References to “Energy Transfer Equity” mean the business and operations of Energy Transfer Equity, L.P. and its consolidated subsidiaries, which include Energy Transfer Partners, L.P. (“ETP”). Energy Transfer Equity is a publicly traded Delaware limited partnership, the common units of which are listed on the NYSE under the ticker symbol “ETE.” The general partner of Energy Transfer Equity is LE GP, LLC (“LE GP”). On May 7, 2007, Enterprise GP Holdings acquired non-controlling interests in both LE GP and Energy Transfer Equity. Enterprise GP Holdings accounts for its investments in LE GP and Energy Transfer Equity using the equity method of accounting.

References to “Employee Partnerships” mean EPE Unit L.P. (“EPE Unit I”), EPE Unit II, L.P. (“EPE Unit II”), EPE Unit III, L.P. (“EPE Unit III”) and Enterprise Unit L.P. (“Enterprise Unit”), collectively, which are private company affiliates of EPCO, Inc.

References to “EPCO” mean EPCO, Inc. and its wholly-owned private company affiliates, which are related parties to all of the foregoing named entities.

Overview of Business

We are a North American midstream energy company providing a wide range of services to producers and consumers of natural gas, natural gas liquids (“NGLs”), crude oil and certain petrochemicals. In addition, we are an industry leader in the development of pipeline and other midstream energy infrastructure in the continental United States and Gulf of Mexico. We are a publicly traded Delaware limited partnership formed in 1998, the common units of which are listed on the NYSE under the ticker symbol “EPD.”

Our midstream energy asset network links producers of natural gas, NGLs and crude oil from some of the largest supply basins in the United States, Canada and the Gulf of Mexico with domestic consumers and international markets. We have four reportable business segments: NGL Pipelines & Services; Onshore Natural Gas Pipelines & Services; Offshore Pipelines & Services; and Petrochemical Services. Our business segments are generally organized and managed according to the type of services rendered (or technologies employed) and products produced and/or sold.

We conduct substantially all of our business through EPO. We are owned 98% by our limited partners and 2% by our general partner, EPGP. EPGP is owned 100% by Enterprise GP Holdings. We, EPO, Duncan Energy Partners, DEP GP, EPGP, Enterprise GP Holdings, EPE Holdings, TEPPCO and TEPPCO GP are affiliates and under the common control of Dan L. Duncan, the Group Co-Chairman and the controlling shareholder of EPCO.

Recent Developments

The following information highlights our significant developments since January 1, 2008 through the date of this filing.

Texas Offshore Port System Joint Venture

In August 2008, we, together with TEPPCO and Oiltanking Holding Americas, Inc. ("Oiltanking"), announced the formation of a joint venture to design, construct, operate and own a Texas offshore crude oil port and related pipeline and storage infrastructure that would facilitate delivery of waterborne crude oil to refining centers located along the upper Texas Gulf Coast. Demand for such projects is being driven by planned and expected refinery expansions along the Gulf Coast, expected increases in shipping traffic and operating limitations of regional ship channels.

The joint venture's primary project, referred to as "TOPS," includes (i) an offshore port (which will be located approximately 36 miles from Freeport, Texas), (ii) an onshore storage facility with approximately 3.9 million barrels of crude oil storage capacity, and (iii) an 85-mile crude oil pipeline system having a transportation capacity of up to 1.8 million barrels per day, that will extend from the offshore port to a Texas City, Texas storage facility. TOPS is expected to begin service as early as the fourth quarter of 2010. The joint venture's second and complementary project, referred to as the Port Arthur Crude Oil Express (or "PACE") will transport crude oil from Texas City, including crude oil from TOPS, and will consist of a 75-mile pipeline and 1.2 million barrels of crude oil storage capacity in the Port Arthur, Texas area. PACE is expected to begin service as early as the third quarter of 2010. Development of the TOPS and PACE projects is supported by long-term contracts with affiliates of Motiva Enterprises LLC and Exxon Mobil Corporation, which have committed a combined 725,000 barrels per day of crude oil to the projects.

We, TEPPCO and Oiltanking each own, through our respective subsidiaries, a one-third interest in the joint venture. The aggregate cost of the TOPS and PACE projects is expected to be approximately $1.8 billion (excluding capitalized interest), with the majority of such capital expenditures occurring in 2009 and 2010. We and TEPPCO have each guaranteed up to approximately $700.0 million of the capital contribution obligations of our respective subsidiary partners in the joint venture. As of September 30, 2008, our investment in TOPS was $2.4 million.

Acquisition of Remaining Interest in Dixie

In August 2008, we acquired the remaining 25.8% ownership interest in Dixie Pipeline Company ("Dixie") for $57.1 million. As a result of this transaction, we own 100% of Dixie, which owns a 1,300-mile pipeline system that delivers NGLs (primarily propane and other chemical feedstocks) to customers along the U.S. Gulf Coast and southeastern United States.

Reorganization of Commercial Management Team

In July 2008, Mr. A. J. Teague, Executive Vice President, was elected as a Director to the boards of both our general partner and that of Duncan Energy Partners and as Chief Commercial Officer responsible for managing all of the commercial activities of the two partnerships. In connection with Mr. Teague's appointment as Chief Commercial Officer, certain members of our senior management team were realigned to report to Mr. Teague. Mr. Teague will continue to report to Michael A. Creel, President and Chief Executive Officer of Enterprise Products Partners.

Independence Trail and Hub Resume Operations

In April 2008, production at the Independence Hub natural gas platform was shut-in due to a leak in the flex-joint assembly where the Independence Trail export pipeline connects to the platform. In July 2008, repairs were completed and the Independence Hub platform and Trail pipeline returned to operation. Our Independence Trail export pipeline recorded $17.0 million of expense associated with the flex-joint repairs. We have submitted a claim with our insurance carriers regarding the flex-joint repair costs. To the extent that we receive cash proceeds from this claim in the future, such amounts would be recorded as income in the period of receipt.

EPO Issues $1.10 Billion of Senior Notes

In April 2008, EPO sold $400.0 million in principal amount of 5.65% fixed-rate, unsecured senior notes due April 2013 ("Senior Notes M") and $700.0 million in principal amount of 6.50% fixed-rate, unsecured senior notes due January 2019 ("Senior Notes N"). Net proceeds from this offering were used to temporarily reduce borrowings outstanding under EPO's Multi-Year Revolving Credit Facility. For additional information regarding this issuance of debt, see Note 10 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report.

