cannot be classified as purely growth or value.

Qualitative Risk Assessment

The S&P equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices.

Quantitative Evaluations

In contrast to our qualitative STARS recommendations, which are assigned by S&P analysts, the quantitative evaluations described below are derived from proprietary arithmetic models. These computer-driven evaluations may at times contradict an analyst's qualitative assessment of a stock. One primary reason for this is that different measures are used to determine each. For instance, when designating STARS, S&P analysts assess many factors that cannot be reflected in a model, such as risks and opportunities, management changes, recent competitive shifts, patent expiration, litigation risk, etc.

S&P Quality Ranking

Growth and stability of earnings and dividends are deemed key elements in establishing S&P's Quality Rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank

Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process.A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stocks with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

S&P Fair Value Calculation

The price at which a stock should trade at, according to S&P's proprietary quantitative model that incorporates both actual and estimated variables (as opposed to only actual variables in the case of S&P Quality Ranking). Relying heavily on a company's actual return on equity, the S&P Fair Value model places a value on a security based on placing a formula-derived price-to-book multiple on a company's consensus earnings per share estimate.

Insider Activity

Gives an insight as to insider sentiment by showing whether directors, officers and key employees who have proprietary information not available to the general public, are buying or selling the company's stock during the most recent six months.

Funds From Operations FFO

FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Investability Quotient (IQ)

The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

S&P's IQ Rationale:
TC Pipelines L.P.

	Raw Score	Max Value
Proprietary S&P Measures	0	115
Technical Indicators	34	40
Liquidity/Volatility Measures	13	20
Quantitative Measures	67	75
IQ Total	**114**	**250**

Volatility

Rates the volatility of the stock's price over the past year.

Technical Evaluation

In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank

Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS)

An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups, 68 Industries, and 154 Sub-Industries.

S&P Issuer Credit Rating

A Standard & Poor's Issuer Credit Rating is a current opinion of an obligor's overall financial capacity (its creditworthiness) to pay its financial obligations. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. In addition, it does not take into account the creditworthiness of the guarantors, insurers, or other forms of credit enhancement on the obligation. The Issuer Credit Rating is not a recommendation to purchase, sell, or hold a financial obligation issued by an obligor, as it does not comment on market price or suitability for a particular investor. Issuer Credit Ratings are based on current information furnished by obligors or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any Issuer Credit Rating and may, on occasion, rely on unaudited financial information. Issuer Credit Ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or based on other circumstances.

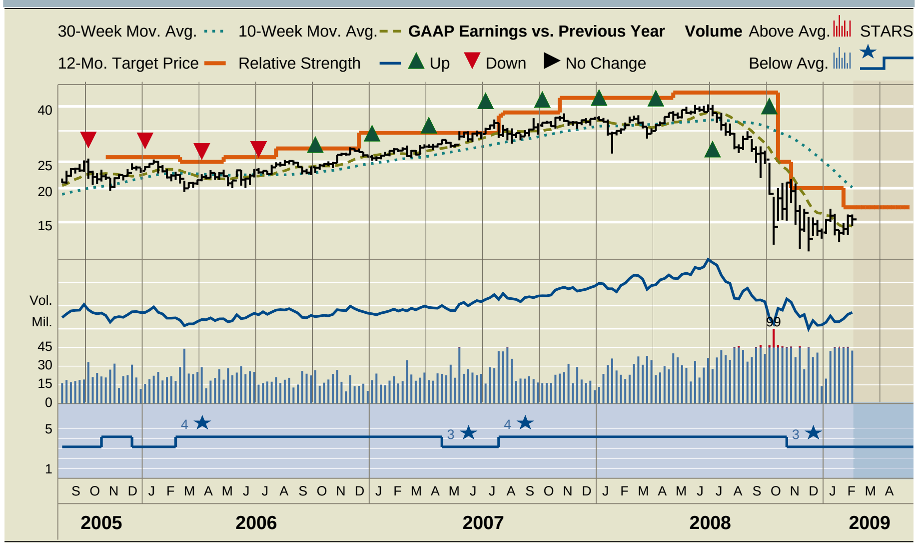
Price Performance



Options: ASE, CBOE, P

Analysis prepared by **Michael Kay** on February 03, 2009, when the stock traded at **$ 13.75**.

Highlights

- We see production growth of 19% in 2008, but have reduced forecasts to 8% growth in 2009 as we assume lower capital spending due to weaker natural gas prices. Pipelines are seeing higher returns from the Transco system and Rockies capacity expansions. We expect E&P to benefit from the development of drilling prospects, especially in the Piceance and Powder River Basins, but we see lower prices impeding segment profits in 2009. WMB sees hurricane damage at midstream facilities cutting fourth quarter profit by $10-$20 million.
- Given volatile markets, we expect WMB to limit asset dropdowns into master limited partnerships Williams Partners (WPZ: $16) and Williams Pipeline Partners (WMZ: $16). WMB's capital budget for 2009 is $2.8-$3.1 billion, down from $3.375-$3.575 billion in 2008. We see E&P spending of about $1.3 billion in 2009, down from about $2 billion in 2008.
- We see 2008 EPS of $2.12, up 25%, on higher natural gas prices and NGL margins. We see lower NGL margins and natural gas prices leading to a 35% drop in 2009 EPS, to $1.38. In July 2008, WMB completed a $1 billion stock repurchase program.

Investment Rationale/Risk

- We expect WMB to expand drilling in the highly active Piceance Basin and the Barnett Shale, a significant inventory of acreage which, if developed, could boost proven reserves by well over 50%. We view positively WMB's stable fee-based business and regulated assets, rising oil and gas reserves, and what we view as its stable liquidity position. The company is evaluating structural changes to enhance shareholder value, and should have a specific plan early in 2009. WMB has noted the potential of splitting one or more of its primary business units.
- Risks to our recommendation and target price include sharply higher interest rates, slower than projected economic growth, a sustained decline in natural gas prices, and lower rates for FERC regulated pipelines.
- Given declining economic forecasts, and the ongoing credit crisis, we expect the market to discount unproven reserve potential, and we now value WMB on proven reserves. We also see lower company guidance for 2009. Our 12-month target price of $17 reflects an enterprise value to projected 2009 EBITDA multiple of 4.5X and our NAV based on WMB's proved reserves only of $20.

Qualitative Risk Assessment

LOW	MEDIUM	**HIGH**

Our risk assessment reflects our belief that although WMB has an E&P segment that can be very volatile, its business portfolio is overweighted in regulated industries with largely fixed returns.

STANDARD &POOR'S

Business Summary February 03, 2009

CORPORATE OVERVIEW. WMB primarily finds, produces, gathers, and processes and transports natural gas. Operations are concentrated in the Pacific Northwest, Rocky Mountains, Gulf Coast, Southern California and Eastern Seaboard.

In February 2003, WMB announced a business strategy focused on migrating to an integrated natural gas business comprised of a smaller portfolio of natural gas businesses, reducing debt and increasing liquidity via asset sales, strategic levels of financing, and reductions in operating costs.

CORPORATE STRATEGY. WMB has transitioned its corporate strategy toward aggressively focusing on the market in the segments in which it perceives a sustainable competitive advantage, primarily its exploration and production (E&P) segment and its midstream segment. WMB has about 4.14 Tcfe of proved reserves (99% natural gas, 54% proved developed), with natural gas produced from tight sands formations and coal bed methane reserves in the Piceance (69% of total reserves at December 31, 2007), San Juan (14%), Powder River (10%), Midcontinent and other basins (7%).

The midstream division provides natural gas gathering, processing and treating, and natural gas liquid fractionation, storage and marketing, with primary service areas concentrated in the western states of Wyoming, Colorado and New Mexico, and the onshore and offshore shelf and deepwater areas in and around the Gulf Coast states of Texas, Louisiana, Mississippi and Alabama. Geographically, midstream natural gas assets are positioned to maximize commercial and operational synergies with other WMB assets (e.g., offshore gathering and processing assets attach and process or condition natural gas supplies delivered to the Transco pipeline; WMB gathering and processing facilities in the San Juan basin handle about 80% of the group's wellhead production in the basin).

The gas pipeline division has 14,200 miles of pipeline, with total annual throughput of 2,700 trillion BTUs, including the Transcontinental Gas Pipeline (Transco) and the Northwest Pipeline. Each pipeline system operates under Federal Energy Regulatory Commission (FERC) approved tariffs that establish rates, cost recovery mechanisms, and service terms and conditions. The established rates are a function of WMB's cost of providing services, including a "reasonable" return on invested capital (ROIC).

IMPACT OF MAJOR DEVELOPMENTS. In June 2006, WMB reached an agreement in principle to settle class-action securities litigation filed on behalf of shareholders between July 24, 2000, and July 22, 2002, for a total payment of $290 million to plaintiffs. WMB funded $145 million of the settlement with cash on hand in November 2006, with the balance funded through insurance proceeds. WMB recorded a pretax charge of approximately $161 million in the second quarter of 2006.

In June 2006, Williams Partners L.P. (WPZ) acquired 25.1% of WMB's interest in Williams Four Corners LLC for $360 million. In December 2006, WPZ acquired the remaining 74.9% interest for $1.223 billion.

In January 2008, WMB announced it had placed an expansion of its Transco natural gas pipeline system into service, increasing transportation capacity into the New York City metropolitan area. The project required expanding certain existing Transco pipeline facilities in New Jersey, New York and Pennsylvania. This included adding approximately 12 miles of new 42-inch pipeline, replacing approximately 2.5 miles of existing 42-inch pipeline, adding a new compressor facility, and minor modifications to several other Transco facilities.

In March 2008, WMB and TransCanada Cop. (TRP) announced that they were evaluating the joint development of Sunstone Pipeline, a major new natural gas transmission pipeline that would move natural gas supply from the Rockies to markets in the western United States. The proposed Sunstone Pipeline is a 618-mile, 42-inch-diameter pipeline with capacity of up to 1.2 Bcfe/d. The project is proposed for service in 2011.

On July 21, 2008, WMB announced that it has agreed to purchase interests in north Texas' Barnett Shale for approximately $166 million cash. The parties expect the transaction to close in September. The assets represent an estimated 175 Bcfe of proved, probable and possible reserves on approximately 10,000 net acres. WMB has four drilling rigs operating in the Barnett Shale and plans to add two rigs in north Texas to begin developing the new acreage. The proposed acquisition also includes 41 existing producing wells with daily net production of approximately 9 MMcfe.

FINANCIAL TRENDS. We believe the company, particularly during the first three years of this decade, made missteps, mostly through an ill-advised aggressive investment in the merchant energy business. However, we think WMB correctly reassessed the relative merits of its portfolio businesses and has effectively executed its turnaround strategy thus far. In our opinion, WMB possesses a significant competitive advantage in its E&P segment by virtue of its landholdings in the Piceance Basin. WMB's business portfolio is dominated by asset-intensive and regulatory-influenced markets, which respond to strategies that lower capital costs. Its three-year average return on invested capital has been about 7%.

STANDARD &POOR'S

Sub-Industry Outlook

Our fundamental outlook for the oil and gas storage and transportation sub-industry for the next 12 months is neutral. We expect fee-based pipeline and terminal operators to continue to expand earnings well in excess of anticipated real U.S. GDP growth in 2008 and 2009. As of January, S&P estimated a 1.1% increase in U.S. real GDP for 2008 and a 2.0% decline for 2009, compared to the 2.0% rise in 2007. However, we believe that investors are concerned that the tightening credit market may hinder MLPs from raising capital to fund their expansion projects. In response to the poor credit environment and weak economy, many MLPs plan to reduce their capital expansion budgets for 2009 to preserve capital and maintain their dividends.

We believe that 2009 will be a volatile year for tanker companies. Based on industry research group Bassoe, daily spot charter rates for VLCCs were $66,000 in the fourth quarter of 2008, below the $91,000 average in the third quarter. We expect tanker rates to continue to soften in 2009, due to the expected increase in the worldwide fleet, cuts in OPEC production, and the slowing global economy. The shipping industry suffered from increased piracy in 2008. If piracy is not curtailed, many shippers will re-route their vessels, leading to longer and more expensive trips, in our opinion.

As of early January 2009, the Energy Information Administration (EIA) estimated that U.S. petroleum consumption declined 5.7% in 2008 and would fall another 2.0% in 2009, after being little changed in 2007. The EIA also estimated that natural gas consumption would increase 0.7% in 2008 and decline 1.0% in 2009. Longer term, we think drivers for new transportation infrastructure include new import terminals for liquefied natural gas, transcontinental movement of gas from the Rockies to Northeast markets, and increased oil sands production in Alberta. In our view, an active merger and acquisition environment will also remain a principal investor focus. Current yields as of February 3, 2009, on our universe of MLPs averaged about 11.0%, above the benchmark 10-year Treasury note, which was yielding about 2.83% at that time.

Year to date through February 2, the S&P Oil and Gas Storage and Transportation Index rose 1.1%, versus a 8.6% decline for the S&P 1500. In 2008, the S&P Oil and Gas Storage and Transportation Index was down 10.5%, versus a 38.2% decline for the S&P 1500. Our preference is for those issues with the potential to increase cash flow and dividend payouts over time.

S&P Analyst Research Notes and other Company News

January 29, 2009
03:23 pm ET ... S&P MAINTAINS HOLD RECOMMENDATION ON SHARES OF WILLIAMS COS (WMB 14.36***): On lower crude oil and natural gas price forecasts, we are cutting our '08 EPS estimate by $0.15 to $2.12 and '09's by $0.64 to $1.38. Because of the challenging economic environment, WMB has suspended over $350M of potential projects. Also, it expects a $700M cut in '09 drilling capex, which has led us to lower our production growth rates. On revised relative metrics blended with our proved-reserve NAV estimate of $20, we cut our target price by $3 to $17. WMB is set to report Q4 and '08 results on 2/19, and we await updates on potential structural changes it is planning. /M. Kay

November 6, 2008
WMB posts lower-than-expected $0.62 vs. $0.33 Q3 EPS. Says it is now facing a more challenging environment. Separately, board says it evaluating structural changes in co. to enhance shareholder value; expects to announce a specific direction in Q1. Among potential changes is separation of one of more of co.'s principal business units.

November 6, 2008
12:35 pm ET ... S&P DOWNGRADES RECOMMENDATION ON SHARES OF WILLIAMS COS TO HOLD FROM BUY (WMB 18.9***): Q3 EPS of $0.57, before $0.05 derivative gain, vs. $0.39, is $0.08 below our view on profit miss in exploration & production segment. WMB is mulling possible split-up and should have plan by early '09, but we see near-term difficulty on current credit and equity markets. We see reduced '09 capex on lower oil and gas prices, and we cut our '08 EPS view $0.18 to $2.27 and '09's $0.36 to $2.02. On lower relative metrics blended with proven-reserve NAV, we cut our target price by $5 to $20 and downgrade on weakening forecasts and uncertainty with respect to split-up. /M.Kay

October 10, 2008
02:21 pm ET ... S&P MAINTAINS BUY RECOMMENDATION ON SHARES OF WILLIAMS COS (WMB 13.67****): We cut our '08 EPS view by $0.51 to $2.45 and '09's by $0.75 to $2.38, on lower price realization estimates. Shares are down close to 60% in '08, to about 1X the book value, amid exposure to gas prices and the high-debt nature of pipeline business. On a weaker price deck applied to our NAV estimate, now only using proved reserves added to the value of midstream operations, we cut our target price by $20 to $25. Despite the high-risk nature of current markets, we view WMB shares as attractive given the company's stable fee-based pipeline business and growing E&P assets. /M. Kay

STANDARD &POOR'S

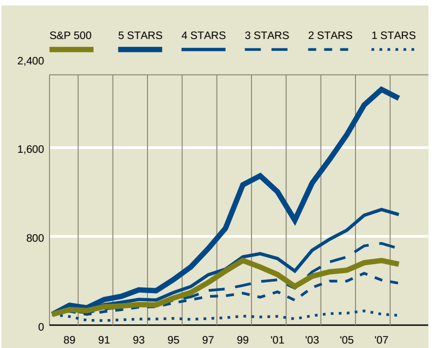
Glossary

S&P STARS
Since January 1, 1987, Standard and Poor's Equity Research Services has ranked a universe of common stocks based on a given stock's potential for future performance. Under proprietary STARS (STock Appreciation Ranking System), S&P equity analysts rank stocks according to their individual forecast of a stock's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350 Index or S&P 500 Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective.

STARS Average Annual Performance



S&P 12-Month Target Price
The S&P equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Investment Style Classification
Characterizes the stock as Growth or Value, and indicates its capitalization level. Growth is evaluated along three dimensions (earnings, sales and internal growth), while Value is evaluated along four dimensions (book-to-price, cash flow-to-price, dividend yield and sale-to-price). Growth stocks score higher than the market average on growth dimensions and lower on value dimensions. The reverse is true for Value stocks. Certain stocks are classified as Blend, indicating a mixture of growth and value characteristics and cannot be classified as purely growth or value.

Qualitative Risk Assessment
The S&P equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices.

Quantitative Evaluations
In contrast to our qualitative STARS recommendations, which are assigned by S&P analysts, the quantitative evaluations described below are derived from proprietary arithmetic models. These computer-driven evaluations may at times contradict an analyst's qualitative assessment of a stock. One primary reason for this is that different measures are used to determine each. For instance, when designating STARS, S&P analysts assess many factors that cannot be reflected in a model, such as risks and opportunities, management changes, recent competitive shifts, patent expiration, litigation risk, etc.

S&P Quality Ranking
Growth and stability of earnings and dividends are deemed key elements in establishing S&P's Quality Rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A-	Above Average	C	Lowest
B+	Average	D	In Reorganization
NR	Not Ranked		

S&P Fair Value Rank
Using S&P's exclusive proprietary quantitative model, stocks are ranked in one of five groups, ranging from Group 5, listing the most undervalued stocks, to Group 1, the most overvalued issues. Group 5 stocks are expected to generally outperform all others. A positive (+) or negative (-) Timing Index is placed next to the Fair Value ranking to further aid the selection process.A stock with a (+) added to the Fair Value Rank simply means that this stock has a somewhat better chance to outperform other stocks with the same Fair Value Rank. A stock with a (-) has a somewhat lesser chance to outperform other stocks with the same Fair Value Rank. The Fair Value rankings imply the following: 5-Stock is significantly undervalued; 4-Stock is moderately undervalued; 3-Stock is fairly valued; 2-Stock is modestly overvalued; 1-Stock is significantly overvalued.

S&P Fair Value Calculation
The price at which a stock should trade at, according to S&P's proprietary quantitative model that incorporates both actual and estimated variables (as opposed to only actual variables in the case of S&P Quality Ranking). Relying heavily on a company's actual return on equity, the S&P Fair Value model places a value on a security based on placing a formula-derived price-to-book multiple on a company's consensus earnings per share estimate.

Insider Activity
Gives an insight as to insider sentiment by showing whether directors, officers and key employees who have proprietary information not available to the general public, are buying or selling the company's stock during the most recent six months.

Funds From Operations FFO
FFO is Funds from Operations and equal to a REIT's net income, excluding gains or losses from sales of property, plus real estate depreciation.

Investability Quotient (IQ)
The IQ is a measure of investment desirability. It serves as an indicator of potential medium-to-long term return and as a caution against downside risk. The measure takes into account variables such as technical indicators, earnings estimates, liquidity, financial ratios and selected S&P proprietary measures.

S&P's IQ Rationale:
Williams Cos

	Raw Score	Max Value
Proprietary S&P Measures	54	115
Technical Indicators	26	40
Liquidity/Volatility Measures	16	20
Quantitative Measures	8	75
IQ Total	**104**	**250**

Volatility
Rates the volatility of the stock's price over the past year.

Technical Evaluation
In researching the past market history of prices and trading volume for each company, S&P's computer models apply special technical methods and formulas to identify and project price trends for the stock.

Relative Strength Rank
Shows, on a scale of 1 to 99, how the stock has performed versus all other companies in S&P's universe on a rolling 13-week basis.

Global Industry Classification Standard (GICS)
An industry classification standard, developed by Standard & Poor's in collaboration with Morgan Stanley Capital International (MSCI). GICS is currently comprised of 10 Sectors, 24 Industry Groups, 68 Industries, and 154 Sub-Industries.

S&P Issuer Credit Rating
A Standard & Poor's Issuer Credit Rating is a current opinion of an obligor's overall financial capacity (its creditworthiness) to pay its financial obligations. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. In addition, it does not take into account the creditworthiness of the guarantors, insurers, or other forms of credit enhancement on the obligation. The Issuer Credit Rating is not a recommendation to purchase, sell, or hold a financial obligation issued by an obligor, as it does not comment on market price or suitability for a particular investor. Issuer Credit Ratings are based on current information furnished by obligors or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any Issuer Credit Rating and may, on occasion, rely on unaudited financial information. Issuer Credit Ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or based on other circumstances.

Exchange Type
ASE - American Stock Exchange; NNM - Nasdaq National Market; NSC - Nasdaq SmallCap; NYSE - New York Stock Exchange; BB - OTC Bulletin Board; OT - Over-the-Counter; TO - Toronto Stock Exchange.

S&P Equity Research Services
Standard & Poor's Equity Research Services U.S. includes Standard & Poor's Investment Advisory Services LLC; Standard & Poor's Equity Research Services Europe includes Standard & Poor's LLC-London and Standard & Poor's AB (Sweden); Standard & Poor's Equity Research Services Asia includes Standard & Poor's LLC's offices in Hong Kong, Singapore and Tokyo, Standard & Poor's Malaysia Sdn Bhd, and Standard & Poor's Information Services (Australia) Pty Ltd.

Globally: As of December 31, 2008, research analysts at Standard & Poor's Equity Research Services globally have recommended 28.1% of issuers with buy recommendations, 58.3% with hold recommendations and 13.6% with sell recommendations.

★★★★★ **5-STARS (Strong Buy)**: Total return is expected to outperform the total return of a relevant benchmark, by a wide margin over the coming 12 months, with shares rising in price on an absolute basis.

★★★★☆ **4-STARS (Buy)**: Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months, with shares rising in price on an absolute basis.

★★★☆☆ **3-STARS (Hold)**: Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months, with shares generally rising in price on an absolute basis.

★★☆☆☆ **2-STARS (Sell)**: Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months, and the share price not anticipated to show a gain.

★☆☆☆☆ **1-STARS (Strong Sell)**: Total return is expected to underperform the total return of a relevant benchmark by a wide margin over the coming 12 months, with shares falling in price on an absolute basis.

Relevant benchmarks: In North America the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are generally the S&P Europe 350 Index and the S&P Asia 50 Index.

For All Regions: All of the views expressed in this research report accurately reflect the research analyst's personal views regarding any and all of the subject securities or issuers. No part of analyst compensation was, is, or will be directly or indirectly, related to the specific recommendations or views expressed in this research report.

Additional information is available upon request.

Other Disclosures

This report has been prepared and issued by Standard & Poor's and/or one of its affiliates. In the United States, research reports are prepared by Standard & Poor's Investment Advisory Services LLC ("SPIAS"). In the United States, research reports are issued by Standard & Poor's ("S&P"), in the United Kingdom by Standard & Poor's LLC ("S&P LLC"), which is authorized and regulated by the Financial Services Authority; in Hong Kong by Standard & Poor's LLC which is regulated by the Hong Kong Securities Futures Commission, in Singapore by Standard & Poor's LLC, which is regulated by the Monetary Authority of Singapore; in Japan by Standard & Poor's LLC, which is regulated by the Kanto Financial Bureau; in Sweden by Standard & Poor's AB ("S&P AB"), in Malaysia by Standard & Poor's Malaysia Sdn Bhd ("S&PM") which is regulated by the Securities Commission and in Australia by Standard & Poor's Information Services (Australia) Pty Ltd ("SPIS") which is regulated by the Australian Securities & Investments Commission; and in Korea by SPIAS, which is also registered in Korea as a cross-border investment advisory company.

The research and analytical services performed by SPIAS, S&P LLC, S&P AB, S&PM, and SPIS are each conducted separately from any other analytical activity of Standard & Poor's.

Standard & Poor's or an affiliate may license certain intellectual property or provide pricing or other services to, or otherwise have a financial interest in, certain issuers of securities, including exchange-traded investments whose investment objective is to substantially replicate the returns of a proprietary Standard & Poor's index, such as the S&P 500. In cases where Standard & Poor's or an affiliate is paid fees that are tied to the amount of assets that are invested in the fund or the volume of trading activity in the fund, investment in the fund will generally result in Standard & Poor's or an affiliate earning compensation in addition to the subscription fees or other compensation for services rendered by Standard & Poor's. A reference to a particular investment or security by Standard & Poor's and one of its affiliates is not a recommendation to buy, sell, or hold such investment or security, nor is it considered to be investment advice.

Standard & Poor's and its affiliates provide a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate or otherwise address.

S&P and/or one of its affiliates has performed services for and received compensation from this company during the past twelve months.

Gradient Opinion

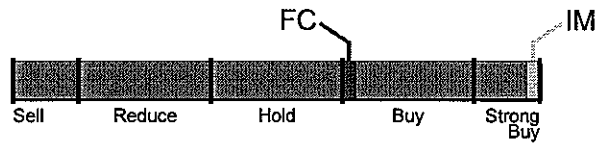
The Gradient Opinion, provided by Gradient Analytics Inc, is an empirically-derived and historically back-tested stock rating system with buy, sell, and hold opinions. To develop a rating the quantitative system analyzes a firm's earnings quality, balance sheet, and income statement, conducts technical and valuation analysis and evaluates the transactions made by the company's management and directors (i.e. insiders).

Gradient Analytics, Inc is a private independent research firm specializing in engineering institutional stock rating systems.

Analyst Recommendations

First Call Mean (FC): **Buy** (12 firms)

Independent Mean (IM): **Strong Buy** (1 firms)



First Call Mean (FC) is the mean recommendation of all analysts covering the stock. Independent Mean (IM) is the mean recommendation of only independent analysts, which includes quantitative firms that are not included in the FC mean.

THOMSON FINANCIAL

Thomson Reuters Company in Context Report for BWP

- Updated January 13, 2009

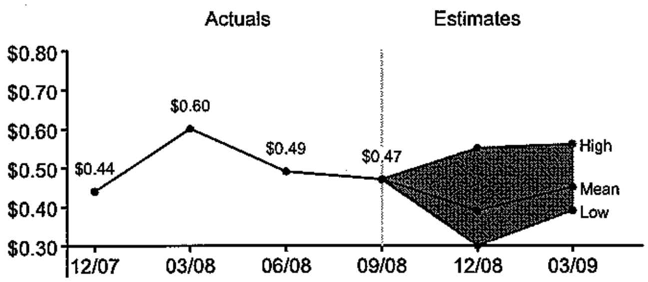
Earnings Per Share

Earnings per share (EPS) is calculated by dividing a company's earnings by the number of shares outstanding. Analysts tend to interpret a pattern of increasing earnings as a sign of strength and flat or falling earnings as a sign of weakness. The charts below provide a comparison between a company's actual and estimated EPS, including the high and low forecasts.

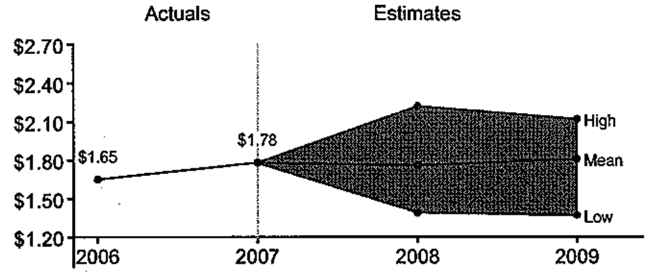
Quarterly



Estimates	12-08	03-09
FC Mean	$0.39	$0.45
High	$0.55	$0.56
Low	$0.30	$0.39
# of Analysts	10	6

NA = No Actual or Estimated EPS

Annual



Estimates	2008	2009
FC Mean	$1.76	$1.81
High	$2.22	$2.12
Low	$1.39	$1.37
# of Analysts	11	10

NA = No Actual or Estimated EPS

Earnings Surprise

Investors frequently compare a company's actual earnings to the mean expectation of professional analysts. The difference between the two is referred to as a "positive" or "negative" surprise. Academic research has shown that when a company reports a surprise, it is often followed by more of the same surprise type.

Surprise Summary - Last 3 Years

Surprise Type	#	%
Positive Quarters (> 2%)	10	83.3%
Negative Quarters (< -2%)	1	8.3%
In-Line Quarters (within 2%)	1	8.3%

Surprise Detail - Last 6 Periods

Surprise Type	Announce Date	Period End Date	Actual EPS	Mean EPS	Surprise (%)
POSITIVE	10/27/08	09/08	$0.470	$0.288	63.2%
POSITIVE	07/28/08	06/08	$0.490	$0.328	49.4%
POSITIVE	04/28/08	03/08	$0.600	$0.578	3.8%
NEGATIVE	02/11/08	12/07	$0.440	$0.576	-23.6%
POSITIVE	10/29/07	09/07	$0.310	$0.285	8.8%
POSITIVE	07/30/07	06/07	$0.420	$0.250	68.0%

Annual Revenue

A pattern of increasing sales in conjunction with a rising EPS may influence a buy recommendation, while flat or falling sales and faltering earnings may explain a sell recommendation. A rising EPS with flat or falling sales may result from increased cost efficiency and margins, rather than market expansion. This chart shows the revenue forecast trend of all analysts and the highest and lowest projections for the current and next fiscal year.

	2008	2009
Mean	$805M	$1.1B
High	$829M	$1.2B
Low	$773M	$766M
Forecasted Growth	25.1%	66.2%
# of Analysts	6	6

NA = No Actual or Estimated Revenue

Fundamental Highlights

- BWP's year-over-year revenue growth of 5.0% is substantially below the Pipelines Subsector average of 49.5%.
- Of the 44 firms within the Pipelines Subsector, BOARDWALK PIPELINE PARTNERS, LP is among the 37 companies that pay a dividend. The stock's dividend yield is currently 9.1%.
- BOARDWALK PIPELINE PARTNERS, LP's current ratio of 0.3 is substantially below the Pipelines Subsector average of 1.0.

The time period stated applies to the company-level data only. The Sector Average is a simple average of the most recent data from companies whose businesses most closely match each other.

Risk Highlights

- On days when the market is up, BWP tends to underperform the S&P 500 index by 54%. On days when the market is down, the shares generally decrease by 45% less than the S&P 500 index.
- Over the past 90 days, BWP shares have been more volatile than the overall market, as the stock's daily price fluctuations have exceeded that of 41% of S&P 500 index firms.
- In the short term, BWP has shown high correlation (>=40%) with the S&P 500 index. The stock has, however, shown low correlation (>=-10% and <20%) with the market in the long term.

Business Description

Enbridge Energy Partners LP. The Group's principal activity is to own and operate crude oil and liquid petroleum transportation assets, natural gas pipelines, marketing assets and related facilities in the United States. Currently, the Group operates under three segments: Liquids, Natural gas and Marketing. The Liquids segment consists of crude oil and liquid petroleum transportation and storage assets. It also includes the operations of Lakehead, North Dakota and Mid-Continent systems. Natural Gas segment consists of natural gas gathering and transmission pipelines, treating plants and processing plants. Marketing segment provides natural gas supply, transmission and sales services to the customers.

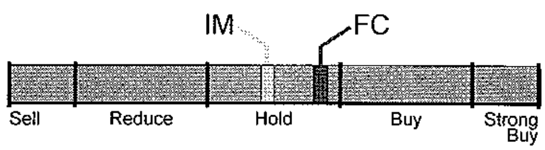
First Call Mean (FC): Hold (13 firms)

Independent Mean (IM): Hold (1 firms)



Distribution

Analysts typically rate a stock based on a five-tier scale ranging from 'Strong Buy' to 'Sell'. The chart below displays the number of analysts in each tier.

Earnings Highlights

- On 02/06/09, the company announced quarterly earnings of $0.67 per share, a positive surprise of 9.3% above the consensus $0.61. Over the past 4 quarters, the company has reported 3 positive (>2%), 1 negative(<-2%), and 0 in-line (within 2%) surprises. The average surprise for this time period has been 5.7%.
- EEP's current quarter consensus estimate has decreased notably over the past 90 days from $0.73 to $0.55, a loss of -24.9%. This trails the average Pipelines Subsector move of -8.0% during the same time period.
- Over the past 90 days, the consensus price target for EEP has decreased notably from $43.70 to $36.60, a loss of -16.2%.

Price Target

The chart below indicates where analysts predict the stock price will be within the next 12 months, as compared to the curent price. The high, low, and mean price targets are presented.

THOMSON FINANCIAL

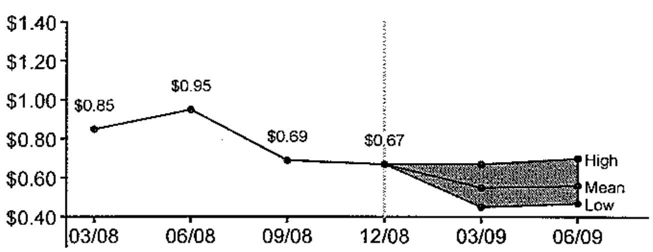
Thomson Reuters Company in Context Report for EEP

- Updated February 18, 2009

Earnings Per Share

Earnings per share (EPS) is calculated by dividing a company's earnings by the number of shares outstanding. Analysts tend to interpret a pattern of increasing earnings as a sign of strength and flat or falling earnings as a sign of weakness. The charts below provide a comparison between a company's actual and estimated EPS, including the high and low forecasts.

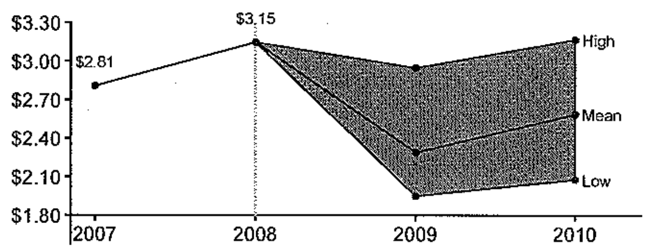
Quarterly



Estimates	03-09	06-09
FC Mean	$0.55	$0.56
High	$0.67	$0.70
Low	$0.45	$0.47
# of Analysts	11	9

NA = No Actual or Estimated EPS

Annual



Estimates	2009	2010
FC Mean	$2.29	$2.59
High	$2.95	$3.17
Low	$1.95	$2.08
# of Analysts	13	10

NA = No Actual or Estimated EPS

Earnings Surprise

Investors frequently compare a company's actual earnings to the mean expectation of professional analysts. The difference between the two is referred to as a "positive" or "negative" surprise. Academic research has shown that when a company reports a surprise, it is often followed by more of the same surprise type.

Surprise Summary - Last 3 Years

Surprise Type	#	%
Positive Quarters (> 2%)	8	66.7%
Negative Quarters (< -2%)	3	25.0%
In-Line Quarters (within 2%)	1	8.3%

Surprise Detail - Last 6 Periods

Surprise Type	Announce Date	Period End Date	Actual EPS	Mean EPS	Surprise (%)
POSITIVE	01/30/09	12/08	$0.670	$0.613	9.3%
NEGATIVE	10/30/08	09/08	$0.690	$0.875	-21.1%
POSITIVE	07/28/08	06/08	$0.950	$0.783	21.3%
POSITIVE	04/28/08	03/08	$0.850	$0.750	13.3%
IN-LINE	01/28/08	12/07	$0.740	$0.737	0.4%
POSITIVE	10/29/07	09/07	$0.810	$0.734	10.4%

Annual Revenue

A pattern of increasing sales in conjunction with a rising EPS may influence a buy recommendation, while flat or falling sales and faltering earnings may explain a sell recommendation. A rising EPS with flat or falling sales may result from increased cost efficiency and margins, rather than market expansion. This chart shows the revenue forecast trend of all analysts and the highest and lowest projections for the current and next fiscal year.

	2009	2010
Mean	$10.0B	$10.8B
High	$12.5B	$13.6B
Low	$7.6B	$8.0B
Forecasted Growth	-0.2%	7.4%
# of Analysts	8	8

NA = No Actual or Estimated Revenue

Fundamental Highlights

- EEP's current gross margin (trailing 4 quarters) of 17.6% is substantially above its five-year average of 10.5%.
- Of the 43 firms within the Pipelines Subsector, ENBRIDGE ENERGY PARTNERS LP is among the 37 companies that pay a dividend. The stock's dividend yield is currently 12.7%.
- The company's interest funding is at its five-year low.

The time period stated applies to the company-level data only. The Sector Average is a simple average of the most recent data from companies whose businesses most closely match each other.

Risk Highlights

- On days when the market is up, EEP tends to underperform the S&P 500 index by 53%. On days when the market is down, the shares generally decrease by 48% less than the S&P 500 index.
- Over the past 90 days, EEP shares have been more volatile than the overall market, as the stock's daily price fluctuations have exceeded that of -- of S&P 500 index firms.
- In both short-term and long-term periods, EEP has shown high correlation (>=40%) with the S&P 500 index. Thus, this stock would provide only low levels of diversification to a portfolio similar to the broader market.

Gradient Opinion

Buy
Hold
Sell

The Gradient Opinion, provided by Gradient Analytics Inc, is an empirically-derived and historically back-tested stock rating system with buy, sell, and hold opinions. To develop a rating the quantitative system analyzes a firm's earnings quality, balance sheet, and income statement, conducts technical and valuation analysis and evaluates the transactions made by the company's management and directors (i.e. insiders).

Gradient Analytics, Inc is a private independent research firm specializing in engineering institutional stock rating systems.

THOMSON FINANCIAL

Thomson Reuters Company in Context Report for EPD

- Updated January 13, 2009

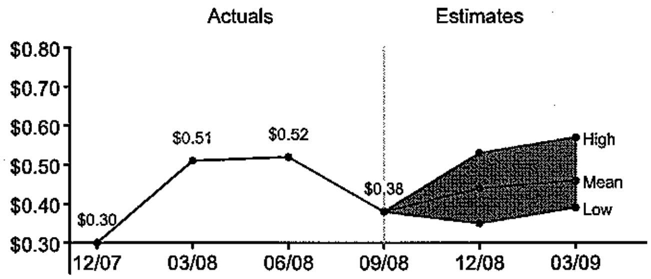
Earnings Per Share

Earnings per share (EPS) is calculated by dividing a company's earnings by the number of shares outstanding. Analysts tend to interpret a pattern of increasing earnings as a sign of strength and flat or falling earnings as a sign of weakness. The charts below provide a comparison between a company's actual and estimated EPS, including the high and low forecasts.

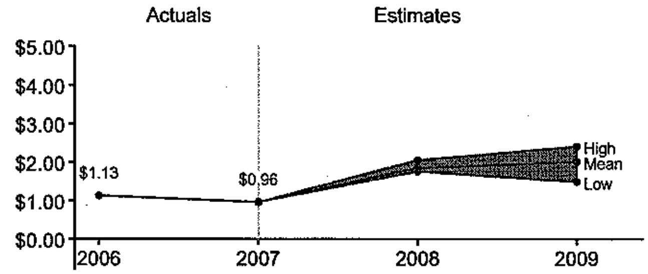
Quarterly



Estimates	12-08	03-09
FC Mean	$0.44	$0.46
High	$0.53	$0.57
Low	$0.35	$0.39
# of Analysts	14	8

NA = No Actual or Estimated EPS

Annual



Estimates	2008	2009
FC Mean	$1.85	$2.01
High	$2.05	$2.41
Low	$1.76	$1.49
# of Analysts	12	15

NA = No Actual or Estimated EPS

Earnings Surprise

Investors frequently compare a company's actual earnings to the mean expectation of professional analysts. The difference between the two is referred to as a "positive" or "negative" surprise. Academic research has shown that when a company reports a surprise, it is often followed by more of the same surprise type.

Surprise Summary - Last 3 Years

Surprise Type	#	%
Positive Quarters (> 2%)	7	58.3%
Negative Quarters (< -2%)	4	33.3%
In-Line Quarters (within 2%)	1	8.3%

Surprise Detail - Last 6 Periods

Surprise Type	Announce Date	Period End Date	Actual EPS	Mean EPS	Surprise (%)
NEGATIVE	10/23/08	09/08	$0.380	$0.491	-22.6%
POSITIVE	07/24/08	06/08	$0.520	$0.362	43.7%
POSITIVE	04/28/08	03/08	$0.510	$0.329	55.0%
NEGATIVE	01/28/08	12/07	$0.300	$0.318	-5.7%
NEGATIVE	10/25/07	09/07	$0.200	$0.271	-26.2%
IN-LINE	07/26/07	06/07	$0.260	$0.264	-1.5%

Annual Revenue

A pattern of increasing sales in conjunction with a rising EPS may influence a buy recommendation, while flat or falling sales and faltering earnings may explain a sell recommendation. A rising EPS with flat or falling sales may result from increased cost efficiency and margins, rather than market expansion. This chart shows the revenue forecast trend of all analysts and the highest and lowest projections for the current and next fiscal year.

	2008	2009
Mean	$24.7B	$26.5B
High	$26.1B	$30.4B
Low	$23.6B	$24.4B
Forecasted Growth	45.7%	56.3%
# of Analysts	7	7

NA = No Actual or Estimated Revenue

Fundamental Highlights

- ENTERPRISE PRODUCTS PARTNERS LP's gross margin (trailing 4 quarters) of 5.2% is substantially below the Pipelines Subsector average of 22.6%.
- Of the 44 firms within the Pipelines Subsector, ENTERPRISE PRODUCTS PARTNERS LP is among the 37 companies that pay a dividend. The stock's dividend yield is currently 9.6%.
- EPD's current interest funding of 3.0 is substantially above its five-year average of 2.4.

The time period stated applies to the company-level data only. The Sector Average is a simple average of the most recent data from companies whose businesses most closely match each other.

Risk Highlights

- On days when the market is up, EPD tends to perform in-line with the S&P 500 index. On days when the market is down, the shares generally decrease by 52% less than the S&P 500 index.
- Over the past 90 days, EPD shares have been more volatile than the overall market, as the stock's daily price fluctuations have exceeded that of 44% of S&P 500 index firms.
- In both short-term and long-term periods, EPD has shown high correlation (>=40%) with the S&P 500 index. Thus, this stock would provide only low levels of diversification to a portfolio similar to the broader market.

Investment Methodology

Gradient Analytics, Inc (Gradient) is a private firm specializing in engineering stock rating systems and in providing independent specialized research to institutional clients. Gradient's exhaustive list of ratings include MSN/CNBC Money's StockScouter, and numerous institutional stock rating systems. Gradient also provides proprietary ratings of earnings quality, fundamental and valuation elements directly to institutional clients. Gradient was founded in 1996 by two former tenured professors, Dr. Carr Bettis and Dr. Donn Vickrey. Today the team consists of more than 30 financial engineers, research and business analysts and technology personnel.

The Gradient Opinion is an empirically-derived and historically backtested stock rating system with buy, sell and hold opinions. To develop a rating, the quantitative system analyzes a firm's earnings quality, balance sheet, and income statement, conducts technical and valuation analysis, and evaluates the transactions made by the company's management and directors (i.e. insiders).

Thomson Reuters Company in Context Report for KMP

- Updated January 13, 2009

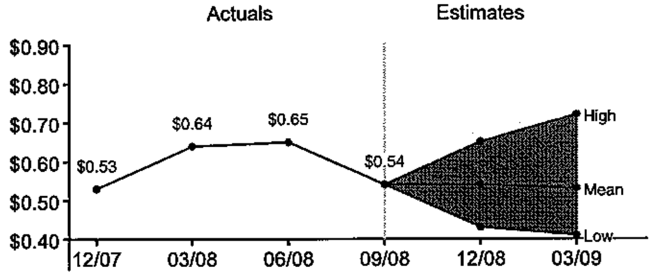
Earnings Per Share

Earnings per share (EPS) is calculated by dividing a company's earnings by the number of shares outstanding. Analysts tend to interpret a pattern of increasing earnings as a sign of strength and flat or falling earnings as a sign of weakness. The charts below provide a comparison between a company's actual and estimated EPS, including the high and low forecasts.

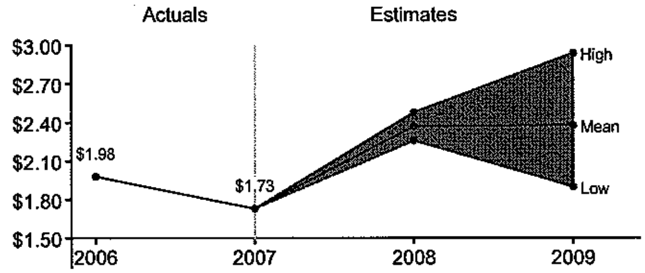
Quarterly



Estimates	12-08	03-09
FC Mean	$0.54	$0.53
High	$0.65	$0.72
Low	$0.43	$0.41
# of Analysts	13	9

NA = No Actual or Estimated EPS

Annual



Estimates	2008	2009
FC Mean	$2.37	$2.38
High	$2.48	$2.94
Low	$2.26	$1.90
# of Analysts	9	14

NA = No Actual or Estimated EPS

Earnings Surprise

Investors frequently compare a company's actual earnings to the mean expectation of professional analysts. The difference between the two is referred to as a "positive" or "negative" surprise. Academic research has shown that when a company reports a surprise, it is often followed by more of the same surprise type.

Surprise Summary - Last 3 Years

Surprise Type	#	%
Positive Quarters (> 2%)	6	50.0%
Negative Quarters (< -2%)	4	33.3%
In-Line Quarters (within 2%)	2	16.7%

Surprise Detail - Last 6 Periods

Surprise Type	Announce Date	Period End Date	Actual EPS	Mean EPS	Surprise (%)
NEGATIVE	10/15/08	09/08	$0.540	$0.592	-8.8%
POSITIVE	07/16/08	06/08	$0.650	$0.547	18.8%
POSITIVE	04/16/08	03/08	$0.640	$0.514	24.5%
POSITIVE	01/16/08	12/07	$0.530	$0.455	16.5%
IN-LINE	10/17/07	09/07	$0.430	$0.425	1.2%
POSITIVE	07/18/07	06/07	$0.430	$0.388	10.8%

Annual Revenue

A pattern of increasing sales in conjunction with a rising EPS may influence a buy recommendation, while flat or falling sales and faltering earnings may explain a sell recommendation. A rising EPS with flat or falling sales may result from increased cost efficiency and margins, rather than market expansion. This chart shows the revenue forecast trend of all analysts and the highest and lowest projections for the current and next fiscal year.

	2008	2009
Mean	$12.7B	$14.5B
High	$13.4B	$16.9B
Low	$12.2B	$12.8B
Forecasted Growth	38.2%	57.3%
# of Analysts	8	9

NA = No Actual or Estimated Revenue

Fundamental Highlights

- KINDER MORGAN ENERGY PARTNERS, L.P.'s net margin (trailing 4 quarters) of 3.8% is substantially below the Pipelines Subsector average of 6.7%.
- Of the 44 firms within the Pipelines Subsector, KINDER MORGAN ENERGY PARTNERS, L.P. is among the 37 companies that pay a dividend. The stock's dividend yield is currently 8.5%.
- KINDER MORGAN ENERGY PARTNERS, L.P.'s current ratio of 0.5 is substantially below the Pipelines Subsector average of 1.0.

Investment Methodology

Gradient Analytics, Inc (Gradient) is a private firm specializing in engineering stock rating systems and in providing independent specialized research to institutional clients. Gradient's exhaustive list of ratings include MSN/CNBC Money's StockScouter, and numerous institutional stock rating systems. Gradient also provides proprietary ratings of earnings quality, fundamental and valuation elements directly to institutional clients. Gradient was founded in 1996 by two former tenured professors, Dr. Carr Bettis and Dr. Donn Vickrey. Today the team consists of more than 30 financial engineers, research and business analysts and technology personnel.

The Gradient Opinion is an empirically-derived and historically backtested stock rating system with buy, sell and hold opinions. To develop a rating, the quantitative system analyzes a firm's earnings quality, balance sheet, and income statement, conducts technical and valuation analysis, and evaluates the transactions made by the company's management and directors (i.e. insiders).

Investment Methodology

Gradient Analytics, Inc (Gradient) is a private firm specializing in engineering stock rating systems and in providing independent specialized research to institutional clients. Gradient's exhaustive list of ratings include MSN/CNBC Money's StockScouter, and numerous institutional stock rating systems. Gradient also provides proprietary ratings of earnings quality, fundamental and valuation elements directly to institutional clients. Gradient was founded in 1996 by two former tenured professors, Dr. Carr Bettis and Dr. Donn Vickrey. Today the team consists of more than 30 financial engineers, research and business analysts and technology personnel.

The Gradient Opinion is an empirically-derived and historically backtested stock rating system with buy, sell and hold opinions. To develop a rating, the quantitative system analyzes a firm's earnings quality, balance sheet, and income statement, conducts technical and valuation analysis, and evaluates the transactions made by the company's management and directors (i.e. insiders).

Business Description

Southern Union Company. The Group's principal activities are the transportation, storage and distribution of natural gas. The natural gas transmission units include Panhandle Eastern Pipe Line Company, Trunkline Gas Company, Sea Robin Pipeline Company, Trunkline LNG Company and Southwest Gas Storage. Through CCE Holdings, LLC, a joint venture with GE Commercial Finance Energy Financial Services, it owns interests in and operates the CrossCountry Energy pipelines. The Group's pipeline interests operate nearly 18,000 miles of interstate pipelines that transport natural gas from the San Juan and Permian Basins, the Rockies, the Gulf of Mexico, Mobile Bay, South Texas and the Panhandle regions of Texas and Oklahoma to markets in the Southeast, West, Midwest and Great Lakes region. The local distribution companies, Missouri Gas Energy, PG Energy and New England Gas Company serves nearly one million natural gas end-user customers in Missouri, Pennsylvania, Rhode Island and Massachusetts.

THOMSON FINANCIAL

Thomson Reuters Company in Context Report for SUG

Updated February 18, 2009

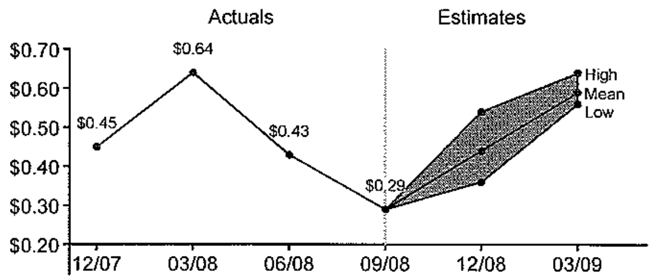
Earnings Per Share

Earnings per share (EPS) is calculated by dividing a company's earnings by the number of shares outstanding. Analysts tend to interpret a pattern of increasing earnings as a sign of strength and flat or falling earnings as a sign of weakness. The charts below provide a comparison between a company's actual and estimated EPS, including the high and low forecasts.

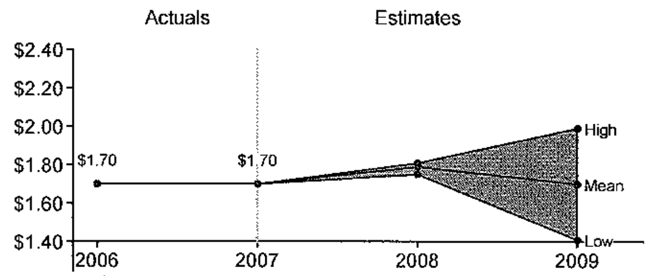
Quarterly



Estimates	12-08	03-09
FC Mean	$0.44	$0.59
High	$0.54	$0.64
Low	$0.36	$0.56
# of Analysts	9	3

NA = No Actual or Estimated EPS

Annual



Estimates	2008	2009
FC Mean	$1.79	$1.70
High	$1.81	$1.99
Low	$1.75	$1.41
# of Analysts	8	9

NA = No Actual or Estimated EPS

Earnings Surprise

Investors frequently compare a company's actual earnings to the mean expectation of professional analysts. The difference between the two is referred to as a "positive" or "negative" surprise. Academic research has shown that when a company reports a surprise, it is often followed by more of the same surprise type.

Surprise Summary - Last 3 Years

Surprise Type	#	%
Positive Quarters (> 2%)	6	50.0%
Negative Quarters (< -2%)	6	50.0%
In-Line Quarters (within 2%)	0	--

Surprise Detail - Last 6 Periods

Surprise Type	Announce Date	Period End Date	Actual EPS	Mean EPS	Surprise (%)
NEGATIVE	11/10/08	09/08	$0.290	$0.334	-13.2%
POSITIVE	08/07/08	06/08	$0.430	$0.396	8.6%
POSITIVE	05/08/08	03/08	$0.640	$0.605	5.8%
NEGATIVE	02/29/08	12/07	$0.450	$0.497	-9.5%
POSITIVE	11/09/07	09/07	$0.340	$0.320	6.3%
POSITIVE	08/09/07	06/07	$0.390	$0.305	27.9%

Annual Revenue

A pattern of increasing sales in conjunction with a rising EPS may influence a buy recommendation, while flat or falling sales and faltering earnings may explain a sell recommendation. A rising EPS with flat or falling sales may result from increased cost efficiency and margins, rather than market expansion. This chart shows the revenue forecast trend of all analysts and the highest and lowest projections for the current and next fiscal year.

	2008	2009
Mean	$3.0B	$2.7B
High	$3.2B	$3.1B
Low	$2.9B	$2.3B
Forecasted Growth	16.2%	2.7%
# of Analysts	5	5

NA = No Actual or Estimated Revenue

Fundamental Highlights

- SUG's current return on equity of 10.2% is substantially above its five-year average of 5.2%.
- Of the 30 firms within the Gas Distribution Subsector, SOUTHERN UNION COMPANY is among the 28 companies that pay a dividend. The stock's dividend yield is currently 4.4%.
- SOUTHERN UNION COMPANY's interest funding of 0.6% is substantially above the Gas Distribution Subsector average of 0.4%.

The time period stated applies to the company-level data only. The Sector Average is a simple average of the most recent data from companies whose businesses most closely match each other.

Risk Highlights

- On days when the market is up, SUG tends to outperform the S&P 500 index by 82%. However, on days when the market is down, the shares generally decrease by 77% more than the S&P 500 index.
- Over the past 90 days, SUG shares have been more volatile than the overall market, as the stock's daily price fluctuations have exceeded that of 46% of S&P 500 index firms.
- In both short-term and long-term periods, SUG has shown high correlation (>=40%) with the S&P 500 index. Thus, this stock would provide only low levels of diversification to a portfolio similar to the broader market.

Business Description

Spectra Energy Corp. The Group's principal activity is to own and operate a large and diversified portfolio of complementary natural gas-related assets. It operates in three key areas of the natural gas industry: gathering and processing, transmission and storage and distribution. The Group provides transportation and storage of natural gas to customers in various regions of the Eastern and Southeastern United States, the Maritime Provinces and the Pacific Northwest in the United States and Canada, and in the province of Ontario, Canada. The natural gas related-assets include more than 18,000 miles of transmission pipeline and approximately 272 billion cubic feet of storage capacity. In addition, it also owns a 50% interest in DCP Midstream, LLC, a natural gas liquids producer and marketer.

THOMSON FINANCIAL

Thomson Reuters Company in Context Report for SE

- Updated February 18, 2009

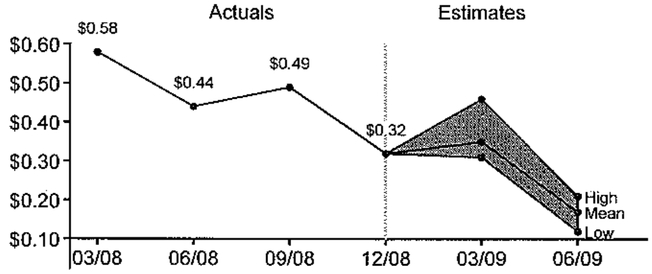
Earnings Per Share

Earnings per share (EPS) is calculated by dividing a company's earnings by the number of shares outstanding. Analysts tend to interpret a pattern of increasing earnings as a sign of strength and flat or falling earnings as a sign of weakness. The charts below provide a comparison between a company's actual and estimated EPS, including the high and low forecasts.

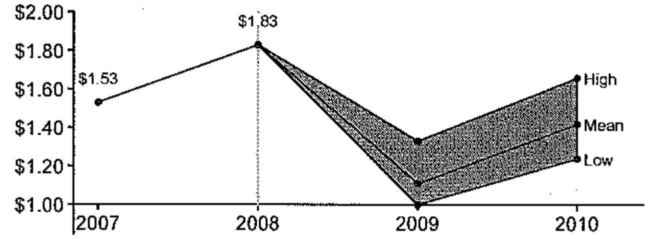
Quarterly



Estimates	03-09	06-09
FC Mean	$0.35	$0.17
High	$0.46	$0.21
Low	$0.31	$0.12
# of Analysts	9	8

NA = No Actual or Estimated EPS

Annual



Estimates	2009	2010
FC Mean	$1.11	$1.42
High	$1.33	$1.66
Low	$1.00	$1.24
# of Analysts	14	14

NA = No Actual or Estimated EPS

Earnings Surprise

Investors frequently compare a company's actual earnings to the mean expectation of professional analysts. The difference between the two is referred to as a "positive" or "negative" surprise. Academic research has shown that when a company reports a surprise, it is often followed by more of the same surprise type.

Surprise Summary - Last 3 Years

Surprise Type	#	%
Positive Quarters (> 2%)	6	75.0%
Negative Quarters (< -2%)	2	25.0%
In-Line Quarters (within 2%)	0	--

Surprise Detail - Last 6 Periods

Surprise Type	Announce Date	Period End Date	Actual EPS	Mean EPS	Surprise (%)
POSITIVE	02/05/09	12/08	$0.320	$0.302	6.0%
POSITIVE	11/06/08	09/08	$0.490	$0.458	7.0%
POSITIVE	08/06/08	06/08	$0.440	$0.420	4.8%
POSITIVE	05/06/08	03/08	$0.580	$0.468	23.9%
POSITIVE	02/06/08	12/07	$0.470	$0.383	22.7%
POSITIVE	11/06/07	09/07	$0.380	$0.287	32.4%

Annual Revenue

A pattern of increasing sales in conjunction with a rising EPS may influence a buy recommendation, while flat or falling sales and faltering earnings may explain a sell recommendation. A rising EPS with flat or falling sales may result from increased cost efficiency and margins, rather than market expansion. This chart shows the revenue forecast trend of all analysts and the highest and lowest projections for the current and next fiscal year.

	2009	2010
Mean	$4.8B	$5.0B
High	$5.2B	$5.5B
Low	$4.0B	$4.3B
Forecasted Growth	-5.7%	-1.8%
# of Analysts	7	6

NA = No Actual or Estimated Revenue

Fundamental Highlights

- The company's return on equity is at its five-year low.
- Of the 30 firms within the Gas Distribution Subsector, SPECTRA ENERGY CORP is among the 28 companies that pay a dividend. The stock's dividend yield is currently 7.0%.
- SPECTRA ENERGY CORP's current ratio of 0.5 is the lowest within its Gas Distribution Subsector.

The time period stated applies to the company-level data only. The Sector Average is a simple average of the most recent data from companies whose businesses most closely match each other.

Risk Highlights

- On days when the market is up, SE tends to outperform the S&P 500 index by 81%. However, on days when the market is down, the shares generally decrease by 71% more than the S&P 500 index.
- Over the past 90 days, SE shares have been more volatile than the overall market, as the stock's daily price fluctuations have exceeded that of 37% of S&P 500 index firms.
- In both short-term and long-term periods, SE has shown high correlation (>=40%) with the S&P 500 index. Thus, this stock would provide only low levels of diversification to a portfolio similar to the broader market.

Thomson Reuters Company in Context Report for TCLP

- Updated January 13, 2009

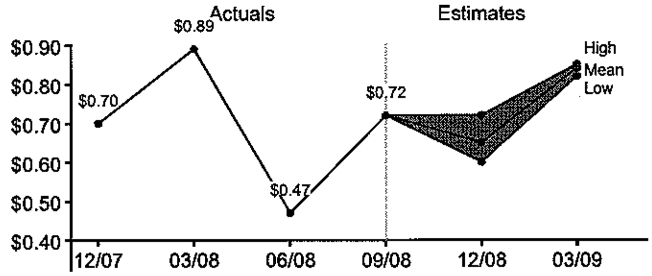
Earnings Per Share

Earnings per share (EPS) is calculated by dividing a company's earnings by the number of shares outstanding. Analysts tend to interpret a pattern of increasing earnings as a sign of strength and flat or falling earnings as a sign of weakness. The charts below provide a comparison between a company's actual and estimated EPS, including the high and low forecasts.

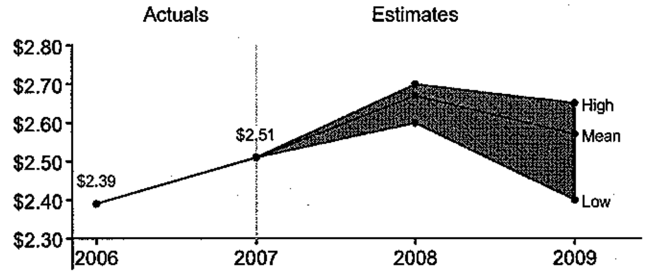
Quarterly



Estimates	12-08	03-09
FC Mean	$0.65	$0.84
High	$0.72	$0.85
Low	$0.60	$0.82
# of Analysts	4	2

NA = No Actual or Estimated EPS

Annual



Estimates	2008	2009
FC Mean	$2.67	$2.57
High	$2.70	$2.65
Low	$2.60	$2.40
# of Analysts	3	6

NA = No Actual or Estimated EPS

Earnings Surprise

Investors frequently compare a company's actual earnings to the mean expectation of professional analysts. The difference between the two is referred to as a "positive" or "negative" surprise. Academic research has shown that when a company reports a surprise, it is often followed by more of the same surprise type.

Surprise Summary - Last 3 Years

Surprise Type	#	%
Positive Quarters (> 2%)	5	41.7%
Negative Quarters (< -2%)	6	50.0%
In-Line Quarters (within 2%)	1	8.3%

Surprise Detail - Last 6 Periods

Surprise Type	Announce Date	Period End Date	Actual EPS	Mean EPS	Surprise (%)
POSITIVE	10/31/08	09/08	$0.720	$0.578	24.6%
NEGATIVE	07/31/08	06/08	$0.470	$0.530	-11.3%
POSITIVE	04/24/08	03/08	$0.890	$0.692	28.6%
POSITIVE	02/22/08	12/07	$0.700	$0.623	12.4%
POSITIVE	11/01/07	09/07	$0.640	$0.548	16.8%
NEGATIVE	08/02/07	06/07	$0.450	$0.482	-6.6%

Annual Revenue

A pattern of increasing sales in conjunction with a rising EPS may influence a buy recommendation, while flat or falling sales and faltering earnings may explain a sell recommendation. A rising EPS with flat or falling sales may result from increased cost efficiency and margins, rather than market expansion. This chart shows the revenue forecast trend of all analysts and the highest and lowest projections for the current and next fiscal year.

	2008	2009
Mean	$31M	$30M
High	$31M	$31M
Low	$30M	$29M
Forecasted Growth	12.1%	10.8%
# of Analysts	2	2

NA = No Actual or Estimated Revenue

Fundamental Highlights

- TCLP's net margin (trailing 4 quarters) of 306.1% is the highest within its Pipelines Subsector.
- Of the 44 firms within the Pipelines Subsector, TC PIPELINES, LP is among the 37 companies that pay a dividend. The stock's dividend yield is currently 10.9%.
- TC PIPELINES, LP's interest coverage (number of times interest payments are covered by EBIT) of 0.5 is substantially below the Pipelines Subsector average of 3.3.

The time period stated applies to the company-level data only. The Sector Average is a simple average of the most recent data from companies whose businesses most closely match each other.

Risk Highlights

- On days when the market is up, TCLP tends to underperform the S&P 500 index by 34%. On days when the market is down, the shares generally decrease by 36% less than the S&P 500 index.
- Over the past 90 days, TCLP shares have been more volatile than the overall market, as the stock's daily price fluctuations have exceeded that of 12% of S&P 500 index firms.
- In both short-term and long-term periods, TCLP has shown high correlation (>=40%) with the S&P 500 index. Thus, this stock would provide only low levels of diversification to a portfolio similar to the broader market.

Investment Methodology

Gradient Analytics, Inc (Gradient) is a private firm specializing in engineering stock rating systems and in providing independent specialized research to institutional clients. Gradient's exhaustive list of ratings include MSN/CNBC Money's StockScouter, and numerous institutional stock rating systems. Gradient also provides proprietary ratings of earnings quality, fundamental and valuation elements directly to institutional clients. Gradient was founded in 1996 by two former tenured professors, Dr. Carr Bettis and Dr. Donn Vickrey. Today the team consists of more than 30 financial engineers, research and business analysts and technology personnel.

The Gradient Opinion is an empirically-derived and historically backtested stock rating system with buy, sell and hold opinions. To develop a rating, the quantitative system analyzes a firm's earnings quality, balance sheet, and income statement, conducts technical and valuation analysis, and evaluates the transactions made by the company's management and directors (i.e. insiders).

Business Description

Williams Companies, Inc. (The). The Group's principal activities are to find, produce, gather, process and transport natural gas. The Group operates in four segments: Gas Pipelines, Exploration and Production, Midstream gas and Liquids and Power. Gas pipeline segment consists of two interstate natural gas pipeline systems as well as investments in natural gas pipeline-related companies. Exploration and Production segment includes natural gas exploration, production gas management activities in Rocky Mountain and Mid Continent regions of the United States and Argentina. Midstream Gas and Liquids segment owns and operates gas gathering and processing facilities in the United States. Power segment is an energy services provider that buys, sells, stores, and transports a full suite of energy-related commodities, including power, natural gas, crude oil, refined products and emission credits, primarily on a wholesale level.

The time period stated applies to the company-level data only. The Sector Average is a simple average of the most recent data from companies whose businesses most closely match each other.

Risk Highlights

- On days when the market is up, WMB tends to outperform the S&P 500 index by 88%. However, on days when the market is down, the shares generally decrease by 90% more than the S&P 500 index.
- Over the past 90 days, the daily price fluctuations of WMB have been in-line with the S&P 500 index firms.
- In both short-term and long-term periods, WMB has shown high correlation (>=40%) with the S&P 500 index. Thus, this stock would provide only low levels of diversification to a portfolio similar to the broader market.

Risk Metrics

Standard Deviation		**Beta vs. S&P**	1.40	**Correlation vs. S&P**

Thomson Reuters Company in Context Report for WMB

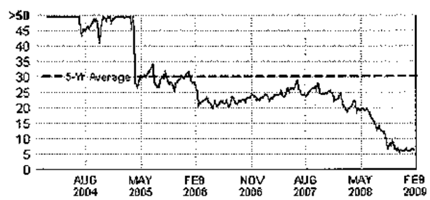
- Updated February 18, 2009

Valuation Multiples

	Trailing P/E	Forward P/E	Forward PEG
WMB	6.4	12.8	.9
S&P 500	11.9	15.1	1.5
Company Relative to Its 5-Yr Average	80% Discount	36% Discount	43% Discount
Company Relative to S&P 500	47% Discount	15% Discount	43% Discount

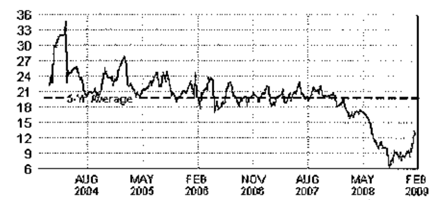
Trailing PE

Trailing P/E is calculated using the most recent closing price (updated weekly) divided by the sum of the four most recently reported quarterly earnings.



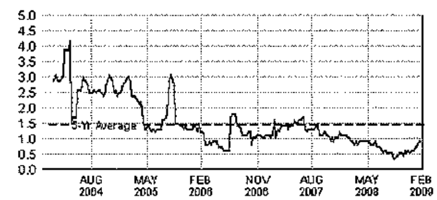
Forward PE

Forward P/E is calculated using the most recent closing price (updated weekly) divided by the sum of the four upcoming quarterly consensus estimates.



Forward PEG

Forward PEG is calculated by dividing the Forward P/E by the five-year, long term forecasted growth rate.



Insider Purchases and Sells

(Most recent transactions within the past 90 days)

Investment Methodology

Gradient Analytics, Inc (Gradient) is a private firm specializing in engineering stock rating systems and in providing independent specialized research to institutional clients. Gradient's exhaustive list of ratings include MSN/CNBC Money's StockScouter, and numerous institutional stock rating systems. Gradient also provides proprietary ratings of earnings quality, fundamental and valuation elements directly to institutional clients. Gradient was founded in 1996 by two former tenured professors, Dr. Carr Bettis and Dr. Donn Vickrey. Today the team consists of more than 30 financial engineers, research and business analysts and technology personnel.

The Gradient Opinion is an empirically-derived and historically backtested stock rating system with buy, sell and hold opinions. To develop a rating, the quantitative system analyzes a firm's earnings quality, balance sheet, and income statement, conducts technical and valuation analysis, and evaluates the transactions made by the company's management and directors (i.e. insiders).

BOARDWALK PIPELINE PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

Note 1: Basis of Presentation

Boardwalk Pipeline Partners, LP (the Partnership) is a Delaware limited partnership formed in 2005. Its business is conducted by Boardwalk Pipelines, LP (Boardwalk Pipelines) and its subsidiaries Gulf South Pipeline Company, LP (Gulf South), Texas Gas Transmission, LLC (Texas Gas) (together, the operating subsidiaries), and Gulf Crossing Pipeline Company, LLC (Gulf Crossing), which will operate a new interstate pipeline expected to be placed in service in 2009. Boardwalk Pipelines Holding Corp. (BPHC), a wholly-owned subsidiary of Loews Corporation (Loews), owns 53.3 million common units, 22.9 million class B units and 33.1 million subordinated units. Boardwalk GP, LP (Boardwalk GP), an indirect wholly-owned subsidiary of BPHC, is the Partnership's general partner and holds a 2% general partner interest in and all of the incentive distribution rights of the Partnership, further described in Note 8. The Partnership's common units are traded under the symbol "BWP" on the New York Stock Exchange.

The accompanying unaudited condensed consolidated financial statements of the Partnership were prepared pursuant to the rules and regulations of the Securities and Exchange Commission. Certain information and footnote disclosures normally included in financial statements prepared in accordance with accounting principles generally accepted in the United States of America have been condensed or omitted pursuant to such rules and regulations. In the opinion of management, the accompanying condensed consolidated financial statements reflect all adjustments (consisting of only normal recurring accruals) necessary to present fairly the financial position as of September 30, 2008 and December 31, 2007, and the results of operations and comprehensive income for the three and nine months ended September 30, 2008 and 2007, and changes in cash flow and changes in partners' capital for the nine months ended September 30, 2008 and 2007. Reference is made to the Notes to Consolidated Financial Statements in the 2007 Annual Report on Form 10-K, which should be read in conjunction with these unaudited condensed consolidated financial statements. The accounting policies described in Note 2 to the Consolidated Financial Statements included in such Annual Report on Form 10-K are the same used in preparing the accompanying unaudited condensed consolidated financial statements.

Net income for interim periods may not necessarily be indicative of results for the full year. All intercompany items have been eliminated in consolidation.

Note 2: Gas in Storage and Gas Receivables/Payables

Gulf South and Texas Gas store gas on behalf of others. Due to the method of storage accounting elected by Gulf South, the Partnership does not reflect volumes held by Gulf South on behalf of others on its Condensed Consolidated Balance Sheets. As of September 30, 2008 and December 31, 2007, Gulf South held 37.1 trillion British thermal units (TBtu) and 52.0 TBtu of gas owned by shippers. Gulf South loaned 2.8 and 0.2 TBtu of gas to shippers as of September 30, 2008 and December 31, 2007. Consistent with the method of storage accounting elected by Texas Gas and the risk-of-loss provisions included in its tariff, Texas Gas reflects gas held on behalf of others in Gas stored underground and records an equal offsetting payable. The amount reflected in Gas Payables on the Condensed Consolidated Balance Sheets is valued at a historical cost of gas of $54.7 million and $35.3 million at September 30, 2008 and December 31, 2007.

Note 3: Derivative Financial Instruments

Subsidiaries of the Partnership use futures, swaps, and option contracts (collectively, derivatives) to hedge exposure to various risks, including natural gas commodity price risk and interest rate risk. These derivatives are reported at fair value in accordance with Statement of Financial Accounting Standards (SFAS) No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended.

Certain volumes of gas stored underground are available for sale and subject to commodity price risk. At September 30, 2008 and December 31, 2007, approximately $3.6 million and $16.3 million of gas stored underground, which the Partnership owns and carries as current Gas stored underground, was exposed to commodity price risk. The Partnership utilizes derivatives to hedge certain exposures to market price fluctuations on the anticipated operational sales of gas.

As a result of the approval by the Federal Energy Regulatory Commission (FERC) of Phase III of the Western Kentucky Storage Expansion project in the first quarter 2008, approximately 5.1 billion cubic feet (Bcf) of gas stored underground with a book value of $11.8 million became available for sale. The Partnership entered into derivatives, which were designated as cash flow hedges, to hedge the price exposure related to the expected sale of this gas. All of the gas was sold in the second and third quarters of 2008, and the related derivatives were settled, resulting in gains of $19.7 million and $34.4 million for the three and nine months ended September 30, 2008, which were reported in Net gain on disposal of operating assets and related contracts on the Condensed Consolidated Statements of Income. In the third quarter 2007, approximately 0.9 Bcf of gas related to Phase II of the Western Kentucky Storage Expansion project was sold and the related derivatives were settled, resulting in a gain of $4.4 million.

In the second quarter 2007, the Partnership entered into natural gas price swaps to hedge exposure to prices associated with the purchase of 2.1 Bcf of natural gas to be used for line pack for pipeline expansion projects. The derivatives were not designated as hedges and were marked to fair value through earnings resulting in a loss of $6.3 million and a gain of $0.9 million in Miscellaneous other income, net on the Condensed Consolidated Statements of Income for the three and nine months ended September 30, 2008, and resulting in a loss of $0.4 million and $1.1 million for the corresponding periods in 2007. All of the line pack derivatives were settled as of September 30, 2008.

In August 2007, the Partnership entered into a Treasury rate lock for a notional amount of $150.0 million of principal to hedge the risk attributable to changes in the risk-free component of forward 10-year interest rates through February 1, 2008. The Treasury rate lock was designated as a cash flow hedge in accordance with SFAS No. 133. As of December 31, 2007, the Partnership recorded a payable of $8.4 million and a corresponding amount in Accumulated other comprehensive loss for the fair value of the rate lock. On February 1, 2008, the Partnership settled the rate lock and paid the counterparty approximately $15.0 million which was deferred as a component of Accumulated other comprehensive loss. The loss will be amortized to interest expense over 10 years.

The derivatives related to the sale of natural gas and cash for fuel reimbursement generally qualify for cash flow hedge accounting under SFAS No. 133 and are designated as such. The effective component of related gains and losses resulting from changes in fair values of the derivatives contracts designated as cash flow hedges are deferred as a component of Accumulated other comprehensive loss. The deferred gains and losses are recognized in the Condensed Consolidated Statements of Income when the anticipated transactions affect earnings. In situations where continued reporting of a loss in Accumulated other comprehensive loss would result in recognition of a future loss on the combination of the derivative and the hedged transaction, SFAS No. 133 requires that the loss be immediately recognized in earnings for the amount that is not expected to be recovered. The Partnership had no losses for the three months ended September 30, 2008, and reclassified losses of $1.7 million for the nine months ended September 30, 2008, from Accumulated other comprehensive loss to earnings related to amounts that are not expected to be recovered in future periods from the combination of sales of gas stored underground and the deferred losses associated with related derivatives.

Generally, for gas sales and cash for fuel reimbursement, any gains and losses on the related derivatives would be recognized in Operating Revenues. For the sale of gas related to the Western Kentucky Storage Expansion projects, any gains and losses on the related derivatives were recognized in Net (gain) loss on disposal of operating assets and related contracts. Any gains and losses on the derivatives related to the line pack gas purchases were recognized in Miscellaneous other income, net.

The changes in fair values of the derivatives designated as cash flow hedges are expected to, and do, have a high correlation to changes in value of the anticipated transactions. Each reporting period the Partnership measures the effectiveness of the cash flow hedge contracts. To the extent the changes in the fair values of the hedge contracts do not effectively offset the changes in the estimated cash flows of the anticipated transactions, the ineffective portion of the hedge contracts is currently recognized in earnings. If the anticipated transactions are no longer deemed probable to occur, hedge accounting would be terminated and changes in the fair values of the associated derivative financial instruments would be recognized currently in earnings. Less than $0.1 million of ineffectiveness was recorded for the three and nine months ended September 30, 2008. Ineffectiveness increased Net income by $0.5 million and $0.9 million for the three and nine months ended September 30, 2007. The Partnership did not discontinue any cash flow hedges during the three and nine month periods ended September 30, 2008 and 2007.

Note 4: Fair Value

SFAS No. 157, Fair Value Measurements

In 2008, the Partnership implemented the provisions of SFAS No. 157, except for the provisions related to non-financial assets and liabilities measured at fair value on a non-recurring basis, which provisions will be applied beginning in 2009. Fair value refers to the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal market in which the reporting entity transacts based on the assumptions market participants would use when pricing the asset or liability. SFAS No. 157 establishes a fair value hierarchy that prioritizes the information used to develop those assumptions giving priority, from highest to lowest, to quoted prices in active markets for identical assets and liabilities (Level 1); observable inputs not included in Level 1, for example, quoted prices for similar assets and liabilities (Level 2); and unobservable data (Level 3), for example, a reporting entity's own internal data based on the best information available in the circumstances.

The Partnership identified its derivatives as items governed by the provisions of SFAS No. 157. The derivatives for the nine months ending September 30, 2008, were natural gas price swaps and options, which were recorded at fair value based on New York Mercantile Exchange (NYMEX) quotes for natural gas futures and options. The NYMEX quotes were deemed to be observable inputs for similar assets and liabilities and rendered Level 2 inputs for purposes of disclosure. The application of SFAS No. 157 had no effect on the Partnership's financial statements.

The fair values of derivatives existing as of September 30, 2008, were included in the following captions in the Condensed Consolidated Balance Sheets (in millions):

	Total at September 30, 2008	Quoted Prices in Active Markets for Identical Assets Level 1	Significant Other Observable Inputs Level 2	Significant Unobservable Inputs Level 3
Assets:				
Prepaid expenses and other current assets	$ 4.2	-	$ 4.2	-
Other assets	1.7	-	1.7	-
Total assets	$ 5.9	-	$ 5.9	-
Liabilities:				
Other current liabilities	$ 0.2	-	$ 0.2	-
Other non-current liabilities	0.1	-	0.1	-
Total liabilities	$ 0.3	-	$ 0.3	-

SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities

Beginning in 2008, the Partnership has the option to apply the provisions of SFAS No. 159, which allows companies to elect to measure and record certain financial assets and liabilities at fair value that would not otherwise be recorded at fair value, such as long-term debt or notes receivable. Unrealized gains and losses on items for which the fair value option was chosen would be reported in earnings. The Partnership reviewed its financial assets and liabilities in existence at January 1, 2008, as well as any financial assets and liabilities entered into during the nine month period ended September 30, 2008, and did not elect the fair value option for any applicable items. Consequently, the application of SFAS No. 159 had no effect on the Partnership's financial statements.

Note 5: Income Taxes

The Partnership is not a taxable entity for federal income tax purposes. As such, it does not directly pay federal income tax. The Partnership's taxable income or loss, which may vary substantially from the net income or loss reported in the Condensed Consolidated Statements of Income, is includable in the federal income tax returns of each partner. The aggregate difference in the basis of the Partnership's net assets for financial reporting and income tax purposes cannot be readily determined as the Partnership does not have access to the information about each partner's tax attributes. The subsidiaries of the Partnership directly incur some income-based state taxes which are presented in Income taxes on the Condensed Consolidated Statements of Income.

Note 6: Commitments and Contingencies

A. Calpine Energy Services (Calpine) Settlement

In December 2007, Gulf South and Calpine filed a stipulation and agreement in Calpine's Chapter 11 Bankruptcy proceedings to settle, for approximately $16.5 million, Gulf South's claim against Calpine related to Calpine's non-payment under a transportation agreement. The claim, which was approved in January 2008, was to be paid in the form of Calpine stock, along with other general creditors having claims in the Bankruptcy proceeding. In the fourth quarter 2007, the Partnership recognized $4.1 million of revenues related to previously reserved amounts invoiced to Calpine for transportation services previously rendered. In January 2008, the Partnership sold the entire claim to a third party and received a cash payment of approximately $15.3 million. The transfer of the claim was deemed a sale and any recourse related to the sale expired in January 2008. As a result, in the first quarter 2008, the Partnership recorded a net gain of $11.2 million related to the realization of the unrecognized portion of the claim which was reported as Contract settlement gain on the Condensed Consolidated Statements of Income. The matter is considered settled and the Partnership does not expect to receive additional amounts related to the claim.

B. Hurricane Rita Settlement

In September 2005, Hurricane Rita caused physical damage to a portion of the Partnership's assets. The related remediation work was completed in 2007. In the second quarter 2008, the Partnership received insurance proceeds of $4.7 million which were applied against a receivable for probable recoveries that was established in the third quarter 2007. The Partnership received an additional $1.0 million in the third quarter 2008 as final settlement.

C. Legal Proceedings

Napoleonville Salt Dome Matter

In December 2003, natural gas leaks were observed near two natural gas storage caverns that were leased and operated by Gulf South for natural gas storage in Napoleonville, Louisiana. Gulf South commenced remediation efforts immediately and ceased using those storage caverns. Two class action lawsuits were filed relating to this incident and were converted to individual actions. Several additional individual actions have been filed against Gulf South and other defendants by local residents and businesses. In addition, the lessor of the property has filed a claim against Gulf South in an action filed against the lessor by one of Gulf South's insurers. Most of the claims have been settled and Gulf South continues to vigorously defend each of the remaining actions, however it is not possible to predict the outcome of this litigation as the cases remain in discovery. Litigation is subject to many uncertainties, and it is possible these actions could be decided unfavorably. Gulf South has settled many of the cases filed against it and may enter into discussions in an attempt to settle the remaining cases if Gulf South believes it is appropriate to do so. For the nine-month period ended September 30, 2008, the Partnership received $4.1 million in insurance proceeds related to previously incurred litigation and remediation costs, which were recorded as a reduction to Operation and maintenance expense.

Other Legal Matters

The Partnership's subsidiaries are parties to various other legal actions arising in the normal course of business. Management believes the disposition of all known outstanding legal actions will not have a material adverse impact on the Partnership's financial condition, results of operations or cash flows.

D. Regulatory and Rate Matters

Expansion Capital Projects

The Partnership has been engaged in several pipeline expansion projects as described below:

Southeast Expansion. The pipeline and two compressor stations related to this project were placed in service during 2008. This project consists of approximately 111 miles of 42-inch pipeline originating near Harrisville, Mississippi and extending to an interconnect with Transcontinental Pipe Line Company (Transco) in Choctaw County, Alabama (Transco 85), having 1.2 Bcf of peak-day transmission capacity. The Partnership will expand the project through the addition of compression facilities to meet commitments of 1.8 Bcf of peak-day transmission capacity. The Partnership expects this additional capacity to be in service during the first quarter 2009 to coincide with the commencement of service on its Gulf Crossing project. Customers have contracted at fixed rates for all of the operational capacity (with a weighted-average term of 9.2 years, including a capacity lease agreement with Gulf Crossing discussed below). Through September 30, 2008, the Partnership spent $635.5 million related to this project.

Gulf Crossing Project. The Partnership is constructing a new interstate pipeline that begins near Sherman, Texas and will proceed to the Perryville, Louisiana area and will consist of approximately 357 miles of 42-inch pipeline having approximately 1.7 Bcf of peak-day transmission capacity with the addition of incremental compression facilities. Additionally, Gulf Crossing has entered into: (i) a capacity lease agreement for 1.1 Bcf per day of capacity on the Partnership’s Gulf South pipeline system (including capacity on the Southeast Expansion and capacity on a portion of the Partnership’s recently completed East Texas to Mississippi Expansion) to make deliveries to an interconnect with Transco 85; and (ii) a capacity lease agreement with Enogex, a third-party intrastate pipeline, which will bring gas supplies to the Partnership’s system, both of which have been approved by the FERC. Customers have contracted at fixed rates for all of the operational capacity, with a weighted average term of approximately 9.5 years. The Partnership expects the pipeline to be in service during the first quarter 2009 and the compression to be fully in service in 2010. Through September 30, 2008, the Partnership spent $1.0 billion related to this project.

Fayetteville and Greenville Laterals. The Partnership is constructing two laterals on its Texas Gas pipeline system to transport gas from the Fayetteville Shale area in Arkansas to markets directly and indirectly served by the Partnership’s existing interstate pipelines. The Fayetteville Lateral will originate in Conway County, Arkansas and proceed southeast through the Bald Knob, Arkansas area to an interconnect with the Texas Gas mainline in Coahoma County, Mississippi and consist of approximately 165 miles of 36-inch pipeline. The Greenville Lateral will originate at the Texas Gas mainline near Greenville, Mississippi and proceed east to the Kosciusko, Mississippi area and consist of approximately 95 miles of 36-inch pipeline. The Greenville Lateral will allow customers to access additional markets, primarily in the Midwest, Northeast and Southeast. The Partnership recently executed contracts for additional capacity that will require it to add compression to increase the peak-day transmission capacity to approximately 1.3 Bcf for the Fayetteville Lateral and to approximately 1.0 Bcf for the Greenville Lateral. The contracts associated with this project are at fixed rates with a weighted average term of 9.9 years. The Partnership expects the first 66 miles of the Fayetteville Lateral to be in service during the fourth quarter 2008 and the remainder of the pipeline related to the Fayetteville and Greenville Laterals to be in service during the first quarter 2009. In September 2008, the Partnership made additional filings with FERC regarding the new compression required to increase the peak-day transmission capacity, which is expected to be in service during 2010. Through September 30, 2008, the Partnership spent $449.6 million related to the Fayetteville and Greenville Laterals.

The Partnership is also engaged in the following storage expansion project:

Western Kentucky Storage Expansion Phase III. The Partnership is developing up to 8.3 Bcf of new working gas capacity at its Midland storage facility and FERC has granted the Partnership market-based rate authority for this new capacity. This expansion is supported by 10-year precedent agreements for 5.1 Bcf of storage capacity. The cost of this project will be dependent on the ultimate size of the expansion. The Partnership expects 5.4 Bcf of storage capacity to be in service during the fourth quarter 2008. Through September 30, 2008, the Partnership spent $41.0 million related to this project.

E. Environmental and Safety Matters

The operating subsidiaries are subject to federal, state, and local environmental laws and regulations in connection with the operation and remediation of various operating sites. The Partnership accrues for environmental expenses resulting from existing conditions that relate to past operations when the remediation efforts are probable and the costs can be reasonably estimated. In addition to federal and state mandated remediation requirements, the Partnership often enters into voluntary remediation programs with the agencies. The Partnership believes its accruals for environmental liabilities are adequate to accomplish remediation related to federal and state regulations. Depending on the results of on-going assessments and federal and state agency review of the data, revisions to the Partnership's estimates may be necessary based on actual costs or new circumstances.

As of September 30, 2008 and December 31, 2007, the Partnership had accrued approximately $15.4 million and $17.0 million related to assessment and/or remediation costs associated with the historical use of polychlorinated biphenyls, petroleum hydrocarbons and mercury, enhancement of groundwater protection measures and other costs. The expenditures are expected to occur over approximately the next ten years. The accrual represents management's estimate of the undiscounted future obligations based on evaluations and discussions with counsel and operating personnel and the current facts and circumstances related to these matters. As of September 30, 2008 and December 31, 2007, approximately $2.7 million was recorded in Other current liabilities and approximately $12.7 million and $14.3 million were recorded in Other Liabilities and Deferred Credits.

In March 2008, the Environmental Protection Agency (EPA) adopted regulations lowering the 8-hour ozone standard relevant to non-attainment areas. Under the regulation new non-attainment areas will be identified which may require additional emission controls for compliance at as many as 14 facilities operated by the Partnership. Compliance for this standard is anticipated to occur between 2013 and 2016. The Partnership is currently evaluating its affected facilities to determine the cost necessary to become compliant with this standard.

The Partnership considers environmental assessment, remediation costs and costs associated with compliance with environmental standards to be recoverable through base rates, as they are prudent costs incurred in the ordinary course of business and, therefore, no regulatory asset has been recorded to defer these costs. The actual costs incurred will depend on the actual amount and extent of contamination discovered, the final cleanup standards mandated by the EPA or other governmental authorities and other factors.

F. Commitments

The Partnership's future capital commitments as of September 30, 2008, for contracts already authorized are expected to approximate the following amounts (in millions):

Less than 1 year	$ 271.9
1-3 years	22.6
4-5 years	-
More than 5 years	-
Total	$ 294.5

There were no substantial changes to the Partnership's operating lease commitments as disclosed in Note 3 to the Partnership's Annual Report on Form 10-K.

Note 7: Financing

Senior Unsecured Debt

For the nine months ended September 30, 2008 and 2007, the Partnership entered into the following debt issuances (in millions, except interest rate percentage):

Date of Issuance	Issuing Subsidiary	Amount of Issuance	Purchaser Discounts and Expenses	Net Proceeds	Interest Rate	Maturity Date	Interest Payable
March 2008	Texas Gas	$ 250.0	$ 2.8	$ 247.2	5.50%	April 1, 2013	April 1 and October 1
August 2007	Gulf South	225.0	2.0	223.0	5.75%	August 15, 2012	February 15 and August 15
August 2007	Gulf South	275.0	2.7	272.3	6.30%	August 15, 2017	February 15 and August 15

The notes are redeemable, in whole or in part, at the Partnership's option at any time, at a redemption price equal to the greater of 100% of the principal amount of the notes to be redeemed or a "make whole" redemption price based on the remaining scheduled payments of principal and interest discounted to the date of redemption at a Treasury rate plus 50 basis points in the case of the Texas Gas notes, 20 basis points in the case of the Gulf South 2012 notes, or 25 basis points in the case of the Gulf South 2017 notes, plus accrued and unpaid interest, if any. Other customary covenants apply, including those concerning events of default.

As of September 30, 2008 and December 31, 2007, the weighted-average interest rate of the Partnership's long-term debt was 5.89% and 5.82%.

Revolving Credit Facility

The Partnership maintains a revolving credit facility which has aggregate lending commitments of $1.0 billion. A financial institution which has a $50.0 million commitment under the revolving credit facility filed for bankruptcy protection in the third quarter 2008 and has not funded its portion of the Partnership's borrowing requests since that time. Borrowings outstanding under the credit facility as of September 30, 2008, were $256.0 million with a weighted-average borrowing rate of 3.00%. As of September 30, 2008, the Partnership and its subsidiaries were in compliance with all covenant requirements under the credit agreement. No funds were drawn under the Partnership's revolving credit facility at December 31, 2007. Subsequent to September 30, 2008, the Partnership borrowed all of the remaining unfunded commitments under the credit facility (excluding the unfunded commitment of the bankrupt lender noted above), which increased borrowings to $958.0 million.

Capitalized Interest and Allowance for Funds Used During Construction

During the three and nine months ended September 30, 2008, the Partnership capitalized interest of $21.9 million and $45.3 million. During the three and nine months ended September 30, 2007, the Partnership capitalized interest of $8.2 million and $14.5 million. In accordance with SFAS No. 71, *Accounting for the Effect of Certain Types of Regulation*, the Partnership's Texas Gas subsidiary capitalizes allowance for funds used during construction (AFUDC), comprised of debt and equity components for certain of its operations. The Partnership capitalized AFUDC of $0.1 million and $0.2 million for the three and nine months ended September 30, 2008, and $1.3 million and $2.4 million for the three and nine months ended September 30, 2007.

Offering of Common Units

For the nine months ended September 30, 2008 and 2007, the Partnership completed the following equity offerings which funds were used to finance a portion of the Partnership's expansion projects or to repay amounts borrowed under the revolving credit facility (in millions, except the offering price):

Month of Offering	Number of Common Units	Offering Price	Underwriting Discounts and Expenses	Net Proceeds (including General Partner Contribution)	Common Units Outstanding After Offering	Common Units Held by the Public After Offering
June 2008	10.0	$ 25.30	$ 9.4	$ 248.8	100.7	47.4
March 2007	8.0	36.50	4.2	293.9	83.2	29.9

Class B Units

In June 2008, the Partnership issued and sold, pursuant to the Class B Unit Purchase Agreement (the Purchase Agreement), approximately 22.9 million of class B units representing limited partner interests (class B units) to BPHC for $30.00 per class B unit, or an aggregate purchase price of $686.0 million. The Partnership's general partner also contributed $14.0 million to the Partnership to maintain its 2% interest. The Partnership used the proceeds of $700.0 million to repay amounts borrowed under the revolving credit facility and to fund a portion of the costs of its ongoing expansion projects. The Class B units are convertible into common units by the holder on a one-for-one basis at any time after June 30, 2013.

The class B units share in quarterly distributions of available cash from operating surplus on a pari passu basis with the Partnership's common units, until each common unit and class B unit has received a quarterly distribution of $0.30. The class B units do not participate in quarterly distributions above $0.30 per unit.

The class B units began sharing in income allocations beginning on July 1, 2008, and will begin participating in distributions that will be made beginning with the fourth quarter 2008. Income of $6.9 million was allocated to the class B capital account for the three and nine months ended September 30, 2008.

The class B units have the same voting rights as if they were outstanding common units and are entitled to vote as a separate class on any matters that materially adversely affect the rights or preferences of the class B units in relation to other classes of partnership interests or as required by law. Pursuant to the Purchase Agreement, the Partnership entered into a Registration Rights Agreement with BPHC covering the common units into which the class B units will be convertible. The class B units will be convertible into common units by the holder on a one-for-one basis at any time after June 30, 2013.

Note 8: Net Income per Limited Partner Unit and Cash Distributions

The Partnership calculates net income per limited partner unit in accordance with Emerging Issues Task Force (EITF) Issue No. 03-6, *Participating Securities and the Two-Class Method under FASB Statement No. 128*. In Issue 3 of EITF No. 03-6, the EITF reached a consensus that undistributed earnings for a period should be allocated to a participating security based on the contractual participation rights of the security to share in those earnings as if all of the earnings for the period had been distributed. The Partnership's general partner holds contractual participation rights which are incentive distribution rights (IDRs) in accordance with the partnership agreement as follows:

	Total Quarterly Distribution	Marginal Percentage Interest in Distributions	
	Target Amount	Limited Partner Unitholders (1),(2)	General Partner Unitholders
Minimum Quarterly Distribution	$0.3500	98%	2%
First Target Distribution	up to $0.4025	98%	2%
Second Target Distribution	above $0.4025 up to $0.4375	85%	15%
Third Target Distribution	above $0.4375 up to $0.5250	75%	25%
Thereafter	above $0.5250	50%	50%

(1) The class B unitholders participate in distributions on a pari passu basis with the Partnership’s common units up to $0.30 per quarter, beginning with the distribution that will be made in the fourth quarter 2008. The class B units do not participate in quarterly distributions above $0.30 per unit.

(2) The partnership agreement provides that during the subordination period, the subordinated units will not receive distributions until the general partner, common and class B unitholders have received their respective minimum quarterly distribution plus any arrearages. The subordinated units are not entitled to arrearages.

The amounts reported for net income per limited partner unit on the Condensed Consolidated Statements of Income for the three and nine month periods ended September 30, 2008 and 2007, were adjusted to take into account an assumed allocation to the general partner's IDRs. Payments made on account of the IDRs are determined in relation to actual declared distributions. A reconciliation of the limited partners' interest in net income and net income available to limited partners used in computing net income per limited partner unit follows (in millions, except per unit data):

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
Limited partners' interest in net income	$ 70.1	$ 38.5	$ 216.7	$ 151.1
Less assumed allocation to IDRs	0.1	(0.7)	7.9	0.7
Net income available to limited partners	70.0	39.2	208.8	150.4
Less assumed allocation to class B units	6.9	-	6.9	-
Less assumed allocation to subordinated units	15.6	10.1	52.3	43.7
Net income available to common units	$ 47.5	$ 29.1	$ 149.6	$ 106.7
Weighted-average common units	100.7	83.2	94.6	80.8
Weighted-average class B units (a)	22.9	-	22.9	-
Weighted-average subordinated units	33.1	33.1	33.1	33.1
Net income per limited partner unit – common units	$ 0.47	$ 0.35	$ 1.58	$ 1.32
Net income per limited partner unit – class B units	$ 0.30	$ -	$ 0.30	$ -
Net income per limited partner unit – subordinated units	$ 0.47	$ 0.30	$ 1.58	$ 1.32

(a) Number of class B units shown is weighted from July 1, 2008.

As discussed in Note 7, the class B units were not eligible to participate in income allocations until the third quarter 2008. As a result, no income allocations were made to the class B unit equity accounts and no assumed allocations to the class B units were made pursuant to EITF No. 03-6 for purpose of computing earnings per unit prior to July 1, 2008.

In the nine month periods ended September 30, 2008 and 2007, the Partnership declared quarterly distributions per unit to eligible unitholders of record, including common and subordinated units and the 2% general partner interest and IDRs held by its general partner as follows (in millions, except distribution per unit):

Payable Date	Distribution per Unit	Amount Paid to Limited Partner Unitholders	Amount Paid to General Partner Unitholders (Including IDRs)
August 11, 2008	$ 0.470	$ 62.8	$ 3.4
May 12, 2008	0.465	57.6	2.9
February 25, 2008	0.460	56.9	2.7
August 13, 2007	0.440	51.1	1.7
May 14, 2007	0.430	50.0	1.5
February 27, 2007	0.415	45.0	1.2

In October 2008, the Partnership declared a quarterly cash distribution to unitholders of record of $0.475 per unit. The subordinated units are convertible to common units on a one-to-one basis when certain distribution requirements, as defined in the partnership agreement, have been met. These requirements will have been met coincident with payment of the quarterly distribution declared in October 2008, to be paid in the fourth quarter 2008. The subordinated units will convert following this quarterly distribution to unitholders.

Note 9: Disposition of Coal Reserves

In August 2008, the Partnership completed the sale of its investment in land and coal reserves along the Ohio River in northern Kentucky and southern Indiana for $16.5 million. These assets had no book value at the time of the sale. As a result, the Partnership recorded a gain of $16.5 million related to the sale which was reported in Net gain on disposal of operating assets and related contracts in the Condensed Consolidated Statements of Income.

Note 10: Property, Plant and Equipment

In 2008, the Partnership placed in service the remaining pipeline assets and related compression associated with the East Texas to Mississippi Expansion project from Delhi, Louisiana to Harrisville, Mississippi. Additionally, the Partnership placed in service the pipeline assets and two compressor stations related to the Southeast Expansion project. As a result, approximately $1.1 billion was transferred from Construction work in progress to Property, plant and equipment during 2008. The assets will generally be depreciated over a term of 35 years.

In the first quarter 2008, the Partnership completed a review of the non-contiguous offshore assets of its Gulf South subsidiary and provided notice to the other interest holders of its intent to discontinue any use of its portion of the available capacity of these assets. As a result, the Partnership reviewed the assets for recoverability in accordance with SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, and recorded an impairment charge of approximately $1.4 million representing the net book value of the assets.

The Partnership was developing a salt dome storage cavern near Napoleonville, Louisiana. Operational tests, which were completed in July 2007, indicated that due to geological and other anomalies that could not be corrected, the Partnership would be unable to place the cavern in service as expected. As a result, the Partnership elected to abandon that cavern and is exploring the possibility of securing a new site on which a new cavern could be developed. In accordance with the requirements of SFAS No. 144, the carrying value of the cavern and related facilities was tested for recoverability. In the second quarter 2007, the Partnership recognized an impairment charge to earnings of approximately $14.7 million, representing the carrying value of the cavern, the fair value of which was determined to be zero based on discounted expected future cash flows. The charge was presented as Asset impairment on the Condensed Consolidated Statements of Income.

Note 11: Credit Concentration

Natural gas price volatility has increased dramatically in recent years, which has materially increased credit risk related to gas loaned to customers. Gas loaned to customers refers to receivables for services provided, as well as volumes owed by customers for imbalances or gas lent by the Partnership to them, generally under parking and lending and no-notice services. As of September 30, 2008, the amount of gas loaned out by the Partnership's subsidiaries was approximately 7.6 TBtu and the amount considered an imbalance was approximately 4.2 TBtu. Assuming an average market price during September 2008 of $7.54 per million British thermal units, the market value of gas loaned out and considered an imbalance at September 30, 2008, would have been approximately $88.6 million. If any significant customer should have credit or financial problems resulting in a delay or failure to repay the gas they owe the Partnership, it could have a material adverse effect on the Partnership's financial condition, results of operations and cash flows.

Note 12: Employee Benefits

Defined Benefit Plans

Texas Gas employees hired prior to November 1, 2006, are covered under a non-contributory, defined benefit pension plan. The Texas Gas Supplemental Retirement Plan provides pension benefits for the portion of an eligible employee's pension benefit that becomes subject to compensation limitations under the Internal Revenue Code. Texas Gas provides postretirement medical benefits and life insurance to retired employees who were employed full time, hired prior to January 1, 1996, and have met certain other requirements. The Partnership uses a measurement date of December 31 for its benefits plans.

Components of net periodic benefit cost for both the retirement plans and postretirement benefits other than pensions (PBOP) for the three and nine months ended September 30, 2008 and 2007, were the following (in millions):

	Retirement Plans For the Three Months Ended September 30,		PBOP For the Three Months Ended September 30,	
	2008	2007	2008	2007
Service cost	$ 0.9	$ 0.9	$ 0.1	$ 0.1
Interest cost	1.6	1.5	0.8	0.8
Expected return on plan assets	(1.7)	(1.7)	(1.3)	(1.2)
Amortization of prior service credit	-	-	(1.9)	(1.9)
Amortization of unrecognized net loss	-	0.1	-	0.2
Settlement charge	0.1	0.4	-	-
Regulatory asset (increase) decrease	-	(0.4)	1.4	1.4
Net periodic expense	$ 0.9	$ 0.8	$ (0.9)	$ (0.6)

	Retirement Plans For the Nine Months Ended September 30,		PBOP For the Nine Months Ended September 30,	
	2008	2007	2008	2007
Service cost	$ 2.7	$ 2.8	$ 0.4	$ 0.4
Interest cost	4.8	4.8	2.4	2.5
Expected return on plan assets	(5.0)	(5.3)	(3.7)	(3.6)
Amortization of prior service credit	-	-	(5.8)	(5.8)
Amortization of unrecognized net loss	-	0.2	-	0.5
Settlement charge	0.1	4.2	-	-
Regulatory asset (increase) decrease	-	(0.4)	4.1	4.1
Net periodic expense	$ 2.6	$ 6.3	$ (2.6)	$ (1.9)

Defined Contribution Plans

Gulf South employees and Texas Gas employees hired on or after November 1, 2006, are provided retirement benefits under a defined contribution money purchase plan. The operating subsidiaries also provide 401(k) plan benefits to their employees. Costs related to the Partnership's defined contribution plans were $1.6 million and $4.7 million for the three and nine months ended September 30, 2008, and $1.2 million and $3.9 million for the three and nine months ended September 30, 2007.

Note 13: Related Parties

Loews provides a variety of corporate services to the Partnership and its subsidiaries under service agreements. Services provided by Loews include, among others, information technology, tax, risk management, internal audit and corporate development services. Loews charged $3.1 million and $10.6 million for the three and nine months ended September 30, 2008, and $2.7 million and $9.3 million for the three and nine months ended September 30, 2007, to the Partnership based on the actual time spent by Loews personnel performing these services, plus related expenses.

Distributions paid related to common and subordinated units held by BPHC and the 2% general partner interest and IDRs held by Boardwalk GP were $129.5 million and $115.4 million during the nine months ended September 30, 2008 and 2007.

Note 14: Accumulated Other Comprehensive (Loss) Income

The following table shows the components of Accumulated other comprehensive (loss) income, net of tax which is included in Partners' Capital on the Condensed Consolidated Balance Sheets (in millions):

	As of September 30, 2008	As of December 31, 2007
Loss on cash flow hedges	$ (9.8)	$ (8.9)
Deferred components of net periodic benefit cost	6.6	13.1
Total Accumulated other comprehensive (loss) income	$ (3.2)	$ 4.2

Note 15: Guarantee of Securities of Subsidiaries

The Partnership has no independent assets or operations other than its investment in its subsidiaries. The Partnership's operating subsidiaries have issued securities which have all been fully and unconditionally guaranteed by the Partnership. The Partnership does have separate partners' capital including publicly traded limited partner common units.

The Partnership's subsidiaries have no significant restrictions on their ability to pay distributions or make loans to the Partnership and had no restricted assets at September 30, 2008.

Note 16: Recently Issued Accounting Pronouncements

In March 2008, the Financial Accounting Standards Board (FASB) issued SFAS No. 161, *Disclosures about Derivative Instruments and Hedging Activities*, which requires entities to provide enhanced disclosures about (a) how and why the entity uses derivative instruments, (b) how derivative instruments and related hedged items are accounted for under SFAS No. 133 and its related interpretations, and (c) how derivative instruments and related hedged items affect the entity's financial position, financial performance, and cash flows. SFAS No. 161 is effective for fiscal years and interim periods beginning after November 15, 2008. The Partnership is evaluating the effect that SFAS No. 161 will have on its financial statements.

In March 2008, the FASB approved Emerging Issues Task Force (EITF) Issue No. 07-4, *Application of the Two-Class Method under FASB Statement No. 128, Earnings per Share, to Master Limited Partnerships*, which requires that master limited partnerships use the two-class method of allocating earnings to calculate earnings per unit. EITF Issue No. 07-4 is effective for fiscal years and interim periods beginning after December 15, 2008. The Partnership is evaluating the effect that EITF Issue No. 07-4 will have on its earnings per unit and financial statements.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of financial condition and results of operations should be read in conjunction with our accompanying interim condensed consolidated financial statements and related notes, included elsewhere in this report and prepared in accordance with accounting principles generally accepted in the United States of America and our consolidated financial statements, related notes, Management's Discussion and Analysis of Financial Condition and Results of Operations and Risk Factors included in our Annual Report on Form 10-K for the year ended December 31, 2007.

We are a Delaware limited partnership formed in 2005. Our business is conducted by Boardwalk Pipelines, LP (Boardwalk Pipelines) and its subsidiaries Gulf South Pipeline Company, LP (Gulf South), Texas Gas Transmission, LLC (Texas Gas) (together, operating subsidiaries) and Gulf Crossing Pipeline Company, LLC (Gulf Crossing), which will operate a new interstate pipeline expected to be placed in service in 2009. Boardwalk Pipelines Holding Corp. (BPHC), a wholly-owned subsidiary of Loews Corporation (Loews), owns 53.3 million of our common units, 22.9 million of our class B units and 33.1 million of our subordinated units. Boardwalk GP, LP (Boardwalk GP), an indirect, wholly-owned subsidiary of BPHC, is our general partner and holds a 2% general partner interest in and all of our incentive distribution rights. Our common units are traded under the symbol “BWP” on the New York Stock Exchange.

Results of Operations – Business Overview

We derive our revenues primarily from the interstate transportation and storage of natural gas for third parties. Transportation and storage services are provided under firm and interruptible service agreements. Transportation rates are subject to maximum tariff rates established by the Federal Energy Regulatory Commission (FERC), although discounts from the maximum allowable cost-based rates are often granted to customers due to competition in the marketplace. Our Gulf South subsidiary is authorized to charge market-based rates for its firm and interruptible transportation and storage services. Our Texas Gas subsidiary was provided authority from FERC to charge market-based rates for the storage services associated with Phase III of our Western Kentucky Storage Expansion project.

Our transportation services consist of firm transportation, where the customer pays a capacity reservation charge to reserve pipeline capacity at certain receipt and delivery points along our pipeline systems, plus a commodity and fuel charge on the volume actually transported, and interruptible transportation, where the customer pays to transport gas only when capacity is available and used. We offer firm storage services in which the customer reserves and pays for a specific amount of storage capacity, including injection and withdrawal rights, and interruptible storage and parking and lending (PAL) services where the customer receives and pays for capacity only when it is available and used. Some PAL agreements are paid for at inception of the service and revenues for these agreements are recognized as service is provided over the term of the agreement.

Our operating costs and expenses typically do not vary significantly based upon the amount of gas transported, with the exception of fuel consumed at Gulf South’s compressor stations, which is part of Operation and maintenance expenses. We charge shippers for fuel in accordance with each pipeline’s individual tariff guidelines and Gulf South’s fuel recoveries are included as part of Gas transportation revenues.

We are not in the business of buying and selling natural gas other than for system management purposes, but changes in the price of natural gas can affect the overall supply and demand of natural gas, which in turn does affect our results of operations. We deliver to a broad mix of customers including local distribution companies, municipalities, interstate and intrastate pipelines, direct industrial users, electric power generation plants, marketers and producers. In addition to serving directly connected markets, our pipeline systems have indirect market access to the northeastern, midwestern and southeastern United States through interconnections with unaffiliated pipelines.

Our business is affected by trends involving natural gas price levels and natural gas price spreads, including spreads between physical locations on our pipeline system, which affect our transportation revenues, and spreads in natural gas prices across time (for example summer to winter), which primarily affect our PAL and storage revenues. High natural gas prices in recent years have helped to drive increased production levels in producing locations such as the Bossier Sands and Barnett Shale gas producing regions in East Texas, which has resulted in additional supply being available on the west side of our system. This has resulted in widened west-to-east basis differentials which have benefited our transportation revenues. The high natural gas prices have also driven increased production in regions such as the Fayetteville Shale in Arkansas and the Caney Woodford Shale in Oklahoma, which, together with the higher production levels in East Texas, have formed the basis for several pipeline expansion projects including those being undertaken by us. Wide spreads in natural gas prices between time periods during the past two to three years, for example fall 2006 to spring 2007, were favorable for our PAL and interruptible storage services during that period. These spreads decreased substantially in 2007 and have continued to decrease for the majority of 2008, which resulted in reduced PAL and interruptible storage revenues. We cannot predict future time period spreads or basis differentials.

Results of Operations for the Three Months Ended September 30, 2008 and 2007

Our net income for the third quarter 2008 increased $33.6 million, or 84%, from the comparable period in 2007. The primary drivers for the increase were higher revenues from firm transportation services associated with our expansion projects and gains on the disposition of coal reserves and gas sales associated with our storage expansion projects. The favorable drivers were partly offset by lower PAL revenues due to unfavorable natural gas price spreads, higher fuel costs and higher depreciation and property tax expense due to an increase in our asset base from expansion.

Operating revenues increased $56.8 million, or 42%, to $191.6 million for the third quarter 2008, compared to $134.8 million for the 2007 period. Gas transportation revenues increased $37.7 million, excluding fuel, due mainly to our expansion projects. Our fuel revenues increased $19.5 million due to expansion-related throughput and an increase in the price of natural gas. Gas storage revenues increased $3.4 million related to an increase in storage capacity associated with our Western Kentucky Storage Expansion project. These increases were partially offset by a $3.8 million decrease in PAL revenues due to unfavorable natural gas price spreads.

Operating costs and expenses increased $16.6 million, or 19%, to $102.8 million for the third quarter 2008, compared to $86.2 million for the 2007 period, primarily resulting from a $20.5 million increase in fuel costs from providing service on our expansion projects and higher natural gas prices. Depreciation and other taxes, primarily comprised of property taxes, increased $17.7 million due to an increase in our asset base from expansion and administrative and general expenses increased $3.7 million primarily due to employee related expenses, various corporate services and a bad debt recovery that favorably impacted the 2007 period. The increased expenses were partly offset by a $16.5 million gain on the disposition of coal reserves and a $15.3 million gain from the sale of gas related to our Western Kentucky Storage Expansion project. The 2007 period was also favorably impacted by $4.6 million from insurance recoveries related to the 2005 hurricanes.

Total other deductions increased by $6.4 million, or 75%, to $14.9 million for the third quarter 2008, compared to $8.5 million for the 2007 period. The increase was due to $5.9 million of losses from the mark-to-market effect of derivatives associated with the purchase of line pack for our expansion projects and decreased interest income of $5.1 million due to lower average cash balances available for investment. These amounts were partly offset by a $5.5 million decrease in interest expense related to higher capitalized interest associated with our expansion projects.

Results of Operations for the Nine Months Ended September 30, 2008 and 2007

Our net income for the first nine months of 2008 increased $70.8 million, or 46%, from the comparable period in 2007. The primary drivers for the increase were higher revenues from firm transportation services associated with our expansion projects and gains on gas sales associated with our expansion projects, disposition of coal reserves and the settlement of a contract claim. The favorable drivers were partly offset by lower PAL revenues due to unfavorable natural gas price spreads and higher depreciation and property tax expense due to an increase in our asset base from expansion. The 2007 period was unfavorably impacted by a $14.7 million impairment charge.

Operating revenues for the nine months ended September 30, 2008, increased $105.8 million, or 22%, to $579.2 million, compared to $473.4 million for the nine months ended September 30, 2007. Gas transportation revenues, excluding fuel, increased $83.0 million, $76.0 million of which was related to our expansion projects and the remainder to higher interruptible services. Fuel revenues increased $38.6 million due to expansion-related throughput and higher natural gas prices. Gas storage revenues increased $9.5 million related to an increase in storage capacity associated with our Western Kentucky Storage Expansion project. These increases were partially offset by lower PAL revenues of $25.3 million due to unfavorable natural gas price spreads.

Operating costs and expenses for the nine months ended September 30, 2008, increased $19.7 million, or 7%, to $307.9 million, compared to $288.2 million for the nine months ended September 30, 2007. The primary drivers were increased depreciation and other taxes, comprised primarily of property taxes, of $43.1 million associated with an increase in our asset base due to expansion and increased fuel costs of $41.5 million from providing service on our expansion projects and higher natural gas prices. Administrative and general expenses increased $8.3 million due to increased outside services mainly due to legal and regulatory matters and various corporate services, higher property insurance from an increase in rates and asset base, an increase in information technology-related expenses from infrastructure improvements and growth and a bad debt recovery that favorably impacted 2007. These increases were offset by a $30.8 million gain on the sale of gas related to our Western Kentucky Storage Expansion project, a $16.5 million gain on the disposition of coal reserves, and an $11.2 million gain from the settlement of a contract claim. The 2007 period was unfavorably impacted by a $14.7 million impairment charge related to our Magnolia storage facility.

Total other deductions increased by $15.0 million, or 52%, to $44.1 million for the nine months ended September 30, 2008, compared to $29.1 million for the 2007 period primarily as a result of decreased interest income due to lower average cash balances available for investment.

Liquidity and Capital Resources

We are a partnership holding company and derive all of our operating cash flow from our operating subsidiaries. Our operating subsidiaries use funds from their respective operations to fund their operating activities and maintenance capital requirements, service their indebtedness and make advances or distributions to Boardwalk Pipelines. Boardwalk Pipelines uses cash provided from the operating subsidiaries and, as needed, borrowings under its revolving credit facility discussed below, to service its outstanding indebtedness and, when available, make distributions or advances to us to fund our distributions to unitholders.

Expansion Capital Expenditures

We are currently engaged in several pipeline expansion projects, described below, and expect the estimated total cost of these projects to be as follows (in millions):

	Estimated Total Cost	Cash Invested through September 30, 2008
Southeast Expansion	$ 775	$ 635.5
Gulf Crossing Project	1,800	1,002.0
Fayetteville and Greenville Laterals	1,290	449.6
Total	$ 3,865	$ 2,087.1

Based upon our current cost estimates, we expect to incur expansion project capital expenditures of approximately $0.9 billion for the remainder of 2008 and $0.9 billion in 2009 and 2010 to complete our pipeline expansion projects. The majority of those expenditures will occur during the remainder of 2008 and the first half of 2009. Our cost and timing estimates for these projects are subject to a variety of other risks and uncertainties, including obtaining regulatory approvals, adverse weather conditions, delays in obtaining key materials, shortages of qualified labor and escalating costs of labor and materials. Please refer to Item 1A, *Risk Factors*, in our 2007 Form 10-K regarding risks associated with our expansion projects and the related financing.

We have financed our expansion capital costs through equity financings, the incurrence of debt, including sales of debt by us and our subsidiaries, borrowings under our revolving credit facility and available operating cash flow in excess of our operating needs. To complete our announced projects, we anticipate we will need to issue as much as $1.0 billion in equity by issuing limited partnership units, a portion of which is expected to be issued in the fourth quarter 2008 and the remainder in the first half of 2009. Our largest shareholder, Loews, has advised us that it is willing to purchase the entire equity investment we need to the extent the public markets remain unavailable on acceptable terms. We have not committed to any transaction at this time, however, any additional investment by Loews would be subject to review and approval, as to fairness, by our independent Conflicts Committee.

The following paragraphs describe each of our pipeline expansion projects in more detail:

Southeast Expansion. The pipeline and two compressor stations related to this project were placed in service during 2008. The project consists of approximately 111 miles of 42-inch pipeline originating near Harrisville, Mississippi and extending to an interconnect with Transcontinental Pipe Line Company (Transco) in Choctaw County, Alabama (Transco 85), having 1.2 billion cubic feet (Bcf) of peak-day transmission capacity. We are expanding the project through the addition of compression facilities to meet commitments of 1.8 Bcf of peak-day transmission capacity. We expect this additional capacity to be in service during the first quarter 2009 to coincide with the commencement of service on our Gulf Crossing project. Customers have contracted at fixed rates for all of the operational capacity (with a weighted-average term of 9.2 years, including a capacity lease agreement with Gulf Crossing discussed below).

Gulf Crossing Project. We are constructing a new interstate pipeline that begins near Sherman, Texas and will proceed to the Perryville, Louisiana area and will consist of approximately 357 miles of 42-inch pipeline having approximately 1.7 Bcf of peak-day transmission capacity with the addition of incremental compression facilities. Additionally, Gulf Crossing has entered into: (i) a capacity lease agreement for 1.1 Bcf per day of capacity on our Gulf South pipeline system (including capacity on the Southeast Expansion and capacity on a portion of our recently completed East Texas to Mississippi Expansion) to make deliveries to an interconnect with Transco 85; and (ii) a capacity lease agreement with Enogex, a third-party intrastate pipeline, which will bring gas supplies to our system, both of which have been approved by the FERC. Customers have contracted at fixed rates for all of the operational capacity, with a weighted-average term of approximately 9.5 years. We expect the pipeline to be in service during the first quarter 2009 and the compression to be fully in service in 2010.

Fayetteville and Greenville Laterals. We are constructing two laterals on our Texas Gas pipeline system to transport gas from the Fayetteville Shale area in Arkansas to markets directly and indirectly served by our existing interstate pipelines. The Fayetteville Lateral will originate in Conway County, Arkansas and proceed southeast through the Bald Knob, Arkansas area to an interconnect with the Texas Gas mainline in Coahoma County, Mississippi and consist of approximately 165 miles of 36-inch pipeline. The Greenville Lateral will originate at the Texas Gas mainline near Greenville, Mississippi and proceed east to the Kosciusko, Mississippi area and consist of approximately 95 miles of 36-inch pipeline. The Greenville Lateral will allow customers to access additional markets, primarily in the Midwest, Northeast and Southeast. We recently executed contracts for additional capacity that will require us to add compression to increase the peak-day transmission capacity to approximately 1.3 Bcf for the Fayetteville Lateral and to approximately 1.0 Bcf for the Greenville Lateral. The contracts associated with this project are at fixed rates with a weighted-average term of 9.9 years. We expect the first 66 miles of the Fayetteville Lateral to be in service during the fourth quarter 2008 and the remainder of the pipeline related to the Fayetteville and Greenville Laterals to be in service during the first quarter 2009. In September 2008, we made additional filings with FERC regarding the new compression required to increase the peak-day transmission capacity, which is expected to be in service during 2010.

We are also engaged in the following storage expansion project:

Western Kentucky Storage Expansion Phase III. We are developing up to 8.3 Bcf of new working gas capacity at our Midland storage facility and FERC has granted us market-based rate authority for this new capacity. This expansion is supported by 10-year precedent agreements for 5.1 Bcf of storage capacity. The cost of this project will be dependent on the ultimate size of the expansion. We expect 5.4 Bcf of storage capacity to be in service during the fourth quarter 2008. Through September 30, 2008, we spent $41.0 million related to this project.

Maintenance Capital Expenditures

Maintenance capital expenditures for the nine months ended September 30, 2008 and 2007, were $23.9 million and $32.3 million. We expect to fund the remaining 2008 maintenance capital expenditures of approximately $34.7 million from our operating cash flows.

Distributions

For the nine months ended September 30, 2008 and 2007, we paid distributions of $186.3 million and $150.5 million. Please see Note 8 in Part 1, Item 1 of this report for further discussion.

Equity and Debt Financing

In June 2008, we issued and sold approximately 22.9 million of class B units representing limited partner interests (class B units) to BPHC for $30.00 per class B unit, or an aggregate purchase price of $686.0 million, pursuant to the Class B Unit Purchase Agreement (the Purchase Agreement). Our general partner also contributed $14.0 million to us to maintain its 2% general partner interest. Please see Note 7 in Part 1, Item 1 of this report for further discussion.

In June 2008, we completed a public offering of 10.0 million of our common units at a price of $25.30 per unit. We received proceeds of approximately $248.8 million, net of underwriting discounts and offering expenses of $9.4 million, which includes approximately $5.2 million contributed by our general partner to maintain its 2% interest.

In March 2008, we received net proceeds of approximately $247.2 million after deducting initial purchaser discounts and offering expenses of $2.8 million from the sale of $250.0 million of 5.50% senior unsecured notes of Texas Gas due April 1, 2013.

Revolving Credit Facility

We maintain a revolving credit facility which has aggregate lending commitments of $1.0 billion, under which Boardwalk Pipelines, Gulf South and Texas Gas each may borrow funds, up to applicable sub-limits. A financial institution which has a $50.0 million commitment under the revolving credit facility filed for bankruptcy protection in the third quarter 2008 and has not funded its portion of our borrowing requests since that time. Interest on amounts drawn under the credit facility is payable at a floating rate equal to an applicable spread per annum over the London Interbank Offered Rate or a base rate defined as the greater of the prime rate or the Federal funds rate plus 50 basis points. Under the terms of the agreement, each of the borrowers must maintain a minimum ratio, as of the last day of each fiscal quarter, of consolidated total debt to consolidated earnings before income taxes, depreciation and amortization (as defined in the agreement), measured for the preceding twelve months, of not more than five to one. The revolving credit facility has a maturity date of June 29, 2012.

As of September 30, 2008, we had $256.0 million of loans outstanding under the revolving credit facility of which the weighted-average interest rate on the borrowings was 3.00%. Any letters of credit previously issued by us under the facility expired in the third quarter 2008. As of September 30, 2008, we were in compliance with all covenant requirements under our credit facility.

Subsequent to September 30, 2008, we borrowed all of the remaining unfunded commitments under the credit facility (excluding the unfunded commitment of the bankrupt lender noted above), which increased borrowings to $958.0 million.

Changes in cash flow from operating activities

Net cash provided by operating activities increased $47.4 million to $276.1 million for the nine months ended September 30, 2008, compared to $228.7 million for the comparable 2007 period, primarily due to a $59.3 million increase in cash from the change in net income excluding non-cash items such as depreciation and amortization and the recognition of income previously deferred. This increase was offset by an $11.0 million decrease in cash due to the settlement of derivatives.

Changes in cash flow from investing activities

Net cash used in investing activities increased $615.7 million to $1,837.0 million for the nine months ended September 30, 2008, compared to $1,221.3 million for the comparable 2007 period, primarily due to a $1,217.4 million increase in capital expenditures related to our expansion projects. This increase was offset by a $540.0 million decrease in short term investments which occurred in the 2007 period and $58.0 million in net proceeds from asset sales mainly related to the sale of gas related to our storage expansion projects and the disposition of coal reserves.

Changes in cash flow from financing activities

Net cash provided by financing activities increased $627.0 million to $1,265.7 million for the nine months ended September 30, 2008, compared to $638.7 million for the comparable 2007 period, primarily due to a $654.9 million increase in net proceeds from the sale of common and class B units and related general partner capital contributions. The increase was offset by a $35.8 million decrease in cash from an increase in distributions to our unitholders.

Contractual Obligations

The table below is updated for significant changes in contractual cash payment obligations as of September 30, 2008, by period (in millions):

	Total	Less than 1 Year	1-3 Years	4-5 Years	More than 5 Years
Principal payments on long-term debt (1)	$ 2,366.0	-	-	$ 481.0	$ 1,885.0
Interest on long-term debt (2)	947.4	$ 25.5	$ 234.9	235.0	452.0
Capital commitments	294.5	271.9	22.6	-	-
Pipeline capacity agreements	59.1	1.6	12.3	12.3	32.9
Total	$ 3,667.0	$ 299.0	$ 269.8	$ 728.3	$ 2,369.9

(1) This includes our senior unsecured notes, having maturity dates from 2012 to 2027 and $256.0 million of loans outstanding under our revolving credit facility, having a maturity date of June 29, 2012.

(2) Interest obligations represent interest due on our senior unsecured notes at fixed rates. Future interest obligations under our revolving credit facility are uncertain, due to the variable interest rate on fluctuating balances. Based on a 3.00% weighted-average interest rate on amounts outstanding under our revolving credit facility as of September 30, 2008, $1.9 million, $15.4 million and $11.4 million would be due under the credit facility in less than one year, 1-3 years, and 4-5 years, respectively.

The commitments related to pipeline capacity agreements are associated with the initial 10-year term for capacity on a third-party pipeline for the Southeast Expansion project. Pursuant to the settlement of the Texas Gas rate case in 2006, we are required to annually fund an amount to the Texas Gas pension plan equal to the amount of actuarially determined net periodic pension cost, including a minimum of $3.0 million. The above table does not reflect commitments we have made after September 30, 2008, relating to our expansion projects. For information on these projects, please read “Expansion Capital Expenditures” above.

Off-Balance Sheet Arrangements

At September 30, 2008, we had no guarantees of off-balance sheet debt to third parties, no debt obligations that contain provisions requiring accelerated payment of the related obligations in the event of specified levels of declines in credit ratings, and no other off-balance sheet arrangements.

Critical Accounting Policies and Estimates

Certain amounts included in or affecting our condensed consolidated financial statements and related disclosures must be estimated, requiring us to make certain assumptions with respect to values or conditions that cannot be known with certainty at the time the financial statements are prepared. These estimates and assumptions affect the amounts we report for assets and liabilities and our disclosure of contingent assets and liabilities in our financial statements. We evaluate these estimates on an ongoing basis, utilizing historical experience, consultation with third parties and other methods we consider reasonable. Nevertheless, actual results may differ significantly from our estimates. Any effects on our business, financial position or results of operations resulting from revisions to these estimates are recorded in the periods in which the facts that give rise to the revisions become known.

During the nine months ended September 30, 2008, there were no significant changes to our critical accounting policies, judgments or estimates disclosed in our Annual Report on Form 10-K for the year ended December 31, 2007.

Forward-Looking Statements

Investors are cautioned that certain statements contained in this report, as well as some statements in periodic press releases and some oral statements made by our officials and our subsidiaries during presentations about us, are “forward-looking.” Forward-looking statements include, without limitation, any statement that may project, indicate or imply future results, events, performance or achievements, and may contain the words “expect,” “intend,” “plan,” “anticipate,” “estimate,” “believe,” “will likely result,” and similar expressions. In addition, any statement made by our management concerning future financial performance (including future revenues, earnings or growth rates), ongoing business strategies or prospects, and possible actions by our partnership or its subsidiaries, are also forward-looking statements.

Forward-looking statements are based on current expectations and projections about future events and are inherently subject to a variety of risks and uncertainties, many of which are beyond our control that could cause actual results to differ materially from those anticipated or projected. These risks and uncertainties include, among others:

- We may not complete projects, including growth or expansion projects, that we have commenced or will commence, or we may complete projects on materially different terms, cost or timing than anticipated and we may not be able to achieve the intended economic or operational benefits of any such project, if completed.

- The successful completion, timing, cost, scope and future financial performance of our expansion projects could differ materially from our expectations due to availability of contractors or equipment, weather, difficulties or delays in obtaining regulatory approvals or denied applications, land owner opposition, the lack of adequate materials, labor difficulties or shortages, expansion costs that are higher than anticipated and numerous other factors beyond our control.

- We may not complete any future debt or equity financing transaction.

- The gas transmission and storage operations of our subsidiaries are subject to rate-making policies and actions by the FERC or customers that could have an adverse impact on the rates we charge and our ability to recover our income tax allowance, our full cost of operating our pipelines and a reasonable return.

- We are subject to laws and regulations relating to the environment and pipeline operations which may expose us to significant costs, liabilities and loss of revenues. Any changes in such regulations or their application could negatively affect our business, financial condition and results of operations.

- Our operations are subject to operational hazards and unforeseen interruptions for which we may not be adequately insured.

- The cost of insuring our assets may increase dramatically.

- Because of the natural decline in gas production connected to our system, our success depends on our ability to obtain access to new sources of natural gas, which is dependent on factors beyond our control. Any decrease in supplies of natural gas in our supply areas could adversely affect our business, financial condition and results of operations.

- We may not be able to maintain or replace expiring gas transportation and storage contracts at favorable rates.

- Significant changes in natural gas prices could affect supply and demand, reducing system throughput and adversely affecting our revenues.

Developments in any of these areas could cause our results to differ materially from results that have been or may be anticipated or projected. Forward-looking statements speak only as of the date of this report and we expressly disclaim any obligation or undertaking to update these statements to reflect any change in our expectations or beliefs or any change in events, conditions or circumstances on which any forward-looking statement is based.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Total long-term debt at September 30, 2008, had a carrying value of $2.4 billion and a fair value of $2.1 billion. With the exception of our revolving credit facility, our debt has been issued at fixed rates, therefore interest expense would not be impacted by changes in interest rates. A 100 basis point increase in interest rates on our fixed rate debt would result in a decrease in fair value of approximately $120.3 million at September 30, 2008. A 100 basis point decrease would result in an increase in fair value of approximately $129.8 million at September 30, 2008. The weighted-average interest rate of our long-term debt was 5.89% at September 30, 2008.

Certain volumes of our gas stored underground are available for sale and subject to commodity price risk. At September 30, 2008 and December 31, 2007, approximately $3.6 million and $16.3 million of gas stored underground, which we own and carry as current Gas stored underground, is exposed to commodity price risk. We utilize derivatives to hedge certain exposures to market price fluctuations on the anticipated operational sales of gas.

The derivatives related to the sale of natural gas and cash for fuel reimbursement generally qualify for cash flow hedge accounting under Statement of Financial Accounting Standards (SFAS) No. 133 and are designated as such. The effective component of related gains and losses resulting from changes in fair values of the derivatives contracts designated as cash flow hedges are deferred as a component of Accumulated other comprehensive loss. The deferred gains and losses are recognized in the Condensed Consolidated Statements of Income when the anticipated transactions affect earnings. Generally, for gas sales and cash for fuel reimbursement, any gains and losses on the related derivatives would be recognized in Operating Revenues.

We are exposed to credit risk relating to the risk of loss resulting from the nonperformance by a customer of its contractual obligations. Our exposure generally relates to receivables for services provided, as well as volumes owed by customers for imbalances or gas lent by us to them, generally under PAL and no-notice service. We maintain credit policies intended to minimize credit risk and actively monitor these policies. Natural gas price volatility has increased dramatically in recent years, which has materially increased credit risk related to gas loaned to customers. As of September 30, 2008, the amount of gas loaned out by our subsidiaries was approximately 7.6 trillion British thermal units (TBtu) and the amount considered an imbalance was approximately 4.2 TBtu. Assuming an average market price during September 2008 of $7.54 per million British thermal units (MMBtu), the market value of gas loaned out and considered an imbalance at September 30, 2008, would have been approximately $88.6 million. As of December 31, 2007, the amount of gas loaned out by our subsidiaries was approximately 12.7 TBtu and the amount considered an imbalance was approximately 2.5 TBtu. Assuming an average market price during December 2007 of $7.13 per MMBtu, the market value of gas loaned out at December 31, 2007, would have been approximately $108.2 million. If any significant customer of ours should have credit or financial problems resulting in a delay or failure to repay the gas they owe to us, this could have a material adverse effect on our financial condition, results of operations and cash flows.

Our cash and cash equivalents, including funds received after September 30, 2008, as a result of borrowing all of the remaining commitments under our revolving credit facility, were invested primarily in treasury funds and treasury bills. Due to the short-term nature and type of our investments, a hypothetical 10% increase in interest rates would not have a material effect on the fair market value of our portfolio. Since we have the ability to liquidate this portfolio, we do not expect our earnings or cash flows to be materially impacted by the effect of a sudden change in market interest rates on our investment portfolio.

Item 4. Controls and Procedures

Disclosure Controls and Procedures

We maintain a system of disclosure controls and procedures designed to ensure that information required to be disclosed by us in reports that we file or submit under the federal securities laws, including this report is recorded, processed, summarized and reported on a timely basis. These disclosure controls and procedures are designed to ensure that information required to be disclosed by us under the federal securities laws is accumulated and communicated to us on a timely basis to allow decisions regarding required disclosure.

Our principal executive officer (CEO) and principal financial officer (CFO) undertook an evaluation of our disclosure controls and procedures as of the end of the period covered by this report. The CEO and CFO have concluded that our controls and procedures were effective as of September 30, 2008.

Changes in Internal Control over Financial Reporting

There were no changes in our internal control over financial reporting that occurred during the quarter ended September 30, 2008, that have materially affected or that are reasonably likely to materially affect our internal control over financial reporting.

PART II – OTHER INFORMATION

Item 1. Legal Proceedings

For a discussion of certain of our current legal proceedings, please see Note 6 in Part 1 in Item 1 of this report.

Item 6. Exhibits

EXHIBIT 31.1

I, Rolf A. Gafvert, certify that:

1) I have reviewed this report on Form 10-Q of Boardwalk Pipeline Partners, LP;

2) Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3) Based on my knowledge, the condensed consolidated financial statements, and other financial information included in this report, fairly present in all material respects the balance sheets, statements of income and cash flows of the registrant as of, and for, the periods presented in this report;

4) The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
   a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5) The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors :
   a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
   b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes ☐ No ☒

The aggregate market value of the common units of the registrant held by non-affiliates as of June 30, 2007 was approximately $1.1 billion. As of February 15, 2008, the registrant had 90,656,122 common units outstanding.

Documents incorporated by reference. None.

TABLE OF CONTENTS

2007 FORM 10-K

BOARDWALK PIPELINE PARTNERS, LP

PART I

Item 1. Business

Introduction

We are a Delaware limited partnership formed in 2005 to own and operate the business conducted by Boardwalk Pipelines, LP (Boardwalk Pipelines) and its subsidiaries, Gulf South Pipeline Company, LP (Gulf South) and Texas Gas Transmission, LLC (Texas Gas) (together, operating subsidiaries). Boardwalk Pipelines Holding Corp. (BPHC), a wholly-owned subsidiary of Loews Corporation (Loews), owns 53.3 million of our common units and 33.1 million of our subordinated units, constituting approximately 68.0% of our equity. Boardwalk GP, LP (Boardwalk GP), an indirect, wholly-owned subsidiary of BPHC, is our general partner and holds a 2.0% general partner interest and all of our incentive distribution rights. Our common units are traded under the symbol "BWP" on the New York Stock Exchange (NYSE).

Our Business

We are engaged in the interstate transportation and storage of natural gas. We own and operate two natural gas pipeline systems which we use to transport and store natural gas for a broad mix of customers, including local distribution companies (LDCs), municipalities, interstate and intrastate pipelines, direct industrial users, electric power generation plants, marketers and producers. Our transportation and storage rates and general terms and conditions of service (tariff) are established by, and subject to review and revision by, the Federal Energy Regulatory Commission (FERC). These rates are designed based upon certain assumptions to allow us the opportunity to recover our costs and earn a reasonable return on equity, however there can be no assurance that we will recover those costs or earn a reasonable return. Our firm and interruptible storage rates for Gulf South are market-based pursuant to authority granted by the FERC.