Duncan Energy Partners' Shelf Registration Statement

In March 2008, Duncan Energy Partners filed a universal shelf registration statement with the U.S. Securities and Exchange Commission ("SEC") that authorized its issuance of up to $1.00 billion in debt and equity securities. Duncan Energy Partners has not issued any securities under this registration statement through November 3, 2008.

Our Pioneer Cryogenic Natural Gas Processing Facility Commences Operations

In February 2008, we commenced operations at our recently completed Pioneer cryogenic natural gas processing facility. Located near the Opal Hub in southwestern Wyoming, this new facility is designed to process up to 750 MMcf/d of natural gas and extract as much as 30 MBPD of NGLs. We intend to maintain the operational capability of our Pioneer silica gel natural gas processing plant, which is located adjacent to the Pioneer cryogenic plant, as a back-up to provide producers with additional assurance of our processing capability at the complex. NGLs extracted at our Pioneer complex are transported on our Mid-America Pipeline System and ultimately to our Hobbs and Mont Belvieu NGL fractionators.

In late March 2008, operations at our Pioneer cryogenic natural gas processing facility were temporarily suspended following a release of natural gas and subsequent fire. No injuries resulted from the incident, which was restricted to a small area within the plant. The facility resumed operations in April 2008.

Results of Operations

We have four reportable business segments: NGL Pipelines & Services, Onshore Natural Gas Pipelines & Services, Offshore Pipelines & Services and Petrochemical Services. Our business segments are generally organized and managed according to the type of services rendered (or technologies employed) and products produced and/or sold.

We evaluate segment performance based on the non-GAAP financial measure of gross operating margin. Gross operating margin (either in total or by individual segment) is an important performance measure of the core profitability of our operations. This measure forms the basis of our internal financial reporting and is used by senior management in deciding how to allocate capital resources among business segments. We believe that investors benefit from having access to the same financial measures that our management uses in evaluating segment results. The GAAP financial measure most directly comparable to total segment gross operating margin is operating income. Our non-GAAP financial measure of total segment gross operating margin should not be considered as an alternative to GAAP operating income.

We define total segment gross operating margin as consolidated operating income before (i) depreciation, amortization and accretion expense; (ii) operating lease expenses for which we do not have the payment obligation; (iii) gains and losses from asset sales and related transactions; and (iv) general and administrative costs. Gross operating margin is exclusive of other income and expense transactions, provision for income taxes, minority interest, extraordinary charges and the cumulative effect of changes in accounting principle. Gross operating margin by segment is calculated by subtracting segment operating costs and expenses (net of the adjustments noted above) from segment revenues, with both segment totals before the elimination of intersegment and intrasegment transactions. Intercompany accounts and transactions are eliminated in consolidation.

We include equity earnings from unconsolidated affiliates in our measurement of segment gross operating margin and operating income. Our equity investments with industry partners are a vital component of our business strategy. They are a means by which we conduct our operations to align our interests with those of our customers and/or suppliers. This method of operation also enables us to achieve favorable economies of scale relative to the level of investment and business risk assumed versus what we could accomplish on a stand-alone basis. Many of these businesses perform supporting or complementary roles to our other business operations.

Our consolidated gross operating margin amounts include the gross operating margin amounts of Duncan Energy Partners on a 100% basis. Volumetric data associated with the operations of Duncan Energy Partners are also included on a 100% basis in our consolidated statistical data.

For additional information regarding our business segments, see Note 12 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report.

Selected Price and Volumetric Data

The following table illustrates selected quarterly industry index prices for natural gas, crude oil and selected NGL and petrochemical products for the periods presented.

	Natural Gas, $/MMBtu (1)	Crude Oil, $/barrel (2)	Ethane, $/gallon (1)	Propane, $/gallon (1)	Normal Butane, $/gallon (1)	Isobutane, $/gallon (1)	Natural Gasoline, $/gallon (1)	Polymer Grade Propylene, $/pound (1)	Refinery Grade Propylene, $/pound (1)
2007									
1st Quarter	$6.77	$58.02	$0.59	$0.97	$1.13	$1.22	$1.37	$0.45	$0.40
2nd Quarter	$7.55	$64.97	$0.72	$1.13	$1.33	$1.45	$1.65	$0.51	$0.46
3rd Quarter	$6.16	$75.48	$0.82	$1.23	$1.44	$1.49	$1.68	$0.52	$0.46
4th Quarter	$6.97	$90.75	$1.04	$1.51	$1.79	$1.80	$2.01	$0.59	$0.54
2007 Averages	$6.86	$72.30	$0.79	$1.21	$1.42	$1.49	$1.68	$0.52	$0.47
2008									
1st Quarter	$8.03	$97.91	$1.01	$1.47	$1.80	$1.87	$2.12	$0.61	$0.54
2nd Quarter	$10.94	$123.88	$1.05	$1.70	$2.05	$2.08	$2.64	$0.70	$0.67
3rd Quarter	$10.25	$118.01	$1.09	$1.68	$1.97	$1.99	$2.52	$0.78	$0.66
2008 Averages	$9.74	$113.27	$1.05	$1.62	$1.94	$1.98	$2.43	$0.70	$0.62

(1) Natural gas, NGL, polymer grade propylene and refinery grade propylene prices represent an average of various commercial index prices including Oil Price Information Service ("OPIS") and Chemical Market Associates, Inc. ("CMAI"). Natural gas price is representative of Henry-Hub I-FERC. NGL prices are representative of Mont Belvieu Non-TET pricing. Refinery grade propylene represents a weighted-average of CMAI spot prices. Polymer-grade propylene represents average CMAI contract pricing.
(2) Crude oil price is representative of an index price for West Texas Intermediate.

The following table presents our significant average throughput, production and processing volumetric data. These statistics are reported on a net basis, taking into account our ownership interests in certain joint ventures, and reflect the periods in which we owned an interest in such operations. These statistics include volumes for newly constructed assets since the dates such assets were placed into service and for recently purchased assets since the date of acquisition.

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
NGL Pipelines & Services, net:				
NGL transportation volumes (MBPD)	1,758	1,575	1,788	1,626
NGL fractionation volumes (MBPD)	413	371	424	379
Equity NGL production (MBPD)	109	64	108	67
Fee-based natural gas processing (MMcf/d)	2,064	2,269	2,469	2,358
Onshore Natural Gas Pipelines & Services, net:				
Natural gas transportation volumes (BBtus/d)	7,562	6,597	7,309	6,576
Offshore Pipelines & Services, net:				
Natural gas transportation volumes (BBtus/d)	1,244	1,271	1,449	1,407
Crude oil transportation volumes (MBPD)	147	163	190	164
Platform gas processing (MMcf/d)	583	246	588	265
Platform oil processing (MBPD)	14	24	19	24
Petrochemical Services, net:				
Butane isomerization volumes (MBPD)	71	96	85	93
Propylene fractionation volumes (MBPD)	58	68	59	69
Octane additive production volumes (MBPD)	8	11	9	9
Petrochemical transportation volumes (MBPD)	95	108	110	104
Total, net:				
NGL, crude oil and petrochemical transportation volumes (MBPD)	2,000	1,846	2,088	1,894
Natural gas transportation volumes (BBtus/d)	8,806	7,868	8,758	7,983
Equivalent transportation volumes (MBPD) (1)	4,317	3,917	4,393	3,995

(1) Reflects equivalent energy volumes where 3.8 MMBtus of natural gas are equivalent to one barrel of NGLs.

Comparison of Results of Operations

The following table summarizes the key components of our results of operations for the periods indicated (dollars in thousands):

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
Revenues	$ 6,297,902	$ 4,111,996	$ 18,322,052	$ 11,647,656
Operating costs and expenses	5,971,942	3,896,411	17,243,070	10,981,562
General and administrative costs	21,720	18,715	66,901	66,706
Equity in earnings of unconsolidated affiliates	14,876	13,960	48,037	13,928
Operating income	319,116	210,830	1,060,118	613,316
Interest expense	102,657	85,075	290,412	219,708
Net income	203,081	117,606	725,960	371,805

Our gross operating margin by segment and in total is as follows for the periods indicated (dollars in thousands):

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
Gross operating margin by segment:				
NGL Pipelines & Services	$ 336,054	$ 190,209	$ 943,445	$ 589,708
Onshore Natural Gas Pipelines & Services	88,160	75,424	321,237	235,102
Offshore Pipelines & Services	17,465	46,676	134,353	97,429
Petrochemical Services	37,243	51,412	136,465	139,329
Total segment gross operating margin	$ 478,922	$ 363,721	$ 1,535,500	$ 1,061,568

For a reconciliation of non-GAAP gross operating margin to GAAP operating income and further to GAAP income before provision for income taxes and minority interest, see “Other Items – Non-GAAP reconciliations” included within this Item 2.

The following table summarizes the contribution to consolidated revenues from the sale of NGL, natural gas and petrochemical products during the periods indicated (dollars in thousands):

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
NGL Pipelines & Services:				
Sale of NGL products	$ 4,271,467	$ 2,837,465	$ 12,550,220	$ 7,952,147
Percent of consolidated revenues	68%	69%	68%	68%
Onshore Natural Gas Pipelines & Services:				
Sale of natural gas	851,748	406,482	2,407,930	1,190,235
Percent of consolidated revenues	14%	10%	13%	10%
Petrochemical Services:				
Sale of petrochemical products	708,745	444,670	1,928,840	1,268,731
Percent of consolidated revenues	11%	11%	11%	11%

As noted in the following section, changes in our revenues and costs and expenses period-to-period are explained in part by changes in energy commodity prices.

Comparison of Three Months Ended September 30, 2008 with Three Months Ended September 30, 2007

Revenues for the third quarter of 2008 were $6.30 billion compared to $4.11 billion for the third quarter of 2007. The $2.19 billion quarter-to-quarter increase in consolidated revenues is primarily due to higher energy commodity sales volumes and prices during the third quarter of 2008 relative to the third quarter of 2007. These factors accounted for $1.89 billion of the quarter-to-quarter increase in consolidated revenues associated with our NGL, natural gas and petrochemical marketing activities. Consolidated revenues increased $270.1 million quarter-to-quarter due to the addition of revenues from newly constructed assets, principally our Meeker and Pioneer natural gas processing plants.

Operating costs and expenses were $5.97 billion for the third quarter of 2008 versus $3.90 billion for the third quarter of 2007. The $2.07 billion quarter-to-quarter increase in consolidated operating costs and expenses is primarily due to higher cost of sales associated with our marketing activities. The cost of sales of our marketing activities increased $1.61 billion quarter-to-quarter primarily due to higher energy commodity sales volumes and prices. Likewise, the operating costs and expenses of our natural gas processing plants increased $294.5 million quarter-to-quarter primarily due to higher energy commodity prices. Consolidated operating costs and expenses attributable to newly constructed assets increased $92.6 million quarter-to-quarter. General and administrative costs increased $3.0 million quarter-to-quarter.

Changes in our revenues and costs and expenses quarter-to-quarter are explained in part by changes in energy commodity prices. The weighted-average indicative market price for NGLs was $1.68 per gallon during the third quarter of 2008 versus $1.21 per gallon during the third quarter of 2007. Our determination of the weighted-average indicative market price for NGLs is based on U.S. Gulf Coast prices for such products at Mont Belvieu, Texas, which is the primary industry hub for domestic NGL production. The market price of natural gas (as measured at Henry Hub) averaged $10.25 per MMBtu during the third quarter of 2008 versus $6.16 per MMBtu during the third quarter of 2007. See the table on page 55 for additional historical energy commodity pricing information.

Equity earnings from our unconsolidated affiliates were $14.9 million for the third quarter of 2008 compared to $14.0 million for the third quarter of 2007. Equity earnings from our investment in Jonah Gas Gathering Company ("Jonah") increased $2.9 million quarter-to-quarter. Equity earnings from our investment in Cameron Highway Oil Pipeline Company ("Cameron Highway") increased $1.9 million quarter-to-quarter due to higher transportation volumes. Collectively, equity earnings from our investments in Poseidon Oil Pipeline Company, L.L.C ("Poseidon") and Deepwater Gateway, L.L.C. ("Deepwater Gateway") decreased $4.1 million quarter-to-quarter as a result of downtime and upstream supply interruptions caused by Hurricanes Gustav and Ike during the third quarter of 2008.