We provide a significant portion of our pipeline transportation and storage services through firm contracts under which our customers pay monthly capacity reservation charges (which are charges owed regardless of actual pipeline or storage capacity utilization) as well as other charges based on actual utilization of the capacity. For the year ended December 31, 2007, approximately 65.0% of our revenues were derived from capacity reservation charges under firm contracts, approximately 17.0% of our revenues were derived from other charges based on actual utilization under firm contracts and approximately 18.0% of our revenues were derived from interruptible transportation, interruptible storage, parking and lending (PAL) and other services.

We are currently undertaking several significant pipeline and storage expansion projects.

Our Pipeline and Storage Systems

Our operating subsidiaries own and operate approximately 13,550 miles of pipeline, directly serving customers in eleven states and indirectly serving customers throughout the northeastern and southeastern United States through numerous interconnections with unaffiliated pipelines. In 2007, our pipeline systems transported approximately 1.3 trillion cubic feet (Tcf) of gas. Average daily throughput on our pipeline systems during 2007 was approximately 3.6 billion cubic feet (Bcf). Our natural gas storage facilities are comprised of eleven underground storage fields located in four states with aggregate working gas capacity of approximately 155.0 Bcf. We conduct all of our natural gas transportation and storage operations through our operating subsidiaries as one segment.

The principal sources of supply for our pipeline systems are regional supply hubs and market centers located in the Gulf Coast region, including offshore Louisiana, Perryville, Louisiana area, Henry Hub in Louisiana, Agua Dulce and Carthage, Texas. Carthage, Texas provides access to natural gas supplies from the Bossier Sands and Barnett Shale gas producing regions in East Texas. The Henry Hub serves as the designated delivery point for natural gas futures contracts traded on the New York Mercantile Exchange (NYMEX). We also access wellhead supplies in eastern Texas, northern and southern Louisiana and Mississippi. We also have access to imported liquefied natural gas (LNG) through the Lake Charles, Louisiana LNG terminal, to mid-continent gas production through several third-party pipeline interconnects, and to Canadian natural gas through a pipeline interconnect with Midwestern Gas Transmission Company at Whitesville, Kentucky.

Our Gulf South System

Our Gulf South pipeline system is located along the Gulf Coast in the states of Texas, Louisiana, Mississippi, Alabama and Florida. This system is composed of:

- approximately 7,700 miles of pipeline, having a peak-day delivery capacity of approximately 4.5 Bcf per day;
- 30 compressor stations having an aggregate of approximately 253,600 horsepower; and
- two natural gas storage fields located in Louisiana and Mississippi, having aggregate storage capacity of approximately 131.0 Bcf of gas, of which approximately 83.0 Bcf is designated as working gas.

The numbers shown above include 242 miles of large diameter pipeline and one compressor station from our East Texas to Mississippi expansion project. See Expansion Projects for more information regarding the East Texas to Mississippi expansion project.

The on-system markets directly served by the Gulf South system are generally located in eastern Texas, Louisiana, southern Mississippi, southern Alabama, and the Florida panhandle. These markets include LDCs and municipalities across the system, including New Orleans, Louisiana; Jackson, Mississippi; Mobile, Alabama; and Pensacola, Florida, and end-users located across the system, including the Baton Rouge to New Orleans industrial corridor and Lake Charles, Louisiana. Gulf South also has indirect access to off-system markets through numerous interconnections with other interstate and intrastate pipelines and storage facilities. These pipeline interconnections provide access to markets throughout the northeastern and southeastern United States.

Gulf South’s Bistineau, Louisiana gas storage facility has approximately 78.0 Bcf of working gas storage capacity, with a maximum injection rate of 480 million cubic feet (MMcf) per day and a maximum withdrawal rate of 870 MMcf per day. Gulf South currently sells firm and interruptible storage services at Bistineau under FERC approved market-based rates. Gulf South’s Jackson, Mississippi gas storage facility has approximately 5.0 Bcf of working gas storage capacity, with a maximum injection rate of 100 MMcf per day and a maximum withdrawal rate of 250 MMcf per day. The Jackson gas storage facility is used for operational purposes and its capacity is not offered for sale to the market.

Our Texas Gas System

Our Texas Gas pipeline system originates in Louisiana and in East Texas and runs north and east through Louisiana, Arkansas, Mississippi, Tennessee, Kentucky, Indiana, and into Ohio, with smaller diameter lines extending into Illinois. This system is composed of:

- approximately 5,850 miles of pipeline, having a peak-day delivery capacity of approximately 3.8 Bcf per day which includes deliveries to pipeline interconnects in South Louisiana;
- 31 compressor stations having an aggregate of approximately 552,000 horsepower; and
- nine natural gas storage fields located in Indiana and Kentucky, having aggregate storage capacity of approximately 180.0 Bcf of gas, of which approximately 72.0 Bcf is designated as working gas.

The numbers shown above include 9.0 Bcf of working gas capacity from Phase II of our Western Kentucky storage expansion project. See Expansion Projects for more information regarding the Western Kentucky storage expansion project.

The direct market area for Texas Gas encompasses eight states in the southern and midwestern United States and includes the Memphis, Tennessee; Louisville, Kentucky; Cincinnati and Dayton, Ohio; and Evansville and Indianapolis, Indiana metropolitan areas. Texas Gas also has indirect market access to the Northeast through interconnections with unaffiliated pipelines.

Texas Gas owns a majority of the gas in its storage fields which it uses to meet the operational balancing needs on its system, to meet the operational requirements of its firm and interruptible storage customers and the requirements of its no-notice transportation service (NNS), which allows customers to draw from storage gas during the winter season to be repaid in-kind during the following summer season. A large portion of the gas delivered by the Texas Gas system is used for heating, resulting in substantially higher daily requirements during winter months. Texas Gas also offers summer no-notice transportation service (SNS) designed primarily to meet the needs of electrical power generation facilities during the summer season.

Expansion Projects

Pipeline Expansion Projects:

East Texas to Mississippi Expansion. On June 18, 2007, the FERC granted us the authority to construct, own and operate a pipeline expansion consisting of approximately 242 miles of 42-inch pipeline from DeSoto Parish in western Louisiana to near Harrisville, Mississippi and approximately 110,000 horsepower of new compression, having approximately 1.7 Bcf of new peak-day transmission capacity. Customers have contracted at fixed rates for 1.4 Bcf per day of firm transportation capacity on a long-term basis (with a weighted average term of approximately 6.8 years) from Carthage, Texas, which represents substantially all of the normal operating capacity. The pipeline facilities from Keatchie, Louisiana in DeSoto Parish to interconnects with Texas Gas near Bosco, Louisiana, and Columbia Gulf Transmission pipeline at Delhi, Louisiana began flowing gas on December 31, 2007. The remaining pipeline facilities from Delhi, Louisiana to Harrisville, Mississippi, began flowing gas during January 2008. Currently, the three compressor units at our Carthage compressor station are operational and we are making all of our primary firm contractual deliveries into the Delhi, Louisiana area and a substantial percentage of our primary firm contractual deliveries to markets in Mississippi. We are in the process of commissioning the remaining compression facilities associated with this project, which we expect to be completed during the second quarter 2008.

Gulf Crossing Project. We are pursuing construction of a new interstate pipeline that will begin near Sherman, Texas and proceed to the Perryville, Louisiana area. The project will be owned by Gulf Crossing Pipeline Company, LLC (Gulf Crossing), our newly formed interstate pipeline subsidiary, and will consist of approximately 357 miles of 42-inch pipeline having up to approximately 1.7 Bcf of peak-day transmission capacity. Additionally, Gulf Crossing has entered into, subject to regulatory approval: (i) an operating lease for up to 1.4 Bcf per day of capacity on our Gulf South pipeline system (including capacity on the Southeast Expansion and capacity on a portion of the East Texas to Mississippi Expansion) to make deliveries to an interconnect with Transcontinental Pipe Line Company (Transco) in Choctaw County, Alabama (Transco 85); and (ii) an operating lease with Enogex, a third-party intrastate pipeline, which will bring certain gas supplies to our system. Customers have contracted at fixed rates for 1.1 Bcf per day of long-term firm transportation capacity (with a weighted average term of approximately 9.5 years). The certificate application for this project was filed with the FERC on June 19, 2007, and we expect this project to be in service by the first quarter 2009.

Southeast Expansion. On September 28, 2007, the FERC granted us the authority to construct, own and operate a pipeline expansion originating near Harrisville, Mississippi and extending to an interconnect with Transco 85. This expansion will initially consist of approximately 112 miles of 42-inch pipeline having approximately 1.2 Bcf of peak-day transmission capacity. To accommodate volumes expected to come from the Gulf Crossing leased capacity discussed above, this project will be expanded to 2.2 Bcf of peak-day transmission capacity. In addition, the FERC approved our 260 MMcf per day operating lease with Destin Pipeline Company which will provide us enhanced access to markets in Florida. Customers have contracted at fixed rates for 660 MMcf per day of firm transportation capacity on a long-term basis (with a weighted-average term of 8.7 years), in addition to the capacity leased to Gulf Crossing discussed above. Construction has commenced and we expect this project to be in service during the second quarter 2008.

Fayetteville and Greenville Laterals. We are pursuing the construction of two laterals connected to our Texas Gas pipeline system to transport gas from the Fayetteville Shale area in Arkansas to markets directly and indirectly served by our existing interstate pipelines. The Fayetteville Lateral will originate in Conway County, Arkansas and proceed southeast through the Bald Knob, Arkansas, area to an interconnect with the Texas Gas mainline in Coahoma County, Mississippi and consist of approximately 165 miles of 36-inch pipeline with an initial design of approximately 0.8 Bcf of peak-day transmission capacity. The Greenville Lateral will originate at the Texas Gas mainline near Greenville, Mississippi and proceed east to the Kosciusko, Mississippi, area consisting of approximately 95 miles of pipeline with an initial design capacity of approximately 0.8 Bcf of peak-day transmission capacity. The Greenville Lateral will allow customers to access additional markets, primarily in the Midwest, Northeast and Southeast. Customers have contracted at fixed rates for 575 MMcf per day of initial capacity, with options for additional capacity that, if exercised, could add 325 MMcf per day of capacity. The certificate application for this project was filed with the FERC on July 11, 2007. We expect the first 60 miles of the Fayetteville Lateral to be in service during the third quarter 2008 and the remainder of the Fayetteville and Greenville Laterals to be in service during the first quarter 2009.

Pipeline Expansion Project Costs and Timing. We currently estimate that the total cost of the pipeline expansion projects discussed above will be approximately $4.5 billion, of which approximately $2.0 billion was spent or committed to material that was on order as of December 31, 2007. Our total estimated cost assumes that we will receive the necessary regulatory approvals to commence construction by June 1, 2008 on Gulf Crossing and the Fayetteville and Greenville Laterals and that we will receive the regulatory approvals to operate the pipelines on certain of our projects at higher pressures, which will allow us to utilize a higher percentage of the pipeline capacity. Delays in receipt of any of these approvals will result in higher costs and additional delays in our expected in-service dates, which would also result in delays of revenues we would have received had these delays not occurred, and in certain instances will result in the payment of penalties to certain customers.

The increase in our estimated total costs and delays reflects, among other things, higher costs due to scope changes, adverse weather conditions, delays in the receipt of regulatory approvals, and the effects of the strong demand for and limited supply of qualified contractors, labor and materials and equipment which has occurred as a result of the number of large, complex pipeline construction projects being constructed in 2007 and 2008. These difficult market conditions have resulted in higher contractor costs, higher costs for labor, materials, construction equipment and other equipment and parts, as well as shortages of skilled labor. These conditions are expected to persist and it is possible that they could result in further cost increases and delays, which could have a material adverse impact on our financial condition, results of operations and cash flows.

Storage Expansion Projects:

Western Kentucky Storage Expansion Phase II. In December 2006, the FERC issued a certificate approving the Phase II storage expansion project which expanded the working gas capacity in our western Kentucky storage complex by approximately 9.0 Bcf. This project is supported by binding commitments from customers to contract on a long-term basis (with a weighted-average term of 8.3 years) for the full additional capacity at the Texas Gas maximum applicable rate. The project was placed in service in November 2007.

Western Kentucky Storage Expansion Phase III. We have signed 10-year precedent agreements for 5.1 Bcf of storage capacity for our Phase III storage project. The certificate application for this project was filed with the FERC on June 25, 2007, seeking approval to develop up to 8.3 Bcf of new storage capacity if Texas Gas is granted market-based rate authority for the new storage capacity being proposed. The cost of this project will be dependent on the ultimate size of the expansion. We expect 5.4 Bcf of storage capacity to be in service in 2008.

Magnolia Storage Facility. We were developing a salt dome storage cavern near Napoleonville, Louisiana. Operational tests, which were completed in July 2007, indicated that due to geological and other anomalies that could not be corrected, we will be unable to place the cavern in service as expected. As a result, we have elected to abandon that cavern and are exploring the possibility of securing a new site on which a new cavern could be developed.

Nature of Contracts

We contract with our customers to provide transportation services and storage services on a firm and interruptible basis. We also provide combined firm transportation and firm storage services, which we refer to as NNS and SNS. In addition, we provide interruptible PAL services.

Transportation Services. We offer transportation services on both a firm and interruptible basis. Our customers choose, based upon their particular needs, the applicable mix of services depending upon availability of pipeline capacity, price of service and the volume and timing of the customer's requirements. Firm transportation customers reserve a specific amount of pipeline capacity at specified receipt and delivery points on our system. Firm customers generally pay fees based on the quantity of capacity reserved regardless of use, plus a commodity and fuel charge paid on the volume of gas actually transported. Capacity reservation revenues derived from a firm service contract (including NNS) are generally consistent during the contract term, but can be higher in winter peak periods, especially related to NNS agreements, than off-peak periods. Firm transportation contracts generally range in term from one to ten years, although short-term firm transportation services can be offered for any term ranging from one day to one year. In providing interruptible transportation service, we agree to transport gas for a customer when capacity is available. Interruptible transportation service customers pay a commodity charge only for the volume of gas actually transported, plus a fuel charge. Interruptible transportation agreements have terms ranging from day-to-day to multiple years, with rates that change on a daily, monthly or seasonal basis.

Storage Services. We offer customers storage services on both a firm and interruptible basis. Firm storage customers reserve a specific amount of storage capacity, including injection and withdrawal rights, while interruptible customers receive storage capacity and injection and withdrawal rights when it is available. Similar to firm transportation customers, firm storage customers generally pay fees based on the quantity of capacity reserved plus an injection and withdrawal fee. Firm storage contracts typically range in term from one to ten years. Interruptible storage customers pay for the volume of gas actually stored, and applicable injection and withdrawal fees. Generally, interruptible storage agreements are for monthly terms. Unlike most FERC-regulated pipelines, including Texas Gas, Gulf South is authorized to charge market-based rates for its firm and interruptible storage services. Texas Gas filed for the ability to charge market-based rates on capacity associated with Phase III of its Western Kentucky storage expansion project.

No Notice Service and Summer No Notice Service. NNS and SNS consist of a combination of firm transportation and storage services that allow customers to withdraw gas from storage with little or no notice and require a reservation of a specified amount of storage and transportation capacity. Customers pay a reservation charge based upon the capacity reserved plus a commodity and fuel charge based on the volume of gas actually transported. NNS and SNS provide customers with additional flexibility over traditional firm transportation and storage services. Texas Gas loans stored gas to its no notice customers who are obligated to repay the gas in-kind.

Parking and Lending Service. PAL is an interruptible service offered to customers providing them the ability to park (inject) or borrow (withdraw) gas into or out of our pipeline systems at a specific location for a specific period of time. Customers pay for PAL service in advance or on a monthly basis depending on the terms of the agreement.

Customers and Markets Served

We transport natural gas for a broad mix of customers, including LDCs, municipalities, intrastate and interstate pipelines, direct industrial users, electric power generators, marketers and producers located throughout the Gulf Coast, Midwest and Northeast regions of the United States. Customers on our Gulf South system are located throughout its service area and elsewhere or are accessed through numerous interconnects on unaffiliated pipeline systems. In contrast, our Texas Gas system primarily moves gas for its customers in a northeasterly direction to serve markets directly connected to its system and also serves indirect customer markets through interconnects with other interstate pipelines.

Based upon 2007 revenues, our customer mix was comprised as follows: LDCs (32.0%), pipeline interconnects (34.0%), storage (13.0%), industrial end-users (7.0%), power plants (6.0%) and other (8.0%). We contract directly with end-use customers and with marketers, producers and other third parties who provide transportation and storage services to end users. One customer, Atmos Energy accounted for approximately 10.0% of our 2007 operating revenues.

LDCs. Most of our LDC customers use firm transportation services, including NNS. These customers operate under contracts having a weighted-average contract term of approximately four years as of December 31, 2007. We serve approximately 190 LDCs located across our pipeline systems. The demand of these customers peaks during the winter heating season.

Pipeline Interconnects (off system). Our pipeline systems serve as feeder pipelines for long-haul interstate pipelines serving markets throughout the northeastern and southeastern United States. We have numerous interconnects with third-party interstate and intrastate pipelines.

Storage. We provide storage services to a broad mix of customers including LDCs, marketers and producers. Typically, LDCs use storage under their NNS contracts to manage winter gas supplies, marketers and producers use storage to facilitate trading opportunities, and producers also use storage to ensure their ability to produce on a consistent basis.

Industrial End Users. We provide industrial facilities with a combination of firm and interruptible transportation services. Our systems are directly connected to industrial facilities in the Baton Rouge to New Orleans industrial corridor; Lake Charles, Louisiana; Mobile, Alabama; and Pensacola, Florida. We can also access the Houston Ship Channel through third-party pipelines.

Power Plants. We serve major electrical power generators in ten states. We are directly connected to several large natural gas-fired power generation facilities, some of which are also directly connected to other pipelines. The demand of the power generating customers peaks during the summer cooling season which is counter to the winter season peak demands of the LDCs. Most of our power generating customers use a combination of SNS, firm and interruptible transportation services.

Competition

We compete with numerous intrastate and interstate pipelines throughout our service territory to provide transportation and storage services for our customers. Competition is particularly strong in the Midwest and Gulf Coast states where we compete with numerous existing pipelines and several new pipeline projects that are under way, including the Rockies Express Pipeline that will transport natural gas from northern Colorado to eastern Ohio; the Heartland Gas Pipeline currently in operation in Indiana; the Southeast Header Supply System that is currently being constructed and will transport gas from Perryville, Louisiana to markets in Florida; and the proposed Mid-Continent Express Pipeline that would transport gas from Texas to Alabama. The principal elements of competition among pipelines are rates, terms of service, access to supply and flexibility and reliability of service. In addition, regulators' continuing efforts to increase competition in the natural gas industry have increased the natural gas transportation options of our traditional customers. As a result of the regulators' policies, segmentation and capacity release have created an active secondary market which increasingly competes with our pipeline services, particularly on our Texas Gas system. Our business is, in part, dependent on the volumes of natural gas consumed in the United States. Our competitors attempt to attract new supply to their pipelines including those that are currently connected to markets served by us. We compete with these entities to maintain current business levels and to serve new demand and markets. Additionally, natural gas competes with other forms of energy available to our customers, including electricity, coal, and fuel oils.

Seasonality

Our revenues are seasonal in nature and are affected by weather and natural gas price volatility. Weather impacts natural gas demand for power generation and heating purposes, which in turn influences the value of transportation and storage across our pipeline systems. Colder than normal winters or warmer than normal summers typically result in increased pipeline transportation revenues. Natural gas prices are also volatile, influencing drilling and production which can affect the value of our storage and PAL services. Peak demand for natural gas occurs during the winter months, caused by the heating load. During 2007, approximately 56.0% of our total operating revenues were recognized in the first and fourth calendar quarters.

Government Regulation

The FERC regulates pipelines under the Natural Gas Act of 1938 (NGA) and the Natural Gas Policy Act of 1978. The FERC regulates, among other things, the rates and charges for the transportation and storage of natural gas in interstate commerce, the extension, enlargement or abandonment of jurisdictional facilities, and the financial accounting of certain regulated pipeline companies. We are also regulated by the United States Department of Transportation (DOT) under the Natural Gas Pipeline Safety Act of 1968, as amended by Title I of the Pipeline Safety Act of 1979, which regulates safety requirements in the design, construction, operation and maintenance of interstate natural gas pipelines.

Where required, our operating subsidiaries hold certificates of public convenience and necessity issued by the FERC covering certain of their facilities, activities, and services. The FERC also prescribes accounting treatment for regulatory purposes. The books and records of the operating subsidiaries may be periodically audited by the FERC.

The maximum rates that may be charged by us for gas transportation and in the case of Texas Gas, for storage services, are established through the FERC cost-of-service rate-making process. Key determinants in the cost-of-service rate-making process are the costs of providing service, the allowed rate of return on capital investments, throughput assumptions, the allocation of costs and the rate design. Texas Gas is prohibited from placing new rates into effect prior to November 1, 2010, and neither of our operating subsidiaries has an obligation to file a new rate case.

Our operations are also subject to extensive federal, state, and local laws and regulations relating to protection of the environment. These laws include, for example:

(a) the Clean Air Act and analogous state laws which impose obligations related to air emissions;

(b) the Water Pollution Control Act, commonly referred to as the Clean Water Act, and analogous state laws which regulate discharge of wastewaters from our facilities into state and federal waters;

(c) the Comprehensive Environmental Response, Compensation and Liability Act, commonly referred to as CERCLA, or the Superfund law, and analogous state laws which regulate the cleanup of hazardous substances that may have been released at properties currently or previously owned or operated by us or locations to which we have sent wastes for disposal; and

(d) the Resource Conservation and Recovery Act, and analogous state laws which impose requirements for the handling and discharge of solid and hazardous waste from our facilities. Item 1A, "Risk Factors." includes further discussion regarding our environmental risk factors.

Effects of Compliance with Environmental Regulations

Note 3 in Item 8 of this Report contains information regarding environmental compliance.

Employee Relations

At December 31, 2007, we had 1,084 employees, approximately 85 of whom are covered by a collective bargaining agreement which expires in April 2011. A satisfactory relationship continues to exist between management and labor. We maintain various defined contribution plans covering substantially all our employees and various other plans, which provide regular active employees with group life, hospital, and medical benefits, as well as disability benefits. We also have a non-contributory, defined benefit pension plan which covers Texas Gas employees hired prior to November 1, 2006. Note 9 in Item 8 of this Report contains further discussion of our employee benefits.

Available Information

Our internet website is located at *www.bwpmlp.com*. We make available free of charge, through our website, our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act as soon as reasonably practicable after we electronically file such material with the Securities and Exchange Commission (SEC). These documents are also available at the SEC's website at *www.sec.gov*. Additionally, copies of these documents, excluding exhibits, may be requested at no cost, by contacting Investor Relations, Boardwalk Pipeline Partners, LP, 9 Greenway Plaza, Suite 2800, Houston, TX 77046.

We also make available free of charge within the "Governance" section of our website, and in print to any unitholder who requests, our corporate governance guidelines, the charter of our Audit Committee, and our Code of Business Conduct and Ethics. Requests for copies may be directed in writing to: Boardwalk Pipeline Partners, LP, 9 Greenway Plaza, Suite 2800, Houston, TX 77046, Attention: Corporate Secretary.

Interested parties may contact the chairpersons of any of our Board committees, our Board's independent directors as a group or our full Board in writing by mail to Boardwalk Pipeline Partners, LP, 9 Greenway Plaza, Suite 2800, Houston, TX 77046, Attention: Corporate Secretary. All such communications will be delivered to the director or directors to whom they are addressed.

Item 1A. Risk Factors

Our business faces many risks. We have described below some of the more material risks which we and our subsidiaries face. There may be additional risks that we do not yet know of or that we do not currently perceive to be material that may also impact our business or the business of our subsidiaries.

Each of the risks and uncertainties described below could lead to events or circumstances that may have a material adverse effect on our business, financial condition, results of operations and cash flows, including our ability to make distributions to our unitholders.

All of the information included in this report and any subsequent reports we may file with the SEC or make available to the public before investing in any securities issued by us should be carefully considered and evaluated.

Business Risks

We are undertaking large, complex expansion projects which involve significant risks that may adversely affect our business.

We are currently undertaking several large, complex pipeline expansion projects, as discussed above under Business – Expansion Projects, and we may also consider additional expansion projects in the future. In pursuing these projects, we have experienced significant cost overruns, including penalties to contractors, and we may experience additional cost increases in the future. We have also experienced construction delays and may experience additional delays in the future. Delays in construction have resulted in reduced transportation rates and liquidated damage payments to customers, as well as lost revenue opportunities and could, in the future result in similar losses or, in some cases, provide customers the right to terminate their transportation agreements relating to the delayed project.

These cost overruns and construction delays have resulted from a variety of factors, including the following:

- delays in obtaining regulatory approvals;
- adverse weather conditions;
- delays in obtaining key materials; and
- shortages of qualified labor and escalating costs of labor and materials resulting from the high level of construction activity in the pipeline industry.

In pursuing current or future expansion projects, we could experience additional delays or cost increases for the reasons described above or as a result of other factors. We may not be able to complete our current or future expansion projects on the terms, at the cost, or under the schedule that we anticipate, or at all. In addition, we cannot be certain that, if completed, these projects will perform in accordance with our expectations and other areas of our business may suffer as a result of the diversion of our management's attention and other resources from our other business concerns. Any of these factors could materially adversely affect our ability to realize the anticipated benefits from expansion projects which could have a material adverse effect on our business, financial condition, results of operations and cash flows. See also Item 1 – Expansion Projects.

Completion of our expansion projects will require significant amounts of debt and equity financing which may not be available to us on acceptable terms, or at all.

We plan to fund our expansion capital expenditures with proceeds from sales of our debt and equity securities and borrowings under our revolving credit facility; however, we cannot be certain that we will be able to issue our debt and equity securities on terms or in the proportions that we expect, or at all, particularly in light of the cost increases and construction delays we have experienced to date on our expansion projects, current credit market disruptions surrounding sub-prime residential mortgage concerns and the impact that those factors and other events are having and may have on the public securities markets generally and on the market for our securities in particular. Future sales of our equity securities would be dilutive to existing securityholders. A significant increase in our indebtedness, or an increase in our indebtedness that is proportionately greater than our issuances of equity, as well as the project cost increases and credit market conditions discussed above could negatively impact our credit ratings or our ability to remain in compliance with the financial covenants under our revolving credit agreement which could have a material adverse effect on our financial condition, results of operations and cash flows. If we are unable to finance our expansion projects as expected, we could be required to seek alternative financing, the terms of which may not be attractive to us, or to revise or cancel our expansion plans.

Our revolving credit agreement contains operating and financial covenants that restrict our business and financing activities.

The operating and financial covenants in our revolving credit agreement restrict our ability to finance future operations or capital needs or to expand or pursue our business activities. For example, our credit agreement limits our ability to make loans or investments, make material changes to the nature of our business, merge, consolidate or engage in asset sales, or grant liens or make negative pledges. The agreement also requires us to maintain a ratio of consolidated debt to consolidated earnings before interest, taxes, depreciation and amortization (as defined in the agreement) of no more than five to one, which limits the amount of additional indebtedness we can incur. Future financing agreements we may enter into may contain similar or more restrictive covenants.

Our ability to comply with the covenants and restrictions contained in our credit agreement may be affected by events beyond our control, including prevailing economic, financial and industry conditions. If market or other economic conditions or our financial performance deteriorate, our ability to comply with these covenants may be impaired. If we default under our credit agreement or another financing agreement, significant additional restrictions may become applicable, including a restriction on our ability to make distributions to unitholders. In addition, a default could result in a significant portion of our indebtedness becoming immediately due and payable, and our lenders could terminate their commitment to make further loans to us. In such event, we would not have, and may not be able to obtain, sufficient funds to make these accelerated payments.

Our natural gas transportation, gathering and storage operations are subject to Federal Energy Regulatory Commission's rate-making policies that could have an adverse impact on our ability to establish rates that would allow us to recover the full cost of operating our pipelines including a reasonable return.

Action by the FERC on currently pending matters as well as matters arising in the future could adversely affect our ability to establish reasonable rates, or to charge rates that would cover future increases in our costs, or even to continue to collect rates to maintain our current revenue levels that cover current costs, including a reasonable return. We cannot make assurances that we will be able to recover all of our costs through existing or future rates. An adverse determination in any future rate proceeding brought by or against any of our subsidiaries could have a material adverse effect on our business, financial condition and results of operations.

In 2005, FERC established a policy regarding the ability of a regulated entity to collect an allowance for income taxes in its cost of service. Generally, FERC has stated it will permit a pipeline that is a partnership (or other pass-through entity) to include in its cost-of-service an income tax allowance to the extent that its partners have an actual or potential income tax liability on the jurisdictional income generated by the partnership (or other pass-through entity). FERC will review pipelines' ability to include such an income tax allowance in their costs of service on a case-by-case basis, and the burden is on the pipelines to show that it had such actual or potential income tax liability. That policy has been further refined in 2006 and 2007 through a series of FERC orders and decisions issued by the United States Court of Appeals for the District of Columbia Circuit. Most recently, FERC's income tax allowance policy was upheld on all issues subject to appeal by the United States Court of Appeals for the District of Columbia Circuit in a decision issued in May 2007. In December 2007, FERC issued an order that again affirmed its income tax allowance policy and further clarified the implementation of that policy. If the FERC were to change its income tax allowance policy in the future, such changes could materially and adversely impact the rates we are permitted to charge as future rates are approved for our interstate transportation services.

In a related interstate oil pipeline proceeding, FERC noted that the tax deferral features of a publicly traded partnership may cause some investors to receive, for some indeterminate duration, cash distributions in excess of their taxable income, which FERC characterized as a "tax savings." FERC stated a concern that this creates an opportunity for those investors to earn an additional equity return funded by ratepayers. Responding to this concern, FERC adjusted the pipeline's equity rate of return downward based on the percentage by which the publicly traded partnership's cash flow exceeded taxable income assumed in the methodology for calculating the rate of return. A rehearing request is pending before FERC on this issue. If FERC establishes a policy of lowering a regulated entities' equity rate of return to compensate for what it considers to be a "tax savings," it is also likely that the level of maximum lawful rates would decrease from current levels.

If our subsidiaries were to file a rate case or if we were to be required to defend our rates, we would be required to establish pursuant to the income tax policy that the inclusion of an income tax allowance in our cost of service was just and reasonable. To establish that our income tax allowance is just and reasonable, our general partner may elect to require owners of our units to recertify their status as being subject to United States federal income taxation on the income generated by our subsidiaries or we may attempt to provide other evidence. We can provide no assurance that the evidence that we will be able to provide (including the information the general partner may require in the certification and recertification process) will be sufficient to establish that its unitholders, or its unitholders' owners, are subject to United States federal income tax liability on the income generated by our jurisdictional pipelines. If we are unable to establish that our unitholders, or our unitholders' owners, incur actual or potential income tax liability on the income generated by our jurisdictional pipelines, FERC could disallow a substantial portion of our regulated pipelines' income tax allowance. If FERC were to disallow a substantial portion of our regulated pipelines' income tax allowance, it is likely that the level of maximum lawful rates would decrease from current levels.

Our natural gas transportation and storage operations are subject to extensive regulation by the FERC in addition to the FERC rules and regulations related to the rates we can charge for our services.

The FERC's regulatory authority also extends to:

- operating terms and conditions of service;
- the types of services we may offer to our customers;
- construction of new facilities;
- creation, extension or abandonment of services or facilities;
- accounts and records; and
- relationships with certain types of affiliated companies involved in the natural gas business.

The FERC's action in any of these areas or modifications of its current regulations can adversely impact our ability to compete for business, the costs we incur in our operations, the construction of new facilities or our ability to recover the full cost of operating our pipelines. Another example is the time the FERC takes to approve the construction of new facilities, which could give our non-regulated competitors time to offer alternative projects or raise the costs of our projects to the point where they are no longer economical.

The FERC has authority to review pipeline contracts. If the FERC determines that a term of any such contract deviates in a material manner from a pipeline's tariff, the FERC typically will order the pipeline to remove the term from the contract and execute and re-file a new contract with the FERC, or alternatively, amend its tariff to include the deviating term, thereby offering it to all shippers. If the FERC audits a pipeline's contracts and finds material deviations that appear to be unduly discriminatory, the FERC could conduct a formal enforcement investigation, resulting in serious penalties and/or onerous ongoing compliance obligations.

Should we fail to comply with all applicable FERC administered statutes, rules, regulations and orders, we could be subject to substantial penalties and fines. Under the recently enacted Energy Policy Act of 2005, the FERC has civil penalty authority under NGA to impose penalties for current violations of up to $1,000,000 per day for each violation.

Finally, we cannot give any assurance regarding the future regulations under which we will operate our natural gas transportation and storage businesses, or the effect such regulation could have on our financial condition, results of operations and cash flows.

The outcome of certain FERC proceedings involving FERC policy statements is uncertain and could affect the level of return on equity that the Partnership may be able to achieve in any future rate proceeding.

In an effort to provide some guidance and to obtain further public comment on FERC's policies concerning return on equity determinations, on July 19, 2007, FERC issued its Proposed Proxy Policy Statement, *Composition of Proxy Groups for Determining Gas and Oil Pipeline Return on Equity*. In the Proposed Proxy Policy Statement, FERC proposes to permit inclusion of publicly traded partnerships in the proxy group analysis relating to return on equity determinations in rate proceedings, provided that the analysis be limited to actual publicly traded partnership distributions capped at the level of the pipeline's earnings and that evidence be provided in the form of multiyear analysis of past earnings demonstrating a publicly traded partnership's ability to provide stable earnings over time.

In a decision issued shortly after FERC issued its Proposed Proxy Policy Statement, the D.C. Circuit vacated FERC's orders in a proceeding involving *High Island Offshore System* and *Petal Gas Storage*. The Court determined that FERC had failed to adequately reflect risks of interstate pipeline operations both in populating the proxy group (from which a range of equity returns was determined) with entities the record indicated had lower risk, while excluding publicly traded partnerships primarily engaged in interstate pipeline operations, and in the placement of the pipeline under review in each proceeding within that range of equity returns. Although the Court accepted for the sake of argument FERC's rationale for excluding publicly traded partnerships from the proxy group (i.e., publicly traded partnership distributions may exceed earnings) it observed this proposition was "not self-evident."

The ultimate outcome of these proceedings is not certain and may result in new policies being established at FERC that would not allow the full use of publicly traded partnership distributions to unitholders in any proxy group comparisons or other negative adjustments used to determine return on equity in future rate proceedings. In addition, the FERC may adopt other policies or institute other proceedings that could adversely affect our ability to achieve a reasonable level of return on equity in any future rate proceeding.

Catastrophic losses are unpredictable.

The nature and location of our business, particularly with regard to our assets in the Gulf Coast region, may make us susceptible to catastrophic losses especially from hurricanes or named storms. Various other events can cause catastrophic losses, including windstorms, earthquakes, hail, explosions, and severe winter weather and fires. The frequency and severity of these events are inherently unpredictable. The extent of losses from catastrophes is a function of both the total amount of insured exposures in the affected areas and the severity of the events themselves. Although we carry insurance, in the event of a loss the coverage could be insufficient or there could be a material delay in the receipt of the insurance proceeds.

We are subject to laws and regulations relating to the environment which may expose us to significant costs, liabilities and loss of revenues.

The risk of substantial environmental costs and liabilities is inherent in natural gas transportation and storage. Our operations are subject to extensive federal, state and local laws and regulations relating to protection of the environment. These laws include, for example the Clean Air Act; the Water Pollution Control Act, commonly referred to as the Clean Water Act; CERCLA or the Superfund law; the Resource Conservation and Recovery Act and analogous state laws.

Such regulations impose, among other things, restrictions, liabilities and obligations in connection with the generation, handling, use, storage, transportation, treatment and disposal of hazardous substances and waste and in connection with spills, releases and emissions of various substances into the environment. Environmental regulations also require that our facilities, sites and other properties be operated, maintained, abandoned and reclaimed to the satisfaction of applicable regulatory authorities. Existing environmental regulations could be revised or reinterpreted in the future and new laws and regulations could be adopted or become applicable to our operations or facilities. For example, the federal government and several states have recently proposed increased environmental regulation of many industrial activities, including increased regulation of air quality, water quality and solid waste management. In addition, government action to reduce greenhouse gas emissions and other government actions that may have the effect of requiring or encouraging reduced consumption or production of natural gas, could adversely impact our business, financial condition, results of operations and cash flows.

Compliance with current or future environmental regulations could require significant expenditures and the failure to comply with current or future regulations might result in the imposition of fines and penalties. The steps we may be required to take to bring certain of our facilities into compliance could be prohibitively expensive and we may be required to shut down or alter the operation of those facilities, which might cause us to incur losses. Further, current rate structures, customer contracts and prevailing market conditions might not allow us to recover the additional costs incurred to comply with new environmental requirements and we might not be able to obtain or maintain all required environmental regulatory approvals for certain projects. If there is a delay in obtaining any required environmental regulatory approvals or if we fail to obtain and comply with them, we may be required to shut down certain facilities or become subject to additional costs. The costs of complying with environmental regulation in the future could have a material adverse effect on our business, financial condition, results of operations and cash flows.

***Our operations are subject to operational hazards and unforeseen interruptions for which we may not be adequately insured*.**

There are a variety of operating risks inherent in our natural gas transportation and storage operations such as leaks, explosions and mechanical problems, all of which could cause substantial financial losses. Any of these or other similar occurrences could result in the disruption of our operations, substantial repair costs, personal injury or loss of human life, significant damage to property, environmental pollution, impairment of our operations and substantial revenue losses. The location of pipelines near populated areas, including residential areas, commercial business centers and industrial sites, could significantly increase the level of damages resulting from these risks.

We currently possess property, business interruption and general liability insurance, but proceeds from such insurance coverage may not be adequate for all liabilities or expenses incurred or revenues lost. Moreover, such insurance may not be available in the future at commercially reasonable costs and terms. Recent changes in the insurance markets have made it more difficult for us to obtain certain types of coverage. Moreover, after Hurricanes Katrina and Rita, there can be no assurance that we will be able to obtain the levels or types of insurance we would otherwise have obtained prior to these market changes, or that the insurance coverage we do obtain will not contain large deductibles or fail to cover certain hazards or all potential losses. The occurrence of any operating risks not fully covered by insurance could have a material adverse effect on our business, financial condition, results of operations and cash flows.

Pipeline safety integrity programs and repairs may impose significant costs and liabilities on us.

The United States DOT Pipeline and Hazardous Materials Safety Administration (PHMSA) has issued a final rule requiring pipeline operators to develop integrity management programs to comprehensively evaluate certain areas along their pipelines and take additional measures to protect pipeline segments located in what the rule refers to as high consequence areas (HCAs) where a leak or rupture could potentially do the most harm.

Operators are required to (1) perform ongoing assessments of pipeline integrity, (2) identify and characterize applicable threats to pipeline segments that could impact a HCA, (3) improve data collection, integration and analysis, (4) repair and remediate the pipeline as necessary and (5) implement preventive and mitigating actions. In compliance with the rule, we have initiated pipeline integrity testing programs that are intended to assess pipeline integrity. At this time, we cannot predict all of the effects this rule will have on us. However, the rule or an increase in public expectations for pipeline safety may require additional reporting, the replacement of some of our pipeline segments, the addition of monitoring equipment, and more frequent inspection or testing of our pipeline facilities. Any repair, remediation, preventative or mitigating actions may require significant capital and operating expenditures. Should we fail to comply with PHMSA rules and related regulations and orders, we could be subject to penalties and fines.

We are subject to strict regulations at many of our facilities regarding employee safety.

The workplaces associated with our pipelines are subject to the requirements of the Occupational Safety and Health Act (OSHA) and comparable state statutes that regulate the protection of the health and safety of workers. In addition, the OSHA hazard communication standard requires that we maintain information about hazardous materials used or produced in our operations and that we provide this information to employees, state and local governmental authorities and local residents. The failure to comply with OSHA requirements or general industry standards, keep adequate records or monitor occupational exposure to regulated substances could have a material adverse effect on our business, financial condition, results of operations and cash flows.

Increased competition could have a significant financial impact on us.

We compete primarily with other interstate and intrastate pipelines in the transportation and storage of natural gas. Competition is particularly strong in the Midwest and Gulf Coast states where we compete with numerous existing pipelines and will compete with several new pipeline projects that are under way, including the Rockies Express Pipeline that will transport natural gas from northern Colorado to eastern Ohio, the Heartland Gas Pipeline currently in operation in Indiana, the proposed Mid-Continent Express Pipeline that would transport gas from Texas to Alabama and the Southeast Header Supply System that is under construction and will transport gas from Perryville, Louisiana to markets in Florida. Natural gas also competes with other forms of energy available to our customers, including electricity, coal and fuel oils. The principle elements of competition among pipelines are rates, terms of service, access to gas supplies, flexibility and reliability. The FERC's policies promoting competition in gas markets are having the effect of increasing the gas transportation options for our traditional customer base. Increased competition could reduce the volumes of gas transported by our pipeline systems or, in cases where we do not have long-term fixed rate contracts, could force us to lower our transportation or storage rates. Competition could intensify the negative impact of factors that significantly decrease demand for natural gas in the markets served by our pipeline systems, such as competing or alternative forms of energy, a recession or other adverse economic conditions, weather, higher fuel costs and taxes or other governmental or regulatory actions that directly or indirectly increase the cost or limit the use of natural gas. Our ability to renew or replace existing contracts at rates sufficient to maintain current revenues and cash flows could be adversely affected by the activities of our competitors. We also compete against a number of intrastate pipelines which have significant regulatory advantages over us and other interstate pipelines because of the absence of FERC regulation. In view of potential rate increases, construction and service flexibility available to intrastate pipelines, we may lose customers and throughput to intrastate competitors. All of these competitive pressures could have a material adverse effect on our business, financial condition, results of operations and cash flows.

Because of the natural decline in gas production from existing wells, our success depends on our ability to obtain access to new sources of natural gas and this is dependent on factors beyond our control. Any decrease in supplies of natural gas in our supply areas could adversely affect our business and operating results.

For the years 2003 to 2006, gas production from the Gulf Coast region, which supplies the majority of our throughput, has declined on average approximately 13.0% per year according to the Energy Information Administration. A large part of this decline was due to the effects of Hurricanes Katrina and Rita (hurricanes) in 2005. We cannot give any assurance regarding the gas production industry's ability to find new sources of domestic supply. Production from existing wells and gas supply basins connected to our pipelines will naturally decline over time, which means that our cash flows associated with the gathering or transportation of gas from these wells and basins will also decline over time. The amount of natural gas reserves underlying these wells may also be less than we anticipate, or the rate at which production from these reserves declines may be greater than we anticipate. Accordingly, to maintain or increase throughput levels on our pipelines, we must continually obtain access to new supplies of natural gas. The primary factors affecting our ability to obtain new sources of natural gas to our pipelines include: (1) the level of successful drilling activity near our pipelines, (2) our ability to compete for these supplies, (3) the successful completion of new LNG facilities near our pipelines, and (4) our gas quality requirements.

The level of drilling activity is dependent on economic and business factors beyond our control. The primary factor that impacts drilling decisions is the price of oil and natural gas. A sustained decline in natural gas prices could result in a decrease in exploration and development activities in the fields served by our pipelines, which would lead to reduced throughput levels on our pipelines. Other factors that impact production decisions include producers' capital budget limitations, the ability of producers to obtain necessary drilling and other governmental permits, the availability and cost of drilling rigs and other drilling equipment, and regulatory changes. Because of these factors, even if new natural gas reserves were discovered in areas served by our pipelines, producers may choose not to develop those reserves or may connect them to different pipelines.

Imported LNG is expected to be a significant component of future natural gas supply to the United States. Much of this increase in LNG supply is expected to be imported through new LNG facilities to be developed over the next decade. We cannot predict which, if any, of these projects will be constructed. We anticipate benefiting from some of these new projects and the additional gas supply they will bring to the Gulf Coast region. If a significant number of these new projects fail to be developed with their announced capacity, or there are significant delays in such development, or if they are built in locations where they are not connected to our systems or they do not influence sources of supply on our systems, we may not realize expected increases in future natural gas supply available for transportation through our systems.

If we are not able to obtain new supplies of natural gas to replace the natural decline in volumes from existing supply basins, or if the expected increase in natural gas supply through imported LNG is not realized, throughput on our pipelines would decline which could have a material adverse effect on our business, financial condition, results of operations and cash flows.

Capacity leaving our Lebanon, Ohio terminus is limited.

The northeastern terminus of our Texas Gas pipeline system is in Lebanon, Ohio, where it connects with other interstate natural gas pipelines delivering to East Coast and Midwest metropolitan areas and other indirect markets. Pipeline capacity into Lebanon is approximately 48.0% greater than pipeline capacity leaving that point, creating a bottleneck for supply into areas of high demand. As of December 31, 2007, approximately 13.0% of our long-term contracts with firm deliveries to Lebanon will expire or have the ability to terminate by the end of 2008. While demand for natural gas from our Lebanon, Ohio terminus and other interconnects in that region has remained strong in the past, there can be no assurance regarding continued demand for gas from the Gulf Coast region, including East Texas, in the face of other sources of natural gas for our various indirect markets, including pipelines from Canada, the anticipated completion of the Rockies Express pipeline in late 2009 or early 2010, and new LNG facilities proposed to be constructed along the East Coast.

Successful development of LNG import terminals in the eastern United States could reduce the demand for our services.

Development of new, or expansion of existing, LNG facilities on the East Coast could reduce the need for customers in the northeastern United States to transport natural gas from the Gulf Coast and other supply basins connected to our pipelines. This could reduce the amount of gas transported by our pipelines for delivery off-system to other interstate pipelines serving the Northeast. If we are not able to replace these volumes with volumes to other markets or other regions, throughput on our pipelines would decline which could have a material adverse effect on our financial condition, results of operations and cash flows.

We may not be able to maintain or replace expiring gas transportation and storage contracts at favorable rates.

Our primary exposure to market risk occurs at the time existing transportation contracts expire and are subject to renegotiation. As of December 31, 2007, approximately 25.0% of the firm contract load on our pipeline systems, excluding agreements related to the expansion projects, was due to expire on or before December 31, 2008. Upon expiration, we may not be able to extend contracts with existing customers or obtain replacement contracts at favorable rates or on a long-term basis. A key determinant of the value that customers can realize from firm transportation on a pipeline is the basis differential, which can be affected by, among other things, the availability of supply, available capacity, storage inventories, weather and general market demand in the respective areas.

The extension or replacement of existing contracts depends on a number of factors beyond our control, including:

- existing and new competition to deliver natural gas to our markets;
- the growth in demand for natural gas in our markets;
- whether the market will continue to support long-term contracts;
- the current basis differentials, or market price spreads between two points on our pipelines;
- whether our business strategy continues to be successful; and
- the effects of state regulation on customer contracting practices.

Any failure to extend or replace a significant portion of our existing contracts may have a material adverse effect on our business, financial condition, results of operations and cash flows.

We depend on certain key customers for a significant portion of our revenues. The loss of any of these key customers could result in a decline in our revenues.

We rely on a limited number of customers for a significant portion of revenues. For the year ended December 31, 2007, Atmos Energy accounted for approximately 10.0% of our total operating revenues. We may be unable to negotiate extensions or replacements of these contracts and those with other key customers on favorable terms. The loss of all or even a portion of the contracted volumes of these customers, as a result of competition, creditworthiness or otherwise, could have a material adverse effect on our financial condition, results of operations and cash flows, unless we are able to contract for comparable volumes from other customers at favorable rates.

We are exposed to credit risk relating to nonperformance by our customers.

Credit risk relates to the risk of loss resulting from the nonperformance by a customer of its contractual obligations. Our exposure generally relates to receivables for services provided, as well as volumes owed by customers for imbalances or gas lent by us to them, generally under PAL and NNS services. If any significant customer of ours should have credit or financial problems resulting in a delay or failure to repay the gas they owe us, it could have a material adverse effect on our financial condition, results of operations and cash flows. Item 7A of this Report contains more information on credit risk arising from gas loaned to customers.

If third-party pipelines and other facilities interconnected to our pipelines and facilities become unavailable to transport natural gas, our revenues could be adversely affected.

We depend upon third-party pipelines and other facilities that provide delivery options to and from our pipelines. For example, we can deliver approximately 500 MMcf per day to Texas Eastern at Kosciusko, Mississippi. If this or any other significant pipeline connection were to become unavailable for current or future volumes of natural gas due to repairs, damage to the facility, lack of capacity or any other reason, our ability to continue shipping natural gas to end markets could be restricted, thereby reducing our revenues. Any temporary or permanent interruption at any key pipeline interconnect which caused a material reduction in volumes transported on our pipelines or stored at our facilities could have a material adverse effect on our business, financial condition, results of operations and cash flows.

Significant changes in natural gas prices could affect supply and demand, reducing system throughput and adversely affecting our revenues and available cash.

Higher natural gas prices could result in a decline in the demand for natural gas, and therefore, in the throughput on our pipelines. In addition, reduced price volatility could reduce the revenues generated by our PAL and storage services and could have a material adverse effect on our financial condition, results of operations and cash flows.

In general terms, the price of natural gas fluctuates in response to changes in supply, changes in demand, market uncertainty and a variety of additional factors that are beyond our control. These factors include:

- worldwide economic conditions;
- weather conditions and seasonal trends;
- levels of domestic production and consumer demand;
- the availability of LNG;
- a material decrease in the price of natural gas could have an adverse effect on the shippers who have contracted for capacity on our planned expansion projects;
- the availability of adequate transportation capacity;
- the price and availability of alternative fuels;
- the effect of energy conservation measures;
- the nature and extent of governmental regulation and taxation; and
- the anticipated future prices of natural gas, LNG and other commodities.

We do not own all of the land on which our pipelines and facilities are located, which could disrupt our operations.

We do not own all of the land on which our pipelines and facilities are located, and we are, therefore, subject to the risk of increased costs to maintain necessary land use. We obtain the rights to construct and operate certain of our pipelines and related facilities on land owned by third parties and governmental agencies for a specific period of time. Our loss of these rights, through our inability to renew right-of-way contracts or otherwise, or increased costs to renew such rights, could have a material adverse effect on our financial condition, results of operations and cash flows.

Mergers among our customers and/or competitors could result in lower volumes being shipped on our pipelines, thereby reducing the amount of cash we generate.

Mergers among our existing customers and/or competitors could provide strong economic incentives for the combined entities to utilize systems other than ours and we could experience difficulty in replacing lost volumes and revenues. A reduction in volumes would result not only in a reduction of revenues, but also a decline in net income and cash flows of a similar magnitude, which could reduce our ability to meet our financial obligations.

Possible terrorist activities or military actions could adversely affect our business.

The continued threat of terrorism and the impact of retaliatory military and other action by the United States and its allies might lead to increased political, economic and financial market instability and volatility in prices for natural gas, which could affect the markets for our natural gas transportation and storage services. While we are taking steps that we believe are appropriate to increase the security of our energy assets, there is no assurance that we can completely secure our assets, completely protect them against a terrorist attack or obtain adequate insurance coverage for terrorist acts at reasonable rates. These developments have subjected our operations to increased risks and could have a material adverse effect on our business. In particular, we might experience increased capital or operating costs to implement increased security.

Our general partner and its affiliates own a controlling interest in us and have conflicts of interest and limited fiduciary duties, which may permit them to favor their own interests.

At December 31, 2007, a subsidiary of Loews owned a majority of our limited partner interests and owns and controls our general partner, which controls us. Although our general partner has a fiduciary duty to manage us in a manner beneficial to us and our unitholders, the directors and officers of our general partner have a fiduciary duty to manage our general partner in a manner beneficial to Loews. Furthermore, certain directors and officers of our general partner are also directors or officers of affiliates of our general partner. Conflicts of interest may arise between Loews and its subsidiaries, including our general partner, on the one hand, and us and our unitholders, on the other hand. In resolving these conflicts, our general partner may favor its own interests and the interests of its affiliates over the interests of our unitholders. These potential conflicts include, among others, the following situations:

- Loews and its affiliates may engage in competition with us.
- Neither our partnership agreement nor any other agreement requires Loews or its affiliates (other than our general partner) to pursue a business strategy that favors us. Directors and officers of Loews and its affiliates have a fiduciary duty to make decisions in the best interest of Loews shareholders, which may be contrary to our interests.
- Our general partner is allowed to take into account the interests of parties other than us, such as Loews and its affiliates, in resolving conflicts of interest, which has the effect of limiting its fiduciary duty to our unitholders.
- Some officers of our general partner who provide services to us may devote time to affiliates of our general partner and may be compensated for services rendered to such affiliates.
- Our partnership agreement limits the liability and reduces the fiduciary duties of our general partner, while also restricting the remedies available to our unitholders for actions that, without these limitations, might constitute breaches of fiduciary duty. By purchasing common units, unitholders are deemed to have consented to some actions and conflicts of interest that might otherwise constitute a breach of fiduciary or other duties under applicable law.
- Our general partner determines the amount and timing of asset purchases and sales, borrowings, repayments of indebtedness, issuances of additional partnership securities and cash reserves, each of which can affect the amount of cash that is available for distribution to our unitholders.

- Our general partner determines the amount and timing of any capital expenditures and whether an expenditure is for maintenance capital, which reduces operating surplus, or a capital improvement expenditure, which does not. Such determination can affect the amount of cash that is distributed to our unitholders and the ability of the subordinated units to convert to common units.

- In some instances, our general partner may cause us to borrow funds in order to permit the payment of cash distributions, even if the purpose or effect of the borrowing is to make a distribution on the subordinated units, to make incentive distributions or to accelerate the expiration of the subordination period.

- Our general partner determines which costs, including allocated overhead, incurred by it and its affiliates are reimbursable by us.

- Our partnership agreement does not restrict our general partner from causing us to pay it or its affiliates for any services rendered on terms that are fair and reasonable to us or entering into additional contractual arrangements with any of these entities on our behalf, and provides that reimbursement to Loews for amounts allocable to us consistent with accounting and allocation methodologies generally permitted by the FERC for rate-making purposes and past business practices is deemed fair and reasonable to us.

- Our general partner intends to limit its liability regarding our contractual obligations.

- Our general partner may exercise its rights to call and purchase (1) all of our common units if at any time it and its affiliates own more than 80.0% of the outstanding common units or (2) all of our equity securities (including common units) if it and its affiliates own more than 50.0% in the aggregate of the outstanding common units, subordinated units and any other classes of equity securities and it receives an opinion of outside legal counsel to the effect that our being a pass-through entity for tax purposes has or is reasonably likely to have a material adverse effect on the maximum applicable rates we can charge our customers.

- Our general partner controls the enforcement of obligations owed to us by it and its affiliates.

- Our general partner decides whether to retain separate counsel, accountants or others to perform services for us.

Our partnership agreement limits our general partner's fiduciary duties to unitholders and restricts the remedies available to unitholders for actions taken by our general partner that might otherwise constitute breaches of fiduciary duty.

Our partnership agreement contains provisions that reduce the standards to which our general partner would otherwise be held by state fiduciary duty law. For example, our partnership agreement:

- permits our general partner to make a number of decisions in its individual capacity, as opposed to its capacity as our general partner. This entitles our general partner to consider only the interests and factors that it desires, and it has no duty or obligation to give any consideration to any interest of, or factors affecting us, our affiliates or any limited partner. Decisions made by our general partner in its individual capacity will be made by a majority of the owners of our general partner, and not by the board of directors of our general partner. Examples of these kinds of decisions include the exercise of its call rights, its voting rights with respect to the units it owns and its registration rights and the determination of whether to consent to any merger or consolidation of the partnership;

- provides that our general partner shall not have any liability to us or our unitholders for decisions made in its capacity as general partner so long as it acted in good faith, meaning it believed that the decisions were in the best interests of the partnership;

- generally provides that affiliate transactions and resolutions of conflicts of interest not approved by the conflicts committee of the board of directors of our general partner and not involving a vote of unitholders must be on terms no less favorable to us than those generally provided to or available from unrelated third parties or be "fair and reasonable" to us and that, in determining whether a transaction or resolution is "fair and reasonable," our general partner may consider the totality of the relationships between the parties involved, including other transactions that may be particularly advantageous or beneficial to us; and

- provides that our general partner and its officers and directors will not be liable for monetary damages to us, our limited partners or assignees for any acts or omissions unless there has been a final and non-appealable judgment entered by a court of competent jurisdiction determining that the general partner or those other persons acted in bad faith or engaged in fraud or willful misconduct.

We have a holding company structure in which our subsidiaries conduct our operations and own our operating assets, which may affect our ability to make distributions.

We are a partnership holding company and our operating subsidiaries conduct all of our operations and own all of our operating assets. We have no significant assets other than the ownership interests in our subsidiaries. As a result, our ability to make distributions to our unitholders depends on the performance of our subsidiaries and their ability to distribute funds to us. The ability of our subsidiaries to make distributions to us may be restricted by, among other things, the provisions of existing and future indebtedness, applicable state partnership and limited liability company laws and other laws and regulations, including FERC policies.

Tax Risks

Our tax treatment depends on our status as a partnership for federal income tax purposes, as well as our not being subject to a material amount of entity-level taxation by individual states. If the Internal Revenue Service (IRS) were to treat us as a corporation or if we were to become subject to additional amounts of entity-level taxation for state tax purposes, then our cash distributions to our unitholders could be substantially reduced.

The anticipated after-tax economic benefit of an investment in the common units depends largely on our being treated as a partnership for federal income tax purposes. If we were treated as a corporation for federal income tax purposes, we would pay federal income tax on our taxable income at the corporate tax rate, which is currently a maximum of 35.0%, and would likely pay additional state income tax at varying rates. Distributions to our unitholders would generally be taxed again as corporate distributions, and no income, gains, losses, deductions or credits would flow through to our unitholders. Because a tax would be imposed upon us as a corporation, our cash available for distribution to our unitholders would be substantially reduced. Thus, treatment of us as a corporation would result in a material reduction in the anticipated cash flow and after-tax return to our unitholders, likely causing a substantial reduction in the value of the common units.

Current law may change, causing us to be treated as a corporation for federal income tax purposes or otherwise subjecting us to additional amounts of entity-level taxation. For example, several states are evaluating ways to subject partnerships to entity-level taxation through the imposition of state income, franchise or other forms of taxation. Imposition of such a tax on us would reduce the cash available for distribution to unitholders.

Our partnership agreement provides that if a law is enacted or existing law is modified or interpreted in a manner that subjects us to taxation as a corporation or otherwise subjects us to a material amount of entity-level taxation for federal, state or local income tax purposes, then the minimum quarterly distribution amount and the target distribution amounts will be adjusted to reflect the impact of that law on us.

The tax treatment of publicly traded partnerships or an investment in our common units is subject to potential legislative, judicial or administrative changes and differing interpretations, possibly on a retroactive basis.

The present federal income tax treatment of publicly traded partnerships, including us, or an investment in our common units may be modified by legislative, judicial or administrative changes and differing interpretations at any time. Any modification to the federal income tax laws and interpretations thereof may or may not be applied retroactively. Members of Congress are considering substantive changes to the existing U.S. tax laws that affect certain publicly traded partnerships. Although the currently proposed legislation would not appear to affect our tax treatment as a partnership, we are unable to predict whether any of these changes, or other proposals, will ultimately be enacted. Any such changes could negatively impact the value of an investment in our common units.

If the IRS contests the federal income tax positions we take, the market for our common units may be adversely impacted, and the costs of any contest will reduce our cash distributions to our unitholders.

We have not requested any ruling from the IRS with respect to our treatment as a partnership for federal income tax purposes or any other matter affecting us. The IRS may adopt positions that differ from the positions that we take. Therefore, it may be necessary to resort to administrative or court proceedings to sustain some or all of the positions we take and even then a court may not agree with some or all of the positions we take. Any contest with the IRS may materially and adversely impact the market for our common units and the price at which they trade. In addition, because the costs of any contest with the IRS will be borne indirectly by our unitholders and our general partner, any such contest will result in a reduction in cash available for distribution.

Our unitholders may be required to pay taxes on their share of our income even if such unitholders do not receive any cash distributions from us.

Our unitholders will be treated as partners to whom we will allocate taxable income and who will be required to pay federal income taxes and, in some cases, state and local income taxes on their share of our taxable income, whether or not such unitholders receive cash distributions from us. Our unitholders may not receive cash distributions from us equal to such unitholders’ share of our taxable income or even equal to the actual tax liability that results from such unitholders’ share of our taxable income.

Tax gain or loss on the disposition of our common units could be different than expected.

If our unitholders sell their common units, such unitholders will recognize gain or loss equal to the difference between the amount realized and such unitholders’ tax basis in those common units. Prior distributions to our unitholders in excess of the total net taxable income our unitholders were allocated for a common unit, which decreased such unitholders’ tax basis in that common unit, will, in effect, become taxable income to such unitholders if the common unit is sold at a price greater than the tax basis in that common unit, even if the price our unitholders receive is less than their original cost. A substantial portion of the amount realized, whether or not representing gain, may be ordinary income to our unitholders. In addition, upon a unitholders’ sale of units, such unitholder may incur a tax liability in excess of the amount of cash it receives from the sale.

Tax-exempt entities and non-U.S. persons face unique tax issues from owning our common units that may result in adverse tax consequences to them.

Investment in common units by tax-exempt entities, such as individual retirement accounts (IRAs) and non-U.S. persons, raises issues unique to them. For example, virtually all of our income allocated to organizations that are exempt from federal income tax, including IRAs and other retirement plans, will be unrelated business taxable income and could be taxable to them. Distributions to non-U.S. persons will be reduced by withholding taxes at the highest applicable effective tax rate, and non-U.S. persons will be required to file United States federal tax returns and pay tax on their share of our taxable income. If you are a tax exempt entity or a non-U.S. person, you should consult your tax advisor before investing in our common units.

We will treat each purchaser of common units as having the same tax benefits without regard to the common units purchased. The IRS may challenge this treatment, which could result in a decrease in the value of the common units.

Because we cannot match transferors and transferees of common units, we will adopt depreciation and amortization positions that may not conform with all aspects of existing Treasury Regulations. A successful IRS challenge to those positions could decrease the amount of tax benefits available to our unitholders. It also could affect the timing of these tax benefits or the amount of gain from any sale of common units and could have a negative impact on the value of our common units or result in audit adjustments to our unitholders tax returns.

We prorate our items of income, gain, loss and deduction between transferors and transferees of our units each month based upon the ownership of our units on the first business day of each month, instead of on the basis of the date a particular unit is transferred. The IRS may challenge this treatment, which could change the allocation of items of income, gain, loss and deduction among our unitholders.

We prorate our items of income, gain, loss and deduction between transferors and transferees of our units each month based upon the ownership of our units on the first business day of each month, instead of on the basis of the date a particular unit is transferred. The use of this proration method may not be permitted under existing Treasury Regulations. If the IRS were to challenge this method or new Treasury Regulations were issued, we may be required to change the allocation of items of income, gain, loss and deduction among our unitholders.

A unitholder whose units are loaned to a "short seller" to cover a short sale of units may be considered as having disposed of those units. If so, the unitholder would no longer be treated for tax purposes as a partner with respect to those units during the period of the loan and may recognize gain or loss from the disposition.

Because a unitholder whose units are loaned to a "short seller" to cover a short sale of units may be considered as having disposed of the loaned units, the unitholder may no longer be treated for tax purposes as a partner with respect to those units during the period of the loan to the short seller and the unitholder may recognize gain or loss from such disposition. Moreover, during the period of the loan to the short seller, any of our income, gain, loss or deduction with respect to those units may not be reportable by the unitholder and any cash distributions received by the unitholder as to those units could be fully taxable as ordinary income. Unitholders desiring to assure their status as partners and avoid the risk of gain recognition from a loan to a short seller are urged to modify any applicable brokerage account agreements to prohibit their brokers from borrowing their units.

We have adopted certain valuation methodologies that may result in a shift of income, gain, loss and deduction between the general partner and the unitholders. The IRS may challenge this treatment, which could adversely affect the value of the common units.

When we issue additional units or engage in certain other transactions, we determine the fair market value of our assets and allocate any unrealized gain or loss attributable to our assets to the capital accounts of our unitholders and our general partner. Our methodology may be viewed as understating the value of our assets. In that case, there may be a shift of income, gain, loss and deduction between certain unitholders and the general partner, which may be unfavorable to such unitholders. Moreover, under our valuation methods, subsequent purchasers of common units may have a greater portion of their Internal Revenue Code Section 743(b) adjustment allocated to our tangible assets and a lesser portion allocated to our intangible assets. The IRS may challenge our valuation methods, or our allocation of the Section 743(b) adjustment attributable to our tangible and intangible assets, and allocations of income, gain, loss and deduction between the general partner and certain of our unitholders.

A successful IRS challenge to these methods or allocations could adversely affect the amount of taxable income or loss being allocated to our unitholders. It also could affect the amount of gain from our unitholders' sale of common units and could have a negative impact on the value of the common units or result in audit adjustments to our unitholders' tax returns without the benefit of additional deductions.

The sale or exchange of 50% or more of our capital and profit interests during any twelve-month period will result in the termination of our partnership for federal income tax purposes.

We will be considered terminated for federal income tax purposes if there is a sale or exchange of 50.0% or more of the total interests in our capital and profits within a twelve-month period. Our termination would, among other things, result in the closing of our taxable year which would require us to file two tax returns (and could result in our unitholders receiving two Schedules K-1) for one fiscal year, and could result in a deferral of depreciation deductions allowable in computing our taxable income. In the case of a unitholder reporting on a taxable year other than a fiscal year ending December 31, the closing of our taxable year may also result in more than twelve months of our taxable income or loss being includable in such unitholder's taxable income for the year of termination. Our termination currently would not affect our classification as a partnership for federal income tax purposes. We would be treated as a new partnership for tax purposes and would be required to make new tax elections and could be subject to penalties if we were unable to determine in a timely manner that a termination occurred.

Our unitholders may be subject to state and local taxes and return filing requirements as a result of investing in our common units.

In addition to federal income taxes, unitholders will likely be subject to other taxes, including state and local taxes, unincorporated business taxes and estate, inheritance or intangible taxes that are imposed by the various jurisdictions in which we do business or own property now or in the future, even if our unitholders do not reside in any of those jurisdictions. Our unitholders will likely be required to file state and local income tax returns and pay state and local income taxes in some or all of these various jurisdictions. Further, unitholders may be subject to penalties for failure to comply with those requirements. We conduct business in eleven states. We may own property or conduct business in other states or foreign countries in the future. It is our unitholders' responsibility to file all federal, state and local tax returns.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

We and Gulf South are headquartered in approximately 103,000 square feet of leased office space located in Houston, Texas. Texas Gas has its headquarters in approximately 108,000 square feet of office space in Owensboro, Kentucky in a building that it owns. Our operating subsidiaries own their respective pipeline systems in fee. A substantial portion of these systems is constructed and maintained on property owned by others pursuant to rights-of-way, easements, permits, licenses or consents.

Item 1. "Our Business–Our Pipeline and Storage Systems," contains additional information on our material property, including our pipelines and storage facilities.

Item 3. Legal Proceedings

For a discussion of certain of our current legal proceedings, please read Note 3 in Item 8 of this Report.

Item 4. Submission of Matters to a Vote of Security Holders

None.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Market Information

As of February 15, 2008, we had 90,656,122 common units outstanding held of record by approximately 36 holders. BPHC owns 53,256,122 of our common units and all of our subordinated units. Our common units are traded on the NYSE under the symbol "BWP."

The following table sets forth, for the periods indicated, the high and low sales prices for our common units, as reported on the NYSE Composite Transactions Tape, and information regarding our quarterly distributions. The last reported sales price of our common units on the NYSE on February 15, 2008 was $29.44 per unit.

	Sales Price Range per Common Unit		**Cash Distributions per Unit (a)**
	High	Low	
Year ended December 31, 2007:			
Fourth quarter	$ 33.33	$ 29.76	$ 0.46
Third quarter	37.79	28.80	0.45
Second quarter	37.46	32.65	0.44
First quarter	39.20	30.13	0.43
Year ended December 31, 2006:			
Fourth quarter	$ 31.64	$ 25.25	$ 0.415
Third quarter	29.00	23.63	0.40
Second quarter	25.18	20.90	0.38
First quarter	22.00	17.98	0.36

(a) Represents cash distributions attributable to the quarter and declared and paid to common and subordinated unitholders within 60 days after quarter end. We also paid cash distributions to our general partner with respect to its 2.0% general partner interest and, with respect to that portion of the distribution in excess of $0.4025 per unit, its incentive distribution rights described below.

Our Cash Distribution Policy

Our cash distribution policy is consistent with the terms of our partnership agreement which requires us to distribute our "available cash," as that term is defined in our partnership agreement, to unitholders on a quarterly basis. However, there is no guarantee that unitholders will receive quarterly distributions from us. Our distribution policy may be changed at any time and is subject to certain restrictions or limitations, including, among others, our general partner's broad discretion to establish reserves which could reduce cash available for distributions, FERC regulations which place restrictions on various types of cash management programs employed by companies in the energy industry, including our operating subsidiaries, the requirements of applicable state partnership and limited liability company laws, and the requirements of our revolving credit facility which would prohibit us from making distributions to unitholders if an event of default were to occur. In addition, we may lack sufficient cash to pay distributions to unitholders due to a number of factors, including those described in Item 1A, "Risk Factors," of this Report.

Incentive Distribution Rights

Incentive distribution rights represent the right to receive an increasing percentage of quarterly distributions of available cash from operating surplus after the minimum quarterly distribution and the subsequent target distribution levels have been achieved. Our general partner currently holds all of our incentive distribution rights, but may transfer these rights separately from its general partner interest, subject to restrictions in our partnership agreement.

Assuming we do not issue any additional classes of units and our general partner maintains its 2.0% interest, if we make distributions to our unitholders from operating surplus in an amount equal to the minimum quarterly distribution for any quarter, assuming no arrearages, then we will distribute any additional available cash from operating surplus for that quarter among the unitholders and our general partner as follows:

	Total Quarterly Distribution	**Marginal Percentage Interest in Distributions**	
	Target Amount	**Common and Subordinated Unitholders**	**General Partner**
Minimum Quarterly Distribution	$0.3500	98.0%	2.0%
First Target Distribution	up to $0.4025	98.0%	2.0%
Second Target Distribution	above $0.4025 up to $0.4375	85.0%	15.0%
Third Target Distribution	above $0.4375 up to $0.5250	75.0%	25.0%
Thereafter	above $0.5250	50.0%	50.0%

Subordination Period

During the subordination period, holders of our common units will have the right to receive distributions of available cash from operating surplus in an amount equal to $0.35 per unit per quarter, which we refer to as the "minimum quarterly distribution," plus any arrearages, before any distributions of available cash from operating surplus may be made on the subordinated units. No arrearages will be paid on the subordinated units. Assuming there are no arrearages in payment of the minimum quarterly distribution, the subordination period will end, and all subordinated units will convert to common units, at such time as we have made distributions from operating surplus on the common and subordinated units at least equal to the minimum quarterly distribution for each of the immediately preceding three consecutive, non-overlapping four-quarter periods; provided also that the "adjusted operating surplus" (as defined in our partnership agreement) generated during such periods equaled or exceeded the sum of the minimum quarterly distributions on all of our units during such periods. Alternatively, assuming there are no arrearages, the subordination period will end at such time as we have made distributions from operating surplus on the common and subordinated units at least equal to 150.0% of the minimum quarterly distribution for the immediately preceding four-quarter period; provided also that the adjusted operating surplus generated during such period equaled or exceeded 150.0% of the minimum quarterly distributions on all of our units during such period. The subordination period will also end, and each subordinated unit will convert into one common unit, if unitholders remove our general partner other than for cause and no units held by our general partner and its affiliates are voted in favor of such removal. We have made distributions from operating surplus on our common and subordinated units in excess of the minimum quarterly distribution for the previous two consecutive, non-overlapping four-quarter periods preceding the date of this Report.

For information about our equity compensation, please see Part III, Item 12 – "Securities Authorized for Issuance under Equity Compensation Plans."

Common Unit Repurchases

On February 27, 2007, our general partner purchased 1,500 of our common units in the open market at a price of $36.61 per unit. These units were granted to our independent directors on March 5, 2007, as part of their director compensation. For information about our director compensation, please see Part III, Item 11 – "Director Compensation."

Item 6. Selected Financial Data

The following table presents summary historical financial and operating data for us and our predecessors, Boardwalk Pipelines and Texas Gas, as of the dates and for the periods indicated. In connection with the consummation of our initial public offering (IPO), BPHC contributed all of the equity interests in Boardwalk Pipelines to us. This contribution was accounted for as a transfer of assets between entities under common control in accordance with Statement of Financial Accounting Standards (SFAS) No. 141, *Business Combinations*. Therefore, the results of Boardwalk Pipelines prior to November 15, 2005, have been combined with our results subsequent to November 15, 2005, as our consolidated results for 2005. Boardwalk Pipelines was formed in April 2003 to acquire all of the outstanding capital stock of Texas Gas, the acquisition of which was completed on May 16, 2003 (the TG-Acquisition). Boardwalk Pipelines had no assets or operations prior to the TG-Acquisition; therefore, we refer to Texas Gas as their predecessor.

The TG-Acquisition was accounted for using the purchase method of accounting and, accordingly, the post-acquisition financial information included below reflects the allocation of the purchase price resulting from the acquisition. As a result, the financial statements of Texas Gas for the periods prior to May 16, 2003 are not directly comparable to our financial statements subsequent to that date. The consolidated financial and operating data shown below have been separated by a bold black line delineating our predecessor's financial data from ours.

The acquisition of Gulf South by Boardwalk Pipelines in December 2004 was also accounted for using the purchase method of accounting. Accordingly, the post-acquisition financial information included below reflects the purchase. As a result, our results of operations for the year ended December 31, 2004, and prior periods are not readily comparable with our results of operations for the years ended December 31, 2007, 2006 and 2005.

Prior to its converting to a limited partnership on November 15, 2005, Boardwalk Pipelines' taxable income was included in the consolidated federal income tax return of Loews and Boardwalk Pipelines recorded a charge-in-lieu of income taxes pursuant to a tax-sharing agreement with Loews. The tax-sharing agreement required Boardwalk Pipelines to remit to Loews on a quarterly basis any federal income taxes as if it were filing a separate return. Boardwalk Pipelines and its subsidiaries were also included in the state franchise tax filings of BPHC. The franchise taxes were charged to, and recorded by, Boardwalk Pipelines and its subsidiaries pursuant to the companies' tax sharing policy. Following our IPO, we no longer record certain state franchise taxes incurred by BPHC and no longer participate in a tax-sharing agreement with Loews. Our subsidiaries directly incur some income-based state taxes, which are shown as Income taxes and charge-in-lieu of income taxes on the Consolidated Statements of Income.

As used herein, EBITDA means earnings before interest, income taxes, and depreciation and amortization. This measure is not calculated or presented in accordance with accounting principles generally accepted in the United States of America (GAAP). We explain this measure below and reconcile it to its most directly comparable financial measures calculated and presented in accordance with GAAP in "**Non-GAAP Financial Measure." The financial data below should be read in conjunction with the consolidated financial statements and notes thereto included in this Report (in thousands, except Earnings per common and subordinated unit):

	Boardwalk Pipeline Partners, LP					Predecessor
	For the Year Ended December 31,				For the Period May 17, 2003 through December 31,	For the Period January 1, 2003 through May 16,
	2007	**2006**	**2005**	**2004**	**2003**	**2003**
Total operating revenues	$ 643,268	$ 607,642	$ 560,466	$ 263,621	$ 142,860	$ 113,447
Net income	227,756	197,550	100,925	48,825	22,451	34,474
Total assets	4,157,306	2,951,299	2,465,491	2,472,140	1,238,627	N/A
Long-term debt	1,847,914	1,350,920	1,101,290	1,106,135	548,115	N/A
Earnings per common and subordinated unit	$ 1.87	$ 1.85	*	N/A	N/A	N/A
EBITDA**	$ 349,839	$ 331,468	$ 289,002	$ 144,489	$ 77,241	$ 78,380

* Our net income was $35,992, or $0.35 per common and subordinated unit, for the period from November 15, 2005, the closing date of our IPO, through December 31, 2005.

****Non-GAAP Financial Measure**

EBITDA is used as a supplemental financial measure by management and by external users of our financial statements, such as investors, commercial banks, research analysts and rating agencies, to assess:

- our financial performance without regard to financing methods, capital structure or historical cost basis;
- our ability to generate cash sufficient to pay interest on our indebtedness and to make distributions to our partners;
- our operating performance and return on invested capital as compared to those of other companies in the natural gas transportation and storage business, without regard to financing methods and capital structure; and
- the viability of acquisitions and capital expenditure projects.

EBITDA should not be considered an alternative to, or more meaningful than, net income, operating income, cash flow from operating activities or any other measure of financial performance or liquidity presented in accordance with GAAP, or as an indicator of our operating performance or liquidity. Certain items excluded from EBITDA are significant components in understanding and assessing a company's financial performance, such as a company's cost of capital and tax structure, as well as historic costs of depreciable assets. We have included information concerning EBITDA because EBITDA provides additional information as to our ability to meet our fixed charges and is presented solely as a supplemental measure. However, viewing EBITDA as an indicator of our ability to make cash distributions on our common units should be done with caution, as we might be required to conserve funds or to allocate funds to business or legal purposes other than making distributions. EBITDA is not necessarily comparable to a similarly titled measure of another company.

The following table presents a reconciliation of EBITDA to the most directly comparable GAAP financial measures, on a historical basis, as applicable, for each of the periods presented below (in thousands):

	Boardwalk Pipeline Partners, LP					Predecessor
	For the Year Ended December 31,				For the Period May 17, 2003 through December 31,	For the Period January 1, 2003 through May 16,
	2007	2006	2005	2004	2003	2003
Net income	$ 227,756	$ 197,550	$ 100,925	$ 48,825	$ 22,451	$ 34,474
Income taxes and charge-in-lieu of income taxes	769	253	49,494	32,333	15,104	22,387
Elimination of cumulative deferred taxes	-	-	10,102	-	-	-
Depreciation and amortization	81,824	75,771	72,078	33,977	20,544	16,092
Interest expense	61,023	62,123	60,067	30,081	19,368	7,392
Interest income	(21,489)	(4,202)	(1,478)	(352)	(205)	-
Interest income from affiliates, net	(44)	(27)	(2,186)	(375)	(21)	(1,965)
EBITDA	$ 349,839	$ 331,468	$ 289,002	$ 144,489	$ 77,241	$ 78,380

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of financial condition and results of operations should be read in conjunction with our consolidated financial statements and the related notes thereto, included in Item 8, and with Item 1A, "Risk Factors."

Overview

We are a Delaware limited partnership formed to own and operate the business conducted by our operating subsidiaries, including the interstate transportation and storage of natural gas. We own and operate pipeline systems in the Gulf Coast states of Texas, Louisiana, Mississippi, Alabama, and Florida and which extend northeasterly through Arkansas to the Midwestern states of Tennessee, Kentucky, Illinois, Indiana, and Ohio.

Our transportation services consist of firm transportation, whereby the customer pays a capacity reservation charge to reserve pipeline capacity at certain receipt and delivery points along our pipeline systems, plus a commodity and fuel charge on the volume actually transported, and interruptible transportation, whereby the customer pays to transport gas only when capacity is available and used. We offer firm storage services in which the customer reserves and pays for a specific amount of storage capacity, including injection and withdrawal rights, and interruptible storage and PAL services where the customer receives and pays for capacity only when it is available and used. Some PAL agreements are paid for at inception of the service and revenues for these agreements are recognized as service is provided over the term of the agreement. For the year ended December 31, 2007, the percentage of our Total operating revenues associated with firm contracts was approximately 81.7%.

We are not in the business of buying and selling natural gas other than for system management purposes, but changes in the price of natural gas can affect the overall supply and demand of natural gas, which in turn does affect our results of operations. We deliver to a broad mix of customers including LDCs, municipalities, interstate and intrastate pipelines, direct industrial users, electric power generation plants, marketers and producers. In addition to serving directly connected markets, our pipeline systems have indirect market access to the northeastern and southeastern United States through interconnections with unaffiliated pipelines.

Our business is affected by trends involving natural gas price levels and natural gas price spreads, including spreads between physical locations on our pipeline system, which affects our transportation revenues, and spreads in natural gas prices across time (for example summer to winter), which primarily affects our PAL and storage revenues. High natural gas prices in recent years have helped to drive increased production levels in producing locations such as the Bossier Sands and Barnett Shale gas producing regions in East Texas, which has resulted in additional supply being available on the west side of our system. This has resulted in widened west-to-east basis differentials which have benefited our transportation revenues. The high natural gas prices have also driven increased production in regions such as the Fayetteville Shale in Arkansas and the Caney Woodford Shale in Oklahoma, which, together with the higher production levels in East Texas, have formed the basis for several pipeline expansion projects including those being undertaken by us. Wide spreads in natural gas prices between time periods during the past two to three years, for example fall 2006 to spring 2007, were favorable for our PAL and interruptible storage services during that period. These spreads decreased substantially in 2007, which resulted in reduced PAL and interruptible storage revenues. We cannot predict future time period spreads or basis differentials.

Critical Accounting Policies and Estimates

Certain amounts included in or affecting our consolidated financial statements and related disclosures must be estimated, requiring us to make certain assumptions with respect to values or conditions that cannot be known with certainty at the time the financial statements are prepared. These estimates and assumptions affect the amounts we report for assets and liabilities and our disclosure of contingent assets and liabilities in our financial statements. We evaluate these estimates on an ongoing basis, utilizing historical experience, consultation with third parties and other methods we consider reasonable. Nevertheless, actual results may differ significantly from our estimates. Any effects on our business, financial position or results of operations resulting from revisions to these estimates are recorded in the periods in which the facts that give rise to the revisions become known.

Earnings per Unit

We calculate net income per limited partner unit in accordance with Emerging Issues Task Force (EITF) Issue No. 03-6, *Participating Securities and the Two-Class Method under FASB Statement No. 128*. In Issue 3 of EITF No. 03-6, the EITF reached a consensus that undistributed earnings for a period should be allocated to a participating security based on the contractual participation rights of the security to share in those earnings as if all of the earnings for the period had been distributed. Our general partner holds contractual participation rights which are incentive distribution rights in accordance with the partnership agreement as described in Item 5 of this Report under “Incentive Distribution Rights.” The amounts reported for net income per limited partner unit on the Consolidated Statements of Income for the years ended December 31, 2007 and 2006, were adjusted to take into account an assumed incremental allocation to the general partner's incentive distribution rights. Payments made on account of the incentive distribution rights are determined in relation to actual declared distributions.

Regulation

Under the FERC’s regulations certain revenues that we collect may be subject to possible refunds to our customers. Accordingly, during an open rate case, estimates of rate refund reserves are recorded considering regulatory proceedings, advice of counsel and estimated risk-adjusted total exposure, as well as other factors. At December 31, 2007 and 2006, there were no liabilities for any open rate case recorded on our Consolidated Balance Sheets. Currently, neither of our operating subsidiaries is involved in an open general rate case.

SFAS No. 71, *Accounting for the Effects of Certain Types of Regulation*, requires rate-regulated public utilities to account for and report assets and liabilities consistent with the economic effect of the manner in which independent third-party regulators establish rates. In applying SFAS No. 71, Texas Gas records certain costs and benefits as regulatory assets and liabilities, respectively, in order to provide for recovery from or refund to customers in future periods. Gulf South does not apply SFAS No. 71, because certain services provided by it are priced using market-based rates and competition in its market area can result in discounts from the maximum allowable cost-based rates being granted to customers, such that the application of SFAS No. 71 is not appropriate.

The storage facilities operated by our operating subsidiaries store gas that is owned by them as well as gas owned by customers. Due to its method of accounting for storage, volumes held on behalf of others by Gulf South are not reflected on the Consolidated Balance Sheets. Consistent with the method of storage accounting elected by Texas Gas and the risk-of-loss provisions included in its tariff, Texas Gas reflects an equal and offsetting receivable and payable for certain customer-owned gas in its facilities for certain storage and related services. For further discussion of our gas in storage, please see Note 2 in Item 8 of this Report.

Environmental Liabilities

Our environmental liabilities are based on management’s best estimate of the undiscounted future obligation for probable costs associated with environmental assessment and remediation of our operating sites. These estimates are based on evaluations and discussions with counsel and operating personnel and the current facts and circumstances related to these environmental matters. At December 31, 2007, we had accrued approximately $17.0 million for environmental matters. Our environmental accrued liabilities could change substantially in the future due to factors such as the nature and extent of any contamination, changes in remedial requirements, technological changes, discovery of new information, and the involvement of and direction taken by the Environmental Protection Agency, the FERC and other governmental authorities on these matters. We continue to conduct environmental assessments and are implementing a variety of remedial measures that may result in increases or decreases in the total estimated environmental costs.

Impairment

At June 30, 2007, the carrying value of our Magnolia storage expansion project was tested for impairment. As a result of the impairment test, we recognized a $14.7 million impairment charge representing the carrying value of the storage cavern. In determining that the fair value of the cavern was zero, estimates and assumptions were made regarding the cash flows associated with the storage cavern disposal through sale or abandonment. Certain costs remain inestimable related to potential regulatory or contractual obligations associated with abandonment of the storage cavern. We believe that alternative uses for the storage cavern may be possible in the hands of a third-party, and will pursue these options with the lessor, however, we have assumed no future cash flows related to these options in our impairment analysis. In assessing the carrying value of the other associated facilities which include pipeline, compressors and other equipment and facilities, we assumed that the facilities would be used in conjunction with a replacement storage cavern to be developed. Our expected cash flows related to the other facilities include the cost of developing a new cavern and revenues from the sale of storage services to third-parties over the useful life of the asset. If storage spreads were to compress appreciably or significant difficulties were to arise in the development of the cavern, the actual cash flows could differ materially from the expected cash flows used in assessing the carrying value of the facilities which could result in the recognition of an additional impairment charge. If it is determined in the future that the assets cannot be used in conjunction with a new cavern, we may be required to record an additional impairment charge at the time that determination is made.

Jackson Storage Gas Loss

Our Jackson, Mississippi aquifer storage facility has a working gas capacity of approximately 5.0 Bcf and is primarily used for operational purposes. In the fourth quarter 2007, it was determined that, based upon tests used to estimate the amount of gas stored in the facility, gas loss had occurred in the range of 1.3 to 1.7 Bcf. As a result of the estimated gas loss, we recognized a charge of $0.7 million to Operation and maintenance expense in the fourth quarter 2007. This amount was determined by applying the carrying value of gas in the facility of $0.53 per million British thermal units (MMBtu), to the low end of the range of estimated gas loss of 1.3 Bcf. An assessment is underway to determine whether the gas will need to be replaced in order to operate the facility and support pipeline operations. A more comprehensive test of the field will be performed in the second quarter 2008. If the pending test results indicate that the actual gas loss is greater than the estimated 1.3 Bcf, this could result in a future adjustment to the estimate.

Goodwill

As of December 31, 2007, we had $163.5 million of goodwill recorded as an asset on our Consolidated Balance Sheets. SFAS No. 142, *Goodwill and Other Intangible Assets,* requires the evaluation of goodwill for impairment at least annually or more frequently if events and circumstances indicate that the asset might be impaired.

An impairment test performed in accordance with SFAS No. 142 requires that a reporting unit's fair value be estimated. We used a discounted cash flow model to estimate the fair value of the reporting unit, and that estimated fair value was compared to the carrying amount, including goodwill. The estimated fair value was in excess of the carrying amount at December 31, 2007, and accordingly no impairment was recognized. Judgments and assumptions were used in management's estimate of discounted future cash flows used to calculate the fair value of the reporting unit, including our five-year financial plan operating results, the long-term outlook for growth in natural gas demand in the U.S. and systematic or diversifiable risk used in the calculation of the applied discount rate under the capital asset pricing model. The use of alternate judgments and/or assumptions could result in the recognition of an impairment charge in the financial statements.

Defined Benefit Plans

We are required to make a significant number of assumptions in order to estimate the liabilities and costs related to our pension and postretirement benefit obligations to employees under our benefit plans. The assumptions that have the most impact on pension costs are the discount rate, the expected return on plan assets and the rate of compensation increases. These assumptions are evaluated relative to current market factors in the United States such as inflation, interest rates and fiscal and monetary policies, as well as our policies regarding management of the plans such as the allocation of plan assets among investment options. Changes in these assumptions can have a material impact on pension obligations and pension expense.

In determining the discount rate assumption, we utilize current market information and liability information provided by our plan actuaries, including a discounted cash flow analysis of our pension and postretirement obligations. In particular, the basis for our discount rate selection was the yield on indices of highly rated fixed income debt securities with durations comparable to that of our plan liabilities. The Moody’s Aa Corporate Bond Index is consistently used as the basis for the change in discount rate from the last measurement date with this measure confirmed by the yield on other broad bond indices. Additionally, we supplement our discount rate decision with a yield curve analysis. The yield curve is applied to expected future retirement plan payments to adjust the discount rate to reflect the cash flow characteristics of the plans. The yield curve is developed by the plans’ actuaries and is a hypothetical AA/Aa yield curve represented by a series of annualized discount rates reflecting bond issues having a rating of Aa or better by Moody’s Investors Service, Inc. or a rating of AA or better by Standard & Poor's.

Further information on our pension and postretirement benefit obligations is included in Note 9 in Item 8 of this Report.

Financial Analysis of Operations

We derive our revenues primarily from the interstate transportation and storage of natural gas for third parties. Transportation and storage services are provided under firm and interruptible service agreements. Item 1, Nature of Contracts, contains more information about the nature of our revenues. Our operating costs and expenses typically do not vary significantly based upon the amount of gas transported, with the exception of fuel consumed at Gulf South’s compressor stations, which is part of Operation and maintenance expenses. We charge shippers for fuel in accordance with each pipeline’s individual tariff guidelines and Gulf South’s fuel recoveries are included as part of Gas transportation revenues. The following analysis discusses our financial results of operations for the years 2007, 2006 and 2005.

2007 Compared with 2006

Our net income for the year ended December 31, 2007, increased $30.2 million, or 15.3%, from 2006. The primary drivers for the increase were higher revenues from strong demand for firm transportation services, including pipeline system expansion and related fuel revenues. Higher operating expenses driven by a variety of factors, mainly charges for impairment and remediation costs associated with certain assets, increased fuel and higher depreciation and amortization, were substantially offset by higher interest income. The 2007 results were also favorably impacted by a gain on the sale of storage gas associated with a storage expansion project, which was accounted for as a reduction of operating expenses.

Total operating revenues increased $35.7 million, or 5.9%, to $643.3 million for the year ended December 31, 2007, compared to $607.6 million for the year ended December 31, 2006, primarily due to:

- $23.4 million increase in gas transportation fees due to higher reservation rates, including $8.9 million from new contracts associated with the Carthage, Texas to Keatchie, Louisiana pipeline expansion which was in service for all of 2007;
- $11.9 million increase in fuel revenues due to increased retained volumes from higher system utilization including amounts associated with pipeline expansion; and
- $4.1 million increase from the settlement of a claim related to a firm transportation agreement in the Calpine bankruptcy proceeding.

Operating costs and expenses increased $23.5 million, or 6.6%, to $377.2 million for the year ended December 31, 2007, compared to $353.7 million for the year ended December 31, 2006, primarily due to:

- $14.7 million loss from impairment of the Magnolia storage facility in the second quarter 2007;
- $9.3 million in charges associated with offshore pipeline assets in the South Timbalier Bay area, offshore Louisiana, including $4.8 million related to re-covering the pipeline and a $4.5 million impairment charge;
- $6.9 million increase in fuel costs due to an increase in gas usage;
- $6.0 million increase in depreciation and amortization from increases in our asset base;
- $5.0 million increase in property and other taxes due to increases in the valuation of our asset base;
- $3.8 million increase related to termination of an agreement with a construction contractor on the Southeast expansion project; and
- $22.0 million decrease from a gain on the sale of gas associated with the Western Kentucky storage expansion project which was reported in Net gain on disposal of operating assets and related contracts.

Total other deductions declined by $18.6 million, or 33.2%, to $37.5 million for the year ended December 31, 2007, compared to $56.1 million for the year ended December 31, 2006. The decline is primarily due to an increase in interest income of $17.3 million as a result of higher levels of invested cash which we accumulated through sales of our debt and equity to finance the cost of our expansion projects.

2006 Compared with 2005

Our net income for the year ended December 31, 2006 increased $96.6 million or 95.7% from 2005. The primary drivers for the increase were higher PAL, gas storage and gas transportation revenues and a change in tax status concurrent with our IPO in November 2005, as a result of which we ceased recording a charge-in-lieu of income taxes in our results of operations.

Total operating revenues increased $47.2 million, or 8.4%, to $607.6 million for the year ended December 31, 2006, compared to $560.4 million for the year ended December 31, 2005, primarily due to:

- $38.5 million increase in gas storage and PAL revenues mainly due to favorable natural gas price spreads and volatility in forward natural gas prices;
- $26.0 million increase in firm transportation revenues, excluding fuel, primarily due to higher reservation rates and additional capacity reserved by shippers due to increased production in the East Texas region; and
- $5.3 million increase due mainly to hurricane insurance recoveries received in 2006 and gas lost in 2005 related to hurricanes.

The increases were partly offset by:

- $10.5 million decrease in interruptible transportation revenues due in part to customers shifting to firm services and supply disruptions caused by the hurricanes;
- $7.1 million decrease in fuel retained due to lower realized natural gas prices and reduced throughput; and
- $5.5 million decrease in revenues from the amortization of acquired executory contracts.

Operating costs and expenses increased by $8.7 million, or 2.5%, to $353.7 million for the year ended December 31, 2006, compared to $345.0 million for the year ended December 31, 2005. This increase is primarily due to:

- $12.6 million increase in outside services and overheads mainly due to growth in operations and regulatory compliance;
- $12.2 million from the sale of storage gas related to Phase I of our Western Kentucky storage expansion project reported in Net gain on disposal of operating assets and related contracts in 2005;
- $10.2 million higher employee benefits costs comprised mainly of $6.3 million from the amortization of a regulatory asset for postretirement benefits as a result of the Texas Gas rate case settlement and $3.5 million from a special termination benefit charge recorded as a result of the early retirement incentive program; and
- $3.7 million from an increase in depreciation and amortization due to increases in our asset base and $2.6 million increased expense from the lease of third-party pipeline capacity.

The increases were partly offset by:

- $18.2 million decrease in hurricane-related costs from $7.3 million of hurricane-related insurance recoveries recognized in 2006 and a reduction in hurricane-related operating expenses from amounts incurred in 2005;
- $14.9 million decrease in company-used gas due to operational efficiencies, lower natural gas prices and reduced throughput resulting in decreased usage.

Total other deductions increased by $1.2 million, or 2.2%, of which $2.1 million is primarily due to interest expense related to borrowings under our revolving credit facility and the issuance of new debt in November 2006, offset by an increase in interest income.

Liquidity and Capital Resources

We are a partnership holding company and derive all of our operating cash flow from our operating subsidiaries. Our operating subsidiaries use funds from their respective operations to fund their operating activities and maintenance capital requirements, service their indebtedness and make advances or distributions to Boardwalk Pipelines. Boardwalk Pipelines uses cash provided from the operating subsidiaries and, as needed, borrowings under its revolving credit facility discussed below, to service its outstanding indebtedness and, when available, make distributions or advances to us to fund our distributions to unitholders.

Our operating subsidiaries participate in a cash management program to the extent they are permitted under FERC regulations. Under the cash management program, depending on whether a participating subsidiary has short-term cash surpluses or cash requirements, Boardwalk Pipelines either provides cash to them or they provide cash to Boardwalk Pipelines.

Maintenance Capital Expenditures

Maintenance capital expenditures were $47.1 million, $41.7 million and $52.9 million in 2007, 2006 and 2005. We expect to fund our 2008 maintenance capital expenditures of approximately $60.0 million from our operating cash flows.

Expansion Capital Expenditures

Expansion capital expenditures were $1,162.7 million, $158.6 million and $30.1 million in 2007, 2006 and 2005. As discussed above in Item 1, Business – Expansion Projects, we have undertaken significant capital expansion projects, substantially all of which have been or are expected to be funded with proceeds from equity and debt financings.

Since our IPO through December 31, 2007, we have raised $726.0 million through issuances of equity limited partnership units and contributions from our general partner and $743.6 million through issuances of unsecured notes by us and our subsidiaries, as described below under Equity and Debt Financing, and in Note 7 to the consolidated financial statements contained in Item 8 of this Report. At December 31, 2007, we had approximately $317.3 million in cash and $814.4 million of borrowing capacity available under our $1.0 billion revolving credit facility discussed below.

We expect to incur expansion capital expenditures of approximately $3.1 billion in 2008 and approximately $0.2 billion in 2009 to complete our pipeline expansion projects, based upon our current cost estimates. However, as noted elsewhere in this report, we have experienced cost increases in these projects and various factors could cause our costs to exceed that amount. We expect to finance our remaining pipeline expansion capital costs through equity financings and the incurrence of debt, including sales of debt by us and our subsidiaries, and borrowings under our revolving credit facility, as well as available operating cash flow in excess of our operating needs. However, the impact of the cost increases we have experienced and may experience in the future to complete our expansion capital projects could adversely impact our financing costs, which could have a material adverse affect on our results of operations, financial condition and cash flows. See Item 1A, Risk Factors – We are undertaking large, complex expansion projects which involve significant risks that may adversely affect our business. See also Item 1 – Pipeline Expansion Projects.

Equity and Debt Financing

In November 2007, we completed an offering of 7.5 million of our common units at a price of $30.90 per unit. The offering resulted in net proceeds of $232.8 million, after deducting underwriting discounts and offering expenses of $3.7 million and including $4.7 million received from our general partner to maintain its 2.0% interest in us. After the offering, we have 90.7 million common units and 33.1 million subordinated units issued and outstanding, of which 37.4 million common units are held by the public.

In August 2007, we sold $225.0 million of 5.75% senior unsecured notes of Gulf South due August 15, 2012, and $275.0 million of 6.30% senior unsecured notes of Gulf South due August 15, 2017. We received net proceeds of approximately $495.3 million after deducting initial purchaser discounts and offering expenses of $4.7 million.

In March 2007, we completed a public offering of 8.0 million of our common units at a price of $36.50 per unit. We received proceeds of approximately $293.8 million, net of underwriting discounts and offering expenses of $4.2 million and including approximately $6.0 million from the general partner to maintain its 2.0% general partner interest.

The proceeds of these offerings have been and will be primarily used to fund capital expenditures associated with our expansion projects.

In August 2007, we entered into a Treasury rate lock for a notional amount of $150.0 million of principal to hedge the risk attributable to changes in the risk-free component of forward 10-year interest rates through February 1, 2008. The reference rate on the Treasury rate lock was 4.74%. On February 1, 2008, we paid the counterparty approximately $15.0 million to settle the rate lock. The Treasury lock was designated as a cash flow hedge in accordance with SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities,* as amended; therefore the loss will be recognized in Interest expense over the term of the related debt to be issued.

Credit Facility

We maintain a $1.0 billion revolving credit facility, which was increased from $700.0 million in November 2007, under which Boardwalk Pipelines, Gulf South and Texas Gas each may borrow funds, up to applicable sub-limits. Interest on amounts drawn under the credit facility is payable at a floating rate equal to an applicable spread per annum over the London Interbank Offered Rate (LIBOR) or a base rate defined as the greater of the prime rate or the Federal funds rate plus 50 basis points. Under the terms of the agreement, each of the borrowers must maintain a minimum ratio, as of the last day of each fiscal quarter, of consolidated total debt to consolidated earnings before income taxes, depreciation and amortization (as defined in the agreement), measured for the preceding twelve months, of not more than five to one. As of December 31, 2007, we were in compliance with all the covenant requirements under our credit agreement and no funds were drawn under this facility. However, at December 31, 2007, we had outstanding letters of credit under the facility for $185.6 million to support certain obligations associated with the Fayetteville Lateral and Gulf Crossing expansion projects which reduced the available capacity under the facility by such amount. The revolving credit facility has a maturity date of June 29, 2012.

Contractual Obligations

The following table summarizes significant contractual cash payment obligations as of December 31, 2007, by period (in millions):

	Total	Less than 1 Year	1-3 Years	4-5 Years	More than 5 Years
Principal payments on long-term debt	$ 1,860.0	-	-	$ 225.0	$ 1,635.0
Interest on long-term debt	963.7	$ 103.6	$ 207.4	207.4	445.3
Capital commitments	851.1	834.7	16.4	-	-
Lease commitments	36.7	6.7	10.8	6.0	13.2
Total	$ 3,711.5	$ 945.0	$ 234.6	$ 438.4	$ 2,093.5

Pursuant to the settlement of the Texas Gas rate case in 2006, we are required to annually fund an amount to the Texas Gas pension plan equal to the amount of actuarially determined net periodic pension cost, including a minimum of $3.0 million. The above table does not reflect commitments we have made after December 31, 2007, relating to our expansion projects. For information on these projects, please read "Capital Expenditures" above.

Changes in cash flow from operating activities

Net cash provided by operating activities increased $26.2 million, or 10.3%, to $281.7 million for the year ended December 31, 2007, compared to $255.5 million for the comparable 2006 period, primarily due to:

- $16.0 million increase in cash due to gas purchases made in 2006;
- $8.5 million increase in cash due to the timing of expenditures; and
- $3.0 million increase in cash from the change in net income, excluding non-cash items such as depreciation and amortization, impairment charges and recognition of previously deferred revenues.

Changes in cash flow from investing activities

Net cash used in investing activities increased $988.8 million to $1.2 billion for the year ended December 31, 2007, compared to $191.5 million for the comparable 2006 period, primarily due to an increase in capital expenditures mainly for our expansion projects.

Changes in cash flow from financing activities

Net cash provided by financing activities increased $547.7 million to $816.9 million for the year ended December 31, 2007, compared to $269.2 million for the comparable 2006 period, primarily due to:

- $327.2 million increase in net proceeds from the sale of common units and related general partner capital contributions;
- $157.0 million increase in net proceeds from the issuance of long term debt; and
- $132.1 million decrease in cash used from the payment of notes and other long term debt in 2006.

These increases were partly offset by $68.6 million increase in cash distributions to unitholders and the general partner.

Impact of Inflation

We have experienced increased costs in recent years due to the effect of inflation on the cost of labor, benefits, materials and supplies, and property, plant and equipment (PPE). A portion of the increased labor and materials and supplies costs have directly affected income through increased operating and maintenance costs. The cumulative impact of inflation over a number of years has resulted in increased costs for current replacement of productive facilities. The majority of our PPE and materials and supplies is subject to rate-making treatment, and under current FERC practices, recovery is limited to historical costs. Amounts in excess of historical cost are not recoverable unless a rate case is filed. However, cost-based regulation, along with competition and other market factors, limit our ability to price jurisdictional services or products to ensure recovery of inflation's effect on costs.

Off-Balance Sheet Arrangements

At December 31, 2007, we had no guarantees of off-balance sheet debt to third parties, no debt obligations that contain provisions requiring accelerated payment of the related obligations in the event of specified levels of declines in credit ratings, and no other off-balance sheet arrangements.

Recent Accounting Pronouncements

For a discussion regarding recent accounting pronouncements, please read Note 15 in Item 8 of this Report.

Calpine Energy Services (Calpine) Settlement

In 2002 and 2003, Calpine entered into two 20-year transportation agreements with Gulf South. In December 2005, Calpine filed for Chapter 11 Bankruptcy protection and in early 2006 discontinued making payments on one of the transportation agreements. Gulf South continued to invoice Calpine under the transportation agreements and fully reserved the revenues associated with the contract on which Calpine was not making payments. In December 2007, Gulf South and Calpine filed a stipulation and agreement with the Bankruptcy court, which was approved in January 2008, to terminate the firm transportation agreement on which Calpine was delinquent, and to settle all of Gulf South's claims in the Bankruptcy proceedings for approximately $16.5 million. The claim was to be paid in the form of Calpine stock, along with other general creditors having claims in the Bankruptcy proceeding. In January 2008, we sold the Bankruptcy claim to a third party and received a cash payment of approximately $15.3 million. The assignment is with recourse subject to the issuance of Calpine stock in the full amount of the claim. As a result of the settlement, in 2007 we recognized $4.1 million in Gas transportation revenues related to invoiced amounts past due, which were previously reserved. The remainder of the settlement amount will be recognized upon full payment of the settlement amount by Calpine.

Forward-Looking Statements

Investors are cautioned that certain statements contained in this report, as well as some statements in periodic press releases and some oral statements made by our officials and our subsidiaries during presentations about us, are "forward-looking." Forward-looking statements include, without limitation, any statement that may project, indicate or imply future results, events, performance or achievements, and may contain the words "expect," "intend," "plan," "anticipate," "estimate," "believe," "will likely result," and similar expressions. In addition, any statement made by our management concerning future financial performance (including future revenues, earnings or growth rates), ongoing business strategies or prospects, and possible actions by our partnership or its subsidiaries, are also forward-looking statements.

Forward-looking statements are based on current expectations and projections about future events and are inherently subject to a variety of risks and uncertainties, many of which are beyond our control that could cause actual results to differ materially from those anticipated or projected. These risks and uncertainties include, among others:

- We may not complete projects, including growth or expansion projects, that we have commenced or will commence, or we may complete projects on materially different terms, cost or timing than anticipated and we may not be able to achieve the intended economic or operational benefits of any such project, if completed.

- The successful completion, timing, cost, scope and future financial performance of our expansion projects could differ materially from our expectations due to availability of contractors or equipment, weather, difficulties or delays in obtaining regulatory approvals or denied applications, land owner opposition, the lack of adequate materials, labor difficulties or shortages, expansion costs that are higher than anticipated and numerous other factors beyond our control.

- We may not complete any future debt or equity financing transaction.

- The gas transmission and storage operations of our subsidiaries are subject to rate-making policies and actions by the FERC or customers that could have an adverse impact on the rates we charge and our ability to recover our income tax allowance, our full cost of operating our pipelines and a reasonable return.

- We are subject to laws and regulations relating to the environment and pipeline operations which may expose us to significant costs, liabilities and loss of revenues. Any changes in such regulations or their application could negatively affect our business, financial condition and results of operations.

- Our operations are subject to operational hazards and unforeseen interruptions for which we may not be adequately insured.

- The cost of insuring our assets may increase dramatically.

- Because of the natural decline in gas production connected to our system, our success depends on our ability to obtain access to new sources of natural gas, which is dependent on factors beyond our control. Any decrease in supplies of natural gas in our supply areas could adversely affect our business, financial condition and results of operations.

- Successful development of LNG import terminals in the eastern or northeastern United States could reduce the demand for our services.

- We may not be able to maintain or replace expiring gas transportation and storage contracts at favorable rates.

- Significant changes in natural gas prices could affect supply and demand, reducing system throughput and adversely affecting our revenues.

Developments in any of these areas could cause our results to differ materially from results that have been or may be anticipated or projected. Forward-looking statements speak only as of the date of this report and we expressly disclaim any obligation or undertaking to update these statements to reflect any change in our expectations or beliefs or any change in events, conditions or circumstances on which any forward-looking statement is based.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

Our debt has been issued at fixed rates, therefore interest expense would not be impacted by changes in interest rates. Total long-term debt at December 31, 2007, had a carrying value of $1.8 billion and a fair value of $1.8 billion. A 100 basis point increase in interest rates on our fixed rate debt would result in a decrease in fair value of approximately $118.8 million at December 31, 2007. A 100 basis point decrease would result in an increase in fair value of approximately $129.3 million at December 31, 2007. The weighted-average interest rate of our long-term debt was 5.82% at December 31, 2007.

In August 2007, we entered into a Treasury rate lock for a notional amount of $150.0 million of principal to hedge the risk attributable to changes in the risk-free component of forward 10-year interest rates through February 1, 2008. The reference rate on the rate lock was 4.74%. On February 1, 2008, we paid the counterparty approximately $15.0 million to settle the rate lock. The Treasury lock was designated as a cash flow hedge in accordance with SFAS No. 133, therefore the loss will be recognized in Interest expense over the term of the related debt to be issued.

Certain volumes of our gas stored underground are available for sale and subject to commodity price risk. At December 31, 2007, approximately $16.3 million of gas stored underground, which we own and carry as current Gas stored underground, is exposed to commodity price risk. We utilize derivatives to hedge certain exposures to market price fluctuations on the anticipated operational sales of gas.

In the second quarter 2007, we entered into natural gas price swaps to hedge exposure to prices associated with the purchase of 2.1 Bcf of natural gas to be used for line pack for our Gulf Crossing and Southeast expansion projects, approximately 1.3 Bcf of which remained outstanding at December 31, 2007. The derivatives were not designated as hedges in accordance with SFAS No. 133 and were marked to fair value through earnings resulting in a loss of $1.0 million for the year ended December 31, 2007. Changes in the fair value of the derivatives will be recognized in earnings each quarter until settlement. When the gas is purchased, the ultimate cost will be recorded to Property, Plant and Equipment and recognized in earnings as the property is depreciated. A $1.00 increase in the price of NYMEX natural gas futures would result in the recognition of a $1.3 million gain in earnings. Conversely, a $1.00 decrease would result in the recognition of a $1.3 million loss.

With the exception of the derivatives related to line pack gas purchases referred to above, the derivatives related to the sale or purchase of natural gas, cash for fuel reimbursement and debt issuance generally qualify for cash flow hedge accounting under SFAS No. 133 and are designated as such. The effective component of related unrealized gains and losses resulting from changes in fair values of the derivatives contracts designated as cash flow hedges are deferred as a component of accumulated other comprehensive income. The deferred gains and losses are recognized in the Consolidated Statements of Income when the anticipated transactions affect earnings. Generally, for gas sales and cash for fuel reimbursement, any gains and losses on the related derivatives would be recognized in Operating Revenues. Any gains and losses on the derivatives related to the line pack gas purchases would be recognized in Miscellaneous other income, net.

The changes in fair values of the derivatives designated as cash flow hedges are expected to, and do, have a high correlation to changes in value of the anticipated transactions. Each reporting period we measure the effectiveness of the cash flow hedge contracts. To the extent the changes in the fair values of the hedge contracts do not effectively offset the changes in the estimated cash flows of the anticipated transactions, the ineffective portion of the hedge contracts is currently recognized in earnings. If the anticipated transactions are deemed no longer probable to occur, hedge accounting would be terminated and changes in the fair values of the associated derivative financial instruments would be recognized currently in earnings.

We are exposed to credit risk relating to the risk of loss resulting from the nonperformance by a customer of its contractual obligations. Our exposure generally relates to receivables for services provided, as well as volumes owed by customers for imbalances or gas lent by us to them, generally under PAL and NNS. We maintain credit policies intended to minimize credit risk and actively monitor these policies. Natural gas price volatility has increased dramatically in recent years, which has materially increased credit risk related to gas loaned to customers. As of December 31, 2007, the amount of gas loaned out by our subsidiaries was 12.7 trillion British thermal units (TBtu) and, assuming an average market price during December 2007 of $7.13 per MMBtu, the market value of gas loaned out at December 31, 2007, would have been approximately $90.6 million. If any significant customer of ours should have credit or financial problems resulting in a delay or failure to repay the gas they owe to us, this could have a material adverse effect on our financial condition, results of operations and cash flows.

As of December 31, 2007, our cash and cash equivalents were invested primarily in mutual funds. Due to the short-term nature and type of our investments, a hypothetical 10.0% increase in interest rates would not have a material effect on the fair market value of our portfolio. Since we have the ability to liquidate this portfolio, we do not expect our Consolidated Statements of Income or Cash Flows to be materially impacted by the effect of a sudden change in market interest rates on our investment portfolio.

During 2007, we began investing in short-term investments such as U.S. Government securities, primarily Treasury notes, under repurchase agreements. Generally, we have engaged in overnight repurchase transactions where purchased securities are sold back to the counterparty the following business day. Pursuant to the master repurchase agreements, we take actual possession of the purchased securities. In the event of default by the counterparty under the agreement, the repurchase would be deemed immediately to occur and we would be entitled to sell the securities in the open market, or give the counterparty credit based on the market price on such date, and apply the proceeds (or deemed proceeds) to the aggregate unpaid repurchase amounts and any other amounts owed by the counterparty. We had no investments under repurchase agreements at December 31, 2007, however since then we have reinitiated our program of investing in short-term repurchase agreements.

Item 8. Financial Statements and Supplementary Data

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors of
Boardwalk GP, LLC and the Partners of Boardwalk Pipeline Partners, LP

We have audited the accompanying consolidated balance sheets of Boardwalk Pipeline Partners, LP and subsidiaries (the “Partnership”) as of December 31, 2007 and 2006, and the related consolidated statements of income, member’s equity and partners’ capital, comprehensive income, and cash flows for each of the three years in the period ended December 31, 2007. Our audits also included the financial statement schedule included in the Index at Item 15. These financial statements and financial statement schedule are the responsibility of the Partnership's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Boardwalk Pipeline Partners, LP and subsidiaries as of December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2007, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

As discussed in Note 1 to the consolidated financial statements, the accompanying financial statements reflect a change in the Partnership’s tax status.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Partnership's internal control over financial reporting as of December 31, 2007, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 26, 2008 expressed an unqualified opinion on the Partnership's internal control over financial reporting.

DELOITTE & TOUCHE LLP
Chicago, Illinois
February 26, 2008

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors of
Boardwalk GP, LLC and the Partners of Boardwalk Pipeline Partners, LP

We have audited the internal control over financial reporting of Boardwalk Pipeline Partners, LP and subsidiaries (the "Partnership") as of December 31, 2007, based on criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Partnership's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Annual Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Partnership's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Boardwalk Pipeline Partners, LP and subsidiaries maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule as of and for the year ended December 31, 2007 of the Partnership and our report dated February 26, 2008 expressed an unqualified opinion on those financial statements and financial statement schedule and included an explanatory paragraph regarding a change in the Partnership's tax status.

Elimination of cumulative deferred taxes *	-	-	10,102
Net income *	$ 227,756	$ 197,550	$ 100,925

*Results of operations for the year ended December 31, 2005, reflect a change in the tax status associated with Boardwalk Pipeline Partners, LP and Boardwalk Pipelines coincident with the IPO. Boardwalk Pipeline Partners, LP recorded a charge-in-lieu of income taxes and certain state franchise taxes for the period January 1, 2005 through the date of the offering. Pursuant to the change in tax status, Boardwalk Pipeline Partners, LP also eliminated its balance of accumulated deferred income taxes at the date of the offering (as presented in line item "Elimination of cumulative deferred taxes"). The subsidiaries of Boardwalk Pipeline Partners, LP directly incur some income-based state taxes following the date of the offering. See Note 1 to the consolidated financial statements for additional information.

Calculation of limited partners' interest in Net income:	For the Year Ended December 31,		For the Period November 15, 2005 through December 31,

BOARDWALK PIPELINE PARTNERS, LP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Note 1: Corporate Structure

Boardwalk Pipeline Partners, LP (the Partnership) is a Delaware limited partnership formed to own and operate the business conducted by Boardwalk Pipelines, LP (Boardwalk Pipelines) and its subsidiaries, Gulf South Pipeline Company, LP (Gulf South) and Texas Gas Transmission, LLC (Texas Gas) (together, the operating subsidiaries). Boardwalk Pipelines Holding Corp. (BPHC) a wholly-owned subsidiary of Loews Corporation (Loews) owns 53.3 million common units and 33.1 million subordinated units constituting approximately 70.0% of the Partnership's equity. Boardwalk GP, LP (Boardwalk GP), an indirect wholly-owned subsidiary of BPHC is the Partnership's general partner and holds a 2.0% general partner interest and all of the incentive distribution rights, further described in Note 10. The Partnership is traded under the symbol "BWP" on the New York Stock Exchange (NYSE).

Basis of Presentation

The accompanying consolidated financial statements of the Partnership were prepared in accordance with accounting principles generally accepted in the United States of America (GAAP).

In connection with the consummation of the Partnership's initial public offering (IPO), BPHC contributed all of the equity interests of Boardwalk Pipelines to the Partnership. This contribution was accounted for as a transfer of assets between entities under common control in accordance with Statement of Financial Accounting Standards (SFAS) No. 141, *Business Combinations*. Therefore, the results of Boardwalk Pipelines prior to November 15, 2005, have been combined with the results of the Partnership subsequent to November 15, 2005, as the consolidated results of the Partnership.

Results of operations for the year ended December 31, 2005, reflect a change in the tax status associated with the Partnership and Boardwalk Pipelines, coincident with the IPO. Prior to converting to a limited partnership on November 15, 2005, Boardwalk Pipelines' taxable income was included in the consolidated federal income tax return of Loews, and Boardwalk Pipelines recorded a charge-in-lieu of income taxes pursuant to a tax sharing agreement with Loews. Accordingly, the Partnership recorded a charge-in-lieu of income taxes of $49.5 million for the period January 1, 2005, through the date of the offering. Pursuant to the change in tax status, the Partnership also eliminated its balance of accumulated deferred income taxes at the date of the offering as presented in Elimination of cumulative deferred taxes on the Consolidated Statements of Income. The subsidiaries of the Partnership directly incur some income-based state taxes which are presented in Income taxes and charge-in-lieu of income taxes on the Consolidated Statements of Income.

Note 2: Accounting Policies

Principles of Consolidation

The consolidated financial statements include the Partnership's accounts and those of its wholly-owned subsidiaries, Boardwalk Pipelines, Gulf South, Texas Gas and Gulf Crossing Pipeline Company, LLC (Gulf Crossing) after elimination of intercompany transactions.

Use of Estimates

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, expenses and disclosure of contingent assets and liabilities. On an ongoing basis, the Partnership evaluates its estimates, including but not limited to those related to bad debts, materials and supplies obsolescence, investments, goodwill, property and equipment and other long-lived assets, property taxes, pensions and other postretirement and postemployment benefits, share-based and other incentive compensation, contingent liabilities, revenues subject to refund, and prior to converting to a limited partnership, charge-in-lieu of income taxes. The Partnership bases its estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results could differ from such estimates.

Segment Information

The Partnership operates in one reportable segment – the operation of interstate natural gas pipeline systems. This segment consists of interstate natural gas pipeline systems originating in the Gulf Coast area and running north and east through Texas, Louisiana, Arkansas, Mississippi, Alabama, Florida, Tennessee, Kentucky, Indiana, Ohio and Illinois, with 13,550 miles of pipelines and integrated storage fields.

Cash and Cash Equivalents

Cash equivalents are highly liquid investments with an original maturity of three months or less. Cash equivalents are stated at cost plus accrued interest, which approximates fair value. Certain short-term investments, for example, those held overnight, result in significant cumulative inflows and outflows of cash. In accordance with SFAS No. 95, *Statement of Cash Flows*, the Partnership reflects these activities on a net basis in the Investing Activities section of the Consolidated Statements of Cash Flows. The Partnership had no restricted cash at December 31, 2007 and 2006.

Cash Management and Advances to Affiliates

The operating subsidiaries participate in a cash management program to the extent they are permitted under Federal Energy Regulatory Commission (FERC) regulations. Under the cash management program, depending on whether a participating subsidiary has short-term cash surpluses or cash requirements, Boardwalk Pipelines either provides cash to them or they provide cash to Boardwalk Pipelines. The Partnership also periodically pays for certain taxes on behalf of BPHC. The obligations to repay these amounts are represented by demand notes and are stated at historical carrying amounts. Interest income and expense is recognized on an accrual basis when collection is reasonably assured. The interest rate on intercompany demand notes is London Interbank Offered Rate (LIBOR) plus one percent and is adjusted every three months.

Inventories

Inventories consisting of materials and supplies are carried at the lower of average cost or market, less an allowance for obsolescence.

Gas in Storage and Gas Receivables/Payables

Both operating subsidiaries have underground gas in storage which is utilized for system management and operational balancing, as well as for certain tariff services including firm, interruptible and no-notice (NNS) storage and parking and lending (PAL) services. Certain of these volumes are a result of providing storage services which allow third parties to store their own natural gas in the pipelines' underground facilities.

The accompanying consolidated financial statements reflect the balance of underground gas in storage recorded at historical cost, as well as the resulting activity relating to the storage services and balancing activity. Gas stored underground includes natural gas volumes owned by the pipelines, at times reduced by certain operational encroachments upon that gas. Current gas stored underground represents retained fuel and excess working gas which is available for resale and is valued at the lower of weighted-average cost or market. Retained fuel is a component of Gulf South's tariff structure and is recognized as transportation revenue at market prices in the month of retention. Customers can pay Gulf South's fuel rate by physically delivering gas or making a cash payment.

In the course of providing transportation and storage services to customers, the pipelines may receive different quantities of gas from shippers and operators than the quantities delivered on behalf of those shippers and operators. This results in transportation and exchange gas receivables and payables, commonly known as imbalances, which are primarily settled through the receipt or delivery of gas in the future or with cash. Settlement of imbalances requires agreement between the pipelines and shippers or operators as to allocations of volumes to specific transportation contracts and timing of delivery of gas based on operational conditions. For Gulf South, these receivables and payables are valued at market price. For Texas Gas, these amounts are valued at the historical value of gas in storage, consistent with the regulatory treatment and the settlement history.

Due to the method of storage accounting elected by Gulf South, the Partnership does not reflect volumes held by Gulf South on behalf of others on its Consolidated Balance Sheets. As of December 31, 2007 and 2006, Gulf South held 52.0 trillion British thermal units (TBtu) and 61.0 TBtu of gas owned by shippers, and had loaned 0.2 TBtu of gas to shippers as of December 31, 2007. No gas was loaned by Gulf South to shippers as of December 31, 2006. Consistent with the method of storage accounting elected by Texas Gas and the risk-of-loss provisions included in its tariff, Texas Gas reflects an equal and offsetting receivable and payable for customer-owned gas in its facilities for storage and related services. The amount reflected in Gas Payables on the Consolidated Balance Sheets is valued at a historical cost of gas of $36.6 million and $45.7 million at December 31, 2007 and 2006.

Derivative Financial Instruments

Subsidiaries of the Partnership use futures, swaps, and option contracts (collectively, derivatives) to hedge exposure to various risks, including natural gas commodity and interest rate risk. These hedge contracts are reported at fair value in accordance with SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended. The effective portion of the related unrealized gains and losses resulting from changes in fair values of the derivatives contracts designated as cash flow hedges are deferred as a component of Accumulated other comprehensive income. The deferred gains and losses are recognized in the Consolidated Statements of Income when the hedged anticipated transactions affect earnings. Changes in fair value of derivatives that are not designated as cash flow hedges in accordance with SFAS No. 133 are recognized in earnings in the periods that those changes in fair value occur. Note 8 contains more information regarding the Partnership's derivative financial instruments.

Property, Plant and Equipment

Property, plant and equipment (PPE) is recorded at its original cost of construction or fair value of assets purchased. Construction costs and expenditures for major renewals and improvements, which extend the lives of the respective assets, are capitalized. Construction work in progress is included in the financial statements as a component of PPE.

Gulf South depreciates assets using the straight-line method of depreciation over the estimated useful lives of the assets, which range from 3 to 35 years. The ordinary sale or retirement of property in the Gulf South system could result in a gain or loss. Depreciation at Texas Gas is provided primarily on the straight-line method at FERC-prescribed rates over estimated useful lives of 5 to 62 years. Reflecting the application of composite depreciation, gains and losses from the ordinary sale and retirement of PPE for Texas Gas generally do not impact PPE, net.

The Partnership evaluates long-lived assets for impairment when, in management's judgment, events or changes in circumstances indicate that the carrying value of such assets may not be recoverable. When such a determination has been made, management's estimate of undiscounted future cash flows attributable to the assets is compared to the carrying value of the assets to determine whether an impairment has occurred. If an impairment of the carrying value has occurred, the amount of impairment recognized in the consolidated financial statements is determined by estimating the fair value of the assets and recording a loss for the amount that the carrying value exceeds the estimated fair value. Note 4 contains more information regarding the Partnership's PPE.

Goodwill

SFAS No. 142, *Goodwill and Other Intangible Assets*, requires an evaluation of goodwill for impairment at least annually or more frequently if events and circumstances indicate that the asset might be impaired. The impairment test for goodwill is performed annually at December 31. No impairment of goodwill was recorded during 2007, 2006 or 2005.

Regulatory Accounting

The operating subsidiaries are regulated by FERC. SFAS No. 71, *Accounting for the Effects of Certain Types of Regulation*, requires that rate-regulated entities that meet certain specified criteria account for and report assets and liabilities consistent with the economic effect of the manner in which independent third-party regulators establish rates. Gulf South does not apply SFAS No. 71. Certain services provided by Gulf South are market-based and competition in its market area has often resulted in discounts from the maximum allowable cost-based rates being granted to customers, such that SFAS No. 71 has not been appropriate. Therefore, Gulf South does not record any regulatory assets or liabilities. Texas Gas applies SFAS No. 71. Therefore, certain costs and benefits are recorded as regulatory assets and liabilities based on expected recovery from customers or refund to customers in future periods.

The Partnership monitors the regulatory and competitive environment in which it operates to determine that the regulatory assets continue to be probable of recovery. If the Partnership were to determine that all or a portion of these regulatory assets no longer met the criteria for recognition as regulatory assets under SFAS No. 71, that portion which was not recoverable would be written off, net of any regulatory liabilities. Note 6 contains more information regarding the Partnership's regulatory assets and liabilities.

Acquired Executory Contracts

As a result of the Gulf South acquisition in December 2004, the Partnership recorded certain shipper contracts at fair value. The below-market valuation balance of $0.2 million and $1.3 million as of December 31, 2007 and 2006 was included as a component of Other current liabilities At the date of acquisition, these deferred credits were to be amortized over the life of the shipper contracts ranging from three months to three years. Amortization for 2007, 2006 and 2005 was $1.1 million, $4.0 million and $9.6 million and is expected to be $0.2 million for 2008.

Asset Retirement Obligations

SFAS No. 143, *Accounting for Asset Retirement Obligations*, addresses accounting and reporting for existing legal obligations associated with the future retirement of long-lived assets. SFAS No. 143 requires entities to record the fair value of a liability for an asset retirement obligation (ARO) in the period during which the liability is incurred. The liability is initially recognized at fair value and is increased with the passage of time as accretion expense is recorded, until the liability is ultimately settled. Corresponding retirement costs are capitalized as part of the carrying amount of the related long-lived asset and depreciated over the useful life of the asset. Note 5 contains more information regarding the Partnership's asset retirement obligations.

Unit-Based Compensation

The Partnership provides awards of phantom units to certain employees under its Long Term Incentive Plan and Strategic Long Term Incentive Plan. Pursuant to SFAS No. 123(R), *Share-Based Payment,* the Partnership measures the cost of an award issued in exchange for employee services based on the grant-date fair value of the award, which is remeasured each reporting period until settlement, and recognizes it as compensation expense over the period the employee is required to provide service in exchange for the award, usually the vesting period. To the extent forfeitures of awards occur during a period due to employee terminations, cumulative compensation expense previously recognized is reversed in the period of forfeiture. Note 9 contains additional information regarding the Partnership's unit-based compensation.

Revenue Recognition

The maximum rates that may be charged by the operating subsidiaries for their gas transportation and storage services are established through the FERC cost-based rate-making process. Rates charged by the operating subsidiaries may be less than those allowed by the FERC. Revenues from the transportation of gas are recognized in the period the service is provided based on contractual terms and the related volumes transported. Revenues from storage services are recognized over the term of the contracts. In connection with certain PAL agreements, cash is received at inception of the service period resulting in the recording of deferred revenues which are recognized in revenues over the period the services are provided. The Partnership had deferred revenues of $7.2 million at December 31, 2007, related to PAL services to be provided mainly in 2008. At December 31, 2006, the Partnership had deferred revenues of $22.4 million.

Retained fuel is a component of Gulf South's tariff structure and is recognized in revenues at market prices in the month of retention. The related fuel consumed in providing transportation services is recorded as a component of Operation and maintenance expense at market prices in the month consumed. Customers may elect to pay cash for fuel, instead of having fuel retained in-kind. Transportation revenues recognized from retained fuel for the years ended December 31, 2007, 2006 and 2005 were $73.0 million, $73.2 million and $86.7 million.

Under the FERC's regulations, certain revenues that the operating subsidiaries collect may be subject to possible refunds to their customers. Accordingly, during a rate case, estimates of rate refund reserves are recorded considering regulatory proceedings, advice of counsel and estimated risk-adjusted total exposure, as well as other factors. At December 31, 2007 and 2006, there were no liabilities for any open rate case recorded on the Consolidated Balance Sheets. Currently, neither of the operating subsidiaries is involved in an open general rate case.

Trade and Other Receivables

Trade and other receivables are stated at the historical carrying amount, net of allowances for doubtful accounts or write-offs. The Partnership establishes an allowance for doubtful accounts on a case-by-case basis when it believes the required payment of specific amounts owed is unlikely to occur. Uncollectible receivables are written off when a settlement is reached for an amount that is less than the outstanding historical balance or a receivable amount is deemed otherwise unrealizable.

Repair and Maintenance Costs

The operating subsidiaries account for repair and maintenance costs in accordance with FERC regulations, which is consistent with GAAP. FERC identifies installation, construction and replacement costs that are to be capitalized. All other costs are expensed as incurred.

Capitalized Interest and Allowance for Funds Used During Construction (AFUDC)

Capitalized interest represents the cost of borrowed funds used to finance construction activities. The Partnership records capitalized interest in connection with Gulf South construction activities. AFUDC represents the cost of funds, including equity funds, applicable to the regulated natural gas transmission plant under construction as permitted by FERC regulatory practices. In accordance with SFAS No. 71, the Partnership records AFUDC in connection with Texas Gas construction activities. Capitalized interest and the allowance for borrowed funds used during construction are recognized as a reduction to Interest expense and the allowance for equity funds used during construction is included in Miscellaneous other income within the Consolidated Statements of Income. The following table summarizes capitalized interest and the allowance for borrowed funds and allowance for equity funds used during construction (in millions):

	For the Year Ended December 31,		
	2007	**2006**	**2005**
Capitalized interest and allowance for borrowed funds used during construction	$ 27.1	$ 2.3	$ 0.7
Allowance for equity funds used during construction	3.0	1.2	1.4

Partner Capital Accounts

For purposes of maintaining the capital accounts, items of income and loss of the Partnership are allocated among the partners in each taxable year, or portion thereof in accordance with the partnership agreement. Generally, net income for each period is allocated among the partners based on their respective ownership interests after deducting any priority allocations in the form of cash distributions paid to the general partner as the holder of incentive distribution rights.

Income Taxes

The Partnership is not a taxable entity for federal income tax purposes. As such, it does not directly pay federal income tax. The Partnership's taxable income or loss, which may vary substantially from the net income or loss reported in the Consolidated Statements of Income, is includable in the federal income tax returns of each partner. The aggregate difference in the basis of the Partnership's net assets for financial and income tax purposes cannot be readily determined as the Partnership does not have access to the information about each partner's tax attributes related to the Partnership. The subsidiaries of the Partnership directly incur some income-based state taxes which are presented in Income taxes and charge-in-lieu of income taxes on the Consolidated Statements of Income. Note 11 contains more information regarding the Partnership's income taxes.

Reclassifications

Certain reclassifications have been made to the 2006 and 2005 financial statements to conform to the 2007 presentation, primarily related to individual amounts and captions within the Operating Activities section of the Consolidated Statements of Cash Flows.

Note 3: Commitments and Contingencies

Calpine Energy Services (Calpine) Settlement

In 2002 and 2003, Calpine entered into two 20-year transportation agreements with Gulf South. In December 2005, Calpine filed for Chapter 11 Bankruptcy protection and in early 2006 discontinued making payments on one of the transportation agreements. Gulf South continued to invoice Calpine under the transportation agreements and fully reserved the revenues associated with the contract on which Calpine was not making payments. In December 2007, Gulf South and Calpine filed a stipulation and agreement with the Bankruptcy court, which was approved in January 2008, to terminate the firm transportation agreement on which Calpine was delinquent, and to settle all of Gulf South's claims in the Bankruptcy proceedings for approximately $16.5 million. The claim was to be paid in the form of Calpine stock, along with other general creditors having claims in the Bankruptcy proceeding. In January 2008, Boardwalk sold the Bankruptcy claim to a third party and received a cash payment of approximately $15.3 million. The assignment is with recourse subject to the issuance of Calpine stock in the full amount of the claim. As a result of the settlement, in 2007 Boardwalk recognized $4.1 million in Gas transportation revenues related to invoiced amounts past due, which were previously reserved. The remainder of the settlement amount will be recognized upon full payment of the settlement amount by Calpine.

Jackson Storage Gas Loss

The Partnership's Jackson, Mississippi aquifer storage facility has a working gas capacity of approximately 5.0 billion cubic feet (Bcf) and is primarily used for operational purposes. In the fourth quarter 2007, it was determined that, based upon tests used to estimate the amount of gas stored in the facility, gas loss had occurred in the range of 1.3 to 1.7 Bcf. As a result of the estimated gas loss, the Partnership recognized a charge of $0.7 million to Operation and maintenance expense in the fourth quarter 2007. This amount was determined by applying the carrying value of gas in the facility of $0.53 per million British thermal units (MMBtu), to the low end of the range of estimated gas loss of 1.3 Bcf. An assessment is underway to determine whether the gas will need to be replaced in order to operate the facility and support pipeline operations. A more comprehensive test of the field will be performed in the second quarter 2008. If the pending test results indicate that the actual gas loss is greater than the estimated 1.3 Bcf, this could result in a future adjustment to the estimate.

Impact of Hurricanes Katrina and Rita

In August and September 2005, Hurricanes Katrina and Rita (hurricanes), and related storm activity caused extensive and catastrophic physical damage to the offshore, coastal and inland areas in the Gulf Coast region of the United States. A substantial portion of the Partnership's assets are located in the area directly impacted by the hurricanes. The remediation work related to the hurricanes was completed in 2007.

The Partnership reduced its liability for estimated costs associated with the hurricanes by $0.4 million in 2007 and increased the liability by $0.1 million in 2006. The Partnership recorded charges related to the hurricanes of $12.9 million in 2005, $2.0 million of which was recorded to Operating revenues and $10.9 million of which was recorded to Operating costs and expenses. The accrued liability for the hurricanes was zero at December 31, 2007, and $1.0 million at December 31, 2006.

In the third quarter 2007, the Partnership accrued estimated insurance proceeds of $5.1 million for claims related to Hurricane Rita which represented the minimum amount of insurance proceeds that were probable of recovery. This amount resulted in a reduction of Operating Costs and Expenses. In 2006, the Partnership recognized $10.7 million of insurance recoveries associated with Hurricane Katrina, $7.4 million of which was recorded to Operating Costs and Expenses and $3.3 million of which was recorded to Operating Revenues. The Partnership received a cash payment of $6.0 million in the fourth quarter 2006 and the remaining $4.7 million was recorded as a receivable at December 31, 2006. In the first quarter 2007, the Partnership received a final cash payment of $6.2 million of insurance proceeds related to damages incurred during Hurricane Katrina, $4.7 million of which was applied against the receivable and $1.5 million of which was recognized in Gas transportation revenues. Through December 31, 2007, the Partnership has received a total of approximately $12.2 million in insurance proceeds related to Hurricane Katrina, and will continue to pursue additional recovery of insurance proceeds related to Hurricane Rita.

Legal Proceedings

Napoleonville Salt Dome Matter

In December 2003, natural gas leaks were observed near two natural gas storage caverns that were being leased and operated by Gulf South for natural gas storage in Napoleonville, Louisiana. Gulf South commenced remediation efforts immediately and ceased using those storage caverns. Two class action lawsuits were filed relating to this incident and were converted to individual actions. Several individual actions have been filed against Gulf South and other defendants by local residents and businesses. In addition, the lessor of the property has filed an affirmative claim against Gulf South in an action filed against the lessor by one of Gulf South's insurers. Gulf South continues to vigorously defend each of these actions, however it is not possible to predict the outcome of this litigation as the cases remain in discovery. Litigation is subject to many uncertainties, and it is possible these actions could be decided unfavorably. Gulf South has settled many of the cases filed against it and may enter into discussions in an attempt to settle other cases if Gulf South believes it is appropriate to do so.

The remediation work related to the incident was completed in November 2006. Gulf South incurred $8.9 million for remediation costs, root cause investigation, and legal fees. Gulf South has made demand for reimbursement from its insurance carriers and will continue to pursue recoveries of the remaining expenses, including legal expenses. To date the insurance carriers have not taken any definitive coverage positions on all of the issues raised in the various lawsuits. During 2007, Gulf South has received $0.3 million of insurance reimbursements for legal expenses and root cause investigation.

Other Legal Matters

In connection with the acquisition of Texas Gas, The Williams Companies, Inc. (Williams) agreed to indemnify Boardwalk Pipelines for any liabilities or obligations in connection with certain litigation or potential litigation. Williams continues to defend the Partnership and Texas Gas and has retained responsibility for these claims. Therefore these claims are not expected to have a material effect upon the Partnership’s future financial condition, results of operations or cash flows.

The Partnership's subsidiaries are parties to various other legal actions arising in the normal course of business. Management believes the disposition of all known outstanding legal actions will not have a material adverse impact on the Partnership's financial condition, results of operations or cash flows.

Regulatory and Rate Matters

Pipeline Expansion Projects

East Texas to Mississippi Expansion. On June 18, 2007, the FERC granted the Partnership the authority to construct, own and operate a pipeline expansion consisting of approximately 242 miles of 42-inch pipeline from DeSoto Parish in western Louisiana to near Harrisville, Mississippi and approximately 110,000 horsepower of new compression having approximately 1.7 Bcf of new peak-day transmission capacity. Customers have contracted at fixed rates for 1.4 Bcf per day of firm transportation capacity on a long-term basis (with a weighted average term of approximately 6.8 years) from Carthage, Texas, which represents substantially all of the normal operating capacity. The pipeline facilities from Keatchie, Louisiana in DeSoto Parish to interconnects with Texas Gas near Bosco, Louisiana, and Columbia Gulf Transmission pipeline at Delhi, Louisiana began flowing gas on December 31, 2007. The remaining pipeline facilities from Delhi, Louisiana to Harrisville, Mississippi, began flowing gas during January 2008. Currently, the three compressor units at the Carthage compressor station are operational and the Partnership is making all of its primary firm contractual deliveries into the Delhi, Louisiana area and a substantial percentage of its primary firm contractual deliveries to markets in Mississippi. The Partnership is in the process of commissioning the remaining compression facilities associated with this project, which the Partnership expects to be completed during the second quarter 2008.

Gulf Crossing Project. The Partnership is pursuing construction of a new interstate pipeline that will begin near Sherman, Texas and proceed to the Perryville, Louisiana area. The project will be owned by Gulf Crossing, the Partnership's newly formed interstate pipeline subsidiary, and will consist of approximately 357 miles of 42-inch pipeline having up to approximately 1.7 Bcf of peak-day transmission capacity. Additionally, Gulf Crossing has entered into, subject to regulatory approval: (i) an operating lease for up to 1.4 Bcf per day of capacity on the Partnership's Gulf South pipeline system (including capacity on the Southeast Expansion and capacity on a portion of the East Texas to Mississippi Expansion) to make deliveries to an interconnect with Transcontinental Pipe Line Company (Transco) in Choctaw County, Alabama (Transco 85); and (ii) an operating lease with Enogex, a third-party intrastate pipeline, which will bring certain gas supplies to the Partnership's system. Customers have contracted at fixed rates for 1.1 Bcf per day of long-term firm transportation capacity (with a weighted average term of approximately 9.5 years). The certificate application for this project was filed with the FERC on June 19, 2007, and the Partnership expects this project to be in service by the first quarter 2009.

Southeast Expansion. On September 28, 2007, the FERC granted the Partnership the authority to construct, own and operate a pipeline expansion originating near Harrisville, Mississippi and extending to an interconnect with Transco 85. This expansion will initially consist of approximately 112 miles of 42-inch pipeline having approximately 1.2 Bcf of peak-day transmission capacity. To accommodate volumes expected to come from the Gulf Crossing leased capacity discussed above, this project will be expanded to 2.2 Bcf of peak-day transmission capacity. In addition, the FERC approved the Partnership's 260 million cubic feet (MMcf) per day operating lease with Destin Pipeline Company which will provide the Partnership enhanced access to markets in Florida. Customers have contracted at fixed rates for 660 MMcf per day of firm transportation capacity on a long-term basis (with a weighted-average term of 8.7 years), in addition to the capacity leased to Gulf Crossing discussed above. Construction has commenced and the Partnership expects this project to be in service during the second quarter 2008.

Fayetteville and Greenville Laterals. The Partnership is pursuing the construction of two laterals connected to its Texas Gas pipeline system to transport gas from the Fayetteville Shale area in Arkansas to markets directly and indirectly served by the Partnership's existing interstate pipelines. The Fayetteville Lateral will originate in Conway County, Arkansas and proceed southeast through the Bald Knob, Arkansas, area to an interconnect with the Texas Gas mainline in Coahoma County, Mississippi and consist of approximately 165 miles of 36-inch pipeline with an initial design of approximately 0.8 Bcf of peak-day transmission capacity. The Greenville Lateral will originate at the Texas Gas mainline near Greenville, Mississippi and proceed east to the Kosciusko, Mississippi, area consisting of approximately 95 miles of pipeline with an initial design capacity of approximately 0.8 Bcf of peak-day transmission capacity. The Greenville Lateral will allow customers to access additional markets, primarily in the Midwest, Northeast and Southeast. Customers have contracted at fixed rates for 575 MMcf per day of initial capacity, with options for additional capacity that, if exercised, could add 325 MMcf per day of capacity. The certificate application for this project was filed with the FERC on July 11, 2007. The Partnership expects the first 60 miles of the Fayetteville Lateral to be in service during the third quarter 2008 and the remainder of the Fayetteville and Greenville Laterals to be in service during the first quarter 2009.

Pipeline Expansion Project Costs and Timing. The total capital expenditures for the pipeline expansion projects through December 31, 2007 were $1.2 billion.

Storage Expansion Projects

Western Kentucky Storage Expansion Phase II. In December 2006, the FERC issued a certificate approving the Phase II storage expansion project which expanded the working gas capacity in the Partnership's western Kentucky storage complex by approximately 9.0 Bcf. This project is supported by binding commitments from customers to contract on a long-term basis (with a weighted-average term of 8.3 years) for the full additional capacity at the Texas Gas maximum applicable rate. The project was placed in service in November 2007.

Western Kentucky Storage Expansion Phase III. The Partnership has signed 10-year precedent agreements for 5.1 Bcf of storage capacity for its Phase III storage project. The certificate application for this project was filed with the FERC on June 25, 2007, seeking approval to develop up to 8.3 Bcf of new storage capacity if Texas Gas is granted market-based rate authority for the new storage capacity being proposed. The cost of this project will be dependent on the ultimate size of the expansion. The Partnership expects 5.4 Bcf of storage capacity to be in service in 2008.

Magnolia Storage Facility. The Partnership was developing a salt dome storage cavern near Napoleonville, Louisiana. Operational tests, which were completed in July 2007, indicated that due to geological and other anomalies that could not be corrected, the Partnership will be unable to place the cavern in service as expected. As a result, the Partnership has elected to abandon that cavern and is exploring the possibility of securing a new site on which a new cavern could be developed. In accordance with the requirements of SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets,* the carrying value of the cavern and related facilities of approximately $45.1 million was tested for recoverability. In the second quarter 2007, the Partnership recognized an impairment charge to earnings of approximately $14.7 million, representing the carrying value of the cavern, the fair value of which was determined to be zero based on discounted expected future cash flows. The charge was presented as Asset impairment on the Consolidated Statements of Income. The Partnership expects to use the other assets associated with the project, which include pipeline, compressors, and other equipment and facilities, in conjunction with a replacement storage cavern to be developed. If it is determined in the future that the assets cannot be used in conjunction with a new cavern, the Partnership may be required to record an additional impairment charge at the time that determination is made. Additional costs to abandon the impaired cavern may be incurred due to regulatory or contractual obligations, however the amounts are inestimable at this time.

Pipeline Integrity

The Partnership expenses all costs incurred in the development of its integrity management program, as defined by the Pipeline and Hazardous Materials Safety Administration (PHMSA), and the ongoing inspecting, testing and reporting on the condition of the pipeline system except costs incurred to replace segments of pipeline or install software or equipment which are capitalized to the extent they meet the requirements of the Partnership's capitalization policy for those types of expenditures. As of December 31, 2007, the Partnership has invested approximately $12.3 million to develop and implement integrity management program computer systems that allow it to dynamically assess various pipeline risks on an integrated basis. The Partnership has systematically used smart, in-line inspection tools to verify the integrity of certain of its pipelines.

Environmental and Safety Matters

The operating subsidiaries are subject to federal, state, and local environmental laws and regulations in connection with the operation and remediation of various operating sites. The Partnership accrues for environmental expenses resulting from existing conditions that relate to past operations when the costs are probable and can be reasonably estimated. In addition to federal and state mandated remediation requirements, the Partnership often enters into voluntary remediation programs with the agencies.

As of December 31, 2007 and 2006, the Partnership had an accrued liability of approximately $17.0 million and $18.4 million related to assessment and/or remediation costs associated with the historical use of polychlorinated biphenyls, petroleum hydrocarbons and mercury, enhancement of groundwater protection measures and other costs. The expenditures are expected to occur over approximately the next ten years. The accrual represents management's estimate of the undiscounted future obligations based on evaluations and discussions with counsel and operating personnel and the current facts and circumstances related to these matters. As of December 31, 2007 and 2006, approximately $2.7 million and $3.5 million were recorded in Other current liabilities. As of December 31, 2007 and 2006, approximately $14.3 million and $14.9 million were recorded in Other Liabilities and Deferred Credits.

On October 20, 2006, Texas Gas received notice from the Environmental Protection Agency (EPA) that Texas Gas is a potentially responsible party under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 with respect to the LWD, Inc. Superfund Site in Calvert City, Kentucky. The Partnership is unable to estimate with any certainty at this time any potential liability it may incur related to this notice but does not expect the outcome to have a material effect on its financial condition, results of operations or cash flows.

On November 2, 2005, Texas Gas received notice from the EPA that it has been identified as a *de minimis* settlement waste contributor at a Mercury Refining Superfund Site located at the Towns of Colonie and Guilderland, Albany County, New York. A *de minimis* party is one which sent less than 1.0% of the total mercury and/or mercury bearing materials to the site. As a *de minimis* party, Texas Gas was offered participation in a settlement agreement. The settlement amount for Texas Gas is approximately $0.1 million. The EPA held a 30-day public comment period regarding the settlement, but has not acted on it. In November 2007, Texas Gas received a notice from the EPA that it was withdrawing its settlement offer and would be issuing a new settlement offer in the future. Based upon the EPA's notice it appears that Texas Gas will still be considered a *de minimis* party, and it is not expected that the new settlement will have a material effect on our financial condition, results of operations or cash flows.

The Partnership's pipelines are subject to the Clean Air Act (CAA) and the CAA Amendments of 1990 (Amendments) which added significant provisions to the CAA. The Amendments require the EPA to promulgate new regulations pertaining to mobile sources, air toxins, areas of ozone non-attainment and acid rain. The Partnership presently operates two facilities in areas affected by non-attainment requirements for the current ozone standard (eight-hour standard). As of December 31, 2007, the Partnership had incurred costs of approximately $13.7 million for emission control modifications of compression equipment located at facilities required to comply with current CAA provisions, the Amendments and state implementation plans for nitrogen oxide reductions. These costs are being recorded as additions to PPE as the modifications are added. If the EPA designates additional new non-attainment areas or promulgates new air regulations where the Partnership operates, the cost of additions to PPE is expected to increase, however the Partnership is unable at this time to estimate with any certainty the cost of any additions that may be required.

In June 2007, the EPA proposed to lower the 8-hour ozone standard relevant to non-attainment areas. If adopted, new non-attainment areas will likely be identified which may require additional emission controls for compliance at as many as 14 facilities operated by the Partnership. The anticipated effective date for compliance with the proposed standard if adopted in its current state, is between 2013 and 2016.

In addition, the EPA and the State of Texas promulgated new rules regarding hazardous air pollutants which required additional controls or equipment modifications at seven Partnership facilities. The Partnership has substantially complied and has incurred costs of $2.6 million at these facilities.

The Partnership has assessed the impact of the CAA on its facilities and does not believe compliance with these regulations will have a material impact on the results of continuing operations or cash flows.

The Partnership considers environmental assessment, remediation costs and costs associated with compliance with environmental standards to be recoverable through base rates, as they are prudent costs incurred in the ordinary course of business and, therefore, no regulatory asset has been recorded to defer these costs. The actual costs incurred will depend on the actual amount and extent of contamination discovered, the final cleanup standards mandated by the EPA or other governmental authorities and other factors.

For further discussion of the Partnership's environmental exposure included in the calculation of its asset retirement obligations, see Note 5 of these Notes to Consolidated Financial Statements.

Lease Commitments

The Partnership has various operating lease commitments extending through the year 2018 generally covering offices and equipment. Total lease expenses for the years ended December 31, 2007, 2006 and 2005 were approximately $7.3 million, $4.7 million and $4.2 million. The following table summarizes minimum future commitments related to these items at December 31, 2007 (in millions):

2008	$	6.7
2009		5.5
2010		5.3
2011		3.0
2012		3.0
Thereafter		13.2
Total	$	36.7

Commitments for Construction

The Partnership incurred $1.2 billion of capital expenditures in 2007. The Partnership's future capital commitments as of December 31, 2007, for contracts already authorized are expected to approximate the following amounts (in millions):

Less than 1 year	$	834.7
1-3 years		16.4
4-5 years		-
More than 5 years		-
Total	$	851.1

Note 4: Property, Plant and Equipment

On December 31, 2007, the Partnership placed in service a portion of its East Texas to Mississippi expansion project from Keatchie, Louisiana in DeSoto Parish to its interconnects with Texas Gas near Bosco, Louisiana and Columbia Gulf Transmission pipeline at Delhi, Louisiana. As a result, approximately $476.0 million was transferred from construction work in progress to depreciable PPE. The assets will generally be depreciated over a term of 35 years. The remaining pipeline to Harrisville, Mississippi was placed in service during January 2008 and the related compression at one of the three compressor stations went in service in January and February 2008.

In November 2007, the Partnership placed in service Phase II of its Western Kentucky storage expansion project which increased the working gas capacity of its Texas Gas system by 9.0 Bcf, resulting in reclassification of approximately $50.0 million from construction work in progress to depreciable PPE. As a result of the expansion, approximately 4.0 Bcf of base gas was sold in 2007, resulting in a total gain of $22.0 million including gains on the settlement of related derivatives.

In conjunction with a review of its offshore pipeline assets in the South Timbalier Bay area, offshore Louisiana, the Partnership discovered that approximately 6 to 7 miles of offshore pipeline did not have adequate cover. In 2007, the Partnership entered into an agreement to sell for a nominal amount the offshore pipeline assets in their current condition and recognized an impairment charge of approximately $4.5 million representing the net book value of the assets. In accordance with the agreement, the Partnership paid the buyer approximately $4.8 million primarily to settle the liability to re-cover the pipeline and other maintenance issues. The total charge for 2007 related to the remediation payment and impairment charge was $9.3 million, $4.8 million of which was recorded to Operation and maintenance expense and the remainder to Asset impairment. The Partnership expects the sale to be completed in 2008.

In 2006, the Partnership received $4.0 million in settlement of a lawsuit concerning the parties' rights and obligations under a lease for a platform being decommissioned in the Eugene Island area in the Gulf of Mexico. The proceeds were used to offset the costs of rebuilding certain offshore facilities. Also, in 2006, the Partnership received $2.5 million for the sale of offshore transmission facilities in the Gulf of Mexico at West Cameron 294. The sale of the facilities was considered a normal retirement. In accordance with the composite method of accounting for PPE, the proceeds and the related book value of the plant were recorded to accumulated depreciation which is classified within PPE, net on the Consolidated Balance Sheets.

The following table presents the Partnership's PPE as of December 31, 2007 and 2006 (in thousands):

Category	**2007 Class Amount**	**Weighted-Average Useful Lives (Years)**	**2006 Class Amount**	**Weighted-Average Useful Lives (Years)**
Depreciable plant:				
Intangible	$ 24,897	9	$ 18,901	9
Gathering	92,828	19	90,787	19
Storage	198,110	49	163,323	48
Transmission	2,125,864	43	1,601,064	45
General	79,605	15	63,698	16
Total utility depreciable plant	2,521,304	41	1,937,773	43
Non-depreciable:				
Land	9,643		9,386	
Storage	71,182		85,392	
Construction work in progress	951,433		165,916	
Other	14,326		13,381	
Total other	1,046,584		274,075	
Total PPE	3,567,888		2,211,848	
Less: accumulated depreciation	262,477		187,412	
Total PPE, net	$ 3,305,411		$ 2,024,436	

The non-transmission assets have weighted-average useful lives of 33 years and 32 years as of December 31, 2007 and 2006 and depreciable asset values of $395.4 million and $336.7 million as of December 31, 2007 and 2006. The non-depreciable assets and construction work in progress were not included in the calculation of the weighted-average useful lives.

The Partnership holds undivided interests in certain assets, particularly the Bistineau storage facility of which the Partnership owns 91.7%, the Mobile Bay Pipeline of which the Partnership owns 50.0%, offshore pipeline assets, onshore pipeline and gathering assets, in each of which the Partnership holds various ownership interests. The proportionate share of investment associated with these interests has been recorded as PPE on the Consolidated Balance Sheets. The Partnership records its portion of direct operating expenses associated with the assets in Operation and maintenance expense. As of December 31, 2007, the gross investment in PPE related to these assets was $87.5 million, approximately $57.0 million, $12.8 million and $11.2 million of which was due to the Bistineau storage, offshore assets and Mobile Bay Pipeline interests. The accumulated depreciation was $17.4 million, approximately $5.0 million, $10.4 million and $1.0 million of which was due to the Bistineau storage, offshore assets and Mobile Bay Pipeline interests.

Note 5: Asset Retirement Obligations

The Partnership has identified and recorded legal obligations associated with the abandonment of offshore pipeline laterals and certain onshore facilities as well as abatement of asbestos when removed from certain compressor stations and meter station buildings. Pursuant to federal regulations, the Partnership has a legal obligation to cut and purge any pipeline that will remain in place after abandonment and to remove offshore platforms after the related gas flows have ceased. Abatement of asbestos consists of removal, transportation and disposal. Legal obligations exist for certain other Partnership assets; however, the fair value of the obligations cannot be determined because the end of the system life is potentially indefinite and therefore cannot be estimated with the degree of accuracy necessary to establish a liability for the obligations.

The following table summarizes the aggregate carrying amount of AROs (in thousands):

	2007	2006
Balance at beginning of year	$ 14,307	$ 14,074
Liabilities recorded	1,529	(366)
Liabilities settled	(499)	-
Accretion expense	722	599
Balance at end of year	$ 16,059	$ 14,307

The Financial Accounting Standards Board (FASB) Interpretation No. 47, *Accounting for Conditional AROs,* clarifies when an entity is required to recognize a liability for the fair value of a conditional ARO. In light of this interpretation, the Partnership believes that an ARO exists for the Texas Gas corporate office building constructed in Owensboro, Kentucky, in 1962. Under the legal requirements enacted by the EPA during 1973, Texas Gas became legally obligated to dismantle and remove the asbestos from its corporate office at the end of its useful life, estimated to be within a range of years between 2112 through 2162. The Partnership believes that the spray-applied asbestos can be maintained, in place, undisturbed, indefinitely, by following written maintenance procedures. The Partnership believes that the fair value of any liability relating to future remediation is not material to its financial position, results of operations or cash flows and that any costs incurred for this remediation would be recoverable in its rates.

Depreciation rates for utility plant at Texas Gas, as approved by the FERC are comprised of two components: one based on economic service life (capital recovery) and one based on net costs of removal (negative salvage). Texas Gas accrues and collects in its rates estimated net costs of removal of long-lived assets through negative salvage expense, which does not represent an existing legal obligation. The Partnership has classified $42.4 million and $39.6 million as of December 31, 2007 and 2006, in the accompanying Consolidated Balance Sheets as Provision for other asset retirement.

Note 6: Regulatory Assets and Liabilities

The amounts recorded as regulatory assets and liabilities in the Consolidated Balance Sheets as of December 31, 2007 and 2006, are summarized in the table below. The table also includes amounts related to unamortized debt expense and unamortized discount on long-term debt. While these amounts are not regulatory assets and liabilities as defined by SFAS No. 71, they are a critical component of the embedded cost of debt financing utilized in the Texas Gas rate proceedings. The tax effect of the equity component of AFUDC represents amounts recoverable from rate payers for the tax effects created prior to the change in Boardwalk Pipelines' tax status. Certain amounts in the table are reflected as a negative, or a reduction, to be consistent with the manner in which Texas Gas records these items in its regulatory books of account. None of the regulatory assets shown below were earning a return as of December 31, 2007 and 2006 (in thousands):

	2007	2006
Regulatory Assets:		
Pension	$ 9,490	$ 7,820
Tax effect of AFUDC equity	6,381	6,794
Unamortized debt expense and premium on reacquired debt	10,705	11,703
Postretirement benefits other than pension	5,414	10,569
Fuel tracker	943	5,783
Imbalances/storage valuation tracker	-	37
Total regulatory assets	$ 32,933	$ 42,706
Regulatory Liabilities:		
System management/cashout tracker	$ 242	-
Provision for asset retirement	42,380	$ 39,644
Unamortized discount on long-term debt	(1,677)	(1,851)
Postretirement benefits other than pension	12,448	-
Total regulatory liabilities	$ 53,393	$ 37,793

Note 7: Financing

Offerings of Common Units

In addition to its IPO in November 2005, the Partnership has completed three follow-on public equity offerings. The proceeds of the follow-on offerings have been and will be used to finance the Partnership's expansion activities discussed in Note 3. In addition to funds received from the public, the general partner has concurrently contributed amounts to maintain its 2.0% interest in the Partnership. The following table shows the key information related to the follow-on public equity offerings (in millions, except the offering price):

Month of Offering	Number of Common Units	Offering Price	Less Underwriting Discounts and Expenses	Net Proceeds (including General Partner Contribution)	Common Units Outstanding After Offering	Common Units Held by the Public After Offering
November 2007	7.5	$ 30.90	$ 3.7	$ 232.8	90.7	37.4
March 2007	8.0	36.50	4.2	293.8	83.2	29.9
November 2006	6.9	29.65	9.4	199.4	75.2	21.9

The Partnership completed its IPO in November 2005, resulting in net proceeds of approximately $271.4 million. After the IPO, the Partnership had 68.3 million common units issued and outstanding, of which 15.0 million were held by the public. In connection with the IPO, the Partnership and its affiliates effected a number of transactions, including among others:

- the distribution by Boardwalk Pipelines of $126.4 million of cash, receivables and other working capital assets to BPHC;
- the contribution, directly and indirectly, by BPHC of all the equity interests of Boardwalk Pipelines to the Partnership;
- the Partnership's reimbursement to BPHC for $42.1 million of capital expenditures it incurred in connection with the acquisition of Gulf South;
- the assumption by the Partnership of $250.0 million of indebtedness to Loews from BPHC;
- the issuance by the Partnership of limited partner interest in the Partnership to BPHC; and
- the issuance by the Partnership of a 2.0% general partner interest and all of its incentive distribution rights to Boardwalk GP.

Senior Unsecured Debt

On August 17, 2007, the Partnership received net proceeds of approximately $495.3 million after deducting initial purchaser discounts and offering expenses of $4.7 million from the sale of $225.0 million of 5.75% senior unsecured notes of Gulf South due August 15, 2012, and $275.0 million of 6.30% senior unsecured notes of Gulf South due August 15, 2017. Interest on the notes will be payable on February 15 and August 15 of each year, beginning on February 15, 2008.

On November 21, 2006, Boardwalk Pipelines received net proceeds of approximately $248.3 million after deducting underwriting discounts and commissions and offering expenses of $1.7 million from its offering of $250.0 million of 5.88% senior unsecured notes, which are guaranteed by the Partnership. Interest on the notes will be payable on May 15 and November 15 of each year, beginning on May 15, 2007. The notes will mature on November 15, 2016.

The Gulf South and Boardwalk Pipelines notes are redeemable, in whole or in part, at the Partnership's option at any time, at a redemption price equal to the greater of 100.0% of the principal amount of the notes to be redeemed or a "make whole" redemption price based on the remaining scheduled payments of principal and interest discounted to the date of redemption at a Treasury rate plus 20 basis points in the case of the 2012 Gulf South notes and 2016 Boardwalk Pipelines notes, or 25 basis points in the case of the 2017 Gulf South notes, plus accrued and unpaid interest, if any. Other customary covenants apply, including those concerning events of default.

The following table represents all long-term debt issues outstanding (in thousands):

	December 31, 2007	December 31, 2006
Boardwalk Pipelines		
5.88% Notes due 2016	$ 250,000	$ 250,000
5.20% Notes due 2018	185,000	185,000
5.50% Notes due 2017	300,000	300,000
Gulf South		
6.30% Notes due 2017	275,000	-
5.75% Notes due 2012	225,000	-
5.05% Notes due 2015	275,000	275,000
Texas Gas		
7.25% Debentures due 2027	100,000	100,000
4.60% Notes due 2015	250,000	250,000
	1,860,000	1,360,000
Unamortized debt discount	(12,086)	(9,080)
Total long-term debt	$ 1,847,914	$ 1,350,920

As of December 31, 2007 and 2006, the weighted-average interest rate of the Partnership's long-term debt was 5.82% and 5.40%.

The long-term debt has restrictive covenants which provide that, with certain exceptions, neither the Partnership nor any of its subsidiaries may create, assume or suffer to exist any lien upon any property to secure any indebtedness unless the debentures and notes shall be equally and ratably secured. The Partnership relies on distributions and advances from the operating subsidiaries to fulfill its debt obligations. All debt obligations are unsecured. At December 31, 2007, Boardwalk Pipelines and the operating subsidiaries were in compliance with their debt covenants.

Revolving Credit Facility

The Partnership maintains a $1.0 billion revolving credit facility, which was increased from $700.0 million in November 2007, under which Boardwalk Pipelines, Gulf South and Texas Gas each may borrow funds, up to applicable sub-limits. Interest on amounts drawn under the credit facility is payable at a floating rate equal to an applicable spread per annum over LIBOR or a base rate defined as the greater of the prime rate or the Federal funds rate plus 50 basis points. Under the terms of the agreement, each of the borrowers must maintain a minimum ratio, as of the last day of each fiscal quarter, of consolidated total debt to consolidated earnings before interest, income taxes and depreciation and amortization (as defined in the agreement), measured for the preceding twelve months, of not more than five to one. The revolving credit facility has a maturity date of June 29, 2012.

As of December 31, 2007, no funds were drawn under the facility, however, the Partnership had outstanding letters of credit under the facility for $185.6 million to support certain obligations associated with the Fayetteville and Greenville Lateral and Gulf Crossing expansion projects which reduced the available capacity under the facility by such amount. As of December 31, 2007, the Partnership was in compliance with all the covenant requirements under the credit agreement. During 2006, the Partnership had borrowed and repaid $90.0 million under this credit facility. The interest rates on the borrowings were 5.55% to 5.73%.

Note 8: Derivatives

Subsidiaries of the Partnership use futures, swaps, and option contracts (collectively, derivatives) to hedge exposure to various risks, including natural gas commodity price risk and interest rate risk. These hedge contracts are reported at fair value in accordance with SFAS No. 133.

Certain volumes of gas stored underground are available for sale and subject to commodity price risk. At December 31, 2007 and December 31, 2006, approximately $16.3 million and $14.0 million of gas stored underground, which the Partnership owns and carries on its Consolidated Balance Sheets as current Gas stored underground, was exposed to commodity price risk. The Partnership utilizes derivatives to hedge certain exposures to market price fluctuations on the anticipated operational sales of gas.

As a result of the approval of Phase II of the Western Kentucky storage expansion project, approximately 4.8 Bcf of gas stored underground with a book value of $11.3 million became available for sale, although it was subsequently determined that 0.8 Bcf of the gas would be used for line pack for the Partnership’s Fayetteville and Greenville Lateral expansion project. The Partnership entered into derivatives to hedge the price exposure related to 3.0 Bcf of the storage gas sold under forward sales agreements, which were designated as cash flow hedges during February 2007, concurrent with the designation of the forward sales agreements as normal sales. The derivatives were settled in March 2007, when the sales price was determined. The Partnership entered into derivatives related to the remaining 1.0 Bcf of storage gas available for sale which were not designated as cash flow hedges and have been marked to fair value through earnings. In the third and fourth quarters 2007, all of the storage gas available for sale was sold and the related derivatives were settled resulting in a gain of $22.0 million. The gain was included in Net gain on disposal of operating assets and related contracts on the Consolidated Statements of Income.

In the second quarter 2007, the Partnership entered into natural gas price swaps to hedge exposure to prices associated with the purchase of 2.1 Bcf of natural gas to be used for line pack for the Partnership’s Gulf Crossing and Southeast Expansion projects, approximately 1.3 Bcf of which remained outstanding at December 31, 2007. The derivatives were not designated as hedges and were marked to fair value through earnings resulting in a loss of $1.0 million for the year ended December 31, 2007.

In August 2007, the Partnership entered into a Treasury rate lock for a notional amount of $150.0 million of principal to hedge the risk attributable to changes in the risk-free component of forward 10-year interest rates through February 1, 2008. The reference rate on the rate lock was 4.74%. Under the terms of the rate lock, the counterparty would pay the Partnership a settlement amount if the 10-year Treasury rate is greater than the reference rate on February 1, 2008. Conversely, the Partnership would pay the counterparty a settlement amount if the 10-year Treasury rate is less than the reference rate. The Treasury rate lock was designated as a cash flow hedge in accordance with SFAS No. 133. As of December 31, 2007, the Partnership recorded a payable of $8.4 million and a corresponding amount in Accumulated other comprehensive income for the fair value of the rate lock. On February 1, 2008, the Partnership paid the counterparty approximately $15.0 million to settle the rate lock. The effective portion of the loss will be recognized in Interest expense over the term of the related debt to be issued.

In August 2006, the Partnership entered into Treasury rate locks with two counterparties each for a notional amount of $100.0 million of principal to hedge the risk attributable to changes in the risk-free component of forward 10-year interest rates through August 1, 2007. The reference rates on the rate locks were 5.00% and 4.96%. The rate locks were designated as cash flow hedges in accordance with SFAS No. 133. In August 2007, the rate locks were settled resulting in payments to the counterparties of approximately $3.9 million. The effective amount of the hedge, of approximately $3.4 million is being amortized to interest expense over the 10-year term of the related notes which were issued in August 2007.

With the exception of the derivatives related to storage gas volumes and line pack gas purchases referred to above, the derivatives related to the sale or purchase of natural gas, cash for fuel reimbursement and debt issuance generally qualify for cash flow hedge accounting under SFAS No. 133 and are designated as such. The effective component of related unrealized gains and losses resulting from changes in fair values of the derivatives contracts designated as cash flow hedges are deferred as a component of Accumulated other comprehensive income. The deferred gains and losses are recognized in the Consolidated Statements of Income when the anticipated transactions affect earnings. Generally, for gas sales and cash for fuel reimbursement, any gains and losses on the related derivatives would be recognized in Operating Revenues. For the sale of gas related to the Western Kentucky storage expansion project, any gains and losses on the related derivatives were recognized in Net gain on disposal of operating assets and related contracts. Any gains and losses on the derivatives related to the line pack gas purchases would be recognized in Miscellaneous other income, net.

The fair values of derivatives existing as of December 31, 2007 and 2006, were included in the following captions in the Consolidated Balance Sheets (in millions):

	December 31, 2007	**December 31, 2006**
Prepaid expenses and other current assets	$ 2.2	$ 13.7
Other current liabilities	9.4	5.1
Accumulated other comprehensive (loss) income	(8.9)	8.3

The changes in fair values of the derivatives designated as cash flow hedges are expected to, and do, have a high correlation to changes in value of the anticipated transactions. Each reporting period the Partnership measures the effectiveness of the cash flow hedge contracts. To the extent the changes in the fair values of the hedge contracts do not effectively offset the changes in the estimated cash flows of the anticipated transactions, the ineffective portion of the hedge contracts is currently recognized in earnings. If the anticipated transactions are deemed no longer probable to occur, hedge accounting would be terminated and changes in the fair values of the associated derivative financial instruments would be recognized currently in earnings. Ineffectiveness decreased Net income by $0.1 million for the year ended December 31, 2007 and increased Net income by $0.5 million for the year ended December 31, 2006. No ineffectiveness was recorded during 2005. The Partnership did not discontinue any cash flow hedges during the years ended December 31, 2007 and 2006.

Note 9: Employee Benefits

Retirement Plans

Texas Gas employees hired before November 1, 2006, are covered under a non-contributory, defined benefit pension plan. The Texas Gas Supplemental Retirement Plan (SRP) provides pension benefits for the portion of an eligible employee's pension benefit that becomes subject to compensation limitations under the Internal Revenue Code. Effective November 1, 2006, the defined benefit pension plan was closed to new participants and new employees will be provided benefits under a defined contribution money purchase plan. The Partnership uses a measurement date of December 31 for its benefits plans.

As a result of its rate case settlement in 2006, the Partnership is required to fund the amount of the Texas Gas annual net periodic pension cost, including a minimum of $3.0 million which is the amount included in rates. During 2006, the Partnership funded approximately $18.0 million to the Texas Gas retirement plan including approximately $11.4 million of additional funding that the Partnership elected to provide to immediately improve the funded status of the plan. Due to the additional funding, the Partnership was not required to fund any amount to the Texas Gas retirement plan in 2007 and does not expect to fund any amount in 2008. Through December 31, 2007, no funding has been provided for the SRP other than the payment of benefits under the plan, and the Partnership does not expect to fund this plan in the future until such time as benefits are paid.

The Partnership recognizes each year the actuarially determined amount of net periodic pension cost in expense, including a minimum amount of $3.0 million, in accordance with the rate case settlement. Texas Gas is permitted to seek future rate recovery for amounts of annual pension costs in excess of $6.0 million and is precluded from seeking future recovery of annual pension costs between $3.0 and $6.0 million. As a result, the Partnership would recognize a regulatory asset for amounts of annual pension cost in excess of $6.0 million and would reduce its regulatory asset to the extent that any amounts of annual pension cost are less than $3.0 million. Annual pension costs between $3.0 million and $6.0 million will be charged to expense.

Postretirement Benefits Other Than Pensions (PBOP)

Texas Gas provides postretirement medical benefits and life insurance to retired employees who were employed full time, hired prior to January 1, 1996, and have met certain other requirements. The Partnership contributed $0.9 million, $0.3 million and $3.9 million to the plan in 2007, 2006 and 2005. Due to plan changes regarding benefits available to current and future retirees described below, the PBOP plan is currently in an overfunded status, therefore the Partnership does not expect to make any contributions to the plan in 2008.

In May 2006, as part of an overall cost reduction program, Texas Gas announced to its employees and retirees a plan to make changes to its postretirement benefits plan beginning January 1, 2007. Under the amended plan, Texas Gas will cap its contributions toward medical benefit coverage for retirees younger than age 65 to the amount contributed for each retiree in 2006. For retirees age 65 and older, Texas Gas will cap its contribution at three times the 2006 amount. In addition, Texas Gas will no longer cover prescription drug costs for retirees age 65 and older. The changes resulted in an estimated reduction in the accumulated postretirement benefit obligation (APBO) of approximately $75.3 million. For the year ended December 31, 2006, the change resulted in a reduction to net periodic benefit cost of $9.0 million from the amount that would otherwise have been recognized.

Due to the Texas Gas rate case settlement in the first quarter 2006, the Partnership began to amortize the balance of its regulatory asset for PBOP of approximately $32.0 million on a straight-line basis over 5 to 6 years. Texas Gas is precluded from seeking future recovery of additional amounts for PBOP costs.

Early Retirement Incentive Program

In 2006, Texas Gas implemented an early retirement incentive program (ERIP) which was made available to approximately 240 non-executive employees age 52 and older with at least five years of service. Under the program, Texas Gas would provide eligible employees three additional years for purposes of age-based vesting under the postretirement medical plan and three additional years of pay credits under the pension plan.

In 2007, all of the approximately 100 employees who elected to participate in the program retired and the Partnership recognized a settlement charge of $4.5 million related to the program. The Partnership recognized a special termination benefit of approximately $6.0 million for pension and $0.9 million for PBOP in 2006.

Projected Benefit Obligation, Fair Value of Assets and Funded Status

The projected benefit obligation, fair value of assets, funded status and the amounts not yet recognized as components of net periodic pension and postretirement benefits cost for the retirement plans and PBOP at December 31, 2007 and 2006, were as follows (in thousands):

	Retirement Plans		PBOP	
	For the Year Ended December 31,		For the Year Ended December 31,	
	2007	2006	2007	2006
Change in benefit obligation:				
Benefit obligation at beginning of period	$ 136,886	$ 116,931	$ 65,341	$ 134,188
Service cost	3,929	4,432	608	1,319
Interest cost	6,599	6,695	3,274	5,147
Plan participants' contributions	-	-	828	1,509
Actuarial (gain) loss	(2,197)	6,326	(9,343)	4,902
Benefits paid	(575)	(3,576)	(4,083)	(7,633)
Retirement / PBOP plan amendment	3	73	-	(75,271)
Settlement	(36,141)	-	-	-
Special termination benefits (ERIP)	-	6,005	-	884
Retiree drug subsidy	-	-	309	296
Benefit obligation at end of period	$ 108,504	$ 136,886	$ 56,934	$ 65,341
Change in plan assets:				
Fair value of plan assets at beginning of period	$ 121,125	$ 96,193	$ 80,218	$ 79,462
Actual return on plan assets	6,489	10,468	6,381	6,539
Benefits paid	(575)	(3,576)	(4,082)	(7,633)
Company contributions	395	18,040	883	341
Plan participants' contributions	-	-	828	1,509
Settlement	(36,141)	-	-	-
Fair value of plan assets at end of period	$ 91,293	$ 121,125	$ 84,228	$ 80,218
Funded status	$ (17,211)	$ (15,761)	$ 27,294	$ 14,877
Items not yet recognized as components of net periodic cost:				
Prior service cost	$ 71	$ 73	$ (62,984)	$ (70,744)
Net actuarial loss	11,731	17,967	10,658	22,316
Total	$ 11,802	$ 18,040	$ (52,326)	$ (48,428)

The Partnership does not anticipate that any plan assets will be returned to the Partnership during 2008. At December 31, 2007 and 2006, the following aggregate information relates only to the underfunded retirement plan (in thousands):

	For the Year Ended December 31,	
	2007	2006
Projected benefit obligation	$ 108,504	$ 136,886
Accumulated benefit obligation	94,590	118,147
Fair value of plan assets	91,293	121,125

Components of Net Periodic Benefit Cost

Components of net periodic benefit cost for both the retirement plans and PBOP for the years ended December 31, 2007, 2006 and 2005 were the following (in thousands):

	Retirement Plans			PBOP		
	For the Year Ended December 31,			For the Year Ended December 31,		
	2007	2006	2005	2007	2006	2005
Service cost	$ 3,929	$ 4,432	$ 4,067	$ 608	$ 1,319	$ 2,076
Interest cost	6,599	6,695	6,283	3,274	5,147	7,222
Expected return on plan assets	(7,146)	(7,131)	(6,859)	(4,734)	(4,653)	(4,632)
Amortization of prior service credit	5	-	-	(7,760)	(4,527)	-
Amortization of unrecognized net loss	242	713	300	668	1,112	362
Settlement charge	4,454	-	-	-	-	-
Special termination benefit (ERIP)	-	6,005	-	-	884	-
Regulatory asset (increase) decrease	(1,669)	(3,979)	(3,713)	5,415	7,337	-
Net periodic pension expense	$ 6,414	$ 6,735	$ 78	$ (2,529)	$ 6,619	$ 5,028

The decrease in the regulatory asset for PBOP was due primarily to the amortization of costs incurred in prior years. The regulatory asset for the retirement plans was increased due to the accumulated cost for the year exceeding the expense cap established in the Texas Gas rate case settlement. In accordance with the rate case settlement, Texas Gas is permitted to seek future rate recovery for amounts of annual pension costs in excess of $6.0 million.

Estimated Future Benefit Payments

The following table shows benefit payments, which reflect expected future service, as appropriate, which are expected to be paid for both the retirement plans and PBOP (in thousands):

	Retirement Plans	PBOP
2008	$ 3,397	$ 4,693
2009	3,633	4,499
2010	5,783	4,294
2011	7,140	4,282
2012	9,391	4,116
2013-2017	67,556	19,997

Weighted –Average Assumptions

The Partnership's weighted-average asset allocations at December 31, 2007 and 2006, for both the qualified retirement plan and PBOP trusts by category were as follows:

	Retirement Plans		PBOP	
	December 31, 2007	**December 31, 2006**	**December 31, 2007**	**December 31, 2006**
Debt securities	45.5%	49.1%	40.4%	46.6%
Equity securities	22.7%	27.1%	22.1%	29.2%
Limited partnerships	13.3%	9.3%	25.2%	23.6%
Comingled funds	12.5%	9.4%	-	-
Cash, short-term investments and other	6.0%	5.1%	12.3%	0.6%
Total	100.0%	100.0%	100.0%	100.0%

The Partnership employs a total-return approach whereby a mix of equities and fixed income investments is used to maximize the long-term return of plan assets for a prudent level of risk. The intent of this strategy is to minimize plan expenses by outperforming plan liabilities over the long run. Risk tolerance is established through careful consideration of the plan liabilities, plan funded status and the financial conditions of the Partnership. The Partnership's goal for 2007 was to allocate between 30.0% and 50.0% of the investment portfolio to equity and alternative investments, including limited partnerships, with consideration given to market conditions and target asset returns. The portion of the portfolio not invested in equity and alternative investments was invested primarily in fixed income securities, comingled funds and the remainder in cash and short-term investments. The investment portfolio contains a diversified blend of U.S. and non-U.S. fixed income and equity investments. Alternative investments, including hedge funds, are used judiciously to enhance risk-adjusted long-term returns while improving portfolio diversification. Derivatives may be used to gain market exposure in an efficient and timely manner. Investment risk is measured and monitored on an ongoing basis through annual liability measurements, periodic asset/liability studies and quarterly investment portfolio reviews.

Weighted-average assumptions used to determine benefit obligations for the years ended December 31, 2007 and 2006 were the following:

	Retirement Plans		PBOP	
	For the Year Ended December 31,		**For the Year Ended December 31,**	
	2007	**2006**	**2007**	**2006**
Discount rate	6.00%	5.75%	6.00%	5.75%
Rate of compensation increase	4.00%	5.50%	-	-

Weighted-average assumptions used to determine net periodic benefit cost for the periods indicated were as follows:

	Retirement Plans			PBOP		
	For the Year Ended December 31,			**For the Year Ended December 31,**		
	2007	**2006**	**2005**	**2007**	**2006**	**2005**
Discount rate	5.94%	5.63%	5.88%	5.75%	5.63% to 5.75%	5.88%
Expected return on plan assets	7.50%	7.50%	7.50%	5.00% to 6.15%	5.00% to 6.15%	5.00% to 6.15%
Rate of compensation increase	5.50%	5.50%	5.50%	-	-	-

PBOP assumed health care cost trends

Assumed health care-cost-trend rates have a significant effect on the amounts reported for PBOP. A one-percentage-point change in assumed health care-cost-trend rates would have had the following effects on amounts reported for the year ended December 31, 2007 (in thousands):

Effect of 1% Increase:	**2007**
Benefit obligation at end of year	$ 1,212
Total of service and interest costs for year	81
Effect of 1% Decrease:	
Benefit obligation at end of year	$ (1,481)
Total of service and interest costs for year	(102)

For measurement purposes, at December 31, 2007, health care costs for the plans were assumed to increase 9.0% for 2008-2009 grading down to 5.0% in 0.5% annual increments for participants not eligible for Medicare and 10.0% grading down to 5.0% in 0.5% annual increments for participants eligible for Medicare. For December 31, 2006, measurement purposes, health care costs for the plans were assumed to increase 9.0% for 2007-2008, grading down to 5.0% in 0.5% annual increments for participants not eligible for Medicare and 10.5% grading down to 5.0% in 0.5% annual increments for participants eligible for Medicare.

Defined Contribution Plans

Texas Gas employees hired on or after November 1, 2006 and Gulf South employees are provided retirement benefits under a similar defined contribution money purchase plan. The operating subsidiaries also provide 401(k) plan benefits to their employees. Costs related to the Partnership's defined contribution plans were $5.3 million, $5.1 million and $3.9 million for the years ended December 31, 2007, 2006 and 2005.

Strategic Long Term Incentive Plan

In 2006, Boardwalk GP approved the Partnership's Strategic Long Term Incentive Plan (SLTIP). The SLTIP provides for the issuance of up to 500 phantom general partner units (Phantom GP Units) to selected employees of the Partnership and its subsidiaries. The Partnership believes that such awards better align the interests of the selected employees with those of the general partner and common unitholders. Each Phantom GP Unit entitles the holder thereof, upon vesting, to a lump sum cash payment in an amount determined by a formula based on cash distributions made by the Partnership to its general partner during the four quarters preceding the vesting date and the implied yield on the Partnership's common units, up to a maximum of $50,000 per unit.

A summary of the status of the Partnership's SLTIP as of December 31, 2007 and 2006, and changes during the years ended December 31, 2007 and 2006, is presented below:

	Phantom GP Units	**Total Fair Value (in thousands)**	**Weighted-Average Vesting Period (in years)**
Granted 7/15/2006 (a)	125	$ 3,398	3.5
Granted 12/20/2006 (a)	125	6,250	4.0
Outstanding @ 12/31/2006 (b)	250	12,500	3.5
Granted (a)	116	5,800	4.0
Forfeited	(5)	-	-
Outstanding @ 12/31/2007 (b)	361	18,050	3.0

(a) Represents fair value and weighted-average vesting period of awards at grant date.
(b) Represents fair value and remaining weighted-average vesting period of outstanding awards at the end of the period.

The fair value of the awards at the date of grant was based on the formula contained in the SLTIP and assumptions made regarding potential future cash distributions made to the general partner during the four quarters preceding the vesting date and the future implied yield on the Partnership's common units. The fair value of the awards will be recognized ratably over the vesting period and remeasured each quarter until settlement in accordance with the treatment of awards classified as liabilities prescribed in SFAS No. 123(R). The Partnership recorded $3.3 million and $0.8 million in Administrative and general expenses during 2007 and 2006 for the ratable recognition of the GP Phantom Unit awards fair value. The total estimated remaining unrecognized compensation expense related to the GP Phantom Units outstanding at December 31, 2007, of $13.9 million will be recognized over the average remaining vesting period of approximately 3.0 years. Approximately 139 Phantom GP Units were available for grant under the plan at December 31, 2007.

Long-Term Incentive Plan

In 2005, the Partnership adopted the Long-Term Incentive Plan (LTIP) for the officers and directors of its general partner and for selected employees of its subsidiaries. The Partnership believes that such awards better align the interests of the selected employees with those of the common unitholders. The Partnership has reserved 3,525,000 units for grants of units, restricted units, unit options and unit appreciation rights under the plan. The Partnership has granted phantom common units under the plan. Each such grant includes: a tandem grant of Distribution Equivalent Rights (DERs); vests 50.0% on the second anniversary of the grant date and 50.0% on the third anniversary of the grant date; and will be payable to the grantee in cash upon vesting in an amount equal to the sum of the fair market value of the units (as defined in the plan) that vest on the vesting date plus the vested amount then credited to the grantee's DER account, less applicable taxes. The fair value of the awards will be recognized ratably over the vesting period and remeasured each quarter until settlement based on the market price of the Partnership's common units and amounts credited under the DERs. The Partnership did not make any grants of units, restricted units, unit options and unit appreciation rights under the plan.

A summary of the status of the Partnership's LTIP as of December 31, 2007, 2006 and 2005, and changes during the years ended December 31, 2007 and 2006, is presented below:

	Phantom Common Units	Total Fair Value (in thousands)	Weighted-Average Vesting Period (in years)
Outstanding @ 12/31/2005 (a)	29,177	$ 525	2.3
Granted (b)	49,387	1,537	2.5
Forfeited	(3,479)	-	-
Outstanding @ 12/31/2006 (a)	75,085	2,413	2.2
Granted (b)	49,966	1,530	2.5
Vested (c)	(14,431)	-	-
Forfeited	(2,099)	-	-
Outstanding @ 12/31/2007 (a)	108,521	3,493	1.8

(a) Represents fair value and remaining weighted-average vesting period of outstanding awards at the end of the period.
(b) Represents fair value and weighted-average vesting period of awards at grant date.
(c) Represents cash paid for vested awards.

The fair value of the awards at the date of grant was based on the formula contained in the LTIP. The fair value of the awards will be recognized ratably over the vesting period and remeasured each quarter until settlement in accordance with the treatment of awards classified as liabilities prescribed in SFAS No. 123(R). The Partnership recorded $1.1 million and $0.4 million in Administrative and general expenses during 2007 and 2006 for the ratable recognition of the Phantom Common Unit awards fair value. Amounts recognized in 2005 were immaterial. The total estimated remaining unrecognized compensation expense related to the Phantom Common Units outstanding at December 31, 2007, of $2.0 million will be recognized over the average remaining vesting period of approximately 1.8 years.

On February 27, 2007, the general partner purchased 1,500 of the Partnership's common units in the open market at a price of $36.61 per unit and on March 23, 2006, the general partner purchased 1,000 common units in the open market at a price of $21.38 per unit. These units were granted under the LTIP to the independent directors as part of their director compensation. At December 31, 2007, 3,522,500 units were available for grants under LTIP.

Note 10: Net Income per Limited Partner Unit and Cash Distributions

The Partnership calculates net income per limited partner unit in accordance with Emerging Issues Task Force (EITF) Issue No. 03-6, *Participating Securities and the Two-Class Method under FASB Statement No. 128*. In Issue 3 of EITF No. 03-6, the EITF reached a consensus that undistributed earnings for a period should be allocated to a participating security based on the contractual participation rights of the security to share in those earnings as if all of the earnings for the period had been distributed. The Partnership's general partner holds contractual participation rights which are incentive distribution rights (IDRs) in accordance with the partnership agreement as follows:

	Total Quarterly Distribution	Marginal Percentage Interest in Distributions	
	Target Amount	Common and Subordinated Unitholders	General Partner
Minimum Quarterly Distribution	$0.3500	98.0%	2.0%
First Target Distribution	up to $0.4025	98.0%	2.0%
Second Target Distribution	above $0.4025 up to $0.4375	85.0%	15.0%
Third Target Distribution	above $0.4375 up to $0.5250	75.0%	25.0%
Thereafter	above $0.5250	50.0%	50.0%

The amounts reported for net income per limited partner unit on the Consolidated Statements of Income for the years ended December 31, 2007, 2006 and 2005, were adjusted to take into account an assumed allocation to the general partner's incentive distribution rights. Payments made on account of the incentive distribution rights are determined in relation to actual declared distributions. A reconciliation of the limited partners' interest in net income and net income available to limited partners used in computing net income per limited partner unit follows (in thousands, except weighted average units and per unit data):

	For the Year Ended December 31,		For the Period November 15, 2005 through December 31,
	2007	2006	2005
Limited partners' interest in net income	$ 220,726	$ 193,599	$ 35,272
Less assumed allocation to incentive distribution rights	4,323	5,187	-
Net income available to limited partners	216,403	188,412	35,272
Less assumed allocation to subordinated units	61,949	61,087	11,382
Net income available to common units	$ 154,454	$ 127,325	$ 23,890
Weighted average common units	82,510,917	68,977,766	68,256,122
Weighted average subordinated units	33,093,878	33,093,878	33,093,878
Net income per limited partner unit – common and subordinated units	$ 1.87	$ 1.85	$ 0.35

The Partnership has declared quarterly distributions per unit to unitholders of record, including common and subordinated units and the 2.0% general partner interest and IDRs held by its general partner as follows (in thousands, except distribution per unit):

Payable Date	Distribution per Unit	Amount Paid to Common and Subordinated Unitholders	Amount Paid to General Partner (Including IDRs)
February 25, 2008	$ 0.46	$ 56,925	$ 2,709
November 12, 2007	0.45	52,313	2,158
August 13, 2007	0.44	51,150	1,770
May 14, 2007	0.43	49,988	1,519
February 27, 2007	0.415	44,924	1,128
November 6, 2006	0.40	40,540	827
August 18, 2006	0.38	38,513	786
May 19, 2006	0.36	36,486	745
February 23, 2006	0.179*	18,121	370

*Distribution represented a prorated portion of the $0.35 per unit "minimum quarterly distribution" (as defined in the Partnership's partnership agreement) for the period November 15, 2005 through December 31, 2005.

Note 11: Income Tax

Results of operations for the year ended December 31, 2005, reflect a change in the tax status associated with the Partnership and Boardwalk Pipelines, coincident with the IPO. Accordingly, the Partnership recorded a charge-in-lieu of income taxes for the period January 1, 2005, through the date of the offering. Pursuant to the change in tax status, the Partnership also eliminated its balance of accumulated deferred income taxes at the date of the offering. The subsidiaries of the Partnership directly incur some income-based state taxes which are accrued as Income taxes and charge-in-lieu of income taxes on the Consolidated Statements of Income.

In July 2006, the FASB issued Interpretation No. (FIN) 48, *Accounting for Uncertainty in Income Taxes - An Interpretation of FASB Statement No. 109*, which is effective for the Partnership's year beginning January 1, 2007. This interpretation was issued to clarify the accounting for uncertainty in income taxes recognized in the financial statements by prescribing a comprehensive model for how a company should recognize, measure, present, and disclose uncertain tax positions taken or expected to be taken in a tax return. The Partnership has determined that FIN 48 does not have an impact on its results of operations. The Partnership's tax years 2005 through 2007 remain subject to examination by the Internal Revenue Service (IRS) and the states in which it operates.

Following is a summary of the provision for Income taxes and charge-in-lieu of income taxes for the periods ended December 31, 2007, 2006 and 2005 (in thousands):

	For the Year Ended December 31, 2007	2006	2005
Current expense:			
Federal	-	-	$ 4,044
State	$ 787	$ 292	870
Total	787	292	4,914
Deferred provision (benefit):			
Federal	-	-	36,690
State	(18)	(39)	7,890
Elimination of cumulative deferred taxes	-	-	10,102
Total	(18)	(39)	54,682
Income taxes and charge-in-lieu of income taxes	$ 769	$ 253	$ 59,596

Reconciliations from the provision at the statutory rate to the Income tax and charge-in-lieu of income taxes provision are as follows (in thousands):

	For the Year Ended December 31, 2007	2006	2005
Provision at statutory rate	-	-	$ 43,583
Increases in taxes resulting from:			
State income taxes	$ 769	$ 253	5,694
Other, net	-	-	217
Elimination of deferred taxes	-	-	10,102
Income taxes and charge-in-lieu of income taxes	$ 769	$ 253	$ 59,596

As of December 31, 2007 and 2006, there were no significant deferred income tax assets or liabilities.

Note 12: Financial Instruments

The following methods and assumptions were used in estimating the Partnership's fair-value disclosures for financial instruments:

Cash and Cash Equivalents: For cash and short-term financial assets and liabilities, the carrying amount is a reasonable estimate of fair value due to the short maturity of those instruments.

Advances to Affiliates: Advances to affiliates, which are represented by demand notes, earn a variable rate of interest, which is adjusted regularly to reflect current market conditions. Therefore, the carrying amount is a reasonable estimate of fair value. The interest rate on intercompany demand notes is LIBOR plus one percent and is adjusted every three months.

Long-Term Debt: All long-term debt is publicly traded, except for debt held by Gulf South. Estimated fair value is based on quoted market prices and market prices of similar debt, for debt held by Gulf South, at December 31, 2007 and 2006.

The carrying amount and estimated fair values of the Partnership's financial instruments as of December 31, 2007 and 2006 were as follows (in thousands):

	2007		2006	
Financial Assets	**Carrying Amount**	**Fair Value**	**Carrying Amount**	**Fair Value**
Cash and cash equivalents	$ 317,319	$ 317,319	$ 399,032	$ 399,032
Financial Liabilities				
Long-term debt	$ 1,847,914	$ 1,834,161	$ 1,350,920	$ 1,318,293

Note 13: Accumulated Other Comprehensive Income (Loss)

The following table shows the components of Accumulated other comprehensive income, net of tax which is included in Partners' Capital on the Consolidated Balance Sheets (in thousands):

	For the Year Ended December 31,	
	2007	**2006**
(Loss) gain on cash flow hedges, net of tax	$ (8,891)	$ 8,309
Deferred components of net periodic benefit cost, net of tax	13,103	14,803
Total Accumulated other comprehensive income, net of tax	$ 4,212	$ 23,112

In 2008, the Partnership will recognize $8.7 million of the amounts shown above in earnings. This amount is comprised of increases to earnings of $1.2 million related to cash flow hedges and $7.5 million related to net periodic benefit cost.

Note 14: Major Customers and Transactions with Affiliates

Major Customers

Operating revenues received from the Partnership's major customer (in thousands) and the percentage of Total operating revenues were:

	For the Year Ended December 31,					
	2007		2006		2005	
Customer	**Revenue**	**%**	**Revenue**	**%**	**Revenue**	**%**
Atmos Energy	$ 63,900	10.0 %	$ 56,413	9.3 %	$ 61,774	11.0 %

Natural gas price volatility has increased dramatically in recent years, which has materially increased credit risk related to gas loaned to customers. As of December 31, 2007, the amount of gas loaned by the operating subsidiaries was approximately 12.7 TBtu and, assuming an average market price during December 2007 of $7.13 per MMBtu, the market value of that gas was approximately $90.6 million. If any significant customer should have credit or financial problems resulting in a delay or failure to repay the gas owed to the operating subsidiaries, this could have a material adverse effect on the Partnership's financial condition, results of operations and cash flows.

Transactions with Affiliates

Loews provides a variety of corporate services to the Partnership and its subsidiaries under services agreements. Services provided by Loews include, among others, information technology, tax, risk management, internal audit and corporate development services. Loews charged $12.1 million, $13.0 million, and $9.7 million for the years ended December 31, 2007, 2006 and 2005 to the Partnership based on the actual time spent by Loews personnel performing these services, plus related expenses.

Distributions paid related to common and subordinated units held by BPHC, 2.0% general partner interest and IDRs held by Boardwalk GP were $156.4 million during 2007 and $116.6 million during 2006.

The Partnership pays franchise and certain other taxes on behalf of BPHC and records a note receivable from BPHC for the amounts paid, which is settled quarterly. The notes accrue interest at LIBOR plus one percent. In 2007 and 2006, the Partnership paid $3.4 million and $0.8 million on behalf of BPHC. A note receivable of $1.6 million remained at December 31, 2007.

Note 15: Recently Issued Accounting Pronouncements

SFAS No. 157, Fair Value Measurements

On September 15, 2006, the FASB issued SFAS No. 157, *Fair Value Measurements*. Fair value refers to the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants in the market in which the reporting entity transacts. The standard clarifies the principle that fair value should be based on the assumptions market participants would use when pricing the asset or liability. In support of this principle, the standard establishes a fair value hierarchy that prioritizes the information used to develop those assumptions. The fair value hierarchy gives the highest priority to quoted prices in active markets and the lowest priority to unobservable data, for example, the reporting entity's own data. Under the standard, fair value measurements would be separately disclosed by level within the fair value hierarchy. The Statement is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. The Partnership is currently evaluating the impact, if any, that SFAS No. 157 would have on its financial statements.

SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities

In February 2007, the FASB issued SFAS No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities- including an amendment of SFAS No. 115*. SFAS No. 159 allows companies to elect to measure financial assets and financial liabilities at fair value. Unrealized gains and losses on items for which the fair value option has been chosen are reported in earnings. SFAS No. 159 is effective for fiscal years beginning after November 15, 2007. The effective date for the Partnership is January 1, 2008. The Partnership is currently evaluating the impact, if any, of adopting SFAS No. 159 on its financial statements.

Note 16: Supplemental Disclosure of Cash Flow Information (in thousands):

	For the Year Ended December 31,		
	2007	**2006**	**2005**
Cash paid during the period for:			
Interest (net of amount capitalized)	$ 46,106	$ 58,111	$ 45,357
Income taxes, net	340	215	-
Non-cash capital contribution	-	-	681,809
Non-cash dividends	-	-	101,401

Note 17: Selected Quarterly Financial Data (Unaudited)

The Partnership's operating income may vary by quarter. Based on the current rate structure, the operating subsidiaries experience higher income in the first and fourth quarters as compared to the second and third quarters. The following tables summarize selected quarterly financial data for 2007 and 2006 for the Partnership (in thousands, except for earnings per unit):

	2007 For the Quarter Ended:			
	December 31	September 30	June 30	March 31
Operating revenues	$ 169,882	$ 134,732	$ 150,542	$ 188,112
Operating expenses	89,048	86,185	106,236	95,766
Operating income	80,834	48,547	44,306	92,346
Interest expense, net	9,704	9,003	8,567	12,216
Other (income) expense	(1,232)	(575)	159	(334)
Income before income taxes	72,362	40,119	35,580	80,464
Income taxes	267	140	132	230
Net income	$ 72,095	$ 39,979	$ 35,448	$ 80,234
Earnings per unit:				
Common units	$ 0.56	$ 0.35	$ 0.35	$ 0.61
Subordinated units	$ 0.56	$ 0.30	$ 0.17	$ 0.61

	2006 For the Quarter Ended:			
	December 31	September 30	June 30	March 31
Operating revenues	$ 171,489	$ 133,045	$ 128,662	$ 174,446
Operating expenses	92,811	88,272	82,798	89,813
Operating income	78,678	44,773	45,864	84,633
Interest expense, net	13,882	14,414	14,510	15,088
Other income	(366)	(406)	(792)	(185)
Income before income taxes	65,162	30,765	32,146	69,730
Income taxes	(111)	118	246	-
Net income	$ 65,273	$ 30,647	$ 31,900	$ 69,730
Earnings per unit:				
Common units	$ 0.57	$ 0.35	$ 0.35	$ 0.58
Subordinated units	$ 0.57	$ 0.19	$ 0.22	$ 0.58

Note 18: Disposition of Coal Reserves

The Partnership has begun efforts to sell its investment in certain coal reserves along the Ohio River in northern Kentucky and southern Indiana that were originally acquired in the 1970's. A data room has been made available to prospective buyers. The book value of the assets at December 31, 2007 and 2006 was zero. The Partnership expects to complete a sale of the assets in 2008.

Note 19: Guarantee of Securities of Subsidiaries

The Partnership has no independent assets or operations other than its investment in its subsidiaries. The Partnership's operating subsidiaries have issued securities which have all been fully and unconditionally guaranteed by the Partnership. The Partnership does have separate partners' capital including publicly traded limited partner common units.

The Partnership's subsidiaries have no significant restrictions on their ability to pay distributions or make loans to the Partnership and have no restricted assets at December 31, 2007. See Note 7 for additional information.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

Disclosure Controls and Procedures

We maintain a system of disclosure controls and procedures which is designed to ensure that information required to be disclosed by us in reports that we file or submit under the federal securities laws, including this report is recorded, processed, summarized and reported on a timely basis. These disclosure controls and procedures include controls and procedures designed to ensure that information required to be disclosed by us under the federal securities laws is accumulated and communicated to us on a timely basis to allow decisions regarding required disclosure.

Our principal executive officer (CEO) and principal financial officer (CFO) undertook an evaluation of our disclosure controls and procedures as of the end of the period covered by this report. The CEO and CFO have concluded that our controls and procedures were effective as of December 31, 2007.

Changes in Internal Control over Financial Reporting

There were no other changes in our internal control over financial reporting that occurred during the quarter ended December 31, 2007, that have materially affected or that are reasonably likely to materially affect our internal control over financial reporting.

Management's Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting for us. Our internal control system was designed to provide reasonable assurance regarding the preparation and fair presentation of our published financial statements.

There are inherent limitations to the effectiveness of any control system, however well designed, including the possibility of human error and the possible circumvention or overriding of controls. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Management must make judgments with respect to the relative cost and expected benefits of any specific control measure. The design of a control system also is based in part upon assumptions and judgments made by management about the likelihood of future events, and there can be no assurance that a control will be effective under all potential future conditions. As a result, even an effective system of internal control over financial reporting can provide no more than reasonable assurance with respect to the fair presentation of financial statements and the processes under which they were prepared.

Our management assessed the effectiveness of our internal control over financial reporting as of December 31, 2007. In making this assessment, management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control – Integrated Framework*. Based on this assessment, our management believes that, as of December 31, 2007, our internal control over financial reporting was effective. Deloitte & Touche LLP, the independent registered public accounting firm that audited our financial statements included in Item 8 of this Report, has issued a report on our internal control over financial reporting.

Item 9B. Other Information

None.

PART III

Item 10. Directors and Executive Officers of the Registrant

Management of Boardwalk Pipeline Partners, LP

Boardwalk GP manages our operations and activities on our behalf. The operations of Boardwalk GP are managed by its general partner, Boardwalk GP, LLC (BGL). We sometimes refer to Boardwalk GP and BGL collectively as "our general partner." Our general partner is not elected by unitholders and is not subject to re-election on a regular basis in the future. Unitholders are not entitled to elect the directors of our general partner or directly or indirectly participate in our management or operation. Our general partner owes a fiduciary duty to our unitholders. Our general partner is liable, as general partner, for all of our debts (to the extent not paid from our assets), except for indebtedness or other obligations that are made specifically nonrecourse to it. Whenever possible, our general partner intends to cause us to incur indebtedness or other obligations that are nonrecourse to it. BGL has a board of directors that oversees our management, operations and activities. We refer to the board of directors of BGL, the members of which are appointed by BPHC, as our Board.

Whenever our general partner makes a determination or takes or declines to take an action in its individual, rather than representative, capacity, it is entitled to make such determination or to take or decline to take such other action free of any fiduciary duty or obligation to any limited partner and is not required to act in good faith or pursuant to any other standard imposed by our partnership agreement or under any law. Examples include the exercise of its limited call rights on our units, as provided in our partnership agreement, its voting rights with respect to the units it owns, its registration rights and its determination whether or not to consent to any merger or consolidation of the Partnership all of which are described in our partnership agreement. Actions of our general partner which are made in its individual capacity will be made by BPHC, the sole member of BGL, rather than by our Board.

Directors and Executive Officers

The following table shows information for the directors and executive officers of BGL:

Name	Age	Position
Rolf A. Gafvert	54	Chief Executive Officer, President and Director
Jamie L. Buskill	43	Chief Financial Officer, Senior Vice-President and Treasurer
Brian A. Cody	50	Senior Vice President of Marketing and Chief Commercial Officer
John C. Earley Jr.	45	Senior Vice President of Operations
Michael E. McMahon	52	Senior Vice President and General Counsel, Secretary
Arthur L. Rebell	67	Director, Chairman of the Board
William R. Cordes	59	Director
Thomas E. Hyland	62	Director
Jonathan E. Nathanson	46	Director
Mark L. Shapiro	63	Director
Andrew H. Tisch	58	Director

All directors have served since 2005 except for Mr. Cordes who was elected to the Board in October 2006. All directors serve until replaced or upon their voluntary resignation.

Rolf A. Gafvert—Mr. Gafvert has been the Chief Executive Officer of BGL since February 2007 and President since February 2008. Prior to February 2007 he had been the Co-President of BGL since its inception in 2005. Mr. Gafvert has been the President of Gulf South since 2000 and has been employed by Gulf South or its predecessors since 1993. During that time he also served in various management roles for affiliates of Gulf South, including President of Koch Power, Inc., Managing Director of Koch Energy International and Vice President of Corporate Development for Koch Energy, Inc. Mr. Gafvert is on the Board of Directors of the Interstate Natural Gas Association of America.

Jamie L. Buskill—Mr. Buskill has been the Chief Financial Officer of BGL since its inception in 2005. Mr. Buskill is also the Vice President, Chief Financial Officer and Treasurer of Texas Gas. Mr. Buskill has been employed by Texas Gas in that capacity since Texas Gas was acquired by Boardwalk Pipelines in May 2003. Prior thereto he served in various management roles for Texas Gas and its affiliates since 1986, including Assistant Treasurer and Financial Reporting Manager from 1998 until May 2003.

Brian A. Cody— Mr. Cody has been the Chief Commercial Officer of BGL since March, 2007. Mr. Cody has served in various management roles for Gulf South including: Vice President of Business Development from 2006 to 2007, Chief Financial Officer from 2005 to 2006, Vice President of Long Term Marketing from 2003 to 2005 and Controller from 2000 to 2003 . He has been employed by Gulf South or its predecessors since 1987 and is a Certified Public Accountant.

John C. Earley Jr. —Mr. Earley has been the Senior Vice President of Operations of BGL since March 2007. Prior thereto he had been Senior Vice President of Operations for Gulf South since 2001. Mr. Earley has held various senior leadership roles prior to 2001 and has been employed by Gulf South or it predecessors since 1995.

Michael E. McMahon—Mr. McMahon has been the Senior Vice President and General Counsel of BGL since February 2007. Prior thereto he served as Senior Vice President and General Counsel of Gulf South since 2001. Mr. McMahon has been employed by Gulf South or its predecessors since 1989. Mr. McMahon also serves on the legal committees of Interstate Natural Gas Association of America and the American Gas Association.

Arthur L. Rebell—Mr. Rebell is a Senior Vice President at Loews. He has been employed by Loews in that capacity since 1998 and has been primarily responsible for investments, corporate strategy, mergers and acquisitions and corporate finance. Mr. Rebell also serves as a director for Diamond Offshore Drilling, Inc., a subsidiary of Loews.

William R. Cordes—Mr. Cordes retired as President of Northern Border Pipeline Company in April 2007. He had worked in the natural gas industry for more than 35 years, including as Chief Executive Officer of Northern Border Partners, LP and President of Northern Natural Gas Company and Transwestern Pipeline Company. Mr. Cordes is also a member of the Board for the Kayne Anderson Energy Development fund.

Thomas E. Hyland—Mr. Hyland was a partner in the global accounting firm of PricewaterhouseCoopers, LLP from 1980 until his retirement in July 2005.

Jonathan E. Nathanson—Mr. Nathanson is Vice President—Corporate Development of Loews. He has been employed by Loews in that capacity since 2001 and is responsible for mergers and acquisitions and corporate finance.

Mark L. Shapiro—Mr. Shapiro has been a private investor since 1998.

Andrew H. Tisch—Mr. Tisch has been Co-Chairman of the Board of Loews since January 2006 and is the Chairman of the Executive Committee and a member of the Office of the President of Loews. He has served as a director of Loews since 1985. Mr. Tisch also serves as a director of CNA Financial Corporation, a subsidiary of Loews, and is Chairman of the Board of K12 Inc.

Audit Committee

Our Board's Audit Committee presently consists of Thomas E. Hyland, Chairman, Mark L. Shapiro and William R. Cordes, each of whom is an independent director and satisfies the additional independence and other requirements for Audit Committee members provided for in the listing standards of the NYSE. The Board of Directors has determined that Mr. Hyland qualifies as an "audit committee financial expert," under Securities and Exchange Commission (SEC) rules.

The primary function of the Audit Committee is to assist our Board in fulfilling its responsibility to oversee management's conduct of our financial reporting process, including review of our financial reports and other financial information, our system of internal accounting controls, our compliance with legal and regulatory requirements, the qualifications and independence of our independent registered public accounting firm (independent auditors) and the performance of our internal audit function and independent auditors. The Audit Committee has sole authority to appoint, retain, compensate, evaluate and terminate our independent auditors and to approve all engagement fees and terms for our independent auditors.

Conflicts Committee

Under our partnership agreement, our Board must have a Conflicts Committee consisting of two or more independent directors. Our Conflicts Committee presently consists of Mark L. Shapiro, Chairman, Thomas E. Hyland and William R. Cordes. The primary function of the Conflicts Committee is to determine if the resolution of any conflict of interest with our general partner or its affiliates is fair and reasonable. Any matters approved by the Conflicts Committee will be conclusively deemed to be fair and reasonable, approved by all of the partners and not a breach by our general partner of any duties it may owe to our unitholders.

Executive Sessions of Non-Management Directors

Our Board's non-management directors, from time to time as such directors deem necessary or appropriate, meet in executive sessions without management participation. The Chairman of the Audit Committee and the Conflicts Committee alternate serving as the presiding director at these meetings.

Corporate Governance Guidelines and Code of Conduct

Our Board has adopted Corporate Governance Guidelines to guide it in its operation and a Code of Business Conduct and Ethics applicable to all of the officers and directors of BGL, including the principal executive officer, chief financial officer, principal accounting officer, and all of the directors, officers and employees of our subsidiaries. We intend to post changes to or waivers of this Code for BGL's principal executive officer, principal financial officer and principal accounting officer on our website.

Section 16(a) Beneficial Ownership Reporting Compliance

Section 16 of the Exchange Act requires our directors and executive officers, and persons who own more than 10.0% of a registered class of our equity securities, to file initial reports of ownership and reports of changes in ownership with the SEC. Such persons are required by SEC regulation to furnish us with copies of all Section 16(a) forms they file. Based solely on our review of the copies of such forms furnished to us and written representations from our executive officers and directors, we believe that all Section 16(a) filing requirements were met during 2007, in a timely manner, other than one late Form 3 filing for each of Messrs. Cody, Earley and McMahon and one late Form 4 filing for H. Dean Jones II and each of Messrs. Buskill, Cody, Cordes, Earley, Gafvert, Hyland, McMahon and Shapiro.

Item 11. Executive Compensation

Compensation Discussion and Analysis

Overview

The objective of our executive compensation program is to attract and retain highly qualified executive officers and motivate them to provide a high level of performance for the Partnership and our unitholders, including maintaining current levels of unitholder distributions and taking prudent steps to grow unitholder distributions. To meet this objective we have established a compensation policy for our executive officers which combines elements of base salary and cash and equity-based incentive compensation, as well as benefits. We have selected these elements and otherwise structured our executive compensation practices to align the interests of our executives with those of our unitholders and our general partner, improve retention of our executives and appropriately reward their performance both in the long and short term. In doing so, we may consider the executive compensation programs of other companies engaged in similar businesses to ours and historical compensation policies and practices of our operating subsidiaries, as well as applicable tax and accounting impacts of executive compensation, including the tax implications of providing equity-based compensation to our employees in light of our being a limited partnership.

As discussed elsewhere in this Report, our Board does not maintain a Compensation Committee. Therefore, the compensation for Rolf Gafvert our Chief Executive Officer (CEO), Jamie L. Buskill our Chief Financial Officer (CFO) and our three other most highly compensated executive officers (together with our former President, H. Dean Jones II, who has resigned as an officer and director in conjunction with his announced retirement that will be effective March 1, 2008), our “Named Executive Officers”, is reviewed with and is subject to the approval of our entire Board, with Mr. Gafvert not participating in those discussions with respect to his own compensation. Named Executive Officers are those officers whose compensation is required to be reported in accordance with Item 402, *Executive Compensation*, of SEC Regulation S-K rules.

The principal components of compensation for our Named Executive Officers are:

- base salary;
- annual incentive compensation awards, including cash bonuses and grants of phantom common units (Phantom Common Units) under our LTIP;
- annual grants of phantom general partner units (Phantom GP Units) under our SLTIP; and
- retirement, medical and related benefits.

In establishing the aggregate amount of compensation for our Named Executive Officers for a given year, we do not rely on formula-driven plans which could result in unreasonably high compensation levels. Instead, the primary factor in setting compensation is an evaluation of the individual's performance in the context of our overall performance for such year, particularly the individual’s contribution to our financial performance during the year, as well as the compensation paid to the individual in prior years. In light of the shortage of excellent management talent in our industry and our desire to retain our key executives, we may also review and consider compensation levels and types in other companies that are engaged in similar businesses to maintain an understanding of the market for executive talent. Based on these factors, we determine an overall level of compensation.

Base Salary

Our executive compensation policies have emphasized the incentive-based compensation elements discussed below. As a result, the base salaries of our executive officers generally have remained unchanged through the end of 2007, with modest adjustments made from year to year based on merit or other factors. Each year we review the overall mix of compensation to determine if we need to vary any one item of an executive’s compensation package.

Incentive Compensation – Cash Bonuses and Phantom Common Unit Awards

A significant portion of the compensation of our Named Executive Officers consists of an annual incentive compensation award, which is an aggregate dollar amount determined by our Board that is paid in part as a cash bonus and in part as an award of Phantom Common Units. In order to balance our goals of motivating our executives to consider long-term results for our unitholders and providing them with appropriate current cash compensation, we have targeted these compensation elements as approximately three-fourths cash bonus and one-fourth as an award of Phantom Common Units for our most senior executives.

Prior to the beginning of a year, the CEO proposes to the Board bonus targets including cash and equity components for the Partnership as a whole, based on meeting specific financial measures, operating goals and project milestones. At the end of the year, the CEO makes recommendations to the Board regarding amounts to pay both Named Executive Officers and other employees based on whether targets for the year were met and based upon the Named Executive Officers' individual performance and contributions to the Company. The CEO's compensation is determined by the Board based upon a similar appraisal of performance and contributions.

Since we are a limited partnership and our Named Executive Officers are employed by our operating subsidiaries, the executives would incur significant adverse individual tax consequences if they would own our units directly; for example by being taxed as a partner rather than as an employee. Furthermore, the ownership of units by our executives would negatively impact the tax status of our benefit plans. As a result, we have chosen to award our executives equity-based compensation in the form of Phantom Common Units, the economic value of which is directly tied to the value of our common units, but which do not confer any rights of ownership to the grantee. The value of a Phantom Common Unit is equal to the value of a common unit plus accumulated distributions made on such common unit since the award date and that value is paid to the executive by us in cash at the end of a vesting period if the executive is still employed on that date. Our Board has discretion to determine the amount, vesting schedule and certain other terms of awards under our LTIP.

The number of Phantom Common Units awarded to a Named Executive Officer is determined by dividing the dollar amount of such executive's incentive based compensation that has been allocated to such an award by the closing price of our common units on the NYSE on the date of grant. For example, if an executive is awarded $250,000 of incentive compensation, of which $60,000 is designated for an award of Phantom Common Units (the balance being paid as a cash bonus), and the closing price of our common units on the NYSE on the grant date is $30.00 per unit, the executive would be awarded 2,000 Phantom Common Units for that year.

The Phantom Common Units awarded to our Named Executive Officers vest 50.0% on the second anniversary of the grant date and 50.0% on the third anniversary of the grant date, and become payable in cash upon vesting. Since the value of the Phantom Common Units is tied directly to the price of our common units, and the amount of distributions made on those units during the vesting period, this element of compensation directly aligns the interests of our Named Executive Officers with those of our common unitholders. It also promotes retention because the awards would be forfeited if an employee were to resign prior to the vesting date.

We exceeded our financial and operational goals for 2007 and increased our distributions to unitholders in each quarter. As a result, we awarded the full amount of incentive compensation we had targeted for 2007 to our key employees including the Named Executive Officers, of which approximately 75.0% was paid as annual cash bonuses and 25.0% was awarded as Phantom Common Units. In making these awards, our Board considered the factors discussed above, with particular emphasis on the contributions made by the individual executives in 2007 to the success of the expansion projects we have undertaken which are described elsewhere in this Report, among other strategic goals and objectives.

Phantom GP Units

Our Board has also made awards of Phantom GP Units to our Named Executive Officers. These awards give the grantee an economic interest in the performance of our general partner, including our general partner's incentive distribution rights, but do not confer any right of ownership of our general partner to the grantee. Phantom GP Units provide the holder with an opportunity, subject to vesting, to receive a lump sum cash payment in an amount determined under a formula based on the amount of cash distributions made by us to our general partner during the four quarters preceding the vesting date and the implied yield on our common units, up to a maximum of $50,000 per unit.

These awards recognize and reward our Named Executive Officers based on our long term performance and encourage them to continue their employment with us since any awards would be forfeited if the executive is not employed by us on the vesting date. They also encourage our Named Executive Officers to carefully focus on long term returns to unitholders and our general partner when making management decisions. Since the value of these awards is directly linked to our performance and the value of our common units and of our general partner, they further align the interests of our Named Executive Officers with those of our unitholders.

We awarded an aggregate of 116 Phantom GP Units in December 2007, which vest in 4.0 years, to 21 of our key employees, of which 65 were awarded to our Named Executive Officers. In making these awards, our Board considered each grantee's overall performance, with particular emphasis on the contributions made by the individual executive to our expansion projects, among other strategic goals and objectives.

Employee Benefits

Each Named Executive Officer participates in benefit programs available generally to salaried employees of the operating subsidiary which employs such officer, including health and welfare benefits and a qualified defined contribution 401(k) plan that includes a dollar-for-dollar match on elective deferrals of up to 6.0% of eligible compensation within Internal Revenue Code (IRC) requirements. Certain Named Executive Officers participate in a defined contribution money purchase plan available to employees of Gulf South, while others participate in a defined benefit cash balance pension plan available to employees of Texas Gas, which includes a non-qualified restoration plan for amounts earned in excess of IRC limits for qualified retirement plans. Certain Named Executive Officers are also eligible for retiree medical benefits after reaching age 55 as part of a plan offered to other Texas Gas employees.

Equity Ownership Guidelines

As discussed above, our executives would suffer significant negative tax consequences by owning our units directly. As a result, we do not have a policy, nor any guidelines, regarding ownership of our equity by our management. We therefore seek to align the interests of management with our unitholders by granting the Phantom Common Units and Phantom GP Units.

Board of Directors Report on Executive Compensation

In fulfilling its responsibilities, our Board has reviewed and discussed the Compensation Discussion and Analysis with our management. Based on this review and discussion, the Board recommended that the Compensation Discussion and Analysis be included in this annual report on Form 10-K.

By the members of the Board of Directors:

William R. Cordes
Rolf A. Gafvert
Thomas E. Hyland
Jonathon E. Nathanson
Arthur L. Rebell, Chairman
Mark L. Shapiro
Andrew H. Tisch

Compensation Committee Interlocks and Insider Participation

As discussed above, our Board does not maintain a Compensation Committee. Our entire Board of Directors performs the functions of such a committee. None of our directors, except Mr. Gafvert, have been or are officers or employees of us or our subsidiaries. Mr. Gafvert participates in deliberations of our Board with regard to executive compensation generally, but does not participate in deliberations or Board actions with respect to his own compensation. None of our executive officers served as director or member of a compensation committee of another entity that has or has had an executive officer who served as a member of our Board during 2007 or 2006.

Summary of Executive Compensation

The following table shows a summary of total compensation earned by our Named Executive Officers during 2007 and 2006:

Summary Compensation Table

Name and Position	Year	Salary	Bonus (1)	Stock Awards (2)	Option Awards	Non-Equity Incentive Plan Compensation (3)	Change in Pension value and nonqualified deferred compensation earnings	All Other Compensation	Total
Rolf A. Gafvert:									
CEO (PEO)	2007	$ 323,365	$ 300,000	$ 175,253	-	$ 682,664	-	$ 35,360(4)	$ 1,516,642
	2006	240,000	300,000	112,944	-	183,442	-	32,149(4)	868,535
H. Dean Jones II: (10)									
	2007	326,534	275,000	80,013	-	401,786	$ 177,404(5)	31,099(5)	1,291,836
	2006	325,000	195,000	59,778	-	110,065	154,458(5)	24,432(5)	868,733
Jamie L. Buskill:									
CFO (PFO)	2007	225,000	225,000	36,092	-	302,679	46,602(6)	14,386(6)	849,759
	2006	225,000	100,000	26,196	-	87,011	40,333(6)	14,292(6)	492,832

SVPM	2007	228,846	175,000	59,288	-	364,137	-	23,107(7)	850,378
John C. Earley Jr.:									
SVPO	2007	226,154	175,000	73,447	-	326,116	-	23,681(8)	824,398
Michael E. McMahon:									
SVPGC	2007	216,346	125,000	59,288	-	297,545	-	28,938(9)	727,117

(1) Reflects cash amounts paid in 2008 and 2007 to the Named Executive Officers for services performed by them during 2007 and 2006.

(2) Represents compensation expense accrued for 2007 and 2006 related to Phantom Common Units granted in 2007, 2006 and 2005. The accruals were made pursuant to SFAS No. 123(R), *Share Based Payments*. See footnote (1) to the Grants of Plan-Based Awards table presented below.

(3) Represents compensation expense accrued for 2007 and 2006 related to Phantom GP Units granted in 2007 and 2006. The accruals were made pursuant to SFAS No. 123(R). See footnote (1) to the Grants of Plan-Based Awards table presented below.

(4) Includes for 2007: matching contributions under 401(k) plan ($13,500), employer contributions to the Gulf South Money Purchase Plan ($9,000), sale of vacation time ($6,250), club memberships ($4,781), imputed life insurance premiums, travel clubs and preferred parking; for 2006: matching contributions under 401(k) plan ($13,200), employer contributions to the Gulf South Money Purchase Plan ($8,800), club memberships ($6,508), physical medical examination reimbursement, preferred parking, sporting event tickets and imputed life insurance premiums.

(5) Includes for 2007: matching contributions under 401(k) plan ($13,500), club memberships ($7,200), salary continuation plan ($6,124), imputed life insurance premiums ($2,741) and tax gross-up on spouse travel; for 2006: matching contributions made under a 401(k) plan ($13,200), club memberships ($7,200), spouse travel, tax gross-up on spouse travel and imputed life insurance premiums. The total included in the change in pension value and nonqualified deferred compensation column for 2007 and 2006 includes the change in qualified retirement plan account balance ($64,897 and $60,562), interest and pay credits for the supplemental retirement plan ($101,028 and $83,935) and excess nonqualified deferred compensation plan earnings ($11,479 and $9,961).

(6) Includes for 2007: matching contributions under 401(k) plan ($13,500) and imputed life insurance premiums; for 2006: matching contributions made under a 401(k) plan ($13,200), spouse travel and imputed life insurance premiums. The total included in the change in pension value and nonqualified deferred compensation column for 2007 and 2006 includes the change in qualified retirement plan account balance ($31,188 and $28,675) and interest and pay credits for the supplemental retirement plan ($15,414 and $11,658).

(7) Includes for 2007: matching contributions under 401(k) plan ($13,500), employer contributions to the Gulf South Money Purchase Plan ($8,426), imputed life insurance premiums, travel clubs and preferred parking.

(8) Includes for 2007: matching contributions under 401(k) plan ($13,500), employer contributions to the Gulf South Money Purchase Plan ($9,000), imputed life insurance premiums, travel clubs and preferred parking.

(9) Includes for 2007: matching contributions under 401(k) plan ($8,481), sale of vacation time ($10,385), employer contributions to the Gulf South Money Purchase Plan ($8,654), imputed life insurance premiums, travel clubs and preferred parking.

(10) H. Dean Jones II has resigned as an officer and director in conjunction with his announced retirement that will be effective March 1, 2008.

Grants of Plan-Based Awards

The following table displays information regarding grants during 2007 and 2006 to our Named Executive Officers of plan-based awards, including Phantom GP Unit awards under our Strategic Long Term Incentive Plan and Phantom Common Unit awards under our Long Term Incentive Plan:

Grants of Plan-Based Awards

Michael E. McMahon:											
	12/14/07	-	-	450,000	-	-	-	3,266	-	-	100,000

(1) On July 24, 2006, our SLTIP became effective. The plan provides for the issuance of up to 500 Phantom GP Units to our key employees. Each Phantom GP Unit entitles the holder thereof, upon vesting, to a lump sum cash payment in an amount determined by a formula based on cash distributions made by us to our general partner during the four quarters preceding the vesting date and the implied yield on our common units, up to a maximum of $50,000 per unit. On December 14, 2007 Messrs. Gafvert, Buskill, Cody, Earley, and McMahon were awarded 25, 12, 10, 9 and 9 Phantom GP Units that have a 4.0 year vesting period. On December 20, 2006, Messrs. Gafvert, Jones and Buskill were awarded 25, 15 and 10 Phantom GP Units that have a 4.0 year vesting period. Concurrent with the approval of the Plan, on July 24, 2006, Messrs. Gafvert, Jones and Buskill were awarded 25, 15 and 12 Phantom GP Units that have a 3.5 year vesting period. The fair value of the awards was determined as of the date of grant and will be remeasured each quarter until settlement in accordance with the treatment of awards classified as liabilities prescribed in SFAS No. 123(R). The fair value at grant date of the December 14, 2007 grants, December 20, 2006 grants and July 24, 2006 grants were $50,000, $50,000 and $27,422, respectively, per GP Phantom Unit. The fair value of the awards will be recognized ratably over the vesting period. As of December 31, 2007, the remeasured fair value of each of the December 14, 2007, December 20, 2006 and July 24, 2006 grants was $50,000. See footnote (2) to the Outstanding Equity Awards at Fiscal Year –End table presented below. Note 9 in Item 8 of this Report contains more information regarding our SLTIP.

(2) Reflects the fair value at the date of grant of Phantom Common Units under our LTIP. The closing price of our common units on such date on the NYSE for 2007 was $30.62 and for 2006 was $31.12. Each such grant includes a tandem grant of Distribution Equivalent Rights (DERs); vests 50.0% on the second anniversary of the grant date and 50.0% on the third anniversary of the grant date; and will be payable to the grantee in cash upon vesting in an amount equal to the sum of the fair market value of the units (as defined in the plan) that vest on the vesting date plus the vested amount then credited to the grantee's DER account, less applicable taxes. Note 9 in Item 8 of this Report contains more information regarding our LTIP.

Outstanding Equity Awards at Fiscal Year-End

The table displayed below shows the total outstanding equity awards in the form of Phantom Common Units, awarded under our LTIP and held by our Named Executive Officers at December 31, 2007 and 2006:

Outstanding Equity Awards at Fiscal Year End

		Option Awards					Stock Awards			
Name	**Year**	**Number of Securities Underlying Unexercised Options (#) Exercisable**	**Number of Securities Underlying Unexercised Options (#) Unexercisable**	**Equity Incentive Plan Awards: Number of Securities Underlying Unexercised Unearned Options (#)**	**Option Exercise Price ($)**	**Option Expiration Date**	**Number of Shares or Units of Stock that Have Not Vested (#)(1)**	**Market Value of Shares or Units of Stock that Have not Vested ($) (2)**	**Equity Incentive Plan Awards: Number of Unearned Shares, Units or Other Rights that Have Not Vested (#)**	**Equity Incentive Plan Awards: Market or Payout Value of Unearned Shares, Units or Rights that Have Not Vested ($)**
Rolf A. Gafvert	2007	-	-	-	-	-	16,974	541,074	-	-
	2006	-	-	-	-	-	14,457	456,155	-	-
H. Dean Jones II	2007						4,712	152,929	-	-
	2006	-	-	-	-	-	6,854	216,888	-	-
Jamie L. Buskill	2007						2,142	69,470	-	-
	2006	-	-	-	-	-	3,079	97,366	-	-
Brian A. Cody	2007	-	-	-	-	-	7,148	226,112	-	-
John C. Earley Jr.	2007	-	-	-	-	-	7,817	248,309	-	-
Michael E. McMahon	2007	-	-	-	-	-	7,148	226,112	-	-

(1) On December 14, 2007, Messrs. Gafvert, Cody, Earley and McMahon were awarded additional grants of Phantom Common Units in the amount of 6,532, 3,266, 3,266 and 3,266. On the December 14, 2007 grant date the closing sale price on the NYSE was $30.62. On December 20, 2006, Messrs. Gafvert, Jones and Buskill were awarded additional grants of Phantom Common Units in the amount of 6,427, 2,571 and 1,205. On the December 20, 2006 grant date the closing sale price on the NYSE was $31.12. On December 15, 2005, Phantom Common Units were awarded to Gafvert, Jones and Buskill in the amount of 8,030, 4,283 and 1,874. The vesting period is 3.5 years. On the grant date, the closing sales price on the common units on the NYSE was $18.68.

(2) The market value per share reported in the above table is based on the NYSE last sale price on December 31, 2007 of $31.10 and December 29, 2006 of $30.82. Included in the market value is the accumulated non-vested amounts related to the DER that were tandem grants to the Phantom Common Units referred to in footnote (1) above. Such DER amounts for Messrs. Gafvert, Jones, Buskill, Cody, Earley and McMahon were $13,183, $6,386, $2,854, $3,809, $5,200 and $3,809 in 2007 and for Messrs. Gafvert, Jones and Buskill were $10,590, $5,648 and $2,471 in 2006

Option Exercises and Stock Vested

All of the equity-based awards granted to our Named Executive Officers have been in the form of Phantom Common Units. We have not issued any awards in the form of options on our units to any employees including Named Executive Officers.

		Options Awards		Stock Awards (1)	
Name	**Year**	**Number of Shares Acquired on Exercise (#)**	**Value Realized on Exercise ($)**	**Number of Shares Acquired on Vesting (#)**	**Value Received on Vesting ($)**
Rolf A. Gafvert	2007	-	-	4,015	135,200
H. Dean Jones II	2007			2,142	72,129
Jamie L. Buskill	2007			937	31,552
Brian A. Cody	2007	-	-	669	22,528
John C. Earley Jr.	2007	-	-	1,339	45,090
Michael E. McMahon	2007	-	-	669	22,528

(1) All vested awards were paid out as a lump sum cash payment and at no time were units issued to or owned by the Named Executive Officers.

Pension Benefits

The table displayed below shows the present value of accumulated benefits for our Named Executive Officers. Pension benefits include both a qualified defined benefit cash balance plan and a non-qualified defined benefit supplemental cash balance plan (SRP).

Pension Benefits

Name	**Year**	**Plan Name**	**Number of Years Credited Service (#)**	**Present Value of Accumulated Benefit ($)**	**Payments During 2007 ($)**	**Payments During 2006 ($)**
H. Dean Jones II	2007	TGRP	27.1	535,760	-	-
		SRP	27.1	677,339	-	-
	2006	TGRP	26.1	470,863	-	-
		SRP	26.1	576,311	-	-
Jamie L. Buskill	2007	TGRP	21.3	173,837	-	-
		SRP	21.3	34,293	-	-
	2006	TGRP	20.3	142,649	-	-
		SRP	20.3	18,879	-	-

The Texas Gas Retirement Plan (TGRP) is a qualified defined benefit cash balance plan. Although this plan was closed to new participants in November 2006, most of our Texas Gas employees are eligible to participate in the TGRP. Participants in the plan vest after five years of credited service. One year of vesting service is earned for each calendar year in which a participant completes 1,000 hours of service.

Eligible compensation used in calculating the plan's annual compensation credits include total salary and bonus paid. The credit rate on all eligible compensation is 4.5% prior to age 30, 6.0% age 30 through 39, 8.0% age 40 through 49 and 10.0% age 50 and older. Additional credit rates on annual pay above Social Security Wage Base is 1.0%, 2.0%, 3.0% and 5.0% for the same age categories. On April 1, 1998, the TGRP was converted to a cash balance plan. Credited service up to March 31, 1998 is eligible for a past service credit of 0.3%. Additionally, participants may qualify for an early retirement subsidy if their combined age and service at March 31, 1998, totaled at least 55 points. The amount of the subsidy is dependent on the number of points and the participant's age of retirement. Upon retirement, the retiree may choose to receive their benefit from a variety of payment options which include a single life annuity, joint and survivor annuity options and a lump-sum cash payment. Joint and survivor benefit elections serve to reduce the amount of the monthly benefit payment paid during the retiree's life but the monthly payments continue for the life of the survivor after the death of the retiree. The TGRP has an early retirement provision that allows vested employees to retire early at age 55. At December 31, 2007, Mr. Jones was eligible for the age 55 early retirement provisions of the TGRP.

The credited years of service appearing in the table above are the same as actual years of service. No payments were made to the Named Executive Officers during 2007 or 2006. The present value of accumulated benefits payable to each of the Named Executive Officers, including the number of years of service credited to each Named Executive Officer, is determined using assumptions consistent with the assumptions used for financial reporting. Interest is credited to the cash balance at December 31, 2007, commencing in the year 2008, using a quarterly compounding up to the normal retirement date of age 65. Salary and bonus pay credits, up to the IRC allowable limits, increase the accumulated cash balance in the year earned. Credited interest rates used to determine the accumulated cash balance at the normal retirement date as of December 31, 2007, 2006, and 2005 were 4.79%, 4.85% and 4.47% and for future years, 4.5%, 4.25%, and 4.125%. The future normal retirement date accumulated cash balance is then discounted using an interest rate at December 31, 2007, 2006 and 2005 of 6.0%, 5.75% and 5.625%. The increase in the present value of accumulated benefit for the TGRP between December 31, 2007 and 2006 of $64,897 for Mr. Jones and $31,188 for Mr. Buskill is reported as compensation in the Summary Compensation Table above. The increase in the present value of accumulated benefit for the TGRP between December 31, 2006 and 2005 of $60,562 for Mr. Jones and $28,675 for Mr. Buskill is reported as compensation in the Summary Compensation Table above.

The Texas Gas SRP is a non-qualified defined benefit cash balance plan that provides supplemental retirement benefits for each Named Executive Officer for earnings that exceed the IRC compensation limitations for qualified defined benefit plans. The present value of accumulated benefit is calculated in the same manner as for TGRP. The increase in the present value of accumulated benefit for the SRP between December 31, 2007 and 2006 of $101,028 for Mr. Jones and $15,414 for Mr. Buskill is reported as compensation in the Summary Compensation Table above. The increase in the present value of accumulated benefit for the SRP between December 31, 2006 and 2005 of $83,935 for Mr. Jones and $11,658 for Mr. Buskill is reported as compensation in the Summary Compensation Table above.

Nonqualified Deferred Compensation

The following table shows nonqualified deferred compensation plan information for our Named Executive Officers. We currently do not have a nonqualified deferred compensation plan that allows for current or future deferrals of compensation. The amounts shown in the table are related to the Texas Gas Salary Continuation Plan that is closed to new participants and compensation deferrals:

Nonqualified Deferred Compensation (1)

Name	Year	Executive Contributions ($)	Registrant Contributions ($)	Aggregate Earnings ($)	Aggregate Withdrawals/ Distributions ($)	Aggregate Balance ($)
H. Dean Jones II	2007	-	-	26,313	-	275,969
	2006	-	-	23,524	-	249,656

(1) The Salary Continuation Plan became closed to new participants and compensation deferrals in 1995. The only activity in the plan is the addition of earnings on individual account balances and any withdrawals from account balances. Earnings on the deferred compensation balances are computed at the prime rate of interest plus 2.0%, compounded monthly. Aggregate earnings in 2007 include $11,479 and in 2006 include $9,961 reported in the Summary Compensation Table above.

Potential Payments Upon Termination or Change-in-Control

We have made grants of Phantom Common Units and Phantom GP Units, subject to vesting, to each of our Named Executive Officers, as discussed elsewhere in this Report. Each of the foregoing grants will vest immediately and become payable to the executive in cash upon a change of control of us, as defined in the applicable plan, or upon the termination of the executive's employment with us and our affiliates by reason of death, disability, retirement or termination by us other than for cause (as defined in such plans); provided, that with respect to the vesting of Phantom GP Units, the minimum distribution amount per unit (as defined in the applicable grant agreements) must have been met for the four consecutive calendar quarters ending on or immediately preceding such termination of employment. Assuming that a termination or change of control event resulting in accelerated vesting had occurred as of December 31, 2007, the Named Executive Officer (i) would be entitled to payment for each Phantom Common Unit held as of such date in an amount equal to $31.10, being the closing price of a common unit on such date on the NYSE, plus the distribution equivalent rights accumulated for such Phantom Common Unit from the date of grant; and (ii) would not be entitled to any payment on account of Phantom GP Units since the Minimum Distribution Amount was not met as of such date for any outstanding Phantom GP Units.

Director Compensation

Each director of BGL who is not an officer or employee of us, our subsidiaries, our general partner or an affiliate of our general partner is paid an annual cash retainer of $35,000 ($40,000 for the chair of the Audit Committee), payable in equal quarterly installments, $1,000 for each Board meeting attended which is not a regularly scheduled meeting, and an annual grant of 500 of our common units. Directors who are officers or employees of us, our subsidiaries, our general partner or an affiliate of our general partner do not receive the compensation described above. All directors are reimbursed for out-of-pocket expenses they incur in connection with attending Board and committee meetings and will be fully indemnified by us for actions associated with being a director to the extent permitted under Delaware law. The following table displays information related to director compensation for 2007:

Name	Fees Earned or Paid in Cash ($) (1)	Stock Awards ($) (3)	Option Awards ($)	Non-Equity Incentive Plan Compensation ($)	Change in Pension Value and Nonqualified Deferred Compensation Earnings	All Other Compensation including perquisites ($)	Total ($)
William R. Cordes	49,000	18,305	-	-	-	-	67,305
Thomas E. Hyland	56,000(2)	18,305	-	-	-	-	74,305
Mark L. Shapiro	50,000	18,305	-	-	-	-	68,305

(1) Represents amounts paid in cash for 2007.
(2) Chairman of Audit Committee.
(3) On March 5, 2007, Messrs. Cordes, Hyland and Shapiro were each granted 500 common units. The units were purchased from the NYSE on February 27, 2007 at a unit price of $36.61.

Item 12. Security Ownership of Certain Beneficial Owners and Management

The following table sets forth certain information, at February 15, 2008, as to the beneficial ownership of our common and subordinated units by beneficial holders of 5.0% or more of either such class of units, each member of our Board, each of the Named Executive Officers and all of our executive officers and directors as a group, based on data furnished by them:

Name of Beneficial Owner	Common Units Beneficially Owned	Percentage of Common Units Beneficially Owned (1)	Subordinated Units Beneficially Owned	Percentage of Subordinated Units Beneficially Owned (1)	Percentage of Total Equity Securities Beneficially Owned
Jamie L. Buskill	-	-	-	-	-
Brian A. Cody	-	-	-	-	-
William R. Cordes	500	*	-	-	-
John C. Earley Jr.	-	-	-	-	-
Rolf A. Gafvert	-	-	-	-	-
Thomas E. Hyland	6,000	*	-	-	-
Michael E. McMahon	-	-	-	-	-
Jonathan E. Nathanson	15,000	*	-	-	-
Arthur L. Rebell	39,083(2)	*	-	-	-
Mark L. Shapiro	11,000	*	-	-	-
Andrew H. Tisch	18,550(3)	*	-	-	-
All directors and executive officers as a group	90,133	*	-	-	-
BPHC (4)	53,256,122	58.75%	33,093,878	100.00%	70.38%
Loews Corporation (4)	53,256,122	58.75%	33,093,878	100.00%	70.38%

*Represents less than 1.0% of the outstanding common units

(1) As of February 15, 2008, we had 90,656,122 common units and 33,093,878 subordinated units issued and outstanding.

(2) 33,083 of these units are owned by Arebell, LLC, a limited liability company controlled by Mr. Rebell.

(3) Represents one quarter of the number of units owned by a general partnership in which a one-quarter interest is held by a trust of which Mr. Tisch is managing trustee.

(4) Loews Corporation is the parent company of BPHC and may, therefore, be deemed to beneficially own the units held by BPHC. The address of BPHC is 9 Greenway Plaza, Suite 2800, Houston, TX 77046. The address of Loews is 667 Madison Avenue, New York, New York 10065.

Securities Authorized for Issuance Under Equity Compensation Plans

In 2005, our Board adopted the Boardwalk Pipeline Partners, LP Long-Term Incentive Plan. The following table provides certain information as of December 31, 2007, with respect to this plan:

Plan category	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted-average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plan (excluding securities reflected in the first column)
Equity compensation plans approved by security holders	-	N/A	-
Equity compensation plans not approved by security holders	-	N/A	3,522,500

Note 9 in Item 8 of this Report contains more information regarding our equity compensation plan.

Item 13. Certain Relationships and Related Transactions, and Director Independence

It is our Board's policy that any transaction, regardless of the size or amount involved, involving us or any of our subsidiaries in which any related person had or will have a direct or indirect material interest shall be reviewed by, and shall be subject to approval or ratification by our Audit Committee. "Related person" means our general partner and its directors and executive officers, holders of more than 5.0% of our units, and in each case, their "immediate family members," including any child, stepchild, parent, stepparent, spouse, sibling, mother-in-law, father-in-law, son-in-law, daughter-in-law, brother-in-law, or sister-in-law, and any person (other than a tenant or employee) sharing their household. In order to effectuate this policy, our General Counsel reviews all such transactions and reports thereon to the Audit Committee for its consideration. Our General Counsel also determines whether any such transaction presents a potential conflict of interest under our partnership agreement and, if so, presents the transaction to our Conflicts Committee for its consideration. See Note 1 and Note 14 in Item 8 of this Report for a description of certain related party transactions.

Our Independent Directors

Our Board has determined that Thomas E. Hyland, Mark L. Shapiro and William R. Cordes are independent directors under the listing standards of the NYSE. Our Board considered all relevant facts and circumstances and applied the independence guidelines described below in determining that none of these directors has any material relationship with us, our management, our general partner or its affiliates or our subsidiaries.

Our Board has established guidelines to assist it in determining director independence. Under these guidelines, a director would not be considered independent if any of the following relationships exists:

(i) during the past three years the director has been an employee, or an immediate family member has been an executive officer, of us;

(ii) the director or an immediate family member received, during any twelve month period within the past three years, more than $100,000 in direct compensation from us, excluding director and committee fees, pension payments and certain forms of deferred compensation;

(iii) the director is a current partner or employee or an immediate family member is a current partner of a firm that is our internal or external auditor, or an immediate family member is a current employee of such a firm and participates in the firm's audit, assurance or tax compliance (but not tax planning) practice or, within the last three years, the director or an immediate family member was a partner employee of such a firm and personally worked on our audit within that time;

(iv) the director or an immediate family member has at any time during the past three years been employed as an executive officer of another company where any of our present executive officers at the same time serves or served on that company's compensation committee; or

(v) the director is a current employee, or an immediate family member is a current executive officer, of a company that has made payments to, or received payments from, us for property or services in an amount which, in any of the last three years, exceeds the greater of $1.0 million, or 2.0% of the other company's consolidated gross revenues.

Our Board has appointed an Audit Committee comprised solely of independent directors. The NYSE does not require a listed limited partnership, or a listed company that is majority-owned by another listed company, such as us, to have a majority of independent directors on its board of directors or to maintain a compensation or nominating/corporate governance committee. In reliance on these exemptions, our Board is not comprised of a majority of independent directors, nor do we maintain a compensation or nominating/corporate governance committee.

Item 14. Principal Accounting Fees and Services

Audit Fees and Services

The following table presents fees billed by Deloitte & Touche LLP and its affiliates for professional services rendered to us and our subsidiaries in 2007 and 2006 by category as described in the notes to the table (in thousands):

	2007	2006
Audit fees (1)	$ 2,216	$ 1,513
Audit related fees (2)	514	553
Tax fees (3)	2	2
Total	$ 2,732	$ 2,068

(1) Includes the aggregate fees and expenses for annual financial statement audit and quarterly financial statements reviews.

(2) Includes the aggregate fees and expenses for services that were reasonably related to the performance of the financial statement audits or reviews described above and not included under "Audit Fees" above, including, principally, consents and comfort letters, audits of employee benefits plans, Sarbanes-Oxley implementation and other potential acquisitions.

(3) Includes the aggregate fees and expenses for tax professional education services.

Auditor Engagement Pre-Approval Policy

In order to assure the continued independence of our independent auditor, currently Deloitte & Touche LLP, the Audit Committee has adopted a policy requiring its pre-approval of all audit and non-audit services performed for us and our subsidiaries by the independent auditor. Under this policy, the Audit Committee annually pre-approves certain limited, specified recurring services which may be provided by Deloitte & Touche, subject to maximum dollar limitations. All other engagements for services to be performed by Deloitte & Touche must be specifically pre-approved by the Audit Committee, or a designated committee member to whom this authority has been delegated.

Since the formation of the Audit Committee and its adoption of this policy in November 2005, the Audit Committee, or a designated member, has pre-approved all engagements by us and our subsidiaries for services of Deloitte & Touche, including the terms and fees thereof, and the Audit Committee concluded that all such engagements were compatible with the continued independence of Deloitte & Touche in serving as our independent auditor.

PART IV

Item 15. Exhibits and Financial Statement Schedules

(a) 1. Financial Statements

Included in Item 8 of this report:

Reports of Independent Registered Public Accounting Firm

Consolidated Balance Sheets at December 31, 2007 and 2006

Consolidated Statements of Income for the years ended December 31, 2007, 2006 and 2005

Consolidated Statements of Cash Flows for the years ended December 31, 2007, 2006 and 2005

Consolidated Statements of Changes in Member's Equity and Partners' Capital for the years ended December 31, 2007, 2006 and 2005

Consolidated Statements of Comprehensive Income for the years ended December 31, 2007, 2006 and 2005

Notes to Consolidated Financial Statements

(a) 2. Financial Statement Schedules

Valuation and Qualifying Accounts

The following table presents those accounts that have a reserve as of December 31, 2007, 2006 and 2005 and are not included in specific schedules herein. These amounts have been deducted from the respective assets on the Consolidated Balance Sheets (in thousands):

Description	Balance at Beginning of Period	Charged to Costs and Expenses	Other Additions (Recoveries)	Deductions (Write-offs)	Balance at End of Period
Allowance for doubtful accounts:					
2007	$ 2,610	$ 2,706	$ (4,657)	$ (226)	$ 433
2006	730	2,053	-	(173)	2,610
2005	174	745	(187)	(2)	730
Inventory obsolescence:					
2007	$ 33	$ -	$ 86	$ (33)	$ 86
2006	-	33	-	-	33
2005	201	-	11	(212)	-

(a) 3. Exhibits

The following documents are filed as exhibits to this report:

Exhibit Number	Description
3.1	Certificate of Limited Partnership of Boardwalk Pipeline Partners, LP (Incorporated by reference to Exhibit 3.1 to the Registrant's Registration Statement on Form S-1, Registration No. 333-127578, filed on August 16, 2005).
3.2	Second Amended and Restated Agreement of Limited Partnership of Boardwalk Pipeline Partners, LP dated as of September 19, 2006. (Incorporated by reference to Exhibit 3.1 to Boardwalk Pipeline Partners, LP Current Report on Form 8-K filed on September 25, 2006).
3.3	Certificate of Limited Partnership of Boardwalk GP, LP (Incorporated by reference to Exhibit 3.3 to the Registrant's Registration Statement on Form S-1, Registration No. 333-127578, filed on August 16, 2005).
3.4	Agreement of Limited Partnership of Boardwalk GP, LP (Incorporated by reference to Exhibit 3.4 to Amendment No. 1 to the Registrant's Registration Statement on Form S-1, Registration No. 333-127578, filed on September 22, 2005).
3.5	Certificate of Formation of Boardwalk GP, LLC (Incorporated by reference to Exhibit 3.5 to the Registrant's Registration Statement on Form S-1, Registration No. 333-127578, filed on August 16, 2005).
3.6	Amended and Restated Limited Liability Company Agreement (Incorporated by reference to Exhibit 3.6 to Amendment No. 4 to Registrant's Registration Statement on Form S-1, Registration No. 333-127578, filed on October 31, 2005).
10.1	Amended and Restated Revolving Credit Agreement, dated as of June 29, 2006, among Boardwalk Pipelines, LP, Boardwalk Pipeline Partners, LP, the several banks and other financial institutions or entities parties to the agreement as lenders, the issuers party to the agreement, Wachovia Bank, National Association., as administrative agent for the lenders and the issuers, Citibank, N.A., as syndication agent, JPMorgan Chase Bank, N.A., Deutsche Bank Securities, Inc. and Union Bank of California, N.A., as co-documentation agents, and Wachovia Capital Markets LLC and Citigroup Global Markets Inc., as joint lead arrangers and joint book managers (Incorporated by reference to Exhibit 10.1 to the Registrant's Current Report on Form 8-K filed on July 5, 2006).
10.2	Amendment No. 1 to Amended and Restated Revolving Credit Agreement, dated as of April 2, 2007, among the Registrant, Boardwalk Pipelines, LP, Texas Gas Transmission, LLC and Gulf South Pipeline Company, LP, each a wholly-owned subsidiary of the Registrant, as Borrowers, and the agent and lender parties identified therein (Incorporated by reference to Exhibit 10.1 to the Registrant's Current Report on Form 8-K filed on April 5, 2007).
10.3	Amendment No. 2 to Amended and Restated Revolving Credit Agreement, dated as of November 27, 2007, among the Registrant, Boardwalk Pipelines, LP, Texas Gas Transmission, LLC and Gulf South Pipeline Company, LP, and the agent and lender parties identified therein (Incorporated by reference to Exhibit 10.1 to the Registrant's Current Report on Form 8-K filed on November 29, 2007).
10.4	Contribution, Conveyance and Assumption Agreement, dated as of November 15, 2005, by and among Boardwalk Pipelines Holding Corp., Boardwalk GP, LLC, Boardwalk Pipeline Partners, LP, Boardwalk Operating GP, LLC, Boardwalk GP, LP, and Boardwalk Pipelines, LLC (Incorporated by reference to Exhibit 10.1 to the Registrant's Current Report on Form 8-K filed on November 18, 2005).
10.5	Indenture dated July 15, 1997, between Texas Gas Transmission Corporation (now known as Texas Gas Transmission, LLC) and The Bank of New York, as Trustee (Incorporated by reference to Exhibit 4.1 to Texas Gas Transmission Corporation's Registration Statement on Form S-3, Registration No. 333-27359, filed on May 19, 1997).
10.6	Indenture dated as of May 28, 2003, between TGT Pipeline, LLC and The Bank of New York, as Trustee (Incorporated by reference to Exhibit 3.6 to TGT Pipeline, LLC's (now known as Boardwalk Pipelines, LP) Registration Statement on Form S-4, Registration No. 333-108693, filed on September 11, 2003).

10.7	Indenture dated as of May 28, 2003, between Texas Gas Transmission, LLC and The Bank of New York, as Trustee (Incorporated by reference to Exhibit 3.5 to Boardwalk Pipelines, LLC's (now known as Boardwalk Pipelines, LP) Registration Statement on Form S-4, Registration No. 333-108693, filed on September 11, 2003).
10.8	Indenture dated as of January 18, 2005 between TGT Pipeline, LLC and The Bank of New York, as Trustee, (Incorporated by reference to Exhibit 10.1 to TGT Pipeline, LLC's (now known as Boardwalk Pipelines, LP) Current Report on Form 8-K filed on January 24, 2005).
10.9	Indenture dated as of January 18, 2005, between Gulf South Pipeline Company, LP and The Bank of New York, as Trustee (Incorporated by reference to Exhibit 10.2 to Boardwalk Pipelines, LLC's (now known as Boardwalk Pipelines, LP) Current Report on Form 8-K filed on January 24, 2005).
10.10	Indenture dated as of November 21, 2006, between Boardwalk Pipelines, LP, as issuer, the Registrant, as guarantor, and The Bank of New York Trust Company, N.A., as Trustee (Incorporated by reference to Exhibit 4.1 to the Registrant's Current Report on Form 8-K filed on November 22, 2006).
10.11	Indenture dated August 17, 2007 between Gulf South Pipeline Company, LP and the Bank of New York Trust Company, N.A. therein (Incorporated by reference to Exhibit 4.1 to the Registrant's Current Report on Form 8-K filed on August 17, 2007).
10.12	Indenture dated August 17, 2007 between Gulf South Pipeline Company, LP and the Bank of New York Trust Company, N.A. (Incorporated by reference to Exhibit 4.2 to the Registrant's Current Report on Form 8-K filed on August 17, 2007).
10.13	Services Agreement, dated as of May 16, 2003 by and between Loews Corporation and Texas Gas Transmission, LLC. (Incorporated by reference to Exhibit 10.8 to Amendment No. 3 to the Registrant's Registration Statement on Form S-1, Registration No. 333-127578, filed on October 24, 2005). (1)
10.14	Boardwalk Pipeline Partners, LP Long-Term Incentive Plan (Incorporated by reference to Exhibit 10.9 to Amendment No. 4 to the Registrant's Registration Statement on Form S-1, Registration No. 333-127578, filed on October 31, 2005).
10.15	Form of Phantom Unit Award Agreement under the Boardwalk Pipeline Partners, LP Long-Term Incentive Plan (Incorporated by reference to Exhibit 10.10 to the Registrant's 2005 Annual Report on Form 10-K filed on March 16, 2006).
10.16	Boardwalk Pipeline Partners, LP Strategic Long Term Incentive Plan (Incorporated by reference to Exhibits 10.1 and 10.2 to the Registrant's Current Report on Form 8-K filed on July 28, 2006).
10.17	Form of GP Phantom Unit Award Agreement under the Boardwalk Pipeline Partners, LP Strategic Long Term Incentive Plan (Incorporated by reference to Exhibits 10.1 and 10.2 to the Registrant's Current Report on Form 8-K filed on July 28, 2006).

I, Rolf A. Gafvert, certify that:

1) I have reviewed this report on Form 10-K of Boardwalk Pipeline Partners, LP;

2) Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3) Based on my knowledge, the consolidated financial statements, and other financial information included in this report, fairly present in all material respects the balance sheets, statements of income and cash flows of the registrant as of, and for, the periods presented in this report;

4) The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
   a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5) The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors :
   a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
   b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

TABLE OF CONTENTS

In this report, unless the context requires otherwise, references to "we," "us," "our," or the "Partnership" are intended to mean Enbridge Energy Partners, L.P. and its consolidated subsidiaries. This Quarterly Report on Form 10-Q contains forward-looking statements. These forward-looking statements are identified as any statement that does not relate strictly to historical or current facts. They use words such as "anticipate," "believe," "continue," "estimate," "expect," "forecast," "intend," "may," "plan," "position," "projection," "strategy," "could," "should," "would," or "will" or the negative of those terms or other variations of them or by comparable terminology. In particular, statements, expressed or implied, concerning future actions, conditions or events or future operating results or the ability to generate revenue, income or cash flow or to make distributions are forward-looking statements. Forward-looking statements are not guarantees of performance. They involve risks, uncertainties and assumptions. Future actions, conditions or events and future results of operations may differ materially from those expressed in these forward-looking statements. Many of the factors that will determine these results are beyond our ability to control or predict. For additional discussion of risks, uncertainties and assumptions, see "Risk Factors" included in Part I, Item 1A of our Annual Report on Form 10-K for the fiscal year ended December 31, 2007 and in Part II, Item 1A of our quarterly reports on Form 10-Q.

ENBRIDGE ENERGY PARTNERS, L.P.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)

1. BASIS OF PRESENTATION

The accompanying unaudited interim consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America for interim consolidated financial information and with the instructions to Form 10-Q and Rule 10-01 of Regulation S-X. Accordingly, they do not include all the information and footnotes required by accounting principles generally accepted in the United States of America for complete consolidated financial statements. In the opinion of management, they contain all adjustments, consisting only of normal recurring adjustments, which management considers necessary to present fairly our financial position as of September 30, 2008 and December 31, 2007; the results of operations for the three and nine month periods ended September 30, 2008 and 2007; and our cash flows for the nine month periods ended September 30, 2008 and 2007. We derived the Consolidated Statement of Financial Position as of December 31, 2007, from the audited financial statements included in our 2007 Annual Report on Form 10-K. The results of operations for the three and nine month periods ended September 30, 2008, should not be taken as indicative of the results to be expected for the full year due to seasonality of portions of the natural gas business, timing and completion of our construction projects, maintenance activities and the impact of forward natural gas prices and differentials on certain derivative financial instruments that are accounted for using mark-to-market accounting. Our interim consolidated financial statements should be read in conjunction with our consolidated financial statements and notes thereto presented in our Annual Report on Form 10-K for the fiscal year ended December 31, 2007.

Comparative Amounts

We have made reclassifications to the amounts reported in our prior year consolidated statement of financial position and our consolidated statements of cash flows to conform to our current year presentation. We reclassified $2.8 million of "Environmental liabilities" to "Other long-term liabilities" in our December 31, 2007 consolidated statement of financial position. We also reclassified $1.8 million for changes in "Environmental liabilities" to "Other" under the operating section of our consolidated statements of cash flows. In addition, we reclassified $3.5 million for changes in the balance of "Current income tax payable" to "Property and other taxes payable" on our consolidated statements of cash flows.

2. NET INCOME PER LIMITED PARTNER UNIT

Net income per limited partner unit is computed by dividing net income, after we deduct our allocations to our general partner, Enbridge Energy Company, Inc. (the "General Partner"), by the weighted average number of our limited partner units outstanding. The General Partner's allocation is equal to an amount based upon its general partner interest, adjusted to reflect an amount equal to its incentive distributions and an amount required to reflect depreciation on the General Partner's historical

Table of Contents

ENBRIDGE ENERGY PARTNERS, L.P.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (Continued)

cost basis for assets contributed on formation of the Partnership. We have no dilutive securities. Net income per limited partner unit was determined as follows:

	Three months ended September 30,		Nine months ended September 30,	
	2008	2007	2008	2007
	(unaudited; in millions, except per unit amounts)			
Net income	$ 119.4	$ 77.3	$ 281.3	$ 185.0
Allocations to the General Partner:				
Net income allocated to the General Partner	(2.4)	(1.5)	(5.6)	(3.7)
Incentive distributions allocated to the General Partner	(11.7)	(7.9)	(30.1)	(22.6)
Historical cost depreciation adjustments	—	—	(0.1)	(0.1)
	(14.1)	(9.4)	(35.8)	(26.4)
Net income allocable to limited partner units	$ 105.3	$ 67.9	$ 245.5	$ 158.6
Net income per limited partner unit (basic and diluted)	$ 1.09	$ 0.75	$ 2.58	$ 1.87
Weighted average limited partner units outstanding	96.9	90.0	95.3	84.8

3. CASH AND CASH EQUIVALENTS

We extinguish liabilities when a creditor has relieved us of our obligation, which occurs when our financial institution honors a check that the creditor has presented for payment. Accordingly, obligations for which we have issued check payments that have not yet been presented to the financial institution in the amounts of approximately $33.4 million at September 30, 2008 and $38.5 million at December 31, 2007, are included in "Accounts payable and other" on our consolidated statements of financial position.

In September 2008, following the bankruptcy filing by Lehman Brothers Bank, FSB, as discussed in Note 6, Bank of America, N.A., as administrative agent to our Credit Facility, required us to post a certificate of deposit issued by Bank of America, N.A. for $10.0 million as collateral against the letters of credit outstanding on our Credit Facility, which we have presented as "Restricted cash" on our consolidated statements of financial position.

4. INVENTORY

Inventory is comprised of the following:

	September 30, 2008	December 31, 2007
	(in millions)	
Materials and supplies	$ 3.9	$ 3.9
Liquids inventory	27.7	6.7
Natural gas and natural gas liquids inventory	169.3	100.0
	$ 200.9	$ 110.6

The cost of natural gas on our consolidated statements of income includes charges totaling $8.3 million for the three and nine months ended September 30, 2008 and $4.5 million for the three and nine months ended September 30, 2007 that we recorded to reduce the cost basis of our natural gas inventory to reflect market value.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (Continued)

5. PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment is comprised of the following:

	September 30, 2008	December 31, 2007
	(in millions)	
Land	$ 17.6	$ 14.3
Rights-of-way	417.5	345.8
Pipelines	4,167.7	2,703.2
Pumping equipment, buildings and tanks	984.9	854.7
Compressors, meters, and other operating equipment	616.2	536.1
Vehicles, office furniture and equipment	151.9	123.3
Processing and treating plants	297.9	200.4
Construction in progress	943.6	1,813.9
Total property, plant and equipment	7,597.3	6,591.7
Accumulated depreciation	(1,190.7)	(1,036.8)
Property, plant and equipment, net	$ 6,406.6	$ 5,554.9

6. DEBT

Credit Facility

In March 2008, we requested and received approval from the parties named as lenders to our Credit Facility for a one year extension of the maturity date from April 4, 2012 to April 4, 2013.

At September 30, 2008, we had $386.2 million outstanding under our Credit Facility at a weighted average interest rate of 3.82% and letters of credit totaling $101.2 million. The amounts we may borrow under the terms of our Credit Facility are reduced by the principal amount of our commercial paper issuances and the balance of our letters of credit outstanding. The terms of our Credit Facility include commitments from 14 different lenders to borrow up to $1,250 million, at September 30, 2008. One of the committed lenders to our Credit Facility, Lehman Brothers Bank, FSB ("Lehman BB"), a subsidiary of Lehman Brothers Holdings, Inc. filed for bankruptcy protection under Chapter 11 of the United States ("U.S.") Bankruptcy Code in September 2008. Lehman BB has commitments of $82.5 million that we currently cannot access; effectively reducing the amounts available to us under our Credit Facility to $1,167.5 million. We are working with other financial institutions to assume Lehman BB's commitment. The remaining lenders under our Credit Facility continue to honor our funding requests.

Excluding the commitments from Lehman BB, at September 30, 2008, we could borrow $490.1 million under the terms of our Credit Facility, determined as follows:

		September 30, 2008
		(in millions)
Total credit available under Credit Facility		$ 1,250.0
Less:	Amounts outstanding under Credit Facility	(386.2)
	Balance of letters of credit outstanding	(101.2)
	Principal amount of commercial paper issuances	(190.0)
	Lehman Brothers Bank, FSB commitment	(82.5)
Total amount we could borrow at September 30, 2008		$ 490.1

Individual borrowings under the terms of our Credit Facility generally become due and payable at the end of each contract period, which typically is a period of three months or less. We have the option to

Table of Contents

ENBRIDGE ENERGY PARTNERS, L.P.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (Continued)

repay these amounts on a non-cash basis by net settling with the parties to our Credit Facility by contemporaneously borrowing at the then current rate of interest and repaying the amounts due. During the nine months ended September 30, 2008, we net settled borrowings of approximately $490 million on a non-cash basis.

Commercial Paper Program

We have a commercial paper program that provides for the issuance of up to $600 million of commercial paper that is supported by our Credit Facility. We access the commercial paper market primarily to provide temporary financing for our operating activities, capital expenditures and acquisitions, at rates that are generally lower than the rates available under our Credit Facility. At September 30, 2008 and December 31, 2007, respectively, we had $189.5 million and $268.5 million of commercial paper outstanding, net of unamortized discount of $0.5 million and $1.5 million, at weighted average interest rates of 3.19% and 5.36%. At September 30, 2008 we could issue an additional $410 million in principal amount under our commercial paper program. The commercial paper we can issue is limited by the credit available under our Credit Facility.

We have the ability and intent to refinance all of our commercial paper obligations on a long-term basis under our unsecured long-term Credit Facility. Accordingly, such amounts have been classified as long-term debt in our accompanying consolidated statements of financial position.

Senior Notes

In April 2008, we issued and sold in a private offering $400 million in principal amount of our 6.5% Notes due April 15, 2018 and $400 million in principal amount of our 7.5% Notes due April 15, 2038, which we collectively refer to as the Notes. We received net proceeds from the offering of approximately $790.2 million after initial purchasers' discounts and payment of offering expenses. We used a portion of the proceeds we received from this offering to repay outstanding issuances of commercial paper and borrowings under our Credit Facility that we had previously used to finance a portion of our capital expansion projects. We temporarily invested the remaining proceeds which we later used to fund additional expenditures under our capital expansion programs. The Notes do not contain any covenants restricting our issuance of additional indebtedness and rank equally with all of our other existing and future unsecured and unsubordinated indebtedness. Interest on the Notes is payable April 15th and October 15th of each year and we may redeem the Notes for cash in whole or in part at any time, at our option.

In August 2008, we completed the offers to exchange all of the Notes, which had not been registered under the Securities Act of 1933, as amended (the "Securities Act"), for notes with identical terms that had been registered under the Securities Act.

We received tenders for $395 million in aggregate principal amount of our outstanding $400 million of 6.50% Series A Notes due 2018, which we exchanged for $395 million of our 6.50% Series B Notes due 2018. We also received tenders for all $400 million in aggregate principal amount of our 7.50% Series A Notes due 2038, which we exchanged for $400 million of our 7.50% Series B Notes due 2038.

Table of Contents

ENBRIDGE ENERGY PARTNERS, L.P.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (Continued)

7. PARTNERS' CAPITAL

The following table sets forth the distributions, as approved by the Board of Directors of Enbridge Energy Management, L.L.C. ("Enbridge Management") during the nine months ended September 30, 2008:

Distribution Declaration Date	Distribution Payment Date	Record Date	Distribution per Unit	Cash available for distribution	Amount of Distribution of i-units to i-unit Holders[1]	Amount of Distribution of Class C units to Class C unit Holders[2]	Retained from General Partner[3]	Distribution of Cash
July 28, 2008	August 14, 2008	August 6, 2008	$ 0.990	$ 108.0	$ 13.9	$ 18.6	$ 0.7	$ 74.8
April 28, 2008	May 15, 2008	May 7, 2008	$ 0.950	$ 102.2	$ 13.1	$ 17.5	$ 0.6	$ 71.0
January 28, 2008	February 14, 2008	February 6, 2008	$ 0.950	$ 96.7	$ 12.9	$ 17.2	$ 0.6	$ 66.0

(1) During 2008, in lieu of cash distributions, the Partnership issued 791,514 i-units to Enbridge Management.

(2) During 2008, in lieu of cash distributions, the Partnership issued 1,084,787 Class C units to our Class C unitholders.

(3) The Partnership retains an amount equal to 2 percent of the i-unit and Class C unit distribution from the General Partner in respect of its 2 percent general partner interest.

Issuance of Class A Common Units

On March 3, 2008, we issued and sold 4.6 million Class A common units, including 0.6 million units from the over-allotment option that was exercised by the underwriters, at a price to the public of $49.00 per unit, for proceeds of approximately $217.2 million, net of underwriters' discounts, commissions and issuance costs. In addition, our general partner contributed approximately $4.6 million to us to maintain its two percent general partner interest. We used the proceeds from this offering to partially reduce outstanding commercial paper we issued and amounts we previously borrowed under our Credit Facility to finance a portion of our capital expansion projects. We invested a portion of the proceeds for use in future periods to fund additional expenditures under our capital expansion projects.

8. RELATED PARTY TRANSACTIONS

We, our general partner and Enbridge Pipelines Inc. ("Enbridge Pipelines"), a subsidiary of Enbridge Inc., regularly collaborate on construction projects that are mutually beneficial to our respective customers and operations. Examples of such projects include the Southern Access and Alberta Clipper projects where we are constructing the United States portion of the projects and Enbridge Pipelines is constructing the Canadian portion. In September 2008, we acquired for $21.1 million, approximately 22 miles of 36 inch diameter line pipe from our general partner for our use in constructing the Alberta Clipper project. The line pipe was initially obtained by our general partner for use in constructing the Southern Access extension, which has been delayed due to a protracted regulatory process.

9. COMMITMENTS AND CONTINGENCIES

Environmental Liabilities

We are subject to federal and state laws and regulations relating to the protection of the environment. Environmental risk is inherent to liquid hydrocarbon and natural gas pipeline operations and we could, at times, be subject to environmental cleanup and enforcement actions. We manage this environmental risk through appropriate environmental policies and practices to minimize any impact our operations may have on the environment. To the extent that we are unable to recover environmental liabilities associated with the Lakehead system assets through insurance, the General Partner has agreed to indemnify us from and against any costs relating to environmental liabilities associated with the Lakehead system assets prior to the transfer to us in 1991. This excludes any liabilities resulting from a change in laws after such transfer. We continue to voluntarily investigate past leak sites on our systems for the purpose of assessing whether

Table of Contents

any remediation is required in light of current regulations, and to date, no material environmental risks have been identified.

In October of 2008, we received a letter from the U.S. Department of Transportation's Pipeline and Hazardous Materials Safety Administration ("PHMSA") alleging violations of federal pipeline safety regulations and proposing a $2.4 million fine related to an unexpected release and fire on line 3 of our Lakehead System that occurred during planned maintenance near our Clearbrook, Minnesota, terminal in November 2007. A provision for the amount of the fine has been made in "Short term environmental liabilities."

As of September 30, 2008 and December 31, 2007, we have recorded $5.7 million and $3.4 million, respectively, in "Accounts payable and other" and $3.0 million and $2.8 million, respectively, in "Other long-term liabilities," primarily to address remediation of contaminated sites, asbestos containing materials, management of hazardous waste material disposal, outstanding air quality measures for certain of our liquids and natural gas assets, and penalties we have been or expect to be assessed.

Legal Proceedings

We are a participant in various legal proceedings arising in the ordinary course of business. Some of these proceedings are covered, in whole or in part, by insurance. We believe that the outcome of all these proceedings will not, individually or in the aggregate, have a material adverse effect on our financial condition.

10. FAIR VALUE MEASUREMENTS

We adopted the provisions of Statement of Financial Accounting Standards No. 157, *Fair Value Measurement*, or SFAS No. 157, as of January 1, 2008. SFAS No. 157 provides guidance for determining fair value and requires increased disclosure regarding the inputs to valuation techniques used to measure fair value. SFAS No. 157 defines fair value as an exit price representing the expected amount we would receive to sell an asset or pay to transfer a liability in an orderly transaction with market participants at the measurement date. We apply the provisions of SFAS No. 157 to fair values we report for our derivative instruments and annual disclosures associated with the fair values of our outstanding indebtedness.

We utilize a mid-market pricing convention for valuation as a practical expedient for assigning fair value to our derivative assets and liabilities. In the case of our liabilities, our nonperformance risk is considered in the valuation, based upon the ratings assigned to our debt obligations by the nationally recognized statistical ratings organizations. We present the fair value of our derivative contracts net of cash paid or received pursuant to collateral agreements on a net-by-counterparty basis in our consolidated statements of financial position when we believe a legal right of setoff exists under an enforceable netting agreement. Our credit exposure for over-the-counter derivatives is directly with our counterparty and continues until the maturity or termination of the contracts. When appropriate, valuations are adjusted for various factors such as credit and liquidity considerations.

We consider credit and nonperformance risk in our valuation of derivative contracts categorized in Level 1, 2 and 3, including both historical and current market data in our assessment of credit and nonperformance risk. We estimate a credit reserve for our outstanding derivative assets and liabilities at an individual transaction level in conjunction with the provisions of our master netting arrangements. Our assessment of credit and nonperformance risk did not affect our determination of the fair value of these derivative assets and liabilities. Likewise, no reserves were made in determining the fair value of our outstanding liabilities as a result of our own credit standing.

SFAS No. 157 establishes a hierarchy which prioritizes the inputs we use to measure fair value into three distinct categories based upon whether such inputs are observable in active markets or unobservable. We classify assets and liabilities in their entirety based on the lowest level of input that is significant to the fair value measurement. Our methodology for categorizing assets and liabilities that are measured at fair

ENBRIDGE ENERGY PARTNERS, L.P.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (Continued)

value pursuant to this hierarchy gives the highest priority to unadjusted quoted prices in active markets and the lowest level to unobservable inputs as outlined below:

- Level 1—We include in this category the fair value of assets and liabilities that we measure based on unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities. We consider active markets as those in which transactions for the assets or liabilities occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The fair value of our assets and liabilities included in this category consists primarily of exchange-traded derivative instruments.

- Level 2—We categorize the fair value of assets and liabilities that we measure with either directly or indirectly observable inputs as of the measurement date where pricing inputs are other than quoted prices in active markets as Level 2. This category includes those derivative instruments that we value using models or other valuation methodologies derived from observable market data. These models are primarily industry-standard models that consider various inputs including: (a) quoted forward prices for commodities, (b) time value, (c) volatility factors, and (d) current market and contractual prices for the underlying instruments, as well as other relevant economic measures. Substantially all of these inputs are observable in the marketplace throughout the full term of the derivative instrument, can be derived from observable data, or supported by observable levels at which transactions are executed in the marketplace.