Operating income for the third quarter of 2008 was $319.1 million compared to $210.8 million for the third quarter of 2007. Collectively, the aforementioned changes in revenues, costs and expenses and equity earnings contributed to the $108.3 million increase in operating income quarter-to-quarter.

Interest expense increased to $102.7 million for the third quarter of 2008 from $85.1 million for the third quarter of 2007. The $17.6 million quarter-to-quarter increase in interest expense is primarily due to our issuance of Senior Notes M and N in the second quarter of 2008 and Senior Notes L in the third quarter of 2007. Average debt principal outstanding during the third quarter of 2008 was $8.14 billion compared to $6.55 billion during the third quarter of 2007. Provision for income taxes increased $4.5 million quarter-to-quarter primarily due to higher expenses associated with the Texas Margin Tax.

As a result of items noted in the previous paragraphs, our consolidated net income increased $85.5 million quarter-to-quarter to $203.1 million for the third quarter of 2008 compared to $117.6 million for the third quarter of 2007.

In general, Hurricanes Gustav and Ike had an adverse effect across our operations in the Gulf of Mexico and along the U.S. Gulf Coast during the third quarter of 2008. Storm-related disruptions in natural gas, NGL and crude oil production in these regions resulted in reduced volumes available to our pipeline systems, natural gas processing plants, NGL fractionators and offshore platforms, which in turn caused a decrease in gross operating margin for certain operations. In addition, property damage caused by Hurricanes Gustav and Ike resulted in lower revenues due to facility downtime as well as higher operating costs and expenses at certain of our plants and pipelines. As a result of our allocated share of EPCO's insurance deductibles for windstorm coverage, gross operating margin for the third quarter of 2008 includes $46.0 million of repair expenses for property damage sustained by our assets as a result of the hurricanes.

We estimate that gross operating margin was reduced by $43.0 million during the third quarter of 2008 due to the effects of Hurricanes Gustav and Ike as a result of supply interruptions and facility downtime. We currently estimate the effects of lost business attributable to Hurricanes Gustav and Ike to reduce gross operating margin for the fourth quarter of 2008 by $25.0 million to $35.0 million prior to any future recoveries under business interruption insurance. For more information regarding our insurance program and claims related to these storms, see "Other Items – Weather-related Risks" included within this Item 2.

The following information highlights significant quarter-to-quarter variances in gross operating margin by business segment:

NGL Pipelines & Services. Gross operating margin from this business segment was $336.1 million for the third quarter of 2008 compared to $190.2 million for the third quarter of 2007. The $145.9 million quarter-to-quarter increase in segment gross operating margin is due to strong natural gas processing margins and NGL demand for petrochemical production as well as an increase in equity NGL production attributable to our Meeker and Pioneer natural gas processing facilities. The third quarter of 2007 includes $1.8 million of proceeds from business interruption insurance claims compared to none for the third quarter of 2008. The following paragraphs provide a discussion of segment results excluding proceeds from business interruption insurance claims.

Gross operating margin from our natural gas processing and related NGL marketing business was $237.6 million for the third quarter of 2008 compared to $96.1 million for the third quarter of 2007. Equity NGL production increased to 109 MBPD during the third quarter of 2008 from 64 MBPD during the third quarter of 2007. The $141.5 million quarter-to-quarter increase in gross operating margin is largely due to contributions from our Meeker and Pioneer cryogenic natural gas processing facilities, which commenced commercial operations during October 2007 and February 2008, respectively. These facilities contributed $97.8 million of the quarter-to-quarter increase in gross operating margin and produced 55 MBPD of equity NGLs during the third quarter of 2008. Gross operating margin from our NGL marketing activities increased $45.5 million quarter-to-quarter primarily due to higher NGL sales margins and volumes. Equity NGL production at the Meeker and Pioneer facilities contributed to the increase in NGL marketing sales volumes.

Collectively, gross operating margin from the remainder of this business decreased $1.8 million quarter-to-quarter. Higher natural gas processing margins in South Texas during the third quarter of 2008 relative to the third quarter of 2007 were more than offset by lower gross operating margin from our facilities in Southern Louisiana. Our natural gas processing plants in Louisiana were negatively affected by downtime and upstream supply interruptions as a result of Hurricanes Gustav and Ike in the third quarter of 2008. In addition, results for our natural gas processing plants in Southern Louisiana include $7.5 million of hurricane-related property damage repair expenses in the third quarter of 2008.

Gross operating margin from our NGL pipelines and related storage business was $72.5 million for the third quarter of 2008 compared to $71.2 million for the third quarter of 2007. Total NGL transportation volumes increased to 1,758 MBPD during the third quarter of 2008 from 1,575 MBPD during the third quarter of 2007. The $1.3 million quarter-to-quarter increase in gross operating margin from this business is primarily due to improved results from our Mid-America and Seminole Pipeline Systems and our NGL storage facility in Mont Belvieu, Texas. Gross operating margin from our Mid-America and Seminole Pipeline Systems increased $6.1 million quarter-to-quarter due to higher transportation volumes and an increase in the system-wide tariff. These pipeline systems contributed 138 MBPD of the quarter-to-quarter increase in NGL transportation volumes. Gross operating margin from our Mont Belvieu NGL storage facility increased $4.3 million as a result of higher revenues during the third quarter of 2008 relative to the third quarter of 2007.

Gross operating margin from the remainder of our NGL pipeline and storage assets decreased $9.1 million quarter-to-quarter attributable to (i) higher maintenance expenses on our Dixie Pipeline System and our NGL Export facility, (ii) higher pipeline integrity expenses on our Dixie Pipeline System and (iii) downtime and reduced volumes as a result of Hurricanes Gustav and Ike during the third quarter of 2008.

Gross operating margin from our Dixie Pipeline System and NGL Export facility decreased $4.0 million and $2.2 million quarter-to-quarter, respectively. In addition, results for our NGL pipelines and related storage business include $1.9 million of hurricane-related property damage repair expenses in the third quarter of 2008.