- Level 3—We include in this category the fair value of assets and liabilities that we measure based on prices or valuation techniques that require inputs which are both significant to the fair value measurement and less observable from objective sources (i.e., supported by little or no market activity). We may also use these inputs with internally developed methodologies that result in our best estimate of the fair value. Level 3 instruments primarily include derivative instruments for which we do not have sufficient corroborating market evidence, such as binding broker quotes, to support classifying the asset or liability as Level 2. In most instances, the observable data is available for us to validate the inputs used to measure fair value; however, the cost of obtaining the information is prohibitive.

Derivative contracts can be exchange-traded or over-the counter ("OTC") traded. We generally value exchange-traded derivatives within portfolios calibrated to market clearing levels on a daily basis. We value OTC derivatives using broker information based on executed market transactions that we have corroborated with other observable market data. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps, and options, inputs can generally be verified and valuation does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information, and the determination of fair value for these derivatives is inherently more difficult. Such instruments are classified within Level 3 of the fair value hierarchy. We include the fair value of financial assets and liabilities in Level 3 as a default due to limited market data or in most cases, due to lacking binding broker quotes to corroborate pricing data as required by current interpretations of SFAS No. 157 Level 2 requirements. Financial assets and liabilities that are categorized in Level 3 may later be reclassified to the Level 2 category at the point we are able to obtain sufficient binding market data or the interpretation of Level 2 criteria is modified in practice to include non-binding market corroborated data.

The following table sets forth by level within the fair value hierarchy, our financial assets and liabilities that were accounted for at fair value on a recurring basis as of September 30, 2008. We classify financial assets and liabilities in their entirety based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement

Table of Contents

requires judgment, and may affect the valuation of the financial assets and liabilities and their placement within the fair value hierarchy.

Recurring fair value measures	Fair Value at September 30, 2008 Level 1	Level 2	Level 3	Total
		(in millions)		
Assets:				
Derivative instruments, net	$ —	$ —	$ 12.7	$ 12.7
Liabilities:				
Derivative instruments, net	(157.6)	—	(95.5)	(253.1)
Total	$(157.6)	$ —	$(82.8)	$(240.4)

The table below provides a summary of changes in the fair value of our Level 3 financial assets and liabilities for the nine months ended September 30, 2008. As reflected in the table, the net unrealized gain on Level 3 financial assets and liabilities was $4.6 million for the nine months ended September 30, 2008, which resulted from forward price decreases in natural gas, natural gas liquids, or NGLs, and crude oil derivative instruments that we held at September 30, 2008.

	Derivative Instruments, net
	(in millions)
Balance at January 1, 2008	$ (160.6)
Realized and unrealized net gains	79.3
Purchases and settlements	(1.5)
Transfer in (out) of Level 3	—
Balance at September 30, 2008	$ (82.8)
Change in unrealized net gains relating to instruments still held at September 30, 2008	$ 4.6

11. DERIVATIVE FINANCIAL INSTRUMENTS

Our net income and cash flows are subject to volatility stemming from changes in commodity prices of natural gas, NGLs, condensate and fractionation margins (the relative price differential between NGL sales and the offsetting natural gas purchases). Our exposure to commodity price risk exists within our Natural Gas and Marketing segments. We use derivative instruments including futures, forwards, swaps, options and other financial instruments with similar characteristics to manage the risks associated with market fluctuations in commodity prices, as well as to reduce the volatility of our cash flows. Our formal hedging program provides a control structure and governance for our hedging activities specific to identified risks and time periods, which are subject to the approval and monitoring by a committee of senior management. Based on our risk management policies, all of our derivative instruments are employed in connection with an underlying asset, liability and/or forecasted transaction and are not entered into with the objective of speculating on interest rates or commodity prices. We have hedged a portion of our exposure to the variability in future cash flows associated with forecasted natural gas and NGL sales and purchases through 2013 in accordance with our risk management policies.

Accounting Treatment

We record all derivative instruments in our consolidated financial statements at fair value pursuant to the provisions of Statement of Financial Accounting Standards No. 133, *Accounting for Derivative Instruments and Hedging Activities*, or SFAS No. 133, and the guidance set forth in SFAS No. 157 as discussed in Note 10 above. We adjust our consolidated financial statements each period for changes in the fair value of our derivative instruments, which we refer to as "marking to market" or "mark-to-market." For those derivative instruments that do not qualify for hedge accounting, we record all changes in fair market value through our consolidated statements of income each period.

Table of Contents

Under the guidance of SFAS No. 133, if a derivative instrument does not qualify as a hedge, or is not designated as a hedge, the derivative instrument is adjusted to its fair value each period with the increases and decreases in fair value recorded in our consolidated statements of income as increases and decreases in "Cost of natural gas" for our commodity-based derivatives. Our cash flow is only impacted to the extent the actual derivative contract is settled by making or receiving a payment to or from the counterparty or by making or receiving a payment for entering into a contract that exactly offsets the original derivative contract. Typically, we settle our derivative contracts when the physical transaction that underlies the derivative instrument occurs.

If a derivative instrument qualifies and is designated as a cash flow hedge, a hedge of a forecasted transaction or future cash flows, any unrealized mark-to-market gain or loss is deferred in "Accumulated other comprehensive income" ("AOCI"), a component of "Partners' capital," until the underlying hedged transaction occurs. To the extent that the hedge instrument is effective in offsetting the transaction being hedged, there is no impact to the income statement. At inception and on a quarterly basis, we formally assess whether the hedge contract is highly effective in offsetting changes in cash flows of hedged items. Any ineffective portion of a cash flow hedge's change in fair value is recognized each period in earnings. Realized gains and losses on derivative instruments that are designated as hedges and qualify for hedge accounting are included in "Cost of natural gas" in the period the hedged transaction occurs. Gains and losses deferred in AOCI related to cash flow hedges, for which hedge accounting has been discontinued, remain in AOCI until the underlying physical transaction occurs unless it is probable that the forecasted transaction will not occur by the end of the originally specified time period, or within an additional two-month period of time thereafter. Generally, our preference is for our derivative instruments to receive hedge accounting treatment whenever possible, to mitigate the non-cash earnings volatility that arises from recording the changes in fair value of our derivative instruments through earnings. To qualify for cash flow hedge accounting as set forth in SFAS No. 133, very specific requirements must be met in terms of hedge structure, hedge objective and hedge documentation. Additionally, both the counterparty credit standing and the ability to perform must be considered for both the hedge transaction and the physical transaction being hedged.

Non-Qualified Hedges

Many of our derivative instruments qualify for hedge accounting treatment under the specific requirements of SFAS No. 133. However, we have four primary transaction types associated with our commodity derivative instruments where the hedge structure does not meet the requirements to apply hedge accounting. As a result, these derivative instruments do not qualify for hedge accounting under SFAS No. 133 and are referred to as "non-qualified." Non-qualified derivative instruments are marked-to-market each period with the change in fair value, representing unrealized gains and losses, included in "Cost of natural gas" in our consolidated statements of income. These mark-to-market adjustments produce a degree of earnings volatility that can often be significant from period to period, but have no cash flow impact relative to changes in market prices. The cash flow impact occurs when the underlying physical transaction takes place in the future and when the associated derivative instrument contract settlement is made.

The four primary transaction types that do not qualify for hedge accounting are as follows:

1. **Transportation**—In our Marketing segment, when we transport natural gas from one location to another, the pricing index used for natural gas sales is generally different from the pricing index used for natural gas purchases, exposing us to basis price risk relative to changes in those two indices. By entering into a basis swap, we can effectively lock in the margin, or "spread," representing the difference between the sales price and the purchase price, on the combined natural gas purchase and natural gas sale, thereby removing locational price risk on the physical transactions. Although this represents a sound economic hedging strategy, the derivative instruments (i.e., the basis swaps) associated with these transportation contracts do not qualify for

Table of Contents

hedge accounting under SFAS No. 133, since only the future margin has been fixed and not the future cash flow. As a result, the changes in fair value of these derivative instruments are recorded in earnings.

2. **Storage**—In our Marketing segment, we use derivative instruments (i.e., natural gas swaps) to hedge the "margin," representing the relative difference between the injection price paid to purchase and store natural gas and the withdrawal price at which the natural gas is sold from storage. The intent of these derivative instruments is to lock in the margin between storage injections and withdrawals in a future period. We do not pursue cash flow hedge accounting treatment for these storage transactions since the underlying forecasted injection or withdrawal of natural gas may not occur in the period as originally forecast. This can occur because we retain the flexibility to make changes in the underlying injection or withdrawal schedule, given changes in market conditions. In addition, since the physical natural gas is recorded at the lower of cost or market, timing differences can result when the derivative instrument is settled in a period that is different from when the physical natural gas is sold from storage. As a result, derivative financial instruments associated with our natural gas storage activities can create volatility in our earnings.

3. **Natural Gas Collars**—In our Natural Gas segment, we had previously entered into natural gas collars to hedge the sales price of natural gas. The natural gas collars were based on a New York Mercantile Exchange ("NYMEX") price, while the physical gas sales were based on a different index. To better align the index of the natural gas collars with the index of the underlying sales, we de-designated the original cash flow hedging relationship with the intent of contemporaneously re-designating the natural gas collars as hedges of forecasted physical natural gas sales with a NYMEX pricing index. However, because the fair value of these derivative instruments was a liability to us at re-designation, they are considered net written options under SFAS No. 133 and do not qualify for hedge accounting. The changes in fair value of these derivative instruments from the date of de-designation are recorded in earnings each period. As a result, our operating income will be subject to greater volatility due to movements in the prices of natural gas until the underlying long-term transactions are settled.

4. **Optional Natural Gas Processing Volumes**—In our Natural Gas segment we use derivative instruments to hedge NGL volumes produced from our natural gas processing facilities. Many of our natural gas contracts provide us with the option of processing natural gas when it is economical, and allow us to cease processing when the "fractionation spread," representing the relative difference between the price received for the NGLs produced less the cost of natural gas used for processing, becomes uneconomic. We have entered into derivative instruments to fix the sales price of a portion of the NGLs that we produce at our discretion and to fix the associated purchases of natural gas required for processing when it is probable the processing will occur. Because our processing forecasts fluctuate due to market conditions, these derivative instruments are deemed "non-qualifying" hedges. For this reason, our operating income will be subject to increased volatility due to fluctuations in both natural gas and NGL prices until the underlying transactions are settled.

In each of the instances described above, the underlying physical purchase, storage and sale of natural gas and NGLs are accounted for on a historical cost or market basis rather than on the mark-to-market basis we utilize for the derivative instruments employed to mitigate the commodity price risk associated with our storage and transportation assets. This difference in accounting treatment between the derivative instrument and the underlying transaction (i.e., the derivative instruments are recorded at fair value while the physical transactions are recorded at historical cost) can and has resulted in volatility in our reported net income, even though the economic margin is essentially unchanged from the date the transactions were consummated.

The following table presents the unrealized gains and losses associated with changes in the fair value of our derivative instruments, which are recorded as an element of "Cost of natural gas" for our

Table of Contents

commodity-based derivative instruments in our consolidated statements of income and disclosed as a reconciling item on our consolidated statements of cash flows:

Derivative fair value gains (losses)	Three months ended September 30, 2008	Three months ended September 30, 2007	Nine months ended September 30, 2008	Nine months ended September 30, 2007
	(in millions)			
Natural Gas segment				
Hedge ineffectiveness	$ 0.1	$ (0.5)	$ (1.1)	$ (0.2)
Non-qualified hedges	36.5	(7.2)	42.5	(13.2)
Marketing segment				
Non-qualified hedges	11.0	2.9	(23.9)	(4.0)
Derivative fair value gains (losses)	$ 47.6	$ (4.8)	$ 17.5	$ (17.4)

De-designation and Settlement of Derivatives

We record the change in fair value of our cash flow hedges in AOCI until the derivative instruments are settled, at which time they are reclassified from AOCI to earnings. Also included in AOCI at September 30, 2008 are unrecognized losses of approximately $1.6 million associated with cash flow hedges that were subsequently de-designated. These losses are reclassified to earnings over the periods during which the originally hedged forecasted transactions affect earnings. For the three and nine months ended September 30, 2008, we reclassified losses of $52.1 million and $112.4 million, respectively, from AOCI to "Cost of natural gas" on our consolidated statements of income for the fair value of derivative instruments that were settled.

In connection with our April 2008 issuance and sale of $800 million in principal amount of Notes, we paid $22.1 million to settle treasury locks we entered to hedge the interest payments on a portion of these obligations through the maturity date of the Notes maturing in 2038. The $22.1 million is being amortized from AOCI to "Interest expense" over the 30-year term of the Notes.

Derivative Positions

Our derivative financial instruments are included at their fair values in our consolidated statements of financial position as follows:

	September 30, 2008	December 31, 2007
	(in millions)	
Other current assets	$ 2.6	$ 6.5
Other assets, net	9.6	6.4
Accounts payable and other	(118.3)	(165.5)
Other long-term liabilities	(134.3)	(192.9)
	$ (240.4)	$ (345.5)

The decrease in our obligation associated with derivative activities is primarily due to a decline in forward and daily natural gas, NGL and condensate prices from December 31, 2007 to September 30, 2008. Our portfolio of derivative financial instruments is largely comprised of long-term fixed price natural gas and NGL sales and purchase agreements.

We present the fair value of our derivative contracts on a net-by-counterparty basis in our consolidated statements of financial position when we believe a legal right of setoff exists under an enforceable netting agreement. Our credit exposure for OTC derivatives is directly with our counterparty

12. SEGMENT INFORMATION

Our business is divided into operating segments, defined as components of the enterprise, about which financial information is available and evaluated regularly by our Chief Operating Decision Maker in deciding how resources are allocated and performance is assessed.

Each of our reportable segments is a business unit that offers different services and products that is managed separately, since each business segment requires different operating strategies. We have segregated our business activities into three distinct operating segments:

- Liquids;
- Natural Gas; and
- Marketing.

The following tables present financial information about our business segments:

	For the three months ended September 30, 2008				
	Liquids	Natural Gas	Marketing	Corporate(1)	Total
			(in millions)		
Total revenue	$ 209.3	$ 2,233.4	$ 1,352.8	$ —	$3,795.5
Less: Intersegment revenue	0.1	928.5	54.2	—	982.8

13. SUBSEQUENT EVENT

Distribution to Partners

On October 13, 2008, the Board of Directors of Enbridge Management declared a distribution payable to our partners on November 14, 2008. The distribution will be paid to unitholders of record as of November 6, 2008, of our available cash of $108.8 million at September 30, 2008, or $0.990 per common unit. Of this distribution, $74.9 million will be paid in cash, $14.3 million will be distributed in i-units to our i-unitholder, $18.9 million will be distributed in Class C units to the holders of our Class C units and $0.7 million will be retained from the General Partner in respect of the i-unit and Class C unit distributions.

14. RECENT ACCOUNTING PRONOUNCEMENTS NOT YET ADOPTED

Disclosures about Derivative Instruments and Hedging Activities

In March 2008, the Financial Accounting Standard Board, or FASB, issued Statement No. 161, *Disclosures about Derivative Instruments and Hedging Activities*, which is effective for fiscal years and interim periods beginning after November 15, 2008. The statement requires qualitative disclosures about a company's strategies and objectives for using derivatives, quantitative disclosures about fair value gains and losses on derivatives, and disclosures of credit-risk-related contingent features in derivative instruments. We do not anticipate adopting the provisions of this pronouncement early. We do not expect our adoption of this pronouncement to have a material affect on our financial statements other than modifications to our existing derivative disclosures to conform to the requirements set forth in the statement.

Calculation of Earnings Per Unit

In March 2008, the Emerging Issues Task Force, or EITF reached consensus on EITF Issue No. 07-4, *Application of the Two-Class Method under FASB Statement No. 128 to Master Limited Partnerships*. The pronouncement prescribes the manner in which a master limited partnership, or MLP, should allocate and present earnings per unit using the two-class method set forth in FASB Statement No. 128, *Earning per Share*. Under the two-class method, current period earnings are allocated to the general partner (including any embedded incentive distribution rights) and limited partners according to the distribution formula for available cash set forth in the partnership agreement. To the extent the partnership agreement does not explicitly limit distributions to the general partner; any earnings in excess of distributions are to be allocated to the general partner and limited partners utilizing the distribution formula for available cash specified in the partnership agreement. When current period distributions are in excess of earnings, the excess distributions are to be allocated to the general partner and limited partners based on their respective sharing of losses specified in the partnership agreement for the period. EITF 07-4 is to be applied retrospectively for all financial statements presented and is effective for financial statements issued for fiscal years beginning after December 15, 2008, and interim periods within those fiscal years. Earlier application is not permitted. We expect to adopt EITF 07-4 for our quarter ending March 31, 2009. We are currently evaluating the effect this pronouncement will have on our present computation of earnings per unit.

Table of Contents

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of operations should be read together with our consolidated financial statements and the accompanying notes included in "Item 1. Financial Statements" of this report.

Additionally, this quarterly report on Form 10-Q should be read in conjunction with our Annual Report on Form 10-K for the year ended December 31, 2007.

DISRUPTION TO FUNCTIONING OF CAPITAL MARKETS

Multiple events during 2008 involving numerous financial institutions have effectively restricted current liquidity within the capital markets throughout the United States and around the world. Despite efforts by treasury and banking regulators in the United States, Europe and other nations around the world to provide liquidity to the financial sector, capital markets currently remain constrained. We expect that our ability to raise debt and equity at prices that are similar to offerings in recent years to be limited over the next three to six months and possibly longer should capital markets remain constrained.

In the weeks following the third quarter, our unit price declined to a closing low of $27.07 on October 10, 2008. Since that date our unit price recovered partially to a level of $37.89 on October 30, 2008. We intend to move forward with our planned internal growth projects, although our capital spending, particularly on the natural gas side of our business, will be reduced to moderate our capital raising requirements. In the near-term we will focus on maintaining sufficient liquidity to fund our growth programs, see "Liquidity and Capital Resources." Maintaining adequate liquidity may involve the issuance of debt and equity at less attractive terms than our most recent offerings and could involve the sale of non-core assets.

RESULTS OF OPERATIONS—OVERVIEW

We provide services to our customers and returns for our unitholders primarily through the following activities:

- Interstate pipeline transportation and storage of crude oil and liquid petroleum;
- Gathering, treating, processing and transportation of natural gas and natural gas liquids, or NGLs, through pipelines and related facilities; and
- Supply, transportation and sales services, including purchasing and selling natural gas and NGLs.

We conduct our business through three business segments: Liquids, Natural Gas and Marketing. These segments are strategic business units established by senior management to facilitate the achievement of our long-term objectives, to aid in resource allocation decisions and to assess operational performance.

Table of Contents

The following table reflects our operating income by business segment and corporate charges for the three and nine month periods ended September 30, 2008 and 2007:

	Three months ended September 30,		Nine months ended September 30,	
	2008	2007	2008	2007
	(unaudited; in millions)			
Operating Income				
Liquids	$ 95.5	$ 57.6	$ 246.8	$ 155.0
Natural Gas	67.2	40.3	177.9	90.5
Marketing	10.6	3.2	(6.5)	13.4
Corporate, operating and administrative	(1.6)	0.5	(4.7)	(2.3)
Total Operating Income	171.7	101.6	413.5	256.6
Interest expense	50.7	23.4	129.7	70.2
Other income	0.3	0.4	2.5	2.3
Income tax expense	1.9	1.3	5.0	3.7
Net Income	$ 119.4	$ 77.3	$ 281.3	$ 185.0

Several types of arrangements in our Natural Gas and Marketing segments expose us to market risk associated with changes in commodity prices where we receive natural gas or NGLs in return for the services we provide, or where we purchase natural gas or NGLs. We employ derivative financial instruments to reduce our exposure to natural gas and NGL price volatility. Some of these derivative financial instruments do not qualify for hedge accounting under the provisions of Statement of Financial Accounting Standards No. 133, *Accounting for Derivative Instruments and Hedging Activities* (SFAS No. 133), which can create volatility in our earnings that can be significant. However, these fluctuations in earnings do not affect our cash flow. Cash flow is only affected when we settle the derivative instrument. Based on our risk management policies, all of our derivative instruments are employed in connection with an underlying asset, liability and/or forecasted transaction and are not entered into with the objective of speculating on commodity prices.

Summary Analysis of Operating Results

Liquids

Operating income from our Liquids segment increased by $37.9 million to $95.5 million for the three months ended September 30, 2008, from the $57.6 million for the same period of 2007. Operating income for the nine months ended September 30, 2008 increased by $91.8 million to $246.8 million from $155.0 million for the same period of 2007. The increase in operating income of our Liquids segment is primarily due to the following:

- Tariff increases that went into effect in January, April, and July 2008, which include increases associated with the first stage of our Southern Access Expansion and the Phase V expansion of our North Dakota system;
- Additional revenue resulting from higher average crude oil prices associated with the allowance oil we receive in connection with our transportation services; and
- Higher delivery volumes on our Lakehead system.

Natural Gas

Operating income from our Natural Gas segment increased by $26.9 million to $67.2 million for the three months ended September 30, 2008 from the $40.3 million for the same period of 2007. Operating income for the nine months ended September 30, 2008 increased by $87.4 million to $177.9 million, from

Table of Contents

$90.5 million for the comparable period in 2007. The following factors affected the operating income of our Natural Gas business:

- $36.6 million of unrealized, non-cash mark-to-market gains from derivative instruments that do not qualify for hedge accounting treatment under SFAS No. 133, as compared with losses of $7.7 million for the same period of 2007;

- Improved margins resulting from higher prices we received for the natural gas, NGLs and condensate we receive as payment for the services we provide;

- Volume growth associated with the substantial completion of our East Texas natural gas system expansion and extension, referred to as the Clarity Project, coupled with strong production from the Bossier Trend, Granite Wash and Barnett Shale formations;

- Reduced revenues of approximately $8 to $9 million associated with the impact of hurricanes Gustav and Ike. Natural gas revenues decreased when third-party facilities downstream of our operations were damaged or without power. Physical damage was minimal, although we expect to incur capital and operating costs approximating $2 million to $3 million for repairs to several of our natural gas systems during the fourth quarter of 2008. All of our major natural gas systems were returned to pre-hurricane levels by the end of September;

- Lower processing margins resulting from higher average prices for natural gas used for processing, coupled with a continued shift in our contract mix from keep-whole to percentage of liquids, or POL, type contracts;

- Declines in the prices of natural gas and NGLs from June 30, 2008 to September 30, 2008 decreased the value of our in-kind natural gas imbalance receivables and produced non-cash charges to reduce the cost basis of our natural gas inventory to fair market value; and

- Variable operating and administrative cost increases associated with our system growth.

For the nine months ended September 30, 2008, in addition to the factors discussed above, we had $41.4 million of unrealized, non-cash mark-to-market gains, representing a $54.8 million improvement from the $13.4 million of losses we experienced in the same period of 2007. Additionally, operating income for the nine months ended September 30, 2008 was not affected by unscheduled maintenance at our Zybach processing facility and measurement losses which negatively affected operating income during the same period of 2007.

Marketing

Operating income from our Marketing segment increased by $7.4 million to $10.6 million for the three months ended September 30, 2008 compared to $3.2 million in the same period in 2007. For the nine months ended September 30, 2008, operating income decreased by $19.9 million to an operating loss of $6.5 million from operating income of $13.4 million in the same period of 2007. The operating results of our Marketing segment for the three months ended September 30, 2008 were positively affected by $11.0 million of unrealized, non-cash, mark-to-market gains associated with derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133 as compared with $2.9 million for the same period in 2007. Offsetting the unrealized non-cash, mark-to-market gains were $6.1 million and $3.0 million of non-cash charges for the three months ended September 30, 2008 and 2007, respectively, we recorded to reduce the cost basis of our natural gas inventory to fair market value. Both the non-cash, mark-to-market gains and revaluation charges resulted from declines in the price of natural gas during the three months ended September 30, 2008.

Table of Contents

Derivative Transactions and Hedging Activities

We record all derivative instruments in our consolidated financial statements at fair market value pursuant to the requirements of SFAS No. 133, and the guidance set forth in Statement of Financial Accounting Standards No. 157, *Fair Value Measurement* ("SFAS No. 157"). For those derivative instruments that do not qualify for hedge accounting, we record all changes in fair market value through our consolidated statements of income each period. Based on our risk management policies, all of our derivative instruments are employed in connection with an underlying asset, liability and/or forecasted transaction and are not entered into with the objective of speculating on interest rates or commodity prices.

The fair values of all our derivative instruments reflect our best estimate of the price we would receive for selling an asset or pay to transfer a liability in an orderly transaction with market participants at the measurement date. SFAS No. 157 defines how we are to determine fair value, establishes criteria for measuring fair value, and requires additional disclosures for assets and liabilities that we report at fair value. We adopted the provisions of SFAS No. 157 prospectively beginning January 1, 2008, which did not affect our results of operations, financial condition or cash flows due to the nature of our derivative instruments and our existing valuation methods.

Our unrealized, non-cash mark-to-market gains of $47.6 million and $17.5 million for the three and nine months ended September 30, 2008, are primarily the result of lower forward and daily prices of natural gas and NGLs relative to June 30, 2008 and December 31, 2007, respectively. The changes in fair value of our portfolio of commodity-based derivative instruments that do not qualify for hedge accounting are a result of the continuing volatility in the underlying prices for natural gas, NGLs and crude oil. During the three and nine months ended September 30, 2007, rising natural gas and NGL prices relative to the prices at June 30, 2007 and December 31, 2006, produced unrealized mark-to-market losses for the respective periods. Mark-to-market gains or losses create volatility in our operating results although the derivative instruments we have in place do not affect our cash flow until they are settled. We expect these non-cash gains and losses to reverse in future periods as we settle the derivative instruments against the underlying physical transactions. We intend to continue using derivative instruments to hedge our portfolio of natural gas and NGLs because of the economic benefit we derive from minimizing the volatility in our cash flows. Our continued use of derivative instruments is likely to result in additional unrealized, non-cash gains and losses in the future.

The following table presents the unrealized gains and losses associated with changes in the fair value of our derivative instruments, which are recorded as an element of "Cost of natural gas" in our consolidated statements of income and disclosed as a reconciling item on our consolidated statements of cash flows:

Derivative fair value gains (losses)	Three months ended September 30, 2008	Three months ended September 30, 2007	Nine months ended September 30, 2008	Nine months ended September 30, 2007
		(in millions)

Three months ended September 30, 2008 compared with three months ended September 30, 2007

Our Liquids segment accounted for $95.5 million of operating income during the three months ended September 30, 2008, an increase of $37.9 million from the $57.6 million generated during the same period in 2007. The favorable results are attributable to increased volumes transported on our Liquids systems coupled with tariff increases that went into effect during 2008, partially offset by higher power, operating and administrative costs, and depreciation. The majority of the increase in delivery volumes is attributable to our Lakehead system; however, our North Dakota system also realized increased delivery volumes.

Operating revenue for the three months ended September 30, 2008 increased by $71.1 million to $209.2 million from $138.1 million for the same period in 2007. The increase in operating revenue is due to the following:

- Increased average tariffs on all of our major systems;

Table of Contents

- The toll charges discussed below that are associated with the first stage of our Southern Access expansion project became effective April 1, 2008. We realize revenues in connection with this increased surcharge as crude oil is delivered from our Lakehead system. Our Southern Access expansion project includes a 42-inch diameter pipeline from Superior to Delavan, Wisconsin along with pump station enhancements upstream and downstream of this segment. Completion of the first stage of this project added approximately 190,000 Bpd of capacity and was considered available for service April 1, 2008;

- Higher delivery volumes on our Lakehead system; and

- Additional revenue resulting from higher crude oil prices associated with the allowance oil we receive in connection with our transportation services.

The increases in average tariffs on all three Liquids systems coupled with longer hauls and transportation of more heavy crude oil contributed approximately $57.0 million of additional operating revenue. We implemented new tariffs in 2008 on our Lakehead system effective April 1, 2008 to reflect true-ups for the difference between estimated and actual cost and throughput data for the prior year and our projected costs and throughput for 2008. The projected costs for 2008 include four projects: (1) the Southern Access mainline expansion, (2) two Superior terminal tank projects, (3) two Griffith terminal tank projects and (4) the Clearbrook Manifold project. We also implemented new tariffs on our North Dakota system effective January 1, 2008 that are applicable for five years and are applied to all transportation routes with a destination of Clearbrook, Minnesota. Additionally, we increased the average tariffs on all three of our Liquids systems in connection with the annual index rate ceiling adjustment that went into effect July 1, 2008. Additional discussion of these tariffs is provided below under the section labeled *Regulatory Matters—FERC Transportation Tariffs–Liquids.*

Average delivery volumes on our Lakehead system increased approximately 3.4 percent, to 1.564 million Bpd during the three months ended September 30, 2008 from 1.512 million Bpd during the same period in 2007, contributing an additional $3.6 million to operating revenue. The increase in average deliveries on our Lakehead system is primarily derived from increases of crude oil supplies from upstream production facilities associated with the ongoing development of the Alberta Oil Sands. However, crude oil supplies from western Canada were lower than we expected due to two primary factors. First, Suncor, an oil sands producer in Alberta, Canada, had limited hydrotreating capacity in August and September of 2008 as well as an accident on their oil sands pipeline both of which reduced production volumes. Second, Syncrude, another oil sands producer, is currently undergoing a maintenance turnaround that has resulted in lower production volumes.

Included in our transportation tariff is an allowance from our customers for the transportation of their crude oil. We recognize revenue for this allowance at the prevailing market price for crude oil. The average prices of crude oil during the three months ended September 30, 2008 are substantially higher than the average prices for the same period of 2007. For example, the average price of West Texas Intermediate crude oil has increased approximately 60 percent for the three months ended September 30, 2008 as compared with the same period in 2007. As a result of the increase in crude oil prices, we experienced an approximate $8.2 million increase in allowance oil revenues.

Operating and administrative expenses for the Liquids segment increased $18.1 million for the three months ended September 30, 2008, compared with the same period in 2007. The increase in these costs is primarily attributable to the following:

- Increased workforce related costs associated with the operational, administrative, regulatory, and compliance support necessary for our growing systems;

- Unfavorable oil measurement adjustments as described below;

- Higher costs incurred in connection with our pipeline integrity management program;

Table of Contents

- Further costs incurred in connection with the crude oil release and fire on Line 3 of our Lakehead system; and

- Favorable settlements of property tax assessments that were realized during the three months ended September 30, 2007 which were not present for the same period in 2008.

Oil measurement adjustments occur as part of the normal operations associated with our Liquids systems. The three types of oil measurement adjustments that normally occur on our systems include:

- Physical gains and losses, which result from evaporation, shrinkage, differences in measurement between receipt and delivery locations and other operational incidents;

- Degradation, which results from mixing at the interface between higher quality light crude oil and lower quality heavy crude oil; and

- Revaluation, which is a function of crude oil prices, of the level of our carriers inventory and the inventory positions of customers.

Power costs increased $5.3 million in the three months ended September 30, 2008, compared with the same period in 2007, predominantly due to the higher delivery volumes coupled with higher utility rates we are charged by our power suppliers. We have experienced a trend of increasing electricity rates from our power suppliers due to higher natural gas and coal costs.

The increase in depreciation expense of $9.8 million is attributable to the additional assets we have placed in service during the last quarter of 2007 and the first three quarters of 2008, including the Southern Access Expansion stage one assets that we placed in service during the second quarter of 2008 along with the assets placed into service on our North Dakota and Mid-Continent systems.

Nine months ended September 30, 2008 compared with nine months ended September 30, 2007

Our Liquids segment accounted for $246.8 million of operating income during the nine months ended September 30, 2008, representing a $91.8 million increase over the $155.0 million for the same period in 2007. The components comprising our operating income changed during the nine months ended September 30, 2008 compared with the nine months ended September 30, 2007, primarily for the same reasons as noted above in our three-month analysis except that we had more favorable experience with oil measurement adjustments for the nine months ended September 30, 2008.

Future Prospects Update for Liquids

We and Enbridge Inc. ("Enbridge") are actively working with our customers to develop transportation options that will allow Canadian crude oil greater access to markets throughout the United States ("U.S."). The following discussion provides an update to the status of projects we and Enbridge are developing and should be read in conjunction with the information included in Item 7 of our Annual Report on Form 10-K for the year ended December 31, 2007.

Partnership Projects

Southern Access

We continue to progress on the second and final stage of the expansion project which will provide additional upstream pumping capacity and a new pipeline from Delavan to Flanagan, Illinois. Construction of this stage of the project commenced on June 1, 2008. We expect to complete this phase of the expansion by the end of the first quarter of 2009. Completion of the total Southern Access expansion project will create a 454-mile pipeline with approximately 400,000 Bpd of incremental capacity on our Lakehead system.

Table of Contents

Alberta Clipper

The Alberta Clipper project involves construction of a new 36-inch diameter, 1,000 mile heavy crude oil pipeline from Hardisty, Alberta to Superior, generally within or adjacent to our and Enbridge's existing rights-of-way. We will construct approximately 330 miles of the new pipeline from the International Border near Neche, North Dakota to Superior, a delivery connection at Clearbrook, Minnesota and an additional tank at Superior. Alberta Clipper will have an initial capacity of 450,000 Bpd and allows for expansions up to 800,000 Bpd by adding pump stations. In addition, complementary capacity on the Southern Access 42-inch pipeline from Superior to Flanagan will be obtained by installing additional pump stations. We anticipate that our share of the construction cost for the United States segment of the project will approximate $1.2 billion. Alberta Clipper will be a common carrier line fully integrated with the Enbridge/Lakehead mainline systems for tolling purposes. We and Enbridge are progressing with the project, which is expected to be in service in mid-2010. We expect to begin construction on the U.S. leg of the project in the first quarter of 2009.

North Dakota

The United States Geological Survey, or USGS, completed an assessment of the undiscovered oil and associated natural gas resources of the Upper Devonian—Lower Mississippi Bakken formation in the United States portion of the Williston Basin and has determined there to be 3.0 to 4.3 billion barrels of technologically recoverable oil. Regional producers in the Williston basin areas of Montana and North Dakota have expressed interest in further expansion of pipeline capacity on our North Dakota system. As a result, we have commenced an approximate $0.15 billion additional expansion consisting of upgrades to existing pump stations, additional tankage, as well as extensive use of drag reducing agents ("DRA") that are injected into the pipeline. This expansion of our North Dakota system, referred to as Phase VI, is expected to increase system capacity to 161,000 Bpd from the 110,000 Bpd that is currently available. The commercial structure for this expansion is a cost-of-service based surcharge that will be added to the existing tariff rates. The proposed tolling methodology is similar to the structure being used on the recently completed Phase V expansion project and was approved by the Federal Energy Regulation Commission ("FERC") in October 2008.

Superior and Griffith Storage

Due to forecasted production increases of synthetic heavy crude oil that we anticipate will be transported on the Enbridge/Lakehead mainline systems from Western Canada to Chicago, Illinois; we are constructing additional crude oil storage tanks at Superior and Griffith to accommodate the anticipated volumes. We are building two tanks with operational capacity of approximately 205,000 barrels each. The Superior tank was completed in early September 2008 and the Griffith tank is on schedule to be completed in December 2008.

Trailbreaker (formerly Eastern PADD II Access)

We and Enbridge are jointly developing plans to provide access for western Canadian crude oil to refineries along the United States Eastern Seaboard and the United States Gulf Coast ("U.S. Gulf Coast") via the marine terminal at Portland, Maine. The Trailbreaker project involves the expansion and reversal of existing facilities to create a pipeline route to Portland that is ready for use in 2010. Commercial terms for the project are being negotiated which will be subject to regulatory approvals in both the United States and Canada. Preliminary estimates indicate our portion of the project will approximate $0.3 billion (excluding capitalized interest).

Table of Contents

Enbridge and Other Projects

Spearhead Pipeline

In another effort to provide shippers access to new markets, Enbridge acquired a pipeline that previously shipped crude oil from Cushing, Oklahoma to Chicago. Enbridge reversed the pipeline, renamed it Spearhead, and began delivering Canadian crude oil to the major oil hub at Cushing in March 2006. Since then, the pipeline has operated at or near its capacity of 125,000 Bpd. In the first half of 2007, Enbridge successfully concluded a binding open season for expansion of the pipeline to 190,000 Bpd, with binding commitments for capacity of 30,000 Bpd. In December 2007, the FERC issued a favorable declaratory order effectively approving the tolling methodology and priority service for shippers with binding commitments. Construction has commenced on the 65,000 Bpd expansion, which is expected to be in service in early 2009. The Spearhead pipeline is complementary to our Lakehead system as Western Canadian crude oil is carried on our Lakehead system as far as Chicago, and then transferred to the Spearhead pipeline.

Southern Access Extension

In July 2006, Enbridge announced that it received support from shippers and the Canadian Association of Petroleum Producers ("CAPP") for its 36-inch diameter Southern Access Extension pipeline from Flanagan to Patoka, Illinois. The extension will broaden the reach of the Enbridge/Lakehead mainline system to incremental markets accessible from the Patoka hub. This project is being undertaken by Enbridge, however, we will benefit from the incremental volumes moving through our Lakehead system to reach this extension. Enbridge filed a petition for declaratory order with the FERC in October 2007, which was denied on May 7, 2008. Enbridge is currently working with shippers to develop a new commercial structure for the pipeline.

Southern Lights

Following completion of a successful open season in 2006, Enbridge initiated its Southern Lights project to construct a diluent pipeline from Chicago to Edmonton, Alberta, Canada to meet the growing demand for crude oil diluent required to transport the heavy oil and bitumen (a thick, tar-like form of oil) being produced in increasing volumes from the Alberta oil sands. The project involves the exchange of a 156-mile section of pipeline we own, referred to as Line 13, for a similar section of a new pipeline to be constructed as part of the project. In addition, this project involves a reconfiguration of our light crude mainline system which will provide an additional 45,000 Bpd of effective capacity at no cost to us. We expect to benefit from increased heavy crude oil shipments, which will be facilitated by the diluent line.

In February 2008, the National Energy Board ("NEB") issued its approval and in May 2008 the Canadian Government also issued its Governor In Council ("GIC") approval for the Canadian portion of the Southern Lights project. The GIC approval has been challenged through proceedings in the Federal Court of Canada by certain First Nations on the basis that the Canadian government failed to adequately consult with affected First Nations. No hearing date has been set and the likelihood of success of this action is not determinable at this time. Enbridge has filed the majority of necessary applications for the United States portion of the project with United States federal and state regulatory agencies. Enbridge filed a petition for declaratory order with the FERC setting forth the rate structure for establishing tolls and the proposed swap of Line 13 discussed above, which the FERC approved in late December 2007. In conjunction with our Southern Access project, the Southern Lights project has been allowed the right to exercise eminent domain for right-of-way in Illinois. Construction and right-of-way acquisition related to this project continues in tandem with the Southern Access project. This project is expected to be placed in service in 2010.

Table of Contents

United States Gulf Coast Joint Initiative

In August 2008, Enbridge and BP Pipelines (North America) Inc. ("BP") announced they are currently developing an initiative to deliver incremental volumes of Canadian crude oil to the U.S. Gulf Coast. The initiative, as envisioned, involves the reversal of the BP #1 pipeline system between Flanagan and Cushing, as well as the construction of a new pipeline between Cushing and Houston, Texas. The scope of the project provides for a pipeline system with over 150,000 Bpd of new capacity between Flanagan and Cushing and approximately 250,000 Bpd of capacity between Cushing and Houston. Enbridge is currently working with BP to develop commercial terms to present to a targeted list of potential shippers to solicit binding support prior to launching an open season later this year. The target in-service date for this pipeline system is late 2012.

Texas Access Pipeline

The initiative discussed above aligns with the Enbridge strategy to pursue a staged approach to the U.S. Gulf Coast that matches supply growth. The Texas Access pipeline will be brought to the forefront when a large volume solution to the U.S. Gulf Coast is required.

Natural Gas

The following tables set forth the operating results of our Natural Gas segment assets and approximate average daily volumes of our major systems in millions of British Thermal Units per day ("MMBtu/d") for the periods presented:

	Three months ended September 30,		Nine months ended September 30,	
	2008	2007	2008	2007
	(unaudited; in millions)			
Operating Results				
Operating revenues	$ 1,304.9	$ 847.3	$ 3,805.3	$ 2,317.1
Cost of natural gas	1,122.4	711.2	3,302.8	1,966.2
Operating and administrative	83.8	68.1	235.8	190.3
Depreciation and amortization	31.5	27.7	88.8	70.1
Operating expenses	1,237.7	807.0	3,627.4	2,226.6
Operating Income	$ 67.2	$ 40.3	$ 177.9	$ 90.5
Operating Statistics (MMBtu/d)				
East Texas	1,443,000	1,158,000	1,431,000	1,162,000
Anadarko	682,000	594,000	648,000	588,000
North Texas	388,000	360,000	383,000	344,000
UTOS	96,000	212,000	157,000	176,000
MidLa	96,000	110,000	104,000	117,000
AlaTenn	28,000	30,000	41,000	41,000
Bamagas	99,000	148,000	79,000	126,000
Other major intrastates	204,000	205,000	215,000	241,000
Total[(1)]	3,036,000	2,817,000	3,058,000	2,795,000

(1) We have excluded from the table above average daily volumes of 10,000 MMBtu/d and 24,000 MMBtu/d for the three and nine month periods ended September 30, 2007, respectively, associated with the KPC system which we sold in November 2007.

Table of Contents

Three months ended September 30, 2008 compared with three months ended September 30, 2007

Our Natural Gas segment contributed $67.2 million of operating income for the three months ended September 30, 2008, an increase of $26.9 million from the $40.3 million contributed in the corresponding period of 2007. The following discussion presents the primary factors affecting the operating income of our Natural Gas business for the three months ended September 30, 2008 as compared with the same period of 2007:

- $36.6 million of unrealized, non-cash mark-to-market gains from derivative instruments that do not qualify for hedge accounting treatment under SFAS No. 133, as compared with losses of $7.7 million for the same period of 2007;

- Reduced revenues of approximately $8 to $9 million associated with the impact of hurricanes Gustav and Ike. Natural gas revenues decreased when third-party facilities downstream of our operations were damaged or without power. Physical damage was minimal, although we expect to incur capital and operating costs approximating $2 million to $3 million for repairs to several of our natural gas systems during the fourth quarter of 2008. All of our major natural gas systems were returned to pre-hurricane levels by the end of September;

- In-kind payments we receive for the services we provide in the form of natural gas, NGLs and condensate have generated improved margins as a result of higher average prices in the commodities market;

- Volume growth associated with the substantial completion of our East Texas natural gas system expansion and extension, referred to as the Clarity Project, coupled with strong production from the Bossier Trend, Granite Wash and Barnett Shale formations;

- Declining processing margins due to higher costs of natural gas used for processing as the average price for natural gas declined less than the price for NGLs, along with continued changes in our contract mix of keep whole and POL type contracts;

- Declines in the prices of natural gas and NGLs from June 30, 2008 to September 30, 2008 decreased the value of our in-kind natural gas imbalance receivables and produced non-cash charges to reduce the cost basis of our natural gas inventory to fair market value; and

- Increased workforce, repair and maintenance, rents, leases, and depreciation associated with our system growth.

Revenue for our Natural Gas business is derived from the fees or commodities we receive from the gathering, transportation, processing and treating of natural gas and NGLs for our customers. We are exposed to fluctuations in commodity prices in the near term on 20 to 30 percent of the natural gas, NGLs and condensate we expect to receive as compensation for our services. As a result of this unhedged commodity price exposure, our margins increase when the prices of these commodities are rising and decrease when the prices are declining. For the three months ended September 30, 2008, we realized approximately $22 million of additional margin compared with the same period of 2007 primarily due to the higher prices we received from the sale of the unhedged natural gas, NGLs and condensate that we received in-kind as compensation for our services.

We enter into derivative financial instruments to hedge 70 to 80 percent of our near-term exposure to commodity prices associated with the in-kind compensation we receive for our services. As a result of entering into these derivative instruments, we have largely fixed the amount of cash that we will pay and receive in the future when we sell the processed natural gas, NGLs and condensate, even though the market price of these commodities will continue to fluctuate during that time. Many of these derivative financial instruments do not qualify for hedge accounting which results in the derivative instrument being marked-to-market in our operating results. This accounting treatment produces unrealized non-cash gains

Table of Contents

and losses in our reported operating results that can be significant during periods when the commodity price environment is volatile.

The operating income of our Natural Gas segment for the three months ended September 30, 2008 was positively affected by unrealized non-cash, mark-to-market net gains of $36.6 million, representing an increase of $44.3 million from the $7.7 million of losses we recorded for the same period of 2007. During the three months ended September 30, 2008, declines in the forward and daily market prices of natural produced non-cash, mark-to-market gains in our portfolio of derivative instruments. The declining price environment that was prevalent during the three months ended September 30, 2008, was not present during the same period of 2007. We expect the net mark-to-market gains to be offset when the related physical transactions are settled. The following table depicts the affect that unrealized non-cash mark-to-market gains and losses had on the operating results of our Natural Gas business for the three and nine months ended September 30, 2008 and 2007:

Derivative fair value gains (losses)	Three months ended September 30, 2008	Three months ended September 30, 2007	Nine months ended September 30, 2008	Nine months ended September 30, 2007
	(in millions)			
Natural Gas segment				
Hedge ineffectiveness	$ 0.1	$ (0.5)	$ (1.1)	$ (0.2)
Non-qualified hedges	36.5	(7.2)	42.5	(13.2)
Derivative fair value gains (losses)	$ 36.6	$ (7.7)	$ 41.4	$ (13.4)

The increase in the average daily volume of our Natural Gas business is directly attributable to the significant investments we have made to expand the capacity and service capability of our systems. We completed the following projects during 2008 and the last quarter of 2007, which have contributed to the increase in average daily volumes and operating results of our major natural gas systems:

- In May 2008 our expansion of the Aker treating plant on our East Texas system was completed and placed into service adding 125 million cubic feet per day, or MMcf/d, of treating capacity.
- The $635 million expansion and extension of our East Texas natural gas system, referred to as the Clarity project, is substantially complete and includes:
- A new 36-inch natural gas pipeline from Bethel, Texas to Southeast Texas near Beaumont, Texas; and
- The Marquez treating plant with capacity of approximately 200 MMcf/d and additional pipeline capacity to the existing southeast section of this area was completed and placed in service in March 2007.

  We expect to finish an additional pipeline connection and two compression stations during the first quarter of 2009. The total added capacity related to this project will then total approximately 700 MMcf/d.
- In the first quarter of 2008 we completed construction of a 25-mile, 20-inch diameter pipeline from a lateral on our East Texas system to gather additional production being developed in East Texas.
- In the latter half of 2007, we completed construction of three hydrocarbon dewpoint control facilities on our East Texas system to add processing capacity to meet the increasingly more stringent pipeline gas quality specifications. These facilities have a cumulative capacity of 550 MMcf/d and obtain a significant portion of their revenues from fees rather than keep-whole processing or percentage-of-liquids revenues.
- Construction and expansion of the Weatherford processing facility within our North Texas system was completed late in 2007 and added approximately 75 MMcf/d of processing capacity.

Table of Contents

With the expansions we completed in 2007 and 2008 we are now able to provide additional gathering, processing, treating and transportation services for our customers which has contributed to our volume growth in the third quarter of 2008. Volume and revenue growth is also the result of additional wellhead supply contracts and continued robust drilling activity in the areas served by our Natural Gas business, primarily the Bossier Trend, Barnett Shale and Granite Wash areas. We expect the volumes on our major natural gas systems to continue increasing throughout the year as a result of our investments to expand the capacity of our systems to provide gathering, processing and transportation services to meet the needs of producers in the areas we serve.

During the third quarter of 2008, we experienced operational disruptions to our onshore and offshore natural gas facilities as a result of hurricanes Gustav and Ike. Our facilities in Texas and Louisiana sustained minimal physical damage from the hurricanes, although some of our natural gas systems had lower throughput and revenues in the month of September due to the inability of third-party downstream facilities to receive deliveries of our natural gas and NGLs. These temporary disruptions curtailed our ability to gather unprocessed natural gas at our processing plants and transport natural gas to markets in the Texas and Louisiana regions. Our current estimate of lost revenue associated with the hurricanes is $8 million to $9 million coupled with capital and operating costs of $2 million to $3 million we expect to incur in the fourth quarter for repairs to our damaged facilities. We do not anticipate recovery of any significant amounts of insurance for these losses. The majority of our facilities returned to normal operation by the end of September.

The processing margins we derive from processing natural gas under keep-whole arrangements that exist within our East Texas, North Texas and Anadarko systems declined 52 percent during the third quarter of 2008 in relation to the same period of 2007. Operating income derived from keep-whole processing arrangements for the three months ended September 30, 2008 was $18.4 million, representing a decrease of $19.6 million from the $38.0 million we produced for the same period in 2007. During the third quarter of 2008, NGL and crude oil prices began to decline faster than natural gas prices, which have the effect of reducing revenue we derive from our processing assets less the cost of natural gas purchased for processing. In addition to the affect that changing prices have had on the processing margins we derive from processing natural gas under keep-whole arrangements, we continue to experience a trend of replacing or renegotiating some of our existing keep-whole contracts with percentage of liquids, or POL, type contracts and other similar arrangements. This trend may reduce our exposure to commodity price risk along with a portion of the operating income we derive from processing natural gas under keep-whole arrangements.

Despite the higher average daily prices for natural gas and NGLs we received during the three months ended September 30, 2008 relative to the same period of 2007, the daily prices for natural gas and NGLs at September 30, 2008 were lower than the prices for these commodities at June 30, 2008. The lower commodity prices at September 30, 2008 produced approximately $4.8 million of revaluation losses with respect to our in-kind natural gas imbalances, as well as approximately $2.2 million of non-cash charges to reduce the cost basis of our natural gas inventory to fair market value. We did not experience similar fluctuations in commodity prices for the three months ended September 30, 2007.

Operating and administrative costs of our Natural Gas segment were $15.7 million greater for the three months ended September 30, 2008 than the three months ended September 30, 2007, primarily as a result of increased workforce-related costs associated with the expansion of our systems, maintenance activities and other costs that are mostly variable with volumes. Our general partner charges us the costs associated with employees and related benefits for personnel that are assigned to us or otherwise provide us with managerial and administrative services. The portion of compensation and related costs we are charged is dependent upon such items as estimated time spent, miles of pipe and headcount. In addition we have experienced an increase in outside contract labor cost, given the high demand and competitive rates within our industry as a result of pipeline expansions across the areas we serve.

Table of Contents

Materials, supplies and other costs along with repair and maintenance costs were higher predominantly due to the increase in volumes and expansion of our natural gas systems. Repair and maintenance costs include compressor maintenance, downtime for routine and unscheduled maintenance, pipeline integrity costs and other similar items that have increased with the expansion of our natural gas systems. We expect workforce related costs in addition to materials, supplies and other costs to increase in relation to the increase in volumes of natural gas services we provide.

Depreciation expense for our Natural Gas segment was higher in the third quarter of 2008 as compared the third quarter of 2007, as a result of the capital projects completed and placed in-service during the first nine months of 2008 and the last quarter of 2007. We expect deprecation expense will be higher in 2008 as a result of the projects we completed and placed in service throughout 2007 and the first half of 2008.

Nine months ended September 30, 2008 compared with nine months ended September 30, 2007

Our Natural Gas segment accounted for $177.9 million of operating income during the nine months ended September 30, 2008, representing an $87.4 million increase over the $90.5 million for the same period in 2007. The components comprising our operating income changed favorably during the nine months ended September 30, 2008 compared with the nine months ended September 30, 2007, primarily for the same reasons noted above in our three-month analysis except for those items described below.

The operating income of our Natural Gas business derived from processing increased by approximately $30 million during the nine months ended September 30, 2008, as compared with the same period in 2007, despite the impact of the hurricanes and the declining price environment that occurred late in the third quarter of 2008 as discussed above under our three month analysis. For a majority of the nine months ended September 30, 2008, we have benefitted from a favorable pricing environment for the production of NGLs. NGL prices were high relative to natural gas prices during most of the nine month period of 2008 providing a favorable environment for the production of NGLs from our processing assets. We have also benefitted from the processing capacity we added on our Anadarko system in April 2007 of approximately 120 MMcf/d and the 75 MMcf/d we added on our North Texas system in the second half of 2007. The added processing capacity provided us with the ability to generate additional processing margin from the NGLs we produced during the first nine months of 2008. Our Zybach processing plant has also continued to operate at expected levels during the first nine months of 2008, which compares favorably with the same period of 2007 when we experienced operational issues that reduced processing margins by approximately $11 million.

Operating income for the nine months ended September 30, 2008 was positively affected by the unrealized non-cash, mark-to-market net gains of $41.4 million from our derivative activities, which is approximately $54.8 million more than the $13.4 million of losses we recorded for the same period of 2007. We expect the net mark-to-market gains and losses to be offset when the related physical transactions are settled.

Future Prospects Update for Natural Gas

Significant liquidity tightening and volatility in the capital markets will necessitate a less aggressive capital program in our natural gas business in the near term. During this period of volatility we will continue to focus our efforts primarily on development of our existing pipeline systems. We continue to evaluate strategic opportunities to further expand the service capabilities of our existing system and we may pursue opportunities to divest any non-strategic natural gas assets as conditions warrant.

Results of our natural gas gathering and processing business depend upon the drilling activities of natural gas producers in the areas we serve. During the third quarter of 2008, increased production from active drilling in the areas where our gathering systems are located has contributed to our volume growth. Recent announcements by natural gas producers forecasting reduced exploration and development

Table of Contents

programs could impact the rate of growth in our natural gas assets. However, we believe our assets are located in three areas where producers are likely to remain active due to the higher probability of success associated with resource developments in the East Texas, North Texas and Anadarko regions. We believe this factor should temper the impact of lower natural gas production drilling programs on the results of our Natural Gas business.

Milsap Plant

We plan to purchase and construct a 55 MMcf/d cryogenic processing plant and associated piping, which we refer to as the Millsap Plant Project, to accommodate Barnett Shale growth opportunities in North Texas. The design will incorporate flexibility to expand the inlet capacity of the plant to 75 MMcf/d (through expansion of inlet and residue compression) should volume growth exceed our expected forecast. We expect the cost to complete construction to approximate $100 million with an in service date late in the first quarter of 2010.

Shelby County Loop and Compression

We commenced construction during the third quarter of 2008 to add compression at the Carthage Hub and on the Shelby lateral sections of our East Texas system. We have also initiated construction to increase the capacity of the East Texas system in the area by installing approximately 26 miles of 20-inch pipeline. We expect to complete this project during 2009 at an approximate cost of $60 million.

Marketing

The following table sets forth the operating results of our Marketing segment assets for the periods presented:

	Three months ended September 30,		Nine months ended September 30,	
	2008	2007	2008	2007
	(unaudited; in millions)			
Operating Results				
Operating revenues	$ 1,298.6	$ 725.5	$3,819.7	$2,444.9
Cost of natural gas	1,285.1	719.6	3,817.8	2,424.5
Operating and administrative	2.5	2.3	7.1	5.8
Depreciation and amortization	0.4	0.4	1.3	1.2
Operating expenses	1,288.0	722.3	3,826.2	2,431.5
Operating Income (Loss)	$ 10.6	$ 3.2	$ (6.5)	$ 13.4

A majority of the operating income of our Marketing segment is derived from selling natural gas received from producers on our Natural Gas segment pipeline assets to customers who need natural gas. As a result of our natural gas system expansions and other initiatives, our Marketing business now has access to several additional downstream natural gas pipelines, which it can use to transport natural gas to primary markets where it can be sold at more favorable prices.

We adopted the provisions of SFAS No. 157 effective January 1, 2008, which did not affect the operating results of our Marketing business, but did expand the disclosures we provide about how we determine the fair value of our derivative instruments. Refer to the discussions included in Notes 9 and 10 of our consolidated financial statements included in Item 1 of this report and also to the discussions below under "Derivative Activities" and the "Quantitative and Qualitative Disclosures about Market Risk" we include in Item 3 of this report for more information about our derivative activities.

Table of Contents

Three months ended September 30, 2008 compared with three months ended September 30, 2007

The operating income of our Marketing segment increased to $10.6 million for the third quarter of 2008 from $3.2 million for the corresponding period in 2007. Included in operating income for the third quarter of 2008 are approximately $11.0 million of unrealized, non-cash, mark-to-market gains associated with derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133, as compared with the $2.9 million of unrealized mark-to-market gains for the same period of 2007. During the three months ended September 30, 2008, declines in the forward and daily market prices of natural gas produced non-cash, mark-to-market gains in our portfolio of derivative instruments in excess of those produced during the same period of 2007. We expect these net mark-to-market gains to be offset when the related physical transactions are settled.

Operating income for the three months ended September 30, 2008 was also negatively affected by non-cash charges of $6.1 million we recorded to reduce the cost basis of our natural gas inventory to fair market value at September 30, 2008, which is $3.1 million more than the $3.0 million non-cash charge we recorded for the same period of 2007. The average daily price of natural gas as published by Platt's Gas Daily for Henry Hub was approximately $7.23 per MMBtu for the month of September 2008, a decline from $12.60 per MMBtu for the month of June 2008. As a result of this decline in the price of natural gas inventory at our storage locations from June 30, 2008 to September 30, 2008, the weighted average cost of our natural gas inventory at September 30, 2008 exceeded the market price of natural gas by approximately $6.1 million. Due to our hedging structures, we expect that a majority of these charges will be offset by future financial transactions that will settle at the time the natural gas inventory is sold.

The operating and administrative expenses of our Marketing business were slightly more in the quarter ended September 30, 2008 as compared with the same period of 2007 due to additional workforce related costs associated with the employees and related benefits for personnel that are assigned to us or otherwise provide us with managerial and administrative services.

Nine months ended September 30, 2008 compared with nine months ended September 30, 2007

Operating income of our Marketing segment declined to a loss of $6.5 million for the nine month period ended September 30, 2008 from income of $13.4 million for the corresponding period in 2007. Included in the operating loss for the first nine months of 2008 are approximately $23.9 million of unrealized, non-cash, mark-to-market losses associated with derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133, compared to the $4.0 million of unrealized mark-to-market losses for the comparable period of 2007. The unrealized, mark-to-market losses for the nine months ended September 30, 2008 result from increases in the forward and daily market prices of natural gas from December 31, 2007. We expect these net mark-to-market losses to be offset when the related physical transactions are settled.

The operating and administrative expenses of our Marketing business are slightly more in the nine months ended September 30, 2008 as compared with the same period of 2007 due to additional workforce related costs associated with the employees and related benefits for personnel that are assigned to us or otherwise provide us with managerial and administrative services.

Corporate

Interest expense was $50.7 million and $129.7 million for the three and nine months ended September 30, 2008, compared with $23.4 million and $70.2 million for the corresponding periods in 2007. The increases are primarily the result of higher weighted average debt balance associated with the following debt issuances:

- $200 million of our Zero Coupon Senior Notes in August 2007,
- $400 million of our Junior Subordinated Notes in September 2007,

Table of Contents

- $400 million of our 6.5% Senior Notes in April 2008, and
- $400 million of our 7.5% Senior Notes in April 2008.

Our weighted average interest rate is 6.3% for the three months and 6.0% for the nine months ended September 30, 2008 as compared with our weighted average interest rates of 6.0% and 5.9% for the same periods in 2007.

Further contributing to the increase in interest expense is the $4.0 million decrease in interest capitalized to our construction projects in the three months ended September 30, 2008 from the same period in 2007. Conversely, the increase in interest expense in the first nine months of 2008 was offset by an additional $5.6 million of capitalized interest when compared to the same period in 2007. For the three and nine months ended September 30, 2008 and 2007, our interest cost is comprised of the following:

	Three months ended September 30,		Nine months ended September 30,	
	2008	2007	2008	2007
	(unaudited; in millions)			
Interest expense	$ 50.7	$ 23.4	$ 129.7	$ 70.2
Interest capitalized	6.2	10.2	31.2	25.6
Interest cost incurred	$ 56.9	$ 33.6	$ 160.9	$ 95.8

LIQUIDITY AND CAPITAL RESOURCES

Disruption to Functioning of Capital Markets

Multiple events during 2008 involving numerous financial institutions have effectively restricted current liquidity within the capital markets throughout the United States and around the world. Despite efforts by treasury and banking regulators in the United States, Europe and other nations around the world to provide liquidity to the financial sector, capital markets currently remain constrained. We expect that our ability to issue debt and equity at prices that are similar to offerings in recent years will be limited over the next three to six months and possibly longer should capital markets remain constrained. Although we intend to move forward with our planned internal growth projects, we may revise the timing and scope of these projects as necessary to adapt to existing economic conditions and the benefits expected to accrue to our unitholders from our expansion activities may be muted by substantial cost of capital increases during this period.

General

We believe that our ability to generate cash flow is sufficient to meet our current and future operating needs. Our primary operating cash requirements consist of normal operating expenses, core maintenance activities, distributions to our partners and payments associated with our derivative activities. We expect to fund our current and future short-term cash requirements from our operating cash flows. Margin requirements associated with our derivative transactions are generally supported by letters of credit issued under our Credit Facility.

Our current business strategy emphasizes developing and expanding our existing Liquids and Natural Gas businesses with less focus on acquisitions. Our need for investment capital to fund our expansion projects, make acquisitions of new assets and businesses and to retire maturing or callable debt obligations is expected to be funded from several sources. We anticipate initially funding long-term cash requirements for expansion projects and acquisitions first from operating cash flows, second, from borrowings under our commercial paper program and/or our Credit Facility, and lastly, from borrowings under our $500 million revolving credit agreement with Enbridge (U.S.) Inc., a wholly-owned subsidiary of Enbridge Inc. Likewise, we anticipate initially retiring our maturing and callable debt with similar borrowings on these existing

Table of Contents

facilities. We expect to obtain permanent financing through the issuance of additional equity and debt securities, which we will use to repay amounts initially drawn to fund these activities. Our ability to complete future debt and equity offerings and the timing of any such offerings will depend on various factors, including prevailing market conditions, interest rates, our financial condition and our credit rating at the time.

Capital Resources

Equity and Debt Securities

Execution of our growth strategy and completion of our planned construction projects contemplate our accessing the public and private equity and credit markets to obtain the capital necessary to fund these projects. Although we have generated in excess of $2.2 billion over the past two years through the issuance of a balanced combination of debt and equity securities to fund our expansion projects, our ability to access these markets to obtain permanent financing over the next three to twelve months is likely to be limited due to prevailing market conditions. Our planned internal growth projects continue to require us to bear the cost of constructing these new assets before we begin to realize a return on them. As a result, we will continue to be opportunistic in our approach to funding the remaining expenditures from additional issuances of our capital and long-term debt.

In March 2008, we obtained approximately $221.8 million of cash from the public issuance and sale of 4.6 million of our Class A common units at a price to the public of $49.00 per unit, which consisted of $217.2 million of net proceeds, after payment of underwriters' discounts, commissions and offering expenses and a contribution of $4.6 million from our general partner to maintain its two percent general partner interest. Additionally, in early April 2008, we completed the private issuance and sale of our $400 million Notes due 2018 and our $400 million Notes due 2038 for net proceeds of approximately $790.2 million, after payment of initial purchasers' discounts and offering expenses. The Notes due 2018 bear interest at the rate of 6.50% and the Notes due 2038 bear interest at the rate of 7.50%. We used a portion of the proceeds from these offerings to repay outstanding issuances of commercial paper and borrowings under our Credit Facility, which we had previously used to finance a portion of our capital expansion projects. We temporarily invested the remaining proceeds for use in future periods to fund additional expenditures under our capital expansion programs.

Available Credit

Two primary sources of our liquidity are provided by the commercial paper market and our Credit Facility. We have a $600 million commercial paper program that is supported by our long-term Credit Facility, which we access primarily to provide temporary financing for our operating activities, capital expenditures and acquisitions, at rates that in the past have been generally more competitive than the rates available under our Credit Facility. In addition to our Credit Facility and commercial paper program, we have access to a $500 million unsecured three year revolving credit agreement from Enbridge (U.S.) Inc., a wholly-owned subsidiary of Enbridge Inc.

Credit markets in the United States and around the world remain constrained due to a lack of liquidity and confidence in a number of financial institutions. Investors continue to seek perceived safe investments in securities of the United States government rather than corporate issues. Although the credit ratings assigned to our senior unsecured debt securities by the nationally recognized statistical ratings organizations are considered "investment grade," we may at times experience difficulty accessing the commercial paper and long-term credit markets due to prevailing market conditions. Additionally, existing constraints in the commercial paper and credit markets may increase the rates we are charged for utilizing these markets. Notwithstanding the continuing weakness in the United States credit markets, we expect that our available liquidity is sufficient to meet our operating and capital requirements into 2009 and for the foreseeable future.

Table of Contents

Credit Facility

A subsidiary of Lehman Brothers Holdings, Inc. ("Lehman"), Lehman Brothers Bank, FSB ("Lehman BB") is one of the committed lenders under our Credit Facility. On September 15, 2008, Lehman filed a petition under Chapter 11 of the U.S. Bankruptcy Code with the U.S. Bankruptcy Court for the Southern District of New York. Lehman BB has declined requests to honor its commitment to lend up to $82.5 million under our Credit Facility, effectively reducing the amount available to us under our Credit Facility to $1,167.5 million. We are working with other financial institutions to assume Lehman BB's commitment. The remaining lenders under our Credit Facility continue to honor our requests for funding and we believe the amounts available to us under our Credit Facility will continue to provide us with sufficient liquidity to meet our working capital needs.

The amounts we can borrow under the terms of our Credit Facility are reduced by the principal amount of our commercial paper issuances and the balance of our letters of credit outstanding. At September 30, 2008, we had $386.2 million outstanding under our Credit Facility at a weighted average interest rate of 3.82% and letters of credit totaling $101.2 million.

At September 30, 2008, we could borrow $490.1 million under the terms of our Credit Facility, determined as follows:

		September 30, 2008
		(in millions)
Total credit available under Credit Facility		$ 1,250.0
Less:	Amounts outstanding under Credit Facility	(386.2)
	Balance of letters of credit outstanding	(101.2)
	Principal amount of commercial paper issuances	(190.0)
	Lehman Brothers Bank, FSB commitment	(82.5)
Total amount we could borrow at September 30, 2008		$ 490.1

In March 2008, we requested and received approval from the parties named as lenders to our Credit Facility for a one year extension of the maturity date of the Credit Facility from April 4, 2012 to April 4, 2013.

Commercial Paper Program

At September 30, 2008, we had $190 million in principal amount of commercial paper outstanding, with unamortized discount of $0.5 million, at a weighted average interest rate of 3.19%, before the effect of our interest rate hedging activities. Under our commercial paper program, we had net repayments of approximately $79.4 million during the nine months ended September 30, 2008, which include gross issuances of $1,603.9 million and gross repayments of $1,683.3 million. At September 30, 2008, we could issue an additional $410 million in principal amount under our commercial paper program. The commercial paper we can issue is limited by the credit available under our Credit Facility.

EUS Credit Agreement

In addition to our Credit Facility and commercial paper program, we have access to an unsecured three year revolving credit agreement with Enbridge (U.S.) Inc., a wholly-owned subsidiary of Enbridge Inc. (the "EUS Credit Agreement"). The EUS Credit Agreement provides us with access to an additional $500 million of financing on substantially the same terms as our Credit Facility and matures in December 2010. The amounts available to us under the EUS Credit Agreement remain undrawn at September 30, 2008 and available for our use.

Table of Contents

The credit markets, including the commercial paper markets in the United States, have recently experienced adverse conditions. Continuing volatility in the capital markets may increase costs associated with issuing commercial paper or other debt instruments or affect our ability to access those markets. Notwithstanding these adverse market conditions, we currently believe that current cash and cash generated by operations, together with access to external sources of funds as described above, will be sufficient to meet our operating and capital needs in the foreseeable future.

Cash Requirements for Future Growth

Capital Spending

We expect to make significant expenditures for the construction of additional natural gas and crude oil transportation infrastructure over the next three years. In 2008, we expect to spend approximately $1.6 billion on these and other projects with the expectation of realizing additional cash flows as projects are completed and placed in service. Our ability to fund these expenditures is dependent upon our ability to access the capital necessary to finance the construction of these facilities. Capital markets in the United States and abroad are constrained and as a result we may revise the timing and scope of these projects as necessary to adapt to existing markets and economic conditions.

Forecasted Expenditures

We categorize our capital expenditures as either core maintenance or enhancement expenditures. Core maintenance expenditures are those expenditures that are necessary to maintain the service capability of our existing assets and include the replacement of system components and equipment which is worn, obsolete or completing its useful life. Enhancement expenditures improve the service capability of our existing assets, extend asset useful lives, increase capacities from existing levels, reduce costs or enhance revenues, and enable us to respond to governmental regulations and developing industry standards.

We estimate our capital expenditures based upon our strategic operating and growth plans, which are also dependent upon our ability to produce or otherwise obtain the capital necessary to accomplish our growth objectives. The following table sets forth our estimates of capital required for system enhancement and core maintenance expenditures through December 31, 2008. Although we anticipate making the indicated expenditures, these estimates may change due to factors beyond our control, including weather-related issues, construction timing, changes in supplier prices or poor economic conditions. Additionally, estimates may change as a result of decisions made at a later date to revise the scope of a project. We made capital expenditures of $1.0 billion, including $49.3 million for core maintenance activities, during the nine months ended September 30, 2008.

For the full year of 2008, we anticipate our capital expenditures to approximate the following in billions:

System enhancements	$0.5
Core maintenance activities	0.1
Southern Access expansion	0.8
Alberta Clipper	0.2
	$1.6

Major Construction Projects

The following table includes our active major construction projects and additional information regarding our estimated construction cost, actual expenditures through September 30, 2008, the incremental capacity that will become available upon completion of the project and the periods during

Table of Contents

which we expect to complete the construction. The projected amounts included in this table may change due to modifications of the scope of the project, increases in materials and construction costs and other factors that are outside of our direct control.

	Capital Expenditures		Estimated Incremental Capacity			
	Estimated Total Cost	Actual Expenditures through September 30, 2008	Storage[(1)]	Oil[(2)]	Natural Gas[(3)]	Expected Completion
	(in billions)					
Southern Access expansion (Lakehead)	$ 2.1	$ 1.7	—	400	—	2009
Clarity (East Texas)	0.6	0.6	—	—	700	2008
Alberta Clipper	1.2	0.1	—	450	—	Mid-2010
North Dakota phase 6 expansion	0.2	—	—	50	—	Early 2010
Griffith and Superior storage tanks	0.1	—	1,220	—	—	2008
Trailbreaker	0.3	—	—	—	—	2012
Total	$ 4.5	$ 2.4	1,220	900	700	

(1) Thousands of barrels (KBbl).

(2) Thousands of barrels per day (Kbpd).

(3) Millions Of cubic feet per day (MMcf/d).

At September 30, 2008, we have approximately $573.2 million in outstanding purchase commitments for materials and services associated with our capital projects for the construction of assets that we expect to settle during the remainder of 2008 and into 2009. However, we will incur additional commitments as our capital projects continue to progress.

Including major expansion projects and excluding acquisitions, ongoing capital expenditures are expected to be significant over the next three years due to our Southern Access expansion and Alberta Clipper projects. Core maintenance capital is also anticipated to increase over that period of time due to growth in our pipeline systems and aging of infrastructure.

We anticipate funding the system enhancement capital expenditures temporarily through the issuance of commercial paper or borrowing under the terms of our Credit Facility, with permanent debt and equity funding being obtained when appropriate. Core maintenance expenditures are expected to be funded by operating cash flows.

We expect to incur continuing annual capital and operating expenditures for pipeline integrity measures to ensure both regulatory compliance and to maintain the overall integrity of our pipeline systems. Expenditure levels have continued to increase as pipelines age and require higher levels of inspection or maintenance; however, these are viewed to be consistent with industry trends.

Derivative Activities

We use derivative instruments (i.e., futures, forwards, swaps, options and other financial instruments with similar characteristics) to mitigate the volatility of our cash flows and manage the risks associated with market fluctuations in commodity prices. Based on our risk management policies, all of our derivative instruments are employed in connection with an underlying asset, liability or anticipated transaction and are not entered into with the objective of speculating on commodity prices.

Table of Contents

The following table provides summarized information about the timing and expected settlement amounts of our outstanding commodity derivative instruments at September 30, 2008:

	Notional	2008	2009	2010	2011	2012	2013	Total
				(dollars, in millions)				
Swaps								
Natural gas[1]	314,776,128	$(21.8)	$(42.0)	$(41.1)	$(33.2)	$(7.0)	$1.1	$(144.0)
NGL[2]	8,029,873	(18.5)	(43.2)	(7.0)	(0.5)	4.6	—	(64.6)
Crude[2]	1,345,324	(5.3)	(11.4)	(7.9)	(7.6)	(5.8)	1.1	(36.9)
Options-calls								
Natural gas[1]	1,187,000	(0.3)	(1.4)	(1.5)	(1.4)	—	—	(4.6)
NGL[2]	9,486	—	—	—	—	—	—	—
Options-puts								
Natural gas[1]	1,310,000	0.6	—	—	—	—	—	0.6
NGL[2]	1,087,300	0.4	1.0	2.3	1.5	2.6	—	7.8
Totals		$(44.9)	$(97.0)	$(55.2)	$(41.2)	$(5.6)	$2.2	$(241.7)

(1) Notional amounts for natural gas are recorded in MMBtu.

(2) Notional amounts for NGL and Crude are recorded in Bbl.

Operating Activities

Net cash provided by operating activities for the nine months ended September 30, 2008 was $473.2 million, an increase of $55.3 million from the $417.9 million generated during the same period in 2007. The increase in operating cash flow is directly attributable to the improved operating performance of our Liquids and Natural Gas systems. Although net cash provided by operating activities increased, cash flows associated with changes in our working capital accounts for the nine months ended September 30, 2008 were lower than the same period of 2007 due to the general timing differences in the collection on and payment of our current and related party accounts.

Investing Activities

We used $294.8 million less in our investing activities during the nine months ended September 30, 2008 in relation to the same period in 2007. The decrease is primarily attributable to the $315.8 million reduction of amounts spent in the first nine months of 2008 on our construction projects as compared to the same period of 2007. The decrease in the amounts spent on our construction projects is primarily attributable to completion of our Clarity project and the first stage of our Southern Access expansion project.

Financing Activities

Net cash provided by financing activities during the nine months ended September 30, 2008 was $707.1 million, compared with $920.9 million for the corresponding period in 2007. The reduction in the amount of cash provided by financing activities is due primarily to the lower amount of cash generated from our unit issuances in the first nine months of 2008 when compared to the same period in 2007. Net cash provided by financing activities for the nine months ended September 30, 2008 is attributable to the following:

- $221.8 million we raised in March 2008 from the issuance of 4.6 million class A common units, which consisted of $217.2 million of net proceeds after underwriters' discounts, commissions and offering expenses, and a contribution of $4.6 million from our general partner to maintain its two percent general partner interest.

Table of Contents

- In early April 2008, we completed the private issuance and sale of our $400 million Notes due 2018 and our $400 million Notes due 2038 for net proceeds of approximately $790.2 million, after payment of initial purchasers' discounts and offering expenses.

The increase in cash raised from both our unit and debt issuances is partially offset by the following:

- $93.1 million of net repayments on our Credit Facility and commercial paper.

- $32.3 million more distributions to our partners for the first nine months of 2008 compared to the same period in 2007 due to a greater number of units outstanding, a higher distribution level and higher incentive distribution payments to our general partner.

For the nine months ended September 30, 2008 we had gross borrowings of $2,131.3 million under our Credit Facility and gross repayments of $2,145.0 million, including $490.0 million of non-cash borrowings and repayments. Under our commercial paper program we had gross issuances of $1,603.9 million and gross repayments $1,683.3 million during the first nine months of 2008.

OFF-BALANCE SHEET ARRANGEMENTS

We have no significant off-balance sheet arrangements.

SUBSEQUENT EVENTS

Distribution to Partners

On October 13, 2008, the Board of Directors of Enbridge Management declared a distribution payable to our partners on November 14, 2008. The distribution will be paid to unitholders of record as of November 6, 2008, of our available cash of $108.8 million at September 30, 2008, or $0.990 per common unit. Of this distribution, $74.9 million will be paid in cash, $14.3 million will be distributed in i-units to our i-unitholder, $18.9 million will be distributed in Class C units to the holders of our Class C units and $0.7 million will be retained from the General Partner in respect of the i-unit and Class C unit distributions.

REGULATORY MATTERS

FERC Transportation Tariffs—Liquids

Effective July 1, 2008, we increased our rates for transportation on our Lakehead, North Dakota and Ozark systems in accordance with the indexed rate ceilings allowed by the FERC. In March 2006, the FERC determined that the Producer Price Index For Finished Goods plus 1.3 percent (PPI + 1.3 percent) should be the oil pricing index for a five year period ending July 2011. The index is used to establish rate ceiling levels for oil pipeline rate changes. For our Lakehead system, indexing only applies to the base rates, and does not apply to the SEP II, Terrace and Facilities surcharges. Effective July 2008, we increased the base tariff rates on our Lakehead system by an average of 8.2 percent to equal the indexed ceiling level allowed under the FERC's indexing methodology. On our Lakehead system, the new average rate for crude oil movements from the International Border near Neche, North Dakota to Chicago, Illinois is $1.26 per barrel, which reflects a $0.05 per barrel increase over the rates filed effective April 1, 2008. In addition to the rates on our Lakehead system, we increased the transportation rates on our North Dakota and Ozark systems 5.2 percent. The tariff rates for our Lakehead, North Dakota and Ozark systems are at the ceiling levels allowed under the FERC methodology.

Effective April 1, 2008, we filed our annual tariff with the FERC to reflect true-ups for the difference between estimates and actual cost and throughput data for the prior year and our projected costs and throughput for 2008. The projected costs for 2008 include four projects including the first stage of the Southern Access mainline expansion, two Superior and Griffith terminal tank projects and the Clearbrook Manifold project. This filing increased the average tariff for crude oil movements from the Canadian

Table of Contents

border to Chicago, Illinois, by approximately $0.34 per barrel, to an average of approximately $1.21 per barrel. We began to realize revenues in relation to this increased surcharge as crude oil is delivered from our pipeline, generally the month following the effective date of the tariff.

OTHER MATTERS

We amended our limited partnership agreement to modify the mechanism by which the capital accounts of all our partners are maintained when our general partner's incentive distribution rights are considered in determining the fair market value of the Partnership's assets in the event of a follow-on offering of our common units. We do not expect the amendment to materially change the amount of net taxable income or loss allocated to our unitholders or the economic rights of our unitholders as compared with the allocations or economic rights of our general partner.

RECENT ACCOUNTING PRONOUNCEMENTS NOT YET ADOPTED

Disclosures about Derivative Instruments and Hedging Activities

In March 2008, the Financial Accounting Standard Board, or FASB, issued Statement No. 161, *Disclosures about Derivative Instruments and Hedging Activities*, which is effective for fiscal years and interim periods beginning after November 15, 2008. The statement requires qualitative disclosures about a company's strategies and objectives for using derivatives, quantitative disclosures about fair value gains and losses on derivatives, and disclosures of credit-risk-related contingent features in derivative instruments. We do not anticipate adopting the provisions of this pronouncement early. We do not expect our adoption of this pronouncement to have a material affect on our financial statements other than modifications to our existing derivative disclosures to conform to the requirements set forth in the statement.

Calculation of Earnings Per Unit

In March 2008, the Emerging Issues Task Force, or EITF reached consensus on EITF Issue No. 07-4, *Application of the Two-Class Method under FASB Statement No. 128 to Master Limited Partnerships*. The pronouncement prescribes the manner in which a master limited partnership, or MLP, should allocate and present earnings per unit using the two-class method set forth in FASB Statement No. 128, *Earning per Share*. Under the two-class method, current period earnings are allocated to the general partner (including any embedded incentive distribution rights) and limited partners according to the distribution formula for available cash set forth in the partnership agreement. To the extent the partnership agreement does not explicitly limit distributions to the general partner; any earnings in excess of distributions are to be allocated to the general partner and limited partners utilizing the distribution formula for available cash specified in the partnership agreement. When current period distributions are in excess of earnings, the excess distributions are to be allocated to the general partner and limited partners based on their respective sharing of losses specified in the partnership agreement for the period. EITF 07-4 is to be applied retrospectively for all financial statements presented and is effective for financial statements issued for fiscal years beginning after December 15, 2008, and interim periods within those fiscal years. Earlier application is not permitted. We expect to adopt EITF 07-4 for our quarter ending March 31, 2009. We are currently evaluating the affect this pronouncement will have on our present computation of earnings per unit.

Table of Contents

Item 3. Quantitative and Qualitative Disclosures About Market Risk

The following should be read in conjunction with the information presented in our Annual Report on Form 10-K for the year ended December 31, 2007, in addition to information presented in Items 1 and 2 of this Quarterly Report on Form 10-Q. There have been no material changes to that information other than as presented below.

Our net income and cash flows are subject to volatility stemming from changes in commodity prices of natural gas, NGLs, condensate and fractionation margins (the relative price differential between NGL sales and the offsetting natural gas purchases). Our exposure to commodity price risk exists within our Natural Gas and Marketing segments. To mitigate the volatility of our cash flows, we use derivative instruments (i.e., futures, forwards, swaps, options and other financial instruments with similar characteristics) to manage the risks associated with market fluctuations in commodity prices. Based on our risk management policies, all of our derivative instruments are employed in connection with an underlying asset, liability or forecasted transaction and are not entered into with the objective of speculating on commodity prices.

Table of Contents

The following tables provides information about our derivative instruments at September 30, 2008 and December 31, 2007, with respect to our commodity price risk management activities for natural gas and NGLs, including condensate:

	At September 30, 2008						At December 31, 2007	
			Wtd. Average Price[2]		Fair Value[3]		Fair Value[3]	
	Commodity	Notional[1]	Receive	Pay	Asset	Liability	Asset	Liability

(1) Volumes of Natural gas are measured in MMBtu, whereas volumes of NGL and Crude are measured in Bbl.

(2) Weighted average prices received and paid are in $/MMBtu for Natural gas and in $/Bbl for NGL and Crude.

(3) The fair value is determined based on quoted market prices at September 30, 2008 and December 31, 2007, respectively, discounted using the swap rate for the respective periods to consider the time value of money. Fair values are presented in millions of dollars.

Table of Contents

Our credit exposure for over-the-counter derivatives is directly with our counterparty and continues until the maturity or termination of the contract. When appropriate, valuations are adjusted for various factors such as credit and liquidity considerations.

The table below summarizes our derivative balances by counterparty credit quality in millions of dollars (negative amounts represent our net obligations to pay the counterparty).

	September 30, 2008	December 31, 2007
	(in millions)	
Counterparty Credit Quality*		
AAA	$ —	$ —
AA	(164.0)	(298.3)
A	(76.4)	(47.2)
Lower than A	—	—
Total	$ (240.4)	$ (345.5)

* As determined by nationally recognized statistical ratings organizations.

Item 4. Controls and Procedures

We and Enbridge maintain systems of disclosure controls and procedures designed to provide reasonable assurance that we are able to record, process, summarize and report the information required in our annual and quarterly reports under the Securities Exchange Act of 1934. Our management has evaluated the effectiveness of our disclosure controls and procedures as of September 30, 2008. Based upon that evaluation, our principal executive officer and principal financial officer concluded that our disclosure controls and procedures are effective to accomplish their purpose. In conducting this assessment, our management relied on similar evaluations conducted by employees of Enbridge affiliates who provide certain treasury, accounting and other services on our behalf. We have not made any changes that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting during the three months ended September 30, 2008.

Table of Contents

PART II—OTHER INFORMATION

Item 1. Legal Proceedings

Refer to Part I, Item 1. Financial statements, Note 9, which is incorporated herein by reference.

Item 1A. Risk Factors

The risk factors presented below update and should be considered in addition to the risk factors previously disclosed in our Annual Report on Form 10-K for the fiscal year ended December 31, 2007.

Our ability to access the credit and capital markets on attractive terms to obtain funding for our capital projects may be limited due to the deterioration of these markets.

Global financial markets and economic conditions have been, and continue to be, weak and volatile which has caused a substantial deterioration in the credit and capital markets. These conditions, along with significant write-offs in the financial services sector and the re-pricing of credit risk have made, and will likely continue to make, it difficult to obtain funding for our capital needs from the credit and capital markets on terms similar to recent debt and equity offerings.

In particular, the cost of raising money in the debt and equity capital markets has increased while the availability of funds from those markets has diminished. Also, as a result of concern about the stability of financial markets generally and the solvency of counterparties specifically, the cost of obtaining money from the credit markets has increased as many lenders and institutional investors have increased interest rates, enacted tighter lending standards and reduced and, in some cases, ceased to provide funding to borrowers.

The commercial paper markets have recently experienced increased volatility and disruption, resulting in higher costs to issue commercial paper, which has resulted in a reduction in our use of our commercial paper program. In addition, because of the recent downturn in the financial markets, including the issues surrounding the solvency of many institutional lenders and the recent failure of several banks, our ability to obtain capital from our Credit Facility may be impaired. For example, as a result of Lehman Brothers Holding, Inc. ("Lehman") filing a petition under Chapter 11 of the U.S. Bankruptcy Code, Lehman Brothers Bank FSB ("Lehman BB"), a subsidiary of Lehman and a committed lender under our Credit Facility, has declined requests to honor its commitment to lend up to $82.5 million under our Credit Facility, effectively reducing the amount available to us under our Credit Facility to $1,167.5 million. We may be unable to utilize the full borrowing capacity under our Credit Facility if other lenders are not willing to provide additional funding to make up the portion of the Credit Facility commitments that Lehman BB has refused to fund or if any of the remaining 13 committed lenders is unable or unwilling to fund their respective portion of any funding request we make under our Credit Facility.

Due to these factors, we cannot be certain that funding for our capital needs will be available from the credit and capital markets if needed and to the extent required, on acceptable terms. If funding is not available when needed, or is available only on unfavorable terms, we may be unable to implement our development plan, enhance our existing business, complete acquisitions or otherwise take advantage of business opportunities or respond to competitive pressures, any of which could have a material adverse effect on our revenues and results of operations.

Our planned construction and development activities require substantial capital. We may be unable to obtain needed capital or financing on satisfactory terms or at all, which could delay or curtail our planned construction projects.

We have made and expect to continue making substantial capital expenditures for the construction and development of crude oil and natural gas infrastructure. One of the primary uses of our capital resources is expenditures for our pipeline construction and expansion projects. We invested approximately

Table of Contents

$1.9 billion in 2007 and anticipate investing approximately $1.6 billion during 2008 on our construction and development activities.

We intend to finance our future capital expenditures initially from our cash flow from operations, second from borrowings under our commercial paper program or our Credit Facility and lastly from borrowings under our $500 million revolving credit agreement with Enbridge (U.S.) Inc., a wholly-owned subsidiary of Enbridge Inc. As of September 30, 2008, our total debt outstanding was $3,736.3 million, we had $151.6 million available in unrestricted cash and short-term investments, $490.1 million of available borrowing capacity under our Credit Facility and the full $500 million available to us under our revolving credit agreement with Enbridge (U.S.) Inc. We expect to obtain permanent financing through the issuance of additional debt and equity securities, which we will use to repay amounts initially drawn to fund our construction and development activities. We may be unable to issue additional debt or equity securities, or to issue these securities on attractive terms due to a number of factors including a lack of demand, poor economic conditions, unfavorable interest rates or our financial condition or credit rating at the time. In the event additional capital resources are unavailable; we may curtail construction and development activities, or be forced to sell some of our assets on an untimely or unfavorable basis in order to raise capital.

Exhibit 31.1

CERTIFICATION PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002

I, Stephen J. J. Letwin, certify that:

1. I have reviewed this quarterly report on Form 10-Q of Enbridge Energy Partners, L.P.;

2. Based on my knowledge, this quarterly report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this quarterly report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this quarterly report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

   a) designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this quarterly report is being prepared;

   b) designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   c) evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this quarterly report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this quarterly report based on such evaluation; and

   d) disclosed in this quarterly report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's Board of Directors (or persons performing the equivalent functions):

   a) all significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

b) any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

TABLE OF CONTENTS

This Annual Report on Form 10-K contains forward-looking statements. These forward-looking statements are identified as any statement that does not relate strictly to historical or current facts. They use words such as "anticipate," "believe," "continue," "estimate," "expect," "forecast," "intend," "may," "plan," "position," "projection," "strategy," "could," "should," or "will" or the negative of those terms or other variations of them or comparable terminology. In particular, statements, expressed or implied, concerning future actions, conditions or events or future operating results or the ability to generate revenue, income or cash flow are forward-looking statements. Forward-looking statements are not guarantees of performance. They involve risks, uncertainties and assumptions. Future actions, conditions or events and future results of operations may differ materially from those expressed in these forward-looking statements. Many of the factors that will determine these results are beyond our ability to control or predict. For additional discussion of risks, uncertainties and assumptions, see "Item 1A. Risk Factors" included elsewhere in this Form 10-K.

Glossary

The following abbreviations, acronyms, or terms used in this Form 10-K are defined below:

AEUB	Alberta Energy and Utilities Board
Anadarko system	Natural gas gathering and processing assets located in western Oklahoma and the Texas panhandle, which were acquired on October 17, 2002
AOCI	Accumulated other comprehensive income
AOSP	Athabasca Oil Sands Project, located in northern Alberta, Canada
Bbl	Barrel of liquids (approximately 42 U.S. gallons)
BlackRock	BlackRock Ventures Inc., an unrelated producer of heavy oil in Western Canada
Bpd	Barrels per day
CAA	Clean Air Act
Canadian Natural	Canadian Natural Resources Limited, an unrelated energy company
CAPP	Canadian Association of Petroleum Producers, a trade association representing a majority of our Lakehead system's customers
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CAD	Amount denominated in Canadian dollars
CWA	Clean Water Act
DOT	Department of Transportation
East Texas system	Natural gas gathering, treating and processing assets in East Texas acquired on November 30, 2001. Also includes a system formerly known as the Northeast Texas system acquired October 17, 2002.
Enbridge	Enbridge Inc., of Calgary, Alberta, Canada, the ultimate parent of the General Partner
Enbridge Management	Enbridge Energy Management, L.L.C.
Enbridge system	Canadian portion of the System
Enbridge Pipelines	Enbridge Pipelines Inc.
EnCana	EnCana Corporation, an unrelated producer of natural gas and crude oil
EP Act	Energy Policy Act of 1992
EPACT	Energy Policy Act of 2005
EPA	Environmental Protection Agency
Exchange Act	Securities Exchange Act of 1934, as amended
FASB	Financial Accounting Standards Board
FERC	Federal Energy Regulatory Commission
General Partner	Enbridge Energy Company, Inc., general partner of the Partnership
HCA	High consequence area
ICA	Interstate Commerce Act
KPC	Kansas Pipeline system, sold on November 1, 2007
Lakehead Partnership	Enbridge Energy, Limited Partnership, a subsidiary of the Partnership
Lakehead system	U.S. portion of the System
LIBOR	London Interbank Offered Rate—British Bankers Association's average settlement rate for deposits in U.S. dollars
M^3	Cubic meters of liquid = 6.2898105 Bbl
MLP	Master Limited Partnership
MMBtu/d	Million British Thermal units per day
MMcf/d	Million cubic feet per day
Midcoast system	Natural gas gathering, treating, processing, transmission and marketing assets acquired October 17, 2002

Mid-Continent system	Crude oil pipelines and storage facilities located in the mid-continent of the U.S. and acquired on March 1, 2004
NEB	National Energy Board, a Canadian federal agency that regulates Canada's energy industry
NGA	Natural Gas Act
NGL or NGLs	Natural gas liquids
NGPA	Natural Gas Policy Act
NOPR	Notice of Proposed Rulemaking issued by the FERC.
North Dakota system	Liquids petroleum pipeline system in the Upper Midwest United States acquired on May 18, 2001
Northeast Texas system	Natural gas gathering and processing assets acquired on October 17, 2002 and integrated with the East Texas system
North Texas system	Natural gas gathering and processing assets acquired on December 31, 2003
NYMEX	The New York Mercantile Exchange where natural gas futures, options contracts, and other energy futures are traded
NYSE	New York Stock Exchange
OCSLA	Outer Continental Shelf Lands Act
OSHA	Occupational Safety and Health Administration
OPA	Oil Pollution Act
OPS	Office of Pipeline Safety
PADD	Petroleum Administration for Defense Districts
PADD I	Consists of Connecticut, Delaware, District of Columbia, Florida, Georgia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia and West Virginia
PADD II	Consists of Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee and Wisconsin
PADD III	Consists of Alabama, Arkansas, Louisiana, Mississippi, New Mexico and Texas
PADD IV	Consists of Idaho, Montana, Wyoming and Colorado
PADD V	Consists of Washington, Oregon, California, Arizona, Alaska, Hawaii and Nevada
Palo Duro system	Natural gas transmission and gathering pipeline assets located in Texas between the Anadarko system and the North Texas system acquired on March 1, 2004 and integrated with the Anadarko system during 2005
Partnership Agreement	Fourth Amended and Restated Agreement of Limited Partnership of the Enbridge Energy Partners, L.P.
Partnership	Enbridge Energy Partners, L.P. and its consolidated subsidiaries
PHMSA	Pipeline and Hazardous Materials Safety Administration (formerly OPS)
PIPES of 2006	Pipeline Inspection, Protection, Enforcement, and Safety Act of 2006
PIPES Act	Pipeline Safety Act Reauthorization of 2006
PPIFG	Producer Price Index for Finished Goods
PSA	Pipeline Safety Act
PSI Act	Pipeline Safety Improvement Act
RCRA	Resource Conservation & Recovery Act
SAGD	Steam assisted gravity drainage
SEC	Securities and Exchange Commission
SEP II	System Expansion Program II, an expansion program on the Lakehead system
Settlement Agreement	A FERC approved settlement agreement, signed October 1996

SFAS	Statement of Financial Accounting Standards
SFPP	Santa Fe Pacific Pipelines, L.P., an unrelated pipeline company
Suncor	Suncor Energy Inc., an unrelated energy company
Syncrude	Syncrude Canada Ltd., an unrelated energy company
Synthetic crude oil	Product that results from upgrading or blending bitumen into a crude oil stream which can be readily refined by most conventional refineries
System	The combined liquid petroleum pipeline operations of the Lakehead system and the Enbridge system
Tariff Agreement	A 1998 offer of settlement filed with the FERC
Terrace	Terrace Expansion Program, an expansion program on the Lakehead system
WCSB	Western Canadian Sedimentary Basin

PART I

Item 1.—Business

OVERVIEW

In this report, unless the context requires otherwise, references to "we," "us," "our," or the "Partnership" are intended to mean Enbridge Energy Partners, L.P. and its consolidated subsidiaries. We are a publicly traded Delaware limited partnership that owns and operates crude oil and liquid petroleum transportation and storage assets, and natural gas gathering, treating, processing, transportation and marketing assets in the United States of America. Our Class A common units are traded on the NYSE under the symbol "EEP."

We were formed in 1991 by our general partner to own and operate the Lakehead system, which is the U.S. portion of a crude oil and liquid petroleum pipeline system extending from western Canada through the upper and lower Great Lakes region of the United States to eastern Canada. A subsidiary of Enbridge owns the Canadian portion of the System. Enbridge, which is based in Calgary, Alberta, provides energy transportation, distribution and related services in North America and internationally. Enbridge is the ultimate parent of our general partner.

We are a geographically and operationally diversified partnership consisting of interests and assets relating to the midstream energy sector. As of December 31, 2007, our portfolio of assets include the following:

- Approximately 5,000 miles of crude oil gathering and transportation lines and 28.9 million barrels, or Bbl, of crude oil storage and terminaling capacity.
- Natural gas gathering and transportation lines totaling approximately 11,500 miles.
- Ten active natural gas treating and 24 active natural gas processing facilities with an aggregate capacity of approximately 2,800 million cubic feet per day, or MMcf/d.
- Trucks, trailers and railcars for transporting natural gas liquids, or NGLs, crude oil and carbon dioxide.
- Marketing assets that provide natural gas supply, transmission, storage and sales services.

Enbridge Management is a Delaware limited liability company that was formed in May 2002 to manage our business and affairs. Under a delegation of control agreement, our general partner delegated substantially all of its power and authority to manage our business and affairs to Enbridge Management. Our general partner, through its direct ownership of the voting shares of Enbridge Management, elects all of the directors of Enbridge Management. Enbridge Management is the sole owner of a special class of our limited partner interests, which we refer to as "i-units."

Our ownership at December 31, 2007 is comprised of the following:

	2007
Class A common units owned by the public	59.6%
Class B common units owned by our general partner	4.2%
Class C units owned by our general partner	6.4%
Class C units owned by institutional investors	13.1%
i-units owned by Enbridge Management	14.7%
General Partner interest	2.0%
	100.0%

BUSINESS STRATEGY

Our primary objective is to provide stable and sustainable cash distributions to our unitholders, while maintaining a relatively low investment risk profile. Our business strategies focus on creating value for our customers, which we believe is the key to creating value for our investors. To accomplish our objective, we focus on the following key strategies:

1. Expand existing core asset platforms

    - We intend to develop and acquire energy transportation assets and related facilities that are complementary to our existing systems. Our core businesses provide plentiful opportunities to achieve our primary business objectives.

2. Develop new asset platforms

    - We plan to develop new gathering, processing, transportation and storage assets to meet customer needs, by expanding capacity into new markets with favorable supply and demand fundamentals.

3. Focus on operational excellence

    - We will continue to operate our existing infrastructure to maximize cost efficiencies, provide flexibility for our customers and ensure the capacity is reliable and available when required. We will focus on safety, environmental integrity, innovation and effective stakeholder relations.

In our current environment, our primary focus is on expanding and developing our existing assets. We continue to place relatively less emphasis on acquisitions than we have in past years due to:

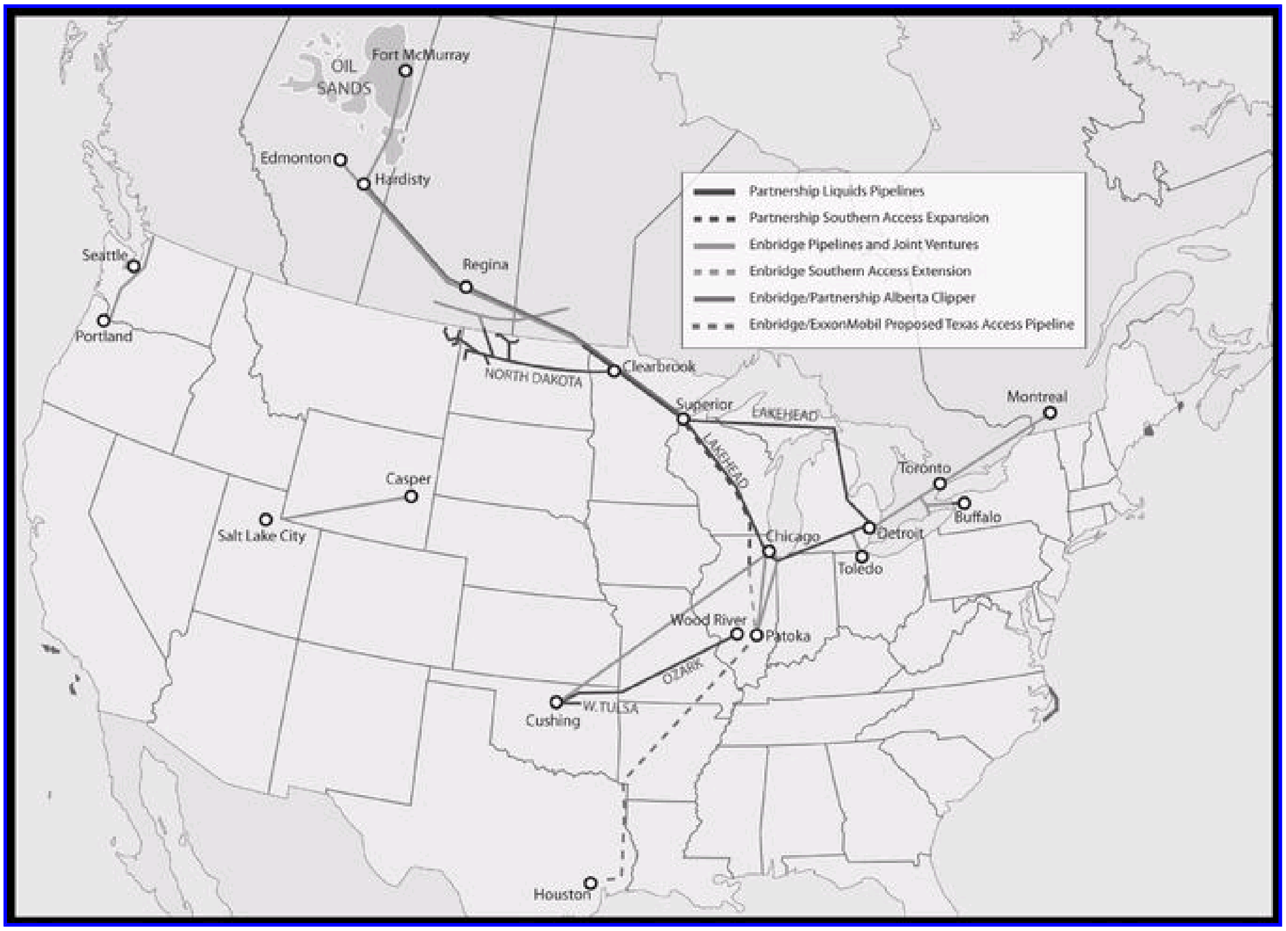
- Acquisition prices for the stable energy assets we seek continue to be inflated; and
- The expansion and diversification of our asset base over the past few years has created opportunities for internal growth projects that are expected to enhance the value of services we provide to our customers and returns to our investors.

While purchase prices remain high, our acquisitions will likely be limited to situations where we have natural advantages, through reduced costs or increased utilization of our services.

Our planned internal growth for both our liquids and natural gas businesses will require a significant investment of expansion capital over the next few years. While these major projects are under construction, we will bear the associated capital costs for these investments before we begin to realize a return on them. We expect our larger growth projects will be accretive to distributable cash flow when placed into service. These projects are discussed below in the respective business section.

Liquids

The following map presents the locations of our current Liquids systems assets and projects being constructed:



This map depicts some assets owned by Enbridge and projects being constructed to provide an understanding of how they interconnect with our Liquids systems.

Western Canadian crude oil is an important source of supply for the United States. According to the latest available data for 2007 from the U.S. Department of Energy's Energy Information Administration, Canada supplied approximately 1.7 million barrels per day, or Bpd, of crude oil to the U.S., the largest source of U.S. imports. Approximately 67 percent of the Canadian crude oil moving into the U.S. was transported on the System, the primary pipeline from western Canada to the U.S. We are well positioned to develop additional infrastructure to deliver growing volumes of crude oil that are expected from the Alberta oil sands. With an estimated $110 billion in Canadian dollars, or CAD, of active or planned projects in the Alberta oil sands, new production is expected to grow steadily during the next five years, with an additional 2.3 million Bpd of incremental supply available by 2015, according to the Canadian Association of Petroleum Producers, or CAPP.

Our Southern Access project is the cornerstone of our mainline expansion initiatives to address the expected increase in supply of Western Canadian crude oil. Our $2.1 billion project will provide an additional 400,000 Bpd of heavy crude oil capacity to the Chicago market and beyond by early 2009, with nearly half of this capacity available in early 2008. The design will also permit a further 800,000 Bpd increase in capacity for minimal additional cost, in conjunction with a corresponding expansion upstream of Superior. The Southern Access project involves new pipeline construction on our Lakehead system along with expansion on the Canadian portion of the pipeline by Enbridge.

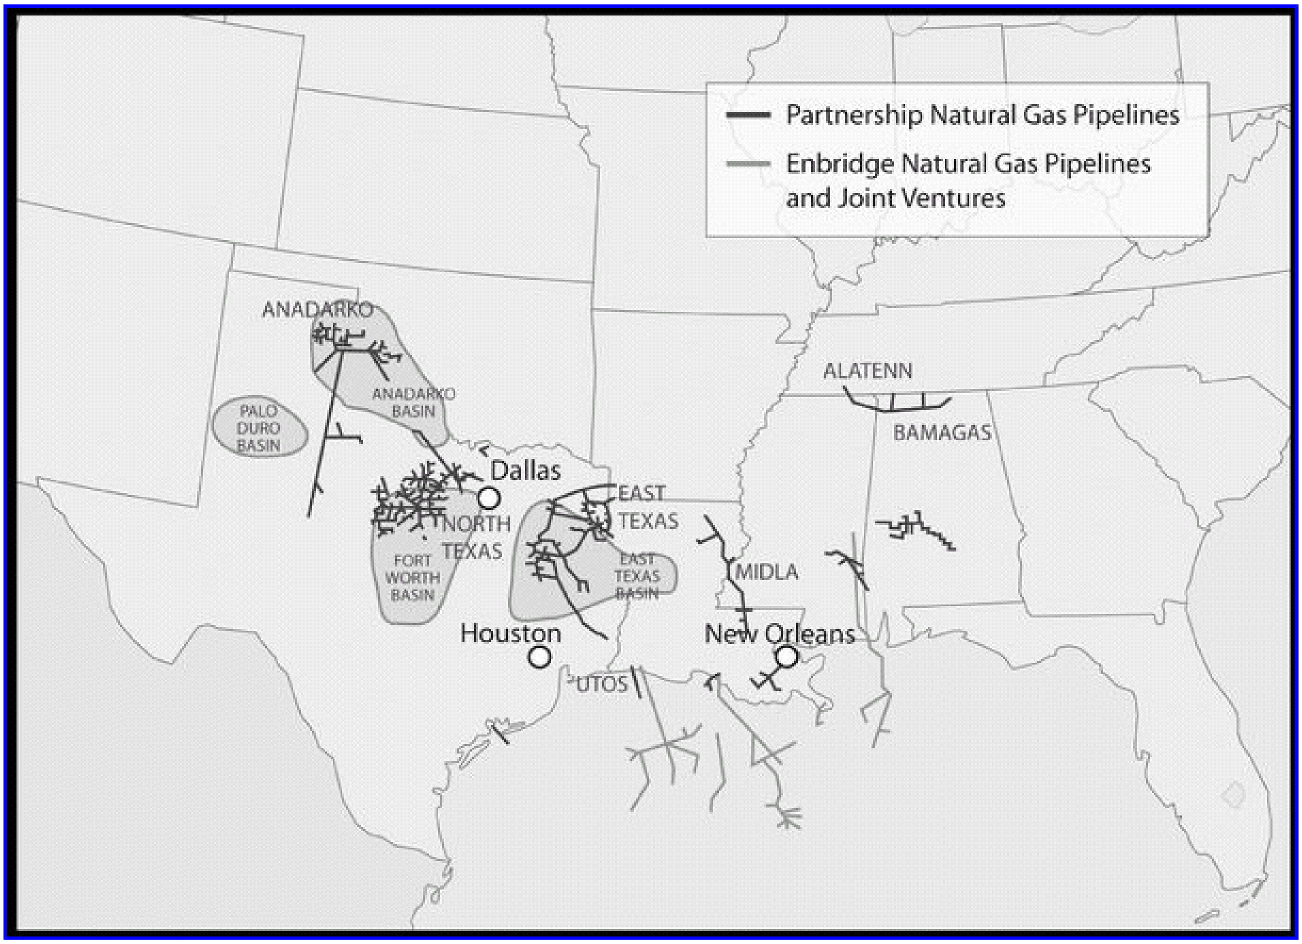
Additionally, we and Enbridge are developing the Alberta Clipper pipeline project, which will involve construction of a 1,000 mile, 36-inch diameter, heavy crude oil pipeline from Hardisty, Alberta to Superior, Wisconsin with an initial capacity of 450,000 Bpd that is expandable to 800,000 Bpd. Our share of the cost of this project as currently proposed will be approximately $1.0 billion in 2007 dollars, excluding capitalized interest. Alberta Clipper is expected to be in-service by the middle of 2010. Regulatory applications were filed with the National Energy Board in May 2007 for the Canadian segment of the project, and the hearings were concluded in the fourth quarter of 2007. In the United States, regulatory and permit applications are in progress at state and federal levels, and engineering and public consultations are underway.

Along with Enbridge, we are actively working with our customers to develop options that will allow Canadian crude oil to access new markets. The market strategy we are undertaking is to provide timely, economical, integrated transportation solutions to connect growing supplies of production from the Alberta oil sands to key refinery markets in the United States. The strategy involves further penetration into PADD II as well as entry into the vast refining center of the U.S. Gulf Coast. In December 2007, Enbridge and ExxonMobil Pipeline Company announced the two companies will conduct a Solicitation for Binding Shipper Commitment (Commitment Solicitation) for a proposed new pipeline system to transport crude oil from Patoka, Illinois, to the Texas Gulf Coast. The new pipeline to be called the "Texas Access Pipeline," would transport crude oil sourced from the Canadian oil sands region in Alberta, Canada, and from the upper Midwest to refiners in the Nederland and Houston, Texas areas. The proposed project includes a new 768-mile, 30-inch diameter pipeline, which would transport crude oil from Patoka, Illinois, southward to Nederland, Texas. Also proposed is an 88-mile, 24-inch pipeline to transport crude oil onward from Nederland to a delivery point in the east Houston area. The Commitment Solicitation is for shipper interest in executing binding commitments to transport specified volumes of crude oil on the new pipeline, which is expected to be completed in 2011. The results of the Commitment Solicitation will guide and determine the further development of the proposed joint venture pipeline.

The strategy of further penetration into PADD II is also evidenced by the Enbridge expansion of the Spearhead pipeline system from 125,000 Bpd to 190,000 Bpd. Our Lakehead system carries Western Canadian crude oil as far as Chicago, where it is transferred to the Spearhead pipeline that runs from Chicago, Illinois to the refinery and storage hub located at Cushing, Oklahoma.

Natural Gas

The following map presents the locations of assets for our Natural Gas systems:



This map depicts some assets owned by Enbridge to provide an understanding of how they relate to our Natural Gas systems.

Our natural gas assets are primarily located in the U.S. Gulf Coast region, one of the most active natural gas producing areas in the United States. Three of our larger systems in Texas are located in basins that are experiencing consistent drilling and production growth. These core basins are known as the East Texas basin, the Fort Worth Basin and the Anadarko basin. Our focus has been on expanding the service capability of our existing assets and acquiring assets with strong growth prospects located in or near these areas where we already operate or have a competitive advantage.

One of our key goals is to become the premier midstream energy company in the U.S. Gulf Coast region. To achieve this end, the operations and commercial activities of our gathering and processing assets and intrastate pipelines are integrated to provide better service to our customers. From an operations perspective, our key strategies are to provide safe and reliable service at reasonable costs to our customers, enhance our reputation and capitalize on opportunities for attracting new customers. From a commercial perspective, our focus is to provide our customers with a greater value for their commodity. This latter objective we intend to achieve by increasing customer access to preferred natural gas markets. We have made significant progress on attaining this objective with construction of our East Texas Expansion project, otherwise known as Clarity, which includes an intrastate pipeline connecting our East Texas system at Bethel, Texas to multiple downstream interconnects and by physically connecting a number of our systems.

The aim is to be able to move significant quantities of natural gas from our Anadarko, North Texas and East Texas systems to the major market hubs in Texas and Louisiana, which Clarity provides. From these market hubs, natural gas can be used in the local Texas markets or transported to consumers in the Midwest, Northeast and Southeast United States.

Our Natural Gas business also includes trucking operations that we use to enhance the value of the NGLs produced at our processing plants by ensuring ready access to strategic markets. Our Marketing business provides us with the ability to maximize the value received for the natural gas we transport and purchase by identifying customers with consistent demand for natural gas.

The growth prospects in our core areas are primarily a result of strong commodity prices, rig utilization rates and improvements in technology to produce natural gas from tight sand and shale formations. As a result, many expansions and extensions have been made on three of our main gathering and processing systems in Texas, including well-connects, processing plant re-activations, new plant construction, added compression, new pipelines and treating plant re-activations.

We continue to work closely with our customers to provide natural gas transportation solutions to avoid shut-in natural gas production from insufficient transportation capacity. In January 2006, we announced an expansion and extension of our East Texas system to handle the strong growth occurring in East Texas natural gas production, particularly from the Bossier Sands and other regional producing formations. We coordinated extensively with our customers to develop and enhance access for growing Texas natural gas production to major markets in southeast Texas. We have firm volume commitments and acreage dedications on our Clarity project, which we believe by the end of 2008 will approximate 600 MMcf/d. The intrastate pipeline has 700 MMcf/day of capacity that will be available when construction is completed in early 2008 and additional compression is added in mid-2008. The project is designed to be expandable and is positioned for potential upstream and downstream extension.

In addition to the expansion of our transportation capacity to meet the needs of our customers, we have also expanded our processing and treating capacity on our three major systems to meet the growing demand for these services and to capture the additional revenue these services provide. In 2007 we added 195 MMcf/d of processing capacity with the commissioning of the Hidetown plant on our Anadarko system and the expansions of the Weatherford plant on our North Texas system. We added three hydrocarbon dewpoint control facilities with total capacity of 550 MMcf/d on our East Texas system at Carthage, Grapeland and Henderson, Texas to meet the increasingly more stringent natural gas pipeline transportation specifications. Lastly, we enhanced the ability of our 275 MMcf/d treating facility at Aker, Texas to handle additional sour gas being produced in the southeast Texas area and we commissioned our 200 MMcf/d treating facility at Marquez, Texas which feeds directly into the intrastate pipeline we are constructing in connection with our Clarity project.

BUSINESS SEGMENTS

We conduct our business through three business segments:

- Liquids;
- Natural Gas; and
- Marketing.

These segments have unique business activities that require different operating strategies. For information relating to revenues from external customers, operating income and total assets for each segment, refer to Note 16 of our consolidated financial statements beginning on page F-1 of this report.

Liquids Segment

Lakehead system

The Lakehead system consists primarily of a crude oil and liquid petroleum common carrier pipeline and terminal assets in the Great Lakes and Midwest regions of the United States. This system, together with the Enbridge system in Canada, forms the longest liquid petroleum pipeline system in the world. The System, which spans approximately 3,300 miles, has been in operation for over 50 years and is the primary transporter of crude oil and liquid petroleum from western Canada to the United States. The System serves all the major refining centers in the Great Lakes and Midwest regions of the United States and the Province of Ontario, Canada. We and Enbridge have undertaken the Southern Access, Alberta Clipper and other expansion projects to increase the capacity of the Lakehead and Enbridge mainline systems in an effort to capitalize on the expected increases in crude oil supplies from previously announced heavy crude oil and oil sands projects in the Province of Alberta, Canada.

Our Lakehead system is an interstate common carrier pipeline system regulated by the Federal Energy Regulatory Commission, or FERC. The Lakehead system spans a distance of approximately 1,900 miles, and consists of approximately 3,500 miles of pipe with diameters ranging from 12 inches to 48 inches, 60 pump station locations with a total of approximately 846,450 installed horsepower and 64 crude oil storage tanks with an aggregate capacity of approximately 11.6 million barrels. The System operates in a segregation, or batch mode, allowing the transport of 43 crude oil commodities including light, medium and heavy crude oil (including bitumen, which is a naturally occurring tar-like mixture of hydrocarbons), condensate and NGLs.

Customers. Our Lakehead system operates under month-to-month transportation arrangements with our shippers. During 2007, approximately 30 shippers tendered crude oil and liquid petroleum for delivery through the Lakehead system. We consider multiple companies that are controlled by a common entity to be a single shipper for purposes of determining the number of shippers delivering crude oil and liquid petroleum on our Lakehead system. Our customers include integrated oil companies, major independent oil producers, refiners and marketers.

Supply and Demand. Our Lakehead system is well positioned as the primary transporter of western Canadian crude oil and continues to benefit from the growing production of crude oil from the Alberta oil sands. Similar to U.S. domestic conventional crude oil production, western Canada's conventional crude oil production is declining. Over the last several years, development of the Alberta oil sands resource has more than offset declining conventional production. The NEB estimated that total production in 2007 from the Western Canadian Sedimentary Basin, or WCSB, averaged approximately 2.4 million Bpd compared with 2.3 million bpd in 2006. WCSB crude oil production is comparable with production from key OPEC members Kuwait and Venezuela.

Remaining established conventional oil reserves in western Canada were estimated to be approximately 3.7 billion barrels at the end of 2006. During 2006, the latest period for which data is available, approximately 66 percent of conventional production was replaced with reserve additions. Remaining established reserves from the Alberta oil sands as of the end of 2006 stand at approximately 173 billion barrels. Combined conventional and oil sands established reserves of approximately 179 billion barrels compares with Saudi Arabia's proved reserves of approximately 264 billion barrels.

According to the CAPP, an estimated $60 billion CAD has been spent on oil sands development from 1996 through 2006. A survey of CAPP members and oil sands developers estimate that oil producers may spend an additional $110 billion CAD by 2011, including all announced and planned oil sands projects. Although it is unlikely that all projects will proceed as planned, the investment already in place and the number and size of companies involved provides strong evidence of ongoing oil sands industry expansion. CAPP estimates future production from the Alberta oil sands will increase by more than 2.3 million barrels per day by 2015 based on a subset of currently approved applications and announced expansions.

The near-term growth in crude oil supply comes from the completion and consolidation of major expansion projects at existing synthetic crude oil upgraders and growth of bitumen production from both existing and new Steam Assisted Gravity Drainage, or SAGD facilities currently under construction. Over the next year, synthetic crude oil production is expected to increase by approximately 315,800 Bpd from the following sources:

- 46,300 Bpd from the start up of the first phase of the Heartland Upgrader by BA Energy Inc.
- 114,000 Bpd from the phase 1 start up by Canadian Natural Resources Limited of its Horizon Project Upgrader.
- 58,500 Bpd from the phase 1 start up the Long Lake Project upgrader by joint venture partners Nexen Inc. and OPTI Canada Inc.
- 97,000 Bpd from start up of the Millennium coker unit by Suncor Energy Inc.

Syncrude completed a 100,000 Bpd Stage 3 expansion in 2006, increasing total production capacity to 350,000 Bpd. However, the new Stage 3 coker suffered from a number of start-up issues that prevented Syncrude from attaining full utilization of its production capacity, even through 2007. Production for the year averaged approximately 304,000 Bpd. Syncrude's next expansion will de-bottleneck the current system to increase synthetic production by approximately 40,000 Bpd to approximately 390,000 Bpd by 2012.

Suncor completed its 35,000 Bpd expansion in late 2005 resulting in total upgrading capacity of 260,000 Bpd. Average synthetic production from the upgrader was 229,000 Bpd in 2007, lower than capacity as a result of the scheduled shutdown of one of two upgraders to allow the tie-in of new facilities related to a planned expansion. Suncor also received conditional approval from the AEUB for its proposed Voyageur expansion, which will increase synthetic production capacity to 550,000 Bpd by 2012. Over the next year, Suncor is planning to complete construction of an additional coker unit as part of its Millennium project, bringing an additional 97,000 Bpd of synthetic production to the market.

The Athabasca Oil Sands Project, or AOSP, owned by Shell Canada Limited (60%), Chevron Canada Limited (20%) and Marathon Oil Corporation (20%), is another oil sands project that reached full production capacity in 2004. The AOSP project moved forward with AEUB's conditional approval of the proposed AOSP Expansion 1 project in 2006. The AOSP Expansion 1 project aims to achieve an expansion from the current production capacity of 158,000 Bpd of synthetic crude oil to more than 249,000 Bpd by 2010.

Over the next two years, unblended bitumen production is expected to start, or increase, from more than ten individual projects that are coming on line. Notable projects include the expansions at Canadian Natural's Wolf Lake/Primrose area, ConocoPhillips' Surmont, Devon's Jackfish, EnCana's Foster Creek and Christiana Lake, Husky's Sunrise, Suncor's Firebag and Total's Josyln project. Based on the AEUB forecast, unblended bitumen production is expected to increase by roughly 38,000 Bpd by the end of 2008, more than offsetting the decline in conventional crude production.

Although the crude oil and liquid petroleum delivered through the Lakehead system primarily originates in oilfields in western Canada, the Lakehead system also receives approximately five percent of its receipts from domestic sources including:

- U.S. production at Clearbrook, Minnesota through a connection with the North Dakota system;
- U.S. production at Lewiston, Michigan; and
- both U.S. and offshore production in the Chicago area.

Based on forecasted growth in western Canadian crude oil production and completion of upgrader expansions and increased bitumen production, Lakehead system deliveries are expected to average 1.69 million Bpd in 2008 compared with 1.54 million Bpd in 2007. The estimated deliveries for 2008 are part of a forecast representing forward-looking information and are subject to risks, uncertainties, and factors beyond our control.

Our ability to increase deliveries and to expand our Lakehead system in the future will ultimately depend upon numerous factors. The investment levels and related development activities by crude oil producers in conventional and oil sands production directly impacts the level of supply from the WCSB. Investment levels are influenced by crude oil producers' expectations of crude oil and natural gas prices, future operating costs, and availability of markets for produced crude. Higher crude oil production from the WCSB should result in higher deliveries on the Lakehead system. Deliveries on the Lakehead system are also affected by periodic maintenance, turnarounds and other shutdowns at producing plants that supply crude oil to, or refineries that take delivery from, our Lakehead system.

We expect the demand for WCSB crude oil production will continue to increase in PADD II. Refinery configurations and crude oil requirements in PADD II continue to be an attractive market for Western Canadian supply. According to the U.S. Department of Energy's Energy Information Administration, 2007 demand for crude oil in PADD II declined slightly from 2006 with an average of 3.2 million Bpd. At the same time, production of crude oil within PADD II increased marginally by 12,000 Bpd to 469,000 Bpd. With the proximity of the WCSB to PADD II, the availability of capacity on the Lakehead system and limited alternative markets for WCSB production, we expect deliveries on the Lakehead system to increase along with increases in WCSB supply. Based on our industry survey, we expect refineries in the PADD II market to compete aggressively with new markets for access to the growing supply of crude oil from the WCSB.

In conjunction with Enbridge, we continue to progress on schedule with construction of the 400,000 Bpd Southern Access expansion project. We are undertaking the United States portion of the expansion on our Lakehead system. The first stage of construction is on schedule for completion in the first half of 2008 that will add approximately 190,000 Bpd. This stage of the project includes a new pipeline between Superior and Delavan, Wisconsin, along with pump station enhancements upstream and downstream of this segment. The second stage of the Southern Access expansion project will provide capacity and a new pipeline from Delavan to Flanagan, Illinois, with completion expected in the first half of 2009. Completion of the total Southern Access expansion project will create a 454-mile pipeline with approximately 400,000 Bpd of incremental capacity on our Lakehead system.

On March 16, 2006, the Federal Energy Regulatory Commission ("FERC") approved an Offer of Settlement with respect to rate principles for the Southern Access expansion, which were negotiated with CAPP. In July 2006, support from shippers and CAPP was obtained to increase the diameter of the new pipeline segment of the project from 36 inches to 42 inches. The larger diameter will not provide increased capacity in the near term but does increase the ultimate expansion capacity of the line from 800,000 Bpd to 1,200,000 Bpd with additional pumping horsepower. This improves future expansion opportunities for our Lakehead system. In the interim, shippers will absorb all of the incremental operating costs of the larger diameter pipe but will benefit from reduced power costs at higher throughput levels.

We anticipate the ultimate cost to complete our portion of the Southern Access project to approximate $2.1 billion. This estimate reflects our cost experience to date for labor, materials and rights-of-way. The risk to our unitholders resulting from any escalation of costs is largely mitigated by the cost of service tolling arrangement used for the project. Approximately 88 percent of cost overages will be included in the rate base, which forms the basis for determining our tariff rates for transportation. The remaining 12 percent of the project cost relates to installing larger pipe than required under current agreements, which we are financing in anticipation of future expansion opportunities.

In July 2006, Enbridge announced that it had received support from shippers and CAPP for its 36-inch diameter, 400,000 Bpd Southern Access Extension pipeline from Flanagan, Illinois to Patoka, Illinois. The extension will broaden the reach of the Enbridge/Lakehead mainline system to incremental markets accessible from the Patoka hub. The project will be undertaken by Enbridge; however, we will benefit from the incremental volumes moving through our Lakehead system to connect with this extension. The initial FERC Offer of Settlement filed in September 2006 was rejected by the FERC due to the rolled in rate design contained in the Offer of Settlement. However, as a result of the strong support for the project, Enbridge filed a second application with the FERC in the latter half of 2007 with an alternative tolling structure to address the initial opposition from the intervening parties. A decision by the FERC is expected in early 2008 to allow the project to continue on schedule, with a 2009 in-service date.

Forecasts of oil sands production growth developed by Enbridge, as well as by CAPP, indicate that additional export pipeline capacity out of Western Canada will be needed over and above projects currently under construction. As a result of these forecasts and support received from shippers, we and Enbridge are developing the Alberta Clipper project. This project involves construction of a 36-inch diameter 1,000 mile heavy crude oil pipeline from Hardisty, Alberta to Superior generally within or adjacent to our and Enbridge's existing rights-of-way. We will construct approximately 330 miles of the new pipeline from the International Border near Neche, North Dakota to Superior, and at the request of our customers, we have revised the scope to include a delivery connection at Clearbrook, Minnesota and an additional tank at Superior. Alberta Clipper will have an initial capacity of 450,000 Bpd and allows for expansions up to 800,000 Bpd by adding pumping stations. In addition, complementary capacity on the Southern Access 42-inch pipeline from Superior to Flanagan will be obtained by installing additional pump stations. We anticipate that our share of the construction cost for the United States segment of the project will approximate $1.0 billion (in 2007 dollars excluding capitalized interest). Alberta Clipper is expected to be in service by mid-2010.

In May 2007, Enbridge filed an application with Canada's National Energy Board, or NEB, for the construction and operation of the Canadian segment of the project. In June 2007 Enbridge filed supplements to this application setting forth the tolling principles of the Canadian portion of the project, which are supported by CAPP and the hearings were concluded in the forth quarter of 2007. The United States regulatory and permit applications are in progress at state and federal levels. Enbridge is also progressing with land access, engineering and initial procurement commitments to facilitate commencement of project construction.

In another effort to provide shippers access to new markets, Enbridge acquired a pipeline that runs from Chicago to Cushing. The pipeline, renamed Spearhead, began delivering Canadian crude oil to the major oil hub at Cushing in March 2006 and has operated at or near its capacity of 125,000 Bpd. We have benefited from Western Canadian crude oil being carried on our Lakehead system as far as Chicago, and then transferred to the Spearhead pipeline. On March 2, 2007, Enbridge initiated a binding open season for expansion of the pipeline to 190,000 Bpd, which was successfully concluded in late April with receipt of binding commitments for capacity in excess of 30,000 Bpd. Preliminary engineering design has been completed, and the expansion is expected to be completed by early 2009. This project will be complementary to our Lakehead system.

In April 2006, ExxonMobil announced it had completed the reversal of two of its crude oil pipelines allowing up to 66,000 Bpd of Canadian crude oil to flow from Patoka, Illinois to the U.S. Gulf Coast. The pipeline is linked to our Lakehead system at Chicago via the Mustang Pipe Line Partners system to Patoka, Illinois. The Mustang system is 30% owned by an affiliate of Enbridge. ExxonMobil has received firm commitments from Canadian shippers for an average of 50,000 Bpd of capacity on the lines from Patoka, to Nederland, Texas for the next five years. The connection of our Lakehead system with this new market should also support increased throughput on our Lakehead system, although the reversed ExxonMobil system is also capable of transporting western Canadian crude oil moved via other competing pipelines into the Patoka market.

In December 2007, Enbridge and ExxonMobil Pipeline Company announced that they will jointly conduct a Solicitation for Binding Shipper Commitment for a proposed new pipeline system, to transport crude oil from Patoka, Illinois, to the Texas Gulf Coast. The new pipeline, to be called the "Texas Access

Pipeline," will transport crude oil sourced from the Canadian oil sands region in Alberta, Canada, and from the upper Midwest to refiners in the Nederland and Houston, Texas areas. The proposed project includes a new 768-mile, 30-inch diameter pipeline, which would transport crude oil from Patoka, Illinois, southward to Nederland, Texas. Also proposed is an 88-mile, 24-inch pipeline to transport crude oil onward from Nederland to a delivery point in the east Houston area. The Commitment Solicitation is for shipper interest in executing binding commitments to transport specified volumes of crude oil on the new pipeline, which is expected to be completed in 2011. The results of the Commitment Solicitation will guide and determine the further development of the proposed joint venture pipeline project.

Competition. Our Lakehead system, along with the Enbridge system, is the main crude oil export route from the WCSB. WCSB production in excess of western Canadian demand moves on existing pipelines into the Midwest area of the United States (PADD II), the Rocky Mountain states (PADD IV), the Anacortes area of Washington State (PADD V), and the U.S. Gulf Coast (PADD III). In each of these regions, WCSB crude oil competes with local and imported crude oil. As local crude oil production declines and refineries demand more imported crude oil, imports from the WCSB should increase.

For 2007, the latest data available shows that PADD II total demand was 3.2 million Bpd while it produced only 469,000 Bpd, and thus imported 2.7 million Bpd. The latest available data for 2007 indicate PADD II imported approximately 1.1 million Bpd of crude oil from Canada, a majority of which was transported on our Lakehead system to destinations in PADD II and to other pipeline systems with PADD III destinations. The remaining 1.6 million Bpd was imported from PADDs III and IV as well as from offshore sources through the U.S. Gulf Coast. Lakehead system deliveries of Canadian crude oil to PADD II were level with delivery volumes for 2006. Total deliveries on our Lakehead system averaged 1.53 million Bpd in 2007, meeting approximately 71 percent of Minnesota refinery capacity; 60 percent of the greater Chicago area; and 67 percent of Ontario's refinery demand.

Considering all of the pipeline systems that transport western Canadian crude oil out of Canada, the System transported approximately 67 percent of the total western Canadian crude oil exports in 2007 to the United States. The remaining production was transported by systems serving the British Columbia, PADD II, PADD IV, and PADD V markets.

Given the expected increase in crude oil production from the Alberta oil sands over the next 10 years, alternative transportation proposals have been presented to crude oil producers. These proposals range from expansions of existing pipelines that currently transport western Canadian crude oil, to new pipelines and extensions of existing pipelines. These proposals are in various stages of development, with some at the concept stage and others that are proceeding with regulatory approval. Some of these proposals could be in direct competition with our Lakehead system.

Enbridge has proposed construction of the Gateway Pipeline with an in-service date in the 2012 to 2014 timeframe, which includes both a condensate import pipeline and a petroleum export pipeline. The condensate line would transport imported diluent from Kitimat, British Columbia to the Edmonton, Alberta area. The petroleum export line would transport crude oil from the Edmonton area to Kitimat and would compete with our Lakehead system for production from the Alberta oil sands.

We and Enbridge believe that the Southern Access Expansion Program, the Alberta Clipper Project, and other initiatives to provide access to new markets in the Midwest, Mid-continent and Gulf Coast, offer flexible solutions to future transportation requirements of western Canadian crude oil producers, and the in-service timing of these solutions is in line with prospective shipper needs.

The following provides an overview of other proposals put forth by competing pipeline companies that are not affiliated with Enbridge:

- The construction of a new 24-inch pipeline alongside an existing pipeline which begins in Clearbrook, Minnesota and transports western Canadian crude oil to St. Paul, Minnesota. This expansion will have 165,000 Bpd initial capacity and 350,000 Bpd ultimate capacity. Construction began in summer 2007, with an anticipated completion date in 2008. While throughput on our Lakehead system would benefit from this expansion, volumes moving on our Lakehead system could be negatively impacted if the geographic reach of this pipeline were extended by reversing an existing Wood River to St. Paul pipeline.

- The expansion of an existing pipeline that runs from Alberta to British Columbia and Washington State. The first phase of this expansion to add 35,000 Bpd of capacity was approved by the NEB in 2005 and was recently completed. The second phase received NEB approval in October 2006, and would further increase capacity by another 40,000 Bpd by the end of 2008. Additional phases have also been proposed which would add substantial additional capacity, however, these proposed phases have not yet received shipper support.

- Construction of a new 435,000 Bpd crude oil pipeline from Hardisty, Alberta to Wood River and Patoka, with an expected in-service date of late 2009. This proposal has support of long-term contracts for a total of 340,000 Bpd. The sponsor company filed applications with the NEB in June 2006 to convert part of its mainline gas transmission facilities, and in December 2006, for approval to operate and construct facilities in Canada. Public hearings on the gas line transfer application were held in mid-November 2006 and in early 2007 the NEB approved transfer of the gas transmission facilities to crude oil service, and in September 2007 the NEB approved the application to construct and operate a 435,000 Bpd crude oil pipeline. Additional approvals will be required from United States and Canadian regulatory authorities before the project can proceed. A successful open season was held in the early part of 2007 for an expansion to 590,000 Bpd and an extension to Cushing, Oklahoma. A variety of regulatory approvals will be required in the United States at state and local levels before the proposal can proceed.

- Construction of new crude oil pipelines from northern Alberta directly to the U.S. Gulf Coast have been proposed by several different companies including Enbridge. These conceptual pipeline proposals are subject to shipper support and regulatory approval.

These competing alternatives for delivering western Canadian crude oil into the United States and other markets could erode shipper support for further expansion of our Lakehead system beyond the Southern Access Expansion and Extension projects and the Alberta Clipper Project. They could also affect throughput on and utilization of the System. However, the Lakehead and Enbridge systems offer significant cost savings and flexibility advantages, which are expected to continue to favor the System as the preferred alternative for meeting shipper transportation requirements to the Midwest United States and beyond.

The following table sets forth average deliveries per day and barrel miles of our Lakehead system for each of the periods presented.

	Deliveries				
	2007	2006	2005	2004	2003
	(thousands of Bpd)				
United States					
Light crude oil	346	327	241	275	258
Medium and heavy crude oil	852	872	791	785	741
NGL	4	5	4	4	4
Total United States	1,202	1,204	1,036	1,064	1,003
Ontario					
Light crude oil	184	160	146	174	174
Medium and heavy crude oil	62	63	59	81	68
NGL	95	90	98	103	109
Total Ontario	341	313	303	358	351
Total Deliveries	1,543	1,517	1,339	1,422	1,354
Barrel miles (billions per year)	408	400	338	367	345

Mid-Continent system

Our Mid-Continent system, which we acquired in the first quarter of 2004, is located within the PADD II district and is comprised of our Ozark pipeline, our West Tulsa pipeline and storage terminals at Cushing and El Dorado, Kansas. It includes over 480 miles of crude oil pipelines and 16.7 million barrels of crude oil storage capacity. Our Ozark pipeline transports crude oil from Cushing to Wood River where it delivers to ConocoPhillips' Wood River refinery and interconnects with the WoodPat Pipeline, and the Wood River Pipeline, each owned by unrelated parties. Our West Tulsa pipeline moves crude oil from Cushing to Tulsa, Oklahoma where it delivers to Sinclair Oil Corporation's Tulsa refinery.

The storage terminals consist of 104 individual storage tanks ranging in size from 55,000 to 575,000 barrels. We added a net of 7 new tanks during 2007 to our existing storage facilities in Cushing, which increased our crude oil storage capacity to 16.7 million. A portion of the storage facilities are used for operational purposes while we contract the remainder of the facilities with various crude oil market participants for their term storage requirements. Contract fees include fixed monthly capacity fees as well as utilization fees, which we charge for injecting crude oil into and withdrawing crude oil from the storage facilities.

Customers. Our Mid-Continent system operates under month-to-month transportation arrangements and both long-term and spot storage arrangements with its shippers. During 2007, approximately 40 shippers tendered crude oil for service by the Mid-Continent system. We consider multiple companies that are controlled by a common entity to be a single shipper for purposes of determining the number of shippers delivering crude oil and liquid petroleum on our Mid-Continent system. These customers include integrated oil companies, independent oil producers, refiners and marketers. Average deliveries on the system were 236,000 Bpd for 2007 and 244,000 Bpd for 2006.