Gross operating margin from our NGL fractionation business was $25.9 million for the third quarter of 2008 compared to $21.1 million for the third quarter of 2007. Fractionation volumes increased from 371 MBPD during the third quarter of 2007 to 413 MBPD during the third quarter of 2008. The $4.8 million quarter-to-quarter increase in gross operating margin and 42 MBPD increase in fractionation volumes is largely attributable to our Hobbs fractionator, which became operational in August 2007. Gross operating margin from our Hobbs fractionator increased $9.3 million quarter-to-quarter on a 52 MBPD increase in NGL fractionation volumes. Collectively, gross operating margin from our other NGL fractionators decreased $4.5 million quarter-to-quarter primarily due to downtime and lower volumes at our Norco, Mont Belvieu and Baton Rouge fractionators as well as a combined $0.5 million of hurricane- related property damage repair expenses in the third quarter of 2008.

Onshore Natural Gas Pipelines & Services. Gross operating margin from this business segment was $88.2 million for the third quarter of 2008 compared to $75.4 million for the third quarter of 2007. Our onshore natural gas transportation volumes were 7,562 BBtus/d during the third quarter of 2008 compared to 6,597 BBtus/d during the third quarter of 2007. Gross operating margin from our onshore natural gas pipeline and related natural gas marketing business was $77.4 million in the third quarter of 2008 compared to $67.8 million in the third quarter of 2007. The $9.6 million quarter-to-quarter increase in gross operating margin from this business is largely due to improved results from our San Juan Gathering System. Gross operating margin on our San Juan Gathering System increased $16.7 million quarter-to-quarter due to higher revenues from transportation fees indexed to natural gas prices and condensate sales. Collectively, gross operating margin from the remainder of our natural gas pipelines increased $10.5 million quarter-to-quarter primarily due to (i) higher transportation volumes and fees on our Texas Intrastate System, (ii) an increase in volumes on our Piceance Creek Gathering System and (iii) increased equity earnings from our investment in Jonah. Results from our natural gas pipelines were partially offset by a $17.6 million quarter-to-quarter decrease in gross operating margin associated with our natural gas marketing activities primarily due to non-cash mark-to-market related charges that are expected to be recouped in cash in future periods extending through 2009.

Gross operating margin from our natural gas storage business was $10.7 million in the third quarter of 2008 compared to $7.6 million in the third quarter of 2007. The $3.1 million quarter-to-quarter increase in gross operating margin is primarily due to increased storage activity at our Petal natural gas storage facility. We placed an additional natural gas storage cavern having 4.2 Bcf of subscribed capacity in operation at the Petal facility during the third quarter of 2008. In addition, results from our Wilson natural gas storage facility in Texas improved quarter-to-quarter as we continue the progress of restoring commercial operations at this facility. Our Wilson facility has been under repairs during most of 2007 and 2008.

Offshore Pipelines & Services. Gross operating margin from this business segment was $17.5 million for the third quarter of 2008 compared to $46.7 million for the third quarter of 2007. The third quarter of 2007 includes $0.2 million of proceeds from business interruption insurance claims compared to none for the third quarter of 2008. The following paragraphs provide a discussion of segment results excluding proceeds from business interruption insurance claims.

Gross operating margin from our offshore platform services business was $34.5 million for the third quarter of 2008 compared to $28.8 million for the third quarter of 2007. The $5.7 million quarter-to-quarter increase in gross operating margin from this business is largely due to contributions from our Independence Hub platform. Gross operating margin from our Independence Hub platform increased $11.1 million quarter-to-quarter due to an increase in processing revenues. Collectively, gross operating margin from our other platforms and related assets decreased $5.4 million quarter-to-quarter primarily due to lower demand fees and a decline in volumes on our Falcon platform as well as lower volumes at all of our platforms due to hurricane-related disruptions in the third quarter of 2008. This includes $2.7 million of property damage repair expenses in the third quarter of 2008.

Gross operating margin from our offshore crude oil pipeline business was $5.7 million for the third quarter of 2008 compared to $8.9 million for the third quarter of 2007. Offshore crude oil transportation volumes decreased to 147 MBPD during the third quarter of 2008 from 163 MBPD during the third quarter of 2007. The $3.2 million quarter-to-quarter decrease in gross operating margin and 16 MBPD decrease in volumes from this business are primarily due to downtime and upstream volume disruptions as a result of Hurricanes Gustav and Ike in the third quarter of 2008. The quarter-to-quarter decrease in gross operating margin also reflects $0.7 million of hurricane-related property damage repair expenses in the third quarter of 2008.

Gross operating margin from our offshore natural gas pipeline business was a loss of $22.8 million for the third quarter of 2008 compared to $8.8 million of earnings for the third quarter of 2007. Our offshore natural gas transportation volumes were 1,244 BBtus/d during the third quarter of 2008 compared to 1,271 BBtus/d during the third quarter of 2007. The $31.6 million quarter-to-quarter decrease in gross operating margin from this business is primarily due to downtime, reduced volumes and property damage resulting from Hurricanes Gustav and Ike. Results for the third quarter of 2008 from this business include $32.1 million of hurricane-related property damage repair expenses. The effects of Hurricanes Gustav and Ike on this business were partially offset by a $10.1 million increase in gross operating margin from our Independence Trail Pipeline. The Independence Trail Pipeline benefited from a 499 BBtus/d quarter-to-quarter increase in transportation volumes.

Petrochemical Services. Gross operating margin from this business segment was $37.2 million for the third quarter of 2008 compared to $51.4 million for the third quarter of 2007. Gross operating margin from our propylene fractionation and pipeline business was $31.0 million for the third quarter of 2008 compared to $14.0 million for the third quarter of 2007. The $17.0 million quarter-to-quarter increase in gross operating margin is largely due to higher propylene sales margins during the third quarter of 2008 relative to the third quarter of 2007. Results for our propylene fractionation and related pipeline business for the third quarter of 2008 include $0.4 million of hurricane-related property damage repair expenses.

Gross operating margin from our octane enhancement business was a loss of $12.9 million for the third quarter of 2008 compared to $8.9 million of earnings for the third quarter of 2007. The $21.8 million quarter-to-quarter decrease in gross operating margin from this business is primarily due to downtime, reduced volumes and higher operating expenses as a result of operational issues during the third quarter of 2008 and the effects of Hurricane Ike. Gross operating margin from our butane isomerization business was $19.1 million for the third quarter of 2008 compared to $28.5 million for the third quarter of 2007. The $9.4 million quarter-to-quarter decrease in gross operating margin from this business is primarily due to reduced demand for isobutane from our octane enhancement facility due to operational issues in the third quarter of 2008 and downtime related to Hurricane Ike.

Comparison of Nine Months Ended September 30, 2008 with Nine Months Ended September 30, 2007

Revenues for the first nine months of 2008 were $18.32 billion compared to $11.65 billion for the first nine months of 2007. The $6.67 billion period-to-period increase in consolidated revenues is primarily due to higher energy commodity sales volumes and prices during the first nine months of 2008 relative to the first nine months of 2007. These factors accounted for $5.88 billion of the period-to-period increase in consolidated revenues associated with our NGL, natural gas and petrochemical marketing activities. Consolidated revenues increased $684.7 million period-to-period due to the addition of revenues from newly constructed assets, principally our Meeker and Pioneer natural gas processing plants and our Independence Hub and Trail projects.

Operating costs and expenses were $17.24 billion for the first nine months of 2008 compared to $10.98 billion for the first nine months of 2007. The $6.26 billion period-to-period increase in consolidated operating costs and expenses is primarily due to higher costs of sales associated with our marketing activities. The cost of sales of our natural gas, NGL and petrochemical products increased $5.10 billion period-to-period primarily due to higher energy commodity sales volumes and prices. Operating costs and expenses associated with our natural gas processing plants increased $736.8 million period-to-period as a result of higher energy commodity prices and processing volumes during the first nine months of 2008 compared to the first nine months of 2007. Consolidated operating costs and expenses attributable to newly constructed assets increased $345.1 million period-to-period.

Changes in our revenues and costs and expenses period-to-period are explained in part by changes in energy commodity prices. The weighted-average indicative market price for NGLs was $1.62 per gallon for the nine months ended September 30, 2008 versus $1.09 per gallon during the nine months ended September 30, 2007. The Henry Hub market price for natural gas averaged $9.74 per MMBtu for the first nine months of 2008 versus $6.83 per MMBtu during the first nine months of 2007. For additional historical energy commodity pricing information, please see the table on page 55.

Equity earnings from our unconsolidated affiliates were $48.0 million for the first nine months of 2008 compared to $13.9 million for the first nine months of 2007, a period-to-period increase of $34.1 million. Equity earnings from our investment in Cameron Highway increased $26.3 million period-to-period due to higher transportation volumes and lower interest expense. On a 100% basis, Cameron Highway had crude oil transportation volumes of 171 MBPD during the first nine months of 2008 compared to 84 MBPD during the first nine months of 2007. Equity earnings from our investment in Jonah increased $11.7 million period-to-period. We earned a fixed 19.4% interest in Jonah during the third quarter of 2007 upon completion of certain achievements with respect to the Phase V Expansion of the Jonah Gathering System. Equity earnings from our investment in Nemo Gathering Company, LLC ("Nemo") increased $5.7 million period-to-period due to the recognition of a non-cash impairment charge in the second quarter of 2007. Collectively, equity earnings from our other investments decreased $9.6 million period-to-period due to higher repair and maintenance expenses during the first nine months of 2008 relative to the first nine months of 2007 as well as the effects of downtime and reduced volumes attributable to Hurricanes Gustav and Ike.

Operating income for the first nine months of 2008 was $1.06 billion compared to $613.3 million for the first nine months of 2007. Collectively, the aforementioned changes in revenues, costs and expenses and equity earnings contributed to the $446.8 million increase in operating income period-to-period.

Interest expense increased to $290.4 million for the first nine months of 2008 from $219.7 million for the first nine months of 2007. The $70.7 million period-to-period increase in interest expense is attributable to a higher average balance of debt principal outstanding. Our average debt principal outstanding was $7.65 billion for the first nine months of 2008 compared to $5.95 billion for the first nine months of 2007. We issued Senior Notes L in the third quarter of 2007, Senior Notes M and N in the second quarter of 2008 and Junior Subordinated Notes B in the third quarter of 2007.

Provision for income taxes increased $8.2 million period-to-period primarily due to the recognition of a $4.4 million benefit with respect to the Texas Margin Tax in the second quarter of 2007 and higher expenses associated with the Texas Margin Tax during the first nine months of 2008. The benefit was associated with a reorganization of certain of our entities from partnerships to limited liability companies effective September 30, 2007. Minority interest expense increased $10.1 million period-to-period attributable to the public unitholders of Duncan Energy Partners and third-party ownership interests in the Independence Hub platform.

As a result of the items noted in previous paragraphs, our consolidated net income increased $354.2 million to $726.0 million for the nine months ended September 30, 2008 compared to $371.8 million for the first nine months of 2007.

The following information highlights the significant period-to-period variances in gross operating margin by business segment:

NGL Pipelines & Services. Gross operating margin from this business segment was $943.4 million for the first nine months of 2008 compared to $589.7 million for the first nine months of 2007, a period-to-period increase of $353.7 million. The first nine months of 2008 include $1.1 million of proceeds from business interruption insurance claims compared to $23.4 million of proceeds during the first nine months of 2007. The following paragraphs provide a discussion of segment results excluding proceeds from business interruption insurance claims.

Gross operating margin from our natural gas processing and related NGL marketing business was $611.8 million for the first nine months of 2008 compared to $283.5 million for the first nine months of 2007. The $328.3 million period-to-period increase in gross operating margin is largely due to higher natural gas processing margins and volumes and increased equity NGL production during the first nine months of 2008 relative to the first nine months of 2007. Total fee-based processing volumes increased to 2.5 Bcf/d during the first nine months of 2008 from 2.4 Bcf/d during the first nine months of 2007. Likewise, equity NGL production increased to 108 MBPD during the first nine months of 2008 from 67 MBPD during the first nine months of 2007.

Collectively, gross operating margin from our Meeker and Pioneer facilities increased $203.3 million period-to-period on a 47 MBPD increase in equity NGL production. Gross operating margin from our NGL marketing activities increased $70.3 million period-to-period primarily due to higher NGL sales margins and volumes. This business also benefited from improved natural gas processing margins in South Texas and the Permian Basin during the first nine months of 2008 relative to the first nine months of 2007. Gross operating margin from our South Texas processing plants and Chaco facility experienced a period-to-period increase of $41.3 million and $23.0 million, respectively. Collectively, gross operating margin from the remainder of our natural gas processing facilities decreased $9.7 million period-to-period primarily due to downtime, reduced volumes and property damage repair expenses affecting our Southern Louisiana natural gas processing plants as a result of Hurricanes Gustav and Ike.