Supply and Demand. The Mid-Continent system is positioned to capitalize on increasing near-term demand for imported crude oil from west Texas and the U.S. Gulf Coast as well as third-party storage demand. In 2007, PADD II imported 2.7 million Bpd from outside of the PADD II region. The Lakehead system supplied roughly 1.1 million Bpd of crude from Canada leaving 1.6 million Bpd imported from PADDs III and IV as well as offshore sources. We expect the gap between local supply and demand for crude oil in PADD II to continue to widen, encouraging imports of crude oil from Canada, PADD III, and foreign sources.

Competition. Our Ozark pipeline system currently serves an exclusive corridor between Cushing and Wood River. However, refineries connected to Wood River have crude supply options available from Canada via the Lakehead system, with a connection to the Mustang pipeline, an Enbridge affiliated system, and through a third party pipeline, which runs from western Canada and PADD IV. These same refineries also have access to U.S. Gulf Coast and foreign supply through the Capline pipeline system, which is an undivided joint interest pipeline that is owned by unrelated parties. In addition, refineries located east of Patoka with access to crude through the Ozark system, also have access to west Texas supply through the Texas Gulf pipeline owned by unrelated parties. The Ozark pipeline system could face a significant increase in competition if a proposed new pipeline from Hardisty, Alberta to Patoka is completed in 2009. However, if that situation occurs, we would consider potential alternative uses for our Ozark system.

In addition to movements into Wood River, crude oil in Cushing is transported to Chicago and El Dorado on third-party pipeline systems. With the reversal of the Spearhead pipeline, western Canadian crude oil moving on Spearhead is increasing the importance of Cushing as a terminal and pipeline origination area.

The storage terminals rely on demand for storage service from numerous oil market participants. Producers, refiners, marketers and traders rely on storage capacity for a number of different reasons: batch scheduling, stream quality control, inventory management, and speculative trading opportunities. Competitors to our storage facilities at Cushing include large integrated oil companies and other midstream energy partnerships.

North Dakota system

Our North Dakota system is a crude oil gathering and interstate transportation system servicing the Williston Basin in North Dakota and Montana. Its crude oil gathering pipelines collect crude oil from points near producing wells in approximately 22 oil fields in North Dakota and Montana. Most deliveries from the North Dakota system are made at Clearbrook, Minnesota, to the Lakehead system and to a third-party pipeline system. The North Dakota system includes approximately 330 miles of crude oil gathering lines connected to a transportation line that is approximately 620 miles long, with a capacity of approximately 110,000 Bpd. We recently completed a 30,000 Bpd increase in capacity resulting from a $78.2 million expansion of the system we began in 2006 and completed in December 2007. This expansion was necessary to meet increased crude oil production from the Montana and North Dakota region. We have also proposed an approximate $150 million additional expansion to further increase system capacity to 161,000 Bpd. The commercial structure for this expansion is a cost-of-service based surcharge that will be added to the existing tariff rates. The proposed surcharge is similar to the structure being used on the recently completed expansion project and is subject to approval from the FERC. The North Dakota system also has 21 pump stations, one delivery station, and 11 terminaling facilities with an aggregate working storage capacity of approximately 745,000 barrels.

Customers. Customers of the North Dakota system include producers of crude oil and purchasers of crude oil at the wellhead, such as marketers, that require crude oil gathering and transportation services. Producers range in size from small independent owner/operators to the largest integrated oil companies.

Supply and Demand. Like the Lakehead system, the North Dakota system depends upon demand for crude oil in the Great Lakes and Midwest regions of the United States, and the ability of crude oil producers to maintain their crude oil production and exploration activities.

Competition. Competitors of the North Dakota system include integrated oil companies, interstate and intrastate pipelines or their affiliates and other crude oil gatherers. Many crude oil producers in the oil fields served by the North Dakota system have alternative gathering facilities available to them or have the ability to build their own facilities.

Natural Gas Segment

We own and operate natural gas gathering, treating, processing and transportation systems as well as trucking operations. We purchase and gather natural gas from the wellhead, deliver it to plants for treating and/or processing and to intrastate or interstate pipelines for transmission to wholesale customers such as power plants, industrial customers and local distribution companies.

Natural gas treating involves the removal of hydrogen sulfide, carbon dioxide, water and other substances from raw natural gas so that it will meet the standards for pipeline transportation. Natural gas processing involves the separation of raw natural gas into residue gas and NGLs. Residue gas is the processed natural gas that ultimately is consumed by end users. NGLs separated from the raw natural gas are either sold and transported as NGL raw mix or further separated through a process known as fractionation, and sold as their individual components, including ethane, propane, butanes and natural gasoline. At December 31, 2007, we have 10 active treating plants and 24 active processing plants, including three hydrocarbon dewpoint control facilities, or HCDP plants. Our treating facilities have a combined capacity exceeding 1,050 MMcf/d while the combined capacity of our processing facilities approximates 1,800 MMcf/d, including 550 MMcf/d provided by the HCDP plants.

Our natural gas segment consists of the following systems:

- East Texas system: Includes approximately 3,800 miles of natural gas gathering and transportation pipelines, eight natural gas treating plants and seven natural gas processing plants, including three HCDP plants and approximately 250 miles associated with completed sections of our Clarity project.

- Anadarko system: Consists of approximately 1,700 miles of natural gas gathering and transportation pipelines in southwest Oklahoma and the Texas panhandle, one natural gas treating plant and six natural gas processing plants. The Anadarko system includes the Palo Duro system, which we acquired in March 2004.

- North Texas system: Includes approximately 4,500 miles of natural gas gathering pipelines and ten natural gas processing plants.

- Our transportation operations include three FERC-regulated natural gas interstate pipeline systems which include the Midla, AlaTenn and UTOS pipelines. Each of these natural gas pipeline systems typically consists of a natural gas pipeline, compression, and various interconnects to other pipelines that serve wholesale customers.

- Our transportation operations also include a number of smaller non-FERC regulated natural gas pipelines and plants as well as trucking operations which are discussed below.

Customers. Customers of our natural gas pipeline systems include both purchasers and producers of natural gas. Purchasers are comprised of marketers, including our Marketing business, and large users of natural gas, such as power plants, industrial facilities and local distribution companies. Producers served by our systems consist of small, medium and large independent operators and large integrated energy companies. We sell NGLs resulting from our processing activities to a variety of customers ranging from large petrochemical and refining companies to small regional retail propane distributors.

Our natural gas pipelines serve customers predominantly in the Gulf Coast and southeastern regions of the United States. Customers include large users of natural gas, such as power plants, industrial facilities, local distribution companies, large consumers seeking an alternative to their local distribution company, and shippers of natural gas, such as natural gas producers and marketers.

Supply and Demand. Demand for our gathering, treating and processing services primarily depends upon the supply of natural gas reserves and the drilling rate of new wells. The level of impurities in the natural gas gathered also affects treating services. Demand for these services also depends upon overall economic conditions and the prices of natural gas and NGLs. Our larger systems, Anadarko, East Texas and North Texas, are located in basins that continue to experience growth in natural gas drilling and production.

Our East Texas system is primarily located in the East Texas Basin. The Bossier trend, which is located on the western side of our East Texas system within the East Texas Basin, continues to experience substantial growth. Production in the Bossier trend has grown from under 390 MMcf/d in 1997 to over 1,500 MMcf/d in August 2007. During 2006, the link between our North Texas and East Texas systems became fully operational and increased the utilization of the 500 MMcf/d intrastate pipeline that we placed in service in June 2005 on our East Texas system by providing additional market access to customers of our North Texas system. In a further effort to address the continuing strong growth in natural gas production occurring in East Texas, in early 2006 we initiated a $635 million expansion and extension of our East Texas system named the Clarity project. During 2007, we completed the following segments of this expansion project:

- A 24-inch diameter pipeline that runs from the Marquez treating facility to Crockett, Texas and the 36-inch diameter pipeline that runs from Crockett to Goodrich, Texas were both completed and placed into service in late March 2007;

- The Marquez treating plant with capacity of approximately 200 MMcf/d and additional pipeline capacity to the existing southeast section of this area was completed and placed into service in March 2007;

- A 36-inch diameter pipeline that extends from an interconnect with our existing pipeline at Bethel, Texas to Crockett was completed and placed into service in late July 2007; and

- A 36-inch diameter pipeline that extends from Goodrich to Kountze, Texas, which enables deliveries into a major interstate pipeline was completed in October 2007.

We expect construction of the remaining segments that will connect natural gas supply from Bethel to Orange, Texas will be completed in the first quarter of 2008. Additional capacity to downstream interconnects will increase as compression is added through mid-2008. Completion of our Clarity project will provide service to major industrial companies in Southeast Texas with interconnects to interstate pipelines, intrastate pipelines and wholesale customers. We have firm volume commitments and acreage dedications which we believe will approximate 600 MMcf/d of the 700 MMcf/d of capacity by the end of 2008 and we continue to pursue additional commitments for capacity on the pipeline. The Clarity project is designed to be expandable and is positioned for potential upstream and downstream extension to meet the growing demand for natural gas transportation capacity.

We have also completed significant expansion of our treating and processing capacity in the region, which began in 2006 with the completion of our 120 MMcf/d Henderson natural gas processing facility. We completed the following additional facilities during 2007:

- Enhancement of our existing 275 MMcf/d Aker treating facility was completed in 2007 and additional expansions are underway at this facility in 2008;

- Construction of the Weatherford gas processing facility within our North Texas system was completed in September 2007 with a processing capacity of approximately 35 MMcf/d. At the end of 2007, additional processing capacity was added to increase its capacity from 35 MMcf/day to 75/MMcf/day.

- In the second half of 2007 we completed three HCDP plants totaling 550 MMcf/d of capacity within our East Texas system.

The gathering, treating, processing and transportation assets we have placed in service over the past several years on our East Texas system are well positioned to capture the growing supply of natural gas being produced in the region as a result of the improved access to primary natural gas markets provided by our Clarity project.

A substantial portion of natural gas on our North Texas system is produced in the Barnett Shale area within the Fort Worth Basin Conglomerate. The Fort Worth Basin Conglomerate is a mature zone that is experiencing slow production decline. In contrast, the Barnett Shale area is one of the most active natural gas plays in North America. While abundant natural gas reserves have been known to exist in the Barnett Shale area since the early 1980s, technological developments in fracturing the shale formation allows commercial production of these natural gas reserves. Based on the latest information available for 2007, Barnett Shale production has risen from approximately 110 MMcf/d in 1999 to over 2,900 MMcf/d in 2007, with the drilling of over 6,600 wells. We anticipate that throughput on the North Texas system will increase modestly in each of the next several years as a result of Barnett Shale development.

Our Anadarko system is located within the Anadarko basin and continues to experience considerable growth as a result of the rapid development of the Granite Wash play in Hemphill and Wheeler counties in Texas. We have expanded our natural gas processing capacity to approximately 445 MMcf/d at the end of 2007, with the addition of the Hidetown processing facility with 120 MMcf/d of capacity. We also continue to add field compression to accommodate the volume growth on this system.

We intend to expand our natural gas gathering and processing services primarily through internal growth projects designed to provide exposure to incremental supplies of natural gas at the wellhead, increase opportunities to serve additional customers, including new wholesale customers, and allow expansion of our treating and processing businesses. Additionally, we will pursue acquisitions to expand our natural gas services in situations where we have natural advantages to create additional value for our existing assets.

Our natural gas pipelines generally serve different geographical areas, with differing supply and demand characteristics in each market. We believe demand and competition for natural gas in the areas served by our natural gas assets will generally remain strong as a result of being located in areas where industrial, commercial or residential growth is occurring. The greatest demand for services in the markets served by our natural gas assets occurs in the winter months.

The table below indicates the capacity in MMcf/d of the transportation and wholesale customer pipelines with firm transportation contracts and the amount of capacity that is reserved under those contracts as of that date.

Major System	**Capacity MMcf/d**	**Percentage Reserved Under Contract as of December 31, 2007**
UTOS system	1,200	0%
Midla system	200	74%
AlaTenn system	200	28%
Bamagas system	450	61%

Our UTOS system transports natural gas from offshore platforms on a fee for service basis to other pipelines onshore for further delivery and does not have long-term contracts. The average daily throughput on our UTOS system during 2007 was 192,000 MMBtu/d. The FERC approved our negotiated settlement with UTOS shippers, keeping our current rates in effect under our 2003 FERC Order, through 2006. In February 2007, the FERC approved our application for an extension of that Order to keep the settlement rates in effect for an additional 3-year term through 2009.

Our Midla, AlaTenn and Bamagas systems primarily serve industrial corridors and power plants in Louisiana, Alabama and Tennessee. Industries in the area include energy intensive segments of the petrochemical and pulp and paper industries. We market the unused capacity on these systems under both short-term firm and interruptible transportation contracts and long-term firm transportation contracts. These systems are located in areas where opportunities exist to serve new industrial facilities and to make delivery interconnects to alleviate capacity constraints on other third-party pipeline systems. As of December 31, 2007, approximately 74 percent of contracted capacity of the Midla system and approximately 15 percent of the AlaTenn system is under contract to our marketing business. We recently initiated negotiations with a major customer of our Midla mainline transmission system for the renewal of a contract that is set to expire in August 2008. Although the ultimate outcome of these negotiations is uncertain, we may incur a non-cash impairment charge for this asset, if the customer elects not to renew the contract, or renews the contract on less favorable terms. We are also exploring alternative uses for this pipeline system.

The Bamagas system in northern Alabama is contiguous with our AlaTenn system and serves two power plants that are indirectly owned by Calpine Corporation ("Calpine"). In December 2005, Calpine Corporation ("Calpine") and many of its subsidiaries, including the subsidiary that owns the two utility plants served by our Bamagas system, filed voluntarily petitions to restructure under Chapter 11 of the United States Bankruptcy Code. Since filing for bankruptcy, Calpine has continued to perform under the terms of its agreements with Bamagas. In June 2007, Calpine and certain of its subsidiaries filed a Joint Plan of Reorganization and Disclosure Statement with the United States Bankruptcy Court. On December 19, 2007, the U.S. Bankruptcy Court for the Southern District of New York issued a decision confirming Calpine's reorganization plan. In addition, the Bamagas contracts with Calpine have been reaffirmed. Calpine announced at the end of January 2008 that it has emerged from Bankruptcy.

Our long-term financial condition depends on the continued availability of natural gas for transportation to the markets served by our systems. Existing customers may not extend their contracts if the availability of natural gas from the Mid-continent and Gulf Coast producing regions was to decline and if the cost of transporting natural gas from other producing regions through other pipelines into the areas we serve were to render the delivered cost of natural gas uneconomical. We may be unable to find additional customers to replace the lost demand or transportation fees.

Competition. Competition from other pipeline companies is significant in all the markets we serve. Competitors of our gathering, treating and processing systems include interstate and intrastate pipelines or their affiliates and other midstream businesses that gather, treat, process and market natural gas or NGLs. Some of these competitors are substantially larger than we are. Competition for the services we provide varies based upon the location of gathering, treating and processing facilities. Most natural gas producers and owners have alternate gathering, treating and processing facilities available to them. In addition, they have alternatives such as building their own gathering facilities or in some cases, selling their natural gas supplies without treating and processing. In addition to location, competition also varies based upon pricing arrangements and reputation. On the sour gas systems, such as our East Texas system, competition is more limited due to the infrastructure required to treat sour gas.

Competition for customers in the marketing of residue gas is based primarily upon the price of the delivered gas, the services offered by the seller and the reliability of the seller in making deliveries. Residue gas also competes on a price basis with alternative fuels such as crude oil and coal, especially for customers that have the capability of using these alternative fuels, and on the basis of local environmental considerations. Competition in the marketing of NGLs comes from other NGL marketing companies, producers, traders, chemical companies and other asset owners.

Because pipelines are generally the only practical mode of transportation for natural gas over land, the most significant competitors of our natural gas pipelines are other pipelines. Pipelines typically compete with each other based on location, capacity, price and reliability. Many of the large wholesale customers we serve have multiple pipelines connected or adjacent to their facilities. Accordingly, many of these customers have the ability to purchase natural gas directly from a number of pipelines or third parties that may hold capacity on the various pipelines. In addition, a number of new interstate natural gas pipelines are being constructed in areas currently served by some of our intrastate and interstate pipelines. When completed, these new pipelines may compete for customers with our existing pipelines.

Trucking and Liquids Marketing Operations

We also include our trucking and liquids marketing operations in our Natural Gas segment. Trucking and liquids marketing operations include the transportation of NGLs, crude oil and carbon dioxide by truck and railcar from wellheads and treating, processing and fractionation facilities and to wholesale customers, such as distributors, refiners and chemical facilities. In addition, our trucking and liquids marketing operations resell these products. A key component of our business is ensuring market access for the liquids extracted at our processing facilities. On average this accounts for approximately 43% of the volume transported by our trucking and liquids marketing business and is a major source of its growth in this area.

Our services are provided using trucks, trailers and rail cars, product treating and handling equipment and NGL storage facilities. In addition, our CO_2 plant, with 250 tons per day of capacity, takes excess CO_2 from hydrogen producers which we then sell to a variety of customers. We also have 50% ownership of an underground propane storage facility in Petal, Mississippi, which augments the services we provide to our customers in the region. The total capacity of this facility is 5.6 million Bbls which increases our storage capabilities.

We have increased the size of our truck fleet by approximately 25 percent since 2005 to meet the growing supply of NGLs, crude oil and carbon dioxide from our processing facilities, as well as to capitalize on the opportunity to better serve our Gulf Coast customers.

Customers. Most of the customers of our trucking and liquids marketing operations are wholesale customers, such as refineries and propane distributors. Our trucking and liquids marketing operations also market products to wholesale customers such as petrochemical plants.

Supply and Demand. The areas served by our trucking and liquids marketing operations are geographically diverse, and the forces that affect the supply of the products transported vary by region. Crude oil and natural gas prices and production levels affect the supply of these products. The demand for services is affected by the demand for NGLs and crude oil by large industrial refineries, and similar customers in the regions served by this business.

Competition. Our trucking and liquids marketing operations have a number of competitors, including other trucking and railcar operations, pipelines, and, to a lesser extent, marine transportation and alternative fuels. In addition, the marketing activities of our trucking and liquids marketing operations have numerous competitors, including marketers of all types and sizes, affiliates of pipelines and independent aggregators.

Marketing Segment

Our Marketing segment's primary objectives are to mitigate financial risk and maximize the value of the natural gas purchased by our gathering systems and the throughput on our gathering and intrastate wholesale customer pipelines. To achieve this objective, our Marketing segment transacts with various counterparties to provide natural gas supply, transportation, balancing, storage and sales services.

Since our gathering and intrastate wholesale customer pipeline assets are geographically located within Texas, Oklahoma, Alabama, Mississippi and Louisiana, the majority of activities conducted by our Marketing segment are focused within these areas.

Customers. Natural gas purchased by our Marketing segment is sold to industrial, utility and power plant end use customers. In addition, gas is sold to marketing companies at various market hubs. These sales are typically priced based upon a published daily or monthly price index. Sales to end-use customers incorporate a pass-through charge for costs of transportation and additional margin to compensate us for associated services.

Supply and Demand. Supply for our Marketing business depends to a large extent on the natural gas reserves and rate of drilling within the areas served by our Natural Gas segment. Demand is typically driven by weather-related factors with respect to power plant and utility customers, and industrial demand.

Our Marketing business uses third-party storage capacity to balance supply and demand factors within its portfolio. Marketing pays third-party storage facilities and pipelines for the right to store gas for various periods of time. These contracts may be denoted as firm storage, interruptible storage, or parking and lending services. These various contract structures are used to mitigate risk associated with sales and purchase contracts, and to take advantage of price differential opportunities. Due to the increased volumes from our gathering assets, our Marketing business leases third-party pipeline capacity downstream from our Natural Gas assets under firm transportation contracts following specific, controlled guidelines. This capacity is leased for various lengths of time and at rates that allow our Marketing business to diversify its customer base by expanding its service territory. Additionally, this transportation capacity provides assurance that our natural gas will not be shut in, which can result from capacity constraints on downstream pipelines.

Competition. Our Marketing segment has numerous competitors, including large natural gas marketing companies, marketing affiliates of pipelines, major oil and gas producers, independent aggregators and regional marketing companies.

REGULATION

FERC Allowance for Income Taxes in Interstate Common Carrier Pipeline Rates

In a 1995 decision involving our Lakehead system, which we refer to as the *Lakehead ruling*, the FERC partially disallowed the inclusion of income taxes in the cost of service for the Lakehead system. In its *Lakehead ruling*, the FERC allowed an oil pipeline publicly traded partnership to include in its cost-of-service an income tax allowance to the extent that its unitholders were corporations subject to income tax. A subsequent appeal of the *Lakehead ruling* was resolved by settlement and therefore was not adjudicated. In another FERC proceeding involving Santa Fe Pacific Pipeline, L.P. (SFPP), an unrelated pipeline entity, the FERC initially relied on its previous *Lakehead ruling* to hold that SFPP could not claim an income tax allowance for income attributable to non-corporate partners, both individuals and other entities. SFPP and other parties to the proceeding appealed the FERC's orders to the United States Court of Appeals for the District of Columbia Circuit, or the D.C. Circuit Court.

In a decision issued in July 2004, in *BP West Coast Products, LLC v. FERC*, which we refer to as the *BP West Coast decision*, the D.C. Circuit Court vacated the portion of the FERC decision regarding the proper tax allowance for SFPP and remanded the case to the FERC for further proceedings.

In May and June 2005, the FERC issued a policy statement, as well as an order on remand of *BP West* Coast (the SFPP order), respectively, in which it stated it will permit pipelines to include in cost-of-service a tax allowance to reflect actual or potential tax liability on their public utility income attributable to all partnership or limited liability company interests, if the ultimate owner of the interest has an actual or potential income tax liability on such income. Whether a pipeline's owners have such actual or potential income tax liability will be determined by the FERC on a case-by-case basis. The new policy entails rate risk due to the case-by-case review requirement.

In December 2005, the FERC issued its first case-specific review of the income tax allowance issue reaffirming its income tax allowance policy and directing the pipeline to provide certain evidence necessary to determine its income tax allowance. The FERC's *BP West Coast* remand decision and the new tax allowance policy were appealed to the D.C. Circuit Court.

In May 2007, the D.C. Circuit Court upheld the income tax allowance policy adopted by the FERC for master limited partnerships (MLPs) and other non-taxable entities. On the basis of the SFPP order, the D.C. Circuit Court concluded that the FERC's new policy statement applied to SFPP and resolved the principle defect of the Lakehead policy, which was the inadequately explained differential treatment of the tax liability of the individual and corporate partners. On that basis the D.C. Circuit Court affirmed the FERC's tax allowance policy as being reasonable and in accordance with the FERC's statutory discretion. As such, the D.C. Circuit Court affirmed that an allowance should be permitted on all partnership interests, or similar legal interest, if the owner of that interest has an actual or potential income tax liability on the public utility income earned though the interest. We believe all our applicable assets will be entitled to a tax allowance to the extent a pipeline's partners have income tax liability on the income they receive from the pipeline. In August 2007, the D.C. Circuit Court denied a request for rehearing of its May 2007 decision, and the decision is now final and cannot be appealed.

In December 2006, the FERC issued a new order addressing rates on one of the interstate oil pipelines of SFPP. In that order, the FERC addressed challenges to the policy statement raised by shippers in filings in another docket earlier in 2006. In the new order, the FERC refined its income tax allowance policy, and notably raised a new issue regarding the implication of the policy statement for publicly traded partnerships. The FERC noted that the tax deferral features of a publicly traded partnership may cause some investors to receive, for some indeterminate duration, cash distributions in excess of their taxable income, which the FERC characterized as a "tax savings." The FERC stated that it is concerned that this creates an opportunity for those investors to earn an additional return, funded by ratepayers. Responding to this concern, the FERC chose to adjust the pipeline's equity rate of return downward based on the percentage by which the publicly traded partnership's cash flow exceeded taxable income. On February 7, 2007, SFPP asked the FERC to reconsider this ruling. The ultimate outcome of this proceeding is not certain and could result in changes to the FERC's treatment of income tax allowances in cost of service rates and to potential adjustment in a future rate case of our pipelines' respective equity rates of return that underlie their rates to the extent that cash distributions in excess of taxable income are allowed to some unitholders. If the FERC were to disallow a substantial portion of our pipelines' income tax allowance, it may cause our rates to be set at a level that is different, and in some instances lower, than the level otherwise in effect.

FERC Regulation of Return on Equity for Master Limited Partnerships

On July 19, 2007, the FERC issued a proposed policy statement regarding the composition of proxy groups for determining the appropriate returns on equity for natural gas and oil pipelines. The proposed policy statement would permit the inclusion of MLPs in the proxy group for purposes of calculating returns on equity under the Discounted Cash Flow (DCF) analysis, a change from its prior view that MLPs had not been shown to be appropriate for such inclusion. Specifically, the FERC proposes that MLPs may be included in the proxy group *provided* that the DCF analysis recognizes as distributions only the pipeline's reported earnings, and not other sources of cash flow subject to distribution. According to the proposed policy statement, under the DCF analysis, the return on equity is calculated by adding the dividend or distribution yield (dividends divided by share/unit price) to the projected future growth rate of dividends or distributions (weighted one third for long-term growth of the economy as a whole and two-thirds short term growth as determined by analysts' five-year forecasts for the pipeline). The determination of which MLPs should be included will be made on a case by case basis, after a review of whether an MLP's earnings have been stable over a multi-year period. The FERC proposes to apply the final policy statement to all pipeline rate cases that have not completed the hearing phase as of the date the FERC issues the final policy statement and has requested comments on the proposed policy which were due in September 2007. The FERC's proposed policy statement is subject to change based on comments filed and therefore we cannot predict the scope of the final policy statement.

Accounting for Pipeline Assessment Costs

In June 2005, the FERC issued an order in Docket AI05-1 describing how FERC-regulated companies should account for costs associated with implementing the pipeline integrity management requirements of the United States Department of Transportation's Office of Pipeline Safety. The order took effect on January 1, 2006. Under the order, FERC-regulated companies are generally required to recognize costs incurred in performing pipeline assessments that are part of a pipeline integrity management program as maintenance expense in the period in which the costs are incurred. Costs for items such as rehabilitation projects designed to extend the useful life of the system can continue to be capitalized to the extent permitted under the existing rules. The FERC denied rehearing of its accounting guidance order on September 19, 2005.

We have historically capitalized first time in-line inspection programs, based on previous rulings by the FERC. In January 2006, we began expensing all first-time internal inspection costs for all our pipeline systems, whether or not they are subject to the FERC's regulation on a prospective basis. We will continue to expense secondary internal inspection tests consistent with our previous practice. Refer to Note 2—Summary of Significant Accounting Policies included in our consolidated financial statements beginning at page F-1 of this annual report on Form 10-K for additional discussion.

Regulation by the FERC of Interstate Common Carrier Liquids Pipelines

The Lakehead, North Dakota, and Ozark systems are our primary interstate common carrier liquids pipelines subject to regulation by the FERC under the Interstate Commerce Act, or ICA. As common carriers in interstate commerce, these pipelines provide service to any shipper who requests transportation services, provided that products tendered for transportation satisfy the conditions and specifications contained in the applicable tariff. The ICA generally requires us to maintain tariffs on file with the FERC that set forth the rates we charge for providing transportation services on our interstate common carrier pipelines, as well as the rules and regulations governing these services.

The ICA gives the FERC the authority to regulate the rates we charge for service on our interstate common carrier pipelines. The ICA requires, among other things, that such rates be "just and reasonable" as well as nondiscriminatory. The ICA permits interested persons to challenge newly proposed or changed rates and authorizes the FERC to suspend the effectiveness of such rates for a period of up to seven months and to investigate the rates to determine if they are just and reasonable. If, upon completion of an investigation, the FERC finds that the new or changed rate is unlawful, it is authorized to require the carrier to refund with interest the increased revenues in excess of the amount that would have been collected during the term of the investigation at the rate properly determined to be lawful. The FERC also may investigate, upon complaint, or on its own motion, rates that are already in effect and may order a carrier to change its rates prospectively. Upon an appropriate showing, a shipper may obtain reparations for damages sustained for a period of up to two years prior to the filing of a complaint.

On October 24, 1992, Congress passed the Energy Policy Act of 1992, or EP Act, which deemed petroleum pipeline rates that were in effect for the 365-day period ending on the date of enactment, or that were in effect on the 365^{th} day preceding enactment and had not been subject to complaint, protest or investigation during the 365 day period, to be just and reasonable under the ICA (i.e., "grandfathered"). The EP Act also limited the circumstances under which a complaint can be made against such grandfathered rates. In order to challenge grandfathered rates, a party must show, 1) that it was contractually barred from challenging the rates during the relevant 365 day period; 2) that there has been a substantial change after the date of enactment of the EP Act in the economic circumstances of the pipeline or in the nature of the services that were the basis for the rate; or 3) that the rate is unduly discriminatory or unduly preferential.

The FERC has determined that the Lakehead system rates are not covered by the grandfathering provisions of the EP Act because they were subject to challenge prior to the effective date of the statute.

We believe that the rates for the North Dakota and Ozark systems should be found to be largely covered by the grandfathering provisions of the EP Act.

The EP Act required the FERC to issue rules establishing a simplified and generally applicable ratemaking methodology for petroleum pipelines, and to streamline procedures in petroleum pipeline proceedings. The FERC responded to this mandate by issuing Order No. 561, which, among other things, adopted an indexing rate methodology for petroleum pipelines. Under the regulations, which became effective January 1, 1995, petroleum pipelines are able to change their rates within prescribed ceiling levels that are tied to an inflation index. Rate increases made within the ceiling levels may be protested, but such protests must show that the rate increase resulting from application of the index is substantially in excess of the pipeline's increase in costs. If the indexing methodology results in a reduced ceiling level that is lower than a pipeline's filed rate, Order No. 561 requires the pipeline to reduce its rate to comply with the lower ceiling, although a pipeline is not required to reduce its rate below the level grandfathered under the EP Act. Under Order No. 561, a pipeline must, as a general rule, utilize the indexing methodology to change its rates. The FERC, however, uses cost-of-service ratemaking, market-based rates and settlement rates as alternatives to the indexing approach in certain specified circumstances.

Under Order No. 561, the original inflation index adopted by the FERC was equal to the annual change in the Producer Price Index for Finished Goods, or PPI-FG, minus one percentage point. The index was subject to review every five years. Rates were then subject to an annual adjustment, based upon changes in the PPI-FG minus 1%, in order to accurately reflect the actual cost changes experienced by the oil pipeline industry. In December 2000, as part of the FERC's five-year review of the oil-pricing index (July 2001 through June 2006), the FERC concluded that the PPI-FG accurately reflected the actual cost changes experienced by the industry. In February 2003 the FERC issued an Order on Remand concluding that for the current five-year period, the oil-pricing index should be the PPI-FG. In order to calculate the 2003 ceiling rate levels, oil pipelines were permitted to use the PPI-FG adjustment as though it had been in effect since 2001. As of July 1, 2007, the index increased to equal PPI-FG plus 1.3 percentage points, resulting in an index of 4.3186% for the period of July 1, 2007 through June 30, 2008.

Regulation by the FERC of Interstate Natural Gas Pipelines

Our AlaTenn, Midla and UTOS systems are interstate natural gas pipelines regulated by the FERC under the Natural Gas Act, or NGA, and the Natural Gas Policy Act, or NGPA. Each system operates under separate FERC-approved tariffs that establish rates, terms and conditions under which each system provides service to its customers. Natural gas companies may not charge rates that have been determined not to be just and reasonable. In addition, the FERC's authority over natural gas companies that provide natural gas pipeline transportation services in interstate commerce includes:

- certification and construction of new facilities;
- extension or abandonment of services and facilities;
- maintenance of accounts and records;
- acquisition and disposition of facilities;
- initiation and discontinuation of services;
- terms and conditions of services and service contracts with customers;
- depreciation and amortization policies;
- conduct and relationship with certain affiliates; and
- various other matters.

The maximum recourse rates that may be charged by our pipelines for their services are established through the FERC's ratemaking process. Generally, the maximum filed recourse rates for interstate pipelines are based on the cost of service including recovery of and a return on the pipeline's actual prudent historical cost investment. Key determinants in the ratemaking process are costs of providing service, allowed rate of return and volume throughput and contractual capacity commitment assumptions. The maximum applicable recourse rates and terms and conditions for service are set forth in each pipeline's FERC approved tariff. Rate design and the allocation of costs also can impact a pipeline's profitability. Our interstate pipelines are permitted to discount their firm and interruptible rates without further FERC authorization down to the variable cost of performing service, provided they do not "unduly discriminate."

Tariff changes can only be implemented upon approval by the FERC. Two primary methods are available for changing the rates, terms and conditions of service of an interstate natural gas pipeline. Under the first method, the pipeline voluntarily seeks a tariff change by making a tariff filing with the FERC justifying the proposed tariff change and providing notice, generally 30 days, to the appropriate parties. If the FERC determines that a proposed change is just and reasonable as required by the NGA, the FERC will accept the proposed change and the pipeline will implement such change in its tariff. However, if the FERC determines that a proposed change may not be just and reasonable as required by the NGA, then the FERC may suspend such change for up to five months beyond the date on which the change would otherwise go into effect and set the matter for an administrative hearing. Subsequent to any suspension period ordered by the FERC, the proposed change may be placed into effect by the company, pending final FERC approval. In most cases, a proposed rate increase is placed into effect before a final FERC determination on such rate increase, and the proposed increase is collected subject to refund (plus interest). Under the second method, the FERC may, on its own motion or based on a complaint, initiate a proceeding seeking to compel the company to change its rates, terms and/or conditions of service. If the FERC determines that the existing rates, terms and/or conditions of service are unjust, unreasonable, unduly discriminatory or preferential, then any rate reduction or change that it orders generally will be effective prospectively from the date of the FERC order requiring this change.

In November 2003, the FERC issued Order 2004 governing the Standards of Conduct for Transmission Providers (including natural gas interstate pipelines). These standards provide that interstate pipeline employees engaged in natural gas transmission system operations must function independently from any employees of their energy affiliates and marketing affiliates and that an interstate pipeline must treat all transmission customers, affiliated and non-affiliated, on a non-discriminatory basis, and cannot operate its transmission system to benefit preferentially, an energy or marketing affiliate. In addition, Order 2004 restricts access to natural gas transmission customer data by marketing and other energy affiliates and provides certain conditions on service provided by interstate pipelines to their gas marketing and energy affiliates. We have implemented changes in business processes to comply with this order. In November 2006, the D.C. Circuit Court vacated Order 2004 as that order applies to interstate natural gas pipelines and remanded that proceeding to the FERC for further action.

On January 9, 2007, the FERC issued Order 690 in response to the D. C. Circuit Court's decision. In its Order, the Commission issued new interim standards of conduct pending the outcome of a new rulemaking proceeding. The interim standards will only govern the relationship between an interstate pipeline and its marketing affiliates as opposed to its energy affiliates, the latter being a much broader category as originally set forth in Order 2004. As a result, the Commission effectively "repromulgated" on a temporary basis the Standards of Conduct first issued in Order 497 in 1992, while it considers its course of action to address the court's decision on a more permanent basis.

On January 18, 2007, the FERC issued a Notice of Proposed Rulemaking ("NOPR") in Docket No. RM07-1 wherein it proposes to make permanent its interim standards of conduct issued in Order 690. The Commission is also seeking comment as to whether it should make comparable changes to the electric industry standards of conduct that were not affected by either the November 2006 decision by the D.C.

Circuit Court, or by Order 690, as well as comments regarding certain other electric-related exceptions to Order 2004. We continue to closely monitor these proceedings and administer our compliance programs accordingly.

On September 20, 2007, the FERC issued a Notice of Inquiry regarding Fuel Retention Practices of Natural Gas Pipelines (Fuel NOI). The Fuel NOI inquires whether the current policy which allows natural gas pipelines to choose between two options for recovering the costs of fuel and lost and unaccounted for (LAUF) gas should be changed in favor of a uniform method. Comments have been filed in response to the Fuel NOI. The outcome of this proceeding could result in changes to the methodology used by our pipelines for calculating fuel and LAUF gas, which could potentially affect the pipelines' revenues.

On September 20, 2007, the FERC issued a Notice of Proposed Rulemaking regarding Revisions to Forms, Statements, and Reporting Requirements for Natural Gas Pipelines (Reporting NOPR). The Reporting NOPR proposed to require pipelines to (i) provide additional information regarding their sources of revenue and amounts included in the rate base; (ii) identify costs related to affiliate transactions; and (iii) provide additional information regarding incremental facilities, and discounted and negotiated rates. According to the FERC, changes would assist pipeline customers and other third parties in analyzing a pipeline's actual return as compared with its approved rate of return based on publicly filed data. Although the FERC proposed that the changes would be effective January 1, 2008, the final rule has not been issued. The FERC's proposed rulemaking is subject to change based on comments filed and therefore we cannot predict the scope of the final rulemaking.

On November 15, 2007, the FERC issued a notice of proposed rulemaking proposing to permit market-based pricing for short-term capacity releases and to facilitate asset management arrangements by relaxing the FERC's prohibition on tying and on its bidding requirements for certain capacity releases (Capacity Release NOPR). The FERC proposes to lift the price ceiling for short-term capacity release transactions of one year or less. The Capacity Release NOPR is proposed to enable releasing shippers to offer competitively-priced alternatives to pipelines' negotiated rates and to encourage more efficient construction of capacity. Under the FERC's proposal, it is possible for the releasing shipper to release the natural gas at market-based prices while our pipelines would still be subject to the maximum rate cap. The FERC's proposed rulemaking is subject to change based on comments filed and therefore we cannot predict the scope of the final rulemaking.

On December 21, 2007, the FERC issued a notice of proposed rulemaking which proposes to require interstate natural gas pipelines and certain non-interstate natural gas pipelines to post capacity, daily scheduled flow information, and daily actual flow information. Comments are due on March 13, 2008, and a technical conference will be held regarding these issues on April 3, 2008. Adoption of this proposal by the FERC could result in additional administrative burdens and could result in increased capital costs.

Additional proposals and proceedings that might affect the natural gas industry are pending before Congress, the FERC and the courts. The natural gas industry historically has been heavily regulated; therefore, there is no assurance that a more stringent regulatory approach will not be pursued by the FERC and Congress, especially in light of potential market power abuse by marketing affiliates of certain pipeline companies engaged in interstate commerce. In response to this issue, Congress, in the Energy Policy Act of 2005 ("EPACT"), and the FERC have implemented requirements to ensure that energy prices are not impacted by the exercise of market power or manipulative conduct. EPACT prohibits the use of any "manipulative or deceptive device or contrivance" in connection with the purchase or sale of natural gas, electric energy or transportation subject to the FERC's jurisdiction. The FERC then adopted the Market Manipulation Rules and the Market Behavior Rules to implement the authority granted under EPACT. These rules, which prohibit fraud and manipulation in wholesale energy markets, are very vague and are subject to broad interpretation. Only two orders interpreting these rules have been issued to date, and each of these is subject to further proceedings. These orders reflect the FERC's view that it has broad latitude in determining whether specific behavior violates the rules. In addition, EPACT gave the FERC increased penalty authority for these violations. The FERC may now issue civil penalties of up to $1 million per day for each violation of the FERC's rules, and there are possible criminal penalties of up to $1 million and 5 years in prison. Given the FERC's broad mandate granted in EPACT, it is assumed that if energy prices are high, or exhibit what the FERC deems to be "unusual" trading patterns, the FERC will investigate energy markets to determine if behavior unduly impacted or "manipulated" energy prices.

Intrastate Pipeline Regulation

Our intrastate liquids and natural gas pipeline operations generally are not subject to rate regulation by the FERC, but they are subject to regulation by various agencies of the states in which they are located. However, to the extent that our intrastate pipeline systems deliver natural gas into interstate commerce, the rates, terms and conditions of such transportation service are subject to the FERC's jurisdiction under Section 311 of the NGPA, which regulates, among other things, the provision of transportation services by an intrastate natural gas pipeline making deliveries on behalf of a local distribution company or an interstate natural gas pipeline. Most states have agencies that possess the authority to review and authorize natural gas transportation transactions and the construction, acquisition, abandonment and interconnection of physical facilities. Some states also have state agencies that regulate transportation rates, service terms and conditions and contract pricing to ensure their reasonableness and to ensure that the intrastate pipeline companies that they regulate do not discriminate among similarly situated customers.

Natural Gas Gathering Pipeline Regulation

Section 1(b) of the NGA exempts natural gas gathering facilities from the jurisdiction of the FERC under the NGA. We own certain natural gas pipelines that we believe meet the traditional tests the FERC has used to establish a pipeline's status as a gatherer not subject to FERC jurisdiction. State regulation of gathering facilities generally includes various safety, environmental and, in some circumstances, nondiscriminatory take requirements, but historically has not entailed rate regulation. In 2005, the FERC initiated an inquiry regarding the extent to which gathering (both offshore and onshore) systems, particularly those that have been previously transferred from a regulated entity should be regulated by the FERC. The FERC terminated this inquiry in early 2007 without making any finding that would expand its existing regulatory purview over gathering facilities. Further, some states have, or are considering, providing greater regulatory scrutiny over the commercial regulation of natural gas gathering business. Many of the producing states have previously adopted some form of complaint-based regulation that generally allows natural gas producers and shippers to file complaints with state regulators in an effort to resolve grievances relating to natural gas gathering access and rate discrimination. Our gathering operations could be adversely affected should they be subject in the future to the application of state or federal regulation of rates and services. Our gathering operations also may be or become subject to safety and operational regulations relating to the design, installation, testing, construction, operation, replacement and management of gathering facilities.

Sales of Natural Gas, Crude Oil, Condensate and Natural Gas Liquids

The price at which we sell natural gas currently is not subject to federal or state regulation except for certain systems in Texas. Our sales of natural gas are affected by the availability, terms and cost of pipeline transportation. As noted above, the price and terms of access to pipeline transportation are subject to extensive federal and state regulation. The FERC is continually proposing and implementing new rules and regulations affecting those segments of the natural gas industry, most notably interstate natural gas transmission companies that remain subject to the FERC's jurisdiction. These initiatives also may affect the intrastate transportation of natural gas under certain circumstances. The stated purpose of many of these regulatory changes is to promote competition among the various sectors of the natural gas industry.

Our sales of crude oil, condensate and natural gas liquids currently are not regulated and are made at market prices. In a number of instances, however, the ability to transport and sell such products is dependent on pipelines whose rates, terms and conditions of service are subject to the FERC's jurisdiction under the ICA. Certain regulations implemented by the FERC in recent years could increase the cost of transportation service on certain petroleum products pipelines. However, we do not believe that these regulations affect us any differently than other marketers of these products.

Other Regulation

The governments of the United States and Canada have, by treaty, agreed to ensure nondiscriminatory treatment for the passage of oil and natural gas through the pipelines of one country across the territory of the other. Individual border crossing points require U.S. government permits that may be terminated or amended at the will of the U.S. Government. These permits provide that pipelines may be inspected by or subject to orders issued by federal or state government agencies.

Tariffs and Rate Cases

Lakehead system

Under published tariffs at December 31, 2007 (including the tariff surcharges related to Lakehead system expansions) for transportation on the Lakehead system, the rates for transportation of heavy crude oil from Neche, North Dakota, where the System enters the United States (unless otherwise stated), to principal delivery points are set forth below.

	Published Tariff Per Barrel	
To Clearbrook, Minnesota	$	0.2279
To Superior, Wisconsin		0.4562
To Chicago, Illinois area		0.9585
To Marysville, Michigan area		1.1496
To Buffalo, New York area		1.1769
Chicago to the international border near Marysville		0.4118

The rates at December 31, 2007 for light and medium crude oils and NGLs are lower than the rates set forth in the table to compensate for differences in the costs of shipping different types and grades of liquid hydrocarbons. We periodically adjust our tariff rates as allowed under the FERC's indexing methodology and the tariff agreements described below.

Base Rates:

The base portion of the rates for the Lakehead system are subject to an annual escalation, which cannot exceed established ceiling rates as approved by the FERC, and determined in compliance with the FERC-approved indexing methodology.

SEP II Surcharge:

Under the Settlement Agreement with CAPP that the FERC approved in 1996 and reconfirmed in 1998, we implemented a tariff surcharge related to our SEP II project. This tariff surcharge, which is added to the base rates, is a cost-of-service based calculation that is trued-up annually (usually in April) for actual costs and throughputs from the previous calendar year, and is not subject to indexing. The initial term of the SEP II portion of the settlement agreement was for 15 years beginning in 1999.

Terrace Surcharge:

Under the Tariff Agreement approved by the FERC in 1998, we also implemented a tariff surcharge for the Terrace expansion program of approximately \$0.013 per barrel for light crude oil from the Canadian border to Chicago. On April 1, 2001, pursuant to an agreement between us and Enbridge Pipelines Inc. our share of the surcharge was increased to \$0.026 per barrel. This surcharge was in effect until April 1, 2004, when our share of the surcharge changed to \$0.007 per barrel. Our share will remain at this level until 2010, after which time the surcharge will return to \$0.013 per barrel through 2013, the term of the agreement. In addition to the Terrace surcharge, included in our tariff is the Terrace Schedule C adjustment. Under the tariff agreement, when Terrace Phase III facilities are in service, and annual actual average pumping exiting Clearbrook are less than 225,000 M^3 per day, an adjustment is made to the Terrace surcharge. In 2007, this adjustment is \$0.061 per barrel, based on annual actual average pumpings exiting Clearbrook of 197,861 M^3 per day in 2006.

Facilities Surcharge:

On July 1, 2004, the FERC approved a settlement with CAPP involving a Facilities Surcharge mechanism, which allows for the recovery of costs for enhancements or modifications to the system at shipper request and approved by CAPP. The Facilities Surcharge permits the Lakehead system to recover the costs associated with particular shipper-requested projects through an incremental surcharge layered on top of the existing base rates and other FERC-approved surcharges already in effect. Like the SEP II surcharge, the Facilities Surcharge is a cost-of-service-based tariff mechanism that is trued-up each year for actual costs and throughput and, therefore, is not subject to adjustment either upwards or downwards under indexing. In 2007, the Facilities Surcharge was \$0.012 per barrel for light movements from the international border near Neche, North Dakota to Chicago. The Facilities Surcharge currently includes four projects that were agreed to with CAPP in 2004. Additional projects to be included in the Facilities Surcharge will be determined as the result of a negotiating process between management of the Lakehead system and CAPP.

On March 16, 2006, the FERC approved the Offer of Settlement we filed on December 21, 2005, seeking approval for the Southern Access mainline expansion surcharge under the provisions of the previously approved Facilities Surcharge mechanism. The Southern Access mainline expansion centers on the construction of a new 42-inch diameter pipeline between Superior, Wisconsin and Flanagan, Illinois, along with associated upstream modifications to balance the expanded capacity created by the new Superior-to-Flanagan line.

On September 1, 2006, Enbridge filed an Offer of Settlement with the FERC seeking prompt approval for the Southern Access Extension surcharge. The proposed Extension is a new 36-inch pipeline which connects with the Southern Access Mainline Expansion pipeline at Flanagan to Patoka, Illinois, which allows Canadian producers and shippers to access the Patoka hub, where they can then access other refining centers. Under the framework that established the Facilities Surcharge already approved by the Commission, the proposed tolling methodology in the Offer of Settlement asked that the costs for the Extension be added to the existing base rates as a surcharge. A variety of benefits would accrue to shippers through the Extension, including a reduction in total tariff rates due to the higher utilization of upstream facilities and therefore reducing the net cost to shippers even if they do not ship on the Extension itself. The Offer of Settlement was opposed by three shippers and was rejected by the Commission on December 8, 2006, which stated that Enbridge did not submit adequate proof that the proposed pipeline would benefit all shippers.

On October 18, 2007, Enbridge filed a Petition for Declaratory Order with the FERC seeking approval for a revised tariff structure on the Extension and associated surcharges and surcredits on the Lakehead system. The proposed tariff methodology in this petition is a stand alone cost-of-service rate from Flanagan to Patoka, Illinois. However, in the first few years of operation, it is not clear that the pipeline will be able to attract sufficient volumes to recover all of its costs. Thus, a backstopping mechanism with the Lakehead system has been proposed for the pipeline system. In the event that a deficiency occurs for a given year, this deficiency would be recovered from Lakehead mainline shippers. Any surpluses would then be credited back to Lakehead shippers in the form of rate credits until the cumulative deficiency, including interest is eliminated. The term of the agreement is for fifteen years. Enbridge/Lakehead mainline shippers will enjoy various benefits as a result of the expansion. Several parties have filed letters of support of the Declaratory Order, and the Petition has been opposed by one shipper. Enbridge has requested a decision from the FERC by February 2008.

Mid-Continent system

The Mid-Continent system is comprised of pipeline, terminaling, and storage infrastructure located in the U.S. Mid-continent region. Specifically the system originates in Cushing, Payne County, Oklahoma and offers transportation service to Wood River, Madison County, Illinois; West Tulsa, Oklahoma, other Mid-Continent system facilities, local area refineries, and other interconnected non-affiliated pipeline infrastructure. The rates for the transportation of light crude oil from Cushing, Payne County, Oklahoma to principle delivery points are set forth below:

	Published Tariff Per Barrel
To Wood River, Illinois	$ 0.4587
To West Tulsa, Oklahoma	$ 0.1926

The rates at December 31, 2007, outlined above, apply to light crude only. Medium and heavy crude oil transportation rates on these systems are higher to compensate us for differences in the costs of shipping different types and grades of liquid hydrocarbons. In addition to the routes above, we also have the following two joint tariffs—one with All American Pipeline, L.P., which allows for transportation from points in Texas and Jal, New Mexico, to Wood River, Illinois, and another with Koch Pipeline Company, L.P., which allows for transportation from Cushing, Oklahoma, to Hartford Tankage, Illinois.

Where applicable, we periodically adjust our tariff rates as allowed under the FERC's indexing methodology. Currently, this methodology allows for an adjustment of rates equal to the PPI-FG + 1.3%, which adjustment is made effective July 1 of each year.

North Dakota system

Our North Dakota system consists of both gathering and trunk line assets. All gathering rates in effect at December 31, 2007, from points in North Dakota and Montana are $0.6350 per barrel. Effective January 1, 2008, two new surcharges were implemented as a part of the Phase V expansion. In August 2006, we submitted an Offer of Settlement to the FERC for an expansion of the pipeline system, which was approved by the Commission on October 31, 2006 (Docket No. OR06-9-000). The Offer of Settlement outlined the mainline expansion and looping surcharges as cost-of-service based surcharges that will be trued up each year to actual costs and are not subject to the FERC indexing methodology. These surcharges are applicable for the five years immediately following the in-service date of the Phase V expansion, which we placed in service in January 2008. The mainline expansion surcharge is applied to all transportation routes with a destination of Clearbrook, Minnesota, beginning January 1, 2008. The looping surcharge is applied to all routes originating at Trenton and Alexander, North Dakota. The rates and surcharges for transportation of light crude oil to principle delivery points via trunk lines on our North Dakota System are set forth below:

	Published[(1)] Tariff Per Barrel at December 31, 2007	Surcharge[(2)] Per Barrel	Revised Tariff Per Barrel effective January 1, 2008
From Glenburn, Haas, Lignite, Minot, Newburg, Sherwood, Stanley and Wiley, North Dakota to Clearbrook, Minnesota	$ 0.7721	$ 0.1434	$ 0.9155
From Brush Lake and Dwyer, Montana and Grenora, North Dakota to Clearbrook, Minnesota	$ 0.8841	$ 0.1434	$ 1.0275
From Clear Lake, Dagmar, Flat Lake and Reserve, Montana to Clearbrook, Minnesota	$ 0.9089	$ 0.1434	$ 1.0523
From Tioga, North Dakota to Clearbrook, Minnesota	$ 0.7967	$ 0.1434	$ 0.9401
From Trenton and Missouri Ridge, North Dakota to Clearbrook, Minnesota to Clearbrook, Minnesota	$ 1.0088	$ 0.6170	$ 1.6258
From Alexander, North Dakota to Clearbrook, Minnesota	$ 1.0460	$ 0.6170	$ 1.6630
From Brush Lake, Dagmar and Clear Lake, Montana to Tioga, North Dakota	$ 0.4857	—	$ 0.4857
From Reserve, Montana to Tioga, North Dakota	$ 0.5479	—	$ 0.5479
From Trenton and Missouri Ridge, North Dakota to Tioga, North Dakota	$ 0.4609	$ 0.4736	$ 0.9345
From Alexander, North Dakota to Clearbrook, Minnesota	$ 0.4978	$ 0.4736	$ 0.9714

(1) Pursuant to FERC Tariff No. 48 as filed with the FERC on May 30, 2007, with an effective date of July 1, 2007.

(2) Pursuant to FERC Tariff No. 53 as filed with the FERC on November 30, 2007, with an effective date of January 1, 2008.

The rates outlined above, are subject to adjustment as allowed under the indexing methodology established by the FERC. Currently this methodology allows for an adjustment of rates equal to the PPI-FG +1.3%, which is made effective July 1 of each year. In addition to the routes above, we have a joint tariff with Plains Pipeline, L.P., which allows for transportation from points in Richland and McCone counties in Montana to Tioga, North Dakota and Clearbrook, Minnesota.

Natural Gas Systems

Tariff rates on the FERC-regulated natural gas pipelines are approved by the FERC and vary by pipeline depending on a number of factors, including cost of providing service, throughput levels on the pipeline, and other factors. Competitive forces may prompt us to charge tariff rates below the FERC-approved maximum rate on our interstate systems. The rates charged for transmission of natural gas on pipelines not regulated by the FERC, or a state agency, are established by competitive forces.

Safety Regulation and Environmental

General

Our transmission and gathering pipelines and storage and processing facilities are subject to extensive federal and state environmental, operational and safety regulation. The added costs imposed by regulations are generally no different than those imposed on our competitors. The failure to comply with such rules and regulations can result in substantial penalties and/or enforcement actions and added operational costs.

Pipeline Safety and Transportation Regulation

Our transmission and non-rural gathering pipelines are subject to regulation by the United States Department of Transportation, or DOT, Pipeline and Hazardous Materials Safety Administration ("PHMSA") under Title 49 United States Code (Pipeline Safety Act, or PSA) relating to the design, installation, testing, construction, operation, replacement and management of transmission and non-rural gathering pipeline facilities. The PHMSA is the agency charged with regulating the safe transportation of hazardous materials under all modes of transportation, including intrastate pipelines. Periodically the PSA has been reauthorized and amended, imposing new mandates on the regulator to promulgate new regulations, imposing direct mandates on operators of pipelines.

On December 17, 2002, the PSI Act of 2002 was enacted reauthorizing and amending the PSA. The most significant amendment required natural gas pipelines to develop integrity management programs and conduct integrity assessment tests at a minimum of seven year intervals. Such tests can include internal inspection, hydrostatic pressure tests or direct assessments on pipelines in certain high consequence areas. The PHMSA has since promulgated rules for this and other mandates included in the PSI Act of 2002.

On December 29, 2006, the Pipeline Inspection, Protection, Enforcement, and Safety Act of 2006 (PIPES of 2006) was signed into legislation that further amended the Pipeline Safety Act. Many of the provisions were welcome, including strengthening excavation damage prevention and enforcement. The most significant provisions of PIPES of 2006 that will affect us, but not materially, include a mandate to PHMSA to remove most exemptions from federal regulations for liquid pipelines operating at low stress and mandates PHMSA to undertake rulemaking requiring pipeline operators to have a human factors management plan for pipeline control room personnel, including consideration for controlling hours of service.

We have incorporated the new requirements of the 2002 and 2006 PSA amendments into procedures and budgets and, while we expect to incur higher regulatory compliance costs, the increase is not expected to be material.

The Pipeline Safety Act Reauthorization of 2006 (PIPES Act) required, among other measures, for PHMSA to extend their current jurisdictional authority to regulate previously exempted low operating stress pipelines. In September 2007, the PHMSA issued a Notice of Proposed Rulemaking that details how such low stress pipelines would be regulated and the safety measures that would be required. Industry commented and PHMSA is expected to issue the Final Rule early in 2008. The Final Rule is expected to have regulatory requirements that will not materially affect our low stress transmission pipelines.

When hydrocarbons are released into the environment, the PHMSA can impose a return-to-service plan, which can include implementing certain internal inspections, pipeline pressure reductions, and other strategies to verify the integrity of the pipeline in the affected area. We do not anticipate any return-to-service plans that will have a material impact on system throughput or compliance costs; however we have the potential of incurring expenditures to remediate any condition in the event of a discharge or failure on our systems.

Our trucking and railcar operations are also subject to safety and permitting regulation by the DOT and state agencies with regard to the safe transportation of hazardous and other materials.

We believe that our pipeline, trucking and railcar operations are in substantial compliance with applicable operational and safety requirements. In instances of non-compliance, we have taken actions to remediate the situations. Nevertheless, significant expenses could be incurred in the future if additional safety measures are required or if safety standards are raised and exceed the capabilities of our current pipeline control system or other safety equipment.

Environmental Regulation

General. Our operations are subject to complex federal, state, and local laws and regulations relating to the protection of health and the environment, including laws and regulations which govern the handling, storage and release of crude oil and other liquid hydrocarbon materials or emissions from natural gas compression facilities. As with the pipeline and processing industry in general, complying with current and anticipated environmental laws and regulations increases our overall cost of doing business, including our capital costs to construct, maintain, and upgrade equipment and facilities. While these laws and regulations affect our maintenance capital expenditures and net income, we believe that they do not affect our competitive position since the operations of our competitors are generally similarly affected.

In addition to compliance costs, violations of environmental laws or regulations can result in the imposition of significant administrative, civil and criminal fines and penalties and, in some instances, injunctions banning or delaying certain activities. We believe that our operations are in substantial compliance with applicable environmental laws and regulations.

There are also risks of accidental releases into the environment associated with our operations, such as leaks or spills of crude oil, liquids or natural gas or other substances from our pipelines or storage facilities. Such accidental releases could, to the extent not insured, subject us to substantial liabilities arising from environmental cleanup and restoration costs, claims made by neighboring landowners and other third parties for personal injury and property damage, and fines, penalties, or damages for related violations of environmental laws or regulations.

Although we are entitled, in certain circumstances, to indemnification from third parties for environmental liabilities relating to assets we acquired from those parties, these contractual indemnification rights are limited and, accordingly, we may be required to bear substantial environmental expenses. However, we believe that through our due diligence process, we identify and manage substantial issues.

Air and Water Emissions. Our operations are subject to the federal Clean Air Act, or CAA, and the federal Clean Water Act, or CWA, and comparable state and local statutes. We anticipate, therefore, that we will incur certain capital expenses in the next several years for air pollution control equipment and spill prevention measures in connection with maintaining existing facilities and obtaining permits and approvals for any new or acquired facilities.

The Oil Pollution Act (OPA) was enacted in 1990 and amends parts of the CWA and other statutes as they pertain to the prevention of and response to oil spills. Under the OPA, we could be subject to strict, joint and potentially unlimited liability for removal costs and other consequences of an oil spill from our facilities into navigable waters, along shorelines or in an exclusive economic zone of the United States. The OPA also imposes certain spill prevention, control and countermeasure requirements for many of our non-pipeline facilities, such as the preparation of detailed oil spill emergency response plans and the construction of dikes or other containment structures to prevent contamination of navigable or other waters in the event of an oil overflow, rupture or leak. For our liquid pipeline facilities, the OPA imposes requirements for emergency plans to be prepared, submitted and approved by the DOT. For our non-transportation facilities, such as storage tanks that are not integral to pipeline transportation system, the OPA regulations are promulgated by the Environmental Protection Agency, or EPA. We believe we are in material compliance with these laws and regulations.

Hazardous Substances and Waste Management. The federal Comprehensive Environmental Response, Compensation, and Liability Act, or CERCLA (also known as the "Superfund" law), and similar state laws, impose liability without regard to fault or the legality of the original conduct, on certain classes of persons, including the owners or operators of waste disposal sites and companies that disposed or arranged for disposal of hazardous substances found at such sites. We may generate some wastes that fall within the definition of a "hazardous substance." We may, therefore, be jointly and severally liable under CERCLA for all or part of any costs required to clean up and restore sites at which such wastes have been disposed. In addition, it is not uncommon for neighboring landowners and other third parties to file claims for personal injury and property damage allegedly caused by hazardous substances or other pollutants released into the environment. Analogous state laws may apply to a broader range of substances than CERCLA and, in some instances, may offer fewer exemptions from liability. We have not received any notification that we may be potentially responsible for material cleanup costs under CERCLA or similar state laws.

Employee Health and Safety. The workplaces associated with our operations are subject to the requirements of the federal Occupational Safety and Health Administration, or OSHA, and comparable state statutes that regulate worker health and safety. We have an ongoing safety, procedure and training program for our employees and believe that our operations are in compliance with applicable OSHA requirements, including industry consensus standards, record keeping requirements, monitoring of occupational exposure to regulated substances, and hazard communication standards.

Site Remediation. We own and operate a number of pipelines, gathering systems, storage facilities and processing facilities that have been used to transport, distribute, store and process crude oil, natural gas and other petroleum products. Many of our facilities were previously owned and operated by third parties whose handling, disposal and release of petroleum and waste materials were not under our control. The age of the facilities, combined with the past operating and waste disposal practices, which were standard for the industry and regulatory regime at the time, have resulted in soil and groundwater contamination at some facilities due to historical spills and releases. Such contamination is not unusual within the natural gas and petroleum industry. Historical contamination found on, under or originating from our properties may be subject to CERCLA, Resource Conservation & Recovery Act and analogous state laws as described above.

Under these laws, we could incur substantial expense to remediate such contamination, including contamination caused by prior owners and operators. In addition, Enbridge Management, as the entity with managerial responsibility for us, could also be liable for such costs to the extent that we are unable to fulfill our obligations. We have conducted site investigations at some of our facilities to assess historical environmental issues, and we are currently addressing soil and groundwater contamination at various facilities through remediation and monitoring programs, with oversight by the applicable government agencies where appropriate.

EMPLOYEES

Neither we nor Enbridge Management, have any employees. Our general partner has delegated to Enbridge Management, pursuant to a delegation of control agreement, substantially all of the responsibility for our day-to-day management and operation. Our general partner, however, retains certain functions and approval rights over our operations. To fulfill its management obligations, Enbridge Management has entered into agreements with Enbridge and several of its affiliates to provide Enbridge Management with the necessary services and support personnel, who act on Enbridge Management's behalf as its agents. We are ultimately responsible for reimbursing these service providers based on the costs that they incur in performing these services.

INSURANCE

Our operations are subject to many hazards inherent in the liquid petroleum and natural gas gathering, treating, processing and transportation industry. We maintain insurance coverage for our operations and properties considered to be customary in the industry. Our coverage limits for property and business interruption, general liability, and pollution liability insurance are expressed in Canadian dollars, or CAD, and range from $400 million CAD to $650 million CAD, representing $404.8 million to $657.8 million in United States dollars (USD) at December 31, 2007 based on the exchange rate of $1.0120 USD = $1 CAD at this date. Insurance policy deductibles are stated in CAD and vary with coverage. As expressed in USD our deductibles are approximately $10.2 million, $0.1 million, and $2.5 million for property, general liability, and pollution liability, respectively, which have been converted from CAD based on the exchange rate presented above. We can make no assurance that the insurance coverage we maintain will be available or adequate for any particular risk or loss, or that we will be able to maintain adequate insurance in the future at rates we consider reasonable. Although we believe that our assets are adequately covered by insurance, a substantial uninsured loss could have a material adverse effect on our financial position, results of operations and cash flows.

TAXATION

We are not a taxable entity for U.S. federal income tax purposes. Generally, federal and state income taxes on our taxable income are borne by our individual partners through the allocation of our taxable income. In a limited number of states, an income tax is imposed upon us and generally, not our individual partners. The income tax that we bear is reflected in our consolidated financial statements. The allocation of taxable income to our individual partners may vary substantially from net income reported in our consolidated statements of income.

AVAILABLE INFORMATION

We file annual, quarterly and other reports, and any amendments to those reports, and information with the Securities and Exchange Commission, or SEC, under the Securities Exchange Act of 1934, as amended, which we refer to as the Exchange Act. You may read and copy any materials that we file with the SEC at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549. You may obtain additional information about the Public Reference Room by calling the SEC at 1-800-SEC-0330. In addition, the SEC maintains an Internet site *http://www.sec.gov* that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC, including ours.

We also make available free of charge on or through our Internet website *http://www.enbridgepartners.com* our Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and other information statements, and if applicable, amendments to those reports filed or furnished pursuant to Section 13(a) of the Exchange Act, as soon as reasonably practicable after we electronically file such material with the SEC. Information contained on our website is not part of this report.

Item 1A. Risk Factors

We encourage you to read the risk factors below in connection with the other sections of this Annual Report on Form 10-K.

RISKS RELATED TO OUR BUSINESS

Our financial performance could be adversely affected if our pipeline systems are used less.

Our financial performance depends to a large extent on the volumes transported on our pipeline systems. Decreases in the volumes transported by our systems can directly and adversely affect our revenues and results of operations. The volume transported on our pipelines can be influenced by factors beyond our control including:

- competition;
- regulatory action;
- weather conditions
- storage levels;
- alternative energy sources;
- decreased demand;
- fluctuations in energy commodity prices;
- economic conditions;
- supply disruptions;
- availability of supply connected to our pipeline systems; and
- availability and adequacy of infrastructure to move supply to our system.

The volume of shipments on our Lakehead system depends heavily on the supplies of western Canadian crude oil. Insufficient supplies of western Canadian crude oil will adversely affect our business by limiting shipments on our Lakehead system. Decreases in conventional crude oil exploration and production activities in western Canada and other factors including supply disruption and competition can reduce the utilization of our Lakehead system. For example, in January 2005, deliveries on our Lakehead system were impacted by a fire at a Suncor facility. The volume of crude oil that we transport on the Lakehead system also depends on the demand for crude oil in the Great Lakes and Midwest regions of the United States and the delivery by others of crude oil and refined products into these regions and the Province of Ontario. Pipeline capacity for the delivery of crude oil to the Great Lakes and Midwest regions of the United States currently exceeds refining capacity.

In addition, our ability to increase deliveries to expand the Lakehead system in the future depends on increased supplies of western Canadian crude oil. We expect that growth in future supplies of western Canadian crude oil will come from oil sands projects in Alberta, Canada. Furthermore, full utilization of additional capacity as a result of our current and future expansions of the Lakehead system, including the Southern Access project, will largely depend on these anticipated increases in crude oil production from oil sands projects. The government of the Province of Alberta has adopted measures to increase its share of revenues from oil sands development. These measures could cause oil sands producers to cancel or delay plans to expand their facilities, which, in turn, would reduce the volume growth we have anticipated in executing our construction projects to increase the capacity of our crude oil pipelines.

The volume of shipments on natural gas systems depends on the supply of natural gas and NGLs available for shipment on those systems from the producing regions that supply these systems. Volumes shipped on these systems also are affected by the demand for natural gas and NGLs in the markets these systems serve. Existing customers may not extend their contracts for a variety of reasons, including a decline in the availability of natural gas from the Mid-continent, Gulf Coast and East Texas producing regions, or if the cost of transporting natural gas from other producing regions through other pipelines into the markets served by the natural gas systems was to render the delivered cost of natural gas on our systems uneconomical. We may be unable to find additional customers to replace the lost demand or transportation fees.

Changes in, or challenges to, our rates could have a material adverse effect on our financial condition and results of operations.

The rates charged by several of our pipeline systems are regulated by the FERC or state regulatory agencies or both. If one of these regulatory agencies, on its own initiative or due to challenges by third parties, were to lower our tariff rates, the profitability of our pipeline businesses might suffer. If we were permitted to raise our tariff rates for a particular pipeline, there might be significant delay between the time the tariff rate increase is approved and the time that the rate increase actually goes into effect, which delay could further reduce our cash flow. Furthermore, competition from other pipeline systems may prevent us from raising our tariff rates even if regulatory agencies permit us to do so. The regulatory agencies that regulate our systems periodically implement new rules, regulations and terms and conditions of services subject to their jurisdiction. New initiatives or orders may adversely affect the rates charged for our services. Some producing states, including Oklahoma and Texas, are considering legislation that would require rate and/or service regulation of gathering and intrastate transmission natural gas systems. Increased state regulation could adversely impact our natural gas systems.

The question of whether and to what extent an income tax allowance should be included in a regulated utility's cost of service for rate-making purposes was a matter of uncertainty for a number of years. On May 29, 2007, the D.C. Circuit Court denied petitions for review of the FERC's income tax allowance ("ITA") policy. The D.C. Circuit Court, which previously vacated and remanded prior FERC orders on the subject, affirmed the ITA policy that the FERC adopted in its May 4, 2005, Policy Statement on Income Tax Allowances, 111 FERC ¶ 61,139 ("Policy Statement"), which concluded that "such an allowance should be permitted on all partnership interests, or similar legal interests, if the owner of that interest has an actual or potential income tax liability on the public utility income earned through the interest," thereby extending the ITA to both corporations and partnerships (or other pass-through entities). In addition, the FERC's Policy Statement contemplates that individual rate proceedings will determine "whether a particular partner... has an actual or potential income tax liability, and what assumptions, if any, should determine the amount of the related tax rate..."

A related issue is whether the FERC's Policy Statement can be relied upon by shippers as a substantial change in circumstances sufficient to remove the grandfathering protection under the EP Act from an oil pipeline's rates. As part of its May 29, 2007 opinion, the D.C. Circuit Court denied the petitions for review with respect to the EP Act issues and upheld the FERC's interpretation of the EP Act as reasonable.

We believe that the rates we charge for transportation services on our interstate common carrier pipelines are just and reasonable under the ICA and NGA. However, because the rates that we charge are subject to review upon an appropriately supported protest or complaint, we cannot predict what rates we will be allowed to charge in the future for service on our interstate common carrier pipelines. Furthermore, because rates charged for transportation services must be competitive with those charged by other transporters, the rates set forth in our tariffs will be determined based on competitive factors in addition to regulatory considerations.

Competition may reduce our revenues.

Our Lakehead system faces current, and potentially further competition for transporting western Canadian crude oil from other pipelines, which may reduce our revenues. Our Lakehead system competes with other crude oil and refined product pipelines and other methods of delivering crude oil and refined products to the refining centers of Minneapolis-St. Paul, Minnesota; Chicago, Illinois; Detroit, Michigan; Toledo, Ohio; Buffalo, New York; and Sarnia, Ontario and the refinery market and pipeline hub located in the Patoka/Wood River area of southern Illinois. Refineries in the markets served by our Lakehead system compete with refineries in western Canada, the Province of Ontario and the Rocky Mountain region of the United States for supplies of western Canadian crude oil.

Our Ozark pipeline system could face a significant increase in competition if a proposed new pipeline from Hardisty, Alberta to Patoka is completed in 2009. However, if that situation occurs, we would consider potential alternative uses for our Ozark system.

We also encounter competition in our natural gas gathering, treating, processing, and transmission businesses. A number of new interstate natural gas transmission pipelines being constructed could reduce the revenue we derive from the interstate and intrastate transmission of natural gas. Many of the large wholesale customers served by our systems' transmission and wholesale customer pipelines have multiple pipelines connected or adjacent to their facilities. Thus, many of these wholesale customers have the ability to purchase natural gas directly from a number of pipelines and/or from third parties that may hold capacity on other pipelines. For example, our Midla system is currently negotiating the renewal of a contract with one of its primary customers that is set to expire in August 2008, and could result in a contract with less favorable terms. Other systems such as our AlaTenn system face similar competition. Likewise, most natural gas producers and owners have alternate gathering and processing facilities available to them. In addition, they have other alternatives, such as building their own gathering facilities or, in some cases, selling their natural gas supplies without processing. Some of our natural gas marketing competitors have greater financial resources and access to larger supplies of natural gas than those available to us, which could allow those competitors to price their services more aggressively than we do.

Our gas marketing operations involve market and certain regulatory risks.

As part of our natural gas marketing activities, we purchase natural gas at prices determined by prevailing market conditions. Following our purchase of natural gas, we generally resell natural gas at a higher price under a sales contract that is generally comparable in terms to our purchase contract, including any price escalation provisions. The profitability of our natural gas operations may be affected by the following factors:

- our ability to negotiate on a timely basis natural gas purchase and sales agreements in changing markets;
- reluctance of wholesale customers to enter into long-term purchase contracts;
- consumers' willingness to use other fuels when natural gas prices increase significantly;
- timing of imbalance or volume discrepancy corrections and their impact on financial results;
- the ability of our customers to make timely payment;
- inability to match purchase and sale of natural gas on comparable terms; and
- changes in, limitations upon, or elimination of the regulatory authorization required for our wholesale sales of natural gas in interstate commerce.

Our results may be adversely affected by commodity price volatility and risks associated with our hedging activities.

We buy and sell natural gas and NGLs in connection with our marketing activities. Commodity price exposure is also inherent in gas purchase and resale activities and in gas processing. To the extent that we engage in hedging activities to reduce our commodity price exposure, we may be prevented from realizing the full benefits of price increases above the level of the hedges. Further, hedging contracts are subject to the credit risk that the other party may prove unable or unwilling to perform its obligations under such contracts. In addition certain of the financial instruments we use to hedge our commodity risk exposures must be accounted for on a mark-to-market basis. This causes periodic earnings volatility due to fluctuations in commodity prices.

Compliance with environmental and operational safety regulations, including any remediation of soil or water pollution or hydrostatic testing of our pipeline systems, may increase our costs and/or reduce our revenues.

Our pipeline, gathering, processing and trucking operations are subject to federal, state and local laws and regulations relating to environmental protection and operational and worker safety. Liquid petroleum and natural gas transportation and processing operations always involve the risk of costs or liabilities or operational modifications related to regulatory compliance as well as resulting from historical environmental contamination, accidental releases or upsets, regulatory enforcement, litigation or safety and health incidents. As a result, we may incur costs or liabilities of this type, or experience a reduction in revenues, in the future. We may also establish temporary pressure restrictions on some sections of our pipelines pending completion of specific inspection and renewal programs. Pressure restrictions reduce the available capacity of the applicable line segment and could result in a loss of throughput and related revenue if and when the full capacity of that line segment would otherwise have been utilized. We may also incur costs in the future due to changes in environmental and safety laws and regulations, enforcement policies or claims for personal, property or environmental damage. We may not be able to recover these costs from insurance or through higher tariffs.

Pipeline operations involve numerous risks that may adversely affect our business and financial condition.

Operation of complex pipeline systems, gathering, treating, processing and trucking operations involves many risks, hazards and uncertainties. These events include adverse weather conditions, accidents, the breakdown or failure of equipment or processes, the performance of the facilities below expected levels of capacity and efficiency and catastrophic events such as explosions, fires, earthquakes, hurricanes, floods, landslides or other similar events beyond our control. A casualty occurrence might result in injury or loss of life or extensive property or environmental damage for which we may bear a part or all of the cost.

Our acquisition strategy may be unsuccessful if we incorrectly predict operating results, are unable to identify and complete future acquisitions and integrate acquired assets or businesses or are unable to raise financing on acceptable terms.

The acquisition of complementary energy delivery assets is a component of our strategy. Acquisitions present various risks and challenges, including:

- the risk of incorrect assumptions regarding the future results of the acquired operations or expected cost reductions or other synergies expected to be realized as a result of acquiring such operations;
- the risk of failing to effectively integrate the operations or management of acquired assets or businesses or a significant delay in such integration; and
- diversion of management's attention from existing operations.

In addition, we may be unable to identify acquisition targets and consummate acquisitions in the future or be unable to raise, on terms we find acceptable, any debt or equity financing that may be required for any such acquisition.

Our actual construction and development costs could exceed our forecast and our cash flow from construction and development projects may not be immediate which may limit our ability to increase cash distributions.

Our strategy contemplates significant expenditures for the development, construction or other acquisitions of energy infrastructure assets. Increased demand for the steel used to fabricate the pipe needed for our construction projects and increased competition for labor has resulted in increased costs for these resources. As a result, we may not be able to complete our projects at the costs currently estimated or within the time periods we have projected. If we experience material cost overruns, we will have to finance these overruns using one or more of the following methods:

- using cash from operations;
- delaying other planned projects;
- incurring additional indebtedness; or
- issuing additional equity.

Any or all of these methods may not be available when needed or may adversely affect our future results of operations and cash flows.

Our revenues and cash flows may not increase immediately on our expenditure of funds on a particular project. For example, if we build a new pipeline or expand an existing facility, the design, construction, development and installation may occur over an extended period of time and we may not receive any material increase in revenue or cash flow from that project until after it is placed in service and customers begin using the systems. If our revenues and cash flow do not increase at projected levels because of substantial unanticipated delays, or other factors, we may not meet our obligations as they become due and we may need to reduce or reprioritize our capital budget, sell non-strategic assets, access the capital markets or reassess our level of distributions to unitholders to meet our capital requirements.

Measurement losses on our pipeline system can be materially impacted by changes in estimation, commodity prices and other factors.

Oil measurement losses occur as part of the normal operating conditions associated with our liquid petroleum pipelines. The three types of oil measurement losses include:

- physical losses, which occur through evaporation, shrinkage, differences in measurement between receipt and delivery locations and other operational incidents;
- degradation losses, which result from mixing at the interface between higher quality light crude oil and lower quality heavy crude oil in pipelines; and
- revaluation losses, which are a function of crude oil prices and the level of the carrier's inventory.

Quantifying oil measurement losses is inherently difficult because physical measurements of volumes are not practical due to the fact that products constantly move through our pipelines and virtually all of our pipeline systems are located underground. In our case, measuring and quantifying oil measurement losses is especially difficult because of the size and scope of our pipeline systems and the number of different grades of crude oil and types of crude oil products we carry. Accordingly, we utilize engineering-based models and operational assumptions to estimate product volumes in our system and associated oil measurement losses.

Natural gas measurement losses occur as part of the normal operating conditions associated with our natural gas pipelines. The quantification and resolution of measurement losses is complicated by several factors including: 1) the significant quantities (i.e., thousands) of measurement meters that we use throughout our natural gas systems, primarily around our gathering and processing assets; 2) varying qualities of natural gas in the streams gathered and processed through our systems; and 3) variances in measurement that are inherent in metering technologies. Each of these factors may contribute to measurement losses that can occur on our natural gas systems.

The interests of Enbridge may differ from our interests and the interests of our security holders, and the board of directors of Enbridge Management may consider the interests of all parties to a conflict, not just the interests of our security holders, in making important business decisions.

Enbridge indirectly owns all of the shares of our general partner and all of the voting shares of Enbridge Management, and elects all of the directors of both companies. Furthermore, some of the directors and officers of our general partners and Enbridge Management are also directors and officers of Enbridge. Consequently, conflicts of interest could arise between our unitholders and Enbridge.

Our partnership agreement limits the fiduciary duties of our general partner to our unitholders. These restrictions allow our general partner to resolve conflicts of interest by considering the interests of all of the parties to the conflict, including Enbridge Management's interests, our interests and those of our general partner. In addition, these limitations reduce the rights of our unitholders under our partnership agreement to sue our general partner or Enbridge Management, its delegee, should its directors or officers act in a way that, were it not for these limitations of liability, would constitute breaches of their fiduciary duties.

We do not have any employees. In managing our business and affairs, we rely on employees of Enbridge, and its affiliates, who act on behalf of and as agents for us. A decrease in the availability of employees from Enbridge could adversely affect us.

We are exposed to credit risks of our customers

Some of our customers may experience financial problems that could have a significant affect on their creditworthiness. Severe financial problems encountered by our customers could limit our ability to collect amounts owed to us, or to enforce performance of obligations under contractual arrangements. For example, in December 2005, Calpine and many of its subsidiaries, including the subsidiary that owns two utility plants served by our Bamagas system, filed voluntarily petitions to restructure under Chapter 11 of the United States Bankruptcy Code. Our Bamagas system is the sole supplier of natural gas to these two utility plants, which exposed us to a potential asset impairment for the book value of the pipeline, if the customer was unable to fulfill its commitments. Financial problems experienced by our customers may also reduce or curtail their future use of our products and services, which could reduce our revenues.

Canada's ratification of the Kyoto Protocol may adversely impact our operations.

In December 2002, Canada ratified the Kyoto Protocol, a 1997 treaty designed to reduce greenhouse gas emissions to 6% below 1990 levels. We and Enbridge are monitoring the Canadian federal government's approach to implementation. While the United States is not a signatory to the Kyoto Protocol, other environmental protection initiatives have been implemented regulating certain priority pollutants. Revisions have been proposed to the U.S. Energy Act that would, if passed, expand the regulation of certain greenhouse gas emissions requiring a cap and establishing a trade to facilitate compliance. While proposed legislation has not yet passed and as other legislation is being proposed the outcome is uncertain at this time. If and when these provisions pass the Partnership could be subject to additional costs to monitor and control emissions above and beyond current practices and permits.

RISKS ARISING FROM OUR PARTNERSHIP STRUCTURE AND RELATIONSHIPS WITH OUR GENERAL PARTNER AND ENBRIDGE MANAGEMENT

Our partnership agreement and the delegation of control agreement limit the fiduciary duties that Enbridge Management and our general partner owe to our unitholders and restrict the remedies available to our unitholders for actions taken by Enbridge Management and our general partner that might otherwise constitute a breach of a fiduciary duty.

Our partnership agreement contains provisions that modify the fiduciary duties that our general partner would otherwise owe to our unitholders under state fiduciary duty law. Through the delegation of control agreement, these modified fiduciary duties also apply to Enbridge Management as the delegate of our general partner. For example, our partnership agreement:

- permits our general partner to make a number of decisions, including the determination of which factors it will consider in resolving conflicts of interest, in its "sole discretion." This entitles our general partner to consider only the interests and factors that it desires, and it has no duty or obligation to give consideration to any interest of, or factors affecting, us, our affiliates or any unitholder;

- provides that any standard of care and duty imposed on our general partner will be modified, waived or limited as required to permit our general partner to act under our partnership agreement and to make any decision pursuant to the authority prescribed in our partnership agreement, so long as such action is reasonably believed by the general partner to be in our best interests; and

- provides that our general partner and its directors and officers will not be liable for monetary damages to us or our unitholders for any acts or omissions if they acted in good faith.

These and similar provisions in our partnership agreement may restrict the remedies available to our unitholders for actions taken by Enbridge Management or our general partner that might otherwise constitute a breach of a fiduciary duty.

Potential conflicts of interest may arise among Enbridge and its shareholders, on the one hand, and us and our unitholders and Enbridge Management and its shareholders, on the other hand. Because the fiduciary duties of the directors of our general partner and Enbridge Management have been modified, the directors may be permitted to make decisions that benefit Enbridge and its shareholders or Enbridge Management and its shareholders more than us and our unitholders.

Conflicts of interest may arise from time to time among Enbridge and its shareholders, on the one hand, and us and our unitholders and Enbridge Management and its shareholders, on the other hand. Conflicts of interest may also arise from time to time between us and our unitholders, on the one hand, and Enbridge Management and its shareholders, on the other hand. In managing and controlling us as the delegate of our general partner, Enbridge Management may consider the interests of all parties to a conflict and may resolve those conflicts by making decisions that benefit Enbridge and its shareholders or Enbridge Management and its shareholders more than us and our unitholders. The following decisions, among others, could involve conflicts of interest:

- whether we or Enbridge will pursue certain acquisitions or other business opportunities;

- whether we will issue additional units or other equity securities or whether we will purchase outstanding units;

- whether Enbridge Management will issue additional shares;

- the amount of payments to Enbridge and its affiliates for any services rendered for our benefit;

- the amount of costs that are reimbursable to Enbridge Management or Enbridge and its affiliates by us;
- the enforcement of obligations owed to us by Enbridge Management, our general partner or Enbridge, including obligations regarding competition between Enbridge and us; and
- the retention of separate counsel, accountants or others to perform services for us and Enbridge Management.

In these and similar situations, any decision by Enbridge Management may benefit one group more than another, and in making such decisions, Enbridge Management may consider the interests of all groups, as well as other factors, in deciding whether to take a particular course of action.

In other situations, Enbridge may take certain actions, including engaging in businesses that compete with us, that are adverse to us and our unitholders. For example, although Enbridge and its subsidiaries are generally restricted from engaging in any business that is in direct material competition with our businesses, that restriction is subject to the following significant exceptions:

- Enbridge and its subsidiaries are not restricted from continuing to engage in businesses, including the normal development of such businesses, in which they were engaged at the time of our initial public offering in December 1991;
- such restriction is limited geographically only to those routes and products for which we provided transportation at the time of our initial public offering;
- Enbridge and its subsidiaries are not prohibited from acquiring any business that materially and directly competes with us as part of a larger acquisition, so long as the majority of the value of the business or assets acquired, in Enbridge's reasonable judgment, is not attributable to the competitive business; and
- Enbridge and its subsidiaries are not prohibited from acquiring any business that materially and directly competes with us if that business is first offered for acquisition to us and the board of directors of Enbridge Management and our unitholders determine not to pursue the acquisition.

Since we were not engaged in any aspect of the natural gas business at the time of our initial public offering, Enbridge and its subsidiaries are not restricted from competing with us in any aspect of the natural gas business. In addition, Enbridge and its subsidiaries would be permitted to transport crude oil and liquid petroleum over routes that are not the same as our Lakehead system, even if such transportation is in direct material competition with our business.

These exceptions also expressly permitted the reversal by Enbridge in 1999 of one of its pipelines that extends from Sarnia, Ontario to Montreal, Quebec. As a result of this reversal, Enbridge competes with us to supply crude oil to the Ontario, Canada market.

We can issue additional common or other classes of units, including additional i-units to Enbridge Management when it issues additional shares, which would dilute your ownership interest.

The issuance of additional common or other classes of units by us, including the issuance of additional i-units to Enbridge Management when it issues additional shares and the issuance of additional Class C units, other than our quarterly distributions to you, may have the following effects:

- the amount available for distributions on each unit may decrease;
- the relative voting power of each previously outstanding unit may decrease; and
- the market price of the Class A common units may decline.

Additionally, the public sale by our general partner of a significant portion of the Class B common units or Class C units that it currently owns could reduce the market price of the Class A common units. Our partnership agreement allows the general partner to cause us to register for public sale any units held by the general partner or its affiliates. A public or private sale of the Class B common units or Class C units currently held by our general partner could absorb some of the trading market demand for the outstanding Class A common units.

We are a holding company and depend entirely on our operating subsidiaries' distributions to service our debt obligations.

We are a holding company with no material operations. If we cannot receive cash distributions from our operating subsidiaries, we will not be able to meet our debt service obligations. Our operating subsidiaries may from time to time incur additional indebtedness under agreements that contain restrictions, which could further limit each operating subsidiary's ability to make distributions to us.

The debt securities we issue and any guarantees issued by the Subsidiary Guarantors will be structurally subordinated to the claims of the creditors of any of our operating subsidiaries who are not guarantors of the debt securities. Holders of the debt securities will not be creditors of our operating subsidiaries who have not guaranteed the debt securities. The claims to the assets of these non-guarantor operating subsidiaries derive from our own ownership interest in those operating subsidiaries. Claims of our non-guarantor operating subsidiaries' creditors will generally have priority as to the assets of such operating subsidiaries over our own ownership interest claims and will therefore have priority over the holders of our debt, including the debt securities. Our non-guarantor operating subsidiaries' creditors may include:

- general creditors;
- trade creditors;
- secured creditors;
- taxing authorities; and
- creditors holding guarantees.

Enbridge Management's discretion in establishing our cash reserves gives it the ability to reduce the amount of cash available for distribution to our unitholders.

Enbridge Management may establish cash reserves for us that in its reasonable discretion are necessary to fund our future operating and capital expenditures, provide for the proper conduct of business, and comply with applicable law or agreements to which we are a party or to provide funds for future distributions to partners. These cash reserves affect the amount of cash available for distribution to our holders of common units.

RISKS RELATED TO OUR DEBT AND OUR ABILITY TO MAKE DISTRIBUTIONS

Agreements relating to our debt restrict our ability to make distributions, which could adversely affect the value of our Class A Common Units, and our ability to incur additional debt and otherwise maintain financial and operating flexibility.

Our primary operating subsidiary is prohibited by its First Mortgage Notes from making distributions to us, and we are prohibited from making distributions to us other than cash distributions, and it may make cash distributions to us only if (1) the distribution amount does not exceed the current available cash of that subsidiary, (2) a default does not exist under the First Mortgage Notes after giving effect to the distribution and (3) timely notice of the distribution has been give to the Note holders. In addition, we are prohibited from making distributions to our unitholders during (1) the existence of certain defaults under our Credit Facility or (2) during a period in which we have elected to defer interest payments on the Junior Notes, subject to limited exceptions as set forth in the related indenture. Further, the agreements governing our Credit Facility and our subsidiary's First Mortgage Notes may prevent us from engaging in transactions or capitalizing on business opportunities that we believe could be beneficial to us by requiring us to comply with various covenants, including the maintenance of certain financial ratios and restrictions on:

- incurring additional debt;
- entering into mergers or consolidations or sales of assets; and
- granting liens.

Although the indentures governing our senior notes do not limit our ability to incur additional debt, they impose restrictions on our ability to enter into mergers or consolidations and sales of all or substantially all of our assets, to incur liens to secure debt and to enter into sale and leaseback transactions. A breach of any restriction under our credit facility or our indentures or our subsidiary's First Mortgage Notes could permit the holders of the related debt to declare all amounts outstanding under those agreements immediately due and payable and, in the case of our Credit Facility, terminate all commitments to extend further credit. Any subsequent refinancing of our current debt or any new indebtedness incurred by us or our subsidiaries could have similar or greater restrictions.

TAX RISKS TO COMMON UNITHOLDERS

We may be classified as an association taxable as a corporation rather than as a partnership, which would substantially reduce the value of our Class A common units.

We could be treated as a corporation for United States income tax purposes. Our treatment as a corporation would substantially reduce the cash distributions on the common units that we distribute quarterly. Moreover, treatment of us as a corporation could materially and adversely affect our ability to make payments on our debt securities. The anticipated benefit of an investment in our common units depends largely on the treatment of us as a partnership for federal income tax purposes. Under current law, we are treated as a partnership for federal income tax purposes and do not pay any federal income tax at the entity level. In order to qualify for this treatment, we must derive more than 90% of our annual gross income from specified investments and activities. While we believe that we currently do qualify and intend to meet this income requirement, we may not find it possible, regardless of our efforts, to meet this income requirement or may inadvertently fail to meet this income requirement. Current law may change so as to cause us to be treated as a corporation for federal income tax purposes without regard to our sources of income or otherwise subject us to entity-level taxation. If we were to be treated as a corporation for federal income tax purposes, we would pay federal income tax on our income at the corporate tax rate, which is currently a maximum of 35% and would pay state income taxes at varying rates. Under current law, distributions to unitholders would generally be taxed as a corporate distribution. Because a tax would be imposed upon us as a corporation, the cash available for distribution to a unitholder would be substantially reduced. Treatment of us as a corporation would cause a substantial reduction in the value of our units.

In addition, several states are evaluating ways to subject partnerships to entity-level taxation through the imposition of state income, franchise, or other forms of taxation similar to recent tax legislation in Texas and Michigan. State tax legislation resulting in the imposition of a partnership-level income tax on us could reduce the cash distributions we make on the Class A and B common units and the number of i-units and Class C units that we will distribute quarterly. The enactment of significant legislation imposing partnership-level income taxes could cause a reduction in the value of our Class A common units.

If the Internal Revenue Service does not respect our curative tax allocations, the after-tax return to our unitholders on their investment in our Class A common units would be adversely affected.

Our partnership agreement allows curative allocations of income, deduction, gain and loss by us to account for differences between the tax basis and fair market value of property at the time the property is contributed or deemed contributed to us and to account for differences between the fair market value and book basis of our assets existing at the time of issuance of any Class A common units. If the Internal Revenue Service, which we refer to as the IRS, does not respect our curative allocations, ratios of taxable income to cash distributions received by the holders of Class A common units will be materially higher than previously estimated

The tax liability of our unitholders could exceed their distributions or proceeds from sales of Class A common units.

The holders of our Class A common units will be required to pay United States federal income tax and, in some cases, state and local income taxes on their allocable share of our income, even if they do not receive cash distributions from us. They will not necessarily receive cash distributions equal to the tax on their allocable share of our taxable income. Further, if we have a large amount of nonrecourse liabilities, they may incur a tax liability that is greater than the money they receive when they sell their Class A common units.

A unitholder may be required to file tax returns with and pay income taxes to the states where we or our subsidiaries own property and conduct business.

In some cases, a unitholder may be required to file income tax returns with and pay income taxes to the states in which we or our subsidiaries own property and conduct business, which are currently Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kansas, Kentucky, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Montana, New York, South Carolina, North Carolina, North Dakota, Oklahoma, Tennessee, Texas and Wisconsin. In the future, we may acquire property or do business in other states or in foreign jurisdictions. In addition to tax liabilities to such state and foreign jurisdictions, the owner of a Class A common unit may also incur tax and filing responsibilities to localities within such jurisdictions.

Ownership of Class A common units raises issues for tax-exempt entities and other investors.

An investment in our Class A common units by tax-exempt entities, including employee benefit plans, individual retirement accounts, Keogh plans and other retirement plans, regulated investment companies and foreign persons raises issues unique to them. Virtually all of the income derived from our Class A common units by a tax-exempt entity will be "unrelated business taxable income" and will be taxable to the tax-exempt entity. Further, a unitholder who is a nonresident alien, a foreign corporation or other foreign person will be required to file a federal income tax return and pay tax on his share of our taxable income because he will be regarded as being engaged in a trade or business in the United States as a result of his ownership of a Class A common unit.

Our registration with the Secretary of the Treasury as a "tax shelter" may increase your risk of an IRS audit.

Because we are a registered "tax shelter" with the Secretary of the Treasury, a unitholder may face an increased risk of an IRS audit resulting in taxes payable on our income as well as income not related to us. We could be audited by the IRS and adjustments to our income or losses could be made. Any unitholder owning less than a 1% profit interest in us has very limited rights to participate in the income tax and audit process. Further, any adjustments in our tax returns will lead to adjustments in the unitholders' tax returns and may lead to audits of unitholders' tax returns and adjustments of items unrelated to us. Each unitholder is responsible for any tax owed as the result of an examination of their personal tax return.

We have adopted certain valuation methodologies that may result in a shift of income, gain, loss and deduction between the general partner and the unitholders. The IRS may challenge this treatment, which could adversely affect the value of the Class A Common Units.

When we issue additional Class A Common Units or engage in certain other transactions, we determine the fair market value of our assets and allocate any unrealized gain or loss attributable to our assets to the capital accounts of our unitholders and our general partner. Our methodology may be viewed as understating the value of our assets. In that case, there may be a shift of income, gain, loss and deduction between certain unitholders and the general partner, which may be unfavorable to such unitholders. Moreover, subsequent purchasers of Class A Common Units may have a greater portion of their Internal Revenue Code Section 743(b) adjustment allocated to our tangible assets and a lesser portion allocated to our intangible assets. The IRS may challenge our valuation methods, or our allocation of the Section 743(b) adjustment attributable to our tangible and intangible assets, and allocations of income, gain, loss and deduction between the general partner and certain of our unitholders.

A successful IRS challenge to these methods or allocations could adversely affect the amount of taxable income or loss being allocated to our unitholders. It also could affect the amount of gain from our unitholders' sale of Class A Common Units and could have a negative impact on the value of the Class A Common Units or result in audit adjustments to our unitholders' tax returns without the benefit of additional deductions.

We treat each purchaser of Class A Common Units as having the same tax benefits without regard to the actual Class A Common Units purchased. The IRS may challenge this treatment, which could result in a unitholder owing more tax and may adversely affect the value of the Class A Common Units.

To maintain the uniformity of the economic and tax characteristics of our Class A Common Units, we have adopted certain depreciation and amortization positions that are inconsistent with existing Treasury regulations. These positions may result in an understatement of deductions and losses and an overstatement of income and gain to our unitholders. For example, we do not amortize certain goodwill assets, the value of which has been attributed to certain of our outstanding Class A Common Units. A subsequent holder of those Class A Common Units is entitled to an amortization deduction attributable to that goodwill under Internal Revenue Code Section 743(b). However, because we cannot identify these Class A Common Units once they are traded by the initial holder, we do not give any subsequent holder of a Class A Common Unit any such amortization deduction. This approach understates deductions available to those unitholders who own those Class A Common Units and results in a reduction in the tax basis of those Class A Common Units by the amount of the deductions that were allowable but were not taken.

The IRS may challenge the manner in which we calculate our unitholder's basis adjustment under Internal Revenue Code Section 743(b). If so, because neither we nor a unitholder can identify the Class A Common Units to which this issue relates once the initial holder has traded them, the IRS may assert adjustments to all unitholders selling Class A Common Units within the period under audit as if all unitholders owned Class A Common Units with respect to which allowable deductions were not taken. Any position we take that is inconsistent with applicable Treasury regulations may have to be disclosed on our federal income tax return. This disclosure increases the likelihood that the IRS will challenge our positions and propose adjustments to some or all of our unitholders. A successful IRS challenge to this position or other positions we may take could adversely affect the amount of taxable income or loss allocated to our unitholders. It also could affect the gain from a unitholder's sale of Class A Common Units and could have a negative impact on the value of the Class A Common Units or result in audit adjustments to our unitholders' tax returns without the benefit of additional deductions.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

A description of our properties and maps depicting the locations of our liquids and natural gas systems are included in Item 1. Business, which is incorporated herein by reference.

In general, our systems are located on land owned by others and are operated under perpetual easements and rights of way, licenses or permits that have been granted by private land owners, public authorities, railways or public utilities. The pumping stations, tanks, terminals and certain other facilities of our systems are located on land that is owned by us, except for five pumping stations that are situated on land owned by others and used by us under easements or permits.

Substantially all of our Lakehead system assets are subject to a first mortgage lien collateralizing indebtedness of our Lakehead Partnership.

Titles to our properties acquired in the Midcoast system acquisition are subject to encumbrances in some cases. We believe that none of these burdens should materially detract from the value of these properties or materially interfere with their use in the operation of our business.

Item 3. Legal Proceedings

We are a participant in various legal proceedings arising in the ordinary course of business. Some of these proceedings are covered, in whole or in part, by insurance. We believe the outcome of all these proceedings will not, individually or in the aggregate, have a material adverse effect on our financial condition.

Item 4. Submission of Matters to a Vote of Security Holders

No matters were submitted to a vote of security holders during the fourth quarter of 2007.

PART II

Item 5. Market for Registrant's Common Equity and Related Unitholder Matters

Our Class A common units are listed and traded on the NYSE, the principal market for the Class A common units, under the symbol "EEP." The quarterly price ranges per Class A common unit and cash distributions paid per unit for 2007 and 2006 are summarized as follows:

	First	Second	Third	Fourth
2007 Quarters				
High	$ 56.23	$ 61.82	$ 58.47	$ 54.16
Low	$ 48.25	$ 52.30	$ 48.27	$ 48.71
Cash distributions paid	$ 0.925	$ 0.925	$ 0.925	$ 0.950
2006 Quarters				
High	$ 47.80	$ 44.80	$ 49.51	$ 50.99
Low	$ 42.88	$ 42.00	$ 43.26	$ 46.10
Cash distributions paid	$ 0.925	$ 0.925	$ 0.925	$ 0.925

On February 20, 2008 the last reported sales price of our Class A common units on the NYSE was $50.99. At February 12, 2008, there were approximately 80,000 Class A common unitholders, of which there were approximately 1,600 registered Class A common unitholders of record. There is no established public trading market for our Class B common units, all of which are held by the General Partner, our Class C units, which are held by the General Partner and institutional investors, or our i-units, all of which are held by Enbridge Management.

Item 6. Selected Financial Data

The following table sets forth, for the periods and at the dates indicated, our summary historical financial data. The table is derived, and should be read in conjunction with, our audited consolidated financial statements and notes thereto beginning at page F-1. See also "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations."

	Year ended December 31,				
	2007	2006	2005	2004	2003
	(dollars in millions, except per unit amounts)				
Income Statement Data:(2)(3)(4)					
Operating revenue	$ 7,282.6	$ 6,509.0	$ 6,476.9	$ 4,291.7	$ 3,172.3

Cash flows provided by financing activities	1,167.5	640.2	181.5	187.6	286.9
Additions to property, plant and equipment and acquisitions included in investing activities, net of cash acquired	1,980.2	897.7	531.2	429.8	423.5

Notes to Selected Financial Data:

(1) The allocation of net income to the General Partner in the following amounts has been deducted before calculating income per unit: 2007, $37.7 million; 2006, $30.9 million; 2005, $23.5 million; 2004, $22.5 million; and 2003, $19.6 million.

(2) Our income statement, financial position and cash flow data reflect the following acquisitions and dispositions:

- April 2006, acquisition of a natural gas pipeline in east Texas;

- December 2005, disposition of assets on the East Texas and South Texas systems;
- January 2005, acquisition of the natural gas gathering and processing asset in north Texas;
- March 2004 acquisition of the Mid-Continent system;
- December 2003 acquisition of the North Texas system;

(3) Our income statement, financial position and cash flow data include the effect of the following debt issuances:

- The December 2007 issuance of $130 million note payable to Enbridge Hungary Ltd. and the simultaneous repayment of a $145 million note payable to Enbridge Hungary Ltd., including $8.8 million of accrued interest.
- The September 2007 issuance of $400 million of junior subordinated notes;
- The August 2007 issuance of $200 million of zero coupon senior unsecured notes and $3.6 million of accreted interest;
- The April 2007 amendment of our credit facility, which increased the maximum principal amount of credit available to us at any one time from $1 billion to $1.25 billion, allows us to request increases in the maximum principal amount of credit available at any one time from $1.25 billion to $1.5 billion, eliminates the letter of credit sublimit and extends the maturity to 2012;
- The December 2006 issuance of $300 million of senior unsecured notes;
- The September 2005 amendment of our credit facility to extend the letter of credit sublimit from $175 million to $300 million and increase the commitments available from $600 million to $800 million maturing in 2010, and the subsequent extension of the commitments available to $1 billion in March 2006.
- The April 2005 establishment of a $600 million commercial paper program;
- The December 2004 issuance of $300 million of senior unsecured notes;
- The April 2004 amendment of our credit facilities to terminate the 364-day revolving credit facility and increase the Three-year term credit facility to $600 million maturing in 2007;
- The January 2004 issuance of $200 million of senior unsecured notes; and
- The May 2003 issuance of $400 million of senior unsecured notes.

(4) Our income statement, financial position and cash flow data include the effect of the following limited partner unit issuances:

- The May 2007 issuance of 5.3 million Class A common units;
- The April 2007 issuance of approximately 5.9 million Class C units to institutional investors;
- The August 2006 issuance of approximately 10.8 million Class C units in equal amounts to our general partner and an institutional investor;
- The December 2005 issuance of 0.13 million Class A common units; the November 2005 issuance of 3.0 million Class A common units; and the February 2005 issuance of 2.5 million Class A common units;
- The September 2004 issuance of 3.68 million Class A common units; and the January 2004 issuance of 0.45 million Class A common units;
- The December 2003 issuance of 5.0 million Class A common units; and the May 2003 issuance of 3.9 million Class A common units;
- The quarterly in-kind distributions of 0.9 million, 1.0 million, 0.8 million, 0.8 million and 0.8 million i-units during 2007, 2006, 2005, 2004 and 2003 respectively, in lieu of cash distributions;
- The quarterly in-kind distributions of 1.1 million and 0.2 million Class C units during 2007 and 2006, respectively, in lieu of cash distributions.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of operations is based on and should be read in conjunction with our consolidated financial statements and the accompanying notes beginning on page F-1 of this Annual Report on Form 10-K.

RESULTS OF OPERATIONS—OVERVIEW

We provide services to our customers and returns for our unitholders primarily through the following activities:

- Interstate pipeline transportation and storage of crude oil and liquid petroleum;
- Gathering, treating, processing and transportation of natural gas and NGLs through pipelines and related facilities; and
- Supply, transportation and sales services, including purchasing and selling of natural gas and NGLs.

We conduct our business through three business segments: Liquids, Natural Gas and Marketing. These segments are strategic business units established by senior management to facilitate the achievement of our long-term objectives, to aid in resource allocation decisions and to assess operational performance.

The following table reflects our operating income by business segment and corporate charges for each of the years ended December 31:

	2007	2006	2005
		(in millions)	
Operating Income			
Liquids	$ 207.1	$ 199.8	$ 127.3
Natural Gas	91.2	133.9	110.5
Marketing	24.0	56.1	(42.4)
Corporate, operating and administrative	(3.5)	(2.9)	(3.5)
Total Operating Income	318.8	386.9	191.9
Interest expense	(99.8)	(110.5)	(107.7)
Other income	3.0	8.5	5.0
Income taxes	(5.1)	—	—
Income from continuing operations	216.9	284.9	89.2
Income from discontinued operations	32.6	—	—
Net Income	$ 249.5	$ 284.9	$ 89.2

Several types of arrangements in our Natural Gas and Marketing segments expose us to market risk associated with changes in commodity prices where we receive natural gas or NGLs in return for the services we provide, or where we purchase natural gas or NGLs. We employ derivative financial instruments to reduce our exposure to natural gas and NGL prices. Some of these derivative financial instruments do not qualify for hedge accounting under the provisions of Statement of Financial Accounting Standards No. 133, *Accounting for Derivative Instruments and Hedging Activities* (SFAS No. 133), which can create volatility in our earnings that can be significant. However, these fluctuations in earnings do not affect our cash flow. Cash flow is only affected when we settle the derivative financial instrument.

Summary Analysis of Operating Results

Liquids

Our Liquids segment includes the operations of our Lakehead, North Dakota and Mid-Continent systems. Each of these systems largely consists of FERC-regulated interstate crude oil and liquid petroleum pipelines. The Lakehead system, together with the Enbridge system in Canada, forms the longest liquid petroleum pipeline system in the world. Each of these systems generates most of its revenues by charging shippers a per barrel tariff rate to transport and store crude oil and liquid petroleum.

Our Liquids segment contributed operating income of $207.1 million in 2007, or $7.3 million more than the $199.8 million contributed in 2006. The operating income of our Liquids segment in 2007 was affected by the following factors:

- Modestly higher volumes on our Lakehead system derived from increased production of Western Canadian crude oil, partially offset by higher power costs associated with the increased volumes;
- The annual index rate increase effective July 1, 2007, which increased our average tariffs;
- Contract storage fees generated by the additional tankage added to our Cushing terminal; and
- Additional workforce related costs, pipeline integrity and casualty losses, partially offset by a reduction in field inventory expenses.

Natural Gas

Our Natural Gas segment consists of natural gas gathering and transmission pipelines, including three FERC-regulated interstate natural gas transmission pipelines, as well as natural gas treating and processing plants and related facilities. The revenues of our Natural Gas segment are derived from the fees we charge to gather and process natural gas and the rates we charge to transport natural gas on our pipelines.

Operating income from our Natural Gas segment declined to $91.2 million in 2007 from $133.9 million in 2006, a decrease of $42.7 million. The operating results of our Natural Gas segment are attributable to the following:

- Unrealized non-cash, mark-to-market net losses of $59.0 million, resulting from our derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133;
- Increased natural gas treating and processing capacity from the completion of new facilities on our East Texas and Anadarko systems, coupled with increased revenue less cost of natural gas derived from our processing assets resulting from a favorable pricing environment;
- Higher average daily volumes on our major natural gas systems during 2007 as compared with the same period in 2006, resulting from our continuing investments to expand the capacity of our three largest natural gas systems;
- Operational inefficiencies at our Zybach processing facility in early 2007 caused by fouling of the plant with contaminated water in the natural gas stream which reduced NGL production and increased operating costs;
- An increase in natural gas measurement losses on two of our major gathering systems in early 2007; and
- Additional operating and administrative costs and depreciation associated with the expansion of our natural gas systems.

Marketing

Our Marketing segment provides supply, transmission, storage and sales services to producers and wholesale customers on our gathering, transmission and customer pipelines, as well as other interconnected pipeline systems. Our Marketing activities are primarily undertaken to realize incremental revenue on gas purchased at the wellhead, increase pipeline utilization and provide other services that are valued by our customers.

Operating income from our Marketing segment decreased $32.1 million to $24.0 million in 2007 from $56.1 million for the comparable period in 2006. The change in operating income of our Marketing segment from 2007 to 2006 resulted from the following:

- Unrealized, non-cash mark-to-market net losses for 2007 of $3.8 million compared with non-cash mark-to-market net gains of $64.5 million for 2006, resulting from the change in market value of our derivative financial instruments that do not qualify for hedge accounting;
- Gains from the sale of natural gas inventory of approximately $16.3 million, including approximately $6.9 million of gains from the settlement of derivative financial instruments hedging our natural gas inventory;
- Non-cash charges of $4.3 million in 2007, resulting from a reduction of the cost basis of our natural gas inventory to market value, which is $12.7 million less than the $17.0 million we recorded in 2006; and
- Increased access to preferred natural gas markets associated with our natural gas system expansions and other initiatives.

Derivative Transactions and Hedging Activities

We record all financial instruments in our consolidated financial statements at fair market value pursuant to the requirements of SFAS No. 133. For those derivative financial instruments that do not qualify for hedge accounting, we record all changes in fair market value through our consolidated statements of income each period. The fair market value of our derivative financial instruments reflects the estimated amounts that we would pay or receive to terminate or close the contracts at the reporting date, although that is not our intent.

Rising NGL prices coupled with relatively stable natural gas prices produced $62.8 million of unrealized, non-cash mark-to-market net losses from hedges of our optional NGL production during the year ended December 31, 2007. We also incurred $1.4 million of unrealized, non-cash mark-to-market losses during 2007 in connection with interest rate swaps that do not qualify for hedge accounting treatment under SFAS No. 133. During the fiscal year ended December 31, 2006, declining natural gas prices produced non-cash mark-to-market net gains of $64.4 million and positively affected our operating results. Mark-to-market gains or losses create volatility in our operating results although the derivative financial instruments we have in place do not affect our cash flow until they are settled. We expect these non-cash gains and losses to reverse in future periods as we settle the derivative financial instruments against the underlying physical transactions. We intend to continue using derivative financial instruments to hedge our portfolio of natural gas and NGLs because of the economic benefit we derive from minimizing the volatility in our cash flows. Our continued use of derivative financial instruments may result in additional unrealized, non-cash gains or losses in the future.

The following table presents the unrealized gains and losses associated with changes in the fair value of our derivatives, which are recorded as an element of "Cost of natural gas" or in "Interest expense" in our consolidated statements of income and disclosed as a reconciling item on our consolidated statements of cash flows:

Derivative fair value gains (losses)	Year ended December 31, 2007	2006	2005
		(in millions)	
Natural Gas segment			
Hedge ineffectiveness	$ —	$ (1.9)	$ (2.5)
Non-qualified hedges	(59.0)	1.8	(5.6)
Marketing			
Non-qualified hedges	(3.8)	64.5	(41.3)
Discontinued hedges	—	—	(9.0)
Commodity derivative fair value gains (losses)	(62.8)	64.4	(58.4)
Corporate			
Non-qualified interest rate hedges	(1.4)	—	—
Derivative fair value gains (losses)	$ (64.2)	$ 64.4	$ (58.4)

De-designation and Settlement of Derivatives

In connection with the sale of assets in December 2005, as discussed in Note 3 to the consolidated financial statements beginning on page F-1 of this report, we settled for cash of approximately $16.3 million, natural gas collars representing derivative financial instruments on sales of 2,000 MMBtu/d of natural gas through 2011. We had previously recorded unrealized losses associated with the natural gas collars that were realized upon settlement. Additionally, we de-designated derivative financial instruments that qualified for and were designated as cash flow hedges of forecasted sales of 273 Bpd of NGLs through 2007 and contemporaneously closed out the position by entering into an offsetting derivative financial instrument, at market, on forecasted purchases of 273 Bpd of NGLs through 2007.

RESULTS OF OPERATIONS—BY SEGMENT

Liquids

Our Liquids segment includes the operations of our Lakehead, North Dakota, and Mid-Continent systems. We provide a detailed description of each of these systems in Item 1.—Business. The following tables set forth the operating results and statistics of our Liquids segment for the periods presented:

	Year Ended December 31,		
	2007	**2006**	**2005**
	(dollars in millions)		
Operating Results			
Operating revenues	$ 548.1	$ 512.8	$ 418.0
Operating and administrative	156.1	141.3	144.2
Power	117.0	107.6	74.8
Depreciation and amortization	67.9	64.1	71.7
Operating expenses	341.0	313.0	290.7
Operating Income	$ 207.1	$ 199.8	$ 127.3
Operating Statistics			
Lakehead system:			
United States(1)	1,202	1,204	1,036
Province of Ontario(1)	341	313	303
Total deliveries(1)	1,543	1,517	1,339
Barrel miles (billions)	408	400	338
Average haul (miles)	725	722	692
Mid-Continent system deliveries(1)	236	244	236
North Dakota system:

North Dakota system deliveries(1)	98	92	87
Total Liquids Segment Delivery Volumes(1)	1,877	1,853	1,662

(1) Average barrels per day in thousands.

Year ended December 31, 2007 compared with year ended December 31, 2006

Our Liquids segment accounted for $207.1 million of operating income in 2007, representing an increase of $7.3 million over 2006. The favorable results of our Liquids business reflect modest growth in our transportation volumes while actively managing the costs of our services. The majority of this increase related to improved results on our Lakehead system.

Operating revenue for the year ended December 31, 2007 increased by $35.3 million to $548.1 million from $512.8 million for the same period in 2006. The increase in revenue is primarily attributable to the higher delivery volumes on our Lakehead and North Dakota systems combined with the increase in average tariffs associated with the annual index rate increase that went into effect July 1, 2007, for all three of our liquids systems. We increased the transportation rates on our Lakehead system by an average of 4.5 percent and on our Ozark and North Dakota systems by an average of 4.3 percent. Additionally, new tariffs went into effect April 1, 2007, on our Lakehead system to reflect the annual calculation of the

SEP II and other surcharges based on true-ups of prior year amounts and estimates for 2007, as well as an adjustment for the Terrace surcharge due to lower than expected volumes moving on the Lakehead system in 2006. The tariff increases of our Liquids systems contributed approximately $15 million to the increase in our revenues for the year ended December 31, 2007.

Also contributing to the increase in revenues for the year ended December 31, 2007, was a $5 million increase in contract storage fees generated by our Mid-Continent storage terminal system from the additional storage tanks we placed in service during 2007 and in late 2006. Across our Mid-Continent system, we added a net of seven storage tanks during 2007 contributing an additional 3.8 million barrels of capacity bringing the total storage capacity to approximately 16.7 million barrels and 104 tanks. This additional storage capacity is expected to provide ongoing fixed, variable, and spot storage revenue.

Average delivery volumes on our Liquids systems increased to 1.877 million Bpd for the year ended December 31, 2007, from the 1.853 million Bpd during the same period in 2006, accounting for approximately $9 million of the increase in the operating revenues of our Liquids segment. The increase in average deliveries on our Liquids systems are primarily derived from modest production increases of Western Canadian crude oil delivered on our Lakehead system. The increase in deliveries is attributable to the following:

- Crude oil supplies increased from upstream production facilities associated with the ongoing development of the Alberta Oil Sands by producers;
- Our Mid-Continent system continues to operate near capacity; and
- Volume growth on our North Dakota system associated with completion of our hydrostatic testing program and phasing in portions of a system expansion that was completed in the fourth quarter of 2007.

Operating and administrative expenses for the year ended December 31, 2007 were $156.1 million, or $14.8 million greater than the $141.3 million for the same period in 2006. The increase in these costs is primarily attributable to the following:

- Additional workforce related costs associated with the operational, administrative, regulatory and compliance support necessary for our growing systems;
- Further costs we incurred in connection with our pipeline integrity program; and
- Property damage we sustained in connection with a crude oil release and fire on Line 3 of our Lakehead system.

Our general partner charges us the costs associated with employees and related benefits for personnel that are assigned to us or otherwise provide us with managerial and administrative services. The portion of compensation and related costs we are charged is dependent upon such items as estimated time spent, miles of pipe and headcount. We have experienced an increase in workforce related costs as a result of the growth and expansion of our Liquids system operations. We expect these costs will continue to increase in future periods as we continue to expand our Liquids system operations. The increase in operating and administrative costs is partially offset by a reduction for field inventory expenses we realized in 2006 that we did not incur in 2007.

Our pipeline systems consist of individual pipelines of varying ages from approximately 60 years to newly constructed. With appropriate inspection and maintenance the physical life of a pipeline is indefinitely long. However, as our pipelines age we anticipate that the level of expenditures required for inspection, renewal and maintenance will increase. In addition, we have established temporary pressure restrictions on some sections of some of our pipelines pending completion of specific inspection and renewal programs, and may from time to time establish further temporary pressure restrictions. Pressure restrictions reduce the available capacity of the applicable line segment and could result in a loss of throughput if and when the full capacity of that line segment would otherwise have been utilized. The loss of throughput to date, resulting from pressure restrictions, has not materially affected our operating results.

Oil measurement adjustments occur as part of the normal operations associated with our Liquids systems. The three types of oil measurement adjustments that normally occur on our systems include:

- Physical gains and losses, which result from evaporation, shrinkage, differences in measurement between receipt and delivery locations and other operational incidents;
- Degradation, which results from mixing at the interface between higher quality light crude oil and lower quality heavy crude oil; and
- Revaluation, which is a function of crude oil prices, the level of the carrier's inventory and the inventory positions of customers.

We identified operating conditions in 2005 on a connected third-party facility that contributed to higher levels of physical losses. We have addressed the operating conditions causing these higher levels of physical losses, which have subsequently reduced the physical losses we have experienced on our Lakehead system. We are seeking to recover damages for the losses we sustained from the owner of the third-party system, but can make no assurances that we will be successful in our efforts.

Power costs increased $9.4 million in 2007, compared with 2006, predominantly due to the higher utility rates we are charged by our power suppliers. The increase in delivery volumes is also a factor contributing to the additional power costs. We have experienced a trend of increasing electricity rates from our power suppliers due to higher natural gas costs.

Year ended December 31, 2006 compared with year ended December 31, 2005

Our Liquids segment accounted for $199.8 million of operating income in 2006, representing an increase of $72.5 million over 2005. The favorable results of the Liquids segment assets reflect continuing growth in our transportation volumes while actively managing the costs of our services. The majority of this increase related to significantly improved results on our Lakehead system.

Operating revenue in 2006 increased by $94.8 million to $512.8 million, compared with $418.0 million in 2005. As indicated in the table above, total delivery volumes of our Liquids segment averaged 1.853 million Bpd in 2006, representing a 0.191 million Bpd increase from the 1.662 million Bpd delivered in 2005. This accounted for an increase in operating revenues of approximately $48.0 million. The increases in deliveries on our Liquids systems are primarily derived from increased production of Western Canadian crude oil delivered on our Lakehead system. The increases in deliveries are attributable to the following:

- Suncor, an oil sands producer in Alberta, Canada, experienced a fire at its upgrader site in January 2005, which affected production for the majority of 2005. In late September 2005, Suncor completed repairs and an expansion to its upgrader site. Suncor's production levels have increased since that time.
- Conventional light, heavy crude oil and bitumen production have increased as existing and new facilities were commissioned during 2006.
- Syncrude, another oil sands producer in Alberta completed its Stage 3 expansion and initiated production on its Coker 8-3 unit in May 2006 enabling all Stage 3 units to be brought on line. Start-up issues were encountered and the full impact of this expansion was not realized until 2007. The Stage 3 expansion is designed to increase productive capacity from 250,000 Bpd to an average 350,000 Bpd of a light synthetic crude oil. Our deliveries in 2006 were marginally higher as a result of Syncrude's completion and start up of its Stage 3 expansion.

Contributing to the revenue growth of our Liquids segment are the increases in the average tariffs on all three of our Liquids systems. These tariff increases were partly the result of the annual index rate increase allowed by the FERC. On our Lakehead system, we increased our rates by an average of three percent. Also on our Lakehead system, new tariffs went into effect on April 1, 2006 for an adjustment on the Terrace expansion program surcharge due to lower than expected volumes moving on the Lakehead system, and new facilities in service, that were not operating during 2005. These tariff increases, along with the four percent increase in average hauls from 692 miles in 2005 compared with 722 in 2006 resulted in a combined increase in operating revenue of approximately $35.4 million.

Continuing volume growth related to our Mid-Continent storage terminal system in Cushing, Oklahoma, and El Dorado, Kansas, has resulted in an increase in operating revenue of approximately $6.8 million compared with 2005. Net capacity additions in 2006 bring the total storage capacity to 97 tanks and approximately 12.8 million barrels. This additional storage capacity is expected to provide ongoing fixed, variable, and spot storage revenue.

Operating and administrative expenses for 2006 were $141.3 million, or $2.9 million less than in 2005, primarily as a result of decreased oil measurement losses which are partially offset by increased workforce related costs and materials, supplies, and other general costs.

Workforce related costs increased due to the additional resources and related benefit costs we are charged for the operational, administrative, regulatory and compliance support necessary for our growing systems as discussed above in the year end analysis for December 31, 2007.

Materials, supplies and other expenses coupled with repair and maintenance costs were higher in 2006 compared with 2005 due to higher pipeline inspection costs associated with our pipeline integrity management programs, increased outside contractor services, field inventory adjustments and other general costs.

During the fourth quarter of 2005, we identified certain operating conditions on connected third-party systems that were contributing to higher levels of physical oil losses on our Lakehead system. Improvements to our oil measurement processes have resulted in fewer physical losses during 2006 on our Lakehead and Mid-Continent systems. We expect these improvements to have a continuing positive impact on our oil measurement losses going forward.

Power costs increased $32.8 million in 2006, compared with 2005, primarily due to the increase in volumes transported on our Lakehead system and higher electricity rates we are charged by our power suppliers. We have experienced a trend of increasing electricity rates from our power suppliers due to higher natural gas and other fuel costs.

We completed a depreciation study of the Lakehead system in the first quarter of 2006 that resulted in extending the composite remaining service life of the system assets from 21.5 to 26 years. The impact of the depreciation study was an $11.0 million reduction of depreciation expense for the full year of 2006.

Future Prospects for Liquids

Historically, Western Canada has been a key source of oil supply serving U.S. energy needs. Canada's oil sands, one of the largest oil reserves in the world, are becoming an increasingly prominent source of supply. Combined conventional and oil sands established reserves of approximately 179 billion barrels compare with Saudi Arabia's proved reserves of approximately 264 billion barrels. The National Energy Board of Canada, or NEB, estimates that total 2007 Western Canadian Sedimentary Basin, or WCSB, production averaged approximately 2.4 million Bpd compared with 2.3 million Bpd in 2006. According to production forecasts by CAPP, Western Canadian crude oil production is projected to grow progressively from approximately 2.4 million Bpd in 2007 to 5.2 million Bpd by 2020. Conventional crude oil production is expected to decline from approximately 1.0 million Bpd to approximately 670,000 Bpd over the same period. The net increased production is expected to result from an estimated $110 billion CAD of active or planned projects that are being developed in the oil sands. The projected growth in western Canadian crude production will require construction of new pipelines to ensure new oil supplies can be transported to markets in the United States.

We and Enbridge are actively working with our customers to develop transportation options that will allow Canadian crude oil greater access to markets in the United States.

Partnership Projects

Southern Access

In conjunction with Enbridge, we continue to progress on schedule with construction of the 400,000 Bpd Southern Access expansion project. We are undertaking the United States portion of the expansion on our Lakehead system. The first stage of construction will add approximately 190,000 Bpd of capacity and is on schedule for completion by the end of the first quarter of 2008. This stage of the project includes a new pipeline between Superior and Delavan, Wisconsin, along with pump station enhancements upstream and downstream of this segment.

The second stage of the expansion project will provide additional upstream pumping capacity and a new pipeline from Delavan to Flanagan, Illinois, with completion expected by the end of the first quarter of 2009. Completion of the total Southern Access expansion project will create a 454-mile pipeline with approximately 400,000 Bpd of incremental capacity on our Lakehead system.

As a result of the escalation of costs we have experienced with the first stage of the project for labor, materials and rights-of-way, we have revised our estimated cost to complete the project. We anticipate the ultimate cost to complete our portion of this project will approximate $2.1 billion. The impact on the project rate of return resulting from the escalation of costs is largely mitigated by the cost of service tolling arrangement used for this project. Approximately 88 percent of the cost overage will be included in the rate base, which forms the basis for determining our tariff rates for transportation. The remaining 12 percent of the project cost relates to installing larger pipe than required under current agreements which we are financing in anticipation of future expansion opportunities.

Alberta Clipper

The Alberta Clipper project involves construction of a new 36-inch diameter, 1,000 mile heavy crude oil pipeline from Hardisty, Alberta to Superior, generally within or adjacent to our and Enbridge's existing rights-of-way. We will construct approximately 330 miles of the new pipeline from the International Border near Neche, North Dakota to Superior and, at the request of our customers, we have revised the scope to also include a delivery connection at Clearbrook, Minnesota and an additional tank at Superior. Alberta Clipper will have an initial capacity of 450,000 Bpd and allows for expansions up to 800,000 Bpd by adding pump stations. In addition, complementary capacity on the Southern Access 42-inch pipeline from Superior to Flanagan will be obtained by installing additional pump stations. We anticipate that our share of the construction cost for the United States segment of the project will approximate $1.0 billion, in 2007 dollars, excluding capitalized interest. Alberta Clipper will be a common carrier line fully integrated with the Enbridge/Lakehead mainline systems for tolling purposes.

In May 2007, Enbridge filed an application with the NEB, for the construction and operation of the Canadian segment of the project. In June 2007, Enbridge filed supplements to this application setting forth the tolling principles for the Canadian portion of the project, which are supported by CAPP. Hearings for the Canadian section of the project began in November 2007. Regulatory and permit applications are in progress at state and federal levels. We plan to file a set of toll principles with the FERC similar to those filed by Enbridge with the NEB for the Canadian segment of the project. The project remains subject to regulatory approvals and receipt of various permits in Canada and the United States. Enbridge is progressing with land access, engineering and initial procurement commitments to facilitate commencement of project construction. Alberta Clipper is expected to be in service in mid-2010.

North Dakota

We substantially completed our expansion of the North Dakota system during the fourth quarter of 2007. The expansion added approximately 30,000 Bpd of mainline throughput capacity and expanded the system's feeder segment by approximately 30,000 Bpd at an approximate cost of $78.2 million. The expansion is supported by increasing crude oil production from the Bakken formation in the Williston Basin region of Montana and North Dakota.

Regional producers in the Williston basin areas of Montana and North Dakota have expressed interest in further expansion of pipeline capacity on our North Dakota system. We have proposed an approximate $0.15 billion additional expansion that will consist of upgrades to existing pump stations, additional tankage, as well as extensive use of drag reducing agents ("DRA") that are injected into the pipeline. This second expansion of our North Dakota system is expected to increase system capacity to 161,000 Bpd from the 110,000 Bpd that is currently available. The commercial structure for this expansion is a cost-of-service based surcharge that will be added to the existing tariff rates. The proposed surcharge is similar to the structure being used on the recently completed expansion project and is subject to approval from the FERC.

Superior and Griffith Storage

Due to forecasted production increases of synthetic heavy crude oil that we anticipate will be transported on the Enbridge/Lakehead mainline systems from Western Canada to Chicago, we are constructing additional crude oil storage tanks at Superior and Griffith to accommodate the anticipated volumes. We completed construction and placed into service one tank with approximately 330,000 barrels of operational capacity at Superior in August 2007 and another tank at Griffith with approximately 330,000 barrels of operational capacity in December 2007. We are also building two tanks with operational capacity of approximately 205,000 barrels each that are scheduled to be completed during 2008.

Mid-Continent Terminal Storage

We continue to experience strong interest from customers in securing access to long-term contract storage capacity at our Cushing, Oklahoma terminal. During 2006, we obtained commitments and initiated construction of an additional 5.0 million barrels of storage tanks, 1.1 million barrels of which were completed in late December 2006. During 2007, we completed construction of additional storage tanks with approximately 3.9 million barrels of capacity. Our total Mid-Continent terminal capacity is approximately 16.7 million barrels, which includes 1.4 million barrels of operational storage.

Enbridge and Other Projects

Spearhead Pipeline

In another effort to provide shippers access to new markets, Enbridge acquired a pipeline that runs from Cushing to Chicago, Illinois. The reversed pipeline, renamed Spearhead, began delivering Canadian crude oil to the major oil hub at Cushing in March 2006 and has operated at or near its capacity of 125,000 Bpd. In the first half of 2007, Enbridge successfully concluded a binding open season for expansion of the pipeline to 190,000 Bpd, with binding commitments for capacity of 30,000 Bpd. In December 2007, the FERC issued a favorable declaratory order effectively approving the tolling methodology and priority service for shippers with binding commitments. The Spearhead pipeline is complementary to our Lakehead system as Western Canadian crude oil is carried on our Lakehead system as far as Chicago, and then transferred to the Spearhead pipeline. The Spearhead pipeline expansion is expected to be in service in early 2009.

Southern Access Extension

In July 2006, Enbridge announced that it received support from shippers and CAPP for its 36-inch diameter Southern Access Extension pipeline from Flanagan, Illinois to Patoka, Illinois. The extension will broaden the reach of the Enbridge/Lakehead mainline system to incremental markets accessible from the Patoka hub. The project is scheduled for completion in the first quarter of 2009. This project is being undertaken by Enbridge, however, we will benefit from the incremental volumes moving through our Lakehead system to reach this extension. Enbridge filed a petition for declaratory order with the FERC in October 2007, which is currently pending approval.

Southern Lights

Following completion of a successful open season in 2006, Enbridge initiated its Southern Lights project to construct a diluent pipeline from Chicago, Illinois to Edmonton, Alberta, Canada to meet the growing demand for crude oil diluent required to transport the heavy oil and bitumen (a thick, tar-like form of oil) being produced in increasing volumes from the Alberta oil sands. The project involves the exchange of a 156-mile section of pipeline we own for a similar section of a new pipeline to be constructed as part of the project. In addition, this project involves a reconfiguration of our light crude mainline system which will provide an additional 45,000 Bpd of effective capacity at no cost to us. We expect to benefit from increased heavy crude oil shipments, which will be facilitated by the diluent line.

Enbridge has filed applications with the NEB for approval of all facets of the Canadian portion of the project and the majority of necessary applications for the United States portion of the project with United States federal and state regulatory agencies. Enbridge filed a petition for declaratory order with the FERC setting forth the rate structure for establishing tolls and the proposed swap of line 13 discussed above, which the FERC approved in late December 2007. In conjunction with our Southern Access project, the Southern Lights project has been allowed the right to exercise eminent domain for right-of-way in Illinois. Early construction and right-of-way acquisition related to this project continues in tandem with stage one of the Southern Access project. This project is expected to be placed in service in 2010.

Texas Access Pipeline

Non-binding expressions of interests received in June 2007 demonstrated strong shipper support for the construction of a new heavy crude oil pipeline system to transport crude oil from Patoka, Illinois to the U.S. Gulf Coast. Enbridge (U.S.) Inc. and ExxonMobil Pipeline Company are jointly pursuing development of the Texas Access Pipeline, which as proposed will provide approximately 445,000 Bpd of new capacity from Patoka, Illinois to Texas Gulf Coast refineries with a projected in-service date of mid-2011. The proposed project comprises a new 768-mile, 30-inch diameter pipeline that begins in the vicinity of Mobil Pipe Line Company's Patoka, Illinois crude oil terminal southward to Nederland, Texas, coupled with an 88-mile, 24-inch lateral to transport crude oil onward from Nederland to a delivery point in Houston, Texas. The new pipeline will allow for connectivity to existing terminals in both Nederland and Houston, and will be constructed in the same corridor with existing pipelines owned by ExxonMobil Pipeline Company. The initial capacity of the Patoka-to-Nederland segment of the pipeline would be 445,000 Bpd, and the initial capacity of the Nederland-to-Houston segment would be 169,000 Bpd.

In December 2007, an open season was announced to solicit binding 15-year shipper commitments for the proposed Texas Access Pipeline, which ends on March 14, 2008. Construction of this project would complement our Lakehead system and further support its expansion.

Eastern PADD II Access

Enbridge has held discussions with several refiners in the eastern United States to gauge interest in supporting the development of a pipeline to provide incremental pipeline capacity to this market. Development of this project is ongoing and is expected to provide up to approximately 100,000 Bpd of heavy Canadian crude oil to the Eastern PADD II market by late 2010. Additional access initiative discussions have commenced with other area refiners to provide incremental infrastructure in this area for service in the 2013 timeframe. Construction of both of these projects would be complementary to our Lakehead system.

Other Matters

In September 2007, the Alberta Royalty Review Panel issued its recommendations to the government of the Province of Alberta calling for the adoption of measures to increase the Alberta government's share of revenues from oil sands development. A majority of the recommendations of the report were subsequently adopted by the Alberta government and will become effective January 1, 2009. These measures may impact how oil sands developers evaluate future projects and this may reduce the level of future volumes we expect to flow through the Enbridge/Lakehead mainline system.

Natural Gas

Our Natural Gas segment consists of natural gas gathering and transmission pipelines, as well as treating and processing plants and related facilities. Collectively, these systems include:

- approximately 11,500 miles of natural gas gathering and transmission pipelines including three FERC-regulated transmission pipeline systems;
- 10 natural gas treating plants;
- 24 natural gas processing plants including three recently installed hydrocarbon dewpoint control facilities; and
- trucks, trailers and railcars used for transporting NGLs, crude oil and carbon dioxide.

The following tables set forth the operating results of our Natural Gas segment assets and average daily volumes of our major systems in MMBtu/d for the periods presented:

	Year Ended December 31,		
	2007	**2006**	**2005**
		(dollars in millions)	
Operating revenues	$ 3,444.0	$ 3,020.7	$ 2,352.1
Cost of natural gas	2,990.0	2,601.1	2,018.7
Operating and administrative	266.7	215.4	175.0
Depreciation and amortization	96.1	70.3	66.0
Gain on sale of assets	—	—	(18.1)
Expenses	3,352.8	2,886.8	2,241.6
Operating income	$ 91.2	$ 133.9	$ 110.5
East Texas(2)	1,180,000	1,019,000	860,000
Anadarko	591,000	582,000	488,000
North Texas	348,000	294,000	265,000
UTOS	192,000	181,000	158,000
Midla	115,000	109,000	106,000
AlaTenn	44,000	41,000	59,000
Bamagas	119,000	88,000	29,000
Other Major Intrastates(3)	236,000	223,000	230,000
Total	2,825,000	2,537,000	2,195,000

(1) In November 2007, we sold the KPC system which contributed average daily volumes of approximately 23,000, 29,000 and 31,000 for the years ended December 31, 2007, 2006 and 2005.

(2) In December 2005, we sold the South Texas assets and a sour gas system in East Texas which had a combined average daily volume of approximately 55,000 MMBtu/d, of this amount 33,000 MMbtu/d relates to South Texas.

(3) We have included in other major intrastates the volumes of our Gloria system for the years ended December 31, 2007, 2006, and 2005 of 62,000, 65,000, and 44,000.

We recognize revenue upon delivery of natural gas and NGLs to customers, when services are rendered, pricing is determinable and collectibility is reasonably assured. We derive revenue in our Natural Gas segment from the following types of arrangements:

Fee-Based Arrangements:

Under a fee-based contract, we receive a set fee for gathering, treating, processing and transporting raw natural gas and providing other similar services. These revenues correspond with the volumes and types of services provided and do not depend directly on commodity prices. Revenues of the Natural Gas segment that are derived from transmission services consist of reservation fees charged for transmission of natural gas on the FERC-regulated interstate natural gas transmission pipeline systems, while revenues from intrastate pipelines are generally derived from the bundled sales of natural gas and transmission services.

Other Arrangements:

We also use other types of arrangements to derive revenues for our Natural Gas segment. These arrangements expose us to commodity price risk, which we substantially mitigate with offsetting physical purchases and sales and by the use of derivative financial instruments to hedge open positions. We will continue to hedge a significant amount of our commodity price risk to support the stability of our cash flows. Refer to Item 7A. Quantitative and Qualitative Disclosures about Market Risk—Commodity Price Risk and Note 14 of our consolidated financial statements beginning on page F-1 of this report for more information about the derivative activities we use to mitigate this commodity price risk.

These other types of arrangements are categorized as follows:

- Percentage-of-Liquids Contracts—Under these contracts, we receive a negotiated percentage of NGLs and condensate extracted from natural gas that requires processing, which we then sell at market prices and retain as our fee. This contract structure is similar to percentage-of-proceeds arrangements except that we only receive a percentage of the NGLs and condensate.

- Keep-Whole Contracts—Under these contracts, we gather or purchase raw natural gas from the producer for processing. A portion of the gathered or purchased natural gas is consumed during processing. We extract and retain the NGLs produced during processing for our own account, which we sell at market prices. In instances where we purchase raw gas at the wellhead, we also sell for our own account at market prices, the resulting residue gas. In those instances when we gather and process raw natural gas for the account of the producer, we must return to the producer residue gas with an energy content equivalent to the original raw natural gas we received as measured in British thermal units, or Btu.

- Percentage-of-Index Contracts—Under these contracts, we purchase raw natural gas at a negotiated discount to an agreed upon index price. We then resell the natural gas, generally for the index price, keeping the difference as our fee.

- Percentage-of-Proceeds Contracts—Under these contracts, we receive a negotiated percentage of the natural gas and NGLs we process in the form of residue natural gas, NGLs, condensate and sulfur, which we then sell at market prices and retain as our fee.

Under the terms of each of these contract structures, we retain a portion of the natural gas and NGLs as our fee in exchange for providing these producers with our services. In order to protect our cash flows from volatility that can result from fluctuations in commodity prices, we enter into derivative financial instruments to effectively fix the sales price of the natural gas and NGLs we anticipate receiving under the terms of these contracts. We target approximately 70 to 80 percent hedge coverage of our anticipated near-term exposure to commodity prices using derivative financial instruments. As a result of entering into these derivative financial instruments, we have largely fixed the amount of cash that we will receive in the future when we sell the processed natural gas and NGLs, although the market price of these commodities will continue to fluctuate during that time.

Year ended December 31, 2007 compared with year ended December 31, 2006

Our Natural Gas segment produced $91.2 million of operating income for the year ended December 31, 2007, a decrease of $42.7 million from the $133.9 million of operating income generated during the prior year. Operating income in 2007 included unrealized, non-cash mark-to-market net losses from our derivative activities totaling $59.0 million which are $58.9 million more than the $0.1 million of net losses we recorded in the same period of 2006. Also contributing to operating income were volume increases, improved pricing for our services and greater processing margins, which represent revenues less the cost of natural gas purchased for processing. Partially offsetting these increases in operating income were higher operating costs and depreciation.

The operating income of our Natural Gas segment for the year ended December 31, 2007 was negatively affected by unrealized non-cash, mark-to-market net losses of $59.0 million from our derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133. These losses were predominantly the result of hedges placed on the optional processing we perform on our three major systems which do not qualify for hedge accounting. In 2006, our operating income was reduced by unrealized non-cash, mark-to-market net losses of $0.1 million, including $1.9 million of losses that resulted from ineffectiveness of our cash flow hedges and $1.8 million of gains derived from our derivative financial instruments that did not qualify for hedge accounting treatment under SFAS No. 133. Refer also to Item 7A. Quantitative and Qualitative Disclosures about Market Risk—Commodity Price Risk and Note 14 of our consolidated financial statements beginning on page F-1 of this report for more information about our derivative activities.

Average daily volumes on our major natural gas systems increased 11 percent, or approximately 288,000 MMBtu/d, for the year ended December 31, 2007, compared with the corresponding period of 2006. The increased volumes for 2007 continue to reflect our ongoing investments to further expand the capacity of our systems and services. We completed the following projects during 2007 and 2006 which have contributed to the increases in average daily volumes and operating results of our major natural gas systems:

- Construction of our Henderson natural gas processing facility on our East Texas system was completed and operating at the end of the third quarter of 2006 with a capacity of 120 MMcf/d;

- A link between our North Texas and East Texas systems became fully operational during the third quarter of 2006, increasing the utilization of our 500 MMcf/d East Texas intrastate pipeline that we placed in service in June 2005;

- Various segments of our East Texas Expansion and Extension project (Project Clarity) including the following:

  - A 24-inch diameter pipeline that runs from the Marquez treating facility to Crockett, Texas and the 36-inch diameter pipeline that runs from Crockett to Goodrich, Texas were both completed and placed into service in late March 2007;

  - The Marquez treating plant with capacity of approximately 200 MMcf/d and additional pipeline capacity to the existing southeast section of this area was completed and placed into service in March 2007;

  - A 20-inch diameter pipeline in close proximity to our Marquez treating facility was completed and placed into service in June 2007;

  - A 36-inch diameter pipeline that extends from an interconnect with our existing pipeline at Bethel, Texas to Crockett was completed and placed into service in late July 2007;

  - A 36-inch diameter pipeline that extends from Goodrich to Kountze was completed in October 2007, which enables deliveries into a major interstate pipeline;

- Expansion of our existing 275 MMcf/d Aker treating facility was completed in 2007 and additional expansions are underway at this facility in 2008;

- Construction of the Hidetown processing facility on our Anadarko system with approximate capacity of 120 MMcf/d was completed and placed into service at the end of April 2007;

- During the second quarter of 2007, we refurbished our Zybach processing plant to address operational inefficiencies experienced by the plant. As a result of the service and repairs, processing volumes were restored to expected levels; and

- Construction of the Weatherford gas processing facility within our North Texas system was completed in September 2007 with a processing capacity of approximately 35 MMcf/d. At the end of 2007, additional processing capacity was added to the Weatherford processing facility to increase its capacity from 35 MMcf/day to 75/MMcf/day.

- In addition to the investments we have made to expand the volumes in areas served by our natural gas assets, the volume and revenue growth is also the result of additional wellhead supply contracts and robust drilling activity in the Bossier Trend and Barnett Shale areas. We expect increasing volumes on our major natural gas systems to result from our continuing investments to expand the capacity of our systems to provide gathering, processing and transportation services to meet the needs of producers in the areas we serve.

During 2007, we have added approximately 195 MMcf/d of additional processing capacity to our Natural Gas systems, which has served to increase our processing margin. During 2007, NGL prices continued to trend higher relative to natural gas prices, providing a favorable environment for the production of NGLs from our processing assets, similar to the pricing environment experienced during 2006. A variable element of our Natural Gas segment's operating income is derived from the processing of natural gas under keep-whole arrangements that exist within our East Texas, North Texas and Anadarko systems. Operating income derived from our keep-whole processing increased to approximately $108.8 million for the year ended December 31, 2007 from $79.2 million for the same period in 2006 primarily due to the current favorable pricing environment and increased volumes processed associated with these types of arrangements and increased processing plant capacity. Partially offsetting our favorable processing results were operational issues associated with our Zybach processing plant that occurred during the first quarter of 2007 which reduced processing margins by approximately $10.5 million. We completed the necessary repairs and modifications during April 2007 and the plant has since been operating as expected throughout the remainder of 2007.

Natural gas measurement losses occur as part of the normal operating conditions associated with our natural gas pipelines. The quantification and resolution of measurement losses is complicated by several factors including varying qualities of natural gas in the streams gathered and processed through our systems, changes in weather temperatures and variances in measurement that are inherent in metering technologies. During the first quarter 2007, we identified operating conditions on our gathering systems which contributed to an increase in measurement losses. We have since installed separator equipment to identify and eliminate free-water in the natural gas streams, one of the underlying causes for the increase in measurement losses during 2007. For the year ended December 31, 2007, we estimate that measurement losses resulted in approximately $21.3 million of additional cost to our natural gas systems relative to the same period of 2006.

A portion of our Natural Gas segment is exposed to risks from fluctuations in commodity prices associated with the percentage of proceeds, percentage of liquids, and percentage of index contracts that we negotiate with producers. Under the terms of these contracts, we retain a portion of the natural gas and NGLs we process in exchange for providing these producers with our services. In order to protect our unitholders from the volatility in cash flows that can result from fluctuations in commodity prices, we enter into derivative financial instruments to fix the sales price of the natural gas and NGLs we anticipate receiving under the terms of these contracts. We target approximately 70 to 80 percent hedge coverage of our anticipated near-term exposure to commodity prices using derivative financial instruments. As a result of entering into these derivative financial instruments, we have largely fixed the amount of cash that we will pay for natural gas and receive in the future when we sell the processed natural gas and NGLs, although the market price of these commodities will continue to fluctuate during that time. Another significant portion of the revenue we receive is derived from fees charged for gathering and treating of natural gas volumes and other related services which are not directly dependent on commodity prices.

Operating and administrative costs associated with our Natural Gas segment were $51.3 million, or 24 percent, greater for 2007 than 2006, primarily as a result of increased workforce related cost associated with the expansion of our systems, maintenance activities and other costs that are mostly variable with volumes. Our workforce related costs increased for the year ended December 31, 2007 over the same period in 2006 due to the additional resources and related benefit costs we are charged for the operational, administrative, regulatory and compliance support necessary for our existing assets and the expansion of our natural gas operations. In addition, our general partner charges us the costs associated with employees and related benefits for personnel that are assigned to us or otherwise provide us with managerial and administrative services. The portion of compensation and related costs we are charged is dependent upon such items as estimated time spent, miles of pipe and headcount. In addition we have experienced an increase in outside contract labor cost, given the high demand and competitive rates within our industry as a result of continuous pipeline expansions across the areas we serve.

Our materials and supplies coupled with repair and maintenance costs increased for the year ended December 31, 2007 over the same period in 2006, predominantly due to the increase in volumes and expansion of our natural gas systems. Materials, supplies and other costs include chemicals used in our processing activities, materials purchased for repair and maintenance purposes, utility costs to run our plants, pumps and other similar costs that are mostly variable with volumes. Repair and maintenance costs include compressor maintenance, downtime for routine and unscheduled maintenance, pipeline integrity costs and other similar items that have increased with the expansion of our existing natural gas systems. An example of these increasing costs is methanol, a chemical used on our systems which cost $2.06 per gallon in 2006. At the end of 2007, this chemical had risen in cost to $2.49 per gallon. Welders, inspectors and other skilled laborers and technicians hourly labor costs have increased in cost by amounts well in excess of the rate of overall inflation as measured by the CPI or PPI inflation index. We expect our operating and administrative costs will continue to increase in future periods as greater volumes of natural gas flow through our systems and we continue to expand our natural gas operations.

Our depreciation and amortization expense for the year ended December 31, 2007 increased by approximately $25.8 million over the same period in 2006, primarily as a result of capital projects completed and placed in-service during late 2006 and throughout 2007. We expect our depreciation expense to continue to increase as we complete capital projects related to our continued expansion of our natural gas operations.

Year ended December 31, 2006 compared with year ended December 31, 2005

Our Natural Gas segment contributed $133.9 million of operating income in 2006, an increase of $23.4 million from the $110.5 million it contributed in 2005. The increase in operating income is primarily attributable to favorable commodity prices which contributed to higher revenue generated by our processing assets in excess of the cost we incur for the natural gas used in processing. Additionally, operating income was higher due to volume increases on each of our three largest systems resulting from additional wellhead supply contracts and the expansion of our transportation and processing capacity. Partially offsetting the benefit provided by favorable volumes and commodity prices are expenses we recorded in 2006 of approximately $8.3 million for NGL purchases and transportation and fractionation charges that relate to prior years we had not previously recorded. Our 2006 volumes and operating results are exclusive of the volumes and operating results associated with our December 2005 sale of the South Texas assets and a sour gas system located on our East Texas system.

Average daily volumes on our major natural gas systems were up approximately 13 percent in 2006, compared with 2005. Increases in our volumes for 2006 are attributable to our ongoing investments to expand the capacity of our systems and services. Our investments in the following projects that were completed during 2006 contributed to the increase in the average daily volumes and operating results on our major natural gas systems:

- The link between our North Texas and East Texas systems became fully operational during the third quarter of 2006, increasing the utilization of our 500 MMcf/d East Texas intrastate pipeline that we placed in service in June 2005;

- Construction of our 120 MMcf/d Henderson natural gas processing facility on our East Texas system was completed at the end of the third quarter of 2006 and processed volumes of approximately 100 MMcf/d;

- The expansion of our existing Zybach processing facility on our Anadarko system to a capacity of 150 MMcf/d of natural gas from an initial capacity of 105 MMcf/d to meet the continuing demands resulting from rapid development in the Anadarko basin; and

- Acquisition of an 80-mile pipeline in April 2006 that is complimentary to our existing East Texas system that provided approximately 75,000 MMBtu/d of incremental volume.

In addition to the investments we have made to expand our volumes in the areas served by our natural gas assets, the volume and revenue growth is also the result of additional wellhead supply contracts and robust drilling activity in the Anadarko basin, Bossier Trend and Barnett Shale.

Throughout a majority of 2006, we have experienced a favorable pricing environment with regard to our assets and our processing. During 2006, NGL and crude oil prices remained high relative to natural gas prices which have declined from the high prices reached in late 2005. This increase includes the contribution to operating income derived from our keep-whole processing, of $79.2 million, including $19.1 million from our North Texas system, for the year ended December 31, 2006, in excess of the $29.0 million generated in 2005 under this contract structure. Due to the volatility associated with commodity prices, the revenue less cost of natural gas we derive from our processing activities in future periods could be adversely affected if the pricing environment becomes unfavorable, which can occur if the prices for NGLs substantially decline and the price of natural gas significantly increases. We attempt to hedge a majority of our mandatory processing to minimize the effects volatility in commodity prices can have on our processing activities.

Operating income of our Natural Gas segment for the year ended December 31, 2006 includes unrealized non-cash, mark-to-market net losses of $0.1 million, including $1.9 million of losses resulting from ineffectiveness of our cash flow hedges and $1.8 million of gains derived from our derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133. In 2005, our operating income was reduced by $8.1 million of unrealized, non-cash, mark-to-market net losses that we incurred, primarily from derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133. The decline in our unrealized derivative fair value losses in 2006 is largely due to a decline in the current and forward prices of natural gas and NGLs during 2006 from the high levels reached in 2005 due to hurricanes Rita and Katrina that caused supply disruptions in the Gulf of Mexico resulting in a volatile pricing environment. Additionally, our unrealized derivative fair value losses in 2006 are lower due to our settlement in December 2005 for $16.3 million of natural gas collars on 2,000 MMBtu/d of natural gas through 2011 that did not qualify for hedge accounting treatment under SFAS No. 133. The settlement of these natural gas collars reduces the quantity of derivatives outstanding that do not qualify for hedge accounting treatment in our Natural Gas segment, effectively reducing the unrealized mark-to-market adjustments resulting from these derivatives in periods following settlement. Refer to Item 7A. Quantitative and Qualitative Disclosures about Market Risk—Commodity Price Risk and Note 14 of our consolidated financial statements beginning on page F-1 of this report for more information about our derivative activities.

Operating and administrative costs of our Natural Gas segment were $215.4 million, or 23 percent, greater for 2006 than 2005, primarily as a result of increased workforce related costs, maintenance activities and other costs that are mostly variable with volumes. Workforce related costs have increased due to the additional resources and related benefit costs we are charged for the operational, administrative, regulatory and compliance support necessary for our existing assets and the expansion of our natural gas operations.

The increase in our Materials, supplies and other costs along with our Repair and maintenance costs are predominantly related to the increase in volumes and expansion of our natural gas systems. Materials, supplies and other costs include chemicals used in our processing activities, materials purchased for repair and maintenance purposes, utility costs to run our plants, pumps and other similar costs that are mostly variable with volumes. These costs were partially offset by the sale of our South Texas assets and a sour gas system located on our East Texas system in December 2005, which contributed to the decrease in Materials, supplies and other costs compared with 2005. Repair and maintenance costs include compressor maintenance, downtime for routine and unscheduled maintenance, pipeline integrity costs and other similar items that have increased with the expansion of our existing natural gas systems. During 2006, we spent approximately $10.1 million, the majority of which was in the fourth quarter of 2006, on pipeline integrity work in connection with our ongoing pipeline integrity management program in order to comply with regulatory guidance and maintain our existing pipeline integrity standards. We anticipate these costs will continue to increase as we expand our systems and increase the volumes of natural gas services we provide.

Our other operating and administrative costs include rents and leases which primarily relate to compressor rentals, property taxes and other costs. These additional operating and administrative costs tend to vary in relation to the natural gas volumes moving on our systems or in relation to the expansion of our natural gas operations. We anticipate these costs will continue to increase as the volumes on our systems increase and we expand our systems.

Our depreciation and amortization expense for the year 2006 exceeded the amount reported for 2005 by approximately $4.3 million, primarily as a result of capital projects completed and placed in-service during 2006 and projects completed in 2005 that were only depreciated for a partial year. The increase in depreciation expense was partially offset by modest extensions of the depreciable lives of our major natural gas systems based on a third-party study commissioned by management that was completed in the third quarter of 2005. As a result of this study, revised depreciation rates for the Anadarko, North Texas and East Texas systems were implemented effective August 1, 2005. The annual composite rate, which represents the expected remaining service life of these natural gas systems, was reduced from 4.0% to 3.4%. As a result, our depreciation expense was approximately $3.5 million and $2.5 million lower for the years ended December 31, 2006 and 2005, respectively, than if these rates had not been reduced. Additionally, we revised our depreciation rates for a portion of our FERC-regulated natural gas assets effective July 1, 2006, to reflect a decrease in the remaining service life of these natural gas assets. Depreciation expense was approximately $1.3 million higher for the year ended December 31, 2006, as a result of this decrease in the expected remaining service life of these assets.

Future Prospects for Natural Gas

Our natural gas assets are located in the Gulf Coast and Mid-continent regions of the United States, two of the premier natural gas producing areas. As a result, there are many opportunities to connect new natural gas supplies either by installing new facilities or acquiring adjacent third-party gathering operations. Consolidation with neighboring facilities will extract efficiencies by eliminating costs, for example, by combining redundant facilities, increasing volume, and increasing processing margins. These opportunities tend to involve modest amounts of capital with attractive rates of return.

We continue to assess various expansion opportunities to pursue our strategy for growth. While we remain committed to making accretive acquisitions in or near areas where we have a competitive advantage, we will continue to focus our efforts primarily on development of our existing pipeline systems. We may, and have, pursued opportunities to divest any non-strategic natural gas assets as conditions warrant.

Results of our natural gas gathering and processing business depend upon the drilling activities of natural gas producers in the areas we serve. During 2007, increased drilling in the areas where our gathering systems are located contributed to the growth of volumes on our systems. We expect the growth trend in these areas to continue in the future as evidenced by external production forecasts and the strong rig counts and permitting in the areas served by our systems.

Producer plans for drilling in the areas served by our natural gas assets are expected to result in continued production growth on our natural gas systems. To accommodate this further growth, we initiated construction on several projects to increase our gathering, processing, transportation and treating infrastructure, as well as market access capability and have completed a number of these projects as discussed above under our analysis for 2007. The remaining projects listed below continue to progress and include:

East Texas System Expansion and Extension (Project Clarity):

- The expansion and extension of our East Texas natural gas system, referred to as the Clarity project, includes construction of a 36-inch diameter intrastate pipeline from Bethel, Texas to Orange, Texas with capacity of approximately 700 MMcf/d. Pipeline construction is expected to be completed in the first quarter of 2008. Additional capacity to downstream interconnects will increase as compression is added through mid-2008. The pipeline will provide service to a number of major industrial companies in Southeast Texas with interconnects to interstate pipelines, intrastate pipelines and wholesale customers. We continue to secure additional commitments for capacity on the pipeline. Our expectation is that the ultimate cost to complete the construction of this project will approximate $635 million.

Other East Texas Projects:

- The expansion of our sour gas treating capacity on the East Texas system will increase the total sulfur capacity from 72.5 tons per day (tpd) to 125 tpd by early 2008, in order to handle additional sour gas supply and higher concentration levels of hydrogen sulfide (H_2S).

- We have completed construction of three hydrocarbon dewpoint control facilities on our East Texas system to add processing capacity to meet the increasingly more stringent pipeline gas quality specifications. We completed and placed into service facilities, which we refer to as Henderson II, Grapeland, and Carthage hydrocarbon dewpoint control facilities. These facilities have a cumulative capacity of 550 MMcf/d and obtain a significant portion of their revenues from fees rather than keep-whole processing or percentage-of-liquids revenues.

- In the first quarter of 2008 we completed construction of a 25-mile, 20-inch diameter pipeline from a lateral on our East Texas system to gather additional production being developed in East Texas, which we expect will be transported on the Clarity system to markets in Southeast Texas.

North Texas System Projects:

In order to accommodate the active development and anticipated growth occurring in the Barnett Shale play in North Texas we commenced construction of two natural gas processing plants and related upstream facilities with a combined total capacity of approximately 75 MMcf/d. During the third quarter 2007, we placed the 35 MMcf/d Weatherford processing facility in service and completed construction on a further expansion of 40 MMcf/d in the fourth quarter of 2007.

Anadarko System Projects:

We continue to increase our field compression in the Anadarko region, which we expect will begin contributing to our operating results during the remainder of 2008.

When fully operational, we expect that the new assets we are constructing will provide additional sources of cash flow for us. We continue to evaluate other projects that could further integrate our major Texas-centered natural gas pipeline systems.

Other Matters

A number of new interstate natural gas transportation pipelines are being constructed that may alter interstate transportation of natural gas. These newly constructed pipelines could affect the operating results of certain of our existing market-based interstate and intrastate natural gas pipelines, primarily the AlaTenn, Midla, and MLGT systems. Conversely, our supply based gathering systems may benefit from enhanced capacity out of our gathering areas.

We recently initiated negotiations with a major customer of our Enbridge Pipelines (Midla), L.L.C., or Midla, mainline transmission system for the renewal of a contract that is set to expire in August 2008. The ultimate outcome of these negotiations is uncertain. The modest amount of operating income we derive from the Midla mainline transmission system could be reduced in the event the customer terminates the contract or renews it at lower rates than we currently charge. Further, such an outcome could reduce Midla's ability to recover the carrying value of its noncurrent assets, which approximate $34 million at December 31, 2007.

In November 2007, we sold our Kansas pipeline system, or KPC, to an unrelated party for $133 million in cash, subject to adjustments for working capital items. KPC is an interstate natural gas transmission system, which serves the Wichita, Kansas and Kansas City, Kansas markets and includes approximately 1,120 miles of pipeline ranging in diameter from 4 to 12 inches, along with three compressor stations. KPC represents a business within our Natural Gas segment that we do not consider strategic to the ongoing central operations of our core Natural Gas segment assets. The operating results of the KPC system were not material to our consolidated operating results or those of our Natural Gas segment for the years ended December 31, 2007, 2006 and 2005. We recognized a gain of $32.6 million on the sale of KPC, which is presented in income from discontinued operations.

In December 2005, Calpine Corporation ("Calpine") and many of its subsidiaries, including the subsidiary that owns the two utility plants served by our Bamagas system, filed voluntarily petitions to restructure under Chapter 11 of the United States Bankruptcy Code. Since filing for bankruptcy, Calpine has continued to perform under the terms of its agreements with Bamagas. In June 2007, Calpine and certain of its subsidiaries filed a Joint Plan of Reorganization (the "Plan") and Disclosure Statement with the United States Bankruptcy Court. On December 19, 2007 the U.S. Bankruptcy Court for the Southern District of New York issued a decision confirming Calpine's reorganization plan. In addition, the Bamagas contracts with Calpine have been reaffirmed. Calpine announced at the end of January 2008 that it has emerged from Bankruptcy.

Marketing

The following table sets forth the operating results for the Marketing segment assets for the periods presented:

	Year Ended December 31,		
	2007	2006	2005
	(dollars in millions)		
Operating revenues	$ 3,290.5	$ 2,975.5	$ 3,706.8
Cost of natural gas	3,256.9	2,913.5	3,744.6
Operating and administrative	8.0	5.4	4.1
Depreciation and amortization	1.6	0.5	0.5
Expenses	3,266.5	2,919.4	3,749.2
Operating income (loss)	$ 24.0	$ 56.1	$ (42.4)

Our Marketing business derives a majority of its operating income from selling natural gas received from producers on our Natural Gas segment pipeline assets to end users of the natural gas. A majority of the natural gas we purchase is produced in Texas markets where we previously had limited physical access to the primary interstate pipeline delivery points, or hubs, such as the Houston Ship Channel. As a result of the completed segments of our natural gas system expansions and other initiatives during 2007, our Marketing business now has access to several interstate natural gas pipelines, which it can use to transport natural gas to primary markets where it can be sold at more favorable prices. Prior to 2007, physical pipeline constraints often limited the ability of our Marketing business to transport the natural gas to these primary markets, which would more frequently require our Marketing business to transport natural gas to alternate market points with less favorable pricing.

Our Marketing business is exposed to commodity price fluctuations because the natural gas purchased by our Marketing business is generally priced using an index that is different from the pricing index at which the gas is sold. This price exposure arises from the relative difference in natural gas prices between the contracted index at which the natural gas is purchased and the index under which it is sold, otherwise known as the "spread." The spread can vary significantly due to local supply and demand factors. Wherever possible, this pricing exposure is economically hedged using derivative financial instruments. However, the structure of these economic hedges often precludes our use of hedge accounting under the requirements of SFAS No. 133, which can create volatility in the operating results of our Marketing segment.

In addition to the market access provided by our intrastate natural gas pipelines, our Marketing business also contracts for firm transportation capacity on third-party interstate and intrastate pipelines to allow access to additional markets. To offset the demand charges associated with these transportation agreements, we look for market conditions that allow us to lock in the price differential or spread between the pipeline receipt point and pipeline delivery point. This allows our Marketing business to lock in a fixed sales margin inclusive of pipeline demand charges. We accomplish this by transacting basis swaps between the index where the natural gas is purchased and the index where the natural gas is sold. By transacting a basis swap between those two indices, we can effectively lock in a margin on the combined natural gas purchase and the natural gas sale, mitigating the demand charges on these transportation agreements and limiting the Partnership's exposure to cash flow volatility that could arise in markets where the transporting the natural gas becomes uneconomical. However, the structure of these transactions precludes our use of hedge accounting under the requirements of SFAS No. 133, which can create volatility in the operating results of our Marketing segment.

In addition to natural gas basis swaps, we contract for storage to assist with balancing natural gas supply and end use market sales. In order to mitigate the absolute price differential between the cost of injected natural gas and withdrawn natural gas, as well as storage fees, the injection and withdrawal price differential, or "spread," is hedged by buying fixed price swaps for the forecasted injection periods and selling fixed price swaps for the forecasted withdrawal periods. When the injection and withdrawal spread increases or decreases in value as a result of market price movements, we can earn additional profit through the optimization of those hedges in both the forward and daily markets. Although all of these hedge strategies are sound economic hedging techniques, these types of financial transactions do not qualify for hedge accounting under the SFAS No. 133 guidelines. As such, the non-qualified hedges are accounted for on a mark-to-market basis, and the periodic change in their market value, although non-cash, will impact our operating results.

Natural gas purchased and sold by our Marketing segment is priced at a published daily or monthly price index. Sales to wholesale customers typically incorporate a premium for managing their transmission and balancing requirements. Higher premiums and associated margins result from transactions that involve smaller volumes or that offer greater service flexibility for wholesale customers. At their request, we will enter into long-term, fixed-price purchase or sales contracts with our customers and generally will enter into offsetting hedged positions under the same or similar terms.

Marketing pays third-party storage facilities and pipelines for the right to store and transport natural gas for various periods of time. These contracts may be denoted as firm storage, interruptible storage, or parking and lending services. These various contract structures are used to mitigate risk associated with sales and purchase contracts, and to take advantage of price differential opportunities.

Year ended December 31, 2007 compared with year ended December 31, 2006

Our Marketing business has benefited from the increased access to preferred natural gas markets resulting from our natural gas system expansions and other initiatives. Although the operating income of our Marketing segment for the year ended December 31, 2007 of $24.0 million is $32.1 million lower than the $56.1 million for the year ended December 31, 2006, the change is primarily due to the $68.3 million decrease in unrealized, non-cash mark-to-market gains associated with our derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133. For the year ended December 31, 2007, we recorded $3.8 million of unrealized mark-to-market losses from our derivative activities as compared with $64.5 million of unrealized mark-to-market gains for the year ended December 31, 2006. The unrealized, mark-to-market losses for the year ended December 31, 2007, are the result of modest increases in the forward and daily market prices of natural gas from December 31, 2006. During the year ended December 31, 2006, declines in the forward and daily market prices of natural gas from the historically high prices existing at December 31, 2005 produced significant unrealized mark-to-market gains in our portfolio of derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133. We expect the unrealized mark-to-market gains and losses associated with our portfolio of derivative financial instruments to be offset when the related physical transactions are settled. Refer to the discussions included in Item 7A. Quantitative and Qualitative Disclosures About Market Risk and Note 14 to our Financial Statements beginning on page F-1 of this report).

The operating results of our Marketing business for the year ended December 31, 2007 also include gains of approximately $16.3 million that we realized upon the sale of natural gas inventory, including approximately $6.9 million of gains from the settlement of derivative financial instruments hedging our natural gas inventory. Partially offsetting these gains are non-cash charges of $4.3 million that we recorded to reduce the cost basis of our natural gas inventory to fair market value, which is $12.7 million less than the $17.0 million non-cash charges we recorded during the year ended December 31, 2006. The market price for natural gas in various storage locations may experience declines during the year from the prices at which the inventory was purchased. Due to our hedging structures, we expect that a majority of these charges will be offset by future financial transactions that will settle at the time the natural gas inventory is sold.

Year ended December 31, 2006 compared with year ended December 31, 2005

For the year ended December 31, 2006, the operating income of our Marketing segment increased $98.5 million to $56.1 million, from a loss of $42.4 million in 2005. The significant increase in the operating income of our Marketing segment for 2006 is primarily due to unrealized, non-cash, mark-to-market net gains of approximately $64.5 million compared with unrealized mark-to-market net losses of $50.3 million for 2005. These unrealized mark-to-market changes are associated with derivative financial instruments that do not qualify for hedge accounting treatment under SFAS No. 133. The unrealized, mark-to-market gains for 2006 are the result of a decline in the forward and daily market price of natural gas from the historically high prices experienced in 2005. Additionally, the basis between the index where the natural gas is purchased and the index where the natural gas is sold has declined in correlation with the decline in the forward market price of natural gas contributing to the unrealized, mark-to-market net gains for 2006.

The operating results of our Marketing segment for the year ended December 31, 2006, also include non-cash charges totaling $17.0 million attributable to reducing the cost basis of our natural gas inventory to fair market value. Natural gas prices as published by Platt's *Gas Daily* for Henry Hub were approximately $10.08 per MMBtu at December 31, 2005, which had declined to $5.64 per MMBtu at December 31, 2006. As a result of the decline in the price of natural gas from 2005 to 2006, we recorded charges totaling $17.0 million during 2006 to reduce the cost basis of our inventory to fair market value. Partially offsetting this charge are gains of approximately $3 million that we realized upon settlement of derivative financial instruments hedging our natural gas inventory for 2006. Due to our hedging structures, we expect that a majority of the lower of cost or market inventory charges will be offset by future financial and physical transactions that will settle at the time the natural gas inventory is sold.

Corporate

Year ended December 31, 2007 compared with year ended December 31, 2006

Interest expense was $99.8 million in 2007 compared with $110.5 million in 2006. The decrease is due to $36.7 million of additional interest capitalized on our construction projects during the year compared with same period of 2006, partially offset by higher average debt balances and weighted average interest rates. Capitalized interest was approximately $47.4 million on our construction projects for 2007 compared with $10.7 million capitalized in 2006. Our weighted average interest rate was approximately 6.11% for the year ended December 31, 2007, compared with approximately 5.82% during 2006. Our debt balances are higher as a result of the capital expenditures we made to expand our pipeline systems that were partially financed by additional borrowings.

We are not a taxable entity for U.S. federal income tax purposes or for the majority of states that impose an income tax. Our income tax expense of $5.1 million for the year ended December 31, 2007 results from the enactment, by the state of Texas, of a new state tax computed on our 2007 modified gross margin. No comparable tax existed during the year ended December 31, 2006. We determined this tax to be an income tax under the provisions of SFAS No. 109, *Accounting for Income Taxes* ("SFAS No. 109"). We computed our income tax expense for the year ended December 31, 2007 by applying a 0.57% apportioned state income tax rate to taxable margin, as defined in State of Texas statutes. Our income tax expense represents a 2% effective rate as applied to pretax book income.

In July 2007, the State of Michigan enacted substantial changes to its tax structure that become effective in 2008. The new system is comprised of two parts, a modified gross receipts tax at 1% and a 6.04% tax on income that will be levied on our Michigan operating activities. We determined that these taxes are income taxes under the provisions of SFAS No. 109. Our initial accounting for the enactment of this income tax did not materially affect our results of operation, financial position, or cash flows.

Year ended December 31, 2006 compared with year ended December 31, 2005

Interest expense was $110.5 million in 2006 compared with $107.7 million in 2005. The increase is the result of higher debt balances and weighted average interest rates, partially offset by approximately $10.7 million of interest capitalized on our construction projects for 2006 compared with $4.0 million capitalized in 2005. Our weighted average interest rate was approximately 5.82% for the year ended December 31, 2006, compared with approximately 5.78% during 2005. Our debt balances are higher at December 31, 2006 compared with December 31, 2005 as a result of the capital expenditures we have made to expand our existing systems to improve the service capabilities of our assets.

Included in other income for the year ended December 31, 2006, is approximately $4.5 million that we received as settlement for an insurance claim that we filed in connection with an interruption to the operations of our Lakehead system resulting from a fire that occurred at Suncor's upgrader site in January 2005.

LIQUIDITY AND CAPITAL RESOURCES

General

We believe that our ability to generate cash flow, in addition to our access to capital, is sufficient to meet the demands of our current and future operating and investment needs. Our primary cash requirements consist of normal operating expenses, capital expenditures for our expansion projects, enhancement and maintenance capital expenditures, debt service payments, distributions to our partners, acquisitions of new assets and businesses, and payments associated with our derivative transactions. Short-term cash requirements, such as operating expenses, maintenance capital expenditures, debt service payments and quarterly distributions to our partners, are expected to be funded by operating cash flows. Margin requirements associated with our derivative transactions are generally supported by letters of credit issued under our Credit Facility. We expect to fund long-term cash requirements for enhancements, expansion projects, and acquisitions from several sources, including cash flows from operating activities, borrowings under our commercial paper program, our Credit Facility, and the issuance of additional equity and debt securities. Our ability to complete future debt and equity offerings and the timing of any such offerings will depend on various factors, including prevailing market conditions, interest rates, our financial condition and credit rating at the time.

Our current business strategy emphasizes developing and expanding our existing Liquids and Natural Gas businesses with less focus on acquisitions. The internal growth projects we have planned for our Natural Gas business (see Natural Gas segment—Future Prospects), coupled with the Southern Access and Alberta Clipper projects on our Lakehead system (see Liquids segment—Future Prospects), will require significant expenditures of capital over the next several years. We expect to fund these expenditures from a balanced combination of additional issuances of partnership units and long-term debt. Our planned internal growth projects will require us to bear the cost of constructing these new assets before we will begin to realize a return on them.

Capital Resources

Equity Capital

Execution of our growth strategy and completion of our planned construction projects contemplate our accessing the public and private equity markets to obtain the capital necessary to fund these projects. During 2007, we obtained approximately $628.8 million of cash through equity issuances in both public and private transactions, including contributions of approximately $12.5 million from our general partner to maintain its two percent general partner interest. We used the proceeds from these offerings to repay outstanding commercial paper we had previously issued to finance a portion of our capital expansion projects and for use in future periods to fund additional expenditures under our capital expansion programs.

The following table presents historical information about offerings of our limited partner interests since January 2005:

Issuance Date	Class of Limited Partnership Interest	Number of units Issued	Offering Price per unit	Net Proceeds to the Partnership[(1)]	General Partner Contribution[(2)]	Net Proceeds Including General Partner Contribution
			(in millions, except units and per unit amounts)			
2007						
May	Class A	5,300,000	$ 58.000	$ 301.9	$ 6.1	$ 308.0
April	Class C	5,931,086	$ 53.113	314.4	6.4	320.8
		11,231,086		$ 616.3	12.5	$ 628.8
2006						
August	Class C	10,869,565	$ 46.000	$ 500.0	$ 10.2	$ 510.2
2005						
December	Class A	136,200	$ 46.000	$ 6.0	$ 0.2	$ 6.2
November	Class A	3,000,000	$ 46.000	132.1	2.8	134.9
February	Class A	2,506,500	$ 49.875	124.8	2.7	127.5
2005 Totals		5,642,700		$ 262.9	$ 5.7	$ 268.6

(1) Net of underwriters' fees and discounts, commissions and issuance expenses.

(2) Contributions made by the General Partner to maintain its 2% general partner interest.

Available Credit

A significant source of our liquidity is provided by the commercial paper market. We have a $600 million commercial paper program that is supported by our long-term Credit Facility, which we access primarily to provide temporary financing for our operating activities, capital expenditures and acquisitions, at rates that are generally lower than the rates available under our Credit Facility.

In the second half of 2007, the domestic credit markets were adversely affected by a sharp increase in the credit risk associated with U.S. asset-backed securities. Due to the increase in perceived risks in the credit markets, and the need of large financial institutions to preserve capital, investors turned to investments in U.S. government securities, while selling off more risky credit securities. The lack of demand for domestic credit instruments other than U.S. government securities have, at times, limited our ability to access the commercial paper markets. However, our Credit Facility, which supports our commercial paper program, continues to provide us with adequate liquidity to fund our growth projects.

In addition to our Credit Facility, we executed an unsecured revolving credit agreement with Enbridge U.S. Inc., a wholly-owned subsidiary of Enbridge Inc. (the "EUS Credit Agreement") in December 2007, which provides us with access to an additional $500 million of financing under substantially the same terms as our Credit Facility.

Although the U.S. credit markets remain volatile, we were able to successfully raise approximately $593 million during the second half of 2007 through the issuance of $200 million of our senior, unsecured zero coupon notes due 2022 (the "Zero Coupon Notes") and $400 million of our fixed/floating rate, unsecured, long-term junior subordinated notes due 2067. Both of these issuances are discussed below and in Note 9 to our consolidated financial statements included in Item 8. Financial Statements to this report on Form 10-K.

Outstanding Indebtedness

The following table presents the components of our outstanding indebtedness:

	December 31, 2007	December 31, 2006
	(in millions)	
Current maturities of long-term debt:		
Current portion of First Mortgage Notes	$ 31.0	$ 31.0
Note payable to affiliate	$ —	$ 136.2
Long-term debt:		
Commercial Paper	$ 268.5	$ 443.7
Credit Facility	400.0	—
Affiliate Credit Agreement	—	—
First Mortgage Notes	93.0	124.0
4.000% senior notes due 2009	200.0	200.0
7.900% senior notes due 2012(1)	100.0	100.0
4.750% senior notes due 2013	200.0	200.0
5.350% senior notes due 2014	200.0	200.0
5.875% senior notes due 2016	300.0	300.0
7.000% senior notes due 2018(1)	100.0	100.0
7.125% senior notes due 2028(1)	100.0	100.0
5.950% senior notes due 2033	200.0	200.0
6.300% senior notes due 2034	100.0	100.0
Senior, unsecured zero coupon notes due 2022	203.6	—
8.05% fixed/floating rate junior subordinated notes due 2067	400.0	—
Unamortized discount	(2.2)	(1.6)
Total long-term debt	$ 2,862.9	$ 2,066.1
Note payable to affiliate(2)	$ 130.0	$ —

(1) Debt of Enbridge Energy, Limited Partnership, one of our operating subsidiaries.

(2) Ranks subordinate to our Credit Facility and other senior indebtedness, and ranks equally with current and future Junior Notes.

Credit Facility

Our Credit Facility, as amended, is a revolving term facility that matures in April 2012. In April 2007, we entered into the Second Amended and Restated Credit Agreement which among other things increased the maximum principal amount of credit available to us at any one time from $1 billion to $1.25 billion and allows us to request increases in the maximum principal amount of credit available at any one time from $1.25 billion to $1.5 billion. We pay interest on the amounts outstanding at variable rates equal to a "Base Rate" or a "Eurodollar Rate" as defined in the Credit Facility. In the case of Eurodollar Rate loans, an additional margin is charged which varies depending on our credit rating and the amounts drawn under the facility. We are also charged a facility fee on the entire amount of the Credit Facility, regardless of the amount drawn, which also varies depending on our credit rating. We continue to use our Credit Facility to support our commercial paper program and provide short-term financing for our operations and capital expansion programs.

The amounts we can borrow under the terms of our Credit Facility are reduced by the principal amount of our commercial paper issuances and the balance of our letters of credit outstanding. At December 31, 2007, we had $400 million outstanding under our Credit Facility at a weighted average interest rate of 5.22% and letters of credit totaling $159.7 million. At December 31, 2007, we could borrow $420.3 million under the terms of our Credit Facility, determined as follows:

			2007
			(in millions)
Total credit available under Credit Facility		$	1,250.0
Less:	Amounts outstanding under Credit Facility		(400.0)
	Balance of letters of credit outstanding		(159.7)
	Principal amount of commercial paper issuances		(270.0)
Total amount we could borrow at December 31, 2007		$	420.3

Our Credit Facility contains restrictive covenants that require us to maintain a maximum leverage ratio of 5.50 to 1.0 for periods ending on or before March 31, 2009; a ratio of 5.25 to 1.0 thereafter, for periods ending on or before March 31, 2010; and a ratio of 5.00 to 1.0 for periods ending June 30, 2010 and following. At December 31, 2007, our leverage ratio was approximately 3.6. Our Credit facility also places limitations on the debt that our subsidiaries may incur directly. Accordingly, it is expected that we will provide debt financing to our subsidiaries as necessary.

Commercial Paper Program

At December 31, 2007, we had $270 million in principal amount of commercial paper outstanding, with unamortized discount of $1.5 million, at a weighted average interest rate of 5.36%, before the effect of our interest rate hedging activities. We had net repayments of approximately $171.5 million during 2007 under our commercial paper program, which include gross issuances of $5,172.7 million and gross repayments of $5,344.2 million. At December 31, 2007, we could issue an additional $330 million in principal amount under our commercial paper program.

First Mortgage Notes

The First Mortgage Notes are collateralized by a first mortgage on substantially all of the property, plant and equipment of Enbridge Energy, Limited Partnership, (the "OLP"), and are due and payable in equal annual installments of $31.0 million until their maturity in 2011. The Notes contain various restrictive covenants applicable to us, and restrictions on the incurrence of additional indebtedness by the OLP, including compliance with certain debt issuance tests. We were in compliance with these covenants at December 31, 2007. We believe these issuance tests will not negatively affect our ability to access the credit markets to finance future expansion projects. Under the First Mortgage Notes Agreements, we cannot make cash distributions more frequently than quarterly in an amount not to exceed Available Cash for the immediately preceding calendar quarter. If we repay the Notes prior to their stated maturities, the First Mortgage Note Agreements provide for the payment of a redemption premium by us.

Senior Notes

All of our Senior Notes represent our unsecured obligations that rank equally in right of payment with all of our existing and future unsecured and unsubordinated indebtedness. Our Senior Notes are structurally subordinated to all existing and future indebtedness and other liabilities, including trade payables of our subsidiaries and the $300 million of senior notes issued by the OLP (the "OLP Notes"). The borrowings under our Senior Notes are non-recourse to our General Partner and Enbridge Management. All of our Senior Notes pay interest semi-annually and have varying maturities and terms as presented in the table above. Our Senior Notes do not contain any covenants restricting us from issuing additional indebtedness. Our Senior Notes are subject to make-whole redemption rights and were issued under an indenture containing certain covenants that restrict our ability, with certain exceptions, to sell, convey, transfer, lease or otherwise dispose of all or substantially all of our assets, except in accordance with our indenture agreement. We were in compliance with these covenants at December 31, 2007.

The OLP, our operating subsidiary that owns the Lakehead system, has $300 million of senior notes outstanding representing unsecured obligations that are structurally senior to our Senior Notes. All of the OLP Notes pay interest semi-annually and have varying maturities and terms as set forth in the table above. The OLP Notes do not contain any covenants restricting us from issuing additional indebtedness by the OLP. The OLP Notes are subject to make-whole redemption rights and were issued under an indenture ("the OLP Indenture") containing certain covenants that restrict our ability, with certain exceptions, to sell, convey, transfer, lease or otherwise dispose of all or substantially all of our assets, except in accordance with the OLP Indenture. We were in compliance with these covenants at December 31, 2007.

In August 2007, we received net proceeds of approximately $200 million from a private placement of our senior, unsecured zero coupon notes due 2022 (the "Zero Coupon Notes"), which at maturity will be payable in the aggregate principal amount of $442 million. We initially recorded the Zero Coupon Notes in long-term debt at the amount of proceeds we received from the private placement, which we refer to as the issue price. The carrying amount at December 31, 2007 includes $3.6 million associated with the accretion of interest we recognized as interest expense during the period. The Zero Coupon Notes are scheduled to mature on August 28, 2022, although they may be called by the note holders prior to the scheduled maturity date on August 28 of any year commencing on August 28, 2009, at a price equal to the then accreted value of the called Zero Coupon Notes. The Zero Coupon Notes have a yield of 5.36% on a semi-annual compound basis and rank equally in right of payment to all of our existing and future senior indebtedness, as set forth in our senior indenture. We used the net proceeds from this private placement to repay a portion of our outstanding commercial paper and Credit Facility borrowings that we had previously incurred to fund a portion of our capital expansion projects.

In December 2006, we issued $300 million in aggregate principal amount of our 5.875% Senior Notes due 2016 in a public offering, from which we received proceeds of $297.6 million, after payment of underwriting discounts and commissions and estimated offering expenses. We used the proceeds to repay a portion of our outstanding commercial paper and to finance a portion of our capital expansion projects.

Junior Subordinated Notes

In September 2007, we issued and sold $400 million in principal amount of our 8.05% fixed/floating rate, unsecured, long-term junior subordinated notes due 2067, which we refer to as the Junior Notes. We received net proceeds of approximately $393.0 million, after payment of underwriting discounts, commissions and offering expenses, which we used to temporarily reduce a portion of our outstanding commercial paper and Credit Facility borrowings that we incurred to finance a portion of our capital expansion projects. The Junior Notes are subordinate in right of payment to all of our existing and future senior indebtedness, as defined in the related indenture.

Indebtedness to Affiliates

Hungary Note Payable

As of December 31, 2007 and 2006, we had $130.0 million and $136.2 million, respectively, in amounts outstanding under notes payable to Enbridge Hungary Ltd., an affiliate of our general partner, which we refer to as the Hungary Note. In December 2007, we repaid $145.0 million of the original Hungary Note, including $8.8 million of accrued interest, with proceeds we received from entering into a new Hungary Note agreement with substantially the same terms and approximately $15 million from our existing cash. The new Hungary Note bears interest at a fixed rate of 8.4% per annum that is payable semi-annually in June and December of each year through its maturity in December 2017. Similar to the old Hungary Note, the new note allows us the option of paying accrued and unpaid interest in the form of additional indebtedness by increasing the principal balance of the note for the amounts due. Consistent with the original Hungary Note, the new Hungary Note has cross-default provisions that are triggered by events of default under our First Mortgage Notes or defaults under our Credit Facility. The new Hungary Note is subordinate to our Credit Facility and other senior indebtedness, and ranks equally with current and future Junior Notes. We entered into the original Hungary Note agreement in connection with our acquisition of the Midcoast system in October 2002. For the year ended December 31, 2006, we converted interest payable in the amount of $4.4 million into debt by increasing the principal balance of the original Hungary Note.

EUS Credit Agreement

In December 2007, we entered an unsecured revolving credit agreement with Enbridge (U.S.) Inc., a wholly-owned subsidiary of Enbridge. Enbridge is the indirect owner of Enbridge Energy Company, Inc., our general partner. The EUS Credit Agreement provides for a maximum principal amount of credit available to us at any one time of $500 million for a three-year term that matures in December 2010. The EUS Credit Agreement also includes financial covenants that are consistent with those in our Second Amended and Restated Credit Agreement as discussed above. Amounts borrowed under the EUS Credit Agreement bear interest at rates that are consistent with the interest rates set forth in our Second Amended and Restated Credit Agreement. At December 31, 2007, we had no balances outstanding under the EUS Credit Agreement and the full amount remains available for our use.

Credit Ratings

The following table reflects the ratings that have been assigned to our debt and the debt of our wholly-owned subsidiary, Enbridge Energy, Limited Partnership at December 31, 2007:

	Standard & Poor's	Moody's	Dominion Bond Rating Service
Enbridge Energy Partners, L.P.			
Outlook	Stable	Negative	Stable
Corporate	BBB	Baa2	BBB
Commercial Paper	A-2	P-2	R-2(middle)
Medium Term Notes & Unsecured Debentures	BBB	Baa2	BBB
Junior subordinated debt	BB+	Baa3	BB(high)
Enbridge Energy, Limited Partnership			
Outlook	Stable	Negative	NR
Senior secured	BBB+	Baa1	NR
Senior unsecured	BBB	Baa1	NR

NR—No rating is available

Moody's continues to maintain our Baa2 rating with a negative outlook. This reflects Moody's view that our financial profile is weaker than those of our similarly rated peers. However, Moody's believes that this weaker financial profile is offset to a degree by our low business risk profile that stems from our highly regulated and/or contracted liquids and natural gas systems and our strategy of hedging a significant portion of our commodity exposure. While our substantial organic growth capital expenditure program will place our financial profile under near term pressure until these projects are commissioned and increase our reliance on the capital markets, Moody's believes that completion of our organic growth projects should contribute to a further reduction in our overall business risk profile and that the cash flow generated by these projects as they are commissioned will strengthen our financial profile. Following the successful execution of both the construction and financing of these growth projects, an improved rating outlook by Moody's is possible.

Summary of Obligations and Commitments

The following table summarizes the principal amount of our obligations and commitments at December 31, 2007:

Future Minimum Commitments	2008	2009	2010	2011	2012	Thereafter	Total
				(in millions)			
Long-term debt and notes payable to affiliates	$ 31.0	$ 434.6	$ 31.0	$ 31.0	$ 770.0	$ 1,730.0	$ 3,027.6
Purchase commitments[1]	305.4	—	—	—	—	—	305.4
Power commitments[2]	2.9	0.2	0.2	—	—	—	3.3
Other operating leases	11.9	8.9	2.7	0.4	—	0.1	24.0
Right-of-way[3]	1.7	1.7	1.7	1.7	1.7	41.0	49.5
Product purchase obligations[4]	55.7	38.5	34.5	32.7	31.0	84.3	276.7
Service contract obligations[5]	36.0	28.8	25.6	18.6	7.3	0.5	116.8
Total	$ 444.6	$ 512.7	$ 95.7	$ 84.4	$ 810.0	$ 1,855.9	$ 3,803.3

(1) Represents commitments to purchase materials, primarily pipe from third-party suppliers in connection with our expansion projects.

(2) Represents commitments to purchase power in connection with our Liquids segment.

(3) Right-of-way payments are estimated to be approximately $1.7 million per year for the remaining life of all pipeline systems, which has been assumed to be 25 years for purposes of calculating the amount of future minimum commitments beyond 2012.

(4) We have long-term product purchase obligations with several third-party suppliers to acquire natural gas and NGLs at prices approximating market at the time of delivery.

(5) The service contract obligations represent the minimum payment amounts for firm transportation and storage capacity we have reserved on third-party pipelines and storage facilities.

Cash Requirements for Future Growth

Capital Spending

We expect to make significant expenditures during the next three years for the construction of additional natural gas and crude oil transportation infrastructure. Anticipated growth in Western Canadian oil sands production and the need to reach newer markets has prompted the Southern Access, Alberta Clipper and related projects associated with our liquid systems. In 2008, we expect to spend approximately $1.4 billion on these and other projects with the expectation of realizing additional cash flows as projects are completed and placed into service. At December 31, 2007, we had approximately $305.4 million in outstanding purchase commitments attributable to capital projects for the construction of assets that will be recorded as property, plant and equipment during 2008.

Forecasted Expenditures

We categorize our capital expenditures as either core maintenance or enhancement expenditures. Core maintenance expenditures are those expenditures that are necessary to maintain the service capability of our existing assets and includes the replacement of system components and equipment which is worn, obsolete or completing its useful life. Enhancement expenditures include our capital expansion projects and other projects that improve the service capability of our existing assets, extend asset useful lives, increase capacities from existing levels, reduce costs or enhance revenues, and enable us to respond to governmental regulations and developing industry standards.

We estimate our forecasted expenditures based upon our strategic operating and growth plans, which are also dependent upon our ability to produce or otherwise obtain the capital necessary to accomplish our growth objectives. The following table sets forth our estimates of capital required for system enhancement and core maintenance expenditures through December 31, 2008. Although we anticipate making the expenditures in 2008, these estimates may change due to factors beyond our control, including weather-related issues, construction timing, changes in supplier prices or poor economic conditions. Additionally, our estimates may also change as a result of decisions made at a later date to revise the scope of a project or undertake a particular capital program. We made capital expenditures of $1,980.2 million, including $59.8 million on core maintenance activities, for the year ended December 31, 2007.

For the full year ending December 31, 2008, we anticipate our capital expenditures to approximate the following:

	Total Forecasted Expenditures
	(in billions)
Other system enhancements	$ 0.5
Core maintenance activities	0.1
Southern Access expansion	0.6
Alberta Clipper	0.2
	$ 1.4

Major Construction Projects

The following table includes our active major construction projects and additional information regarding our projected cost, actual expenditures through December 31, 2007, the incremental capacity that will or has become available upon completion of the project and the periods we expect to complete the construction. The projected amounts included in this table may change due to modifications of the scope of the project, increases in materials and construction costs and other factors that are outside of our direct control.

	Capital Expenditures		Estimated Incremental Capacity			
	Estimated Total Cost	Actual Expenditures Inception through December 31, 2007	Storage	Oil	Natural Gas	Expected Completion
	(in billions)		(KBbl)	(Kbpd)	(MMcf/d)	
Southern Access expansion (Lakehead)	$ 2.1	$ 1.1	—	400	—	2009
Clarity (East Texas)	0.6	0.6	—	—	700	Early 2008
Alberta Clipper	1.2	—	—	450	—	Mid-2010
North Dakota phase 6 expansion	0.2	—	—	51	—	Early 2010
Griffith and Superior storage tanks	0.1	—	1,220	—	—	Mid-2008
Total	$ 4.2	$ 1.7	1,220	901	700	

Including major expansion projects and excluding acquisitions, ongoing capital expenditures are expected to be significant over the next three years due to our Southern Access expansion and Alberta Clipper projects. Core maintenance capital is also anticipated to increase over that period of time due to growth in our pipeline systems and aging of infrastructure.

We anticipate funding the system enhancement capital expenditures temporarily through the issuance of commercial paper and borrowing under the terms of our Credit Facility, with permanent debt and equity funding being obtained when appropriate. Core maintenance expenditures are expected to be funded by operating cash flows.

We expect to incur continuing annual capital and operating expenditures for pipeline integrity measures to ensure both regulatory compliance and to maintain the overall integrity of our pipeline systems. Expenditure levels have continued to increase as pipelines age and require higher levels of inspection or maintenance; however, these are viewed to be consistent with industry trends.

The following table presents major construction projects that we have completed during 2007 and additional information regarding the estimated cost, actual expenditures through December 31, 2007, the incremental capacity that has become available upon completion of the project and the periods construction was completed.

	Capital Expenditures		Estimated Incremental Capacity			
	Estimated Total Cost	Actual Expenditures Inception through December 31, 2007	Storage	Oil	Natural Gas	Period Completed
	(in billions)		(KBbl)	(Kbpd)	(MMcf/d)	
North Dakota system expansion	0.1	0.1	—	30	—	November 2007
Cushing terminal storage tanks	0.1	0.1	4,970	—	—	Throughout 2007
Processing and treating plant expansions	0.3	0.3	—	—	1,130	Various
Total	$ 0.5	$ 0.5	4,970	30	1,130	

Acquisitions

We continue to assess ways to generate value for our unitholders, including reviewing opportunities that may lead to acquisitions, dispositions or other strategic transactions, some of which may be material. We evaluate opportunities against operational, strategic and financial benchmarks before pursuing. The market for acquiring energy transportation assets is active and competition among prospective acquirers of assets has been significant. While we remain committed to making accretive acquisitions in or near areas where we already operate or have a competitive advantage, we will continue to focus our efforts on development of our existing pipeline systems. Additionally, we may pursue opportunities to divest of any non-strategic assets as conditions warrant.

We expect that the funds needed to achieve growth through acquisitions will be obtained through issuances of commercial paper, borrowings under the terms of our Credit Facility, term debt and issuances of additional partnership interests.

Derivative Activities

We use derivative financial instruments (e.g., futures, forwards, swaps, options and other financial instruments with similar characteristics) to mitigate the volatility of our cash flows and manage the purchase and sales prices of our commodities. Based on our risk management policies, all of our derivative financial instruments are employed in connection with an underlying asset, liability or anticipated transaction and are not entered into with the objective of speculating on commodity prices.

The following table provides summarized information about the timing and expected settlement amounts of our outstanding commodity derivative financial instruments based upon the market values at December 31, 2007 for each of the indicated calendar years:

	Notional	2008	2009	2010	2011	2012
			($ in millions)			
Swaps						
Natural gas[1]	328,985,388	$ (32.9)	$ (35.6)	$ (32.8)	$ (30.8)	$ (5.9)
NGL[2]	10,163,878	(98.9)	(43.6)	(13.8)	(4.3)	—
Crude[2]	1,411,221	(17.7)	(7.2)	(4.4)	(3.4)	(1.9)
Options—calls						
Natural gas[1]	1,461,000	(1.3)	(1.5)	(1.4)	(1.4)	—
Options—puts						
Natural gas[1]	1,401,000	—	—	—	—	—
NGL[2]	763,403	0.1	0.6	—	—	—
Totals		$ (150.7)	$ (87.3)	$ (52.4)	$ (39.9)	$ (7.8)

(1) Notional amounts for natural gas are recorded in millions of British thermal units ("MMBtu").

(2) Notional amounts for NGL and Crude are recorded in Barrels ("Bbl").

Operating Activities

Net cash provided by our operating activities was $463.4 million in 2007 compared with $321.6 million in 2006. The improved operating cash flow is primarily attributable to sales of inventory during 2007 that we did not make in 2006 and other changes in working capital accounts related to general timing differences between the collection on and payment of our current and related party accounts.

Investing Activities

Net cash used in our investing activities during the year ended December 31, 2007 was $1,765 million, an increase of $898 million from the $867 million used during the same period of 2006. The increase is primarily attributable to the $1,062.6 million increase in our investments in property, plant and equipment during the year ended December 31, 2007, over the amount spent during the year ended December 31, 2006, partially offset by $133 million of proceeds we received from the sale of our KPC system. The increase in our capital expenditures during the year ended December 31, 2007 is directly attributable to our previously described expansion projects. We expect that cash flows used in our investing activities will remain at high levels throughout the periods we are performing extensive expansions to our Lakehead and East Texas systems.

Financing Activities

Net cash provided by financing activities during the year ended December 31, 2007 was $1,167.5 million, an increase of $527.3 million from the $640.2 million generated during the year ended December 31, 2006. We increased the level of our financing activities during 2007 to obtain permanent financing for our capital expansion projects. The permanent financing we completed during the year ended December 31, 2007 includes the following:

- We issued and sold in September 2007, $400.0 million of our Junior Notes for net proceeds of $393.0 million, which we used to partially reduce issuances of commercial paper and borrowings under our Credit Facility;

- We issued and sold in August 2007, $200.0 million in principal amount of our Zero Coupon Notes for net proceeds of $199.8 million, which we used to partially reduce issuances of commercial paper and borrowings under our credit facility.

- In May 2007, we issued and sold 5.3 million of our Class A common units for net proceeds of $308.0 million including a $6.1 million contribution from our general partner to maintain its 2 percent general partner interest.

- In April 2007, we issued and sold approximately 5.9 million of our Class C units in a private placement for net proceeds of approximately $320.8 million, including a $6.4 million contribution from our general partner to maintain its 2 percent general partner interest.

Also contributing to the increase in our financing activities for the year ended December 31, 2007 are net Credit facility borrowings of $400.0 million, which include gross borrowings of $740.0 million and gross repayments of $340.0 million. We also had net repayments of commercial paper of $171.5 million, which include gross issuances of $5,172.7 million and gross repayments of $5,344.2 million.

During the year ended December 31, 2007, cash distributions to our partners increased to $245.4 million from $227.4 million in the same period of 2006 due to:

- An increase in the number of units outstanding;

- An increase in the quarterly distribution rate per unit from $0.925 to $0.950 for the distribution paid in November 2007; and

- An increase in the general partner incentive distributions, as a result of the increased distributions to our limited partners.

Cash Distributions

We make quarterly distributions to our General Partner and the holders of our limited partner units in an amount equal to our "available cash." As defined in our partnership agreement, "available cash" represents for any calendar quarter, the sum of all of our cash receipts plus net reductions to reserves less all of our cash disbursements and net changes to reserves. We retain reserves to provide for the proper conduct of our business, to stabilize distributions to our unitholders and the General Partner and, as necessary, to comply with the terms of any of our agreements or obligations. Enbridge Management, as the delegate of the General Partner under a delegation of control agreement, computes the amount of our available cash.

As the owner of our i-units, Enbridge Management does not receive distributions in cash. Instead, each time that we make a cash distribution to the General Partner and the holders of our Class A and Class B common units, the number of i-units owned by Enbridge Management and the percentage of total units in us owned by Enbridge Management increases automatically under the provisions of our partnership agreement with the result that the number of i-units owned by Enbridge Management will equal the sum of Enbridge Management's shares that are then outstanding. The amount of this increase in i-units is determined by dividing the cash amount distributed per limited partner unit by the average price of one of Enbridge Management's listed shares on the NYSE for the 10-trading day period immediately preceding the ex-dividend date for Enbridge Management's shares multiplied by the number of shares outstanding on the record date. The cash equivalent amount of the additional i-units is treated as if it had actually been distributed for purposes of determining the distributions to be made to the General Partner.

Until August 15, 2009, in lieu of cash distributions, the holders of our Class C units will receive quarterly distributions of additional Class C units with a value equal to the quarterly cash distributions we pay to the holders of our Class A and Class B common units, which we collectively refer to as common units. The number of additional Class C units we will issue is determined by dividing the quarterly cash distribution per unit we pay on our common units by the average market price of a Class A common unit as listed on the New York Stock Exchange for the 10-trading day period immediately preceding the ex-dividend date for our Class A common units multiplied by the number of Class C units outstanding on the record date. As a result, the number of Class C units and the percentage of our total units owned by holders of the Class C units will increase automatically under the provisions of our partnership agreement. The cash equivalent amount of the additional Class C units is treated as if it had actually been distributed for purposes of determining the distributions to be made to the General Partner.

After August 15, 2009, the holders of our Class C units will receive quarterly cash distributions equal to those paid to the holders of our common units. Subject to the approval of holders of our outstanding units in accordance with the then-existing requirements of the principal national securities exchange on which the Class A common units are listed, the Class C units will convert into Class A common units on a one-for-one basis. If our unitholders do not approve the conversion, the holders of our Class C units will receive quarterly cash distributions equal to 115 percent of those paid to the holders of our common units. Prior to conversion, holders of our Class C units will not be entitled to receive any quarterly cash distribution until the holders of our common units have received a minimum quarterly cash distribution of $0.59 per common unit. As of May 2007, the NYSE no longer requires unitholder approval to convert the Class C units to Class A common units.

For purposes of calculating the sum of all distributions of available cash, the cash equivalent amount of the additional i-units and Class C units that are issued when a distribution of cash is made to the General Partner and owners of common units is treated as distribution of available cash, even though the i-unit holder and holders of our Class C units will not receive cash. We retain the cash for use in our operations to finance a portion of our capital expansion projects. During 2007, we distributed a total of 889,938 i-units through quarterly distributions to Enbridge Management, compared with 969,200 in 2006. Additionally, we distributed a total of 1,072,423 Class C units to the holders of our Class C units. We retained $107.5 million in 2007 related to the i-unit and Class C unit distributions, compared with $54.7 million in 2006.

Our current annual cash distribution rate is $3.80 per unit, or $0.950 per quarter compared with $3.725 for the year ended December 31, 2007. We expect that all cash distributions will be paid out of operating cash flows over the long term; however, from time to time, we may temporarily borrow under our Credit Facility or issue additional commercial paper for the purpose of paying cash distributions until we realize the full impact of assets being developed on operations.

Off-Balance Sheet Arrangements

We have no significant off-balance sheet arrangements.

Subsequent Events

Distribution to Partners

On January 28, 2008, the board of directors of Enbridge Management declared a distribution payable to our partners on February 14, 2008. The distribution was paid to unitholders of record as of February 6, 2008, of our available cash of $96.7 million at December 31, 2007, or $0.950 per limited partner unit. Of this distribution, $66.0 million was paid in cash, $12.9 million was distributed in i-units to our i-unitholder, $17.2 million was distributed in Class C units to the holders of our Class C units and $0.6 million was retained from the General Partner in respect of the i-unit and Class C unit distributions to maintain its two percent general partner interest.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Our selection and application of accounting policies is an important process that has developed as our business activities have evolved and as new accounting pronouncements have been issued. Accounting decisions generally involve an interpretation of existing accounting principles and the use of judgment in applying those principles to the specific circumstances existing in our business. We make every effort to comply with all applicable accounting principles and believe the proper implementation and consistent application of these principles is critical. However, not all situations we encounter are specifically addressed in the accounting literature. In such cases, we must use our best judgment to implement accounting policies that clearly and accurately present the substance of these situations. We accomplish this by analyzing similar situations and the accounting guidance governing them and consulting with experts about the appropriate interpretation and application of the accounting literature to these situations.

In addition to the above, certain amounts included in or affecting our consolidated financial statements and related disclosures must be estimated, requiring us to make certain assumptions with respect to values or conditions that cannot be known with certainty at the time the consolidated financial statements are prepared. These estimates affect the reported amounts of assets, liabilities, revenues, expenses and related disclosures with respect to contingent assets and liabilities. The basis for our estimates is historical experience, consultation with experts and other sources we believe to be reliable. While we believe our estimates are appropriate, actual results can and often do differ from these estimates. Any effect on our business, financial position, results of operations and cash flows resulting from revisions to these estimates are recorded in the period in which the facts that give rise to the revision become known.

We believe our critical accounting policies and estimates discussed in the following paragraphs address the more significant judgments and estimates we use in the preparation of our consolidated financial statements. Each of these areas involves complex situations and a high degree of judgment either in the application and interpretation of existing accounting literature or in the development of estimates that affect our consolidated financial statements. Our management has discussed the development and selection of the critical accounting policies and estimates related to the reported amounts of assets, liabilities, revenues and expenses and disclosure of contingent liabilities with the Audit, Finance & Risk Committee of Enbridge Management's board of directors.

Revenue Recognition and the Estimation of Revenues and Cost of Natural Gas

In general, we recognize revenue when delivery has occurred or services have been rendered, pricing is determinable and collectibility is reasonably assured. For our natural gas and marketing businesses, we must estimate our current month revenue and cost of natural gas to permit the timely preparation of our consolidated financial statements. We generally cannot compile actual billing information nor obtain actual vendor invoices within a timeframe that would permit the recording of this actual data prior to preparation of the consolidated financial statements. As a result, we record an estimate each month for our operating revenues and cost of natural gas based on the best available volume and price data for natural gas delivered and received, along with a true-up of the prior month's estimate to equal the prior month's actual data. As a result, there is one month of estimated data recorded in our operating revenues and cost of natural gas for each period reported. We believe that the assumptions underlying these estimates will not be significantly different from the actual amounts due to the routine nature of these estimates and the stability of our processes.

Capitalization Policies, Depreciation Methods and Impairment of Property, Plant and Equipment

We capitalize expenditures related to property, plant and equipment, subject to a minimum rule, that have a useful life greater than one year for (1) assets purchased or constructed; (2) existing assets that are replaced, improved, or the useful lives have been extended; or (3) all land, regardless of cost. Acquisitions of new assets, additions, replacements and improvements (other than land) costing less than the minimum rule in addition to maintenance and repair costs are expensed as incurred.

During construction, we capitalize direct costs, such as labor and materials, and other costs, such as direct overhead and interest at our weighted average cost of debt, and, in our regulated businesses that apply the provisions of Statement of Financial Accounting Standards No. 71, *Accounting for the Effects of Certain Types of Regulation,* or SFAS No. 71, an equity return component.

We categorize our capital expenditures as either core maintenance or enhancement expenditures. Core maintenance expenditures are necessary to maintain the service capability of our existing assets and include the replacement of system components and equipment that are worn, obsolete or near the end of their useful lives. Examples of core maintenance expenditures include valve automation programs, cathodic protection, zero-hour compression overhauls and electrical switchgear replacement programs. Enhancement expenditures improve the service capability of our existing assets, extend asset useful lives, increase capacities from existing levels, reduce costs or enhance revenues, and enable us to respond to governmental regulations and developing industry standards. Examples of enhancement expenditures include costs associated with installation of seals, liners and other equipment to reduce the risk of environmental contamination from crude oil storage tanks, costs of sleeving a major segment of the pipeline system following an integrity tool run, natural gas or crude oil well-connects, natural gas plants and pipeline construction and expansion.

Regulatory guidance issued by the FERC requires us to expense certain costs associated with implementing the pipeline integrity management requirements of the U.S. Department of Transportation's Office of Pipeline Safety. Under this guidance, beginning in January 2006, costs to 1) prepare a plan to implement the program, 2) identify high consequence areas, 3) develop and maintain a record keeping system and 4) inspect, test and report on the condition of affected pipeline segments to determine the need for repairs or replacements, are required to be expensed. We adopted this guidance prospectively in January 2006 for all our pipeline systems. Costs of modifying pipelines to permit in-line inspections, certain costs associated with developing or enhancing computer software and costs associated with remedial mitigation actions to correct an identified condition continue to be capitalized. We have historically capitalized initial in-line inspection programs, crack detection tool runs and hydrostatic testing costs conducted for the purposes of detecting manufacturing or construction defects. Beginning January 2006, costs of this nature are expensed as incurred which is consistent with industry practice and the regulatory guidance issued by the FERC. However, we continue to capitalize initial construction hydrostatic testing cost and subsequent hydrostatic testing programs conducted for the purpose of increasing pipeline capacity in accordance with our capitalization policies. Also capitalized are certain costs such as sleeving or recoating existing pipelines, unless the expenditures are incurred as a single event and not part of a major program, in which case we expense these costs as incurred. Our adoption of the regulatory guidance did not significantly affect our financial position, results of operations or cash flows.

We record property, plant and equipment at its original cost, which we depreciate on a straight-line basis over the lesser of their estimated useful lives or the estimated remaining lives of the crude oil or natural gas production in the basins the assets serve. Our determination of the useful lives of property, plant and equipment requires us to make various assumptions, including the supply of and demand for hydrocarbons in the markets served by our assets, normal wear and tear of the facilities, and the extent and frequency of maintenance programs. We routinely utilize consultants and other experts to assist us in assessing the remaining lives of the crude oil or natural gas production in the basins we serve.

We record depreciation using the group method of depreciation which is commonly used by pipelines, utilities and similar entities. Under the group method, for all segments, upon the disposition of property, plant and equipment, the cost less net proceeds is normally charged to accumulated depreciation and no gain or loss on disposal is recognized. However, when a separately identifiable group of assets, such as a stand-alone pipeline system is sold, we will recognize a gain or loss in our consolidated statements of income for the difference between the cash received and the net book value of the assets sold. Changes in any of our assumptions may alter the rate at which we recognize depreciation in our consolidated financial statements. At regular intervals, we retain the services of independent consultants to assist us with assessing the reasonableness of the useful lives we have established for the property, plant and equipment of our major systems. Based on the results of these regular assessments we may make modifications to the assumptions we use to determine our depreciation rates.

We evaluate the recoverability of our property, plant and equipment when events or circumstances such as economic obsolescence, the business climate, legal and other factors indicate we may not recover the carrying amount of the assets. We continually monitor our businesses and the market and business environments to identify indicators that may suggest an asset may not be recoverable. We evaluate the asset for recoverability by estimating the undiscounted future cash flows expected to be derived from operating the asset. These cash flow estimates require us to make projections and assumptions for many years into the future for pricing, demand, competition, operating cost and other factors. We recognize an impairment loss when the carrying amount of the asset exceeds its fair value as determined by quoted market prices in active markets or present value techniques if quotes are unavailable. The determination of the fair value using present value techniques requires us to make projections and assumptions regarding the probability of a range of outcomes and the rates of interest used in the present value calculations. Any changes we make to these projections and assumptions could result in significant revisions to our evaluation of recoverability of our property, plant and equipment and the recognition of an impairment loss in our consolidated statements of income.

Assessment of Recoverability of Goodwill and Intangibles

Goodwill represents the excess of the purchase price over the fair value of net assets acquired in a business combination. Goodwill is not amortized, but is tested for impairment annually based on the carrying values as of the end of the second quarter, or more frequently if impairment indicators arise that suggest the carrying value of goodwill may not be recovered. Impairment occurs when the carrying amount of a reporting unit exceeds its fair value. At the time we determine that impairment has occurred, the carrying value of the goodwill is written down to its fair value. To estimate the fair value of the reporting units, we make estimates and judgments about future cash flows, as well as revenue, cost of sales, operating expenses, capital expenditures and net working capital based on assumptions that are consistent with our most recent five-year plan, which we use to manage the business.

Preparation of forecast information for use in our five-year plan involves significant judgment. Actual results can, and often do, differ from the projections and assumptions we make in preparing these forecasts. These changes can have a negative impact on our estimates of impairment, which could result in charges to income. In addition, further changes in the economic and business environment can affect our original and ongoing assessments of potential impairment.

Other intangible assets consist of customer contracts for the purchase and sale of natural gas, and natural gas supply opportunities, which we amortize on a straight-line basis over the weighted average useful life of the underlying assets, which is the period over which the asset is expected to contribute directly or indirectly to our future cash flows.

We evaluate the carrying value of the intangible assets whenever certain events or changes in circumstances indicate that the carrying amount of these assets may not be recoverable. In assessing the recoverability of intangibles, we compare the carrying value to the undiscounted future cash flows the intangibles are expected to generate. If the total of the undiscounted future cash flows is less than the carrying amount of the intangibles, the intangibles are written down to their fair value. If there are changes to any of our estimates and assumptions, actual results may differ.

Asset Retirement Obligations

We record a liability for the fair value of our asset retirement obligations, or ARO, on a discounted basis, in the period in which the liability is incurred. Typically we record an ARO at the time the assets are installed or acquired, if a reasonable estimate of fair value can be made. In connection with establishing an

ARO, we capitalize the costs as part of the carrying value of the related assets. We recognize an ongoing expense for the interest component of the liability as part of depreciation expense resulting from changes in the value of the ARO due to the passage of time. We depreciate the initial capitalized costs over the useful lives of the related assets. We extinguish the liabilities for asset retirement obligations when assets are taken out of service or otherwise abandoned.

The provisions of Financial Accounting Standards Board ("FASB") Interpretation No. 47, *Accounting for Conditional Asset Retirement Obligations, an interpretation of FASB Statement No. 143* ("FIN 47") require us to recognize a liability and related asset, consistent with SFAS No. 143, for the fair value of conditional asset retirement obligations that we can reasonably estimate. FIN 47 also provides specific guidance regarding when an asset retirement obligation is reasonably estimable including when sufficient information is available to apply an expected present value technique. Our implementation of FIN 47 did not have a material impact effect on our consolidated financial statements.

We have legal obligations requiring us to decommission our offshore pipeline systems at retirement. In certain rate jurisdictions, we are permitted to include annual charges for removal costs in the regulated cost of service rates we charge our customers. Additionally, legal obligations exist for a minority of our onshore right-of-way agreements due to requirements or landowner options to compel us to remove the pipe at final abandonment. Sufficient data exists with certain onshore pipeline systems to reasonably estimate an abandonment retirement obligation cost. However, in some cases, there is insufficient information to reasonably determine the timing and/or method of settlement for estimating the fair value of the asset retirement obligation. In these cases, the asset retirement obligation cost is considered indeterminate because there is no data or information that can be derived from past practice, industry practice, management's intent, or the asset's estimated economic life. Useful lives of most pipeline systems are primarily derived from available supply resources and the ultimate consumption of those resources by end users. Variables can affect the remaining lives of the assets which preclude us from making a reasonable estimate of the ARO. Indeterminate ARO costs will be recognized in the period in which sufficient information exists to reasonably estimate potential settlement dates and methods.

Derivative Financial Instruments

Our net income and cash flows are subject to volatility stemming from changes in interest rates and commodity prices of natural gas, NGLs, condensate and fractionation margins (the relative price differential between NGL sales and the offsetting natural gas purchases). To reduce the volatility of our cash flows, we use derivative financial instruments (i.e., futures, forwards, swaps, options and other financial instruments with similar characteristics) to manage the purchase and sales prices of the commodities and fix the interest rate on our variable rate debt.

The accounting treatment for our derivative financial instruments is determined by the guidance of SFAS No. 133 and is dependent on each instrument's intended use, how it is designated and the extent to which the derivative financial instrument is effective in reducing the risk that it is intended to hedge. To qualify for hedge accounting, very specific requirements must be met in terms of hedge structure, hedge objective and hedge documentation.

Derivative financial instruments qualifying for hedge accounting treatment that we use can generally be divided into two categories: 1) cash flow hedges, or 2) fair value hedges. We enter into cash flow hedges to reduce the variability in cash flows related to forecasted transactions. We enter into fair value hedges to reduce the risk of changes in the value of a recognized asset or liability. Cash flow and fair value hedges are considered highly effective if they are able to substantially offset (i.e., more than 80 percent) the changes in cash flow or fair value of the risk that is being hedged. The extent to which a derivative financial instrument designated as a hedge does not offset the changes in cash flow or fair value of the risk being hedged is considered ineffective. At inception and on an ongoing basis we assess whether the derivative financial instruments we use in our hedging transactions are highly effective in offsetting changes in cash flows or fair values of the hedged items.

All of our derivative financial instruments are recorded in our consolidated financial statements at fair market value as current and long-term assets or liabilities on a net basis by counterparty and are adjusted each period for changes in the fair market value. The fair market value of these derivative financial instruments reflects the estimated amounts that we would pay or receive to terminate or close the contracts at the reporting date, taking into account the current unrealized losses or gains on open contracts. We use external market quotes and indices to value substantially all of the financial instruments we utilize.

Derivative financial instruments that we designate and qualify as cash flow or fair value hedges under the requirements of SFAS No. 133, receive hedge accounting treatment for the effective portion of the derivative financial instrument. Under hedge accounting, any unrealized gain or loss in fair market value of the effective portion of a derivative financial instrument designated as a cash flow hedge is recorded as an asset or liability with an offset deferred in Accumulated other comprehensive income ("AOCI"), a component of partners' capital, until the underlying hedged transaction occurs. Realized gains and losses on derivative financial instruments that are designated as cash flow hedges of forecasted commodity purchases and sales are included in cost of natural gas and cash flow hedges of forecasted interest payments are included in Interest expense on our consolidated statements of income in the period the hedged transaction occurs. Under hedge accounting, the realized and unrealized gain or loss in the fair market value of a derivative financial instrument designated as a fair value hedge is recorded as an asset or a liability with the offset recorded in our consolidated statements of income as a component of Cost of natural gas for fair value hedges of our commodities and as a component of interest expense for fair value hedges of our indebtedness both of which are offset by the changes in the fair market value of the underlying hedged item.

Under the guidance of SFAS No. 133, the changes in fair market value, both realized and unrealized gains and losses, of derivative financial instruments that 1) do not qualify for hedge accounting, 2) are not designated as hedges and 3) are ineffective, are recognized each period in our consolidated statements of income. These changes in fair market value are recognized as a component of cost of natural gas for our commodity derivative financial instruments and as a component of interest expense for derivative financial instruments of our interest rates. We refer to the accounting treatment for derivative financial instruments that do not qualify for hedge accounting as mark-to-market accounting. Our preference, whenever possible, is for our derivative financial instruments to receive hedge accounting treatment to mitigate the non cash earnings volatility that arises under mark-to-market accounting treatment.

Our cash flow is only affected to the extent the actual derivative contract is settled by 1) making or receiving a payment to/from the counterparty; or 2) by making or receiving a payment for entering into a contract that exactly offsets the original derivative contract. Typically, a derivative contract is settled when the physical transaction that underlies the derivative financial instrument occurs.

Gains and losses that we have deferred in AOCI related to cash flow hedges for which hedge accounting has been discontinued, remain in AOCI until the underlying physical transaction occurs unless it is probable that the forecasted transaction will not occur by the end of the originally specified time period or within an additional two-month period of time thereafter.

One of the primary factors that can affect our operating results each period is the price assumptions we use to value our derivative financial instruments. To the extent that these derivative financial instruments are ineffective or do not qualify for hedge accounting treatment under the requirements of SFAS No. 133, they are accounted for using the mark-to-market method of accounting and any change in the fair market value is reflected in our consolidated statements of income as a component of cost of natural gas or interest expense, depending on whether the derivative financial instrument relates to a commodity or interest rate. We use published market price information where available, or quotations from OTC market makers to find executable bids and offers. The valuations also reflect the potential impact of liquidating our position in an orderly manner over a reasonable period of time under present market conditions, modeling risk, credit risk of our counterparties and operational risk. The amounts we report in our consolidated financial statements change quarterly as these estimates are revised to reflect actual results, changes in market conditions or other factors, many of which are beyond our control.

Commitments, Contingencies and Environmental Liabilities

We accrue reserves for contingent liabilities, including environmental remediation and clean-up costs, when our assessments indicate that it is probable that a liability has been incurred and an amount can be reasonably estimated. Estimates of the liabilities are based on currently available facts, existing technology and presently enacted laws and regulations taking into consideration the likely effects of inflation and other factors, and include estimates of associated legal costs. These estimates also consider prior experience remediating contaminated sites, other companies' clean-up experience and data released by government organizations. Our estimates are subject to revision in future periods based on actual costs or new circumstances and any revisions are reflected in our earnings in the period in which they are reasonably determinable. We evaluate recoveries from insurance coverage separately from our liability and, when recovery is reasonably assured, we record and report an asset separately from the associated liability in our financial statements. New environmental developments, such as increasingly strict environmental laws and regulations and new claims for damages to property, employees, other persons and the environment resulting from our current or past operations, could result in substantial cost and future liabilities.

We recognize liabilities for other contingencies when we have an exposure that, when fully analyzed, indicates it is both probable that an asset has been impaired or that a liability has been incurred and the amount of impairment or loss can be reasonably estimated. Both internal and external legal counsel evaluate our potential exposure to adverse outcomes. When a range of probable loss can be estimated, we accrue the most likely amount, or at least the minimum of the range of probable loss. To the extent that actual outcomes differ from our estimates, or additional facts and circumstances cause us to review our estimates, income may be affected.

Crude Oil Over/Short Balance and Crude Oil Measurement Gains/Losses

Crude oil over/short balance and crude oil measurement gains/losses are inherent in the transportation of crude oil due to evaporation, measurement differences and blending of commodities in transit in addition to other factors. We estimate our crude oil measurement gains/losses and our crude oil over/short balance based on mathematical calculations and physical measurements, which include assumptions about the type of crude oil, its market value, normal physical losses due to evaporation and capacity limitations of the system. A material change in these assumptions may result in a change to the carrying value of our crude oil over/short balance or revision of our crude oil measurement gain/loss estimates. We include the crude oil measurement gains/losses in our operating and administrative expenses on our consolidated statements of income and the crude oil over/short balance in accounts payable and other in the consolidated statements of financial position if the balance is a liability and in inventory if the balance is in an asset position.

Operational Balancing Agreements and Natural Gas Imbalances

We record payables and receivables associated with our natural gas pipeline operational balancing agreements and natural gas imbalances monthly when a customer delivers more or less natural gas into our pipelines than they remove. These balances are either settled on a cash basis or are carried by the pipelines and shippers on an in-kind basis. We primarily estimate the value of the imbalances at month-end spot prices based on published third-party indices for the locations where the imbalances are derived using the best available third party and internal volume information. If there is a change to these estimates and assumptions, actual results may differ.

RECENT ACCOUNTING PRONOUNCEMENTS NOT YET ADOPTED

Fair Value Option for Financial Assets and Liabilities

In February 2007, the FASB issued SFAS No. 159, *The Fair Value Option for Financial Assets and Liabilities*. This statement provides companies with an option to report certain financial assets and financial liabilities at fair value. The objective of SFAS No. 159 is to reduce the volatility in earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. SFAS No. 159 also establishes presentation and disclosure requirements designed to facilitate comparisons between companies that choose different measurement attributes for similar types of assets and liabilities. The provisions of SFAS No. 159 are effective at the beginning of our first fiscal year that begins after November 15, 2007, as we have elected not to early adopt the provisions of SFAS No. 159. We do not expect our adoption of SFAS No. 159 to have a material effect on our consolidated financial statements.

Fair Value Measurements

In September 2006, the Financial Accounting Standards Board (FASB) issued FASB Statement No. 157, *Fair Value Measurements*. This statement defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles (GAAP), and expands disclosures about fair value measurement. The statement is effective for fiscal years beginning after November 15, 2007, and with limited exceptions is to be applied prospectively as of the beginning of the fiscal year initially adopted. We do not expect our adoption of this pronouncement to materially affect our financial statements. However, adoption of this pronouncement may affect our disclosures regarding derivative financial instruments and indebtedness.

Business Combinations

In December 2007, the Financial Accounting Standards Board issued Statement No. 141(R), *Business Combinations*, which we refer to as SFAS No. 141(R). The new standard retains the fundamental requirements in FASB Statement No. 141, *Business Combinations*, that the acquisition method of accounting (previously referred to as the *purchase method)*, be used for all business combinations and for an acquirer to be identified for each business combination. Among other items, SFAS No. 141(R) requires the following:

- Assets acquired, liabilities assumed and any noncontrolling interest in the acquiree at the acquisition date are to be measured at their fair values as of that date.
- Costs associated with effecting an acquisition and restructuring costs the acquirer was not obligated to incur are recognized separately from the business combination.
- Assets acquired and liabilities assumed arising from contractual contingencies as of the acquisition date are measured at their acquisition-date fair values.
- Noncontractual contingencies as of the acquisition date are measured at the acquisition-date fair values only if it is more likely than not that they meet the definition of an asset or liability in FASB Concepts Statement No. 6, *Elements of Financial Statements*.
- Assets and liabilities arising from contingencies are to be reported at the acquisition-date fair value absent new information about the possible outcome, however, when new information becomes available, liabilities are measured at the higher of the acquisition date fair value or the FASB Statement No. 5, *Accounting for Contingencies* (SFAS No. 5) amount while assets are measured at the lower of the acquisition date fair value or the best estimate of the future settlement amount.

- Goodwill as of the acquisition date is determined as the excess of the fair value of the consideration transferred plus the fair value of any noncontrolling interest plus the fair value of previously held equity interests less the fair values of the identifiable net assets acquired.

- Recognition of a gain in earnings attributable to the acquirer when the total acquisition date fair value of the identifiable net assets acquired exceed the fair value of the consideration transferred plus any noncontrolling interest in the acquiree.

- Contingent consideration at the acquisition date is measured at its fair value at that date.

- Retroactively recognize adjustments made during the measurement period (not more than one year from the acquisition date) as if the accounting had occurred on the acquisition date.

SFAS No. 141(R) applies prospectively to business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2008, and early adoption is not permitted. Among other things, the provisions of this statement will require us to expense certain costs associated with acquisitions that were previously permitted to be capitalized which may affect our operating results in periods that we complete an acquisition.

Noncontrolling Interests

In December 2007, the Financial Accounting Standards Board issued FASB Statement No. 160, *Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51*, to establish accounting and reporting standards for the noncontrolling interest in a subsidiary and for deconsolidation of a subsidiary. Among other provisions, SFAS No. 160 requires the following:

- The ownership in subsidiaries held by parties other than the parent is presented in the consolidated statement of financial position within equity, but separate from the parent's equity.

- The amount of consolidated net income attributable to the parent and the noncontrolling interest is presented on the face of the consolidated statement of income.

- Changes in a parent's ownership interest while the parent retains its controlling financial interest in its subsidiary are accounted for as equity transactions.

- Any retained noncontrolling equity investment in a subsidiary that is deconsolidated be initially measured at fair value.

- Sufficient disclosures that clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling owners.

SFAS No. 160 is effective for fiscal years, and interim periods within those years, beginning on or after December 15, 2008, and early adoption is prohibited. SFAS No. 160 requires prospective adoption as of the beginning of the fiscal year in which the provisions are initially applied, except for the presentation and disclosure requirements which shall be applied retrospectively for all periods presented. Our adoption of this standard will not have a material effect on our financial position or results of operations.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

INTEREST RATE RISK

We utilize both fixed and variable interest rate debt, and are exposed to market risk resulting from the variable interest rates on our Credit Facility and the frequent changes in interest rates when we re-issue maturing commercial paper. To the extent that we frequently issue and re-issue commercial paper at short-term interest rates and have amounts drawn under our credit facilities at floating rates of interest, our earnings and cash flows are exposed to changes in interest rates. This exposure is managed through periodically refinancing commercial paper and floating-rate bank debt with long-term fixed rate debt and through the use of interest rate derivative financial instruments including futures, forwards, swaps, options and other financial instruments with similar characteristics. We do not have any material exposure to movements in foreign exchange rates as virtually all of our revenues and expenses are denominated in U.S. dollars. To the extent that a material foreign exchange exposure arises, we intend to hedge such exposure using derivative financial instruments.

The following table presents the principal cash flows and related weighted average interest rates by expected maturity dates along with the carrying values and fair values of our third-party debt obligations as of December 31, 2007 and 2006.

	December 31, 2007									December 31, 2006	
		Expected Maturity of Carrying Amounts by Fiscal Year									
	Average Interest Rate	2008	2009	2010	2011	2012	Thereafter	Total	Fair Value	Carrying Amount	Fair Value
	(dollars in millions)

Variable Rate:											
Commercial paper	5.360%	—	—	—	—	268.5	—	268.5	268.5	443.7	443.7
Credit Facility	5.220%	—	—	—	—	400.0	—	400.0	400.0	—	—

Our net income and cash flows are subject to volatility stemming from changes in interest rates on our variable rate debt obligations. Our interest rate risk exposure does not exist within any of our segments, but exists at the corporate level where our variable rate debt obligations are issued. To mitigate the volatility of our cash flows, we use derivative financial instruments (i.e., futures, forwards, swaps, options and other financial instruments with similar characteristics) to manage the risks associated with market fluctuations in interest rates. Based on our risk management policies, all of our derivative financial instruments are employed in connection with an underlying asset, liability and/or forecasted transaction and are not entered into with the objective of speculating on interest rates.

The table below provides information about our derivative financial instruments that we use to hedge the interest payments on our variable rate debt obligations which are sensitive to changes in interest rates and to lock in the interest rate on anticipated issuances of debt in the future. For interest rate swaps, the table presents notional amounts, the rates charged on the underlying notional and weighted average interest rates paid by expected maturity dates. Notional amounts are used to calculate the contractual payments to be exchanged under the contract. Weighted average variable rates are based on implied forward rates in the yield curve at December 31, 2007.

(1) LIBOR refers to the three-month U.S. London Interbank Offered Rate.

(2) UST refers to United States Treasury notes.

Our treasury locks and a portion of our interest rate collars maturing in 2008 qualify for hedge accounting treatment pursuant to the requirements of SFAS No. 133 and have been designated as cash flow hedges of future interest payments on the first $200 million of an anticipated debt issuance and interest payments on $50 million of our variable rate indebtedness, respectively. As such, the fair value of these derivative financial instruments is recorded as assets or liabilities on our consolidated statements of financial position with the changes in fair value recorded as corresponding increases or decreases in AOCI. Our floating to fixed rate interest rate swaps and a portion of our interest rate collars maturing in 2008 and 2009 hedging $250 million of our variable rate indebtedness did not qualify for hedge accounting treatment as set forth in SFAS No. 133 at December 31, 2007. As such, changes in the fair value of these derivative financial instruments are recorded in earnings as an increase or decrease in interest expense. A portion of these transactions have subsequently been re-designated as cash flow hedges of forecast floating rate indebtedness.

The floating to fixed rate and fixed to floating rate interest rate swaps maturing in 2013 have not been designated as cash flow or fair value hedges under SFAS No. 133 and, as a result, changes in the fair value of these derivative financial instruments are recorded in earnings as an increase or decrease in interest expense.

COMMODITY PRICE RISK

Our net income and cash flows are subject to volatility stemming from changes in commodity prices of natural gas, NGLs, condensate and fractionation margins (the relative price differential between NGL sales and the offsetting natural gas purchases). Our exposure to commodity price risk exists within our Natural Gas and Marketing segments. To mitigate the volatility of our cash flows, we use derivative financial instruments (i.e., futures, forwards, swaps, options and other financial instruments with similar characteristics) to manage the risks associated with market fluctuations in commodity prices. Based on our risk management policies, all of our derivative financial instruments are employed in connection with an underlying asset, liability and/or forecasted transaction and are not entered into with the objective of speculating on commodity prices.

The following tables provide information about our derivative financial instruments at December 31, 2007 and December 31, 2006, with respect to our commodity price risk management activities for natural gas and NGLs, including condensate:

	At December 31, 2007						At December 31, 2006

(1) Volumes of Natural gas are measured in MMBtu, whereas volumes of NGL and Crude are measured in Bbl.

(2) Weighted average prices received and paid are in $/MMBtu for Natural gas and in $/Bbl for NGL and Crude.

(3) The fair value is determined based on quoted market prices at December 31, 2007 and December 31, 2006, respectively, discounted using the swap rate for the respective periods to consider the time value of money. Fair values are presented in millions of dollars.

Accounting Treatment

All derivative financial instruments are recorded in the consolidated financial statements at fair market value and are adjusted each period for changes in the fair market value ("mark-to-market"). The fair market value of these derivative financial instruments reflects the estimated amounts that we would pay or receive, other than in a forced or liquidation sale, to terminate or close the contracts at the reporting date, taking into account the current unrealized losses or gains on open contracts. We use actively traded external market quotes and indices to value substantially all of the financial instruments we utilize.

Under the guidance of SFAS No. 133, if a derivative financial instrument does not qualify as a hedge, or is not designated as a hedge, the derivative is adjusted to its fair market value, or marked-to-market, each period with the increases and decreases in fair value recorded in our consolidated statements of income as increases and decreases in cost of natural gas for our commodity-based derivatives and Interest expense for our interest rate derivatives. Cash flow is only impacted to the extent the actual derivative contract is settled by making or receiving a payment to or from the counterparty or by making or receiving a payment for entering into a contract that exactly offsets the original derivative contract. Typically, we settle our derivative contracts when the physical transaction that underlies the derivative financial instrument occurs.

If a derivative financial instrument qualifies and is designated as a cash flow hedge, a hedge of a forecasted transaction or future cash flows, any unrealized mark-to-market gain or loss is deferred in Accumulated other comprehensive income ("AOCI"), a component of Partners' Capital, until the underlying hedged transaction occurs. To the extent that the hedge instrument is effective in offsetting the transaction being hedged, there is no impact to the income statement. At inception and on a quarterly basis, we formally assess whether the hedge contract is highly effective in offsetting changes in cash flows of hedged items. Any ineffective portion of a cash flow hedge's change in fair market value is recognized each period in earnings. Realized gains and losses on derivative financial instruments that are designated as hedges and qualify for hedge accounting are included in Cost of natural gas for commodity hedges and Interest expense for interest rate hedges in the period the hedged transaction occurs. Gains and losses deferred in AOCI related to cash flow hedges, for which hedge accounting has been discontinued, remain in AOCI until the underlying physical transaction occurs unless it is probable that the forecasted transaction will not occur by the end of the originally specified time period, or within an additional two-month period of time thereafter. Generally, our preference is for our derivative financial instruments to receive hedge accounting treatment whenever possible, to mitigate the non-cash earnings volatility that arises under from recording the changes in fair value of our derivative financial instruments through earnings. To qualify for cash flow hedge accounting as set forth in SFAS No. 133, very specific requirements must be met in terms of hedge structure, hedge objective and hedge documentation.

If a derivative financial instrument is designated and qualifies as a fair value hedge of the change in fair market value of an underlying asset or liability, the gain or loss resulting from the change in fair market value of the derivative financial instrument is recorded in earnings adjusted by the gain or loss resulting from the change in fair market value of the underlying asset or liability. Any ineffective portion of a fair value hedge's change in fair market value will be recorded in earnings as the amount that is not offset by the gain or loss on the change in fair market value of the underlying asset or liability. We include the gains and losses associated with derivative financial instruments designated and qualifying as fair value hedges of our debt obligations in interest expense on our consolidated statements of income. Similar to derivative financial instruments designated as cash flow hedges, very specific requirements must be met in terms of hedge structure, hedge objective and hedge documentation.

Non-Qualified Hedges

Many of our derivative financial instruments qualify for hedge accounting treatment under the specific requirements of SFAS No. 133. However, we have four primary transaction types associated with our commodity derivative financial instruments where the hedge structure does not meet the requirements to apply hedge accounting. As a result, these derivative financial instruments do not qualify for hedge accounting under SFAS No. 133 and are referred to as "non-qualified." These non-qualified derivative financial instruments are marked-to-market each period with the change in fair value, representing unrealized gains and losses, included in cost of natural gas in our consolidated statements of income. These mark-to-market adjustments produce a degree of earnings volatility that can often be significant from period to period, but have no cash flow impact relative to changes in market prices. The cash flow impact occurs when the underlying physical transaction takes place in the future and when the associated financial instrument contract settlement is made.

The four primary transaction types that do not qualify for hedge accounting are as follows:

1. **Transportation—**In our Marketing segment, when we transport natural gas from one location to another the pricing index used for natural gas sales is usually different from the pricing index used for natural gas purchases, which exposes us to market price risk relative to changes in those two indices. By entering into a basis swap, where we exchange one pricing index for another, we can effectively lock in the margin, representing the difference between the sales price and the purchase price, on the combined natural gas purchase and natural gas sale, removing any market price risk on the physical transactions. Although this represents a sound economic hedging strategy, the derivative financial instruments (i.e., the basis swaps) we use to manage the commodity price risk associated with these transportation contracts do not qualify for hedge accounting under SFAS No. 133, since only the future margin has been fixed and not the future cash flow. As a result, the changes in fair value of these derivative financial instruments are recorded in earnings.

2. **Storage—**In our Marketing segment, we use derivative financial instruments (i.e., natural gas swaps) to hedge the relative difference between the injection price paid to purchase and store natural gas and the withdrawal price at which the natural gas is sold from storage. The intent of these derivative financial instruments is to lock in the margin, representing the difference between the price paid for the natural gas injected and the price received upon withdrawal of the gas from storage in a future period. We do not pursue cash flow hedge accounting treatment for these storage transactions since the underlying forecasted injection or withdrawal of natural gas may not occur in the period as originally forecast. This can occur because we have the flexibility to make changes in the underlying injection or withdrawal schedule, given changes in market conditions. In addition, since the physical natural gas is recorded at the lower of cost or market, timing differences can result when the derivative financial instrument is settled in a period that is different from when the physical natural gas is sold from storage. As a result, derivative financial instruments associated with our natural gas storage activities can create volatility in our earnings.

3. **Natural Gas Collars—**In our Natural Gas segment, we had previously entered into natural gas collars to hedge the sales price of natural gas. The natural gas collars were based on a NYMEX price, while the physical gas sales were based on a different index. To better align the index of the natural gas collars with the index of the underlying sales, we de-designated the original cash flow hedging relationship with the intent of contemporaneously re-designating the natural gas collars as hedges of forecasted physical natural gas sales with a NYMEX pricing index. However, because the fair value of these derivative instruments was a liability to us at re-designation, they are considered net written options under SFAS No. 133 and do not qualify for hedge accounting. These derivatives are being marked-to-market, with the changes in fair value from the date of de-designation recorded to earnings each period. As a result, our operating income will be

subject to greater volatility due to movements in the prices of natural gas until the underlying long-term transactions are settled.

4. **Optional Natural Gas Processing Volumes—**In our Natural Gas segment we use derivative financial instruments to hedge the volumes of NGLs produced from our natural gas processing facilities. Our natural gas contracts allow us the option of processing natural gas when it is economical, and ceasing to do so when processing becomes uneconomic. We have entered into derivative financial instruments to fix the sales price of a portion of the NGLs that we produce at our discretion and to fix the associated purchases of natural gas required for processing. We will designate derivative financial instruments associated with NGLs we produce at our discretion as cash flow hedges when the processing of natural gas is probable of occurrence. However, we are precluded from designating the derivative financial instruments entered to manage the respective commodity price risk when we are unable to accurately forecast the NGLs to be processed at our discretion. As a result, our operating income will be subject to increased volatility due to fluctuations in NGL prices until the underlying transactions are settled or offset.

In each of the instances described above, the underlying physical purchase, storage and sale of natural gas and NGLs are accounted for on a historical cost or market basis rather than on the mark-to-market basis we utilize for the derivative financial instruments employed to mitigate the commodity price risk associated with our storage and transportation assets. This difference in accounting (i.e., the derivative financial instruments are recorded at fair market value while the physical transactions are recorded at historical cost) can and has resulted in volatility in our reported net income, even though the economic margin is essentially unchanged from the date the transactions were consummated.

We routinely enter into interest rate swaps to fix the interest rates associated with our variable rate debt, including commercial paper and bank borrowings. In August 2007, we entered into forward-starting interest rate swaps that we designated as cash flow hedges of variable rate debt to begin in October 2007 and November 2007. The specific floating rate borrowings did not take place as initially forecast, thereby causing the interest rates swaps to no longer qualify as cash flow hedges. As a result, we recorded a charge to interest expense of $1.4 million, representing the fair market value of the interest rate swaps at December 31, 2007. A portion of these transactions have subsequently been re-designated as cash flow hedges of forecast floating rate indebtedness.

Discontinuance of Hedge Accounting

In 2005, we discontinued application of hedge accounting in connection with some of our derivative financial instruments designated as hedges of forecasted sales and purchases of natural gas. We discontinued application of hedge accounting when we determined it was no longer probable that the originally forecasted purchases and sales of natural gas would occur by the end of the originally specified time period, or within an additional two-month period of time thereafter. As discussed above, this can occur because we have the flexibility to make changes to the underlying delivery locations for our transportation assets and to the underlying injection or withdrawal schedule for our storage assets, given changes in market conditions. One of the key criteria to achieve hedge accounting under SFAS No. 133 is that the forecasted transaction be probable of occurring as originally set forth in the hedge documentation. As a result, in 2005, we recognized previously deferred unrealized losses in our Marketing segment of approximately $9.0 million from the discontinuance of hedge accounting. In doing so, we reclassified the $9.0 million to cost of natural gas on our consolidated statements of income from AOCI. Going forward, the derivative financial instruments for which hedge accounting has been discontinued are considered to be non-qualified under SFAS No. 133, and must be marked-to-market each period, with the increases and decreases in fair value recorded as increases and decreases in earnings. Also included in the loss from discontinuance are approximately $2.1 million of net mark-to-market losses that relate to hedge positions that were closed out in 2005.

The following table presents the unrealized gains and losses associated with changes in the fair value of our derivatives, which are recorded as an element of cost of natural gas and interest expense in our consolidated statements of income and disclosed as a reconciling item on our consolidated statements of cash flows:

Derivative fair value gains (losses)	December 31, 2007	December 31, 2006	December 31, 2005
		(in millions)	
Natural Gas segment			
Hedge ineffectiveness	$ —	$ (1.9)	$ (2.5)
Non-qualified hedges	(59.0)	1.8	(5.6)
Marketing			
Non-qualified hedges	(3.8)	64.5	(41.3)
Discontinued hedges	—	—	(9.0)
Commodity derivative fair value gains (losses)	(62.8)	64.4	(58.4)
Corporate			
Non-qualified interest rate hedges	(1.4)	—	—
Derivative fair value gains (losses)	$ (64.2)	$ 64.4	$ (58.4)

De-designation and Settlement of Derivatives

In connection with the sale of assets in December 2005, as discussed in Note 3 to the consolidated financial statements beginning on page F-1 of this report, we settled for cash of approximately $16.3 million, natural gas collars representing derivative financial instruments on sales of 2,000 MMBtu/d of natural gas through 2011. We had previously recorded unrealized losses associated with the natural gas collars that were realized upon settlement. Additionally, we de-designated derivative financial instruments that qualified for and were designated as cash flow hedges of forecasted sales of 273 Bpd of NGLs through 2007 and contemporaneously closed out the position by entering into an offsetting derivative financial instrument, at market, on forecasted purchases of 273 Bpd of NGLs through 2007.

Derivative Positions

Our derivative financial instruments are included at their fair values in the consolidated statements of financial position as follows:

	December 31, 2007	December 31, 2006
	(in millions)	
Receivables, trade and other	$ 6.5	$ 7.2
Other assets, net	6.4	11.0
Accounts payable and other	(165.5)	(57.2)
Other long-term liabilities	(192.9)	(136.4)
	$ (345.5)	$ (175.4)

The increase in our obligation associated with derivative activities is primarily due to the increase in current and forward natural gas and NGL prices from December 31, 2006 to December 31, 2007. Our portfolio of derivative financial instruments is largely comprised of long-term fixed price natural gas sales and purchase agreements.

We record the change in fair value of our highly effective cash flow hedges in AOCI until the derivative financial instruments are settled, at which time they are reclassified to earnings. We regularly enter into treasury locks to hedge the interest on anticipated issuances of indebtedness. The settlement of a treasury lock can result in the retention of unrecognized gains or losses in AOCI that are amortized to interest expense over the life of the related debt issuance. In connection with our 2007 issuance and sale of $400 million in principal amount of our Junior Notes, we paid $0.9 million to settle treasury locks we entered to hedge the first five years of interest payments on a portion of this obligation. The $0.9 million is being amortized from AOCI to interest expense over the five year period for which the derivative instrument was established to hedge of interest payments on the junior notes. In December 2006, we paid $10.2 million to settle treasury locks we entered to hedge a portion of the interest payments associated with our issuance of $300 million in principal amount of our senior notes. The $10.2 million is being amortized from AOCI to interest expense over the 10-year life of the senior notes.

Also included in AOCI are unrecognized losses of approximately $2.0 million associated with derivative financial instruments that qualified for and were classified as cash flow hedges of forecasted commodity transactions that were subsequently de-designated. These unrealized losses are reclassified to earnings over the periods during which the originally hedged forecasted transactions affect earnings. For the years ended December 31, 2007, 2006 and 2005, we reclassified unrealized losses of $94.8 million, $78.3 million and $33.8 million, respectively, from AOCI to cost of natural gas on our consolidated statements of income for the fair value of derivative financial instruments that were settled. We estimate that approximately $113 million of AOCI representing unrealized net losses on cash flow hedging activities at December 31, 2007, will be reclassified to earnings during the next twelve months.

We do not require collateral or other security from the counterparties to our derivative financial instruments, all of which were rated "BBB+" or better by the major credit rating agencies.

Item 8. Financial Statements and Supplementary Data

Our consolidated financial statements, together with the notes thereto and the independent registered public accounting firm's report thereon, and unaudited supplementary information, appear beginning on page F-2 of this report, and are incorporated by reference. Reference should be made to the "Index to Financial Statements, Supplementary Information and Financial Statement Schedules" on page F-1 of this report.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

DISCLOSURE CONTROLS AND PROCEDURES

We and Enbridge maintain systems of disclosure controls and procedures designed to provide reasonable assurance that we are able to record, process, summarize and report the information required in our annual and quarterly reports under the Securities Exchange Act of 1934. Our management has evaluated the effectiveness of our disclosure controls and procedures as of December 31, 2007. Based upon that evaluation, our principal executive officer and principal financial officer concluded that our disclosure controls and procedures are effective to accomplish their purpose. In conducting this assessment, our management relied on similar evaluations conducted by employees of Enbridge affiliates who provide certain treasury, accounting and other services on our behalf.

INTERNAL CONTROL OVER FINANCIAL REPORTING

Management's Annual Report on Internal Control Over Financial Reporting

Management of Enbridge Energy Partners, L.P. and its consolidated subsidiaries is responsible for establishing and maintaining adequate internal control over financial reporting as such term is defined in Exchange Act Rule 13a-15(f).

The Partnership's internal control over financial reporting is a process designed under the supervision and with the participation of our principal executive and principal financial officers to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the Partnership's financial statements for external reporting purposes in accordance with U.S. generally accepted accounting principles.

The Partnership's internal control over financial reporting includes policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets of the Partnership;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. generally accepted accounting principles, and that receipts and expenditures are being made only in accordance with the authorization of the Partnership's management and directors; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of our assets that could have a material effect on our financial statements.

The Partnership's internal control over financial reporting may not prevent or detect all misstatements because of its inherent limitations. Additionally, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or deterioration in the degree of compliance with our policies and procedures.

Management assessed the effectiveness of the Partnership's internal control over financial reporting as of December 31, 2007, based on the framework established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on this assessment, management concluded that the Partnership maintained effective internal control over financial reporting as of December 31, 2007.

PricewaterhouseCoopers LLP, an independent registered public accounting firm, has issued an attestation report on our internal control over financial reporting as of December 31, 2007, beginning on page F-2.

Changes in Internal Control Over Financial Reporting

No changes in our internal control over financial reporting were made during the three months ended December 31, 2007, that would materially affect our internal control over financial reporting.

Item 9B. Other Information

None.

PART III

Item 10. Directors, Executive Officers and Corporate Governance

DIRECTORS AND EXECUTIVE OFFICERS OF THE REGISTRANT

The Partnership is a limited partnership and has no officers or directors of its own. Set forth below is certain information concerning the directors and executive officers of the General Partner and of Enbridge Management as the delegate of the General Partner under a Delegation of Control Agreement among the Partnership, the General Partner and Enbridge Management. All directors of the General Partner are elected annually and may be removed by Enbridge Pipelines, as the sole stockholder of the General Partner. All directors of Enbridge Management were elected and may be removed by the General Partner, as the sole holder of Enbridge Management's voting shares. All officers of the General Partner and Enbridge Management serve at the discretion of the respective boards of directors of the General Partner and Enbridge Management. All directors and officers of the General Partner hold identical positions in Enbridge Management.

Name	Age	Position
Directors and Executive Officers:		
M.O. Hesse	65	Director and Chairman of the Board
J.A. Connelly	61	Director
G.K. Petty	66	Director
D.A. Westbrook	55	Director
S.J.J. Letwin	52	Managing Director and Director
T.L. McGill	53	President and Director
S.J. Wuori	50	Executive Vice President—Liquids Pipelines and Director
Officers:		
R.L. Adams	43	Vice President—U.S. Engineering and Project Execution, Liquids Pipelines
E.C. Kaitson	51	Vice President—Law and Deputy General Counsel
D.V. Krenz	56	Vice President
J.A. Loiacono	45	Vice President—Commercial Activities
M.A. Maki	43	Vice President—Finance
A. Monaco	48	Executive Vice President—Major Projects
S.J. Neyland	40	Controller
K.C. Puckett	46	Vice President—Engineering and Operations, Gathering and Processing
J.N. Rose	40	Treasurer
A.M. Schneider	49	Vice President—Regulated Engineering and Operations, Gathering and Processing
B.A. Stevenson	52	Corporate Secretary
L.A. Zupan	52	Vice President—Liquids Pipelines Operations

M.O. Hesse was elected as Chairman of the Board in May 2007 and as a director of the General Partner and Enbridge Management in March 2003 and serves as a member of the Audit, Finance & Risk Committee. Ms. Hesse was President and Chief Executive Officer of Hesse Gas Company from 1990 through 2003. She served as Chairman of the U.S. Federal Energy Regulatory Commission from 1986 to 1989. Ms. Hesse also served as Senior Vice President, First Chicago Corporation and Assistant Secretary for Management and Administration, U.S. Department of Energy. She is a private investor and currently serves as a director of Amec plc, Mutual Trust Financial Group, and Terra Industries, Inc.

J.A. Connelly was elected a director of the General Partner and Enbridge Management in January 2003 and serves as the Chairman of the Audit, Finance & Risk Committee. Mr. Connelly served as Executive Vice President, Senior Vice President and Vice President of the Coastal Corporation from 1988 to 2001. Mr. Connelly is a business consultant providing executive management consulting services.

G.K. Petty was elected a director of the General Partner in February 2001 and Enbridge Management upon its formation and serves on the Audit, Finance & Risk Committee. Mr. Petty has served as a director of Enbridge since January 2001. Mr. Petty served as President and Chief Executive Officer of Telus Corporation, a Canadian telecommunications company, from November 1994 to November 1999. Mr. Petty retired in 1994 from AT&T Corporation as a Vice-President after 25 years of service. He currently serves on the Board of Directors of Fuelcell Energy Corporation.

D.A. Westbrook was elected a director of the General Partner and Enbridge Management in October 2007 and serves on the Audit, Finance & Risk Committee. From May 2007 he has also served on the Board of Directors of Synenco Energy Inc., where he is a member of their Audit & Risk and Finance Committees. From January 2006, he has served on the Board of Directors of Knowledge Systems Inc., a privately held U.S. company. From 2001 to 2005, Mr. Westbrook served as President of BP China Gas, Power & Upstream and Vice-Chairman of the Board of Directors of Dapeng LNG, a Sino joint venture between BP subsidiaries and other Chinese companies.

S.J.J. Letwin was elected Managing Director of the General Partner and Enbridge Management in May 2006, and is also Executive Vice President, Gas Transportation & International of Enbridge. Prior to his election he served Enbridge, the indirect parent of our General Partner, as Group Vice President, Gas Strategy & Corporate Development from April 2003; prior thereto he served Enbridge as Group Vice President, Distribution & Services from September 2000.

T. L. McGill was elected President of the General Partner and Enbridge Management in May 2006. Mr. McGill previously served as Vice President, Commercial Activity and Business Development of the General Partner and Enbridge Management from April 2002 and Chief Operating Officer from July 2004. Prior to that time, Mr. McGill was President of Columbia Gulf Transmission Company from January 1996 to March 2002.

S. J. Wuori was elected a director of the General Partner and Enbridge Management in January 2008 and is also the Executive Vice President of Liquids Pipelines for the General Partner and Enbridge Management. Mr. Wuori holds similar responsibilities with Enbridge. He was previously Executive Vice President, Chief Financial Officer and Corporate Development of Enbridge from 2006 to 2008, Group Vice President and Chief Financial Officer of Enbridge from 2003 to 2006 and Group Vice President, Corporate Planning and Development of Enbridge from 2001 to 2003.

R.L. Adams was elected Vice President, U.S. Engineering and Project Execution, Liquids Pipelines of the General Partner and Enbridge Management in June 2007 prior to which he was Vice President, Operations and Technologies from April 2003. Prior to April 2003, he was Director of Technology & Operations for the General Partner and Enbridge Management from 2001, and Director of Field Operations and Technical Services and Director of Commercial Activities for Ocensa/Enbridge in Bogota, Colombia from 1997 to 2001.

E.C. Kaitson was elected Vice President, Law and Deputy General Counsel of the General Partner and Enbridge Management in May 2007. He also currently serves as Deputy General Counsel of Enbridge. Prior to that he was Assistant Secretary of the General Partner and Enbridge Management from July 2004. He served as Corporate Secretary of the General Partner and Enbridge Management from October 2001 to July 2004. He was previously Assistant Corporate Secretary and General Counsel of Midcoast Energy Resources, Inc. from 1997 until acquired by Enbridge in May 2001.

D.V. Krenz was elected Vice President of the General Partner and Enbridge Management in January 2005. Prior to that, he was President of Shell Gas Transmission, LLC (previously Shell Gas Pipelines Co.) from March 1996 to December 2004.

J.A. Loiacono was elected Vice President, Commercial Activities, of the General Partner and Enbridge Management in July 2006. Prior to that, he was Director of Commercial Activities for the General Partner and Enbridge Management from April 2003 and commenced employment with Midcoast Energy Resources in February 2000 as an Asset Optimizer.

M.A. Maki was elected Vice President, Finance of the General Partner and Enbridge Management in July 2002. Prior to that time, he served as Controller of the General Partner and Enbridge Management from June 2001, and prior to that, as Controller of Enbridge Pipelines from September 1999.

A. Monaco was elected Executive Vice President, Major Projects of the General Partner and Enbridge Management in January 2008 and holds similar responsibilities with Enbridge. Prior to that Mr. Monaco was President of Enbridge Gas Distribution Inc. from September 2006, Senior Vice President, Planning & Development, Enbridge from June 2003, and Vice President, Financial Services, of Enbridge from February 2002. Mr. Monaco was Treasurer of the General Partner from February 2002 and Enbridge Management from its formation until his resignation in April 2003.

S.J. Neyland was elected Controller of the General Partner and Enbridge Management effective September 2006. Prior to his election he served as Controller, Natural gas from January 2005, Assistant Controller from May 2004 to January 2005, and in other managerial roles in Finance and Accounting from December 2001 to May 2004. Prior to that time, Mr. Neyland was Controller of Koch Midstream Services from 1999 to 2001.

K.C. Puckett was elected Vice President, Engineering and Operations, Gathering and Processing of the General Partner and Enbridge Management in October 2007. Prior to his election he served as General Manager of Engineering and Operations from 2004 and Manager of Operations from 2002 to 2004. Prior to that time, he served as Manager of Business Development for Sid Richardson Energy Services Company.

J. N. Rose was elected as Treasurer of the General Partner and Enbridge Management in January 2008. He was previously Assistant Treasurer of the General Partner and Enbridge Management from July 2005. Mr. Rose is also a Director, Finance of Enbridge, a position he has held from October 2007, prior to which he was Manager, Finance from 2004. Prior to that Mr. Rose was a Vice President with Citigroup Global Corporate and Investment Bank from 2001 to 2004.

A.M. Schneider was elected Vice President, Regulated Engineering and Operations of the General Partner and Enbridge Management in October 2007. Prior to his election he served as Director of Engineering and Operations for Regulated & Offshore and Director of Engineering Services from January 2005. Prior to that, Mr. Schneider was Vice President of Engineering and Operations for Shell Gas Transmission from December 2000.

B.A. Stevenson was elected Corporate Secretary of the General Partner and Enbridge Management in July 2004. Between 2000 and 2004 Mr. Stevenson held management positions with Reliant Energy, Inc. and Arthur Andersen LLP. Prior to that Mr. Stevenson was General Counsel & Corporate Secretary of Alberta Natural Gas Company Ltd, a Canadian gas processing and transmission company, that was acquired by TransCanada Pipelines.

L.A. Zupan was elected Vice President, Liquids Pipelines Operations of the General Partner and Enbridge Management in July 2004, and holds similar responsibilities with Enbridge. Mr. Zupan previously served as Vice President, Development & Services for Enbridge Pipelines from 2000.

SECTION 16(a) BENEFICIAL OWNERSHIP REPORTING COMPLIANCE

Section 16(a) of the Exchange Act requires our directors, executive officers and 10% beneficial owners to file with the SEC reports of ownership and changes in ownership of our equity securities and to furnish us with copies of all reports filed. To our knowledge, based solely on a review of the copies of reports furnished to us and written representations that no other reports were required, the officers, directors, and greater than 10% beneficial owners complied with all applicable filing requirements of Section 16(a) of the Exchange Act during the year.

GOVERNANCE MATTERS

We are a "controlled company," as that term is used in NYSE Rule 303A, because all of our voting shares are owned by the General Partner. Because we are a controlled company, the NYSE listing standards do not require that we or the General Partner have a majority of independent directors or a nominating or compensation committee of the General Partner's board of directors.

The NYSE listing standards require our Chief Executive Officer to annually certify that he is not aware of any violation by the Partnership of the NYSE corporate governance listing standards. Accordingly, this certification was provided as required to the NYSE on March 20, 2007.

CODE OF ETHICS, STATEMENT OF BUSINESS CONDUCT AND CORPORATE GOVERNANCE GUIDELINES

We have adopted a Code of Ethics applicable to our senior financial officers, including the principal executive officer, principal financial officer and principal accounting officer of Enbridge Management. A copy of the Code of Ethics for Senior Financial Officers is available on our website at *www.enbridgepartners.com* and is included herein as Exhibit 14.1. We post on our website any amendments to or waivers of our Code of Ethics for Senior Financial Officers. Additionally, this material is available in print, free of charge, to any person who requests the information. Persons wishing to obtain this printed material should submit a request to Corporate Secretary, c/o Enbridge Energy Partners, L.P., 1100 Louisiana, Suite 3300, Houston, TX 77002.

We also have a Statement of Business Conduct applicable to all of our employees, officers and directors. A copy of the Statement of Business Conduct is available on our website at *www.enbridgepartners.com*. We post on our website any amendments to or waivers of our Statement of Business Conduct. Additionally, this material is available in print, free of charge, to any person who requests the information. Persons wishing to obtain this printed material should submit a request to Corporate Secretary, c/o Enbridge Energy Partners, L.P., 1100 Louisiana, Suite 3300, Houston, TX 77002.

We also have a statement of Corporate Governance Guidelines that sets forth the expectation of how the Board should function and the Board's position with respect to key corporate governance issues. A copy of the Corporate Governance Guidelines is available on our website at *www.enbridgepartners.com*. We post on our website any amendments to our Corporate Governance Guidelines. Additionally, this material is available in print, free of charge, to any person who requests the information. Persons wishing to obtain this printed material should submit a request to Corporate Secretary, c/o Enbridge Energy Partners, L.P., 1100 Louisiana, Suite 3300, Houston, TX 77002.

AUDIT, FINANCE & RISK COMMITTEE

Enbridge Management has an Audit, Finance & Risk Committee (the "Audit Committee") comprised of four board members who are independent as the term is used in Section 10A of the Exchange Act. None of these members is relying upon any exemptions from the foregoing independence requirements. The members of the Audit Committee are J.A. Connelly, D.A. Westbrook, M.O. Hesse, and G.K. Petty. The Audit Committee provides independent oversight with respect to our internal controls, accounting policies, financial reporting, internal audit function and the report of the independent registered public accounting firm. The Audit Committee also reviews the scope and quality, including the independence and objectivity of the independent and internal auditors and the fees paid for both audit and non-audit work and makes recommendations concerning audit matters, including the engagement of the independent auditors, to the board of directors.

The charter of the Audit Committee is available on our website at *www.enbridgepartners.com*. The charter of the Audit Committee complies with the listing standards of the NYSE currently applicable to us. This material is available in print, free of charge, to any person who requests the information. Persons wishing to obtain this printed material should submit a request to Corporate Secretary, c/o Enbridge Energy Partners, L.P., 1100 Louisiana, Suite 3300, Houston, TX 77002.

Enbridge Management's board of directors has determined that J.A. Connelly and M.O. Hesse qualify as "Audit Committee financial experts" as defined in Item 407(d)(ii) of SEC Regulation S-K. Each of the members of the Audit, Finance and Risk Committee is independent as defined by Section 303A of the listing standards of the NYSE.

Ms. Hesse also serves on the Audit Committees of the General Partner, Enbridge Management, Amec plc., Mutual Trust Financial Group and of Terra Industries, Inc. In compliance with the provisions of the Audit, Finance & Risk Committee Charter, the boards of directors of the General Partner and of Enbridge Management have determined that Ms. Hesse's simultaneous service on such audit committees does not impair her ability to effectively serve on the Audit, Finance & Risk Committee.

Mr. Petty also serves on the Audit Committees of the General Partner, Enbridge Management, Fuel Cell Energy, Inc. and of Enbridge Inc. In compliance with the provisions of the Audit, Finance & Risk Committee Charter, the boards of directors of the General Partner and of Enbridge Management have determined that Mr. Petty's simultaneous service on such audit committees does not impair his ability to effectively serve on the Audit, Finance & Risk Committee.

Enbridge Management's Audit Committee has established procedures for the receipt, retention and treatment of complaints we receive regarding accounting, internal accounting controls or auditing matters and the confidential, anonymous submission by our employees of concerns regarding questionable accounting or auditing matters. Persons wishing to communicate with our Audit Committee may do so by writing in care of Chairman, Audit Committee, c/o Enbridge Energy Management, L.L.C., 1100 Louisiana, Suite 3300, Houston, TX 77002.

EXECUTIVE SESSIONS OF NON-MANAGEMENT DIRECTORS

The independent directors of Enbridge Management meet at regularly scheduled executive sessions without management. M.O. Hesse serves as the presiding director at those executive sessions. Persons wishing to communicate with the Company's independent directors may do so by writing in care of Chairman, Board of Directors, Enbridge Energy Partners, L.P., 1100 Louisiana, Suite 3300, Houston, TX 77002.

Item 11. Executive Compensation

COMPENSATION DISCUSSION AND ANALYSIS

We are a master limited partnership and we do not directly employ any of the individuals responsible for managing or operating our business nor do we have any directors. We obtain managerial, administrative and operational services from our general partner and Enbridge pursuant to service agreements among us, Enbridge Management, and affiliates of Enbridge. Pursuant to these service agreements, we have agreed to reimburse our general partner and affiliates of Enbridge for the cost of managerial, administrative, operational and director services they provide to us.

The compensation policies and philosophy of Enbridge govern the types and amount of compensation granted to each of the Named Executive Officers, or NEOs. Since these policies and philosophy are those of Enbridge, we refer you to a discussion of those items as set forth in the Executive Compensation section of the Enbridge "Management Information Circular" on the Enbridge website at www.enbridge.com. The Enbridge "Management Information Circular" is produced by Enbridge pursuant to Canadian securities regulations and is not incorporated into this document by reference or deemed furnished or filed by us under the Exchange Act; rather the reference is to provide our investors with an understanding of the compensation policies and philosophy of the ultimate parent of our general partner.

The boards of directors of Enbridge Management and our General Partner do not have separate compensation committees, nor do they have responsibility for approving the elements of compensation presented in the tables which follow this discussion. The boards of directors of Enbridge Management and our general partner do have responsibility for evaluating and determining the reasonableness of the total amount we are charged for managerial, administrative and operational support, including compensation of the NEOs, provided by Enbridge and its affiliates, including our general partner.

All U.S.-domiciled employees of Enbridge are directly employed by its subsidiary, Enbridge Employee Services, Inc., which we refer to as EES. In connection with our annual budget process, we calculate an average "Budgeted Allocation Rate," which represents an estimated average of the percentage of time expected will be spent by each of our NEOs on our business during the succeeding year. Those estimates are revised each year based on historical experience. The average Budgeted Allocation Rate was 84% for 2007 and has been set at approximately 85% for 2008. EES' salary costs are allocated to us based on the percentage of time spent by EES employees on our behalf compared with the total time of all EES employees. We are allocated a portion of the equity-based compensation expense as determined in accordance with U.S. GAAP. Pension expenses of EES (other than expenses under Enbridge's nonqualified supplemental pension plan for U.S.-domiciled employees, which we refer to as the SPP) are allocated to us based on the proportion that the total headcount of EES employees assigned to us bears to the total headcount of EES. For this purpose, an employee of EES is deemed to be assigned to us if he or she works on assets we own. Pension expenses of EES attributable to the SPP are allocated to us based upon the average Budgeted Allocation Rate. EES allocates to us that portion of its compensation expense for Enbridge's Short Term Incentive Plan, a non-equity performance-based incentive plan, equal to the total salaries of employees who perform work for us multiplied by the average Budgeted Allocation Rate divided by EES' total salary expense.

We are a partnership and not a corporation for U.S. federal income tax purposes, and therefore, are not subject to the executive compensation tax deductible limitations of Internal Revenue Code §162(m). Accordingly, none of the compensation paid to our NEOs is subject to limitation. The compensation of our Named Executive Officers included in the tables below is established by a committee of the board of directors of Enbridge. We have included in the following tables the full amount of compensation and related benefits provided for the NEOs for 2007 and 2006, together with the approximate amount of compensation cost allocated to us for the years ended December 31, 2007 and 2006.

SUMMARY COMPENSATION TABLE

Name and Principal Position	Year	Salary ($)	Bonus ($)	Stock Awards[1] ($)	Option Awards[2] ($)	Non-Equity Incentive Plan Compensation[3] ($)	Change in Pension Value and Nonqualified Deferred Compensation Earnings ($)	All Other Compensation[4] ($)	Total ($)	Approximate Amount Allocated to Enbridge Energy Partners, L.P. ($)
S.J.J. Letwin[5] Managing Director *(Principal Executive Officer)*	2007	483,750	—	116,820	570,647	450,000	335,000	127,310	2,083,527	$ 1,507,502
	2006	457,257	—	108,600	316,259	450,000	208,000	185,871	1,725,987	—
T.L. McGill President	2007	323,631	—	41,536	148,725	241,320	128,000	50,039	933,251	815,977
	2006	290,000	—	38,535	191,599	200,000	103,000	39,659	862,793	758,806
J. R. Bird[6] Executive Vice President–Liquids Pipelines	2007	468,692	—	116,820	476,614	465,203	988,000	88,167	2,603,496	269,386
	2006	419,937	—	98,090	495,433	440,878	512,000	75,042	2,041,380	190,000
M.A. Maki Vice President–Finance *(Principal Financial Officer)*	2007	258,681	—	27,258	67,217	161,170	103,000	38,856	656,182	577,011
	2006	212,500	—	22,187	74,014	140,000	71,000	35,056	554,757	480,703
R.L. Adams Vice President–Operations and Technology	2007	220,779	—	22,066	53,895	135,000	78,000	96,469	606,209	564,365
	2006	189,375	—	19,852	50,677	117,000	55,000	33,543	465,447	402,909

(1) The 2007 expense associated with Performance Stock Units (PSUs) is reflected in this column and is measured based on the number of respective units granted, the percentage vested (33%) and the market value, representing the volume weighted average closing price of an Enbridge share as quoted on the NYSE for U.S. dollar (USD) denominated PSUs and the Toronto Stock Exchange, or TSX, for Canadian dollar (CAD) denominated PSUs for the 20 consecutive days prior to January 1, 2008. Beginning in 2007, U.S. domiciled NEOs were granted PSUs denominated in USD with a market value at December 31, 2007 of $38.94 per unit computed as described in the preceding sentence. Canadian domiciled NEOs are granted PSUs denominated in CAD, the market value of the 2007 PSUs has been converted to USD at December 31, 2007 using the market value computed for U.S. domiciled employees. The 2006 expense for PSUs grants is measured based on the number of respective units granted, the percentage vested (33%) and the market value, representing the weighted average closing price of an Enbridge share as quoted on the Toronto Stock Exchange, or TSX for the 20 consecutive days prior to January 1, 2007, or $39.73 CAD, since all 2006 PSU grants are denominated in CAD. The expense has been converted to United States dollars, or USD, using the average exchange rate during 2006 of $1.1341 CAD = $1 USD. The PSUs were granted on January 1, 2007 and 2006, respectively.

(2) The annual expenses for option awards that are granted under the Enbridge Incentive Stock Option Plan (2002) ("ISOP") and the Performance Stock Option Plan (2007) ("PSOP") are determined by computing the fair value of the options under FAS 123(R) on the grant date using the Black-Scholes option pricing model with the following assumptions for the indicated grant year:

	ISOP		PSOP	
Assumption	**2007**	**2006**	**2007**	**2006**
Expected option term in years	6	8	8	NA
Expected volatility	18.1%	19.0%	13.6%	NA
Expected dividend yield	3.22%	3.23%	3.57%	NA
Risk-free interest rate	4.11%	4.16%	4.38%	NA

The fair value of ISOPs granted as computed using the above assumptions is expensed over the shorter of the vesting period for the options or the period in which an NEO is within three years of attaining eligibility for early retirement. In 2006, Mr. McGill and in 2007 Mr. Letwin reached the period where they were within three years of attaining eligibility for early retirement and Mr. Bird is currently eligible for early retirement. Accordingly, the amounts reported in this column for each of these individuals include 100 percent of the fair value of the ISOPs they were granted for the respective periods, although vesting is not accelerated. The fair value of PSOPs granted as computed using the above assumptions is expensed over the vesting period for the options, generally five years. The exercise price and fair value information for all option grants has been converted to United States dollars using the exchange rates as set forth in the tables below. The fair values of all grants on the grant date has been converted to USD using the average exchange rates, representing the exchange rate for the period during which the expense was recognized.

	ISOP		PSOP	
	2007	2006	2007	2006
Exercise price in CAD	$ 38.26	$ 36.47	$ 36.57	NA
Exercise price in USD	$ 32.59	$ 31.58	$ 34.03	NA
Grant date exchange rate for $1 USD	$ 1.1740	$ 1.1548	$ 1.0746	NA

	ISOP		PSOP	
	2007	2006	2007	2006
Vesting period	4	4	5	NA
Option fair value on grant date in CAD	$ 6.16	$ 6.28	$ 3.40	NA
Option fair value on grant date in USD	$ 5.25	$ 5.54	$ 3.16	NA
Average exchange rate for $1 USD	$ 1.1740	$ 1.1341	$ 1.0750	NA

(3) Non-equity incentive plan compensation represents awards that are paid in February for amounts that are earned in the immediately preceding fiscal year under the Enbridge Short Term Incentive Plan, or STIP. The Enbridge STIP is a performance-based plan where measurement metrics are established at the beginning of each fiscal year that promote the achievement of financial, safety, corporate governance and individual goals. The amount presented for Mr. Bird represents an award of $500,000 CAD, which was converted to USD using the weighted average exchange rate of $1.0748 CAD = $1 USD. All other amounts presented in this column represent USD denominated STIP awards.

(4) The table which follows labeled "All Other Compensation" sets forth the elements comprising the amounts presented in this column.

(5) Mr. Letwin relocated to the United States on May 1, 2006, and became Managing Director of our general partner and Enbridge Management. Mr. Letwin is also an executive officer of Enbridge with responsibility for other Enbridge operations in addition to those of our general partner, Enbridge Management, and us, which he assumed in May 2006. We have included the full amount of Mr. Letwin's compensation in the summary compensation table. However, we were not charged the cost of Mr. Letwin's compensation for the period from January 1, 2006 through December 31, 2006, since the allocation to us of compensation to Mr. Letwin was not contemplated in our budget. As a result, Mr. Letwin's compensation was borne by other Enbridge affiliates. For the year ended December 31, 2006, we used a weighted average exchange rate of $1.1519 CAD = $1 USD to convert the compensation costs to USD for Mr. Letwin, which represents the weighted average exchange rate for the period from May 1, 2006 through December 31, 2006. The costs associated with the PSU's and options Mr. Letwin was granted in 2006 were borne by Enbridge and other affiliates where he is also an officer because the grants occurred prior to his becoming managing director of our general partner and Enbridge Management.

(6) Mr. Bird is also an executive officer of Enbridge with responsibility for other affiliates of Enbridge in addition to those for our general partner and Enbridge Management. Mr. Bird is compensated by affiliates of Enbridge in CAD which we have converted to USD using the weighted average exchange rates for the years ended December 31, 2007 and 2006 of $1.0748 CAD = $1 USD and $1.1341 CAD = $1.0 USD, respectively. The costs associated with the PSU's and options Mr. Bird was granted in 2007 and 2006 were borne by Enbridge and other affiliates where he is also an officer. We are allocated a portion of the remaining elements of Mr. Bird's compensation based on the approximate percentage of time he devotes to us and Enbridge Management. In January 2008, Mr. Bird assumed other responsibilities with Enbridge and ceased being an NEO of Enbridge Management and the General Partner.