Gross operating margin from our NGL pipelines and related storage business was $252.8 million for the first nine months of 2008 compared to $215.5 million for the first nine months of 2007. Total NGL transportation volumes increased to 1,788 MBPD during the first nine months of 2008 from 1,626 MBPD during the first nine months of 2007. The $37.3 million period-to-period increase in gross operating margin and 162 MBPD increase in transportation volumes from this business is primarily due to higher NGL transportation volumes and a system-wide tariff increase on our Mid-America Pipeline System.

Gross operating margin from our NGL fractionation business was $77.7 million for the first nine months of 2008 compared to $67.3 million for the first nine months of 2007. Fractionation volumes were 424 MBPD during the first nine months of 2008 compared to 379 MBPD during the first nine months of 2007. The $10.4 million period-to-period increase in gross operating margin and 45 MBPD increase in fractionation volumes is primarily due to contributions from our Hobbs fractionator. Gross operating margin from our Hobbs fractionator increased $23.1 million period-to-period on a 53 MBPD increase in NGL fractionation volumes. Collectively, gross operating margin from our other NGL fractionators decreased $12.7 million period-to-period primarily due to lower volumes at our Mont Belvieu and Norco fractionators. Our Mont Belvieu fractionator experienced downtime during the first quarter of 2008 for scheduled maintenance activities. Also, our Mont Belvieu and Norco fractionators experienced downtime and reduced volumes in the third quarter of 2008 due to the effects of Hurricanes Gustav and Ike.

Onshore Natural Gas Pipelines & Services. Gross operating margin from this business segment was $321.2 million for the first nine months of 2008 compared to $235.1 million for the first nine months of 2007. Our onshore natural gas transportation volumes were 7,309 BBtus/d during the first nine months of 2008 compared to 6,576 BBtus/d during the first nine months of 2007. Gross operating margin from our onshore natural gas pipeline and related natural gas marketing business was $292.2 million for the first nine months of 2008 compared to $216.2 million for the first nine months of 2007. Collectively, gross operating margin from our natural gas pipelines increased $93.1 million period-to-period primarily due to (i) higher revenues from our San Juan Gathering System, (ii) higher transportation activity on our Texas Intrastate System, (iii) higher natural gas sales margins on our Acadian Gas System and (iv) increased equity earnings from our investment in Jonah.

Gross operating margin from our natural gas storage business was $29.0 million for the first nine months of 2008 compared to $18.9 million for the first nine months of 2007. The $10.1 million period-to-period increase in gross operating margin is primarily due to increased storage activity at our Petal natural gas storage facility and improved results at our Wilson facility. We placed additional natural gas storage caverns in operation during the third quarters of 2007 and 2008 at the Petal facility, which provided an additional 1.6 Bcf and 4.2 Bcf of subscribed capacity, respectively.

Gross operating margin from our natural gas marketing activities decreased $17.1 million period-to-period primarily due to non-cash mark-to-market related charges that are expected to be recouped in cash in future periods extending through 2009. Our natural gas marketing business has increased significantly during 2008. These marketing activities have four primary objectives: (i) to mitigate risk; (ii) maximize the use of our natural gas assets; (iii) to provide real-time market intelligence; and (iv) to link our noncontiguous natural gas assets together to enhance the profitability of such operations. To achieve these objectives, our natural gas marketing activities transact with various parties to provide transportation, balancing, storage, supply and sales services. The majority of our natural gas marketing activities are focused on the Gulf Coast and Rocky Mountain regions.

Our natural gas marketing business acquires a significant portion of the natural gas it sells from our processing plants and attracts additional supplies from third parties at pipeline interconnects to facilitate incremental throughput on our natural gas transportation pipelines. This purchased gas is then sold to industrial consumers, utilities and power plants at prices that include a transportation fee. In addition, sales are made with third party marketing companies at industry hub locations in order to balance our supply/demand portfolio. Our purchase and sale transactions are typically based on published daily or monthly index prices. We utilize financial instruments to hedge various transactions within our natural gas marketing business.

We use third party transportation and storage capacity to link together our non-contiguous natural gas assets. Our natural gas marketing business contracts with third party transportation and storage providers to provide services on both a firm and interruptible basis. This strategy allows us to compliment and strengthen our portfolio of natural gas assets.

Offshore Pipelines & Services. Gross operating margin from this business segment was $134.4 million for the first nine months of 2008 compared to $97.4 million for the first nine months of 2007. The $37.0 million period-to-period increase in segment gross operating margin is primarily due to contributions from our Independence Hub and Trail project and improved results from our Cameron Highway Oil Pipeline. Results from this business segment for the first nine months of 2008 were negatively impacted by (i) downtime and $17.0 million of repair expenses associated with a leak on the Independence Trail pipeline and (ii) the effects of Hurricanes Gustav and Ike including downtime, reduced volumes and $35.5 million of property damage repair expenses. The first nine months of 2008 include $0.2 million of proceeds from business interruption insurance claims compared to $1.5 million of proceeds during the first nine months of 2007. The following paragraphs provide a discussion of segment results excluding proceeds from business interruption insurance.

Gross operating margin from our offshore platform services business was $109.7 million for the first nine months of 2008 compared to $69.5 million for the first nine months of 2007. The $40.2 million period-to-period increase in gross operating margin is primarily due to our completion of the Independence Hub platform in March 2007. Gross operating margin increased period-to-period despite the platform being shut-in for 66 days during the second quarter of 2008 due to a leak on the Independence Trail export pipeline. While the Independence Hub platform did not earn volumetric fees during the period of suspended operations, the platform continued to earn its fixed demand revenues of approximately $5.0 million per month. Our net platform natural gas processing volumes increased to 588 MMcf/d during the first nine months of 2008 compared to 265 MMcf/d during the first nine months of 2007.

Gross operating margin from our offshore crude oil pipeline business was $32.7 million for the first nine months of 2008 versus $11.9 million for the first nine months of 2007. The $20.8 million period-to-period increase in gross operating margin is primarily due to increased equity earnings from Cameron Highway, which benefited from higher crude oil transportation volumes and lower interest expense in the first nine months of 2008 relative to the first nine months of 2007. Crude oil transportation volumes on the Cameron Highway Oil Pipeline System netted to our ownership interest were 85 MBPD in the first nine months of 2008 compared to 42 MBPD in the first nine months of 2007. Total offshore crude oil transportation volumes were 190 MBPD during the first nine months of 2008 versus 164 MBPD during the first nine months of 2007.