ALL OTHER COMPENSATION
(For the years ended December 31, 2007 and 2006)

Name	Year	Flexible Benefits(1)	401(k) Matching Contribution(2)	Relocation Allowance	Mortgage Interest Payments	Dividends Paid on PSUs	Other Benefits(3)	Total
S.J.J. Letwin	2007	$ 35,000	$ 11,250	$ —	$ 40,321	$ 36,307	$ 4,432	$ 127,310
	2006	35,169	11,000	77,500	25,701	29,706	6,795	185,871
T.L. McGill	2007	20,000	11,250	—	—	11,204	7,585	50,039
	2006	20,000	11,000	—	—	6,434	2,225	39,659
J.R. Bird	2007	52,081	—	—	—	32,045	4,041	88,167
	2006	48,482	—	—	—	24,236	2,324	75,042
M.A. Maki	2007	20,000	11,250	—	—	7,343	263	38,856
	2006	20,000	10,625	—	—	4,214	217	35,056
R.L. Adams	2007	20,000	11,039	58,722	—	6,493	215	96,469
	2006	20,000	9,469	—	—	3,882	192	33,543

(1) Flexible benefits for our U.S. domiciled NEOs represent a perquisite allowance that is paid in cash as additional compensation. Our NEOs domiciled in Canada receive flexible benefits based on their family status and base salary. For our NEOs that are domiciled in Canada, the flexible benefits can be used to purchase additional benefits, paid in cash, or be applied as contributions to the Enbridge Stock Purchase and Savings Plan; or (b) paid as additional compensation. The amounts reported in this column include the net flexible benefits that Mr. Bird and Mr. Letwin (2006) applied to the Enbridge Stock Purchase and Savings Plan.

(2) Our NEOs that are domiciled in the United States and participate in the Enbridge Employee Services, Inc. Savings Plan (the "401(k) Plan") may contribute up to 50 percent of their base salary which is matched up to 5 percent by Enbridge. Both individual and matching contributions are subject to limits established by the Internal Revenue Service. Enbridge contributions are used to purchase Enbridge shares at market value and employee contributions may be used to purchase Enbridge shares or 22 designated funds.

(3) Other benefits include professional financial services, term life insurance premiums, parking, and home security and internet services.

We do not maintain any compensation plans for the benefit of the NEOs under which equity interests in Enbridge Management or the Partnership may be awarded. However, Enbridge allocates to us the compensation expense it recognizes under FAS 123(R) in connection with recording the fair value of its restricted stock units and outstanding stock options granted to certain of our officers, including the NEOs. The costs we are charged with respect to option grants represent a portion of the costs determined in accordance with U.S. GAAP.

The performance stock units are granted to the NEOs pursuant to the Enbridge Inc. Performance Stock Unit Plan and stock options are granted pursuant to the Enbridge Incentive Stock Option Plan (2002) and the Performance Stock Option Plan (2007). Awards under these plans provide long-term incentive and are administered by the Human Resources & Compensation Committee of Enbridge. The performance stock units granted from 2004 through 2006 and stock option grants are denominated in CAD. The performance stock units granted in 2007 to our U.S.-domiciled NEOs are denominated in USD while those granted to NEOs domiciled in Canada are denominated in Canadian dollars. The following two tables set forth information concerning performance stock units and stock options outstanding at

December 31, 2007, and the number of awards vested and exercised during the year ended December 31, 2007, by each of the NEOs:

GRANTS OF PLAN-BASED AWARDS

(1) The abbreviated plan names are defined as follows:

a. PSUP refers to the Enbridge Performance Stock Unit Plan, an equity-based incentive plan.

b. ISOP refers to the Enbridge Incentive Stock Option Plan, a qualified stock option plan.

c. PSOP refers to the Enbridge Performance Stock Option Plan (2007), a performance-based, incentive stock option plan.

d. STIP refers to the Enbridge Short Term Incentive Plan, a non-equity performance-based incentive plan.

(2) Our NEOs are eligible to receive annual grants of Performance Stock Units, or PSUs, under the Performance Stock Unit Plan, or PSUP, an equity-based, long-term incentive plan, administered by a committee of the board of directors of Enbridge. The initial value of each of these PSUs on the grant date is equivalent to the weighted average closing price of one Enbridge share as quoted on the New York Stock Exchange for the 20 days immediately preceding the start of the performance period. The initial PSUs granted are increased for quarterly dividends paid during the three-year period on an Enbridge share. Awards under the 2007 PSUP are paid out in cash at the end of a three-year performance cycle based on: (1) an earnings per share, or EPS target for Enbridge based on the long range plan of the organization and (2) the price to earnings ratio of an Enbridge share relative to a defined group of peer organizations established in advance by a committee of the board of directors of Enbridge. The performance measures for grants awarded from 2004 through 2006 are based on (1) the market value of an Enbridge share at the end of the three-year period; and (2) the total shareholder return for Enbridge over a three-year period in relation to a peer group of companies established in advance by a committee of the board of directors of Enbridge. Payments under the PSUP may be increased up to 200 percent of the original award when Enbridge outperforms its peer group. If Enbridge fails to meet threshold performance levels, no payments are made under the PSUP. Dividends are paid on the PSUs which are invested in additional PSUs at the then current market price for one share of Enbridge common stock which are not included in the estimated future payout amounts, but have been included as other compensation in the Summary Compensation table. Enbridge does not issue any shares in connection with the PSUP.

The threshold at which PSUs are issued represents 4 percent of the number of PSUs initially granted and is the lowest level at which PSUs will be issued based on the performance criteria discussed above. The target level at which PSUs are issued represents 100 percent of the number of PSUs initially granted and attainment of the established performance criteria. The maximum level at which PSUs may be issued is 200 percent of the number of PSUs initially granted and may occur when Enbridge exceeds the established performance criteria.

PSUs vest at the end of a three year performance period that begins on January 1 of the year granted and during the term the PSUs are outstanding, a liability and expense are recorded by Enbridge based on the number of PSUs outstanding and the current market price of an Enbridge share. The grant date fair value for each PSU granted to each of our NEOs in 2007 was

$34.73 USD, representing the weighted average closing price of one Enbridge share as quoted on the New York Stock Exchange for the 20 days immediately preceding the start of the performance period that began on January 1, 2007.

(3) The Enbridge Incentive Stock Option Plan (2002) is administered by a committee of the Enbridge board of directors and if an option is issued during a trading blackout period, the exercise price of an option grant is determined as the weighted average trading price of an Enbridge share on the Toronto Stock Exchange for the three trading days immediately prior to the effective date of the option. In the event an option grant is issued during a period a trading blackout is not in effect, the exercise price of the option grant is equal to the last reported sales price on the Toronto Stock Exchange for the day immediately preceding the grant date. During 2007, each of the NEOs received grants of Enbridge incentive stock options that upon exercise may be exchanged for an equivalent number of shares of Enbridge common stock. The exercise price of the incentive stock options at the time of grant was $38.26 CAD which has been converted into USD using an exchange rate of $1.1740 CAD per $1 USD, representing the noon buying rate in New York for transfers of CAD on the grant date of February 9, 2007.

The amounts included as the grant date fair value for the 2007 incentive stock option awards represent the amount determined by computing the fair value of the options under FAS 123(R) on the grant date using the Black-Scholes option pricing model with the following assumptions:

- 6 years expected term;
- 18.1% expected volatility;
- 3.22% expected dividend yield; and
- 4.11% risk free interest rate

The fair value of options granted as computed using these assumptions is $6.16 CAD which has been converted to USD using an exchange rate of $1.0750 CAD = $1 USD which equates to a grant date fair value of $5.25 USD per option granted. The grant date fair value is expensed over the shorter of the vesting period for the options (generally 4 years) and the period to early retirement eligibility.

(4) The Enbridge Performance Stock Option Plan (2007) is administered by a committee of the Enbridge board of directors and if an option is issued during a trading blackout period, the exercise price of an option grant is determined as the weighted average trading price of an Enbridge share on the Toronto Stock Exchange for the five trading days immediately prior to the effective date of the option. In the event an option grant is issued during a period a trading blackout is not in effect, the exercise price of the option grant is equal to the last reported sales price on the Toronto Stock Exchange for the day immediately preceding the grant date. Performance-based stock options, or PBSOs, are similar to the incentive stock options, except that the quantities become exercisable subject to both the achievement of specified share price targets and time requirements. One half of the PBSOs become exercisable if the first share price hurdle is achieved and 100% of the grant becomes exercisable if the second share price hurdle is achieved within a $6^{1}/2$ year time period. The term of each grant is 8 years provided the performance criteria are met. PBSOs are granted on an infrequent basis and provide the eligible NEO the opportunity to acquire one Enbridge Share for each option held when the specified time and share price targets are met. During 2007, Messrs. Letwin and Bird each received grants of Enbridge performance stock options that upon exercise may be exchanged for an equivalent number of shares of Enbridge common stock. The exercise price of the PBSOs at the time of grant was $36.57 CAD which has been converted into USD using an exchange rate of $1.0746 CAD per $1 USD, representing the noon buying rate in New York for transfers of CAD on the grant date of August 15, 2007.

The amounts included as the grant date fair value for the 2007 PBSO awards represent the amount determined by computing the fair value of the options under FAS 123(R) on the grant date using the Black-Scholes option pricing model with the following assumptions:

- 8 years expected term;
- 13.6% expected volatility;
- 3.57% expected dividend yield; and
- 4.38% risk free interest rate

The fair value of options granted as computed using these assumptions is $3.40 CAD which has been converted to USD using an exchange rate of $1.0748 CAD = $1 USD which equates to a grant date fair value of $3.16 USD per option granted. The grant date fair value is expensed over the vesting period for the options, generally 5 years.

(5) The estimated future payouts under the Enbridge STIP are determined for the indicated fiscal year, based upon achievement of performance goals established at the beginning of the fiscal year for each of the NEOs. The payouts earned under the STIP for each fiscal year are generally paid to the NEO on the last business day of February of the year following the fiscal year in which the payout is earned. The performance goals include pre-determined financial, safety, corporate governance and operational goals that are aligned with the business objectives for Enbridge and the business unit(s) to which the NEOs are assigned, in addition to individual performance objectives. Based upon the level achieved in meeting the pre-determined objectives, a multiple is determined that can vary from a low of zero, if the level of achievement is significantly below the stated objectives, to a high of two, if the level of achievement significantly exceeds the stated objective, with the mid-point or target representing achievement of 100 percent of the pre-established goals. The multiple is then applied to the bonus level, represented as a percentage of base salary, for each NEO. The STIP targets for each NEO expressed as a percentage of salary for 2007 is as follows:

	Threshold	**Target**	**Maximum**
S.J.J. Letwin	—	50%	100%
T.L. McGill	—	40%	80%
J.R. Bird	—	50%	100%
M.A. Maki	—	35%	70%
R.L. Adams	—	35%	70%

(1) Each incentive stock option award has a ten year term and vests pro rata as to one-fourth of the option award beginning on the first anniversary of the grant date thus, the vesting dates for each of the option awards in this table can be calculated accordingly. As an example, for Mr. Letwin's grant that expires on February 6, 2013, the grant date would be ten years prior or February 6, 2003 and as a result, the remaining unexercisable amounts become fully vested on February 6, 2007 representing four years following the grant date.

(2) Performance-based stock options, or PBSOs, were provided to certain of our NEOs on September 16, 2002 and August 15, 2007 and are similar to the incentive stock options, except that the quantity that become exercisable are subject to both time and performance requirements. PBSOs are granted on an infrequent basis and provide the eligible NEO the opportunity to acquire one Enbridge Share for each option held when the specified time and performance conditions are met. The PBSOs granted September 16, 2002, became exercisable, as to 50 percent of the grant, when the price of an Enbridge Share exceeded $30.50 for 20 consecutive trading days during the period September 16, 2002 to September 16, 2007, and became exercisable as to 100 percent when the price of an Enbridge share exceeded $35.50 CAD for 20 consecutive trading days during the same period. As a result of achieving the established performance criteria, the initial five year term of the options was extended to eight years expiring on September 16, 2010. In addition to the performance hurdles, the PBSOs are also time vested 20% annually over 5 years. As of December 31, 2007, 100 percent of the PBSOs granted September 16, 2002, had vested and were exercisable and none of the PBSOs granted August 15, 2007, were vested or exercisable.

(3) The unearned shares, units or other rights that have not vested under stock awards represent PSUs for which the performance criteria discussed in footnote number 2 of the Grants of Plan-Based Awards table have not been achieved. The PSUs become vested upon achieving the established performance criteria as set forth in the aforementioned footnote.

(4) The exercise prices of the ISDs and PBSOs are denominated in CAD, which have been converted to USD using the exchange rate on the grant date as set forth below:

Option Grant Date	Option Exercise Price CAD	Exchange Rate USD/CAD	Option Exercise Price USD
February 21, 2001	$ 19.1000	$ 0.6508	$ 12.4303
February 5, 2002	21.8500	0.6259	13.6759
September 16, 2002	23.1500	0.6319	14.6285
February 6, 2003	20.8250	0.6572	13.6862
February 4, 2004	25.7200	0.7504	19.3003
February 3, 2005	31.6800	0.8046	25.4897
February 13, 2006	36.4700	0.8660	31.5830
February 9, 2007	38.2600	0.8519	32.5937
August 15, 2007	36.5700	0.9306	34.0320

OPTION EXERCISES AND STOCK VESTED

	Option Awards		Stock Awards	
Name	Number of Shares Acquired on Exercise (#)	Value Realized on Exercise ($)	Number of Shares Acquired on Vesting(1) (#)	Value Realized on Vesting(2) ($)
S.J.J. Letwin	71,000	955,832.74	20,702.32	$ 392,467.47
T.L. McGill	—	—	3,166.67	89,124.18
J.R. Bird	—	—	16,038.10	307,147.03
M.A. Maki	—	—	2,353.01	66,224.21
R.L. Adams	—	—	2,221.07	62,510.71

(1) The number of shares acquired on vesting represent the number of PSUs issued in 2004 that matured on March 7, 2007, and in 2005 that matured on December 31, 2007. As discussed above in footnote number 2 of the Grants of Plan-Based Awards table, no shares are issued with respect to the PSUs that become vested rather cash is paid in an amount based on the value of an Enbridge share at the maturity date and the level of achievement of the established performance goals.

(2) The value realized on vesting has been converted to USD using an exchange rate of $1.1786 CAD = $1 USD for the PSUs that matured on March 7, 2007, and an exchange rate of $0.9881 CAD = $1 USD for the PSUs that matured on December 31, 2007. These exchange rates represent the noon buying rate in New York for transfers of CAD on the respective maturity dates.

(3) The value realized on exercise of options by Mr. Letwin has been converted to USD using an exchange rate of $0.9818 CAD = $1 USD for 40,000 options exercised on October 5, 2007 and an exchange rate of $1.0194 CAD = $1 USD for 31,000 options exercised on September 18, 2007.

Pension Plan

Enbridge sponsors two basic pension plans, the Retirement Plan for Employees' Annuity Plan ("EI RPP") and the Enbridge Employee Services, Inc. Employees' Annuity Plan ("QPP"), which provide defined pension benefits and cover employees in Canada and the United States, respectively. Both plans are non-contributory. Enbridge also sponsors supplemental nonqualified retirement plans in both Canada ("EI SPP") and the United States ("US SPP"), which provide pension benefits for the NEOs in excess of the tax-qualified plans' limits. We collectively refer to the EI RPP, the QPP, the EI SPP and the US SPP as the "Pension Plans." Retirement benefits under the Pension Plans are based on the employees' years of service and final average remuneration with an offset for Social Security benefits. These benefits are partially indexed to inflation after a named executive officer's retirement.

For service prior to January 1, 2000, the Pension Plans provide a yearly pension payable after age 60 in the normal form (60 percent joint and last survivor) equal to: (a) 1.6 percent of the average of the participant's highest annual salary during three consecutive years out of the last ten years of credited service multiplied by (b) the number of credited years of service. The pension is offset, after age 65, by 50 percent of the participant's Social Security benefit, prorated by years in which the participant has both

credited service and Social Security coverage. An unreduced pension is payable if retirement is after age 55 with 30 or more years of service, or after age 60. Early retirement reductions apply if a participant retires and does not meet these requirements. Retirement benefits paid from the Plan are indexed at 50 percent of the annual increase in the consumer price index.

For service after December 31, 1999, the Pension Plans provide for senior management employees, including the NEOs, a yearly pension payable after age 60 in the normal form (60 percent joint and last survivor) equal to: (a) 2 percent of the sum of (i) the average of the participant's highest annual base salary during three consecutive years out of the last ten years of credited service and (ii) the average of the participant's three highest annual performance bonus periods, represented in each period by 50 percent of the actual bonus paid, in respect of the last five years of credited service, multiplied by (b) the number of credited years of service. An unreduced pension is payable if retirement is after age 55 with 30 or more years of service, or after age 60. Early retirement reductions apply if a participant retires and does not meet these requirements. Retirement benefits paid from the Plan are indexed at 50 percent of the annual increase in the consumer price index.

The table illustrates the total annual pension entitlements assuming the eligibility requirements for an unreduced pension have been satisfied. The present value of the accumulated benefits has been determined under the accrued benefit valuation method with the following assumptions:

Discount rate	6.00% at year end 2007
Salaries	Current
Inflation	2.50% per year
Retirement age	60
Terminations	None
Mortality	
Pre-retirement	None
Post-retirement	RP-2000 Projected to 2005

Plan benefits that exceed maximum pension rules applicable to registered plan benefits are paid from the Enbridge supplemental pension plans. Other trusteed pension plans, with varying contribution formulae and benefits, cover the balance of employees.

Mr. Bird accumulated pension credits equal to 2.0% for each year of service from his date of employment until January 1, 2000 and 3.26% for each year of service thereafter to his sixtieth birthday. Mr. Letwin was granted six additional years of credited service on his employment date based on the pension formula applicable for service prior to January 1, 2000.

PENSION BENEFITS

Name (a)	Plan Name (b)	Number Of Years Credited Service (#) (c)	Present Value of Accumulated Benefit ($) (d)	Payments During Last Fiscal Year ($) (e)

Employment and Severance Agreements

Enbridge has employment and severance agreements in place with each of Stephen J. J. Letwin, Managing Director and Chief Executive Officer of Enbridge Management and the General Partner, and J. Richard Bird, Executive Vice President—Liquids Pipelines of Enbridge Management and the General Partner. The agreements took effect on April 14, 2003 and were amended effective June 24, 2004. The agreements continue in effect until the earlier of (i) the applicable executive's voluntary retirement in accordance with the retirement policies established for senior employees of Enbridge, (ii) such executive's voluntary resignation, other than a voluntary resignation within 90 days after a "constructive dismissal" (as defined in the agreements) or within one year following a change of control of Enbridge, (iii) termination based on death or disability of such executive, or (iv) termination of such executive's employment by Enbridge.

The agreements provide that Enbridge will pay severance benefits to each of Mr. Letwin and Mr. Bird if (i) his employment is involuntarily terminated without cause or because of his disability, (ii) he elects to terminate his employment within 60 days of the first anniversary of the occurrence of a change of control of Enbridge, or (iii) he elects to terminate his employment within 60 days following constructive dismissal. In each such instance, and subject to the terms of the agreements, Enbridge will pay to the applicable executive the following:

(a) A lump sum payment equal to two times the sum of: (i) twelve times the gross monthly salary paid to him in the last full month of employment and (ii) the average of the last two years of the Enbridge Short Term Incentive Plan (STIP) awards paid to him;

(b) A lump sum payment equal to two times the cash value of the last annual flex benefit credit allowance provided to him under Enbridge's flexible benefit program, unless he continues to be covered through Enbridge's annuitant benefit program or the benefits program of another employer;

(c) A lump sum payment equal to the value of his annual incentive bonus to be paid for the calendar year in which termination occurs, pro rated based upon the number of days of his employment in such year;

(d) A lump sum payment equal to the value of all of his accrued and unpaid annual vacation pay to the date of his termination;

(e) A lump sum payment equal to two times the cash value of the last annual flexible perquisite allowance provided to him under Enbridge's flexible perquisites program, less any amounts paid to him but unearned by virtue of such termination of employment; and

(f) Payment for financial counseling or career counseling assistance in an amount up to a maximum of $10,000.

The agreements also provide that each of Mr. Letwin and Mr. Bird are entitled to certain benefits, including two years of additional service added to the service already accrued at the date of his termination under the Enbridge defined benefit pension plan and supplemental benefit pension plan and cash payment of certain non-vested options, if any, that are cancelled under the Incentive Stock Option Plan (ISOP) as a consequence of termination of his employment. In the case of options granted pursuant to the ISOP, the payment is calculated based on the in-the-money value of the applicable executive's non-vested option at the date of his termination.

According to the agreements, a "change of control" means:

- the sale to a person or acquisition by a person not affiliated with Enbridge or its subsidiaries of net assets of Enbridge or its subsidiaries having a value greater than 50% of the fair market value of the net assets of Enbridge and its subsidiaries determined on a consolidated basis prior to such sale whether such sale or acquisition occurs by way of reconstruction, reorganization, recapitalization, consolidation, amalgamation, arrangement, merger, transfer, sale or otherwise;

- any change in the holding, direct or indirect, of shares of Enbridge by a person not affiliated with Enbridge as a result of which such person, or a group of persons, or persons acting in concert, or persons associated or affiliated with any such person or group within the meaning of the Securities Act (Alberta), are in a position to exercise effective control of Enbridge whether such change in the holding of such shares occurs by way of takeover bid, reconstruction, reorganization, recapitalization, consolidation, amalgamation, arrangement, merger, transfer, sale or otherwise; and for the purposes of this Agreement, a person or group of persons holding shares or other securities in excess of the number which, directly or following conversion thereof, would entitle the holders thereof to cast 20% or more of the votes attaching to all shares of Enbridge which, directly or following conversion of the convertible securities forming part of the holdings of the person or group of persons noted above, may be cast to elect directors of Enbridge shall be deemed, other than a person holding such shares or other securities in the ordinary course of business as an investment manager who is not using such holding to exercise effective control, to be in a position to exercise effective control of Enbridge;

- any reconstruction, reorganization, recapitalization, consolidation, amalgamation, arrangement, merger, transfer, sale or other transaction involving Enbridge where shareholders of Enbridge immediately prior to such reconstruction, reorganization, recapitalization, consolidation, amalgamation, arrangement, merger, transfer, sale or other transaction hold less than 60% of the shares of Enbridge or of the continuing corporation following completion of such reconstruction, reorganization, recapitalization, consolidation, amalgamation, arrangement, transfer, sale or other transaction;

- Enbridge ceases to be a distributing corporation as that term is defined in the Canada Business Corporations Act;

- any event or transaction which Enbridge board of directors, in its discretion, deems to be a change of control; or
- Enbridge board of directors is no longer comprised of a majority of incumbent directors, who are defined as directors who were directors immediately prior to the occurrence of the transaction, elections or appointments giving rise to a change of control and any successor to an incumbent director who was recommended for election at a meeting of Enbridge shareholders, or elected or appointed to succeed any incumbent director, by the affirmative vote of the directors, which affirmative vote includes a majority of the incumbent directors then on the board of directors.

Each of Mr. Letwin and Mr. Bird is subject during his employment (and for two years thereafter with regard to disclosure of confidential information) to restrictions on (i) any practice or business in competition with Enbridge or its affiliates and (ii) disclosure of the confidential information of Enbridge or its affiliates.

In the event of involuntary termination without cause or because of disability or voluntary termination within 60 days of the first anniversary of the occurrence of a change of control of Enbridge or within 60 days following constructive dismissal, Enbridge would owe approximately $5 million and $6 million to Mr. Letwin and Mr. Bird, respectively. Such amounts assume that termination was effective as of December 31, 2007, and as a result include amounts earned through such time and are estimates of the amounts which would be paid out to each of Mr. Letwin and Mr. Bird upon termination under such circumstances. The actual amounts to be paid out can only be determined at the time of such executive's separation from Enbridge.

Director Compensation

As a partnership, we are managed by Enbridge Management, as the delegate of Enbridge Energy Company, Inc., our general partner. The boards of directors of Enbridge Management and our general partner, which are comprised of the same persons, perform for us the functions of a board of directors of a business corporation. We are allocated 100 percent of the director compensation of these board members. Enbridge employees who are members of the boards of directors of the General Partner or Enbridge Management do not receive any additional compensation for serving in those capacities.

As of January 1, 2006, the Director Compensation Plan was amended to increase the annual retainer to $75,000 and additional meeting fees were eliminated. The retainers paid to directors serving as the chairman of the boards and chairman of the audit committees will remain at current levels. The out of state travel fee will be increased to $1,500 per meeting. As part of this change to the Director Compensation Plan, the directors voted to amend the Corporate Governance Guidelines to incorporate an expectation that independent directors will hold a personal investment in either or both of us or Enbridge Management, of at least two times the annual board retainer, which currently would be $150,000 (i.e., 2 X $75,000 = $150,000). Directors would be expected to achieve the foregoing level of equity ownership by the later of January 1, 2011 or five years from the date they became a director.

DIRECTOR COMPENSATION

Name	Fees Earned or Paid in Cash ($)	Stock Awards ($)	Option Awards ($)	Non-Equity Incentive Plan Compensation ($)	Change in Pension Value and Nonqualified Deferred Compensation Earnings ($)	All Other Compensation ($)	Total ($)
J.A. Connelly *Audit Committee Chairman*	84,000	—	—	—	—	—	84,000
M.O. Hesse *Chairman of the Board*	86,000	—	—	—	—	—	86,000
G.K. Petty	81,000	—	—	—	—	—	81,000
D.A. Westbrook	20,250	—	—	—	—	—	20,250

The General Partner indemnifies each director for actions associated with being a director to the full extent permitted under Delaware law and maintains errors and omissions insurance.

COMPENSATION REPORT OF THE BOARD OF DIRECTORS

The Board of Directors of Enbridge Energy Management, L.L.C., as delegate of the general partner of Enbridge Energy Partners, L.P., has reviewed and discussed the Compensation Discussion and Analysis section of this report with management and, based on that review and discussion, has recommended that the Compensation Discussion and Analysis be included in this report.

Item 12. Security Ownership of Certain Beneficial Owners and Management

SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS

The following table sets forth information as of February 20, 2008, with respect to persons known to us to be the beneficial owners of more than 5% of any class of the Partnership's units:

Name and Address of Beneficial Owner	Title of Class	Amount and Nature of Beneficial Ownership	Percent Of Class
Enbridge Energy Management, L.L.C. 1100 Louisiana, Suite 3300 Houston, TX 77002	i-units	13,815,388	100.0
Enbridge Energy Company, Inc. 1100 Louisiana, Suite 3300 Houston, TX 77002	Class B common units Class C units	3,912,750 6,032,016	100.0 32.8
CDP Infrastructures Fund G.P. 1000 place Jean-Paul-Riopelle Montreal, Québec H2Z 2B3	Class C units	11,072,473	60.1
Tortoise Energy Infrastructure Corporation 10801 Mastin Blvd., Suite 222 Overland Park, KS 66210	Class C units	1,008,091	5.5

SECURITY OWNERSHIP OF MANAGEMENT AND DIRECTORS

The following table sets forth information as of February 20, 2008, with respect to each class of our units and the Listed Shares of Enbridge Management beneficially owned by the NEOs, directors and nominees for director of the General Partner and all executive officers, directors and nominees for director of the Partnership as a group:

	Enbridge Energy Partners, L.P.			Enbridge Energy Management, L.L.C.		
Name	Title of Class	Amount and Nature of Beneficial Ownership[1]	Percent Of Class	Title of Class	Number of Shares[1]	Percent Of Class
M.O. Hesse	Class A common units	—	—	Listed Shares	8,222.05	*
J.A. Connelly	Class A common units	7,000	*	Listed Shares	—	—
G.K. Petty	Class A common units	2,617	*	Listed Shares	1,036.14	*
D.A. Westbrook	Class A common units	5,500	*	Listed Shares	—	—
S.J.J. Letwin	Class A common units	15,000	*	Listed Shares	—	—
T.L. McGill	Class A common units	—	—	Listed Shares	1,461.28	*

All Officers, directors and nominees as a group 19 persons)	Class A common units	30,117	*	Listed Shares	10,719.47	*

* Less than 1%.

(1) Each beneficial owner has sole voting and investment power with respect to all the units or shares attributed to him/her.

Item 13. Certain Relationships and Related Transactions, and Director Independence

INTEREST OF THE GENERAL PARTNER IN THE PARTNERSHIP

At December 31, 2007, our general partner had the following ownership interest in us:

	Quantity	Effective Ownership %
Direct ownership		
Class B common units representing limited partner interest	3,912,750	4.2%
Class C units representing limited partner interest	5,920,109	6.4%
General Partner interest	—	2.0%
Indirect ownership		
Enbridge Management shares (Listed and Voting)	2,336,038	2.5%
Total effective ownership	12,168,897	15.1%

INTEREST OF ENBRIDGE MANAGEMENT IN THE PARTNERSHIP

At December 31, 2007, Enbridge Management owned 13,564,086 i-units, representing a 14.7% limited partner interest in us. The i-units are a separate class of our limited partner interests. All of our i-units are owned by Enbridge Management and are not publicly traded. Enbridge Management's limited liability company agreement provides that the number of all of its outstanding shares, including the voting shares owned by the General Partner, at all times will equal the number of i-units that it owns. Through the combined effect of the provisions in the Partnership Agreement and the provisions of Enbridge Management's limited liability company agreement, the number of outstanding Enbridge Management shares and the number of our i-units will at all times be equal.

CASH DISTRIBUTIONS

As discussed in "Part II, Item 7", we make quarterly cash distributions of all of our available cash to our General Partner and the holders of our common units. The holders of our i-units and Class C units receive in-kind distributions under the Partnership Agreement. Our General Partner receives incremental incentive cash distributions on the portion of cash distributions that exceed certain target thresholds on a per unit basis as follows:

	Unitholders	General Partner
Quarterly Cash Distributions per Unit:		
Up to $0.59 per unit	98%	2%
First Target—$0.59 per unit up to $0.70 per unit	85%	15%
Second Target—$0.70 per unit up to $0.99 per unit	75%	25%
Over Second Target—Cash distributions greater than $0.99 per unit	50%	50%

During 2007, we paid cash and incentive distributions to our general partner for its general partner ownership interest of approximately $34.9 million and cash distributions of $14.5 million in connection with its ownership of the Class B common units. The cash distributions we make to our general partner for its general partner ownership interest exclude an amount equal to two percent of the i-unit and Class C unit distributions to maintain its two percent general partner interest.

IN-KIND DISTRIBUTIONS

Enbridge Management, as owner of our i-units, does not receive distributions in cash. Instead, each time that we make a cash distribution to the General Partner and the holders of our Class A and Class B common units, we issue additional i-units to Enbridge Management in an amount determined by dividing the cash amount distributed per limited partner unit by the average price of one of Enbridge Management's listed shares on the NYSE for the 10-trading day period immediately preceding the ex-dividend date for Enbridge Management's shares multiplied by the number of shares outstanding on the record date. In 2007, we distributed a total of 889,938 i-units to Enbridge Management and retained cash totaling approximately $48.4 million in connection with these in-kind distributions.

Holders of our Class C units receive quarterly distributions of additional Class C units with a value equal to the quarterly cash distribution we pay to the holders of our Class A and Class B common units. We determine the additional Class C units we will issue by dividing the quarterly cash distribution per unit we pay on our Class A and Class B common units by the average market price of a Class A common unit as listed on the NYSE for the 10-trading day period immediately preceding the ex-dividend date for our Class A common units multiplied by the number of Class C units outstanding on the record date. In 2007, we distributed a total of 385,032 Class C units to our general partner in lieu of making cash distributions and retained cash totaling approximately $21.1 million in connection with these in-kind distributions.

GENERAL PARTNER CONTRIBUTIONS

Pursuant to our partnership agreement, our general partner is at all times required to maintain its two percent general partner ownership interest in us. During 2007, in connection with our issuances and sales in April 2007 of approximately 5.9 million Class C units, and in May 2007 of 5.3 million Class A common units, our general partner contributed approximately $6.4 million and $6.1 million to us, respectively, to maintain its two percent general partner ownership interest.

OTHER RELATED PARTY TRANSACTIONS

We do not directly employ any of the individuals responsible for managing or operating our business, nor do we have any directors. We obtain managerial, administrative and operational services from our general partner and affiliates of Enbridge pursuant to service agreements among us, Enbridge Management, and affiliates of Enbridge. Pursuant to these service agreements, we have agreed to reimburse our general partner and affiliates of Enbridge for the cost of managerial, administrative, operational and director services they provide to us.

Hungary Note Payable

In December 2007, we repaid $145.0 million of a note payable to Enbridge Hungary Liquidity Management Ltd. (the "Hungary Note"), a wholly-owned subsidiary of Enbridge, including $8.8 million of accrued interest. We repaid the Hungary Note with proceeds we received from entering into a new note payable agreement with Hungary Liquidity Management Ltd. (the "new Hungary Note") on substantially the same terms, and approximately $15 million from our existing cash. The new Hungary Note bears interest at a fixed rate of 8.4% per annum that is payable semi-annually in June and December of each year through its maturity in December 2017. Similar to the old Hungary Note, the new note allows us the option of paying accrued and unpaid interest in the form of additional indebtedness by increasing the principal balance of the note for the amounts due. Consistent with the original Hungary Note, the new Hungary Note has cross-default provisions that are triggered by events of default under our First Mortgage Notes or defaults under our Credit Facility. The new Hungary Note is subordinate to our Credit Facility and other senior indebtedness, and ranks equally with current and future Junior Notes. We entered into the original Hungary Note agreement in connection with our acquisition of the Midcoast system in October 2002.

EUS Credit Agreement

In December 2007, we entered into an unsecured revolving credit agreement (the "EUS Credit Agreement") with Enbridge (U.S.) Inc., a wholly-owned subsidiary of Enbridge. The EUS Credit Agreement provides for a maximum principal amount of credit available to us at any one time of $500 million for a three-year term that matures in December 2010. The EUS Credit Agreement also includes financial covenants that are consistent with those in our Second Amended and Restated Credit Agreement. Amounts borrowed under the EUS Credit Agreement bear interest at rates that are consistent with the interest rates set forth in our Second Amended and Restated Credit Agreement. At December 31, 2007, we had no balances outstanding under the EUS Credit Agreement and the full amount remains available for our use.

Facilities Cost Reimbursement Agreement

In 2007, we entered into an agreement with Enbridge Pipelines Inc., a wholly-owned subsidiary of Enbridge, to install and operate certain sampling and related facilities for the purpose of improving the quality of crude oil and the transportation services on our Lakehead system, which directly increases the transportation services revenue of Enbridge Pipelines Inc. As compensation for installing and operating these transportation facilities, Enbridge Pipelines Inc. makes annual payments to us on a cost of service basis. The income we accrued for providing these transportation services in 2007 was approximately $0.6 million.

For further discussion of these and other related party transactions, refer to "Note 11—Related Party Transactions" in the consolidated financial statements beginning on Page F-2 of this Annual Report on Form 10-K.

REVIEW, APPROVAL OR RATIFICATION OF TRANSACTIONS WITH RELATED PERSONS

If we contemplate entering into a transaction, other than a routine or in the ordinary course of business transaction, in which a related person will have a direct or indirect material interest, the proposed transaction is submitted for consideration to the board of directors of our general partner or Enbridge Management, as appropriate. The board of directors then determines whether it is advisable to constitute a special committee of independent directors to evaluate the proposed transaction. If a special committee is appointed, the committee obtains information regarding the proposed transaction from management and determines whether it is advisable to engage independent legal counsel or an independent financial advisor to advise the members of the committee regarding the transaction. If the special committee retains such counsel or financial advisor, it considers the advice and, in the case of a financial advisor, such advisor's opinion as to whether the transaction is fair to us and all of our unitholders.

Potential transactions with related persons that are not financially significant so as to require review by the board of directors are disclosed to the President of Enbridge Management and our general partner and reviewed for compliance with the Enbridge Statement on Business Conduct. The President may also consult with legal counsel in making such determination. If a related person transaction occurred and was later found not to comply with the Statement on Business Conduct, the transaction would be reported to the board of directors for further review and ratification or remedial action.

During 2007, we had the following "related person" transactions (as the term is defined in Item 404 of Regulation S-K):

- An affiliate of Enbridge which provides employee services to the Partnership continued a previously existing employment relationship with Jan Connelly, the sister of Jeffrey A. Connelly, a member of the Board of Directors. Ms. Connelly is employed in our Michigan office as the Manager, Origination. During 2007, she received total cash compensation of $162,737.97 and benefits estimated at approximately 35% of her cash compensation for a total of $219,696.26.

Item 14. Principal Accountant Fees and Services

The following table sets forth the aggregate fees billed for professional services rendered by PricewaterhouseCoopers LLP, our principal independent auditors, for each of our last two fiscal years.

	For the years ended December 31, 2007	2006
Audit fees[1]	$ 2,453,000	$ 2,405,200
Audit related fees	—	—
Tax fees[2]	702,500	625,000
All other fees	—	—
Total	$ 3,155,500	$ 3,030,200

(1) Audit fees consist of fees billed for professional services rendered for the audit of our consolidated financial statements, reviews of our interim consolidated financial statements, audits of various subsidiaries for statutory and regulatory filing requirements and our debt and equity offerings.

(2) Tax fees consist of fees billed for professional services rendered for federal and state tax compliance for Partnership tax filings and unitholder K-1's.

Engagements for services provided by PricewaterhouseCoopers LLP are subject to pre-approval by the Audit, Finance & Risk Committee of Enbridge Management's board of directors, or services up to $50,000 may be approved by the Chairman of the Audit, Finance & Risk Committee, under board of directors' delegated authority. All services in 2007 and 2006 were approved by the Audit, Finance & Risk Committee.

PART IV

Item 15. Exhibits, Financial Statement Schedules

The following documents are filed as a part of this report:

(1) *Financial Statements, which are incorporated by reference in Item 8 are included beginning on page F-1.*

a. Report of PricewaterhouseCoopers LLP, Independent Registered Public Accounting Firm.

b. Consolidated Statements of Income for the years ended December 31, 2007, 2006, and 2005.

c. Consolidated Statements of Comprehensive Income for the years ended December 31, 2007, 2006, and 2005.

d. Consolidated Statements of Cash Flows for the years ended December 31, 2007, 2006, and 2005.

e. Consolidated Statements of Financial Position as of December 31, 2007 and 2006.

f. Consolidated Statements of Partners' Capital for the years ended December 31, 2007, 2006, and 2005.

g. Notes to the Consolidated Financial Statements.

(2) *Financial Statement Schedules.*

All schedules have been omitted because they are not applicable, the required information is shown in the consolidated financial statements or Notes thereto, or the required information is immaterial.

(3) *Exhibits.*

Reference is made to the "Index of Exhibits" following the signature page, which is hereby incorporated into this Item.

SIGNATURES

INDEX TO CONSOLIDATED FINANCIAL STATEMENTS, SUPPLEMENTARY INFORMATION AND CONSOLIDATED FINANCIAL STATEMENT SCHEDULES

ENBRIDGE ENERGY PARTNERS, L.P.

FINANCIAL STATEMENT SCHEDULES

Financial statement schedules not included in this report have been omitted because they are not applicable or the required information is either immaterial or shown in the consolidated financial statements or notes thereto.

Report of Independent Registered Public Accounting Firm

To the Partners of
Enbridge Energy Partners, L.P.:

In our opinion, the accompanying consolidated statements of financial position and the related consolidated statements of income and comprehensive income, of partners capital and of cash flows present fairly, in all material respects, the financial position of Enbridge Energy Partners, L.P. and its subsidiaries (the "Partnership") at December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2007 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Partnership maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Partnership's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on these financial statements and on the Partnership's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

ENBRIDGE ENERGY PARTNERS, L.P.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. PARTNERSHIP ORGANIZATION AND NATURE OF OPERATIONS

General

Enbridge Energy Partners, L.P. and its consolidated subsidiaries, referred to herein as "we," "us," "our," and the "Partnership," is a publicly-traded Delaware limited partnership that owns and operates crude oil and liquid petroleum transportation and storage assets, and natural gas gathering, treating, processing, transmission and marketing assets in the United States of America. Our Class A common units are traded on the New York Stock Exchange ("NYSE") under the symbol "EEP."

We were formed in 1991 by Enbridge Energy Company, Inc. (the "General Partner"), which is an indirect, wholly-owned subsidiary of Enbridge Inc. ("Enbridge") of Calgary, Alberta. We were formed to acquire, own and operate the crude oil and liquid petroleum transportation assets of Enbridge Energy, Limited Partnership (the "OLP") which owns the United States portion of a crude oil and liquid petroleum pipeline system extending from western Canada through the upper and lower Great Lakes region of the United States to eastern Canada.

We are a geographically and operationally diversified organization, providing crude oil gathering, transportation and storage services, and natural gas gathering, treating, processing, marketing and transportation services in the Gulf Coast and Mid-continent regions of the United States. We hold our assets in a series of limited liability companies and limited partnerships that we own directly or indirectly.

Our ownership includes general partner interests and limited partner interests. Our limited partner interests consist of Class A and Class B common units, Class C units and i-units, which we collectively refer to as the limited partner units. At December 31, 2007 and 2006, our ownership is distributed as follows:

	2007	2006
Class A common units owned by the public	59.6%	63.1%
Class B common units owned by our General Partner	4.2%	4.9%
Class C units owned by our General Partner	6.4%	7.0%
Class C units owned by institutional investors	13.1%	7.0%
i-units owned by Enbridge Management	14.7%	16.0%
General Partner interest	2.0%	2.0%
	100.0%	100.0%

Enbridge Energy Management, L.L.C.

Enbridge Energy Management, L.L.C. and its subsidiary, which we refer to as Enbridge Management, is a Delaware limited liability company that was formed in May 2002. Our general partner, through its direct ownership of the voting shares of Enbridge Management, elects all of the directors of Enbridge Management. Enbridge Management's Listed Shares are traded on the NYSE under the symbol "EEQ." Enbridge Management owns all of a special class of our limited partner interests, referred to as "i-units" and receives its earnings from this investment.

Enbridge Management's principal activity is managing and controlling our business and affairs pursuant to a delegation of control agreement with our general partner. The delegation of control agreement provides that Enbridge Management will not amend or propose to amend our partnership agreement, allow a merger or consolidation involving us, allow a sale or exchange of all or substantially all of our assets or dissolve or liquidate us without the approval of our general partner. In accordance with its limited liability company agreement, Enbridge Management's activities are restricted to being our limited partner and managing our business and affairs.

Enbridge Inc.

Enbridge is the indirect parent of our general partner and is publicly traded on the NYSE and Toronto Stock Exchange under the symbol "ENB." Enbridge is a leader in the transportation and distribution of energy, with a focus on crude oil and liquids pipelines, natural gas pipelines and natural gas distribution in North America. Enbridge also has international interests located in Western Europe and Latin America. At December 31, 2007 and 2006, Enbridge and its consolidated subsidiaries owned an effective 15.1% and 16.7% interest in us through its ownership in Enbridge Management and our general partner.

Business Segments

We conduct our business through three segments: Liquids, Natural Gas, and Marketing.

Liquids

Our Liquids segment includes the Lakehead, North Dakota, and the Mid-Continent systems. Our Lakehead system consists of an interstate common carrier crude oil and liquid petroleum pipeline that is regulated by the Federal Energy Regulatory Commission, or FERC, and storage assets, all of which are located in the Great Lakes and Midwest regions of the United States. Our Lakehead system, together with the Enbridge system in Canada owned by Enbridge, forms the longest liquid petroleum pipeline in the world. The Lakehead system, which spans approximately 3,300 miles, has been in operation for over 50 years and is the primary transporter of crude oil and liquid petroleum from western Canada to the United States. The Lakehead system serves all the major refining centers in the Great Lakes and Midwest regions of the United States and the province of Ontario, Canada. Our North Dakota system includes approximately 330 miles of crude oil gathering lines connected to an interstate transportation line that is approximately 620 miles long and is regulated by the FERC. The North Dakota system connects directly into the Lakehead system in the state of Minnesota. Our Mid-Continent system consists of over 480 miles of active crude oil pipelines, including the FERC-regulated Ozark pipeline and approximately 16.7 million barrels of storage capacity, which serve refineries in the U.S. Mid-continent region from Cushing, Oklahoma.

Natural Gas

Our Natural Gas segment consists of natural gas gathering and transmission pipelines, treating and processing plants and related facilities predominantly located in active producing basins in east and north Texas, as well as the Texas panhandle and western Oklahoma. Our Natural Gas segment includes ten natural gas treating plants and 24 natural gas processing plants at December 31, 2007, excluding plants that are inactive or under construction. In addition, our Natural Gas segment includes approximately 11,500 miles of natural gas gathering and transmission pipelines, as well as trucks, trailers and rail cars used for transporting natural gas liquids ("NGL" or "NGLs"), crude oil and carbon dioxide.

Our Natural Gas segment also includes three FERC-regulated natural gas transmission pipeline systems located in the Southeast and Gulf Coast regions of the United States.

Marketing

Our Marketing segment primarily provides natural gas supply, transportation, balancing, storage and sales services for producers and wholesale customers on our natural gas pipelines as well as other interconnected natural gas pipeline systems. We primarily undertake marketing activities to increase the utilization of our natural gas pipelines, realize incremental income on gas purchased at the wellhead, and provide value-added services to customers.

Our Marketing business purchases third-party pipeline transportation capacity which provides us and our customers with access to natural gas markets that might not be directly accessible from our existing natural gas pipelines. Our Marketing business also purchases third-party storage capacity which permits us to inject and store natural gas over various periods of time for withdrawal as these products become needed by end users of natural gas. These contracts may be denoted as firm transportation, interruptible transportation, firm storage, interruptible storage, or parking and lending services. These various contract structures are used to mitigate risk associated with our natural gas purchase and sale contracts and to provide us with opportunities to competitively market natural gas and NGL products.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of Presentation and Use of Estimates

We prepare our consolidated financial statements in accordance with accounting principles generally accepted in the United States of America ("GAAP"). Our preparation of these consolidated financial statements requires us to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, expenses and the disclosure of contingent assets and liabilities. We regularly evaluate these estimates utilizing historical experience, consultation with experts and other methods we consider reasonable in the circumstances. Nevertheless, actual results may differ significantly from these estimates. We record the effect of any revisions to these estimates in our consolidated financial statements in the period in which the facts that give rise to the revision become known.

Principles of Consolidation

The consolidated financial statements include the accounts of the Partnership and its wholly-owned subsidiaries on a consolidated basis. All significant intercompany accounts and transactions have been eliminated in consolidation.

Comparative Amounts

We have made a reclassification to the prior years' reported amounts to conform to our presentation in the 2007 consolidated statements of financial position between other assets, net and intangibles, net. We reclassified $6.4 million from other assets, net to intangibles, net in our December 31, 2006 consolidated statement of financial position related to rights we received for contributions we made in aid of construction projects, consistent with our current period presentation.

Accounting for Regulated Operations

Certain of our liquids and natural gas activities are subject to regulation by the FERC and various state authorities. Regulatory bodies exercise statutory authority over matters such as construction, rates and underlying accounting practices, and ratemaking agreements with customers.

Certain of our natural gas systems are subject to the provisions of Statement of Financial Accounting Standards ("SFAS") No. 71, *Accounting for the Effects of Certain Types of Regulation.* Accordingly, we record certain assets and liabilities that result from the regulated ratemaking process that would not be recorded for non-regulated entities under U.S. GAAP.

Revenue Recognition and the Estimation of Revenues and Cost of Natural Gas

Liquids

Revenues of our Liquids segment are primarily derived from two sources, interstate transportation of crude oil and liquid petroleum under tariffs regulated by the FERC and contract storage revenues related to our crude oil storage assets. The tariffs established for our interstate pipelines specify the amounts to be paid by shippers for service between receipt and delivery locations and the general terms and conditions of transportation services on the respective pipeline systems. We recognize revenue upon delivery of products to our customers, when pricing is determinable and collectibility is reasonably assured. We recognize contract storage revenues based on contractual terms under which customers pay for the option to use available storage capacity and/or a fee based on throughput volumes. We recognize revenues as storage services are rendered, pricing is determinable and collectibility is reasonably assured. In the Liquids segment, we generally do not own the crude oil and liquid petroleum that we transport or store, and therefore, we do not assume significant direct commodity price risk.

Natural Gas

We recognize revenue upon delivery of natural gas and NGLs to customers, when services are rendered, pricing is determinable and collectibility is reasonably assured. We derive revenue in our Natural Gas segment from the following types of arrangements:

Fee-Based Arrangements:

Under a fee-based contract, we receive a set fee for gathering, treating, processing and transporting raw natural gas and providing other similar services. These revenues correspond with the volumes and types of services provided and do not depend directly on commodity prices. Revenues of the Natural Gas segment that are derived from transmission services consist of reservation fees charged for transmission of natural gas on the FERC-regulated interstate natural gas transmission pipeline systems, while revenues from intrastate pipelines are generally derived from the bundled sales of natural gas and transmission services. Customers of the FERC-regulated natural gas pipeline systems typically pay a reservation fee each month to reserve capacity plus a nominal commodity charge based on actual transmission volumes.

Other Arrangements:

We also use other types of arrangements to derive revenues for our Natural Gas segment. These arrangements expose us to commodity price risk, which we substantially mitigate with offsetting physical purchases and sales and by the use of derivative financial instruments to hedge open positions. We will continue to hedge a significant amount of our commodity price risk to support the stability of our cash flows. Refer to Note 14 for more information about the derivative activities we use to mitigate this commodity price risk.

These other types of arrangements are categorized as follows:

- Percentage-of-Liquids Contracts—Under these contracts, we receive a negotiated percentage of NGLs and condensate extracted from natural gas that requires processing, which we then sell at market prices and retain as our fee. This contract structure is similar to percentage-of-proceeds arrangements discussed below except that we only receive a percentage of the NGLs and condensate.

- Keep-Whole Contracts—Under these contracts, we gather or purchase raw natural gas from the producer for processing. A portion of the gathered or purchased natural gas is consumed during processing. We extract and retain the NGLs produced during processing for our own account, which we sell at market prices. In instances where we purchase raw gas at the wellhead, we also sell for our own account at market prices, the resulting residue gas. In those instances when we gather and process raw natural gas for the account of the producer, we must return to the producer residue gas with an energy content equivalent to the original raw gas we received as measured in British thermal units, or Btu.

- Percentage-of-Index Contracts—Under these contracts, we purchase raw natural gas at a negotiated discount to an agreed upon index price. We then resell the natural gas, generally for the index price, keeping the difference as our fee.

- Percentage-of-Proceeds Contracts—Under the terms of these contracts, we receive a negotiated percentage of the natural gas and NGLs we process in the form of residue natural gas, NGLs, condensate and sulfur, which we then sell at market prices and retain as our fee.

Under the terms of each of these contract structures, we retain a portion of the natural gas and NGLs as our fee in exchange for providing these producers with our services. In order to protect our unitholders from volatility in our cash flows that can result from fluctuations in commodity prices, we enter into derivative financial instruments to effectively fix the sales price of the natural gas and NGLs we anticipate receiving under the terms of these contracts. As a result of entering into these derivative financial instruments, we have largely fixed the amount of cash that we will receive in the future when we sell the processed natural gas and NGLs, although the market price of these commodities will continue to fluctuate during that time.

Marketing

Revenues of our Marketing segment are derived from providing supply, transportation, balancing, storage and sales services for producers and wholesale customers on our natural gas pipelines, as well as other interconnected pipeline systems. Natural gas marketing activities are primarily undertaken to realize incremental revenues on natural gas purchased at the wellhead, and to provide other services valued by our customers. In general, natural gas purchased and sold by our Marketing business is priced at a published daily or monthly index price. Sales to wholesale customers typically incorporate a premium for managing their transmission and balancing requirements. Higher premiums and associated revenues result from transactions that involve smaller volumes or that offer greater service flexibility for wholesale customers. At the request of some customers, we will enter into long-term fixed price purchase or sales contracts with our customers and usually will enter into offsetting positions under the same or similar terms. We recognize revenues upon delivery of natural gas and NGLs to our customers, when services are rendered, pricing is determinable and collectibility is reasonably assured.

Estimation of Revenue and Cost of Natural Gas

For our natural gas and marketing businesses, we must estimate our current month revenue and cost of gas to permit the timely preparation of our consolidated financial statements. We generally cannot compile actual billing information nor obtain actual vendor invoices within a timeframe that would permit the recording of this actual data prior to preparation of the consolidated financial statements. As a result, we record an estimate each month for our operating revenues and cost of natural gas based on the best available volume and price data for natural gas delivered and received, along with a true-up of the prior month's estimate to equal the prior month's actual data. As a result, there is one month of estimated data recorded in our operating revenues and cost of natural gas for each of the years ended December 31, 2007, 2006 and 2005. We believe that the assumptions underlying these estimates will not be significantly different from actual amounts due to the routine nature of these estimates and the stability of our processes.

Cash and Cash Equivalents

Cash equivalents are defined as all highly marketable securities with maturities of three months or less when purchased. The carrying value of cash and cash equivalents approximates fair value because of the short term to maturity of these investments.

We extinguish liabilities when a creditor has relieved us of our obligation, which occurs when our financial institution honors a check that the creditor has presented for payment. Accordingly, obligations for which we have issued check payments that have not yet been presented to the financial institution of approximately $38.5 million at December 31, 2007 and $46.9 million at December 31, 2006 are included in Accounts payable and other on our Consolidated Statements of Financial Position.

Allowance for Doubtful Accounts

We establish provisions for losses on accounts receivable if we determine that we will not collect all or part of the outstanding balance. Collectibility is reviewed regularly and an allowance is established or adjusted, as necessary, using the specific identification method.

Inventory

Inventory includes product inventory and materials and supplies inventory. We record all product inventories at the lower of our cost as determined on a weighted average basis, or market. The product inventory consists of liquids and natural gas. Upon disposition, product inventory is recorded to Cost of natural gas at the weighted average cost of inventory, including any adjustments recorded to reduce inventory to market value.

Materials and supplies inventory is either used during operations and charged to operating expense as incurred, or used for capital projects and new construction, and capitalized to property, plant and equipment.

Oil Measurement Adjustments

Oil measurement adjustments occur as part of the normal operating conditions associated with our Liquids pipelines. The three types of oil measurement adjustments include:

- physical, which result from evaporation, shrinkage, differences in measurement between receipt and delivery locations and other operational incidents;
- degradation, which result from mixing at the interface between higher quality light crude oil and lower quality heavy crude oil in pipelines; and
- revaluation, which are a function of crude oil prices, the level of the carrier's inventory and the inventory positions of customers.

Difficulties are inherent in quantifying oil measurement adjustments because physical measurements of volumes are not practical, as products continuously move through our pipelines and virtually all of these pipelines are located underground. Quantifying oil measurement adjustments is especially difficult for us because of the length of the pipeline systems and the number of different grades of crude oil and types of crude oil products we carry. We utilize engineering-based models and operational assumptions to estimate product volumes in our systems and associated oil measurement adjustments. Material changes in our assumptions may result in revisions to our oil measurement estimates in the period determined.

Operational Balancing Agreements and Natural Gas Imbalances

To facilitate deliveries of natural gas and provide for operational flexibility, we have operational balancing agreements in place with other interconnecting pipelines. These agreements ensure that the volume of gas a shipper schedules for transportation between two interconnecting pipelines equals the volume actually delivered. If natural gas moves between pipelines in volumes that are more or less than the volumes the shipper previously scheduled, a gas imbalance is created. The imbalances are settled through periodic cash payments or repaid in kind through the receipt or delivery of natural gas in the future. Gas imbalances are recorded as accrued receivables and accrued purchases on our consolidated statements of financial position using the posted index prices, which approximate market rates, or our weighted average cost of gas.

Capitalization Policies, Depreciation Methods and Impairment of Property, Plant and Equipment

We capitalize expenditures related to property, plant and equipment, subject to a minimum rule, that have a useful life greater than one year for (1) assets purchased or constructed; (2) existing assets that are replaced, improved, or the useful lives have been extended; or (3) all land, regardless of cost. Acquisitions of new assets, additions, replacements and improvements (other than land) costing less than the minimum rule in addition to maintenance and repair costs, including any planned major maintenance activities, are expensed as incurred.

During construction, we capitalize direct costs, such as labor and materials, and other costs, such as direct overhead and interest at our weighted average cost of debt, and, in our regulated businesses that apply the provisions of Statement of Financial Accounting Standards No. 71, *Accounting for the Effects of Certain Types of Regulation*, or SFAS No. 71, an equity return component.

We categorize our capital expenditures as either core maintenance or enhancement expenditures. Core maintenance expenditures are necessary to maintain the service capability of our existing assets and include the replacement of system components and equipment that are worn, obsolete or near the end of their useful lives. Examples of core maintenance expenditures include valve automation programs, cathodic protection, zero-hour compression overhauls and electrical switchgear replacement programs. Enhancement expenditures improve the service capability of our existing assets, extend asset useful lives, increase capacities from existing levels, reduce costs or enhance revenues, and enable us to respond to governmental regulations and developing industry standards. Examples of enhancement expenditures include costs associated with installation of seals, liners and other equipment to reduce the risk of environmental contamination from crude oil storage tanks, costs of sleeving a major segment of a pipeline system following an integrity tool run, natural gas or crude oil well-connects, natural gas plants and pipeline construction and expansion.

Regulatory guidance issued by the FERC requires us to expense certain costs associated with implementing the pipeline integrity management requirements of the U.S. Department of Transportation's Office of Pipeline Safety. Under this guidance, beginning in January 2006, costs to 1) prepare a plan to implement the program, 2) identify high consequence areas, 3) develop and maintain a record keeping system and 4) inspect, test and report on the condition of affected pipeline segments to determine the need for repairs or replacements, are required to be expensed. We adopted this guidance prospectively in January 2006 for all our pipeline systems. Costs of modifying pipelines to permit in-line inspections, certain costs associated with developing or enhancing computer software and costs associated with remedial mitigation actions to correct an identified condition continue to be capitalized. We have historically capitalized initial in-line inspection programs, crack detection tool runs and hydrostatic testing costs conducted for the purposes of detecting manufacturing or construction defects. Beginning January 2006, costs of this nature are expensed as incurred, which is consistent with industry practice and the regulatory guidance issued by the FERC. However, we continue to capitalize initial construction hydrostatic testing cost and subsequent hydrostatic testing programs conducted for the purpose of increasing pipeline capacity in accordance with our capitalization policies. Also capitalized are certain costs such as sleeving or recoating existing pipelines, unless the expenditures are incurred as a single event and not part of a major program, in which case we expense these costs as incurred. Our adoption of the regulatory guidance did not significantly affect our financial position, results of operations or cash flows.

We record property, plant and equipment at its original cost, which we depreciate on a straight-line basis over the lesser of its estimated useful life or the estimated remaining lives of the crude oil or natural gas production in the basins the assets serve. Our determination of the useful lives of property, plant and equipment requires us to make various assumptions, including the supply of and demand for hydrocarbons in the markets served by our assets, normal wear and tear of the facilities, and the extent and frequency of maintenance programs. We routinely utilize consultants and other experts to assist us in assessing the remaining lives of the crude oil or natural gas production in the basins we serve.

We record depreciation using the group method of depreciation which is commonly used by pipelines, utilities and similar entities. Under the group method, for all segments, upon the disposition of property, plant and equipment, the cost less net proceeds is typically charged to accumulated depreciation and no gain or loss on disposal is recognized. However, when a separately identifiable group of assets, such as a stand-alone pipeline system is sold, we will recognize a gain or loss in our consolidated statements of income for the difference between the cash received and the net book value of the assets sold. Changes in any of our assumptions may alter the rate at which we recognize depreciation in our consolidated financial statements. At regular intervals, we retain the services of independent consultants to assist us with assessing the reasonableness of the useful lives we have established for the property, plant and equipment of our major systems. Based on the results of these regular assessments we may make modifications to the assumptions we use to determine our depreciation rates.

We evaluate the recoverability of our property, plant and equipment when events or circumstances such as economic obsolescence, the business climate, legal and other factors indicate we may not recover the carrying amount of the assets. We continually monitor our businesses, the market and business environments to identify indicators that could suggest an asset may not be recoverable. We evaluate the asset for recoverability by estimating the undiscounted future cash flows expected to be derived from operating the asset as a going concern. These cash flow estimates require us to make projections and assumptions for many years into the future for pricing, demand, competition, operating cost, contract renewals, and other factors. We recognize an impairment loss when the carrying amount of the asset exceeds its fair value as determined by quoted market prices in active markets or present value techniques if quotes are unavailable. The determination of the fair value using present value techniques requires us to make projections and assumptions regarding the probability of a range of outcomes and the rates of interest used in the present value calculations. Any changes we make to these projections and assumptions could result in significant revisions to our evaluation of recoverability of our property, plant and equipment and the recognition of an impairment loss in our consolidated statements of income.

Goodwill

Goodwill represents the excess of the purchase price over the fair value of net assets acquired in a business combination. Goodwill is allocated to two of our segments, Natural Gas and Marketing.

Goodwill is not amortized, but is tested for impairment annually based on carrying values as of the end of the second quarter, or more frequently if impairment indicators arise that suggest the carrying value of goodwill may not be recovered. Impairment occurs when the carrying amount of a reporting unit exceeds its fair value. At the time we determine that impairment has occurred, the carrying value of the goodwill is written down to its fair value. To estimate the fair value of the reporting units, we make estimates and judgments about future cash flows, as well as revenue, cost of sales, operating expenses, capital expenditures and net working capital based on assumptions that are consistent with our most recent long range plan, which we use to manage the business. We have not identified or recognized any goodwill impairments during the years ended December 31, 2007, 2006 or 2005.

Intangibles, Net

Intangibles, net, consist of customer contracts for the purchase and sale of natural gas and natural gas supply opportunities. We amortize these assets on a straight-line basis over the weighted average useful life of the underlying assets, representing the period over which the asset is expected to contribute directly or indirectly to our future cash flows.

We evaluate the carrying value of our intangible assets whenever certain events or changes in circumstances indicate that the carrying amount of these assets may not be recoverable. In assessing the recoverability of intangibles, we compare the carrying value to the undiscounted future cash flows the intangibles are expected to generate. If the total of the undiscounted future cash flows is less than the carrying amount of the intangibles, the intangibles are written down to their fair value. We did not identify nor recognize any impairment of our intangible assets for the years ended December 31, 2007, 2006, or 2005.

Other Assets

Other assets primarily include deferred financing costs, which we amortize on a straight-line basis over the life of the related debt to interest expense on our consolidated statements of income. Amortization of these costs on a straight-line basis approximates the amortization computed using the effective interest method.

Income Taxes

We are not a taxable entity for U.S. federal income tax purposes or for the majority of states that impose income tax. Taxes on our net income generally are borne by our unitholders through the allocation of taxable income. Our income tax expense results from the enactment, by the State of Texas, of a new state tax computed on our modified gross margin that we determined to be an income tax under the provisions of SFAS No. 109.

We recognize deferred income tax assets and liabilities for temporary differences between the relevant basis of our assets and liabilities for financial reporting and tax purposes. The impact of changes in tax legislation on deferred income tax liabilities and assets is recorded in the period of enactment.

Net income for financial statement purposes may differ significantly from taxable income of unitholders as a result of differences between the tax basis and financial reporting basis of assets and liabilities and the taxable income allocation requirements under our partnership agreement. The aggregate difference in the basis of our net assets for financial and tax reporting purposes cannot be readily determined because information regarding each partner's tax attributes in us is not available.

Derivative Financial Instruments

Our net income and cash flows are subject to volatility stemming from changes in interest rates on our variable rate debt and commodity prices of natural gas, NGL, condensate and fractionation margins (the relative price differential between NGL sales and the offsetting natural gas purchases). In order to manage the risks to unitholders, we use a variety of derivative financial instruments including futures, forwards, swaps, options and other financial instruments with similar characteristics to create offsetting positions to specific commodity or interest rate exposures. In accordance with SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities* ("SFAS No. 133"), we record all derivative financial instruments on our consolidated statements of financial position at fair market value. We record the fair market value of our derivative financial instruments in the Consolidated Statements of Financial Position as current and long-term assets or liabilities on a net basis by counterparty. For those instruments that qualify for hedge accounting, the accounting treatment depends on the intended use and designation of each instrument. For our derivative financial instruments related to commodities that do not qualify for hedge accounting, the change in market value is recorded as a component of cost of natural gas in the consolidated statements of income. For our derivative financial instruments related to interest rates that do not qualify for hedge accounting, the change in fair market value is recorded as a component of Interest expense in the consolidated statements of income.

In implementing our hedging programs, we have established a formal analysis, execution and reporting framework that requires the approval of the board of directors of Enbridge Management or a committee of our senior management. We employ derivative financial instruments in connection with an underlying asset, liability or anticipated transaction and we do not use derivative financial instruments for speculative purposes.

Derivative financial instruments qualifying for hedge accounting treatment that we use can generally be divided into two categories: 1) cash flow hedges, or 2) fair value hedges. We enter into cash flow hedges to reduce the variability in cash flows related to forecasted transactions. We enter into fair value hedges to reduce the risk of changes in the value of recognized assets or liabilities.

Price assumptions we use to value the cash flow and fair value hedges can affect net income for each period. We use published market price information where available, or quotations from over-the-counter ("OTC") market makers to find executable bids and offers. The valuations also reflect the potential impact of liquidating our position in an orderly manner over a reasonable period of time under present market conditions, modeling risk, credit risk of our counterparties and operational risk. The amounts reported in our consolidated financial statements change quarterly as these valuations are revised to reflect actual results, changes in market conditions or other factors, many of which are beyond our control.

At inception, we formally document the relationship between the hedging instrument and the hedged item, the risk management objectives, and the methods used for assessing and testing correlation and hedge effectiveness. We also assess, both at the inception of the hedge and on an on-going basis, whether the derivatives that are used in our hedging transactions are highly effective in offsetting changes in cash flows or the fair value of the hedged item. Furthermore, we regularly assess the creditworthiness of our counterparties to manage against the risk of default. If we determine that a derivative is no longer highly effective as a hedge, we discontinue hedge accounting prospectively by including changes in the fair value of the derivative in current earnings.

For cash flow hedges, changes in the fair market values of derivative financial instruments, to the extent that the hedges are determined to be highly effective, are recorded as a component of Accumulated other comprehensive income until the hedged transactions occur and are recognized in earnings. Any ineffective portion of a cash flow hedge's change in fair market value is recognized immediately in earnings. For fair value hedges, the change in fair market value of the financial instrument is determined each period and is taken into earnings. In addition, the change in the fair market value of the hedged item is also calculated and taken into earnings. To the extent that the two valuations offset, the hedge is effective and net earnings is not affected.

Our earnings are also affected by use of the mark-to-market method of accounting as required under GAAP for derivative financial instruments that do not qualify for hedge accounting. We use short-term, highly liquid derivative financial instruments such as basis swaps and other similar derivative financial instruments to economically hedge market price risks associated with inventories, firm commitments and certain anticipated transactions. However, these derivative financial instruments, do not qualify for hedge accounting treatment under SFAS No. 133, and thus the changes in fair value of these instruments are recorded on the balance sheet and through earnings (i.e., using the "mark-to-market" method) rather than being deferred until the firm commitment or anticipated transaction affects earnings. The use of mark-to-market accounting for financial instruments can cause non-cash earnings volatility due to changes in the underlying indices, primarily commodity prices. The fair market value of these derivative financial instruments is determined using price data from highly liquid markets such as the New York Mercantile Exchange, or NYMEX, OTC market makers, or other similar sources.

Commitments, Contingencies and Environmental Liabilities

We expense or capitalize, as appropriate, expenditures for ongoing compliance with environmental regulations that relate to past or current operations. Amounts for remediation of existing environmental contamination caused by past operations, which do not benefit future periods by preventing or eliminating future contamination, are expensed. Liabilities are recorded when environmental assessments indicate that remediation efforts are probable, and the costs can be reasonably estimated. Estimates of the liabilities are based on currently available facts, existing technology and presently enacted laws and regulations taking into consideration the likely effects of inflation and other factors. These amounts also consider prior experience in remediating contaminated sites, other companies' clean-up experience and data released by government organizations. These estimates are subject to revision in future periods based on actual costs or new information and are included on the balance sheet in other current and long-term liabilities at their undiscounted amounts. We evaluate recoveries from insurance coverage separately from the liability and, when recovery is probable, we record and report an asset separately from the associated liability in our consolidated financial statements.

We recognize liabilities for other contingencies when, after fully analyzing the available information, we determine it is either probable that an asset has been impaired, or that a liability has been incurred and the amount of impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, we accrue the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss. We typically expense legal costs associated with loss contingencies as such costs are incurred.

Asset Retirement Obligations

We have legal obligations requiring us to decommission our offshore pipeline systems at retirement. In certain rate jurisdictions, we are permitted to include annual charges for removal costs in the regulated cost of service rates we charge our customers. Additionally, legal obligations exist for a minority of our onshore right-of-way agreements due to requirements or landowner options to compel us to remove the pipe at final abandonment. Sufficient data exists with certain onshore pipeline systems to reasonably estimate the cost of abandoning or retiring a pipeline system. However, in some cases, there is insufficient information to reasonably determine the timing and/or method of settlement for estimating the fair value of the asset retirement obligation. In these cases, the asset retirement obligation cost is considered indeterminate because there is no data or information that can be derived from past practice, industry practice, management's intent, or the asset's estimated economic life. Useful lives of most pipeline systems are primarily derived from available supply resources and ultimate consumption of those resources by end users. Variables can affect the remaining lives of the assets which preclude us from making a reasonable estimate of the asset retirement obligation. Indeterminate asset retirement obligation costs will be recognized in the period in which sufficient information exists to reasonably estimate potential settlement dates and methods.

We record a liability for the fair value of asset retirement obligations and conditional asset retirement obligations that we can reasonably estimate, on a discounted basis, in the period in which the liability is incurred. We collectively refer to asset retirement obligations and conditional asset retirement obligations as ARO. Typically we record an ARO at the time the assets are installed or acquired, if a reasonable estimate of fair value can be made. In connection with establishing an ARO, we capitalize the costs as part of the carrying value of the related assets. We recognize an ongoing expense for the interest component of the liability as part of depreciation expense resulting from changes in the value of the ARO due to the passage of time. We depreciate the initial capitalized costs over the useful lives of the related assets. We extinguish the liabilities for an ARO when assets are taken out of service or otherwise abandoned.

We did not record any additional AROs for the years ended December 31, 2007 and 2006. We recorded accretion expense of $0.2 million, $0.2 million and $0.5 million, respectively, in the consolidated statements of income for the years ended December 31, 2007, 2006 and 2005 for previously recorded asset retirement obligation liabilities.

No assets are legally restricted for purposes of settling our ARO for each of the years ended December 31, 2007 and 2006. Following is a reconciliation of the beginning and ending aggregate carrying amount of our ARO liabilities for each of the years ended December 31, 2007 and 2006:

	2007	2006
	(in millions)	
Balance at beginning of period	$ 3.8	$ 3.6
Disposal of KPC	(1.1)	—
Accretion expense	0.2	0.2
Balance at end of period	$ 2.9	$ 3.8

Recent Accounting Pronouncements Not Yet Adopted

Fair Value Measurements

In September 2006, the Financial Accounting Standards Board (FASB) issued FASB Statement No. 157, *Fair Value Measurements*. This statement defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles (GAAP), and expands disclosures about fair value measurement. The statement is effective for fiscal years beginning after November 15, 2007, and with limited exceptions is to be applied prospectively as of the beginning of the fiscal year initially adopted. We expect to adopt the provisions of this statement prospectively beginning January 1, 2008. We do not expect our adoption of this pronouncement to materially affect our consolidated financial statements. However, our adoption of this pronouncement may affect our disclosures regarding derivative financial instruments and indebtedness.

In February 2007, the Financial Accounting Standards Board (FASB) issued FASB Statement No. 159, *The Fair Value Option for Financial Assets and Liabilities ("SFAS No. 159")*. This statement provides companies with an option to report certain financial assets and financial liabilities at fair value. The objective of SFAS No. 159 is to reduce the volatility in earnings caused by measuring related financial assets and financial liabilities differently without having to apply complex hedge accounting provisions. SFAS No. 159 also establishes presentation and disclosure requirements designed to facilitate comparisons between companies that choose different measurement attributes for similar types of assets and liabilities. The provisions of SFAS No. 159 are effective at the beginning of our first fiscal year that begins after November 15, 2007, as we have elected not to early adopt its provisions. We do not expect our adoption of SFAS No. 159 to have a material affect on our consolidated financial statements.

Business Combinations

In December 2007, the Financial Accounting Standards Board issued Statement No. 141(R), *Business Combinations*, which we refer to as SFAS No. 141(R). The new standard retains the fundamental requirements in FASB Statement No. 141, *Business Combinations*, that the acquisition method of accounting (previously referred to as the *purchase method*), be used for all business combinations and for an acquirer to be identified for each business combination. Among other items, SFAS No. 141(R) requires the following:

- Assets acquired, liabilities assumed and any noncontrolling interest in the acquiree at the acquisition date are to be measured at their fair values as of that date.

- Costs associated with effecting an acquisition and restructuring costs the acquirer was not obligated to incur are recognized separately from the business combination.

- Assets acquired and liabilities assumed arising from contractual contingencies as of the acquisition date are measured at their acquisition-date fair values.

- Noncontractual contingencies as of the acquisition date are measured at the acquisition-date fair values only if it is more likely than not that they meet the definition of an asset or liability in FASB Concepts Statement No. 6, *Elements of Financial Statements*.

- Assets and liabilities arising from contingencies are to be reported at the acquisition-date fair value absent new information about the possible outcome, however, when new information becomes available, liabilities are measured at the higher of the acquisition date fair value or the FASB Statement No. 5, *Accounting for Contingencies* (SFAS No. 5) amount while assets are measured at the lower of the acquisition date fair value or the best estimate of the future settlement amount.

- Goodwill as of the acquisition date is determined as the excess of the fair value of the consideration transferred plus the fair value of any noncontrolling interest plus the fair value of previously held equity interests less the fair values of the identifiable net assets acquired.

- Recognition of a gain in earnings attributable to the acquirer when the total acquisition date fair value of the identifiable net assets acquired exceed the fair value of the consideration transferred plus any noncontrolling interest in the acquiree.

- Contingent consideration at the acquisition date is measured at its fair value at that date.

- Retroactively recognize adjustments made during the measurement period (not more than one year from the acquisition date) as if the accounting had occurred on the acquisition date.

SFAS No. 141(R) applies prospectively to business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2008, and early adoption is not permitted. The provisions of this statement will require us to expense certain costs associated with acquisitions that were previously permitted to be capitalized which may affect our operating results in periods that we complete an acquisition.

Noncontrolling Interests

In December 2007, the Financial Accounting Standards Board issued FASB Statement No. 160, *Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51*, to establish accounting and reporting standards for the noncontrolling interest in a subsidiary and for deconsolidation of a subsidiary. Among other provisions, SFAS No. 160 requires the following:

- The ownership in subsidiaries held by parties other than the parent be presented in the consolidated statement of financial position within equity, but separate from the parent's equity.

- The amount of consolidated net income attributable to the parent and the noncontrolling interest be presented on the face of the consolidated statement of income.

- Changes in a parent's ownership interest while the parent retains its controlling financial interest in its subsidiary are accounted for as equity transactions.

- Any retained noncontrolling equity investment in a subsidiary that is deconsolidated be initially measured at fair value.

- Sufficient disclosures that clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling owners.

SFAS No. 160 is effective for fiscal years, and interim periods within those years, beginning on or after December 15, 2008, and early adoption is prohibited. SFAS No. 160 requires prospective adoption as of the beginning of the fiscal year in which the provisions are initially applied, except for the presentation and disclosure requirements which shall be applied retrospectively for all periods presented. Our adoption of this standard will not have a material effect on our financial position or results of operations.

3. ACQUISITIONS AND DISPOSITIONS

We accounted for each of our completed acquisitions using the purchase method and recorded the assets acquired and liabilities assumed at their estimated fair market values as of the date of purchase. We have included the results of operations from each of these acquisitions in our earnings from the acquisition date.

2007 Disposition

KPC Disposition

In November 2007, we sold our Kansas pipeline system, or KPC, with a net asset value of approximately $100.4 million, including $9.2 million of goodwill, to an unrelated party for $133 million in cash, subject to adjustments for working capital items. KPC is an interstate natural gas transmission system, which serves the Wichita, Kansas and Kansas City, Kansas markets and includes approximately 1,120 miles of pipeline ranging in diameter from 4 to 12 inches, along with three compressor stations. The area in which KPC operates is not strategic to the ongoing central operations of our core Natural Gas segment assets. The operating results of the KPC system were not material to our consolidated operating results or those of our Natural Gas segment for the years ended December 31, 2007, 2006 and 2005. We recognized a gain of $32.6 million on the sale of KPC, which is presented in income from discontinued operations.

2006 Acquisitions

Oakhill Acquisition

In April 2006, we acquired, for $33.3 million in cash, an 80-mile natural gas pipeline that is complementary to our existing East Texas system. This pipeline provides approximately 100 million cubic feet per day, or MMcf/d, of additional transportation capacity and interconnects with approximately 65 central receipt points.

The purchase price and the allocation to assets acquired and liabilities assumed are as follows in millions of dollars:

Purchase Price:		
Cash paid, including transaction costs	$	33.3
Allocation of purchase price:		
Property, plant and equipment, including construction in progress	$	13.0
Intangibles		12.8
Goodwill		7.5
Total	$	33.3

2005 Acquisitions and Dispositions

North Texas Natural Gas System

In January 2005, we acquired natural gas gathering and processing assets in north Texas for $164.6 million in cash, including transaction costs of $0.5 million. The assets we acquired serve the Fort Worth Basin, which is mature, but experiencing minimal production decline rates and include:

- 2,200 miles of gas gathering pipelines; and
- four processing plants with aggregate processing capacity of 121 MMcf/d of natural gas.

The system provides cash flow primarily from purchasing raw natural gas from producers at the wellhead, processing the natural gas and then selling the natural gas liquids and residue natural gas streams. We included the assets and results of operations in our Natural Gas segment from the acquisition date.

We allocated the purchase price of the assets acquired and liabilities assumed as follows (in millions):

Purchase Price:		
Cash paid, including transaction costs	$	164.6
Allocation of purchase price:		
Property, plant and equipment, including construction in progress	$	151.6
Intangibles, including contracts		14.3
Current liabilities		(0.9)
Contingent liabilities		(0.4)
Total	$	164.6

Other 2005 Acquisitions

In June 2005, we acquired for $20.1 million in cash, a natural gas pipeline and related facilities consisting of 92 miles of 20-inch diameter pipeline that extends from Pampa, Texas into western Oklahoma and has interconnects with our Anadarko system. We integrated this pipeline into our existing Anadarko system and have included the assets and operating results in our Natural Gas segment from the date of acquisition. The purchase price for this acquisition was allocated to property, plant and equipment for $19.1 million and goodwill for $1.0 million. We also acquired other gathering and processing assets during 2005 that are complementary to our existing natural gas systems for cash totaling approximately $1.7 million.

Sale of Gathering and Processing Assets

In December 2005, we sold for $105.4 million in cash, a processing plant and related facilities and other gathering and processing assets located in our East and South Texas systems with a carrying value of approximately $86.9 million. We incurred selling costs of approximately $0.4 million and recognized a gain on the sale of approximately $18.1 million. The facilities we sold represent non-strategic assets within our Natural Gas segment. In connection with this sale, we paid approximately $16.3 million to settle natural gas collars on 2,000 Million British Thermal units per day, or MMBtu/d, associated with the natural gas produced by these assets and entered into offsetting derivatives at market to close out derivatives previously classified as hedges of 273 Barrels per day, or Bpd, of NGL produced by these assets. We had previously recorded unrealized losses associated with the natural gas collars that were realized upon settlement. Refer to Note 14 for additional discussion regarding our derivative activities.

4. NET INCOME PER LIMITED PARTNER UNIT

We compute net income per limited partner unit by dividing net income, after deducting our allocation to the General Partner, by the weighted average number of our limited partner units outstanding. The General Partner's allocation is equal to an amount based upon its general partner interest, adjusted to reflect an amount equal to its incentive distributions and an amount required to reflect depreciation on the General Partner's historical cost basis for assets contributed on formation of the

Partnership. We have no dilutive securities, therefore basic and diluted earnings per unit amounts are equal. Net income per limited partner unit was determined as follows:

	Year ended December 31,		
	2007	2006	2005
	(in millions, except per unit amounts)		
Income from continuing operations	$ 216.9	$ 284.9	$ 89.2
Income from discontinued operations	32.6	—	—
Net income	$ 249.5	$ 284.9	$ 89.2
Allocations to the General Partner:			
Income from continuing operations	$ (4.3)	$ (5.7)	$ (1.8)
Incentive distributions to General Partner	(32.5)	(25.1)	(21.6)
Historical cost depreciation adjustments	(0.2)	(0.1)	(0.1)
	(37.0)	(30.9)	(23.5)
Income from discontinued operations	(0.7)	—	—
	$ (37.7)	$ (30.9)	$ (23.5)
Allocations to limited partner units			
Income from continuing operations	$ 179.9	$ 254.0	$ 65.7
Income from discontinued operations	31.9	—	—
	$ 211.8	$ 254.0	$ 65.7
Basic and diluted earnings per limited partner unit			
Income from continuing operations	$ 2.08	$ 3.62	$ 1.06
Income from discontinued operations	0.37	—	—
Net income per limited partner unit (basic and diluted)	$ 2.45	$ 3.62	$ 1.06
Weighted average units outstanding	86.3	70.2	62.1

5. INVENTORY

Inventory is comprised of the following:

	December 31,	
	2007	2006
	(in millions)	
Material and supplies	$ 3.9	$ 3.8
Liquids inventory	6.7	9.9
Natural gas and natural gas liquids inventory	100.0	103.4
	$ 110.6	$ 117.1

Our inventory at December 31, 2007 is net of charges totaling $4.5 million we recorded in 2007 to reduce the cost basis of our natural gas inventory to reflect market value. Our inventory at December 31, 2006 is net of charges totaling $17.7 million we recorded in 2006 to reduce the cost basis of our natural gas inventory to reflect market value. The lower of cost or market adjustments are included in the Cost of natural gas of our Natural Gas and Marketing segments on our consolidated statements of income.

6. PROPERTY, PLANT AND EQUIPMENT

Property, Plant and Equipment is comprised of the following:

	Depreciation Rates[1]	December 31, 2007	December 31, 2006
		(in millions)	
Land	—	$ 14.3	$ 14.3
Rights-of-way	1.5% - 6.4%	345.8	298.6
Pipeline	1.5% - 7.0%	2,703.2	2,320.8
Pumping equipment, buildings and tanks	1.5% - 14.3%	854.7	747.4
Compressors, meters, and other operating equipment	1.5% - 20.0%	536.1	418.1
Vehicles, office furniture and equipment	1.4% - 33.3%	123.3	112.4
Processing and treating plants	2.7% - 4.0%	200.4	86.4
Construction in progress	—	1,813.9	733.6
Total property, plant and equipment		6,591.7	4,731.6
Accumulated depreciation		(1,036.8)	(906.7)
Net property, plant and equipment		$ 5,554.9	$ 3,824.9

(1) We have assets included in the above table that are highly depreciated, which yield depreciation rates that suggest these assets have significant remaining useful lives, but in fact have little remaining net book value in relation to their expected service lives.

Based on third-party studies commissioned by management, we implemented revised depreciation rates for the Lakehead system effective January 1, 2006, and the Anadarko, North Texas and East Texas systems effective August 1, 2005. We reduced the annual composite rate, representing the expected remaining service lives of the system assets, from 3.20% to 2.63% for our Lakehead system and from 4.0% to 3.4% for our Anadarko, North Texas and East Texas systems. As a result, our depreciation expense for the years ended December 31, 2006 and 2005, respectively, was approximately $14.5 million and $2.5 million lower than if these rates had not been reduced. Additionally, effective July 1, 2006, we increased the annual composite rates on three of our FERC-regulated pipelines, representing reductions to the expected remaining service lives of our AlaTenn, KPC, and Midla systems. These increases resulted in approximately $1.3 million and $2.6 million of additional depreciation in 2006 and 2007, respectively.

7. GOODWILL

The changes in the carrying amount of goodwill for each of the years ended December 31, 2007 and 2006 are as follows:

	Liquids	Natural Gas	Marketing	Corporate	Total
			(in millions)		
December 31, 2005	$ —	$ 237.8	$ 20.4	$ —	$ 258.2
Acquisition	—	7.5	—	—	7.5
December 31, 2006	—	245.3	20.4	—	265.7
Disposition	—	(9.2)	—	—	(9.2)
December 31, 2007	$ —	$ 236.1	$ 20.4	$ —	$ 256.5

In November 2007 we sold our KPC assets to an unrelated third party for $133 million. In connection with the sale, we disposed of $9.2 million of goodwill associated with this business which we reduced the gain we realized from the sale.

We completed our annual goodwill impairment test using data at June 30, 2007. To estimate the fair value of our reporting units we made estimates and judgments about future cash flows, as well as revenue, cost of sales, operating expenses, capital expenditures, and net working capital based on assumptions that are consistent with the long-range plans we use to manage our businesses. Based on the results of our impairment analysis, we determined that the fair value of each reporting unit exceeded its respective carrying amount, including goodwill. As a result, no goodwill impairment existed in any of our reporting units. We have not observed any events or circumstances subsequent to our analysis that would, more likely than not, reduce the fair value of our reporting units below the carrying amounts as of December 31, 2007.

8. INTANGIBLES

The following table provides the gross carrying value, accumulated amortization and activity affecting these balances for each of our major classes of intangible assets.

	Gross Carrying Amount				Accumulated Amortization				
	Customer Contracts	Natural Gas Supply Opportunities	Other	Intangible Assets Gross	Customer Contracts	Natural Gas Supply Opportunities	Other	Accumulated Amortization Gross	Intangible Assets, Net
	(in millions)								
December 31, 2004	$ 31.1	$ 48.1	$ —	$ 79.2	$ (3.3)	$ (1.9)	$ —	$ (5.2)	$ 74.0
Additions	14.3	—	4.3	18.6	—	—	—	—	18.6
Dispositions	(2.2)	—	—	(2.2)	0.3	—	—	0.3	(1.9)
Amortization	—	—	—	—	(1.7)	(2.0)	(0.1)	(3.8)	(3.8)
December 31, 2005	43.2	48.1	4.3	95.6	(4.7)	(3.9)	(0.1)	(8.7)	86.9
Additions	12.8	—	2.4	15.2	—	—	—	—	15.2
Amortization	—	—	—	—	(2.2)	(1.9)	(0.2)	(4.3)	(4.3)
December 31, 2006	56.0	48.1	6.7	110.8	(6.9)	(5.8)	(0.3)	(13.0)	97.8
Additions	—	—	2.9	2.9	—	—	—	—	2.9
Dispositions(1)	(5.8)	—	—	(5.8)	1.1	—	—	1.1	(4.7)
Amortization	—	—	—	—	(2.2)	(1.9)	(0.4)	(4.5)	(4.5)
December 31, 2007	$ 50.2	$ 48.1	$ 9.6	$ 107.9	$ (8.0)	$ (7.7)	$ (0.7)	$ (16.4)	$ 91.5

(1) We disposed of customer contract intangibles of $4.7 million in connection with the sale of KPC.

Our customer contracts are comprised entirely of natural gas purchase and sale agreements associated with our Natural Gas and Marketing segments. We amortize our customer contracts on a straight-line basis over the weighted average useful life of the underlying reserves at the time of acquisition, which approximates 25 years.

We obtained the natural gas supply opportunities in conjunction with the 2003 North Texas system acquisition and relate entirely to our Natural Gas segment. The value of the intangible asset was determined by a third party appraisal and it represents the fair value associated with growth opportunities present in the Barnett Shale producing zone. We are amortizing the natural gas supply opportunities over the weighted average estimated useful life of the underlying reserves at the time of the acquisition, which approximates 25 years.

Our other column is comprised of contributions we made in aid of construction for our Natural Gas and Liquids business. We made contributions to third parties for construction of electrical infrastructure to provide utility services for our Lakehead system and for interconnections between our natural gas systems and third-party pipelines and the related measurement equipment.

We estimate the aggregate amortization expense associated with our intangibles for each of the five succeeding years through December 31, 2012 to approximate $4.6 million.

9. DEBT

The following table presents the primary components of our outstanding indebtedness and the weighted average interest rates associated with each component at the end of each period presented, before the effect of our interest rate hedging activities as discussed in Notes 13 and 14:

		December 31,			
		2007		2006	
	Maturity	Rate	Dollars	Rate	Dollars
		(dollars in millions)			
First Mortgage Notes	2011	9.15%	$ 124.0	9.15%	$ 155.0
Credit Facility	2012	5.22%	400.0	—	—
Commercial Paper[(1)]	2012	5.36%	268.5	5.45%	443.7
Senior Notes	2009-2034	5.69%	1,702.1	5.74%	1,498.4
Junior Subordinated Notes	2067	8.05%	399.3	—	—
			2,893.9		2,097.1
Current maturities and short-term debt			(31.0)		(31.0)
Long-term debt			$ 2,862.9		$ 2,066.1

(1) Individual issuances of commercial paper generally mature in 90 days or less, but are supported by our credit facility and are therefore considered long-term debt.

First Mortgage Notes

The First Mortgage Notes ("Notes") are collateralized by a first mortgage lien on substantially all of the property, plant and equipment of the Enbridge Energy, Limited Partnership, (the "OLP"), and are due and payable in equal annual installments of $31.0 million until their maturity in 2011. Property, plant and equipment, net, associated with the OLP was $2,555.5 million and $1,495.1 million at December 31, 2007 and 2006, respectively. The Notes contain various restrictive covenants applicable to us, and restrictions on the incurrence of additional indebtedness, including compliance with certain debt issuance tests. We believe these restrictions will not negatively impact our ability to finance future expansion projects. Under the Notes agreements, we cannot make cash distributions more frequently than quarterly in an amount not to exceed Available Cash (see Note 10) for the immediately preceding calendar quarter. We would be required to pay a redemption premium pursuant to the Note agreements should we elect to repay the Notes prior to their stated maturity.

Under the terms of the Notes, we are required to establish, at the end of each quarter, a debt service reserve. This reserve includes an amount equal to 50% of the prospective Notes interest payments for the immediately following quarter and an amount for Note sinking fund repayments. At December 31, 2007 and 2006, there was no required debt service reserve, as we have made all required interest and sinking fund payments.

Credit Facility

On April 4, 2007 we entered into the Second Amended and Restated Credit Agreement (Credit Facility) which among other things: (i) increased the maximum principal amount of credit available to us at any one time from $1 billion to $1.25 billion; (ii) gave us the right to request increases in the maximum principal amount of credit available at any one time from $1.25 billion to $1.5 billion; (iii) eliminated the sublimit on letters of credit; (iv) provided for a five-year facility that matures April 4, 2012 and grants us the option to request annual extensions of maturity and a one-year term out period upon maturity; (v) modified our leverage ratio to include in the calculations of EBITDA (as defined in the Second Amended and Restated Credit Agreement) pro forma adjustments for material projects and to exclude from the calculation of Consolidated Funded Debt (as defined in the Second Amended and Restated Credit Agreement) certain amounts of preferred securities and subordinated debt that we or our designated subsidiaries may issue in the future; and (vi) eliminated our coverage ratio financial covenant. Our Credit Facility contains restrictive covenants that require us to maintain a maximum leverage ratio of 5.50 to 1.0 for periods ending on or before March 31, 2009; a ratio of 5.25 to 1.0 thereafter, for periods ending on or before March 31, 2010; and a ratio of 5.00 to 1.0 for periods ending June 30, 2010 and following. Our Credit Facility continues to support our commercial paper program.

At December 31, 2007, our leverage ratio was approximately 3.6. Our Credit Facility also places limitations on the debt that our subsidiaries may incur directly. Accordingly, it is expected that we will provide debt financing to our subsidiaries as necessary.

At December 31, 2007, we had $400 million outstanding under our Credit Facility at a weighted average interest rate of 5.22% and letters of credit totaling $159.7 million. The amounts we may borrow under the terms of our Credit Facility are reduced by the principal amount of our commercial paper issuances and the balance of our letters of credit outstanding. At December 31, 2007 and 2006, we could borrow $420.3 million and $495.7 million, respectively, under the terms of our Credit Facility, determined as follows:

	2007	2006
	(in millions)	
Total credit available under Credit Facility	$ 1,250.0	$ 1,000.0
Less: Amounts outstanding under Credit Facility	(400.0)	—
Balance of letters of credit outstanding	(159.7)	(59.3)
Principal amount of commercial paper issuances	(270.0)	(445.0)
Total amount we could borrow at December 31, 2007	$ 420.3	$ 495.7

Individual borrowings under the terms of our Credit Facility generally become due and payable at the end of each contract period, typically a period of three months or less. We have the option to repay these amounts on a non-cash basis by net settling with the parties to our Credit Facility by contemporaneously borrowing at the then current rate of interest and repaying the amounts due. During the year ended December 31, 2007, we net settled borrowings of approximately $180 million on a non-cash basis. During the year ended December 31, 2006, we did not net settle any borrowings under our Credit Facility and we net settled $565 million during the year ended December 31, 2005, on a non-cash basis.

Commercial Paper Program

We have a commercial paper program that provides for the issuance of up to $600 million of commercial paper that is supported by our Credit Facility. We access the commercial paper market primarily to provide temporary financing for our operating activities, capital expenditures and acquisitions, at rates that are generally lower than the rates available under our Credit Facility. At December 31, 2007 and 2006, respectively, we had $268.5 million and $443.7 million of commercial paper outstanding, net of unamortized discount of $1.5 million and $1.3 million, at weighted average interest rates of 5.36% and

5.45%. At December 31, 2007 and 2006, respectively, we could issue an additional $330 million and $155 million in principal amount under our commercial paper program.

We have the ability and intent to refinance all of our commercial paper obligations on a long-term basis under our unsecured long-term Credit Facility. Accordingly, such amounts have been classified as long-term debt in our accompanying consolidated statement of financial position.

Senior Notes

All of our Senior Notes, other than the Zero Coupon Notes discussed below, pay interest semi-annually and have varying maturities and terms as presented in the following table. The Senior Notes do not contain any covenants restricting the issuance of additional indebtedness and rank equally with all of our other existing and future unsecured and unsubordinated indebtedness. The interest rates set forth in this table represent the interest rates as set forth on the face of each note agreement without consideration to any discount or interest rate hedging activities.

	Interest Rate	December 31, 2007	December 31, 2006
		(in millions)	
Senior Notes due 2009	4.000%	$ 200.0	$ 200.0
Senior Notes due 2012	7.900%	100.0	100.0
Senior Notes due 2013	4.750%	200.0	200.0
Senior Notes due 2014	5.350%	200.0	200.0
Senior Notes due 2016	5.875%	300.0	300.0
Senior Notes due 2018	7.000%	100.0	100.0
Senior Notes due 2028	7.125%	100.0	100.0
Senior Notes due 2033	5.950%	200.0	200.0
Senior Notes due 2034	6.300%	100.0	100.0
Senior, unsecured zero coupon notes due 2022	5.358%	203.6	—
		1,703.6	1,500.0
Unamortized Discount		(1.5)	(1.6)
		1,702.1	1,498.4

Zero Coupon Senior Notes

In August 2007, we received net proceeds of approximately $200 million from a private placement of our senior, unsecured zero coupon notes due 2022 (the "Zero Coupon Notes"), which at maturity will be payable in the aggregate principal amount of $442 million. We initially recorded the Zero Coupon Notes in long-term debt at the amount of proceeds we received from the private placement, which we refer to as the issue price. The carrying amount at December 31, 2007 includes $3.6 million associated with the accretion of interest we recognized as interest expense during the period. The Zero Coupon Notes are scheduled to mature on August 28, 2022, although they may be called by the note holders prior to the scheduled maturity date on August 28 of any year commencing on August 28, 2009, at a price equal to the then accreted value of the called Zero Coupon Notes. The Zero Coupon Notes have a yield of 5.36% on a semi-annual compound basis and rank equally in right of payment to all of our existing and future senior indebtedness, as set forth in our senior indenture. We used the net proceeds from this private placement to repay a portion of our outstanding commercial paper and Credit Facility borrowings that we had previously incurred to fund a portion of our capital expansion projects.

Junior Subordinated Notes

In September 2007, we issued and sold $400 million in principal amount of our fixed/floating rate, junior subordinated notes due 2067, which we refer to as the Junior Notes. We received proceeds of approximately $393 million, net of underwriting discounts, commissions and offering expenses. We used the net proceeds to temporarily reduce a portion of our outstanding commercial paper and Credit Facility borrowings that we had previously incurred to finance a portion of our capital expansion projects.

The Junior Notes represent our unsecured obligations that are subordinate in right of payment to all of our existing and future senior indebtedness. The Junior Notes bear interest at a fixed annual rate of 8.05%, exclusive of any discounts or interest rate hedging activities, from September 27, 2007 to October 1, 2017, payable semi-annually in arrears on April 1 and October 1 of each year beginning April 1, 2008. After October 1, 2017, the Junior Notes will bear interest at a variable rate equal to the three-month LIBOR for the related interest period increased by 3.7975%, payable quarterly in arrears on January 1, April 1, July 1 and October 1 of each year beginning January 1, 2018. We may elect to defer interest payments on the Junior Notes for up to ten consecutive years on one or more occasions, but not beyond the final repayment date. Until paid, any interest we elect to defer will bear interest at the prevailing interest rate, compounded semi-annually during the period the Junior Notes bear interest at the fixed annual rate and quarterly during the period that the Junior Notes bear interest at a variable annual rate.

The Junior Notes do not restrict our ability to incur additional indebtedness. However, with limited exceptions, during any period we elect to defer interest payments on the Junior Notes, we cannot make distribution payments or liquidate any of our equity securities, nor can we or our subsidiaries make any principal and interest payments for any debt that ranks equally with or junior to the Junior Notes.

The scheduled maturity date for the Junior Notes is initially October 1, 2037, but we may extend the maturity date up to two times, on October 1, 2017 and October 1, 2027, in each case for an additional ten-year period. As a result, the scheduled maturity date may be extended to October 1, 2047 or October 1, 2057. Our obligation to repay the Junior Notes on the scheduled maturity date is limited by an agreement we refer to as the Replacement Capital Covenant, which we entered into in connection with our offering of the Junior Notes, but not as part of the Junior Notes. The Replacement Capital Covenant limits the types of financing sources we can use to repay the Junior Notes. We are required to repay the Junior Notes on the scheduled maturity date only to the extent the principal amount repaid does not exceed proceeds we have received from the issuance and sale of securities, that, among other attributes defined in the Replacement Capital Covenant, have characteristics that are the same or more equity-like than the Junior Notes. We refer to the securities that meet this characterization as qualifying capital securities. If we do not receive sufficient proceeds from the sale of qualifying capital securities to repay the Junior Notes by the scheduled maturity date, we must use our commercially reasonable efforts to raise sufficient proceeds from the sale of qualifying capital securities to permit repayment of the Junior Notes on the following quarterly interest payment date, and on each subsequent quarterly interest payment date until the Junior Notes are paid in full. Regardless of the amount of qualifying capital securities that we have issued and sold, the final repayment date is initially October 1, 2067. We may extend the final repayment date for an additional ten-year period on October 1, 2017, and as a result the final repayment date may be extended to October 1, 2077. We may extend the scheduled maturity date whether or not we also extend the final repayment date, and we may extend the final repayment date whether or not we extend the scheduled maturity date.

We may redeem the Junior Notes in whole at any time, or in part from time, prior to October 1, 2017, for a "make-whole" redemption price, and thereafter at a redemption price equal to the principal amount plus accrued and unpaid interest on the Junior Notes. We may also redeem the Junior Notes prior to October 1, 2017 in whole, but not in part, upon the occurrence of certain tax or rating agency events at specified redemption prices. Our right to optionally redeem the Junior Notes is also limited by the Replacement Capital Covenant, which limits the types of financing sources we can use to redeem the Junior Notes in the same manner as to repay the Junior Notes, as discussed in the above paragraph.

Interest

For the years ended December 31, 2007, 2006, and 2005, our interest cost is comprised of the following:

	Year Ended December 31,		
	2007	2006	2005
	(dollars in millions)		
Interest expense	$ 99.8	$ 110.5	$ 107.7
Interest capitalized	47.4	10.7	4.0
Interest cost incurred	$ 147.2	$ 121.2	$ 111.7
Interest paid	$ 125.8	$ 109.7	$ 101.7

Maturities of Third Party Debt

The scheduled maturities of outstanding third party debt, excluding the market value of interest rate swaps, at December 31, 2007, are summarized as follows in millions:

2008	$ 31.0
2009	434.6
2010	31.0
2011	31.0
2012	770.0
Thereafter	1,600.0
Total	$ 2,897.6

10. PARTNERS' CAPITAL

Our capital accounts are comprised of a two percent general partner interest and 98 percent limited partner interests. The limited partner interests are comprised of Class A common units, Class B common units, Class C units, and i-units. The limited partners have limited rights of ownership as provided for under our partnership agreement and, as discussed below, the right to participate in our distributions. The General Partner manages our operations, subject to a delegation of control agreement with Enbridge Management, and participates in the Partnership's distributions, including certain incentive income distributions.

Class A common units

The following table presents the net proceeds from our Class A common unit issuances for each of the years ended December 31, 2007, 2006 and 2005. The proceeds from each of our offerings were generally used to repay issuances of commercial paper or amounts outstanding under our credit facilities, which we initially borrowed to finance our capital expansion projects and acquisitions, or to repay other outstanding obligations. Any proceeds we received in excess of amounts used to repay issuances of commercial paper and credit facility borrowings were temporarily invested for use in future periods to fund additional expenditures associated with our capital expansion projects.

Issuance Date	Number of Class A Common units Issued		Offering Price per Class A Common unit		Net Proceeds to the Partnership(1)		General Partner Contribution(2)		Net Proceeds Including General Partner Contribution
					(in millions, except per unit amounts)				
2007									
May	5,300,000	$	58.000	$	301.9	$	6.1	$	308.0
2006									
We did not issue any Class A common units during 2006									
2005									
December	136,200	$	46.000	$	6.0	$	0.2	$	6.2
November	3,000,000	$	46.000		132.1		2.8		134.9
February	2,506,500	$	49.875		124.8		2.7		127.5
2005 Totals	5,642,700			$	262.9	$	5.7	$	268.6

(1) Net of underwriters' fees and discounts, commissions and issuance expenses.

(2) Contributions made by the General Partner to maintain its 2% general partner interest.

Class B common units

Our outstanding Class B common units are held entirely by our general partner and have rights similar to our Class A common units except that they are not currently eligible for trading on the NYSE.

Class C units

In April 2007, we issued and sold 4.7 million Class C units at a price of $53.11 per Class C unit to CDP Infrastructure Fund G.P. ("CDP"), 0.9 million Class C units to Tortoise Infrastructure Corporation and 0.3 million Class C units to Tortoise Energy Capital Corporation. We sold the Class C units in a private transaction exempt from registration under Section 4(2) of the Securities Act of 1933, as amended. We received proceeds of approximately $314.4 million, net of expenses associated with the private placement. In addition, our general partner contributed approximately $6.4 million to us to maintain its two percent general partner interest. We used the proceeds from this offering partially to reduce outstanding commercial paper we previously issued to finance a portion of our capital expansion program.

In August 2006, we issued and sold 5.4 million Class C units, representing a new class of limited partner interest, to our general partner and 5.4 million Class C units to CDP for a purchase price of $46.00 per unit in a private transaction exempt from registration under Section 4(2) of the Securities Act of 1933, as amended. We received proceeds of approximately $500 million, net of expenses associated with the private placement. Additionally, our general partner contributed approximately $10 million to maintain its two percent general partner interest.

i-units

The i-units are a separate class of our limited partner interests, all of which are owned by Enbridge Management and are not publicly traded.

Enbridge Management, as the owner of our i-units, votes together with the holders of the common units as a single class. However, the i-units vote separately as a class on the following matters:

- Any proposed action that would cause us to be treated as a corporation for U.S. federal income tax purposes;
- Amendments to our partnership agreement that would have a material adverse effect on the holder of our i-units, unless, under our partnership agreement, the amendment could be made by our general partner without a vote of holders of any class of units;
- The removal of our general partner and the election of a successor general partner; and
- The transfer by our general partner of its general partner interest to a non-affiliated person that requires a vote of holders of units under our partnership agreement and the admission of that person as a general partner.

In all cases, Enbridge Management will vote or refrain from voting its i-units in the same manner that owners of Enbridge Management's shares vote or refrain from voting their shares. Furthermore, under the terms of our partnership agreement, we agree that we will not, except in liquidation, make a distribution on an i-unit other than in additional i-units or a security that has in all material respects the same rights and privileges as the i-units.

Distributions

Our partnership agreement requires us to distribute 100 percent of our "Available Cash", which is generally defined in our partnership agreement as the sum of all cash receipts and net additions to reserves for future cash requirements less cash disbursements and amounts retained by us. Enbridge Management, as delegate of our general partner under the delegation of control agreement, computes the amount of our "Available Cash." Typically, the General Partner and owners of our common units will receive distributions in cash. However, we also retain reserves to provide for the proper conduct of our business and as necessary to comply with the terms of our agreements or obligations (including any reserves required under debt instruments for future principal and interest payments and for future capital expenditures). We make distributions to our partners approximately 45 days following the end of each calendar quarter in accordance with their respective percentage interests.

Our general partner is granted discretion by our partnership agreement, which discretion has been delegated to Enbridge Management, subject to the approval of the General Partner in certain cases, to establish, maintain and adjust reserves for future operating expenses, debt service, maintenance capital expenditures, and distributions for the next four quarters. These reserves are not restricted by magnitude, but only by type of future cash requirements with which they can be associated. When Enbridge Management determines our quarterly distributions, it considers current and expected reserve needs along with current and expected cash flows to identify the appropriate sustainable distribution level.

Distributions of our Available Cash are generally made 98.0 percent to holders of our limited partner units and two percent to our general partner. However, distributions are subject to the payment of incentive distributions to the General Partner to the extent that certain target levels of distributions to the unitholders are achieved. The incremental incentive distributions payable to the General Partner are 15.0 percent, 25.0 percent and 50.0 percent of all quarterly distributions of Available Cash that exceed target levels of $0.59, $0.70, and $0.99 per limited partner units. As set forth in our partnership agreement, we will not make cash distributions on our i-units, but instead, will distribute additional i-units such that the cash is retained and used in our business. Similarly, until August 15, 2009, we will distribute additional Class C units to the holders of our Class C units in lieu of cash distributions, which will be retained and used in our business. Further, we retain an additional amount equal to two percent of the i-unit and Class C unit distributions from the General Partner to maintain its two percent general partner interest in us.

Enbridge Management, as owner of the i-units, does not receive distributions in cash. Instead, each time that we make a cash distribution to the General Partner and the holders of our common units, the number of i-units owned by Enbridge Management and the percentage of our total units owned by Enbridge Management will increase automatically under the provisions of our partnership agreement with the result that the number of i-units owned by Enbridge Management will equal the number of Enbridge Management's listed and voting shares that are then outstanding. The amount of this increase in i-units is determined by dividing the cash amount distributed per common unit by the average price of one of Enbridge Management's listed shares on the NYSE for the 10-trading day period immediately preceding the ex-dividend date for Enbridge Management's shares multiplied by the number of shares outstanding on the record date. The cash equivalent amount of the additional i-units is treated as if it had actually been distributed for purposes of determining the distributions to be made to the General Partner.

Until August 15, 2009, in lieu of cash distributions, the holders of our Class C units will receive quarterly distributions of additional Class C units with a value equal to the quarterly cash distributions we pay to the holders of our Class A and Class B common units, which we collectively refer to as common units. The number of additional Class C units we will issue is determined by dividing the quarterly cash distribution per unit we pay on our common units by the average market price of a Class A common unit as listed on the New York Stock Exchange for the 10-trading day period immediately preceding the ex-dividend date for our Class A common units multiplied by the number of Class C units outstanding on the record date. As a result, the number of Class C units and the percentage of our total units owned by holders of the Class C units will increase automatically under the provisions of our partnership agreement. The cash equivalent amount of the additional Class C units is treated as if it had actually been distributed for purposes of determining the distributions to be made to the General Partner.

After August 15, 2009, the holders of our Class C units will receive quarterly cash distributions equal to those paid to the holders of our common units. Subject to the approval of holders of our outstanding units in accordance with the then-existing requirements of the principal national securities exchange on which the Class A common units are listed, the Class C units will convert into Class A common units on a one-for-one basis. If our unitholders do not approve the conversion, the holders of our Class C units will receive quarterly cash distributions equal to 115 percent of those paid to the holders of our common units. Prior to conversion, holders of our Class C units will not be entitled to receive any quarterly cash distribution until the holders of our common units have received a quarterly cash distribution of $0.59 per common unit.

The following table sets forth our distributions, as approved by the board of directors for each period in the years ended December 31, 2007, 2006 and 2005.

Distribution Declaration Date	Distribution Payment Date	Record Date	Distribution per Unit	Cash available for distribution	Amount of Distribution of i-units to i-unit Holders(1)	Amount of Distribution of Class C units to Class C unit Holders(2)	Retained from General Partner(3)	Distribution of Cash

January 24	February 14	February 3	0.925	61.0	10.1	—	0.2	50.7
				$ 252.9	$ 41.5	$ —	$ 0.8	$ 210.6

(1) We issued 889,938, 969,200 and 802,539 i-units to Enbridge Energy Management, L.L.C., the sole owner of our i-units, during 2007, 2006 and 2005, respectively, in lieu of cash distributions.

(2) We issued 1,072,423 and 200,587 additional Class C units to our Class C unitholders in lieu of cash distributions during 2007 and 2006, including 385,032 and 100,293 to our general partner, respectively.

(3) We retained an amount equal to 2 percent of the i-unit and Class C unit distribution from the General Partner to maintain its 2 percent general partner interest in us.

11. RELATED PARTY TRANSACTIONS

Administrative and Workforce Related Services

Enbridge and its affiliates provide management and administrative, operations and workforce related services to us. Employees of Enbridge and its affiliates are assigned to work for one or more affiliates of Enbridge, including us. Where directly attributable, the costs of all compensation, benefits expenses and employer expenses for these employees are charged directly by Enbridge to the appropriate affiliate. Enbridge does not record any profit or margin for the services charged to us.

The portion of direct workforce costs associated with the management and administrative services provided at our Houston office and the operating and administrative services provided to support our facilities across the United States, are charged to us by Enbridge and its affiliates.

Certain of the operating activities associated with our Liquids segment are provided by Enbridge Pipelines Inc. ("Enbridge Pipelines"), a subsidiary of Enbridge, as the majority of these pipeline systems form one contiguous system with the Enbridge system in Canada. These services include control center operations, facilities management, shipper services, pipeline integrity management and other related activities. The costs to provide these services are allocated to us from Enbridge Pipelines, based on an appropriate allocation methodology consistent with Enbridge's corporate cost allocation policy, including estimated time spent and miles of pipe. We also receive costs associated with control center services for some of the natural gas assets from another affiliate of Enbridge.

Enbridge also allocates management and administrative costs to us pursuant to our partnership agreement and related services agreements. These costs are allocated to us based on an allocation methodology consistent with Enbridge's corporate cost allocation policy, including estimated time spent, number of full-time equivalent employees and capital employed.

During 2007, 2006 and 2005, we incurred the following costs related to these services, which are included in operating and administrative expenses.

	Year ended December 31,		
	2007	2006	2005
		(in millions)	
Direct workforce costs	$ 181.6	$ 152.1	$ 111.3
Allocated Liquids and Natural Gas operating costs	20.1	17.3	15.3
Allocated management and administrative costs, including insurance	28.9	27.4	20.1
	$ 230.6	$ 196.8	$ 146.7

Enbridge and its affiliates allocated direct workforce costs to us related to our construction projects of $18.1 million, $11.8 million and $5.7 million during 2007, 2006 and 2005, respectively, that we recorded as additions to property, plant and equipment on our consolidated statements of financial position.

Affiliate Revenues and Purchases

We purchase natural gas from third-parties, which subsequently generates operating revenues from sales to Enbridge and its affiliates. These transactions are entered into at the market price on the date of sale. We also record operating revenues in our Liquids segment for storage, transportation and terminaling services we provide to affiliates. Included in our results for the twelve months ending December 31, 2007, 2006 and 2005, are operating revenues of $95.2 million, $42.8 million, and $43.6 million, respectively, related to these transactions.

In 2007, we entered into an agreement with Enbridge Pipelines Inc., a wholly-owned subsidiary of Enbridge, to install and operate certain sampling and related facilities for the purpose of improving the quality of crude oil and the transportation services on our Lakehead system, which directly increases the transportation services revenue of Enbridge Pipelines Inc. As compensation for installing and operating these transportation facilities, Enbridge Pipelines Inc. makes annual payments to us on a cost of service basis. The income we accrued for providing these transportation services in 2007 was approximately $0.6 million.

We also purchase natural gas from Enbridge and its affiliates for sale to third-parties at market prices on the date of purchase. Included in our results for the twelve months ending December 31, 2007, 2006 and 2005, are cost of natural gas expenses of $6.2 million, $11.5 million and $4.5 million, respectively, relating to these purchases.

Notes Payable to Affiliates

Hungary Note Payable

As of December 31, 2007 and 2006, we had $130.0 million and $136.2 million, respectively, in amounts outstanding under notes payable to Enbridge Hungary Ltd., an affiliate of our general partner, which we refer to as the Hungary Note. In December 2007, we repaid $145.0 million of the original Hungary Note, including $8.8 million of accrued interest, with proceeds we received from entering into a new Hungary

Note agreement with substantially the same terms and approximately $15 million from our existing cash. The new Hungary Note bears interest at a fixed rate of 8.4% per annum that is payable semi-annually in June and December of each year through its maturity in December 2017. Similar to the old Hungary Note, the new note allows us the option of paying accrued and unpaid interest in the form of additional indebtedness by increasing the principal balance of the note for the amounts due. Consistent with the original Hungary Note, the new Hungary Note has cross-default provisions that are triggered by events of default under our First Mortgage Notes or defaults under our Credit Facility. The new Hungary Note is subordinate to our Credit Facility and other senior indebtedness, and ranks equally with current and future Junior Notes. We entered into the original Hungary Note agreement in connection with our acquisition of the Midcoast system in October 2002. For the year ended December 31, 2006, we converted interest payable in the amount of $4.4 million into debt by increasing the principal balance of the original Hungary Note.

EUS Credit Agreement

In December 2007, we entered into an unsecured revolving credit agreement (the "EUS Credit Agreement") with Enbridge (U.S.) Inc., a wholly-owned subsidiary of Enbridge. Enbridge is the indirect owner of Enbridge Energy Company, Inc., our general partner. The EUS Credit Agreement provides for a maximum principal amount of credit available to us at any one time of $500 million for a three-year term that matures in December 2010. The EUS Credit Agreement also includes financial covenants that are consistent with those in our Second Amended and Restated Credit Agreement as discussed above. Amounts borrowed under the EUS Credit Agreement bear interest at rates that are consistent with the interest rates set forth in our Second Amended and Restated Credit Agreement. At December 31, 2007, we had no balances outstanding under the EUS Credit Agreement and the full amount remains available for our use.

General Partner Equity Transactions

Our general partner owns an effective two percent general partner ownership interest in us. Pursuant to our partnership agreement we paid cash distributions to our general partner of $34.9 million, $28.1 million, and $25.3 million for the years ended December 31, 2007, 2006 and 2005, respectively. The cash distributions we make to our general partner exclude an amount equal to two percent of the i-unit and Class C unit distributions, which we retain from the General Partner to maintain its two percent ownership interest in us.

As of December 31, 2007 and 2006, the General Partner also owned 3,912,750 Class B common units, representing a 4.2 and 4.9 percent limited partner interest in us for the respective years. We paid the General Partner cash distributions of $14.5 million for the years ended December 31, 2007, 2006 and 2005, related to its ownership of Class B common units.

At December 31, 2007 and 2006, our general partner owned 5,920,108 and 5,535,076 of our Class C units. We distributed 385,032 and 100,293 additional Class C units to our general partner during the years ended December 31, 2007 and 2006, respectively, in lieu of making cash distributions. The Class C units owned by our general partner at December 31, 2007 and 2006 represent an approximately 6.4 percent and 7.0 percent limited partner interest in us. Refer to Note 10 for additional information regarding the Class C units.

In May 2007, we issued and sold 5.3 million of our Class A common units to the public for $58.00 per Class A common unit. As part of this transaction our general partner contributed approximately $6.1 million to us to maintain its two percent general partner interest.

In April 2007, we issued and sold 5.9 million Class C units at a price of $53.11 per Class C unit to institutional investors. As part of this transaction our general partner contributed approximately $6.4 million to us to maintain its two percent general partner interest.

In August 2006, we sold approximately 5.4 million of our Class C units to our general partner for $250 million, or $46.00 per unit and 5.4 million Class C units to institutional investors for $250 million. As part of this transaction our general partner contributed approximately $10.2 million to maintain its two percent general partner interest.

Conflicts of Interest

Enbridge Management makes all decisions relating to the management and control of our business through a delegation of control agreement with the General Partner and us. The General Partner owns the voting shares of Enbridge Management and elects all of Enbridge Management's directors. Enbridge, through its wholly-owned subsidiary, Enbridge Pipelines, owns all the common stock of the General Partner. Some of the General Partner's directors and officers are also directors and officers of Enbridge and Enbridge Management and have fiduciary duties to manage the business of Enbridge and Enbridge Management in a manner that may not be in the best interests of our unitholders. Certain conflicts of interest could arise as a result of the relationships among Enbridge Management, the General Partner, Enbridge and us. Our partnership agreement and the delegation of control agreement contain provisions that allow Enbridge Management to take into account the interest of all parties in addition to those of our unitholders in resolving conflicts of interest, thereby limiting its fiduciary duties to our unitholders, as well as provisions that may restrict the remedies available to our unitholders for actions taken that might, without such limitations, constitute breaches of fiduciary duty.

Enbridge Management

Pursuant to the delegation of control agreement between Enbridge Management, our General Partner and us, and our partnership agreement, we pay all expenses relating to Enbridge Management. This includes Texas franchise taxes and any other similar capital-based foreign, state and local taxes not otherwise paid or reimbursed pursuant to a tax indemnification agreement between Enbridge and Enbridge Management on behalf of Enbridge Management.

12. COMMITMENTS AND CONTINGENCIES

Environmental Liabilities

We are subject to federal and state laws and regulations relating to the protection of the environment. Environmental risk is inherent to liquid hydrocarbon and natural gas pipeline operations and we could, at times, be subject to environmental cleanup and enforcement actions. We manage this environmental risk through appropriate environmental policies and practices to minimize any impact our operations may have on the environment. To the extent that we are unable to recover environmental liabilities associated with the Lakehead system assets through insurance, the General Partner has agreed to indemnify us from and against any costs relating to environmental liabilities associated with the Lakehead system assets prior to the transfer to us in 1991. This excludes any liabilities resulting from a change in laws after such transfer. We continue to voluntarily investigate past leak sites on our systems for the purpose of assessing whether any remediation is required in light of current regulations, and to date, no material environmental risks have been identified.

In November 2007, an unexpected release and fire on line 3 of our Lakehead system occurred during planned maintenance near our Clearbrook, Minnesota terminal. We immediately shut down all pipelines in the vicinity and dispatched emergency response crews to oversee containment, cleanup and repair of the pipeline at an estimated economic cost of $2.6 million. Lines 1, 2 and 4 were restarted the following day after inspections revealed these lines had not been damaged. The volume of oil released was approximately 325 barrels, which was largely contained in the trench that had been excavated to facilitate the planned maintenance. We completed excavation and repairs and returned the line to service within 5 days. We continue to work with federal and state environmental and pipeline safety regulators to investigate the cause of the incident. We have the potential of incurring additional costs in connection with this incident, including expenditures necessary to remediate any operating condition that is determined to have caused this incident.

As of December 31, 2007 and 2006, we have recorded $3.4 million and $4.1 million in current liabilities and $2.8 million and $3.3 million, respectively, in long-term liabilities primarily to address remediation of asbestos containing materials, management of hazardous waste material disposal, and outstanding air quality measures for certain of our liquids and natural gas assets.

Oil and Gas in Custody

Our Liquids assets transport crude oil and NGLs owned by our customers for a fee. The volume of liquid hydrocarbons in our pipeline systems at any one time varies from approximately 22 to 40 million barrels, virtually all of which is owned by our customers. Under the terms of our tariffs, losses of crude oil from identifiable incidents not resulting from our direct negligence may be apportioned among our customers. In addition, we maintain adequate property insurance coverage with respect to crude oil and NGLs in our custody.

Approximately 50% of the natural gas volumes on our natural gas assets are transported for customers on a contractual basis. We purchase the remaining 50% and sell to third-parties downstream of the purchase point. At any point in time, the value of our customers' natural gas in the custody of our natural gas systems is not material to us.

Right-of-Way

As part of our pipeline construction process, we must obtain certain right-of-way agreements from landowners whose property the pipeline will cross. Right-of-way agreements that we buy are capitalized as part of Property, plant and equipment. Right-of-way agreements that are leased from a third-party are expensed. We recorded expenses of $1.6 million, $2.1 million, and $1.9 million for the leased right-of-way agreements for the years ended December 31, 2007, 2006, and 2005, respectively.

Legal Proceedings

We are a participant in various legal proceedings arising in the ordinary course of business. Some of these proceedings are covered, in whole or in part, by insurance. We believe that the outcome of all these proceedings will not, individually or in the aggregate, have a material adverse effect on our financial condition.

Future Minimum Commitments

As of December 31, 2007, our future minimum commitments that have remaining non-cancelable terms in excess of one year are as follows:

Future Minimum Commitments	2008	2009	2010	2011	2012	Thereafter	Total
				(in millions)			
Purchase commitments[1]	$ 305.4	$ —	$ —	$ —	$ —	$ —	$ 305.4
Power commitments[2]	2.9	0.2	0.2	—	—	—	3.3
Other operating leases	11.9	8.9	2.7	0.4	—	0.1	24.0
Right-of-way[3]	1.7	1.7	1.7	1.7	1.7	41.0	49.5
Product purchase obligations[4]	55.7	38.5	34.5	32.7	31.0	84.3	276.7
Service contract obligations[5]	36.0	28.8	25.6	18.6	7.3	0.5	116.8
Total	$ 413.6	$ 78.1	$ 64.7	$ 53.4	$ 40.0	$ 125.9	$ 775.7

(1) Represents commitments to purchase materials, primarily pipe from third-party suppliers in connection with our expansion projects.

(2) Represents commitments to purchase power in connection with our Liquids segment.

(3) Right-of-way payments are estimated to be approximately $1.7 million per year for the remaining life of all pipeline systems, which has been assumed to be 25 years for purposes of calculating the amount of future minimum commitments beyond 2012.

(4) We have long-term product purchase obligations with several third-party suppliers to acquire natural gas and NGLs at prices approximating market at the time of delivery.

(5) The service contract obligations represent the minimum payment amounts for firm transportation and storage capacity we have reserved on third-party pipelines and storage facilities.

13. FINANCIAL INSTRUMENTS

Fair Value of Debt Obligations

The table below presents the carrying amount and approximate fair values of our debt obligations. The carrying amounts of our commercial paper obligations approximate their fair values at December 31, 2007, due to the short-term nature of these obligations. The fair values of the First Mortgage Notes and Senior notes have been determined based on quotations of indicative pricing for which we could issue the same or similar securities quoted market prices for the same or similar issues.

	December 31, 2007		December 31, 2006	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
	(in millions)			
Commercial paper	$ 268.5	$ 268.5	$ 443.7	$ 443.7
Credit Facility	400.0	400.0	—	—
9.150% First Mortgage Notes	124.0	135.1	155.0	169.5
5.358% Senior unsecured zero coupon notes due 2022	203.6	210.7	—	—
4.000% Senior notes due 2009	200.0	198.5	200.0	194.2
7.900% Senior notes due 2012	99.9	110.2	99.9	110.5
4.750% Senior notes due 2013	199.8	192.0	199.8	188.6
5.350% Senior notes due 2014	199.9	194.3	199.9	193.0
5.875% Senior notes due 2016	299.7	293.7	299.7	297.4
7.000% Senior notes due 2018	99.9	105.3	99.8	107.9
7.125% Senior notes due 2028	99.8	104.3	99.8	108.9
5.950% Senior notes due 2033	199.7	176.9	199.7	186.2
6.300% Senior notes due 2034	99.8	92.1	99.8	97.1
8.050% Junior subordinated notes due 2067	399.3	385.9	—	—

Fair Value of Derivative Financial Instruments

The fair values of our derivative financial instruments are determined based on available market information, valuation and modeling techniques. These modeling techniques require us to make estimates of future prices, price correlation, market volatility and liquidity. The estimates also reflect factors for time value of money and the volatility of prices underlying the contracts, the potential impact of liquidating positions in an orderly manner over a reasonable period of time under present market conditions, modeling risk, credit risk of counterparties and operational risk.

Interest Rate Derivatives

We enter into interest rate swaps, collars and derivative financial instruments with similar characteristics to manage the effect of future interest rate movements on our interest costs. The following table provides information about our current interest rate derivatives by transaction type for the specified periods.

	Notional Principal	Partnership Pays	Partnership Receives	Maturity Date	Fair Value at December 31, 2007	Fair Value at December 31, 2006
					(dollars in millions)	
Interest Rate Swaps						
Floating to Fixed:						
	$ 50.0	4.715%	LIBOR [2]	January 22, 2007	$ —	$ 0.1
	$ 50.0	4.738%	LIBOR	January 24, 2007	—	0.1
	$ 50.0	4.740%	LIBOR	February 3, 2007	—	0.1
	$ 50.0	4.750%	LIBOR	February 8, 2007	—	0.1

(1) A bps refers to a basis point. One basis point is equivalent to 1/100th of 1 percent.

(2) LIBOR refers to the three-month U.S. London Interbank Offered Rate.

(3) UST refers to United States Treasury notes.

Our treasury locks and a portion of our interest rate collars maturing in 2008 qualify for hedge accounting treatment pursuant to the requirements of SFAS No. 133 and have been designated as cash flow hedges of future interest payments on the first $200 million of an anticipated debt issuance and interest payments on $50 million of our variable rate indebtedness, respectively. As such, the fair value of these derivative financial instruments is recorded as assets or liabilities on our consolidated statements of financial position with the changes in fair value recorded as corresponding increases or decreases in Accumulated Other Comprehensive Income, or AOCI. Our floating to fixed rate interest rate swaps and a portion of our interest rate collars maturing in 2008 and 2009 hedging $250 million of our variable rate indebtedness did not qualify for hedge accounting treatment as set forth in SFAS No. 133 at December 31, 2007. As such, changes in the fair value of these derivative financial instruments are recorded in earnings as an increase or decrease in interest expense. A portion of these transactions have subsequently been re-designated as cash flow hedges of forecast floating rate indebtedness.

The floating to fixed rate and fixed to floating rate interest rate swaps maturing in 2013 have not been designated as cash flow or fair value hedges under SFAS No. 133 and, as a result, changes in the fair value of these derivative financial instruments are recorded in earnings as an increase or decrease in interest expense.

Commodity Price Derivatives

The following table provides summarized information about the fair values of our outstanding commodity derivative financial instruments at December 31, 2007 and 2006:

	December 31, 2007					December 31, 2006	
		Wtd Avg Price		Fair Value[3]		Fair Value[3]	
	Notional	Receive	Pay	Asset	Liability	Asset	Liability
Swaps							
Natural gas[1]							
Receive variable/ pay fixed	53,477,203	$ 7.43	$ 7.31	$ 21.6	$ (16.1)	$ 25.6	$ (94.2)
Receive fixed/ pay variable	67,237,786	5.59	8.00	11.5	(160.5)	84.3	(160.7)

NGL[2]							
Receive variable/ pay fixed	—	—	—	—	—	—	(0.5)
Receive fixed/ pay variable	10,163,878	42.19	58.68	—	(160.6)	18.3	(34.4)
Crude[2]							
Receive fixed/ pay variable	1,411,221	62.27	88.36	—	(34.6)	0.2	(18.5)
Options—calls							
Natural gas[1]	1,461,000	4.31	8.36	—	(5.6)	—	(5.4)
Options—puts							
Natural gas[1]	1,401,000	8.41	3.40	—	—	1.0	—
NGL[2]	763,403	61.42	43.54	0.7	—	—	—
Totals[4]				$ 45.3	$ (383.4)	$ 137.3	$ (318.5)

(1) Notional amounts for natural gas are recorded in millions of British thermal units ("MMBtu").

(2) Notional amounts for NGL and Crude are recorded in Barrels ("Bbl").

(3) Fair values of derivatives are presented in millions of dollars.

(4) We record the fair value of our derivative financial instruments in the balance sheet as current and long-term assets or liabilities on a net basis by counterparty.

14. DERIVATIVE FINANCIAL INSTRUMENTS AND HEDGING ACTIVITIES

Our net income and cash flows are subject to volatility stemming from changes in interest rates on our variable rate debt obligations and fluctuations in commodity prices of natural gas, NGLs, condensate and fractionation margins (the relative difference between the price we receive from NGL sales and the corresponding cost of natural gas purchases). Our interest rate risk exposure does not exist within any of our segments, but exists at the corporate level where our variable rate debt obligations are issued. Our exposure to commodity price risk exists within our Natural Gas and Marketing segments. We use derivative financial instruments (i.e., futures, forwards, swaps, options and other financial instruments with similar characteristics) to manage the risks associated with market fluctuations in commodity prices and interest rates, as well as reduce volatility to our cash flows. Based on our risk management policies, all of our derivative financial instruments are employed in connection with an underlying asset, liability and/or forecasted transaction and are not entered into with the objective of speculating on interest rates or commodity prices.

Accounting Treatment

We record all derivative financial instruments in our consolidated financial statements at fair market value which we adjust each period for changes in the fair market value ("mark-to-market"). The fair market value of these derivative financial instruments reflects the estimated amounts that we would pay or receive, other than in a forced or liquidation sale, to terminate or close the contracts at the reporting date, taking into account the current unrealized losses or gains on open contracts. We use actively traded external market quotes and indices to value substantially all of the derivative financial instruments we utilize.

Under the guidance of SFAS No. 133, if a derivative financial instrument does not qualify as a hedge, or is not designated as a hedge, the derivative is adjusted to its fair market value, or marked-to-market, each period with the increases and decreases in fair value recorded in our consolidated statements of income as increases and decreases in Cost of natural gas for our commodity-based derivatives and Interest expense for our interest rate derivatives. Cash flow is only impacted to the extent the actual derivative contract is settled by making or receiving a payment to or from the counterparty or by making or receiving a payment for entering into a contract that exactly offsets the original derivative contract. Typically, we settle our derivative contracts when the physical transaction that underlies the derivative financial instrument occurs.

If a derivative financial instrument qualifies and is designated as a cash flow hedge, a hedge of a forecasted transaction or future cash flows, any unrealized mark-to-market gain or loss is deferred in Accumulated other comprehensive income ("AOCI"), a component of Partners' Capital, until the underlying hedged transaction occurs. To the extent that the hedge instrument is effective in offsetting the transaction being hedged, there is no impact to the income statement. At inception and on a quarterly basis, we formally assess whether the hedge contract is highly effective in offsetting changes in cash flows of hedged items. Any ineffective portion of a cash flow hedge's change in fair market value is recognized each period in earnings. Realized gains and losses on derivative financial instruments that are designated as hedges and qualify for hedge accounting are included in Cost of natural gas for commodity hedges and Interest expense for interest rate hedges in the period the hedged transaction occurs. Gains and losses deferred in AOCI related to cash flow hedges for which hedge accounting has been discontinued, remain in AOCI until the underlying physical transaction occurs unless it is probable that the forecasted transaction will not occur by the end of the originally specified time period, or within an additional two-month period of time thereafter. Generally, our preference is for our derivative financial instruments to receive hedge accounting treatment whenever possible, to mitigate the non-cash earnings volatility that arises from recording the changes in fair value of our derivative financial instruments through earnings. To qualify for cash flow hedge accounting as set forth in SFAS No. 133, very specific requirements must be met in terms of hedge structure, hedge objective and hedge documentation.

If a derivative financial instrument is designated and qualifies as a hedge of the change in fair market value of an underlying asset or liability, the gain or loss resulting from the change in fair market value of the derivative financial instrument is recorded in earnings adjusted by the gain or loss resulting from the change in fair market value of the underlying asset or liability. Any ineffective portion of a fair value hedge's change in fair market value will be recorded in earnings as the amount that is not offset by the gain or loss on the change in fair market value of the underlying asset or liability. We include the gains and losses associated with derivative financial instruments designated and qualifying as fair value hedges of our debt obligations in Interest expense on our consolidated statements of income. Similar to derivative financial instruments designated as cash flow hedges, to qualify as a fair value hedge very specific requirements must be met in terms of hedge structure, hedge objective and hedge documentation.

Non-Qualified Hedges

Many of our derivative financial instruments qualify for hedge accounting treatment under the specific requirements of SFAS No. 133. However, we have four primary transaction types associated with our commodity derivative financial instruments where the hedge structure does not meet the requirements to apply hedge accounting. As a result, these derivative financial instruments do not qualify for hedge accounting under SFAS No. 133 and are referred to as "non-qualified." These non-qualified derivative financial instruments are marked-to-market each period with the change in fair value, representing unrealized gains and losses, included in cost of natural gas in our consolidated statements of income. These mark-to-market adjustments produce a degree of earnings volatility that can often be significant from period to period, but have no cash flow impact relative to changes in market prices. The cash flow impact occurs when the underlying physical transaction takes place in the future and the associated financial instrument contract settlement is made.

The four primary transaction types that do not qualify for hedge accounting are as follows:

1. **Transportation—**In our Marketing segment, when we transport natural gas from one location to another the pricing index used for natural gas sales is usually different from the pricing index used for natural gas purchases, which exposes us to market price risk relative to changes in those two indices. By entering into a basis swap, where we exchange one pricing index for another, we can effectively lock in the margin, representing the difference between the sales price and the purchase price, on the combined natural gas purchase and natural gas sale, removing any market price risk on the physical transactions. Although this represents a sound economic hedging strategy, the derivative financial instruments (i.e., the basis swaps) we use to manage the commodity price risk associated with these transportation contracts do not qualify for hedge accounting under SFAS No. 133, since only the future margin has been fixed and not the future cash flow. As a result, the changes in fair value of these derivative financial instruments are recorded in earnings.

2. **Storage—**In our Marketing segment, we use derivative financial instruments (i.e., natural gas swaps) to hedge the relative difference between the injection price paid to purchase and store natural gas and the withdrawal price at which the natural gas is sold from storage. The intent of these derivative financial instruments is to lock in the margin, representing the difference between the price paid for the natural gas injected and the price received upon withdrawal of the gas from storage in a future period. We do not pursue cash flow hedge accounting treatment for these storage transactions since the underlying forecasted injection or withdrawal of natural gas may not occur in the period as originally forecast. This can occur because we have the flexibility to make changes in the underlying injection or withdrawal schedule, given changes in market conditions. In addition, since the physical natural gas is recorded at the lower of cost or market, timing differences can result when the derivative financial instrument is settled in a period that is different from the period the physical natural gas is sold from storage. As a result, derivative financial instruments associated with our natural gas storage activities can create volatility in our earnings.

3. **Natural Gas Collars—**In our Natural Gas segment, we had previously entered into natural gas collars to hedge the sales price of natural gas. The natural gas collars were based on a NYMEX price, while the physical gas sales were based on a different index. To better align the index of the natural gas collars with the index of the underlying sales, we de-designated the original cash flow hedging relationship with the intent of contemporaneously re-designating the natural gas collars

as hedges of forecasted physical natural gas sales with a NYMEX pricing index. However, because the fair value of these derivative instruments was a liability to us at re-designation, they are considered net written options under SFAS No. 133 and do not qualify for hedge accounting. These derivatives are being marked-to-market, with the changes in fair value from the date of de-designation recorded to earnings each period. As a result, our operating income will be subject to greater volatility due to movements in the prices of natural gas until the underlying long-term transactions are settled.

4. **Optional Natural Gas Processing Volumes—**In our Natural Gas segment we use derivative financial instruments to hedge the volumes of NGLs produced from our natural gas processing facilities. Our natural gas contracts allow us the option of processing natural gas when it is economical, and ceasing to do so when processing becomes uneconomic. We have entered into derivative financial instruments to fix the sales price of a portion of the NGLs that we produce at our discretion and to fix the associated purchases of natural gas required for processing. We will designate derivative financial instruments associated with NGLs we produce at our discretion as cash flow hedges when the processing of natural gas is probable of occurrence. However, we are precluded from designating the derivative financial instruments entered to manage the respective commodity price risk when we are unable to accurately forecast the NGLs to be processed at our discretion. As a result, our operating income will be subject to increased volatility due to fluctuations in NGL prices until the underlying transactions are settled or offset.

In each of the instances described above, the underlying physical purchase, storage and sale of natural gas and NGLs are accounted for on a historical cost or market basis rather than on the mark-to-market basis we utilize for the derivative financial instruments employed to mitigate the commodity price risk associated with our storage and transportation assets. This difference in accounting (i.e., the derivative financial instruments are recorded at fair market value while the physical transactions are recorded at historical cost) can and has resulted in volatility in our reported net income, even though the economic margin is essentially unchanged from the date the transactions were consummated.

We routinely enter into interest rate swaps to fix the interest rates associated with our variable rate debt, including commercial paper and bank borrowings. In August 2007, we entered into forward-starting interest rate swaps that we designated as cash flow hedges of variable rate debt to begin in October 2007 and November 2007. The specific floating rate borrowings did not take place as initially forecast, thereby causing the interest rates swaps to no longer qualify as cash flow hedges. As a result, we recorded a charge to interest expense of $1.4 million, representing the fair market value of the interest rate swaps at December 31, 2007. A portion of these transactions have subsequently been re-designated as cash flow hedges of forecast floating rate indebtedness.

Discontinuance of Hedge Accounting

In 2005, we discontinued application of hedge accounting in connection with some of our derivative financial instruments designated as hedges of forecasted sales and purchases of natural gas. We discontinued application of hedge accounting when we determined it was no longer probable that the originally forecasted purchases and sales of natural gas would occur by the end of the originally specified time period, or within an additional two-month period of time thereafter. As discussed above, this can occur because we have the flexibility to make changes to the underlying delivery locations for our transportation assets and to the underlying injection or withdrawal schedule for our storage assets, given changes in market conditions. One of the key criteria to achieve hedge accounting under SFAS No. 133 is that the forecasted transaction be probable of occurring as originally set forth in the hedge documentation. As a result, in 2005, we recognized previously deferred unrealized losses in our Marketing segment of approximately $9.0 million from the discontinuance of hedge accounting. In doing so, we reclassified the $9.0 million to cost of natural gas on our consolidated statements of income from AOCI. Going forward, the derivative financial instruments for which hedge accounting has been discontinued are considered to be non-qualified under SFAS No. 133, and must be marked-to-market each period, with the increases and decreases in fair value recorded as increases and decreases in earnings. Also included in the loss from discontinuance are approximately $2.1 million of net mark-to-market losses that relate to hedge positions that were closed out in 2005.

The following table presents the unrealized gains and losses associated with changes in the fair value of our derivatives, which are recorded as an element of cost of natural gas and interest expense in our consolidated statements of income and disclosed as a reconciling item on our consolidated statements of cash flows:

Derivative fair value gains (losses)	December 31, 2007	December 31, 2006	December 31, 2005
		(in millions)	
Natural Gas segment			
Hedge ineffectiveness	$ —	$ (1.9)	$ (2.5)
Non-qualified hedges	(59.0)	1.8	(5.6)
Marketing			
Non-qualified hedges	(3.8)	64.5	(41.3)
Discontinued hedges	—	—	(9.0)
Commodity derivative fair value gains (losses)	(62.8)	64.4	(58.4)
Corporate			
Non-qualified interest rate hedges	(1.4)	—	—
Derivative fair value gains (losses)	$ (64.2)	$ 64.4	$ (58.4)

De-designation and Settlement of Derivatives

In connection with the sale of assets in December 2005, as discussed in Note 3 to these consolidated financial statements, we settled for cash of approximately $16.3 million, natural gas collars representing derivative financial instruments on sales of 2,000 MMBtu/d of natural gas through 2011. We had previously recorded unrealized losses associated with the natural gas collars that were realized upon settlement. Additionally, we de-designated derivative financial instruments that qualified for and were designated as cash flow hedges of forecasted sales of 273 Bpd of NGLs through 2007 and contemporaneously closed out the position by entering into an offsetting derivative financial instrument, at market, on forecasted purchases of 273 Bpd of NGLs through 2007.

Derivative Positions

Our derivative financial instruments are included at their fair values in the consolidated statements of financial position as follows:

	December 31, 2007	December 31, 2006
	(in millions)	
Other current assets	$ 6.5	$ 7.2
Other assets, net	6.4	11.0
Accounts payable and other	(165.5)	(57.2)
Other long-term liabilities	(192.9)	(136.4)
	$ (345.5)	$ (175.4)

The increase in our obligation associated with derivative activities is primarily due to the increase in current and forward natural gas and NGL prices from December 31, 2006 to December 31, 2007. Our portfolio of derivative financial instruments is largely comprised of long-term fixed price natural gas and NGL sales and purchase agreements.

We record the change in fair value of our highly effective cash flow hedges in AOCI until the derivative financial instruments are settled, at which time they are reclassified to earnings. We regularly enter into treasury locks to hedge the interest on anticipated issuances of indebtedness. The settlement of a treasury lock can result in the retention of unrecognized gains or losses in AOCI that are amortized to interest expense over the life of the related debt issuance. In connection with our 2007 issuance and sale of $400 million in principal amount of our Junior Notes, we paid $0.9 million to settle treasury locks we entered to hedge the first five years of interest payments on a portion of this obligation. The $0.9 million is being amortized from AOCI to interest expense over the five year period for which the derivative instrument was established to hedge of interest payments on the junior notes. In December 2006, we paid $10.2 million to settle treasury locks we entered to hedge a portion of the interest payments associated with our issuance of $300 million in principal amount of our senior notes. The $10.2 million is being amortized from AOCI to interest expense over the 10-year life of the senior notes.

Also included in AOCI are unrecognized losses of approximately $2.0 million associated with derivative financial instruments that qualified for and were classified as cash flow hedges of forecasted commodity transactions that were subsequently de-designated. These unrealized losses are reclassified to earnings over the periods during which the originally hedged forecasted transactions affect earnings. For the years ended December 31, 2007, 2006 and 2005, we reclassified unrealized losses of $94.8 million, $78.3 million and $33.8 million, respectively, from AOCI to cost of natural gas on our consolidated statements of income for the fair value of derivative financial instruments that were settled. We estimate that approximately $113 million of AOCI representing unrealized net losses on cash flow hedging activities at December 31, 2007, will be reclassified to earnings during the next twelve months.

We do not require collateral or other security from the counterparties to our derivative financial instruments, all of which were rated "BBB+" or better by the major credit rating agencies.

15. INCOME TAXES

We are not a taxable entity for U.S. federal income tax purposes, or for the majority of states that impose an income tax. These taxes on our net income are generally borne by our unitholders through the allocation of taxable income. Beginning in 2006, two states enacted substantial changes to their tax structures to impose taxes that are based upon many but not all items included in net income. We report these taxes as income taxes under the provisions of Statement of Financial Accounting Standards No. 109, *Accounting for Income Taxes* ("SFAS No. 109").

Our income tax expense is $5.1 million for the year ended December 31, 2007, which we computed by applying a 0.57% state income tax rate to modified gross revenue. Our income tax expense represents a 2.0% effective rate as applied to pretax book income. At December 31, 2007 we have included a current income tax payable of $4.9 million in property and other taxes payable. In addition, we have included a deferred income tax asset of $0.6 million in other assets, net on our consolidated statement of financial position to reflect the tax associated with the difference between the net basis in assets and liabilities for financial and state tax reporting.

We recognize deferred income tax assets and liabilities for temporary differences between the relevant basis of our assets and liabilities for financial reporting and tax purposes. The impact of changes in tax legislation on deferred income tax liabilities and assets is recorded in the period of enactment. The tax effects of significant temporary differences representing deferred tax assets and liabilities are as follows:

Net book basis of assets in excess of tax basis	$	(1.3)
Net book losses on derivatives not recognized for tax purposes		1.9
Net deferred tax asset	$	0.6

Accounting for Uncertainty in Income Taxes

In July 2006, the Financial Accounting Standards Board ("FASB") issued Interpretation No. 48, *Accounting for Uncertainty in Income Taxes-an Interpretation of FASB Statement 109,* or FIN 48. This Interpretation clarifies the accounting for uncertainty in income taxes recognized in a company's financial statements in accordance with FASB Statement No. 109, *Accounting for Income Taxes*. We implemented FIN 48 during the first quarter of 2007. Our adoption of FIN 48 did not materially affect our operating results, financial position or cash flows. As of December 31, 2007, we have no liability reported for unrecognized tax benefits.

Our tax years are generally open to examination by the Internal Revenue Service and state revenue authorities for calendar years ending December 2006, 2005, and 2004.

16. SEGMENT INFORMATION

Our business is divided into operating segments, defined as components of the enterprise, about which financial information is available and evaluated regularly by our Chief Operating Decision Maker in deciding how resources are allocated and performance is assessed.

Each of our reportable segments is a business unit that offers different services and products that is managed separately, since each business segment requires different operating strategies. We have segregated our business activities into three distinct operating segments:

- Liquids;
- Natural Gas; and
- Marketing.

The following table presents certain financial information relating to our business segments as of and for the years ended December 31, 2007, 2006 and 2005.

	As of and for the Year Ended December 31, 2007				
	Liquids	Natural Gas	Marketing	Corporate[1]	Total
	(in millions)				
Total revenue	$ 548.1	$ 5,807.3	$ 3,527.5	$ —	$ 9,882.9

(1) Corporate consists of interest expense, interest income and other costs such as certain taxes, which are not allocated to the other business segments.

17. SUBSEQUENT EVENTS

On January 28, 2008, the board of directors of Enbridge Management declared a distribution payable to our partners on February 14, 2008. The distribution was paid to unitholders of record as of February 6, 2008, of our available cash of $96.7 million at December 31, 2007, or $0.950 per limited partner unit. Of this distribution, $66.0 million was paid in cash, $12.9 million was distributed in i-units to our i-unitholder, $17.2 million was distributed in Class C units to the holders of our Class C units and $0.6 million was retained from the General Partner in respect of the i-unit and Class C unit distributions to maintain its two percent general partner interest.

18. QUARTERLY FINANCIAL DATA (Unaudited)

	First		Second		Third		Fourth		Total	
	(in millions, except per unit amounts)									
2007 Quarters										
Operating revenue	$	1,712.7	$	1,738.7	$	1,710.9	$	2,120.3	$	7,282.6
Operating income	$	64.1	$	90.9	$	101.6	$	62.2	$	318.8
Income from continuing operations	$	39.1	$	68.6	$	77.3	$	31.9	$	216.9
Income from discontinued operations	$	—	$	—	$	—	$	32.6	$	32.6
Net income	$	39.1	$	68.6	$	77.3	$	64.5	$	249.5
Net income per limited partner unit(1)	$	0.40	$	0.69	$	0.75	$	0.59	$	2.45
2006 Quarters										
Operating revenue	$	1,888.6	$	1,424.7	$	1,532.3	$	1,663.4	$	6,509.0
Operating income(2)	$	108.0	$	93.6	$	108.7	$	76.6	$	386.9
Net income(2)	$	81.1	$	70.4	$	82.2	$	51.2	$	284.9
Net income per limited partner unit(1)(2)	$	1.12	$	0.96	$	1.03	$	0.56	$	3.62

(1) The General Partner's allocation of net income has been deducted before calculating net income per limited partner unit.

(2) The fourth quarter of 2006 includes approximately $8.3 million for raw natural gas purchases and transportation and fractionation charges that relate to prior years that we had not previously recorded.

Exhibit 31.1

CERTIFICATION PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002

I, Stephen J. J. Letwin, certify that:

1. I have reviewed this Annual Report on Form 10-K of Enbridge Energy Partners, L.P.;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

    a) designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

    b) designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

    c) evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

    d) disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's Board of Directors (or persons performing the equivalent functions):

    a) all significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

    b) any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

ENTERPRISE PRODUCTS PARTNERS L.P.
NOTES TO UNAUDITED CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

Except per unit amounts, or as noted within the context of each footnote disclosure, the dollar amounts presented in the tabular data within these footnote disclosures are stated in thousands of dollars.

Note 1. Partnership Organization

Partnership Organization

Enterprise Products Partners L.P. is a publicly traded Delaware limited partnership, the common units of which are listed on the New York Stock Exchange ("NYSE") under the ticker symbol "EPD." Unless the context requires otherwise, references to "we," "us," "our" or "Enterprise Products Partners" are intended to mean the business and operations of Enterprise Products Partners L.P. and its consolidated subsidiaries.

We were formed in April 1998 to own and operate certain natural gas liquids ("NGLs") related businesses of EPCO, Inc. ("EPCO"). We conduct substantially all of our business through our wholly owned subsidiary, Enterprise Products Operating LLC ("EPO"). We are owned 98% by our limited partners and 2% by Enterprise Products GP, LLC (our general partner, referred to as "EPGP"). EPGP is owned 100% by Enterprise GP Holdings L.P. ("Enterprise GP Holdings"), a publicly traded affiliate, the units of which are listed on the NYSE under the ticker symbol "EPE." The general partner of Enterprise GP Holdings is EPE Holdings, LLC ("EPE Holdings"), a wholly owned subsidiary of Dan Duncan LLC, the membership interests of which are owned by Dan L. Duncan. We, EPGP, Enterprise GP Holdings, EPE Holdings and Dan Duncan LLC are affiliates and under common control of Dan L. Duncan, the Group Co-Chairman and controlling shareholder of EPCO.

References to "TEPPCO" mean TEPPCO Partners, L.P., a publicly traded affiliate, the common units of which are listed on the NYSE under the ticker symbol "TPP." References to "TEPPCO GP" refer to Texas Eastern Products Pipeline Company, LLC, which is the general partner of TEPPCO and is wholly owned by Enterprise GP Holdings.

References to "Energy Transfer Equity" mean the business and operations of Energy Transfer Equity, L.P. and its consolidated subsidiaries. References to "LE GP" mean LE GP, LLC, which is the general partner of Energy Transfer Equity. On May 7, 2007, Enterprise GP Holdings acquired non-controlling interests in both LE GP and Energy Transfer Equity. Enterprise GP Holdings accounts for its investments in LE GP and Energy Transfer Equity using the equity method of accounting.

References to "Employee Partnerships" mean EPE Unit L.P. ("EPE Unit I"), EPE Unit II, L.P. ("EPE Unit II"), EPE Unit III, L.P. ("EPE Unit III") and Enterprise Unit L.P. ("Enterprise Unit"), collectively, which are private company affiliates of EPCO.

On February 5, 2007, a consolidated subsidiary of ours, Duncan Energy Partners L.P. ("Duncan Energy Partners"), completed an initial public offering of its common units (see Note 13). Duncan Energy Partners owns equity interests in certain of our midstream energy businesses. References to "DEP GP" mean DEP Holdings, LLC, which is the general partner of Duncan Energy Partners and is wholly owned by EPO.

For financial reporting purposes, we consolidate the financial statements of Duncan Energy Partners with those of our own and reflect its operations in our business segments. We control Duncan Energy Partners through our ownership of its general partner. Also, due to common control of the entities by Dan L. Duncan, the initial consolidated balance sheet of Duncan Energy Partners reflects our historical carrying basis in each of the subsidiaries contributed to Duncan Energy Partners. Public ownership of Duncan Energy Partners' net assets and earnings are presented as a component of minority interest in our condensed consolidated financial statements. The borrowings of Duncan Energy Partners are presented as part of our consolidated debt; however, neither Enterprise Products Partners L.P. nor EPO have any obligation for the payment of interest or repayment of borrowings incurred by Duncan Energy Partners.

Basis of Presentation

Our results of operations for the three and nine months ended September 30, 2008 are not necessarily indicative of results expected for the full year.

Essentially all of our assets, liabilities, revenues and expenses are recorded at EPO's level in our consolidated financial statements. Enterprise Products Partners L.P. acts as guarantor of certain of EPO's debt obligations. See Note 18 for condensed consolidated financial information of EPO.

In our opinion, the accompanying Unaudited Condensed Consolidated Financial Statements include all adjustments consisting of normal recurring accruals necessary for fair presentation. Although we believe the disclosures in these financial statements are adequate to make the information presented not misleading, certain information and footnote disclosures normally included in annual financial statements prepared in accordance with U.S. generally accepted accounting principles ("GAAP") have been condensed or omitted pursuant to the rules and regulations of the U.S. Securities and Exchange Commission ("SEC"). These Unaudited Condensed Consolidated Financial Statements and notes thereto should be read in conjunction with our Annual Report on Form 10-K for the year ended December 31, 2007 (Commission File No. 1-14323).

Note 2. General Accounting Policies and Related Matters

Consolidation Policy

Our financial statements include our accounts and those of our majority-owned subsidiaries in which we have a controlling financial or equity interest, after the elimination of intercompany accounts and transactions. We evaluate our financial interests in companies to determine if they represent variable interest entities where we are the primary beneficiary. If such criteria are met, we consolidate the financial statements of such businesses with those of our own.

If an investee is organized as a limited partnership or limited liability company and maintains separate ownership accounts, we account for our investment using the equity method if our ownership interest is between 3% and 50% and we exercise significant influence over the investee's operating and financial policies. For all other types of investments, we apply the equity method of accounting if our ownership interest is between 20% and 50% and we exercise significant influence over the investee's operating and financial policies. In consolidation we eliminate our proportionate share of profits and losses from transactions with our equity method unconsolidated affiliates to the extent such amounts are material and remain on our balance sheet (or those of our equity method investees) in inventory or similar accounts.

If our ownership interest in an investee does not provide us with either control or significant influence over the investee, we account for the investment using the cost method.

Dixie Employee Benefit Plans

Dixie Pipeline Company ("Dixie"), a consolidated subsidiary of EPO, directly employs the personnel that operate its pipeline system. Certain of these employees are eligible to participate in Dixie's defined contribution plan and pension and postretirement benefit plans.

Defined Contribution Plan. Dixie contributed $0.1 million to its company-sponsored defined contribution plan during each of the three month periods ended September 30, 2008 and 2007. During each of the nine month periods ended September 30, 2008 and 2007, Dixie contributed $0.2 million to its company-sponsored defined contribution plan.

Pension and Postretirement Benefit Plans. Dixie's net pension benefit costs were $0.1 million for each of the three month periods ended September 30, 2008 and 2007. For each of the nine month periods ended September 30, 2008 and 2007, Dixie's net pension benefit costs were $0.4 million. Dixie's net postretirement benefit costs were $0.1 million for each of the three month periods ended September 30, 2008 and 2007. For each of the nine month periods ended September 30, 2008 and 2007, Dixie's net postretirement benefit costs were $0.3 million. During the remainder of 2008, Dixie expects to contribute approximately $0.5 million to its pension plan and approximately $0.1 million to its postretirement benefit plan.

Environmental Costs

Environmental costs for remediation are accrued based on estimates of known remediation requirements. Such accruals are based on management's best estimate of the ultimate cost to remediate a site and are adjusted as further information and circumstances develop. Those estimates may change substantially depending on information about the nature and extent of contamination, appropriate remediation technologies and regulatory approvals. Ongoing environmental compliance costs are charged to expense as incurred. In accruing for environmental remediation liabilities, costs of future expenditures for environmental remediation are not discounted to their present value, unless the amount and timing of the expenditures are fixed or reliably determinable. At September 30, 2008, none of our estimated environmental remediation liabilities are discounted to present value since the ultimate amount and timing of cash payments for such liabilities are not readily determinable. Expenditures to mitigate or prevent future environmental contamination are capitalized.

At September 30, 2008 and December 31, 2007, our accrued liabilities for environmental remediation projects totaled $21.2 million and $26.5 million, respectively. These amounts were derived from a range of reasonable estimates based upon studies and site surveys. Unanticipated changes in circumstances and/or legal requirements could result in expenses being incurred in future periods in addition to an increase in actual cash required to remediate contamination for which we are responsible.

Estimates

Preparing our financial statements in conformity with GAAP requires management to make estimates and assumptions that affect amounts presented in the financial statements (i.e. assets, liabilities, revenue and expenses) and disclosures about contingent assets and liabilities. Our actual results could differ from these estimates. On an ongoing basis, management reviews its estimates based on currently available information. Changes in facts and circumstances may result in revised estimates.

We revised the remaining useful lives of certain assets, most notably the assets that constitute our Texas Intrastate System, effective January 1, 2008. This revision adjusted the remaining useful life of such assets to incorporate recent data showing that proved natural gas reserves supporting throughput and processing volumes for these assets have changed since our original determination made in September 2004. These revisions will prospectively reduce our depreciation expense on assets having carrying values totaling $2.72 billion at January 1, 2008. For additional information regarding this change in estimate, see Note 6.

Minority Interest

As presented in our Unaudited Condensed Consolidated Balance Sheets, minority interest represents third-party and affiliate ownership interests in the net assets of our consolidated subsidiaries. For financial reporting purposes, the assets and liabilities of our controlled subsidiaries, including Duncan Energy Partners, are consolidated with those of our own, with any third-party or affiliate ownership interests in such amounts presented as minority interest.

At September 30, 2008 and December 31, 2007, minority interest includes $281.9 million and $288.6 million, respectively, attributable to third party owners of Duncan Energy Partners. Minority interest expense for the three months ended September 30, 2008 and 2007 includes $2.7 million and $3.2

million, respectively, attributable to third party owners of Duncan Energy Partners. For the nine months ended September 30, 2008 and 2007 minority interest expense attributable to third party owners of Duncan Energy Partners was $11.9 million and $9.4 million, respectively. The remaining minority interest expense amounts for 2008 and 2007 are attributable to our other consolidated affiliates.

Contributions from minority interests for the nine months ended September 30, 2007 includes approximately $291.0 million received from third parties in connection with the initial public offering of Duncan Energy Partners in February 2007.

Recent Accounting Developments

The following information summarizes recently issued accounting guidance since those reported in our Annual Report on Form 10-K for the year ended December 31, 2007 that will or may affect our future financial statements.

Statement of Financial Accounting Standards ("SFAS") No. 161, Disclosures about Derivative Instruments and Hedging Activities – An Amendment of FASB Statement No. 133. Issued in March 2008, SFAS 161 changes the disclosure requirements for financial instruments and hedging activities with the intent to provide users of financial statements with an enhanced understanding of (i) how and why an entity uses financial instruments, (ii) how financial instruments and related hedged items are accounted for under SFAS 133, Accounting for Derivative Instruments and Hedging Activities, and its related interpretations and (iii) how financial instruments and related hedged items affect an entity's financial position, financial performance and cash flows. SFAS 161 requires qualitative disclosures about objectives and strategies for using financial instruments, quantitative disclosures about fair value amounts of and gains and losses on financial instruments and disclosures about credit-risk-related contingent features in financial instrument agreements. This statement has the same scope as SFAS 133, and accordingly applies to all entities. SFAS 161 is effective for financial statements issued for fiscal years and interim periods beginning after November 15, 2008, with early application encouraged. This statement encourages, but does not require, comparative disclosures for earlier periods at initial adoption. SFAS 161 only affects disclosure requirements; therefore, our adoption of this statement effective January 1, 2009 will not impact our financial position, results of operations or cash flows.

Emerging Issues Task Force ("EITF") 07-4, Application of the Two Class Method Under FASB Statement No. 128, Earnings Per Share, to Master Limited Partnerships ("MLP"). EITF 07-4 was issued during the first quarter of 2008 and prescribes the manner in which a MLP should allocate and present earnings per unit using the two-class method set forth in SFAS 128, Earnings Per Share. Under the two-class method, current period earnings are allocated to the general partner (including earnings attributable to any embedded incentive distribution rights) and limited partners according to the distribution formula for available cash set forth in the MLP's partnership agreement. EITF 07-4 is effective for us on January 1, 2009. We do not believe that EITF 07-4 will have a material impact on our earnings per unit computations and disclosures.

FASB Staff Position ("FSP") No. EITF 03-6-1, Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities. FSP EITF 03-6-1 was issued in June 2008. FSP EITF 03-6-1 clarifies that unvested share-based payment awards constitute participating securities, if such awards include nonforfeitable rights to dividends or dividend equivalents. Consequently, awards that are deemed to be participating securities must be allocated earnings in the computation of earnings per share under the two-class method. FSP EITF 03-6-1 is effective for us on January 1, 2009. We do not believe that FSP EITF 03-6-1 will have a material impact on our earnings per unit computations and disclosures.

FSP No. FAS 157-2, Effective Date of FASB Statement No. 157. FSP 157-2 defers the effective date of SFAS 157, Fair Value Measurements, to fiscal years beginning after November 15, 2008, and interim periods within those fiscal years, for all nonfinancial assets and nonfinancial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually). As allowed under FSP 157-2, we have not applied the provisions of SFAS 157 to our nonfinancial assets and liabilities measured at fair value, which include certain assets and liabilities acquired in business combinations. On January 1, 2008, we adopted the provisions of SFAS 157 that apply to financial assets and liabilities. See Note 4 for these fair value disclosures. We do not expect any immediate impact from adoption of the remaining portions of SFAS 157 on January 1, 2009.

In light of current market conditions, the FASB has issued additional clarifying guidance regarding the implementation of SFAS 157, particularly with respect to financial assets that do not trade in active markets such as investments in joint ventures. This clarifying guidance did not result in a change in our accounting, reporting or impairment testing for such investments. We continue to monitor developments at the FASB and SEC for new matters and guidance that may affect our valuation processes.

FSP No. FAS 142-3, Determination of the Useful Life of Intangible Assets. In April 2008, the FASB issued FSP 142-3, which amends the factors that should be considered in developing renewal or extension assumptions used to determine the useful lives of recognized intangible assets under SFAS 142, Goodwill and Other Intangible Assets. This change is intended to improve consistency between the useful life of a recognized intangible asset under SFAS 142 and the period of expected cash flows used to measure the fair value of such assets under SFAS 141(R) and other accounting guidance. The requirement for determining useful lives must be applied prospectively to intangible assets acquired after January 1, 2009 and the disclosure requirements must be applied prospectively to all intangible assets recognized as of, and subsequent to, January 1, 2009. We will adopt the provisions of FSP 142-3 on January 1, 2009.

Restricted Cash

Restricted cash represents amounts held in connection with our commodity financial instruments portfolio and New York Mercantile Exchange ("NYMEX") physical natural gas purchases. Additional cash may be restricted to maintain our positions as commodity prices fluctuate or deposit requirements change. At December 31, 2007, restricted cash also included amounts held by a third party trustee charged with disbursing proceeds from our Petal GO Zone bond offering. As of June 30, 2008, all proceeds from the Petal GO Zone bonds had been released by the trustee to fund construction costs associated with the expansion of our Petal, Mississippi storage facility. The following table presents the components of our restricted cash balances at the periods indicated:

	September 30, 2008	December 31, 2007
Amounts held in brokerage accounts related to		
commodity hedging activities and physical natural gas purchases	$ 183,221	$ 53,144
Proceeds from Petal GO Zone bonds reserved for construction costs	--	17,871
Total restricted cash	$ 183,221	$ 71,015

Note 3. Accounting for Unit-Based Awards

We account for unit-based awards in accordance with SFAS 123(R), Share-Based Payment. SFAS 123(R) requires us to recognize compensation expense related to unit-based awards based on the fair value of the award at grant date. The fair value of restricted unit awards is based on the market price of the underlying common units on the date of grant. The fair value of other unit-based awards is estimated using the Black-Scholes option pricing model. The fair value of an equity-classified award (such as a restricted unit award) is amortized to earnings on a straight-line basis over the requisite service or vesting period. Compensation expense for liability-classified awards (such as unit appreciation rights ("UARs")) is recognized over the requisite service or vesting period of an award based on the fair value of the award remeasured at each reporting period. Liability-type awards are settled in cash upon vesting.

The following table summarizes our unit-based compensation expense amounts by plan during each of the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
EPCO 1998 Long-Term Incentive Plan ("1998 Plan")				
Unit options	$ 116	$ 139	$ 329	$ 4,248
Restricted units	2,569	1,981	6,121	5,639
Total 1998 Plan (1)	2,685	2,120	6,450	9,887
Enterprise Products 2008 Long-Term Incentive Plan ("2008 LTIP")				
Unit options	36	--	50	--
Total 2008 LTIP	36	--	50	--
Employee Partnerships	1,540	1,364	4,099	2,542
DEP GP Unit Appreciation Rights	(1)	23	5	58
Total consolidated expense	$ 4,260	$ 3,507	$ 10,604	$ 12,487

(1) Amounts presented for the nine months ended September 30, 2007 include $4.6 million associated with the resignation of our former Chief Executive Officer.

1998 Plan

The 1998 Plan provides for the issuance of up to 7,000,000 of our common units. After giving effect to outstanding option awards at September 30, 2008 and the issuance and forfeiture of restricted unit awards through September 30, 2008, a total of 771,546 additional common units could be issued under the 1998 Plan.

Unit option awards. Under the 1998 Plan, non-qualified incentive options to purchase a fixed number of our common units may be granted to key employees of EPCO who perform management, administrative or operational functions for us. The following table presents unit option activity under the 1998 Plan for the periods indicated:

	Number of Units	Weighted-Average Strike Price (dollars/unit)	Weighted-Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value (1)
Outstanding at December 31, 2007 (2)	2,315,000	$ 26.18		
Exercised	(61,500)	$ 20.38		
Forfeited or terminated	(85,000)	$ 26.72		
Outstanding at September 30, 2008	2,168,500	$ 26.32	5.44	$ 2,356
Options exercisable at September 30, 2008	548,500	$ 21.47	4.33	$ 2,356

(1) Aggregate intrinsic value reflects fully vested unit options at September 30, 2008.
(2) During 2008, we amended the terms of certain of our outstanding unit options. In general, the expiration dates of these awards were modified from May and August 2017 to December 2012.

The total intrinsic value of unit options exercised during the three and nine months ended September 30, 2008 was $0.1 million and $0.6 million, respectively. At September 30, 2008, there was an estimated $1.9 million of total unrecognized compensation cost related to nonvested unit options granted under the 1998 Plan. We expect to recognize our share of this cost over a weighted-average period of 2.4 years in accordance with the EPCO administrative services agreement (the "ASA").

During the nine months ended September 30, 2008 and 2007, we received cash of $0.7 million and $7.7 million, respectively, from the exercise of unit options. Conversely, our option-related reimbursements to EPCO were $0.6 million and $2.9 million, respectively.

Restricted unit awards. Under the 1998 Plan, we may also issue restricted common units to key employees of EPCO and directors of our general partner. The following table summarizes information regarding our restricted common units for the periods indicated:

	Number of Units	Weighted-Average Grant Date Fair Value per Unit (1)
Restricted units at December 31, 2007	1,688,540	
Granted (2)	750,900	$ 25.30
Forfeited	(84,677)	$ 26.83
Vested	(115,150)	$ 22.83
Restricted units at September 30, 2008	2,239,613	

(1) Determined by dividing the aggregate grant date fair value of awards by the number of awards issued. The weighted-average grant date fair value per unit for forfeited and vested awards is determined before an allowance for forfeitures.
(2) Aggregate grant date fair value of restricted common unit awards issued during 2008 was $19.0 million based on a grant date market price of our common units ranging from $28.21 to $32.31 per unit and an estimated forfeiture rate of 17.0%.

The total fair value of our restricted unit awards that vested during the three and nine months ended September 30, 2008 was $1.2 million and $2.6 million, respectively. As of September 30, 2008, there was $34.6 million of total unrecognized compensation cost related to restricted common units. We will recognize our share of such costs in accordance with the EPCO ASA. At September 30, 2008, these costs are expected to be recognized over a weighted-average period of 2.4 years.

Phantom unit awards. The 1998 Plan also provides for the issuance of phantom unit awards. These liability awards are automatically redeemed for cash based on the vested portion of the fair market value of the phantom units at redemption dates in each award. No phantom unit awards have been issued to date under the 1998 Plan.

2008 LTIP

On January 29, 2008, our unitholders approved the 2008 LTIP, which provides for awards of our common units and other rights to our non-employee directors and to consultants and employees of EPCO and its affiliates providing services to us. Awards under the 2008 LTIP may be granted in the form of unit options, restricted units, phantom units, UARs and distribution equivalent rights. The 2008 LTIP is administered by EPGP's Audit, Conflicts and Governance ("ACG") Committee. The 2008 LTIP provides for the issuance of up to 10,000,000 of our common units. After giving effect to option awards outstanding at September 30, 2008, a total of 9,205,000 additional common units could be issued under the 2008 LTIP.

The 2008 LTIP may be amended or terminated at any time by the Board of Directors of EPCO or EPGP's ACG Committee; however, the rules of the NYSE require that any material amendment, such as a significant increase in the number of common units available under the plan or a change in the types of awards available under the plan, would require the approval of our unitholders. The ACG Committee is also authorized to make adjustments in the terms and conditions of, and the criteria included in, awards under the plan in specified circumstances. The 2008 LTIP is effective until the earlier of January 29, 2018 or the time which all available units under the incentive plan have been delivered to participants or the time of termination of the plan by EPCO or EPGP's ACG Committee.

Unit option awards. The exercise price of unit options awarded to participants is determined by the ACG Committee (at its discretion) at the date of grant and may be no less than the fair market value of our common units at the date of grant. The following table presents unit option activity under the 2008 LTIP for the periods indicated:

	Number of Units	Weighted-Average Strike Price (dollars/unit)	Weighted-Average Remaining Contractual Term (in years)
Outstanding at January 29, 2008	--		
Granted (1)	795,000	$ 30.93	
Outstanding at September 30, 2008	795,000	$ 30.93	5.25

(1) Aggregate grant date fair value of these unit options issued during 2008 was $1.6 million based on the following assumptions: (i) a grant date market price of our common units of $30.93 per unit; (ii) expected life of options of 4.7 years; (iii) risk-free interest rate of 3.3%; (iv) expected distribution yield on our common units of 7.0%; (v) expected unit price volatility on our common units of 19.8%; and (vi) an estimated forfeiture rate of 17.0%.

At September 30, 2008, there was an estimated $1.4 million of total unrecognized compensation cost related to nonvested unit options granted under the 2008 LTIP. We expect to recognize our share of this cost over a remaining period of 3.6 years in accordance with the EPCO ASA.

Employee Partnerships

EPCO formed the Employee Partnerships to serve as an incentive arrangement for key employees of EPCO by providing them a "profits interest" in the Employee Partnerships. Currently, there are four Employee Partnerships: EPE Unit I, EPE Unit II, EPE Unit III and Enterprise Unit. EPE Unit I was formed in August 2005 in connection with Enterprise GP Holdings' initial public offering, EPE Unit II was formed in December 2006, EPE Unit III was formed in May 2007 and Enterprise Unit was formed in February 2008. For a detailed description of EPE Unit I, EPE Unit II and EPE Unit III, see our Annual Report on Form 10-K for the year ended December 31, 2007.

In July 2008, each of EPE Unit I, EPE Unit II and EPE Unit III entered into a second amendment to its respective agreement of limited partnership ("Second Amendment"). The Second Amendments for EPE Unit I and EPE Unit II provide for the reduction of the rate at which the Class A Limited Partner, Duncan Family Interests, Inc., earns a preferred return on its investment in EPE Unit I and EPE Unit II ("Class A Preference Return Rate"). The Class A Preference Return Rate in each of these two limited partnership agreements was reduced from 6.25% to a floating preference rate to be determined by EPCO (in its sole discretion) that will be between 4.50% and 5.725% per annum. The Second Amendment for EPE Unit I and EPE Unit II also provides that the liquidation date of these partnerships be extended to November 2012 and February 2014, respectively. The Second Amendment for EPE Unit III extends the liquidation date of EPE Unit III to May 2014. Collectively, the Second Amendment to these partnership agreements resulted in an aggregate $18.2 million increase in non-cash compensation costs attributable to the profits interest awards in EPE Unit I, EPE Unit II and EPE Unit III.

As of September 30, 2008, there was $43.4 million of total unrecognized compensation cost related to the four Employee Partnerships. We will recognize our share of these costs in accordance with the EPCO ASA over a weighted-average period of 5.2 years.

Enterprise Unit. On February 20, 2008, EPCO formed Enterprise Unit to serve as an incentive arrangement for certain employees of EPCO through a "profits interest" in Enterprise Unit. On that date, EPCO Holdings, Inc. ("EPCO Holdings") agreed to contribute $18.0 million in the aggregate (the "Initial Contribution") to Enterprise Unit and was admitted as the Class A limited partner. Certain key employees of EPCO, including our Chief Executive Officer and Chief Financial Officer, were issued Class B limited partner interests and admitted as Class B limited partners of Enterprise Unit without any capital contributions. EPCO Holdings made capital contributions to Enterprise Unit in addition to its Initial

Contribution and may make additional contributions, although it has no legal obligation to do so. As of September 30, 2008, EPCO Holdings has contributed a total of $51.5 million to Enterprise Unit.

As with the awards granted in connection with the other Employee Partnerships, these awards are designed to provide additional long-term incentive compensation for certain employees. The profits interest awards (or Class B limited partner interests) in Enterprise Unit entitle the holder to participate in the appreciation in value of Enterprise GP Holdings' units and our common units and are subject to early vesting or forfeiture upon the occurrence of certain events.

An allocated portion of the fair value of these equity awards will be charged to us under the EPCO ASA as a non-cash expense. We will not reimburse EPCO, Enterprise Unit or any of their affiliates or partners, through the ASA or otherwise, in cash for any expenses related to Enterprise Unit, including the Initial Contribution by EPCO Holdings.

The Class B limited partner interests in Enterprise Unit that are owned by EPCO employees are subject to forfeiture if the participating employee's employment with EPCO and its affiliates is terminated prior to February 20, 2014, with customary exceptions for death, disability and certain retirements that will result in early vesting. The risk of forfeiture associated with the Class B limited partner interests in Enterprise Unit will also lapse (i.e. the interests will become vested) upon certain change of control events.

Unless otherwise agreed to by EPCO, EPCO Holdings and a majority in interest of the Class B limited partners of Enterprise Unit, Enterprise Unit will terminate at the earlier of February 20, 2014 (six years from the date of the agreement) or a change in control of us or Enterprise GP Holdings. Enterprise Unit has the following material terms regarding its quarterly cash distribution to partners:

- Distributions of cash flow – Each quarter, 100% of the cash distributions received by Enterprise Unit from Enterprise GP Holdings and us will be distributed to the Class A limited partner until EPCO Holdings has received an amount equal to the Class A preferred return (as defined below), and any remaining distributions received by Enterprise Unit will be distributed to the Class B limited partners. The Class A preferred return equals the Class A capital base (as defined below) multiplied by 5.0% per annum. The Class A limited partner's capital base equals the amount of any contributions of cash or cash equivalents made by the Class A limited partner to Enterprise Unit, plus any unpaid Class A preferred return from prior periods, less any distributions made by Enterprise Unit of proceeds from the sale of units owned by Enterprise Unit (as described below).

- Liquidating Distributions – Upon liquidation of Enterprise Unit, units having a fair market value equal to the Class A limited partner capital base will be distributed to EPCO Holdings, plus any accrued and unpaid Class A preferred return for the quarter in which liquidation occurs. Any remaining units will be distributed to the Class B limited partners.

- Sale Proceeds – If Enterprise Unit sells any units that it beneficially owns, the sale proceeds will be distributed to the Class A limited partner and the Class B limited partners in the same manner as liquidating distributions described above.

DEP GP UARs

The non-employee directors of DEP GP, the general partner of Duncan Energy Partners, have been granted UARs in the form of letter agreements. These liability awards are not part of any established long-term incentive plan of EPCO, Enterprise GP Holdings, Duncan Energy Partners or us. These UARs entitle each non-employee director to receive a cash payment on the vesting date equal to the excess, if any, of the fair market value of Enterprise GP Holdings' units (determined as of a future vesting date) over the grant date fair value. These UARs are accounted for similarly to liability awards under SFAS 123(R) since they will be settled with cash. At September 30, 2008 and December 31, 2007, we had a total of 90,000 outstanding UARs granted to non-employee directors of DEP GP that cliff vest in 2012. If a director resigns prior to vesting, his UAR awards are forfeited.

Note 4. Financial Instruments

We are exposed to financial market risks, including changes in commodity prices, interest rates and foreign exchange rates. We may use financial instruments (e.g., futures, forwards, swaps, options and other financial instruments with similar characteristics) to mitigate the risks of certain identifiable and anticipated transactions. In general, the types of risks we attempt to hedge are those related to (i) the variability of future earnings, (ii) fair values of certain debt instruments and (iii) cash flows resulting from changes in applicable interest rates, commodity prices or exchange rates.

We recognize financial instruments as assets and liabilities on our Unaudited Condensed Consolidated Balance Sheets based on fair value. Fair value is generally defined as the amount at which a financial instrument could be exchanged in a current transaction between willing parties, not in a forced or liquidation sale. The estimated fair values of our financial instruments have been determined using available market information and appropriate valuation techniques. We must use considerable judgment, however, in interpreting market data and developing these estimates. Accordingly, our fair value estimates are not necessarily indicative of the amounts that we could realize upon disposition of these instruments. The use of different market assumptions and/or estimation techniques could have a material effect on our estimates of fair value.

Changes in fair value of financial instrument contracts are recognized in earnings in the current period unless specific hedge accounting criteria are met. If the financial instrument meets the criteria of a fair value hedge, gains and losses incurred on the instrument will be recorded in earnings to offset corresponding losses and gains on the hedged item. If the financial instrument meets the criteria of a cash flow hedge, gains and losses incurred on the instrument are recorded in accumulated other comprehensive income. Gains and losses on cash flow hedges are reclassified from accumulated other comprehensive income to earnings when the forecasted transaction occurs or, as appropriate, over the economic life of the hedged item. A contract designated as a hedge of an anticipated transaction that is no longer likely to occur is immediately recognized in earnings.

To qualify for hedge accounting, the item to be hedged must expose us to risk and the related hedging instrument must reduce the exposure and meet the formal hedging requirements of SFAS 133, Accounting for Derivative Instruments and Hedging Activities (as amended and interpreted). We formally designate the financial instrument as a hedge and document and assess the effectiveness of the hedge at its inception and thereafter on a quarterly basis. Any hedge ineffectiveness is immediately recognized in earnings.

We routinely review our outstanding financial instruments in light of current market conditions. If market conditions warrant, some financial instruments may be closed out in advance of their contractual settlement dates thus realizing income or loss depending on the specific hedging criteria. When this occurs, we may enter into a new financial instrument to reestablish the hedge to which the closed instrument relates.

Interest Rate Risk Hedging Program

Our interest rate exposure results from variable and fixed interest rate borrowings under various debt agreements. We manage a portion of our interest rate exposures by utilizing interest rate swaps and similar arrangements, which allow us to convert a portion of fixed rate debt into variable rate debt or a portion of variable rate debt into fixed rate debt.

Fair Value Hedges – Interest Rate Swaps. As summarized in the following table, we had five interest rate swap agreements outstanding at September 30, 2008 that were accounted for as fair value hedges.

Hedged Fixed Rate Debt	Number of Swaps	Period Covered by Swap	Termination Date of Swap	Fixed to Variable Rate (1)	Notional Value
Senior Notes C, 6.375% fixed rate, due Feb. 2013	1	Jan. 2004 to Feb. 2013	Feb. 2013	6.375% to 5.02%	$100.0 million
Senior Notes G, 5.60% fixed rate, due Oct. 2014	4	4th Qtr. 2004 to Oct. 2014	Oct. 2014	5.60% to 3.63%	$400.0 million

(1) The variable rate indicated is the all-in variable rate for the current settlement period.

The aggregate fair value of the five interest rate swaps at September 30, 2008 was an asset of $13.2 million, with an offsetting increase in the fair value of the underlying debt. There were eleven interest rate swaps outstanding at December 31, 2007 having an aggregate fair value of $14.8 million (an asset). Interest expense for the three months ended September 30, 2008 and 2007 includes a $1.8 million benefit and a $2.3 million loss, respectively, from interest rate swap agreements. For the nine months ended September 30, 2008 and 2007, interest expense reflects a benefit of $3.2 million and a loss of $6.9 million, respectively, from interest rate swap agreements.

The following table summarizes the termination of our interest rate swaps during 2008 (dollars in millions):

	Notional Value	Cash Gains (1)
Interest rate swap portfolio, December 31, 2007	$ 1,050.0	$ --
First quarter of 2008 terminations	(200.0)	6.3
Second quarter of 2008 terminations	(250.0)	12.0
Third quarter of 2008 terminations (2)	(100.0)	--
Interest rate swap portfolio, September 30, 2008	$ 500.0	$ 18.3

(1) Cash gains resulting from the termination, or monetization, of interest rate swaps will be amortized to earnings as a reduction to interest expense over the remaining life of the underlying debt.
(2) In early October 2008, one counterparty filed for bankruptcy. At September 30, 2008, the fair value of this interest rate swap was $3.4 million and this amount has been fully reserved. Hedge accounting for this swap has been discontinued.

Cash Flow Hedges – Interest Rate Swaps. Duncan Energy Partners had three floating-to-fixed interest rate swap agreements outstanding at September 30, 2008 that were accounted for as cash flow hedges.

Hedged Variable Rate Debt	Number of Swaps	Period Covered by Swap	Termination Date of Swap	Variable to Fixed Rate (1)	Notional Value
Duncan Energy Partners' Revolver, due Feb. 2011	3	Sep. 2007 to Sep. 2010	Sep. 2010	3.77% to 4.62%	$175.0 million

(1) Amounts receivable from or payable to the swap counterparties are settled every three months (the "settlement period").

We recognized losses of $0.8 million and $1.6 million from these swap agreements during the three and nine months ended September 30, 2008, respectively. The aggregate fair values of these interest rate swaps at September 30, 2008 and December 31, 2007 were liabilities of $4.3 million and $3.8 million, respectively. As cash flow hedges, any increase or decrease in fair value of the financial instrument (to the extent effective) would be recorded as other comprehensive income and amortized into earnings based on the settlement period being hedged. Over the next twelve months, we expect to reclassify $1.4 million of losses to earnings as an increase in interest expense.

Cash Flow Hedges – Treasury Locks. We occasionally use treasury lock financial instruments to hedge the underlying U.S. treasury rates related to our anticipated issuances of debt. Cash gains or losses on the termination, or monetization, of such instruments are amortized to earnings using the effective interest method over the estimated term of the underlying fixed-rate debt. Each of our treasury lock transactions were designated as a cash flow hedge. The following table summarizes changes in our treasury lock portfolio since December 31, 2007 (dollars in millions).

	Notional Value	Cash Losses (1)
Treasury lock portfolio, December 31, 2007	$ 600.0	$ --
First quarter of 2008 terminations	(350.0)	27.7
Second quarter of 2008 terminations	(250.0)	12.7
Treasury lock portfolio, September 30, 2008	$ --	$ 40.4

(1) Cash losses are included in net interest rate financial instrument losses in the Unaudited Condensed Statements of Consolidated Comprehensive Income.

We expect to reclassify $1.8 million of cumulative net gains from the monetization of treasury lock financial instruments to earnings (as a decrease in interest expense) over the next twelve months. This includes financial instruments that were settled in years prior to 2008.

Commodity Risk Hedging Program

The prices of natural gas, NGLs and certain petrochemical products are subject to fluctuations in response to changes in supply, market uncertainty and a variety of additional factors that are beyond our control. In order to manage the price risks associated with such products, we may enter into commodity financial instruments.

The primary purpose of our commodity risk management activities is to reduce our exposure to price risks associated with (i) natural gas purchases, (ii) the value of NGL production and inventories, (iii) related firm commitments, (iv) fluctuations in transportation revenues where the underlying fees are based on natural gas index prices and (v) certain anticipated transactions involving either natural gas, NGLs or certain petrochemical products. From time to time, we inject natural gas into storage and may utilize hedging instruments to lock in the value of our inventory positions. The commodity financial instruments we utilize may be settled in cash or with another financial instrument.

We have segregated our commodity financial instruments portfolio between those financial instruments utilized in connection with our natural gas marketing activities and those used in connection with our NGL and petrochemical operations.

Natural gas marketing activities. At September 30, 2008 and December 31, 2007, the aggregate fair values of those financial instruments utilized in connection with our natural gas marketing activities was an asset of $0.8 million and a liability of $0.3 million, respectively. Our natural gas marketing business and its related use of financial instruments has increased since December 31, 2007. For additional information regarding our natural gas marketing activities, see Note 12. We currently utilize mark-to-market accounting for substantially all of the financial instruments utilized in connection with our natural gas marketing activities. The following table presents gains and losses recognized in earnings from this portion of the commodity financial instruments portfolio for the periods indicated (dollars in millions):

Three months ended September 30, 2008	Gains	$ 13.2
Three months ended September 30, 2007	Losses	$ (0.6)
Nine months ended September 30, 2008	Gains	$ 7.8
Nine months ended September 30, 2007	Losses	$ (0.1)

NGL and petrochemical operations. At September 30, 2008 and December 31, 2007, the aggregate fair values of financial instruments utilized in connection with our NGL and petrochemical operations were liabilities of $116.6 million and $19.0 million, respectively. The change in fair value between December 31, 2007 and September 30, 2008 is primarily due to a decrease in the price of natural gas and an increase in volumes hedged. Almost all of the financial instruments within this portion of the commodity financial instruments portfolio are accounted for as cash flow hedges, with a small number accounted for using mark-to-market accounting.

EPO has employed a program to economically hedge a portion of earnings from its natural gas processing business (a component of its NGL Pipelines & Services business segment). This program consists of (i) the forward sale of a portion of EPO's expected equity NGL production volumes at fixed prices through 2009 and (ii) the purchase (using commodity financial instruments) of the amount of natural gas expected to be consumed as plant thermal reduction ("PTR") in the production of such equity NGL volumes. The objective of this strategy is to hedge a level of gross margins (i.e., NGL sales revenues less actual costs for PTR and the gain or loss on the PTR hedge) associated with the forward sales contracts by fixing the cost of natural gas used for PTR, through the use of commodity financial instruments. At September 30, 2008, this hedging program had hedged future gross margins before plant operating expenses of $588.8 million for 28.8 million barrels of forecasted NGL forward sales transactions extending through 2009.

NGL forward sales contracts are not accounted for as financial instruments under SFAS 133; therefore, changes in the aggregate economic value of these sales contracts are not reflected in earnings and comprehensive income until the volumes are delivered to customers. On the other hand, the commodity financial instruments used to purchase the related quantities of PTR (i.e., "PTR hedges") are accounted for as cash flow hedges; therefore, changes in the aggregate fair value of the PTR hedges are presented in other comprehensive income.

Prior to actual settlement, if the market price of natural gas is less than the price stipulated in a PTR hedge, we recognize an unrealized loss in other comprehensive income for the excess of the natural gas price stated in the PTR hedge over the market price. To the extent that we realize such financial losses upon settlement of the instrument, the losses are added to the actual cost we have to pay for PTR (which would then be based on the lower market price). The end result of this relationship – financial gain/loss on the PTR hedges plus the market price of actual natural gas purchases at the time of consumption – is that our total cost of natural gas used for PTR approximates the amount we originally hedged under this program The converse is true if the price of natural gas decreases. During the third quarter of 2008, the price of natural gas decreased approximately 45% from June 30, 2008. As a result, we recognized unrealized losses in other comprehensive income with respect to the PTR hedges of $258.4 million during the third quarter of 2008. For the nine months ended September 30, 2008, we recognized unrealized losses in other comprehensive income of $126.0 million with respect to the PTR hedging program. Once the forecasted NGL forward sales transactions occur, any realized gains and losses on the cash flow hedges would be reclassified into earnings at that time.

The following table presents gains and losses recognized in earnings from this portion of the commodity financial instruments portfolio for the periods indicated (dollars in millions):

Three months ended September 30, 2008 (1)	Losses	$	(7.2)
Three months ended September 30, 2007	Losses	$	(10.1)
Nine months ended September 30, 2008 (2)	Gains	$	1.7
Nine months ended September 30, 2007	Losses	$	(11.9)

(1) Includes ineffectiveness of $5.6 million (an expense).
(2) Includes ineffectiveness of $2.8 million (an expense).

A significant number of the financial instruments in this portfolio hedge the purchase of physical natural gas. If natural gas prices fall below the price stipulated in such financial instruments, we recognize a liability for the difference; however, if prices partially or fully recover, this liability would be reduced or eliminated, as appropriate. Our restricted cash balance at September 30, 2008 was $183.2 million in order to meet commodity exchange deposit requirements and the negative change in the fair value of our commodity positions.

Foreign Currency Hedging Program

We are exposed to foreign currency exchange rate risk primarily through our Canadian NGL marketing subsidiary. As a result, we could be adversely affected by fluctuations in the foreign currency exchange rate between the U.S. dollar and the Canadian dollar. We attempt to hedge this risk using foreign exchange purchase contracts to fix the exchange rate. Mark-to-market accounting is utilized for these contracts, which typically have a duration of one month. For the nine months ended September 30, 2008, we recorded minimal gains from these financial instruments. No such amounts were recorded in the third quarter of 2008.

Adoption of SFAS 157 - Fair Value Measurements

On January 1, 2008, we adopted the provisions of SFAS 157 that apply to financial assets and liabilities. We will adopt the provisions of SFAS 157 that apply to nonfinancial assets and liabilities on January 1, 2009. SFAS 157 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at a specified measurement date.

Our fair value estimates are based on either (i) actual market data or (ii) assumptions that other market participants would use in pricing an asset or liability. These assumptions include estimates of risk. Recognized valuation techniques employ inputs such as product prices, operating costs, discount factors and business growth rates. These inputs may be either readily observable, corroborated by market data or generally unobservable. In developing our estimates of fair value, we endeavor to utilize the best information available and apply market-based data to the extent possible. Accordingly, we utilize valuation techniques (such as the market approach) that maximize the use of observable inputs and minimize the use of unobservable inputs.

SFAS 157 established a three-tier hierarchy that classifies fair value amounts recognized or disclosed in the financial statements based on the observability of inputs used to estimate such fair values. The hierarchy considers fair value amounts based on observable inputs (Levels 1 and 2) to be more reliable and predictable than those based primarily on unobservable inputs (Level 3). At each balance sheet reporting date, we categorize our financial assets and liabilities using this hierarchy. The characteristics of fair value amounts classified within each level of the SFAS 157 hierarchy are described as follows:

- Level 1 fair values are based on quoted prices, which are available in active markets for identical assets or liabilities as of the measurement date. Active markets are defined as those in which transactions for identical assets or liabilities occur in sufficient frequency so as to provide pricing information on an ongoing basis (e.g., the NYSE or NYMEX). Level 1 primarily consists of financial assets and liabilities such as exchange-traded financial instruments, publicly-traded equity securities and U.S. government treasury securities.

- Level 2 fair values are based on pricing inputs other than quoted prices in active markets (as reflected in Level 1 fair values) and are either directly or indirectly observable as of the measurement date. Level 2 fair values include instruments that are valued using financial models or other appropriate valuation methodologies. Such financial models are primarily industry-standard models that consider various assumptions, including quoted forward prices for commodities, time value of money, volatility factors for stocks and current market and contractual prices for the underlying instruments, as well as other relevant economic measures. Substantially all of these assumptions are (i) observable in the marketplace throughout the full term of the instrument, (ii) can be derived from observable data or (iii) are validated by inputs other than quoted prices (e.g., interest rate and yield curves at commonly quoted intervals). Level 2 includes non-exchange-traded instruments such as over-the-counter forward contracts, options and repurchase agreements.

- Level 3 fair values are based on unobservable inputs. Unobservable inputs are used to measure fair value to the extent that observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date.

Unobservable inputs reflect the reporting entity's own ideas about the assumptions that market participants would use in pricing an asset or liability (including assumptions about risk). Unobservable inputs are based on the best information available in the circumstances, which might include the reporting entity's internally-developed data. The reporting entity must not ignore information about market participant assumptions that is reasonably available without undue cost and effort. Level 3 inputs are typically used in connection with internally developed valuation methodologies where management makes its best estimate of an instrument's fair value. Level 3 generally includes specialized or unique financial instruments that are tailored to meet a customer's specific needs.

The following table sets forth, by level within the fair value hierarchy, our financial assets and liabilities measured on a recurring basis at September 30, 2008. These financial assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement requires judgment, and may affect the valuation of the fair value assets and liabilities and their placement within the fair value hierarchy levels. At September 30, 2008 there were no Level 1 financial assets or liabilities.

	Level 2	Level 3	Total
Financial assets:			
Commodity financial instruments	$ 15,320	$ 18,445	$ 33,765
Interest rate financial instruments	13,151	--	13,151
Total	$ 28,471	$ 18,445	$ 46,916
Financial liabilities:			
Commodity financial instruments	$ 149,577	$ --	$ 149,577
Interest rate financial instruments	4,301	--	4,301
Total	$ 153,878	$ --	$ 153,878

Fair values associated with our interest rate, commodity and foreign currency financial instrument portfolios were developed using available market information and appropriate valuation techniques in accordance with SFAS 157.

The following table sets forth a reconciliation of changes in the fair value of our Level 3 financial assets and liabilities for the periods indicated:

Balance, January 1, 2008	$ (4,660)
Total gains (losses) included in:	
Net income (1)	(2,254)
Other comprehensive income	2,419
Purchases, issuances, settlements	1,861
Balance, March 31, 2008	(2,634)
Total gains (losses) included in:	
Net income (1)	322
Other comprehensive income	(2,428)
Purchases, issuances, settlements	71
Balance, June 30, 2008	(4,669)
Total gains (losses) included in:	
Net income (1)	(2,190)
Other comprehensive loss	23,114
Purchases, issuances, settlements	2,190
Balance, September 30, 2008	$ 18,445

(1) Net income includes commodity financial instrument losses of $2.2 million and $4.1 million, respectively, recorded in revenue for the three and nine months ended September 30, 2008. There were no unrealized gains included in these amounts.

Note 5. Inventories

Our inventory amounts were as follows at the dates indicated:

	September 30, 2008	December 31, 2007
Working inventory (1)	$ 602,909	$ 342,589
Forward-sales inventory (2)	50,874	11,693
Total inventory	$ 653,783	$ 354,282

(1) Working inventory is comprised of inventories of natural gas, NGLs and certain petrochemical products that are either available-for-sale or used in the provision for services.
(2) Forward sales inventory consists of segregated NGL and natural gas volumes dedicated to the fulfillment of forward-sales contracts.

Our inventory values reflect payments for product purchases, freight charges associated with such purchase volumes, terminal and storage fees, vessel inspection costs, demurrage charges and other related costs. We value our inventories at the lower of average cost or market.

Operating costs and expenses, as presented on our Unaudited Condensed Statements of Consolidated Operations, include cost of sales amounts related to the sale of inventories. Our cost of sales amounts were $5.47 billion and $3.53 billion for the three months ended September 30, 2008 and 2007, respectively. For the nine months ended September 30, 2008 and 2007, our cost of sales were $15.88 billion and $9.89 billion, respectively.

Due to fluctuating commodity prices in the NGL, natural gas and petrochemical industry, we recognize lower of cost or market ("LCM") adjustments when the carrying value of our inventories exceed their net realizable value. These non-cash charges are a component of cost of sales in the period they are recognized. For the three months ended September 30, 2008 and 2007, we recognized LCM adjustments of approximately $36.4 million and $0.2 million, respectively. We recognized LCM adjustments of $41.3 million and $13.3 million for the nine months ended September 30, 2008 and 2007, respectively.

Note 6. Property, Plant and Equipment

Our property, plant and equipment values and related accumulated depreciation balances were as follows at the dates indicated:

	Estimated Useful Life in Years	September 30, 2008	December 31, 2007
Plants and pipelines (1)	3-35(5)	$ 12,019,063	$ 10,884,819
Underground and other storage facilities (2)	5-35(6)	784,808	720,795
Platforms and facilities (3)	20-31	634,809	637,812
Transportation equipment (4)	3-10	35,865	32,627
Land		50,560	48,172
Construction in progress		1,417,947	1,173,988
Total		14,943,052	13,498,213
Less accumulated depreciation		2,249,433	1,910,949
Property, plant and equipment, net		$ 12,693,619	$ 11,587,264

(1) Plants and pipelines include processing plants; NGL, petrochemical, oil and natural gas pipelines; terminal loading and unloading facilities; office furniture and equipment; buildings; laboratory and shop equipment; and related assets.
(2) Underground and other storage facilities include underground product storage caverns; storage tanks; water wells; and related assets.
(3) Platforms and facilities include offshore platforms and related facilities and other associated assets.
(4) Transportation equipment includes vehicles and similar assets used in our operations.
(5) In general, the estimated useful lives of major components of this category are as follows: processing plants, 20-35 years; pipelines, 18-35 years (with some equipment at 5 years); terminal facilities, 10-35 years; office furniture and equipment, 3-20 years; buildings, 20-35 years; and laboratory and shop equipment, 5-35 years.
(6) In general, the estimated useful lives of major components of this category are as follows: underground storage facilities, 20-35 years (with some components at 5 years); storage tanks, 10-35 years; and water wells, 25-35 years (with some components at 5 years).

The following table summarizes our depreciation expense and capitalized interest amounts for the periods indicated:

	For the Three Months Ended September 30, 2008	For the Three Months Ended September 30, 2007	For the Nine Months Ended September 30, 2008	For the Nine Months Ended September 30, 2007
Depreciation expense (1)	$ 115,517	$ 108,692	$ 339,332	$ 302,758
Capitalized interest (2)	$ 17,284	$ 18,656	$ 53,019	$ 59,795

(1) Depreciation expense is a component of costs and expenses as presented in our Unaudited Condensed Statements of Consolidated Operations.
(2) Capitalized interest increases the carrying value of the associated asset and reduces interest expense during the period it is recorded.

We reviewed assumptions underlying the estimated remaining useful lives of certain of our assets during the first quarter of 2008. As a result of our review, effective January 1, 2008, we revised the remaining useful lives of these assets, most notably the assets that constitute our Texas Intrastate System. This revision increased the remaining useful life of such assets to incorporate recent data showing that proved natural gas reserves supporting throughput and processing volumes for these assets have changed since our original determination made in September 2004. These revisions will prospectively reduce our depreciation expense on assets having carrying values totaling $2.72 billion as of January 1, 2008. On average, we extended the life of these assets by 3.1 years. As a result of this change in estimate, depreciation expense included in operating income and net income for the three and nine months ended September 30, 2008 decreased by approximately $5.0 million and $15.0 million, respectively, which increased our earnings per unit by $0.01 and $0.03, respectively, from what it would have been absent the change.

Asset retirement obligations

Asset retirement obligations ("AROs") are legal obligations associated with the retirement of a tangible long-lived asset that results from its acquisition, construction, development or normal operation or a combination of these factors. The following table summarizes amounts recognized in connection with AROs since December 31, 2007:

ARO liability balance, December 31, 2007	$ 40,614
Liabilities incurred	810
Liabilities settled	(7,154)
Revisions in estimated cash flows	2,411
Accretion expense	1,660
ARO liability balance, September 30, 2008	$ 38,341

Property, plant and equipment at September 30, 2008 and December 31, 2007 includes $8.8 million and $10.6 million, respectively, of asset retirement costs capitalized as an increase in the associated long-lived asset.

Note 7. Investments in and Advances to Unconsolidated Affiliates

We own interests in a number of related businesses that are accounted for using the equity method of accounting. Our investments in and advances to unconsolidated affiliates are grouped according to the business segment to which they relate. See Note 12 for a general discussion of our business segments. The following table presents our investments in and advances to unconsolidated affiliates at the dates indicated.

	Ownership Percentage at September 30, 2008	September 30, 2008	December 31, 2007
NGL Pipelines & Services:			
Venice Energy Service Company, L.L.C. ("VESCO")	13.1%	$ 38,542	$ 40,129
K/D/S Promix, L.L.C. ("Promix")	50.0%	47,291	51,537
Baton Rouge Fractionators LLC ("BRF")	32.2%	25,410	25,423
Onshore Natural Gas Pipelines & Services:			
Jonah Gas Gathering Company ("Jonah")	19.4%	278,736	235,837
Evangeline (2)	49.5%	4,494	3,490
White River Hub, LLC ("White River Hub") (1)	50.0%	19,654	--
Offshore Pipelines & Services:			
Poseidon Oil Pipeline Company, L.L.C. ("Poseidon")	36.0%	59,364	58,423
Cameron Highway Oil Pipeline Company ("Cameron Highway")	50.0%	260,713	256,588
Deepwater Gateway, L.L.C. ("Deepwater Gateway")	50.0%	109,263	111,221
Neptune Pipeline Company, L.L.C. ("Neptune")	25.7%	52,278	55,468
Nemo Gathering Company, LLC ("Nemo")	33.9%	784	2,888
Texas Offshore Port System ("TOPS")	33.3%	2,355	--
Petrochemical Services:			
Baton Rouge Propylene Concentrator LLC ("BRPC")	30.0%	14,255	13,282
La Porte (3)	50.0%	4,054	4,053
Total		$ 917,193	$ 858,339

(1) In February 2008, we acquired a 50.0% ownership interest in White River Hub.
(2) Refers to our ownership interests in Evangeline Gas Pipeline Company, L.P. and Evangeline Gas Corp., collectively.
(3) Refers to our ownership interests in La Porte Pipeline Company, L.P. and La Porte GP, LLC, collectively.

On occasion, the price we pay to acquire a non-controlling ownership interest in a company exceeds the underlying book value of the net assets we acquire. Such excess cost amounts are included within the carrying values of our investments in and advances to unconsolidated affiliates. At September 30, 2008 and December 31, 2007, our investments in Promix, La Porte, Neptune, Poseidon, Cameron Highway and Jonah included excess cost amounts totaling $44.1 million and $43.8 million, respectively.

These amounts are attributable to the excess of the fair value of each entity's tangible assets over their respective book carrying values at the time we acquired an interest in each entity. Amortization of such excess cost amounts was $0.5 million during each of the three months ended September 30, 2008 and 2007. For each of the nine months ended September 30, 2008 and 2007, amortization of such amounts was $1.5 million.

The following table presents our equity in earnings of unconsolidated affiliates by business segment for the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
NGL Pipelines & Services	$ 3,009	$ 2,684	$ 2,288	$ 4,364
Onshore Natural Gas Pipelines & Services	5,598	2,351	16,883	4,592
Offshore Pipelines & Services	5,987	8,557	27,914	3,786
Petrochemical Services	282	368	952	1,186
Total	$ 14,876	$ 13,960	$ 48,037	$ 13,928

On a quarterly basis, we monitor the underlying business fundamentals of our investments in unconsolidated affiliates and test such investments for impairment when impairment indicators are present. As a result of our reviews for the third quarter of 2008, no impairment charges were required. We have the intent and ability to hold these investments, which are integral to our operations.

Summarized Financial Information of Unconsolidated Affiliates

The following tables present unaudited income statement data for our current unconsolidated affiliates, aggregated by business segment, for the periods indicated (on a 100% basis).

	Summarized Income Statement Information for the Three Months Ended					
	September 30, 2008			September 30, 2007		
	Revenues	Operating Income	Net Income	Revenues	Operating Income	Net Income
NGL Pipelines & Services	$ 75,108	$ 9,742	$ 6,788	$ 49,579	$ 15,435	$ 16,118
Onshore Natural Gas Pipelines & Services	188,887	28,953	27,911	126,042	24,659	23,447
Offshore Pipelines & Services	31,926	12,812	11,976	39,331	21,363	19,974
Petrochemical Services	5,596	1,105	1,111	4,894	1,480	1,492

	Summarized Income Statement Information for the Nine Months Ended					
	September 30, 2008			September 30, 2007		
	Revenues	Operating Income	Net Income	Revenues	Operating Income	Net Income
NGL Pipelines & Services	$ 217,822	$ 17,749	$ 15,049	$ 150,367	$ 17,916	$ 19,873
Onshore Natural Gas Pipelines & Services	492,455	88,677	85,295	360,072	71,472	67,862
Offshore Pipelines & Services	115,018	62,363	57,202	116,957	65,227	34,204
Petrochemical Services	16,592	3,891	3,907	15,416	4,770	4,832

White River Hub Joint Venture

In February 2008, we formed a joint venture, White River Hub, with a wholly-owned subsidiary of Questar Corporation to design, construct, own and operate a natural gas hub located in the vicinity of Meeker, Colorado. White River Hub will construct a FERC-regulated interstate natural gas transmission system for the purpose of providing natural gas transportation and hub services to its customers. The newly constructed natural gas hub will connect six interstate natural gas pipelines in northwest Colorado and have a capacity in excess of 2.0 billion cubic feet per day ("Bcf/d"). This project is expected to be completed during the fourth quarter of 2008 and our share of the estimated construction costs is $22.1 million.

Texas Offshore Port System Joint Venture

In August 2008, we, together with TEPPCO and Oiltanking Holding Americas, Inc. ("Oiltanking"), announced the formation of a joint venture to design, construct, operate and own a Texas offshore crude oil port and related pipeline and storage infrastructure that would facilitate delivery of waterborne crude oil to refining centers located along the upper Texas Gulf Coast. Demand for such projects is being driven by planned and expected refinery expansions along the Gulf Coast, expected increases in shipping traffic and operating limitations of regional ship channels.

The joint venture's primary project, referred to as "TOPS," includes (i) an offshore port (which will be located approximately 36 miles from Freeport, Texas), (ii) an onshore storage facility with approximately 3.9 million barrels of crude oil storage capacity, and (iii) an 85-mile crude oil pipeline system having a transportation capacity of up to 1.8 million barrels per day, that will extend from the offshore port to a Texas City, Texas storage facility. TOPS is expected to begin service as early as the fourth quarter of 2010. The joint venture's second and complementary project, referred to as the Port Arthur Crude Oil Express (or "PACE") will transport crude oil from Texas City, including crude oil from TOPS, and will consist of a 75-mile pipeline and 1.2 million barrels of crude oil storage capacity in the Port Arthur, Texas area. PACE is expected to begin service as early as the third quarter of 2010. Development of the TOPS and PACE projects is supported by long-term contracts with affiliates of Motiva Enterprises LLC and Exxon Mobil Corporation, which have committed a combined 725,000 barrels per day of crude oil to the projects.

We, TEPPCO and Oiltanking each own, through our respective subsidiaries, a one-third interest in the joint venture. The aggregate cost of the TOPS and PACE projects is expected to be approximately $1.8 billion (excluding capitalized interest), with the majority of such capital expenditures occurring in 2009 and 2010. We and TEPPCO have each guaranteed up to approximately $700.0 million of the capital contribution obligations of our respective subsidiary partners in the joint venture. As of September 30, 2008, our investment in TOPS was $2.4 million.

Note 8. Business Combinations

Acquisition of Remaining Interest in Dixie

In August 2008, we acquired the remaining 25.8% ownership interest in Dixie for $57.1 million. As a result of this transaction, we own 100% of Dixie, which owns a 1,300-mile pipeline system that delivers NGLs (primarily propane and other chemical feedstocks) to customers along the U.S. Gulf Coast and southeastern United States.

Purchase Price Allocations

We accounted for business combinations completed during the nine months ended September 30, 2008 using the purchase method of accounting and, accordingly, such costs have been allocated to assets acquired and liabilities assumed based on estimated preliminary fair values. Such preliminary values have been developed using recognized business valuation techniques and are subject to change pending a final valuation analysis. We expect to finalize the purchase price allocations for these transactions during 2008.

	Dixie	South Monco (1)	Total
Assets acquired in business combination:			
Current assets	$ --	$ 35	$ 35
Property, plant and equipment, net	24,114	(12,781)	11,333
Intangible assets	--	12,747	12,747
Total assets acquired	24,114	1	24,115
Liabilities assumed in business combination:			
Minority interest	7,631	--	7,631
Total liabilities assumed	7,631	--	7,631
Total assets acquired plus liabilities assumed	31,745	1	31,746
Total cash used for business combinations	57,089	1	57,090
Goodwill	$ 25,344	$ --	$ 25,344

(1) Represents non-cash reclassification adjustments to December 2007 preliminary fair value estimates for assets acquired in the South Monco natural gas pipeline acquisition.

Note 9. Intangible Assets and Goodwill

Identifiable Intangible Assets

The following table summarizes our intangible assets at the dates indicated:

	September 30, 2008			December 31, 2007		
	Gross Value	Accum. Amort.	Carrying Value	Gross Value	Accum. Amort.	Carrying Value
NGL Pipelines & Services	$ 523,401	$ (174,863)	$ 348,538	$ 520,025	$ (146,954)	$ 373,071
Onshore Natural Gas Pipelines & Services	476,298	(133,962)	342,336	463,551	(109,399)	354,152
Offshore Pipelines & Services	207,012	(86,797)	120,215	207,012	(73,954)	133,058
Petrochemical Services	67,906	(12,682)	55,224	67,906	(11,187)	56,719
Total	$ 1,274,617	$ (408,304)	$ 866,313	$ 1,258,494	$ (341,494)	$ 917,000

The following table presents the amortization expense of our intangible assets by segment for the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
NGL Pipelines & Services	$ 9,203	$ 8,869	$ 27,908	$ 26,912
Onshore Natural Gas Pipelines & Services	8,014	7,946	24,564	24,154
Offshore Pipelines & Services	4,135	4,745	12,843	14,733
Petrochemical Services	499	499	1,495	1,495
Total	$ 21,851	$ 22,059	$ 66,810	$ 67,294

For the remainder of 2008, amortization expense associated with our intangible assets is currently estimated at $21.5 million.

Goodwill

The following table summarizes our goodwill amounts by segment at the dates indicated:

	September 30, 2008	December 31, 2007
NGL Pipelines & Services (1)	$ 179,050	$ 153,706
Onshore Natural Gas Pipelines & Services	282,121	282,121
Offshore Pipelines & Services	82,135	82,135
Petrochemical Services	73,690	73,690
Total	$ 616,996	$ 591,652

(1) See Note 8 for information regarding our recent acquisition of the remaining ownership interests in Dixie, which resulted in additional goodwill of $25.3 million.

Note 10. Debt Obligations

Our consolidated debt obligations consisted of the following at the dates indicated:

	September 30, 2008	December 31, 2007
EPO senior debt obligations:		
Multi-Year Revolving Credit Facility, variable rate, due November 2012	$ 1,150,701	$ 725,000
Pascagoula MBFC Loan, 8.70% fixed-rate, due March 2010	54,000	54,000
Senior Notes B, 7.50% fixed-rate, due February 2011	450,000	450,000
Senior Notes C, 6.375% fixed-rate, due February 2013	350,000	350,000
Senior Notes D, 6.875% fixed-rate, due March 2033	500,000	500,000
Senior Notes F, 4.625% fixed-rate, due October 2009	500,000	500,000
Senior Notes G, 5.60% fixed-rate, due October 2014	650,000	650,000
Senior Notes H, 6.65% fixed-rate, due October 2034	350,000	350,000
Senior Notes I, 5.00% fixed-rate, due March 2015	250,000	250,000
Senior Notes J, 5.75% fixed-rate, due March 2035	250,000	250,000
Senior Notes K, 4.950% fixed-rate, due June 2010	500,000	500,000
Senior Notes L, 6.30% fixed-rate, due September 2017	800,000	800,000
Senior Notes M, 5.65% fixed-rate, due April 2013	400,000	--
Senior Notes N, 6.50% fixed-rate, due January 2019	700,000	--
Petal GO Zone Bonds, variable rate, due August 2037	57,500	57,500
Duncan Energy Partners' debt obligation:		
$300 Million Revolving Credit Facility, variable rate, due February 2011	212,000	200,000
Dixie Revolving Credit Facility, variable rate, due June 2010	10,000	10,000
Total principal amount of senior debt obligations	7,184,201	5,646,500
EPO Junior Subordinated Notes A, fixed/variable rates, due August 2066	550,000	550,000
EPO Junior Subordinated Notes B, fixed/variable rates, due January 2068	700,000	700,000
Total principal amount of senior and junior debt obligations	8,434,201	6,896,500
Other, non-principal amounts:		
Change in fair value of debt-related financial instruments (see Note 4)	20,096	14,839
Unamortized discounts, net of premiums	(7,405)	(5,194)
Unamortized deferred net gains related to terminated interest rate swaps (see Note 4)	11,303	--
Total other, non-principal amounts	23,994	9,645
Long-term debt	$ 8,458,195	$ 6,906,145
Standby letters of credit outstanding	$ 61,100	$ 1,100

Enterprise Products Partners L.P. acts as guarantor of the consolidated debt obligations of EPO with the exception of Dixie's revolving credit facility and Duncan Energy Partners' revolving credit facility. If EPO were to default on any of its guaranteed debt, Enterprise Products Partners L.P. would be responsible for full repayment of that obligation.

We consolidate the debt of Dixie and Duncan Energy Partners; however, neither Enterprise Products Partners L.P. nor EPO has the obligation to make interest or debt payments with respect to such obligations.

With respect to debt agreements existing at September 30, 2008, there have been no significant changes in the terms of our consolidated debt obligations since December 31, 2007.

Letters of credit. During the third quarter of 2008, a $60.0 million letter of credit was issued under EPO's Multi-Year Revolving Credit Facility to support our NYMEX margin requirements for natural gas financial instruments that are part of an economic hedge related to our natural gas processing business. In October 2008, EPO entered into a $100.0 million letter of credit facility. EPO issued a $70.0 million letter of credit under this new facility that replaced the letter of credit issued under its Multi-Year Revolving Credit Facility which was outstanding at September 30, 2008.

Senior Notes M and N. In April 2008, EPO sold $400.0 million in principal amount of 5-year senior unsecured notes ("Senior Notes M") and $700.0 million in principal amount of 10-year senior unsecured notes ("Senior Notes N") under its universal registration statement. Senior Notes M were issued at 99.906% of their principal amount, have a fixed interest rate of 5.65% and mature in April 2013. Senior Notes N were issued at 99.866% of their principal amount, have a fixed interest rate of 6.50% and mature in January 2019.

Senior Notes M pay interest semi-annually in arrears on April 1 and October 1 of each year. Senior Notes N pay interest semi-annually in arrears on January 31 and July 31 of each year. Net proceeds from the issuance of Senior Notes M and N were used to temporarily reduce indebtedness outstanding under the EPO Multi-Year Revolving Credit Facility.

Senior Notes M and N rank equal with EPO's existing and future unsecured and unsubordinated indebtedness. They are senior to any existing and future subordinated indebtedness of EPO. Senior Notes M and N are subject to make-whole redemption rights and were issued under indentures containing certain covenants, which generally restrict EPO's ability, with certain exceptions, to incur debt secured by liens and engage in sale and leaseback transactions.

Covenants

We are in compliance with the covenants of our consolidated debt agreements at September 30, 2008 and December 31, 2007.

Information regarding variable interest rates paid

The following table presents the weighted-average interest rate paid on our consolidated variable-rate debt obligations during the nine months ended September 30, 2008.

	Weighted-average interest rate paid
EPO's Multi-Year Revolving Credit Facility	3.62%
Duncan Energy Partners' Revolving Credit Facility	4.15%
Dixie Revolving Credit Facility	3.25%
Petal GO Zone Bonds	2.27%

Consolidated debt maturity table

The following table presents the scheduled maturities of principal amounts of our consolidated debt obligations for the next five years and in total thereafter.

2008	$ --
2009	500,000
2010	564,000
2011	662,000
2012	1,150,701
Thereafter	5,557,500
Total scheduled principal payments	$ 8,434,201

Debt Obligations of Unconsolidated Affiliates

We have two unconsolidated affiliates with long-term debt obligations. The following table shows (i) our ownership interest in each entity at September 30, 2008, (ii) total debt of each unconsolidated affiliate at September 30, 2008 (on a 100% basis to the affiliate) and (iii) the corresponding scheduled maturities of such debt.

	Our Ownership Interest	Total	Scheduled Maturities of Debt 2008	2009	2010	2011	2012	After 2012
Poseidon	36.0%	$ 109,000	$ --	$ --	$ --	$ 109,000	$ --	$ --
Evangeline	49.5%	20,650	5,000	5,000	3,150	7,500	--	--
Total		$ 129,650	$ 5,000	$ 5,000	$ 3,150	$ 116,500	$ --	$ --

The credit agreements of our unconsolidated affiliates contain various affirmative and negative covenants, including financial covenants. These businesses were in compliance with such covenants at September 30, 2008. The credit agreements of our unconsolidated affiliates restrict their ability to pay cash dividends if a default or an event of default (as defined in each credit agreement) has occurred and is continuing at the time such dividend is scheduled to be paid.

There have been no significant changes in the terms of the debt obligations of our unconsolidated affiliates since those reported in our Annual Report on Form 10-K for the year ended December 31, 2007.

Note 11. Partners' Equity and Distributions

Our common units represent limited partner interests, which give the holders thereof the right to participate in distributions and to exercise the other rights or privileges available to them under our Fifth Amended and Restated Agreement of Limited Partnership (together with all amendments thereto, the "Partnership Agreement"). We are managed by our general partner, EPGP.

In accordance with the Partnership Agreement, capital accounts are maintained for our general partner and limited partners. The capital account provisions of our Partnership Agreement incorporate principles established for U.S. Federal income tax purposes and are not comparable to the equity accounts reflected under GAAP in our condensed consolidated financial statements.

Our Partnership Agreement sets forth the calculation to be used in determining the amount and priority of cash distributions that our limited partners and general partner will receive. The Partnership Agreement also contains provisions for the allocation of net earnings and losses to our limited partners and general partner. For purposes of maintaining partner capital accounts, the Partnership Agreement specifies that items of income and loss shall be allocated among the partners in accordance with their respective percentage interests. Normal income and loss allocations according to percentage interests are done only after giving effect to priority earnings allocations in an amount equal to incentive cash distributions allocated to our general partner.

Equity Offerings and Registration Statements

In general, the Partnership Agreement authorizes us to issue an unlimited number of additional limited partner interests and other equity securities for such consideration and on such terms and conditions as may be established by EPGP in its sole discretion (subject, under certain circumstances, to the approval of our unitholders).

We have a universal shelf registration statement on file with the SEC registering the issuance of an unlimited amount of equity and debt securities. In April 2008, EPO sold $1.10 billion in principal amount of senior notes under our universal shelf registration statement. For additional information regarding this debt offering, see Note 10.

We also have on file with the SEC a registration statement authorizing the issuance of up to 25,000,000 common units in connection with our distribution reinvestment plan ("DRIP"). The DRIP provides unitholders of record and beneficial owners of our common units a voluntary means by which they can increase the number of common units they own by reinvesting the quarterly cash distributions they would otherwise receive into the purchase of additional common units of our partnership. An aggregate of 1,895,776 of our common units were issued in connection with the DRIP and the employee unit purchase plan ("EUPP") during the nine months ended September 30, 2008. The issuance of these units generated $56.5 million in net proceeds that we used for general partnership purposes. In November 2008, affiliates of EPCO, including Enterprise GP Holdings, expect to reinvest $67.0 million of their distributions through the DRIP.

The following table reflects the number of common units issued and the net proceeds received from other common unit offerings completed during the nine months ended September 30, 2008:

	Net Proceeds from Sale of Common Units			
	Number of Common Units Issued	Contributed by Limited Partners	Contributed by General Partner	Total Net Proceeds
February DRIP and EUPP	587,610	$ 17,651	$ 360	$ 18,011
May DRIP and EUPP	631,950	19,025	389	19,414
August DRIP and EUPP	676,216	18,687	381	19,068
Total 2008	1,895,776	$ 55,363	$ 1,130	$ 56,493

Summary of Changes in Outstanding Units

The following table summarizes changes in our outstanding units since December 31, 2007:

	Common Units	Restricted Common Units	Treasury Units
Balance, December 31, 2007	433,608,763	1,688,540	--
Common units issued in connection with DRIP and EUPP	1,895,776	--	--
Common units issued in connection with unit-based awards	21,905	--	--
Restricted units issued	--	750,900	--
Conversion of restricted units to common units	115,150	(115,150)	--
Acquisition of treasury units	(30,918)	--	30,918
Cancellation of treasury units	--	--	(30,918)
Forfeiture of restricted units	--	(84,677)	--
Balance, September 30, 2008	435,610,676	2,239,613	--

During the nine months ended September 30, 2008, 115,150 restricted unit awards vested and were converted to common units. Of this amount, 30,918 were sold back to us by employees to cover related withholding tax requirements. The total cost of these treasury units was approximately $795 thousand, of which $779 thousand was allocated to limited partners and the remainder to our general partner. Immediately upon acquisition, we cancelled such treasury units.

Summary of Changes in Limited Partners' Equity

The following table details the changes in limited partners' equity since December 31, 2007:

	Common Units	Restricted Common Units	Total
Balance, December 31, 2007	$ 5,976,947	$ 15,948	$ 5,992,895
Net income	617,761	2,733	620,494
Operating leases paid by EPCO	1,541	7	1,548
Cash distributions to partners	(661,137)	(2,809)	(663,946)
Unit option reimbursements to EPCO	(550)	--	(550)
Non-cash distributions	(5,006)	--	(5,006)
Acquisition of treasury units, limited partner share	--	(779)	(779)
Net proceeds from issuance of common units	55,363	--	55,363
Proceeds from exercise of unit options	680	--	680
Amortization of unit-based awards	4,862	8,769	13,631
Balance, September 30, 2008	$ 5,990,461	$ 23,869	$ 6,014,330

Distributions to Partners

The percentage interest of EPGP in our quarterly cash distributions is increased after certain specified target levels of quarterly distribution rates are met. At current distribution rates, we are in the highest tier of such incentive targets. EPGP's quarterly incentive distribution thresholds are as follows:

- 2% of quarterly cash distributions up to $0.253 per unit;
- 15% of quarterly cash distributions from $0.253 per unit up to $0.3085 per unit; and
- 25% of quarterly cash distributions that exceed $0.3085 per unit.

We paid incentive distributions of $32.0 million and $27.4 million to EPGP during the three months ended September 30, 2008 and 2007, respectively. During the nine months ended September 30, 2008 and 2007, we paid incentive distributions of $92.8 million and $79.0 million, respectively, to EPGP.

We paid aggregate distributions to our unitholders and general partner of $770.3 million during the nine months ended September 30, 2008. These distributions pertained to the nine month period ended June 30, 2008 (i.e., the fourth quarter of 2007, and first and second quarters of 2008). On November 12, 2008, we will pay a quarterly cash distribution of $0.5225 per unit with respect to the third quarter of 2008, to unitholders of record at the close of business on October 31, 2008.

Accumulated Other Comprehensive Income (Loss)

Accumulated other comprehensive income (loss) primarily includes the effective portion of the gain or loss on financial instruments designated and qualified as a cash flow hedge, foreign currency adjustments and Dixie's minimum pension liability adjustments. Amounts accumulated in other comprehensive income (loss) from cash flow hedges are reclassified into earnings in the same period(s) in which the hedged forecasted transactions (such as a forecasted forward sale of NGLs) affect earnings. If it becomes probable that the forecasted transaction will not occur, the net gain or loss in accumulated other comprehensive income (loss) must be immediately reclassified.

The following table presents the components of accumulated other comprehensive income (loss) at the dates indicated:

	September 30, 2008	December 31, 2007
Commodity financial instruments – cash flow hedges (1)	$ (129,913)	$ (21,619)
Interest rate financial instruments – cash flow hedges (1)	9,714	34,980
Foreign currency cash flow hedges (1)	--	1,308
Foreign currency translation adjustment (2)	1,652	1,200
Pension and postretirement benefit plans (3)	324	588
Total accumulated other comprehensive income (loss)	$ (118,223)	$ 16,457

(1) See Note 4 for additional information regarding financial instruments. The negative change in fair value of our commodity financial instruments between December 31, 2007 and September 30, 2008 is primarily due to a significant decrease in natural gas prices during the third quarter of 2008.
(2) Relates to transactions of our Canadian NGL marketing subsidiary.
(3) See Note 2 for additional information regarding Dixie's pension and postretirement benefit plans.

Note 12. Business Segments

We have four reportable business segments: NGL Pipelines & Services, Onshore Natural Gas Pipelines & Services, Offshore Pipelines & Services and Petrochemical Services. Our business segments are generally organized and managed according to the type of services rendered (or technologies employed) and products produced and/or sold.

We evaluate segment performance based on the non-GAAP financial measure of gross operating margin. Gross operating margin (either in total or by individual segment) is an important performance measure of the core profitability of our operations. This measure forms the basis of our internal financial reporting and is used by senior management in deciding how to allocate capital resources among business segments. We believe that investors benefit from having access to the same financial measures that our management uses in evaluating segment results. The GAAP financial measure most directly comparable to total segment gross operating margin is operating income. Our non-GAAP financial measure of total segment gross operating margin should not be considered an alternative to GAAP operating income.

We define total segment gross operating margin as consolidated operating income before: (i) depreciation, amortization and accretion expense; (ii) operating lease expenses for which we do not have the payment obligation; (iii) gains and losses from asset sales and related transactions; and (iv) general and administrative costs. Gross operating margin is exclusive of other income and expense transactions, provision for income taxes, minority interest, extraordinary charges and the cumulative effect of changes in accounting principle. Gross operating margin by segment is calculated by subtracting segment operating costs and expenses (net of the adjustments noted above) from segment revenues, with both segment totals before the elimination of intersegment and intrasegment transactions.

Segment revenues include intersegment and intrasegment transactions, which are generally based on transactions made at market-related rates. Our consolidated revenues reflect the elimination of intercompany (both intersegment and intrasegment) transactions.

We include equity earnings from unconsolidated affiliates in our measurement of segment gross operating margin and operating income. Our equity investments with industry partners are a vital component of our business strategy. They are a means by which we conduct our operations to align our interests with those of our customers and/or suppliers. This method of operation enables us to achieve favorable economies of scale relative to the level of investment and business risk assumed versus what we could accomplish on a stand-alone basis. Many of these businesses perform supporting or complementary roles to our other business operations.

Our integrated midstream energy asset system (including the midstream energy assets of our equity method investees) provides services to producers and consumers of natural gas, NGLs, crude oil and certain petrochemicals. In general, hydrocarbons enter our asset system in a number of ways, such as an offshore natural gas or crude oil pipeline, an offshore platform, a natural gas processing plant, an onshore natural gas gathering pipeline, an NGL fractionator, an NGL storage facility, or an NGL transportation or distribution pipeline.

Many of our equity investees are included within our integrated midstream asset system. For example, we have ownership interests in several offshore natural gas and crude oil pipelines. Other examples include our use of the Promix NGL fractionator to process mixed NGLs extracted by our gas plants. The fractionated NGLs we receive from Promix can then be sold in our NGL marketing activities. Given the integral nature of our equity method investees to our operations, we believe the presentation of earnings from such investees as a component of gross operating margin and operating income is meaningful and appropriate.

Historically, substantially all of our consolidated revenues were earned in the United States and derived from a wide customer base. The majority of our plant-based operations are located in Texas, Louisiana, Mississippi, New Mexico, Colorado and Wyoming. Our natural gas, NGL and crude oil pipelines are located in a number of regions of the United States including (i) the Gulf of Mexico offshore Texas and Louisiana; (ii) the south and southeastern United States (primarily in Texas, Louisiana, Mississippi and Alabama); and (iii) certain regions of the central and western United States, including the Rocky Mountains. Our marketing activities are headquartered in Houston, Texas and serve customers in a number of regions of the United States including the Gulf Coast, West Coast and Mid-Continent areas.

Consolidated property, plant and equipment and investments in and advances to unconsolidated affiliates are assigned to each segment on the basis of each asset's or investment's principal operations. The principal reconciling difference between consolidated property, plant and equipment and the total value of segment assets is construction-in-progress. Segment assets represent the net book carrying value of facilities and other assets that contribute to gross operating margin of that particular segment. Since assets under construction generally do not contribute to segment gross operating margin, such assets are excluded from segment asset totals until they are placed in service. Consolidated intangible assets and goodwill are assigned to each segment based on the classification of the assets to which they relate.

We consolidate the financial statements of Duncan Energy Partners with those of our own. As a result, our consolidated gross operating margin amounts include 100% of the gross operating margin amounts of Duncan Energy Partners.

The following table presents our measurement of total segment gross operating margin for the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	**2007**	**2008**	**2007**
Revenues (1)	$ 6,297,902	$ 4,111,996	$ 18,322,052	$ 11,647,656
Less: Operating costs and expenses (1)	(5,971,942)	(3,896,411)	(17,243,070)	(10,981,562)
Add: Equity in earnings of unconsolidated affiliates (1)	14,876	13,960	48,037	13,928
Depreciation, amortization and accretion in operating costs and expenses (2)	138,417	133,869	408,601	374,522
Operating lease expense paid by EPCO (2)	526	526	1,579	1,579
Loss (gain) from asset sales and related transactions in operating costs and expenses (2)	(857)	(219)	(1,699)	5,445
Total segment gross operating margin	$ 478,922	$ 363,721	$ 1,535,500	$ 1,061,568

(1) These amounts are taken from our Unaudited Condensed Statements of Consolidated Operations.
(2) These non-cash expenses are taken from the operating activities section of our Unaudited Condensed Statements of Consolidated Cash Flows.

A reconciliation of our total segment gross operating margin to operating income and income before provision for income taxes and minority interest follows:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
Total segment gross operating margin	$ 478,922	$ 363,721	$ 1,535,500	$ 1,061,568
Adjustments to reconcile total segment gross operating margin to operating income:				
Depreciation, amortization and accretion in operating costs and expenses	(138,417)	(133,869)	(408,601)	(374,522)
Operating lease expense paid by EPCO	(526)	(526)	(1,579)	(1,579)
Gain (loss) from asset sales and related transactions in operating costs and expenses	857	219	1,699	(5,445)
General and administrative costs	(21,720)	(18,715)	(66,901)	(66,706)
Operating income	319,116	210,830	1,060,118	613,316
Other expense, net	(101,479)	(83,369)	(287,672)	(213,327)
Income before provision for income taxes and minority interest	$ 217,637	$ 127,461	$ 772,446	$ 399,989

The following table summarizes the contribution to consolidated revenues from the sale of NGL, natural gas and petrochemical products for the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
NGL Pipelines & Services:				
Sale of NGL products	$ 4,271,467	$ 2,837,465	$ 12,550,220	$ 7,952,147
Percent of consolidated revenues	68%	69%	68%	68%
Onshore Natural Gas Pipelines & Services:				
Sale of natural gas	851,748	406,482	2,407,930	1,190,235
Percent of consolidated revenues	14%	10%	13%	10%
Petrochemical Services:				
Sale of petrochemical products	708,745	444,670	1,928,840	1,268,731
Percent of consolidated revenues	11%	11%	11%	11%

Information by segment, together with reconciliations to our consolidated totals, is presented in the following table:

	Reportable Segments					
	NGL Pipelines & Services	Onshore Natural Gas Pipelines & Services	Offshore Pipelines & Services	Petrochemical Services	Adjustments and Eliminations	Consolidated Totals
Revenues from third parties:						
Three months ended September 30, 2008	$ 4,288,205	$ 823,245	$ 60,194	$ 826,099	$ --	$ 5,997,743
Three months ended September 30, 2007	2,873,937	428,807	54,444	575,969	--	3,933,157
Nine months ended September 30, 2008	12,544,242	2,456,275	197,326	2,300,602	--	17,498,445
Nine months ended September 30, 2007	8,261,659	1,304,239	142,557	1,559,887	--	11,268,342
Revenues (losses) from related parties:						
Three months ended September 30, 2008	140,839	154,566	4,754	--	--	300,159

Nine months ended September 30,						

2007	589,708	235,102	97,429	139,329		1,061,568
Segment assets:						
At September 30, 2008	5,248,670	3,922,181	1,407,855	696,966	1,417,947	12,693,619
At December 31, 2007	4,570,555	3,702,297	1,452,568	687,856	1,173,988	11,587,264
Investments in and advances to unconsolidated affiliates (see Note 7):						
At September 30, 2008	111,243	302,884	484,757	18,309	--	917,193
At December 31, 2007	117,089	239,327	484,588	17,335	--	858,339
Intangible assets, net (see Note 9):						
At September 30, 2008	348,538	342,336	120,215	55,224	--	866,313
At December 31, 2007	373,071	354,152	133,058	56,719	--	917,000
Goodwill (see Note 9):						
At September 30, 2008	179,050	282,121	82,135	73,690	--	616,996
At December 31, 2007	153,706	282,121	82,135	73,690	--	591,652

Our natural gas marketing business, which is included in our Onshore Natural Gas Pipelines & Services segment, has increased significantly during 2008. These marketing activities have four primary objectives: (i) to mitigate risk; (ii) maximize the use of our natural gas assets; (iii) to provide real-time market intelligence; and (iv) to link our noncontiguous natural gas assets together to enhance the profitability of such operations. To achieve these objectives, our natural gas marketing activities transact with various parties to provide transportation, balancing, storage, supply and sales services. The majority of our natural gas marketing activities are focused on the Gulf Coast and Rocky Mountain regions.

Our natural gas marketing business acquires a significant portion of the natural gas it sells from our processing plants and attracts additional supplies from third parties at pipeline interconnects to facilitate incremental throughput on our natural gas transportation pipelines. This purchased gas is then sold to industrial consumers, utilities and power plants at prices that include a transportation fee. In addition, sales are made with third party marketing companies at industry hub locations in order to balance our supply/demand portfolio. Our purchase and sale transactions are typically based on published daily or monthly index prices. We utilize financial instruments to hedge various transactions within our natural gas marketing business (see Note 4).

We use third party transportation and storage capacity to link together our noncontiguous natural gas assets. Our natural gas marketing business contracts with third party transportation and storage providers to provide services on both a firm and interruptible basis. This strategy allows us to compliment and strengthen our portfolio of natural gas assets.

Note 13. Related Party Transactions

The following table summarizes our revenue and expense transactions with related parties for the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	**2007**	**2008**	**2007**
Revenues from consolidated operations:				
EPCO and affiliates	$ 47,215	$ 12,673	$ 91,922	$ 42,778
Energy Transfer Equity and subsidiaries	99,583	78,957	412,975	121,521
Unconsolidated affiliates	153,361	87,209	318,710	215,015
Total	$ 300,159	$ 178,839	$ 823,607	$ 379,314
Operating costs and expenses:				
EPCO and affiliates	$ 87,991	$ 72,296	$ 274,406	$ 219,879
Energy Transfer Equity and subsidiaries	56,528	2,614	134,447	8,385
Unconsolidated affiliates	20,688	6,414	68,214	22,628
Total	$ 165,207	$ 81,324	$ 477,067	$ 250,892
General and administrative costs:				
EPCO and affiliates	$ 13,403	$ 11,504	$ 44,631	$ 45,292
Unconsolidated affiliates	(37)	--	(37)	--
Total	$ 13,366	$ 11,504	$ 44,594	$ 45,292
Other expense:				
EPCO and affiliates	$ --	$ --	$ (274)	$ 170

We believe that the terms and provisions of our related party agreements are fair to us; however, such agreements and transactions may not be as favorable to us as we could have obtained from unaffiliated third parties.

Relationship with EPCO and affiliates

We have an extensive and ongoing relationship with EPCO and its affiliates, which include the following significant entities that are not part of our consolidated group of companies:

- EPCO and its private company subsidiaries;
- EPGP, our sole general partner;
- Enterprise GP Holdings, which owns and controls our general partner;
- TEPPCO, which is owned and controlled by Enterprise GP Holdings; and
- the Employee Partnerships (see Note 3).

We also have an ongoing relationship with Duncan Energy Partners, the financial statements of which are consolidated with those of our own. Our transactions with Duncan Energy Partners are eliminated in consolidation. A description of our relationship with Duncan Energy Partners is presented within this Note 13.

EPCO is a private company controlled by Dan L. Duncan, who is also a Director and Chairman of EPGP, our general partner. At September 30, 2008, EPCO and its affiliates beneficially owned 149,433,410 (or 34.1%) of our outstanding common units, which include 13,454,498 of our common units owned by Enterprise GP Holdings. In addition, at September 30, 2008, EPCO and its affiliates beneficially owned 77.8% of the limited partner interests of Enterprise GP Holdings and 100% of its general partner, EPE Holdings. Enterprise GP Holdings owns all of the membership interests of EPGP. The principal business activity of EPGP is to act as our managing partner. The executive officers and certain of the directors of EPGP and EPE Holdings are employees of EPCO.

As our general partner, EPGP received cash distributions of $106.4 million and $91.6 million from us during the nine months ended September 30, 2008 and 2007, respectively. These amounts include incentive distributions of $92.8 million and $79.0 million for the nine months ended September 30, 2008 and 2007, respectively.

We and EPGP are both separate legal entities apart from each other and apart from EPCO, Enterprise GP Holdings and their respective other affiliates, with assets and liabilities that are separate from those of EPCO, Enterprise GP Holdings and their respective other affiliates. EPCO and its private company subsidiaries depend on the cash distributions they receive from us, Enterprise GP Holdings and other investments to fund their other operations and to meet their debt obligations. EPCO and its private company affiliates received directly from us $300.2 million and $260.7 million in cash distributions during the nine months ended September 30, 2008 and 2007, respectively.

The ownership interests in us that are owned or controlled by Enterprise GP Holdings are pledged as security under its credit facility. In addition, substantially all of the ownership interests in us that are owned or controlled by EPCO and its affiliates, other than those interests owned by Enterprise GP Holdings, Dan Duncan LLC and certain trusts affiliated with Dan L. Duncan, are pledged as security under the credit facility of a private company affiliate of EPCO. This credit facility contains customary and other events of default relating to EPCO and certain affiliates, including Enterprise GP Holdings, TEPPCO and us.

We have entered into an agreement with an affiliate of EPCO to provide trucking services to us for the transportation of NGLs and other products. We also lease office space in various buildings from affiliates of EPCO. The rental rates in these lease agreements approximate market rates.

EPCO Administrative Services Agreement

We have no employees. All of our operating functions and general and administrative support services are provided by employees of EPCO pursuant to the ASA. We, Duncan Energy Partners, Enterprise GP Holdings, TEPPCO and our respective general partners are parties to the ASA. The ACG Committees of each general partner have approved the ASA.

Under the ASA, we reimburse EPCO for all costs and expenses it incurs in providing management, administrative and operating services for us, including compensation of employees (i.e., salaries, medical benefits and retirement benefits). Since the vast majority of such expenses are charged to us on an actual basis (i.e. no mark-up or subsidy is charged or received by EPCO), we believe that such expenses are representative of what the amounts would have been on a stand-alone basis. With respect to allocated costs, we believe that the proportional direct allocation method employed by EPCO is reasonable and reflective of the estimated level of costs we would have incurred on a stand-alone basis. The ASA also addresses potential conflicts in business opportunities that may arise among us, Enterprise GP Holdings, Duncan Energy Partners and other affiliates of EPCO.

Relationship with TEPPCO

TEPPCO became a related party to us in February 2005 when its general partner was acquired by private company affiliates of EPCO. Our relationship with TEPPCO was further reinforced by the acquisition of TEPPCO's general partner by Enterprise GP Holdings in May 2007. Enterprise GP Holdings also owns our general partner.

We received $47.2 million and $12.7 million from TEPPCO during the three months ended September 30, 2008 and 2007, respectively, from the sale of hydrocarbon products. We received $91.9 million and $42.8 million from TEPPCO during the nine months ended September 30, 2008 and 2007, respectively, from the sale of hydrocarbon products. We paid TEPPCO $5.9 million and $4.5 million for NGL pipeline transportation and storage services during the three months ended September 30, 2008 and 2007, respectively. We paid TEPPCO $21.9 million and $13.8 million for NGL pipeline transportation and storage services during the nine months ended September 30, 2008 and 2007, respectively.

In August 2006, we formed a joint venture with TEPPCO involving Jonah, which owns the Jonah Gas Gathering System located in the Greater Green River Basin of southwestern Wyoming. The Jonah Gas Gathering System gathers and transports natural gas produced from the Jonah and Pinedale fields to regional natural gas processing plants and major interstate pipelines that deliver natural gas to end-user markets. Currently, the gathering capacity of this system is 2.4 Bcf/d. We own an approximate 19.4% interest in Jonah and TEPPCO owns the remaining 80.6% interest. We account for our investment in the Jonah joint venture using the equity method of accounting.

During the first quarter of 2008, Jonah initiated a separate project to increase gathering capacity on that portion of its system that serves the Pinedale production field. This new project is expected to increase overall capacity of the Jonah Gas Gathering System by an additional 0.2 Bcf/d. The total anticipated cost of this new project is $125.0 million, of which we will be responsible for our share of the construction costs.

In August 2008, we, together with TEPPCO and Oiltanking, announced the formation of a joint venture to design, construct, operate and own a Texas offshore crude oil port and pipeline system to facilitate delivery of waterborne crude oil to refining centers located along the upper Texas Gulf Coast. See Note 7 for additional information regarding the Texas Offshore Port System joint venture.

Relationship with Duncan Energy Partners

On February 5, 2007, Duncan Energy Partners completed its initial public offering of 14,950,000 common units. At September 30, 2008, Enterprise Products Partners beneficially owned 5,351,571 of Duncan Energy Partners' common units. We also own the 2% general partner interest in Duncan Energy

Partners. EPO directs the business operations of Duncan Energy Partners through its ownership and control of the general partner of Duncan Energy Partners. For financial reporting purposes, we consolidate the financial statements of Duncan Energy Partners with those of our own.

As a result of contributions EPO made at the time of Duncan Energy Partners' initial public offering in February 2007, Duncan Energy Partners owns 66% of the equity interests in the following entities and EPO owns the remaining 34% of the equity interests:

- Mont Belvieu Caverns, LLC ("Mont Belvieu Caverns"),
- Acadian Gas, LLC ("Acadian Gas"),
- Sabine Propylene Pipeline L.P. ("Sabine Propylene"),
- Enterprise Lou-Tex Propylene Pipeline L.P. ("Lou-Tex Propylene"), and
- South Texas NGL Pipelines, LLC ("South Texas NGL").

We have significant involvement with all of the subsidiaries of Duncan Energy Partners, including the following types of transactions:

- We utilize storage services provided by Mont Belvieu Caverns to support our Mont Belvieu fractionation and other businesses;
- We buy natural gas from and sell natural gas to Acadian Gas in connection with its and our normal business activities; and
- We are currently the sole shipper on the DEP South Texas NGL Pipeline System.

EPO may contribute or sell other equity interests in its subsidiaries, or other of its or its subsidiaries' assets, to Duncan Energy Partners. EPO has no obligation or commitment to make such contributions or sales to Duncan Energy Partners.

Effective February 1, 2007, EPO is allocated all operational measurement gains and losses relating to Mont Belvieu Caverns' underground storage activities. Operational measurement gains and losses are created when product is moved between storage wells and are attributable to pipeline and well connection measurement variances. As a result, EPO is required each period to contribute cash to Mont Belvieu Caverns for net operational measurement losses and is entitled to receive distributions from Mont Belvieu Caverns for net operational measurement gains. Mont Belvieu Caverns recorded operational measurement gains of $1.1 million and losses of $3.8 million during the three and nine months ended September 30, 2008, respectively. For the three and eight months ended September 30, 2007, Mont Belvieu Caverns recorded operational measurement losses of $0.9 million and gains of $3.2 million, respectively. Operational measurement gains and losses are a component of gross operating margin for the NGL Pipelines & Services business segment; however, the related cash distributions from and contributions to Mont Belvieu Caverns are eliminated in the preparation of our consolidated financial statements.

Omnibus Agreement. In February 2007, EPO entered into an Omnibus Agreement with Duncan Energy Partners that governs the following matters:

- indemnification by EPO of certain environmental liabilities, tax liabilities and right-of-way defects with respect to assets EPO contributed to Duncan Energy Partners in February 2007;
- reimbursement by EPO of certain capital expenditures incurred by South Texas NGL and Mont Belvieu Caverns with respect to projects under construction at the time of Duncan Energy Partners' initial public offering;

- a right of first refusal to EPO in Duncan Energy Partners' current and future subsidiaries and a right of first refusal on the material assets of such subsidiaries, other than sales of inventory and other assets in the ordinary course of business; and

- a preemptive right with respect to equity securities issued by certain of Duncan Energy Partners' subsidiaries, other than as consideration in an acquisition or in connection with a loan or debt financing.

Neither EPO nor any of its affiliates are restricted under the Omnibus Agreement from competing against Duncan Energy Partners. As provided for in the EPCO ASA, EPO and its affiliates may acquire, construct or dispose of additional midstream energy or other assets in the future without any obligation to offer Duncan Energy Partners the opportunity to acquire or construct such assets.

As noted previously, EPO indemnified Duncan Energy Partners for certain environmental liabilities, tax liabilities and right-of-way defects associated with the assets EPO contributed to Duncan Energy Partners in February 2007. These indemnifications terminate on February 5, 2010. There is an aggregate cap of $15.0 million on the amount of indemnity coverage and Duncan Energy Partners is not entitled to indemnification until the aggregate amount of claims it incurs exceeds $250 thousand. Environmental liabilities resulting from a change of law after February 5, 2007 are excluded from the indemnity. Duncan Energy Partners made no claims to EPO during the three and nine months ended September 30, 2008 in connection with these indemnity provisions.

Under the Omnibus Agreement, EPO agreed to make additional cash contributions to South Texas NGL and Mont Belvieu Caverns to fund 100% of project costs in excess of (i) the $28.6 million of estimated costs to complete the Phase II expansion of the DEP South Texas NGL Pipeline System and (ii) the $14.1 million of estimated costs for additional Mont Belvieu brine production capacity and above-ground storage reservoir projects. These projects were in progress at the time of Duncan Energy Partners' initial public offering. EPO made cash contributions of $32.5 million under the Omnibus Agreement to the subsidiaries of Duncan Energy Partners during the nine months ended September 30, 2008. This amount was primarily contributed to South Texas NGL to fund costs of its Phase II pipeline project. We expect EPO to make contributions of approximately $2.1 million during the remainder of 2008 in satisfaction of its project funding obligations under the Omnibus Agreement.

EPO will not receive an increased allocation of earnings or cash flows as a result of these contributions to South Texas NGL and Mont Belvieu Caverns. EPO's payments under the Omnibus Agreement are accounted for as additional investments by EPO in the underlying companies and are subsequently eliminated in the preparation of our consolidated financial statements.

Mont Belvieu Caverns' LLC Agreement. The Mont Belvieu Caverns' LLC Agreement (the "Caverns LLC Agreement") states that if Duncan Energy Partners elects to not participate in certain projects of Mont Belvieu Caverns, then EPO is responsible for funding 100% of such projects. To the extent such non-participated projects generate identifiable incremental cash flows for Mont Belvieu Caverns in the future, the earnings and cash flows of Mont Belvieu Caverns will be adjusted to allocate such incremental amounts to EPO by special allocation or otherwise. Under the terms of the Caverns LLC Agreement, Duncan Energy Partners may elect to acquire a 66% share of these projects from EPO within 90 days of such projects being placed in-service. In November 2008, the Caverns LLC Agreement was amended to provide that EPO would prospectively receive a special allocation of 100% of the depreciation related to projects that it has fully funded.

EPO made cash contributions of $86.4 million under the Caverns LLC Agreement during the nine months ended September 30, 2008. These expenditures are associated with storage-related projects sponsored by EPO's NGL marketing activities and represent 100% of the costs of such projects to date. EPO expects that its NGL marketing activities will benefit from these projects. At present, Mont Belvieu Caverns is not expected to generate any identifiable incremental cash flows in connection with these projects; thus, the sharing ratio for Mont Belvieu Caverns is not expected to change from the current ratio of 66% for Duncan Energy Partners and 34% for EPO. However, as noted above, beginning in November 2008, EPO will receive a special allocation of depreciation related to these projects. We expect EPO to make $37.5 million of contributions to Mont Belvieu Caverns in connection with these construction projects during the remainder of 2008 through the first quarter of 2009. The constructed assets are the property of Mont Belvieu Caverns.

EPO's payments under the Caverns LLC Agreement are accounted for as additional investments by EPO in Mont Belvieu Caverns and are subsequently eliminated in the preparation of our consolidated financial statements.

Relationship with Energy Transfer Equity

Enterprise GP Holdings acquired equity method investments in Energy Transfer Equity and its general partner in May 2007. As a result, Energy Transfer Equity and its consolidated subsidiaries became related parties to our consolidated businesses.

For the three and nine months ended September 30, 2008, we recorded $99.6 million and $413.0 million of revenues, respectively, from Energy Transfer Partners, L.P. ("ETP"), primarily from our NGL marketing activities. For the three and five months ended September 30, 2007, we recorded $79.0 million and $ 121.5 million, respectively, of revenues from ETP. We incurred $56.5 million and $134.4 million in operating costs and expenses for the three and nine months ended September 30, 2008, respectively, that were paid to ETP. For the three and five months ended September 30, 2007, we incurred $2.6 million and $8.4 million, respectively, in operating costs and expenses. We have a long-term revenue generating contract with Titan Energy Partners, L.P. ("Titan"), a consolidated subsidiary of ETP. Titan purchases substantially all of its propane requirements from us. We and Energy Transfer Company ("ETC OLP") transport natural gas on each other's systems and share operating expenses on certain pipelines. ETC OLP also sells natural gas to us.

Relationships with Unconsolidated Affiliates

Our significant related party revenue and expense transactions with unconsolidated affiliates consist of the sale of natural gas to Evangeline and the purchase of NGL storage, transportation and fractionation services from Promix. In addition, we sell natural gas to Promix and process natural gas at VESCO. For additional information regarding our unconsolidated affiliates, see Note 7.

See "Relationship with TEPPCO" within this Note 13 for a description of ongoing transactions involving our Jonah and TOPS joint ventures with TEPPCO.

Note 14. Earnings Per Unit

Basic earnings per unit is computed by dividing net income or loss allocated to limited partner interests by the weighted-average number of distribution-bearing units outstanding during a period. Diluted earnings per unit is computed by dividing net income or loss allocated to limited partner interests by the sum of (i) the weighted-average number of distribution-bearing units outstanding during a period (as used in determining basic earnings per unit); (ii) the weighted-average number of performance-based phantom units outstanding during a period; and (iii) the number of incremental common units resulting from the assumed exercise of dilutive unit options outstanding during a period (the "incremental option units").

In a period of net losses, restricted units, phantom units and incremental option units are excluded from the calculation of diluted earnings per unit due to their antidilutive effect. The dilutive incremental option units are calculated using the treasury stock method, which assumes that proceeds from the exercise of all in-the-money options at the end of each period are used to repurchase common units at an average market value during the period. The amount of common units remaining after the proceeds are exhausted represents the potentially dilutive effect of the securities.

The amount of net income or loss allocated to limited partner interests is net of our general partner's share of such earnings. The following table presents the allocation of net income to EPGP for the periods indicated:

	For the Three Months Ended September 30, 2008	For the Three Months Ended September 30, 2007	For the Nine Months Ended September 30, 2008	For the Nine Months Ended September 30, 2007
Net income	$ 203,081	$ 117,606	$ 725,960	$ 371,805
Less incentive earnings allocations to EPGP	(32,035)	(27,394)	(92,803)	(78,964)
Net income available after incentive earnings allocation	171,046	90,212	633,157	292,841
Multiplied by EPGP ownership interest	2.0%	2.0%	2.0%	2.0%
Standard earnings allocation to EPGP	$ 3,421	$ 1,804	$ 12,663	$ 5,857
Incentive earnings allocation to EPGP	$ 32,035	$ 27,394	$ 92,803	$ 78,964
Standard earnings allocation to EPGP	3,421	1,804	12,663	5,857
Net income available to EPGP	$ 35,456	$ 29,198	$ 105,466	$ 84,821

The following table presents our calculation of basic and diluted earnings per unit for the periods indicated:

	For the Three Months Ended September 30, 2008	For the Three Months Ended September 30, 2007	For the Nine Months Ended September 30, 2008	For the Nine Months Ended September 30, 2007
Net income	$ 203,081	$ 117,606	$ 725,960	$ 371,805
Net income available to EPGP	(35,456)	(29,198)	(105,466)	(84,821)

Net income available to limited partners	$ 0.38	$ 0.20	$ 1.42	$ 0.66

Note 15. Commitments and Contingencies

Litigation

On occasion, we or our unconsolidated affiliates are named as a defendant in litigation relating to our normal business activities, including regulatory and environmental matters. Although we are insured against various business risks to the extent we believe it is prudent, there is no assurance that the nature and amount of such insurance will be adequate, in every case, to indemnify us against liabilities arising from future legal proceedings as a result of our ordinary business activities. We are unaware of any significant litigation, pending or threatened, that could have a significant adverse effect on our financial position, results of operations or cash flows.

On September 18, 2006, Peter Brinckerhoff, a purported unitholder of TEPPCO, filed a complaint in the Court of Chancery of New Castle County in the State of Delaware, in his individual capacity, as a putative class action on behalf of other unitholders of TEPPCO, and derivatively on behalf of TEPPCO, concerning, among other things, certain transactions involving TEPPCO and us or our affiliates. Mr. Brinkerhoff filed an amended complaint on July 12, 2007. The complaint names as defendants (i) TEPPCO, certain of its current and former directors, and certain of its affiliates; (ii) us and certain of our affiliates; (iii) EPCO; and (iv) Dan L. Duncan.

The amended complaint alleges, among other things, that the defendants caused TEPPCO to enter into certain transactions that were unfair to TEPPCO or otherwise unfairly favored Enterprise Products Partners or its affiliates over TEPPCO. These transactions are alleged to include: (i) the joint venture to further expand the Jonah system entered into by TEPPCO and Enterprise Products Partners in August 2006; (ii) the sale by TEPPCO of its Pioneer natural gas processing plant to Enterprise Products Partners in March 2006; and (iii) certain amendments to TEPPCO’s partnership agreement, including a reduction in the maximum tier of TEPPCO’s incentive distribution rights in exchange for TEPPCO common units. The amended complaint seeks (i) rescission of the amendments to TEPPCO’s partnership agreement; (ii) damages for profits and special benefits allegedly obtained by defendants as a result of the alleged wrongdoings in the amended complaint; and (iii) awarding plaintiff costs of the action, including fees and expenses of his attorneys and experts. We believe this lawsuit is without merit and intend to vigorously defend against it. See Note 13 for additional information regarding our relationship with TEPPCO.

On February 14, 2007, EPO received a letter from the Environment and Natural Resources Division (“ENRD”) of the U.S. Department of Justice (“DOJ”) related to an ammonia release in Kingman County, Kansas on October 27, 2004 from a pressurized anhydrous ammonia pipeline owned by a third party, Magellan Ammonia Pipeline, L.P. (“Magellan”) and a previous release of ammonia on September 27, 2004 from the same pipeline. EPO was the operator of this pipeline until July 1, 2008. The ENRD has indicated that it may pursue civil damages against EPO and Magellan as a result of these incidents. Based on this correspondence from the ENRD, the statutory maximum amount of civil fines that could be assessed against EPO and Magellan is up to $17.4 million in the aggregate. EPO is cooperating with the DOJ and is hopeful that an expeditious resolution of this civil matter acceptable to all parties will be reached in the near future. Magellan has agreed to indemnify EPO for the civil matter. At this time, we do not believe that a final resolution of the civil claims by the ENRD will have a material impact on our consolidated financial position, results of operations or cash flows.

On October 25, 2006, a rupture in the Magellan Ammonia Pipeline resulted in the release of ammonia near Clay Center, Kansas. The pipeline has been repaired and environmental remediation tasks related to this incident have been completed. At this time, we do not believe that this incident will have a material impact on our consolidated financial position, results of operations or cash flows.

Several lawsuits have been filed by municipalities and other water suppliers against a number of manufacturers of reformulated gasoline containing methyl tertiary butyl ether. In general, such suits have not named manufacturers of this product as defendants, and there have been no such lawsuits filed against our subsidiary that owns an octane-additive production facility. It is possible, however, that former manufacturers such as our subsidiary could ultimately be added as defendants in such lawsuits or in new lawsuits.

The Attorney General of Colorado on behalf of the Colorado Department of Public Health and Environment filed suit against us and others on April 15, 2008 in connection with the construction of a pipeline near Parachute, Colorado. The State sought a temporary restraining order and an injunction to halt construction activities since it alleged that the defendants failed to install measures to minimize damage to the environment and to follow requirements for the pipeline's stormwater permit and appropriate stormwater plan. The State's complaint also seeks penalties for the above alleged failures. Defendants and the State agreed to certain stipulations that, among other things, require us to install specified environmental protection measures in the disturbed pipeline right-of-way to comply with regulations. We have complied with the stipulations and the State has dismissed the portions of the complaint seeking the temporary restraining order and injunction. The State has not yet assessed penalties and we are unable to predict the amount of penalties that may be assessed. At this time, we do not believe that this incident will have a material impact on our consolidated financial position, results of operations or cash flows.

Contractual Obligations

Operating Lease Obligations. We lease certain property, plant and equipment under noncancelable and cancelable operating leases. Our significant lease agreements involve (i) the lease of underground caverns for the storage of natural gas and NGLs, (ii) leased office space with affiliates of EPCO, (iii) a railcar unloading terminal in Mont Belvieu, Texas and (iv) land held pursuant to right-of-way agreements. In general, our material lease agreements have original terms that range from two to 28 years and include renewal options that could extend the agreements for up to an additional 20 years. Lease expense is charged to operating costs and expenses on a straight-line basis over the period of expected economic benefit. Contingent rental payments are expensed as incurred.

Lease and rental expense was \$8.5 million and \$9.0 million during the three months ended September 30, 2008 and 2007, respectively. For the nine months ended September 30, 2008 and 2007, lease and rental expense was \$26.9 million and \$28.9 million, respectively. There have been no material changes in our operating lease commitments since December 31, 2007.

Scheduled Maturities of Long-Term Debt. With the exception of the issuance of Senior Notes M and N by EPO in April 2008 and routine fluctuations in the balance of our consolidated revolving credit facilities, there have been no significant changes in our consolidated scheduled maturities of long-term debt since those reported in our Annual Report on Form 10-K for the year ended December 31, 2007. See Note 10 for additional information regarding the issuance of senior notes by EPO.

Purchase Obligations. There have been no material changes in our consolidated purchase obligations since December 31, 2007, except for commitments associated with two long-term natural gas purchase agreements and certain pipeline capacity reservation agreements that we executed in 2008 to support our natural gas marketing activities. The following table presents our estimated purchase commitments (in terms of volumes and cost) under these new agreements for the periods indicated:

		Payment or Settlement due by Period			
	Total	Less than 1 year	1-3 years	4-5 years	More than 5 years
Product purchase commitments:					
Estimated payment obligations:					
Natural gas	$ 5,707,213	$ 261,703	$ 985,430	$ 1,232,670	$ 3,227,410
Underlying volume commitment:					
Natural gas (in billion British thermal units)	927,765	45,360	158,775	199,505	524,125
Service payment commitments					
for pipeline capacity reservation	$ 157,633	$ 2,730	$ 27,414	$ 30,074	$ 97,415

Estimated future payment obligations for natural gas shown in the preceding table are based on the contractual price under each contract for purchases made at September 30, 2008 applied to all future volume commitments. Actual future payment obligations under these natural gas purchase agreements will vary depending on market prices at the time of delivery.

Other Claims

As part of our normal business activities with joint venture partners and certain customers and suppliers, we occasionally have claims made against us as a result of disputes related to contractual agreements or similar arrangements. As of September 30, 2008, claims against us totaled approximately $3.0 million. These matters are in various stages of assessment and the ultimate outcome of such disputes cannot be reasonably estimated. However, in our opinion, the likelihood of a material adverse outcome related to such disputes is remote. Accordingly, accruals for loss contingencies related to these matters, if any, that might result from the resolution of such disputes have not been reflected in our consolidated financial statements.

Note 16. Significant Risks and Uncertainties – Weather-Related Risks

We participate as a named insured in EPCO's insurance program, which provides us with property damage, business interruption and other coverages, the scope and amounts of which are customary and sufficient for the nature and extent of our operations. While we believe EPCO maintains adequate insurance coverage on our behalf, insurance will not cover every type of interruption that might occur. If we were to incur a significant liability for which we were not fully insured, it could have a material impact on our consolidated financial position, results of operations and cash flows. In addition, the proceeds of any such insurance may not be paid in a timely manner and may be insufficient to reimburse us for our repair costs or lost income. Any event that interrupts the revenues generated by our consolidated operations, or which causes us to make significant expenditures not covered by insurance, could reduce our ability to pay distributions to our partners and, accordingly, adversely affect the market price of our common units.

For windstorm events such as hurricanes and tropical storms, EPCO's deductible for onshore physical damage is $10.0 million per storm. For offshore assets, the windstorm deductible is $10.0 million per storm plus a one-time $15.0 million aggregate deductible per policy period. For non-windstorm events, EPCO's deductible for onshore and offshore physical damage is $5.0 million per occurrence. In meeting the deductible amounts, property damage costs are aggregated for EPCO and its affiliates, including us. Accordingly, our exposure with respect to the deductibles may be equal to or less than the stated amounts depending on whether other EPCO or affiliate assets are also affected by an event.

To qualify for business interruption coverage in connection with a windstorm event, covered assets must be out-of-service in excess of 60 days for onshore assets and 75 days for offshore assets. To qualify for business interruption coverage in connection with a non-windstorm event, covered onshore and offshore assets must be out-of-service in excess of 60 days.

Hurricanes Gustav and Ike

In the third quarter of 2008, our onshore and offshore facilities located along the Gulf Coast of Texas and Louisiana were adversely impacted by Hurricanes Gustav and Ike. The disruptions in natural gas, NGL and crude oil production caused by these storms resulted in decreased volumes for some of our pipeline systems, natural gas processing plants, NGL fractionators and offshore platforms, which, in turn, caused a decrease in gross operating margin from these operations. As a result of our allocated share of EPCO's insurance deductibles for windstorm coverage, we expensed a combined $46.0 million of repair costs for property damage in connection with these two storms. We expect to file property damage insurance claims to the extent repair costs exceed this amount. Due to the recent nature of these storms, we are still evaluating the total cost of repairs and the potential for business interruption claims on certain assets.

Pre-2008 Hurricanes (Katrina, Rita, et al)

The following table summarizes the proceeds we received from business interruption and property damage insurance claims with respect to certain named storms for the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	**2007**	**2008**	**2007**
Business interruption proceeds:				
Hurricane Ivan	$ --	$ --	$ --	$ 377
Hurricane Katrina	--	1,301	501	14,500
Hurricane Rita	--	743	662	9,000
Other	--	--	--	996
Total proceeds	--	2,044	1,163	24,873
Property damage proceeds:				
Hurricane Ivan	--	--	--	1,273
Hurricane Katrina	2,495	--	9,404	6,563
Hurricane Rita	--	--	2,678	--
Other	--	--	--	184
Total proceeds	2,495	--	12,082	8,020
Total	$ 2,495	$ 2,044	$ 13,245	$ 32,893

At September 30, 2008, we have $30.8 million of estimated property damage claims outstanding related to these storms that we believe are probable of collection through 2009. To the extent we estimate the dollar value of such damages, please be aware that a change in our estimates may occur as additional information becomes available.

Note 17. Supplemental Cash Flow Information

Third parties may be obligated to reimburse us for all or a portion of expenditures on certain of our capital projects. The majority of such arrangements are associated with projects related to pipeline construction and production well tie-ins. We received $21.2 million and $52.5 million as contributions in aid of our construction costs during the nine months ended September 30, 2008 and 2007, respectively.

We determine net cash flows provided by operating activities using the indirect method, which adjusts net income for items that did not affect cash. Under GAAP, we use the accrual basis of accounting to determine net income. This basis of accounting requires that we record revenue when earned and expenses when incurred. Earned revenues may include credit sales that have not been collected in cash and expenses incurred that may not have been paid in cash. The extent to which changes in operating accounts influence net cash flows provided by operating activities generally depends on the following:

- The timing of cash receipts from revenue transactions and cash payments for expense transactions near the end of each reporting period. For example, if significant cash receipts are posted on the last day of the current reporting period, but subsequent payments on expense invoices are made on the first day of the next reporting period, net cash flows provided by operating activities will reflect an increase in the current reporting period that will be reduced as payments are made in the next period. We employ prudent cash management practices and monitor our daily cash requirements to meet our ongoing liquidity needs.

- If commodity or other prices increase between reporting periods, changes in accounts receivable and accounts payable and accrued expenses may appear larger than in previous periods; however, overall levels of receivables and payables may still reflect normal ranges. From a receivables standpoint, we monitor the amount of credit extended to customers.

- Additions to inventory for forward sales transactions or other reasons or increased expenditures for prepaid items would be reflected as a use of cash and reduce overall cash provided by operating activities in a given reporting period. As these assets are charged to expense in subsequent periods, the expense amount is reflected as a positive change in operating accounts; however, there is no impact on operating cash flows.

In addition to the adjustments noted above, non-cash charges in the income statement are added back to net income and non-cash credits are deducted to compute net cash flows provided by operating activities. Examples of non-cash charges include depreciation and amortization.

The net effect of changes in operating assets and liabilities is as follows for the periods indicated:

	For the Nine Months Ended September 30, 2008	For the Nine Months Ended September 30, 2007
Decrease (increase) in:		
Accounts and notes receivable	$ 84,900	$ (281,949)
Inventories	(299,124)	(170,610)
Prepaid and other current assets	(43,928)	(41,171)
Other assets	24,236	4,719
Increase (decrease) in:		
Accounts payable	(5,951)	61,106
Accrued product payable	14,192	354,508
Accrued expenses	27,177	152,534
Accrued interest	(29,009)	10,020
Other current liabilities	7,691	26,110
Other long-term liabilities	(8,581)	(4,995)
Net effect of changes in operating accounts	$ (228,397)	$ 110,272

Note 18. Condensed Financial Information of EPO

EPO conducts substantially all of our business. Currently, we have no independent operations and no material assets outside those of EPO. EPO consolidates the financial statements of Duncan Energy Partners with those of its own.

Enterprise Products Partners L.P. guarantees the debt obligations of EPO, with the exception of the Dixie revolving credit facility and the Duncan Energy Partners' revolving credit facility. If EPO were to default on any of its guaranteed debt, Enterprise Products Partners L.P. would be responsible for full repayment of that obligation. See Note 10 for additional information regarding our consolidated debt obligations.

The reconciling items between our consolidated financial statements and those of EPO are insignificant. The following table presents condensed consolidated statements of operations data for EPO for the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
Revenues	$ 6,297,902	$ 4,111,996	$ 18,322,052	$ 11,647,656
Costs and expenses	5,993,391	3,917,172	17,308,464	11,046,151
Equity in earnings of unconsolidated affiliates	14,876	13,960	48,037	13,928
Operating income	319,387	208,784	1,061,625	615,433
Other expense, net	(101,481)	(84,001)	(287,679)	(215,088)
Income before provision for income taxes and minority interest	217,906	124,783	773,946	400,345
Provision for income taxes	(6,609)	(2,072)	(17,193)	(9,006)
Income before minority interest	211,297	122,711	756,753	391,339
Minority interest	(7,998)	(7,804)	(29,454)	(19,325)
Net income	$ 203,299	$ 114,907	$ 727,299	$ 372,014

The following table presents condensed consolidated balance sheet data for EPO at the dates indicated:

	September 30, 2008	December 31, 2007
ASSETS		
Current assets	$ 2,993,491	$ 2,545,297
Property, plant and equipment, net	12,693,619	11,587,264
Investments in and advances to unconsolidated affiliates, net	917,193	858,339
Intangible assets, net	866,313	917,000
Goodwill	616,996	591,652
Deferred tax asset	2,320	3,113
Other assets	69,067	112,345
Total	$ 18,158,999	$ 16,615,010
LIABILITIES AND MEMBERS' EQUITY		
Current liabilities	$ 3,170,816	$ 3,044,002
Long-term debt	8,458,195	6,906,145
Other long-term liabilities	89,263	95,112
Minority interest	422,499	439,854
Members' equity	6,018,226	6,129,897
Total	$ 18,158,999	$ 16,615,010
Total EPO debt obligations guaranteed by Enterprise Products Partners L.P.	$ 8,212,201	$ 6,686,500

Item 2. ***Management's Discussion and Analysis of Financial Condition and Results of Operations*.**

For the three and nine months ended September 30, 2008 and 2007.

The following information should be read in conjunction with our Unaudited Condensed Consolidated Financial Statements and our accompanying notes included under Item 1 of this Quarterly Report on Form 10-Q and with the information contained within our Annual Report on Form 10-K for the year ended December 31, 2007. Our discussion and analysis includes the following:

- Cautionary Note Regarding Forward-Looking Statements.
- Significant Relationships Referenced in this Discussion and Analysis.
- Overview of Business.
- Recent Developments – Discusses significant developments since December 31, 2007.
- Results of Operations – Discusses material period-to-period variances in our Unaudited Condensed Statements of Consolidated Operations.
- Liquidity and Capital Resources – Addresses available sources of liquidity and capital resources and includes a discussion of our capital spending program.
- Overview of Critical Accounting Policies and Estimates.
- Other Items – Includes information related to contractual obligations, off-balance sheet arrangements, related party transactions, recent accounting pronouncements and similar disclosures.

As generally used in the energy industry and in this discussion, the identified terms have the following meanings:

/d	= per day
BBtus	= billion British thermal units
Bcf	= billion cubic feet
MBPD	= thousand barrels per day
MMBbls	= million barrels
MMBtus	= million British thermal units
MMcf	= million cubic feet

Our financial statements have been prepared in accordance with U.S. generally accepted accounting principles ("GAAP").

Cautionary Note Regarding Forward-Looking Statements

This discussion contains various forward-looking statements and information that are based on our beliefs and those of our general partner, as well as assumptions made by us and information currently available to us. When used in this document, words such as "anticipate," "project," "expect," "plan," "seek," "goal," "forecast," "intend," "could," "should," "will," "believe," "may," "potential" and similar expressions and statements regarding our plans and objectives for future operations, are intended to identify forward-looking statements. Although we and our general partner believe that such expectations reflected in such forward-looking statements are reasonable, neither we nor our general partner can give any assurances that such expectations will prove to be correct. Such statements are subject to a variety of risks, uncertainties and assumptions as described in more detail in Part I, Item 1A, "Risk Factors," included in our Annual Report on Form 10-K for 2007. If one or more of these risks or uncertainties materialize, or if underlying assumptions prove incorrect, our actual results may vary *materially from those anticipated, estimated, projected or expected. You should not put undue reliance on any forward-looking statements.*

Significant Relationships Referenced in this Discussion and Analysis

Unless the context requires otherwise, references to “we,” “us,” “our” or “Enterprise Products Partners” are intended to mean the business and operations of Enterprise Products Partners L.P. and its consolidated subsidiaries.

References to “EPO” mean Enterprise Products Operating LLC, which is a wholly owned subsidiary of Enterprise Products Partners.

References to “Duncan Energy Partners” mean Duncan Energy Partners L.P., which is a consolidated subsidiary of EPO. Duncan Energy Partners is a publicly traded Delaware limited partnership, the common units of which are listed on the New York Stock Exchange (“NYSE”) under the ticker symbol “DEP.” References to “DEP GP” mean DEP Holdings, LLC, which is the general partner of Duncan Energy Partners and is wholly owned by EPO.

References to “EPGP” mean Enterprise Products GP, LLC, which is our general partner.

References to “Enterprise GP Holdings” mean Enterprise GP Holdings L.P., a publicly traded affiliate, the units of which are listed on the NYSE under the ticker symbol “EPE.” Enterprise GP Holdings owns EPGP. References to “EPE Holdings” mean EPE Holdings, LLC, which is the general partner of Enterprise GP Holdings.

References to “TEPPCO” mean TEPPCO Partners, L.P., a publicly traded affiliate, the common units of which are listed on the NYSE under the ticker symbol “TPP.” References to “TEPPCO GP” refer to Texas Eastern Products Pipeline Company, LLC, which is the general partner of TEPPCO and is wholly owned by Enterprise GP Holdings.