Gross operating margin from our offshore natural gas pipeline business was a loss of $8.3 million for the first nine months of 2008 compared to $14.6 million of earnings for the first nine months of 2007. Offshore natural gas transportation volumes were 1,449 BBtus/d during the first nine months of 2008 versus 1,407 BBtus/d during the first nine months of 2007. Gross operating margin from our Independence Trail pipeline, which first received production in July 2007, increased $24.1 million period-to-period on a 460 BBtus/d increase in transportation volumes. Collectively, gross operating margin from our other offshore natural gas pipelines decreased $47.0 million period-to-period primarily due to the effects of Hurricanes Gustav and Ike.

Petrochemical Services. Gross operating margin from this business segment was $136.5 million for the first nine months of 2008 compared to $139.3 million for the first nine months of 2007. Gross operating margin from our propylene fractionation business was $64.3 million for the first nine months of 2008 versus $45.6 million for the first nine months of 2007. The $18.7 million period-to-period increase in gross operating margin is largely due to higher propylene sales margins.

Gross operating margin from our butane isomerization business was $77.9 million for the first nine months of 2008 compared to $71.7 million for the first nine months of 2007. The $6.2 million period-to-period increase in gross operating margin is primarily due to strong demand for high-purity isobutane and higher NGL prices, which resulted in higher by-product sales revenues during the first nine months of 2008 relative to the first nine months of 2007. Butane isomerization volumes decreased to 85 MBPD during the first nine months of 2008 compared to 93 MBPD for the first nine months of 2007 due to production interruptions resulting from Hurricane Ike and operational issues at our octane enhancement facility during the third quarter of 2008.

Gross operating margin from our octane enhancement business was a loss of $5.7 million for the first nine months of 2008 compared to $22.1 million of earnings for the first nine months of 2007. The $27.8 million period-to-period decrease in gross operating margin is primarily due to downtime, reduced volumes and higher operating expenses as a result of operational issues during the third quarter of 2008 and the effects of Hurricane Ike.

Liquidity and Capital Resources

Our primary cash requirements, in addition to normal operating expenses and debt service, are for working capital, capital expenditures, business acquisitions and distributions to partners. We expect to fund our short-term needs for such items as operating expenses and sustaining capital expenditures with operating cash flows and short-term revolving credit arrangements. Capital expenditures for long-term needs resulting from business expansion projects and acquisitions are expected to be funded by a variety of sources (either separately or in combination) including net cash flows provided by operating activities, borrowings under credit facilities, the issuance of additional equity and debt securities and proceeds from divestitures of ownership interests in assets to affiliates or third parties. We expect to fund cash distributions to partners primarily with operating cash flows. Our debt service requirements are expected to be funded by operating cash flows and/or refinancing arrangements.

At September 30, 2008, we had $55.4 million of unrestricted cash on hand and approximately $539.3 million of available credit under EPO’s Multi-Year Revolving Credit Facility. We had approximately $8.43 billion in principal outstanding under consolidated debt agreements at September 30,

2008. In total, our consolidated liquidity at September 30, 2008 was approximately $730.0 million, which includes the available borrowing capacity of our consolidated subsidiaries such as Duncan Energy Partners.

Recent volatility in global capital markets has resulted in a significant increase in the costs of incremental debt and equity capital and has reduced the availability of debt and equity capital. We expect that the current cost of capital may trend lower in the coming months as coordinated government-led funding programs are implemented worldwide. As the capital markets begin to stabilize and recover, we believe that we will have sufficient access to debt and equity capital to support our operating and investing activities. Costs of such capital, however, may remain significantly higher for an extended period of time. Our disciplined approach to funding capital spending and other partnership needs, combined with sufficient trade credit to operate our businesses efficiently, available borrowing capacity under our consolidated credit facilities and retained distributable cash flow, should provide us with a foundation to meet our anticipated liquidity and capital resource requirements.

For information regarding our risks in connection with the global financial crisis, see "*The global financial crisis may have impacts on our business and financial condition that we currently cannot predict*," under Item 1A of Part II of this quarterly report on Form 10-Q.

For additional information regarding our growth strategy, see "Capital Spending" included within this Item 2.

Registration Statements

We may issue equity or debt securities to assist us in meeting our liquidity and capital spending requirements. We have a universal shelf registration statement on file with the SEC registering the issuance of an unlimited amount of equity and debt securities. In April 2008, EPO issued $1.10 billion in principal amount of fixed-rate, unsecured senior notes under this registration statement. Net proceeds from these senior note offerings were used to temporarily reduce borrowings outstanding under EPO's Multi-Year Revolving Credit Facility.

We also have on file with the SEC a registration statement authorizing the issuance of up to 25,000,000 common units in connection with our distribution reinvestment program ("DRIP"). The DRIP provides unitholders of record and beneficial owners of our common units a voluntary means by which they can increase the number of common units they own by reinvesting the quarterly cash distributions they would otherwise receive into the purchase of additional common units of our partnership. An aggregate of 1,895,776 of our common units were issued in connection with the DRIP and a related plan during the nine months ended September 30, 2008. The issuance of these units generated $56.5 million in net proceeds that we used for general partnership purposes. In November 2008, affiliates of EPCO expect to reinvest $67.0 million in connection with the DRIP.

In March 2008, Duncan Energy Partners filed a universal shelf registration statement with the SEC that authorized its issuance of up to $1.00 billion in debt and equity securities. Duncan Energy Partners has not issued any securities under this registration statement through November 3, 2008.

Letter of Credit Facility

During the third quarter of 2008, a $60.0 million letter of credit was issued under EPO's Multi-Year Revolving Credit Facility to support our NYMEX margin requirements for natural gas financial instruments that are part of an economic hedge related to our natural gas processing business. In October 2008, EPO entered into a $100.0 million letter of credit facility. EPO issued a $70.0 million letter of credit under this new facility that replaced the letter of credit issued under its Multi-Year Revolving Credit Facility which was outstanding at September 30, 2008.

Credit Ratings of EPO

At November 3, 2008, the investment grade credit ratings of EPO's senior unsecured debt securities were Baa3 by Moody's Investor Services and BBB- by Fitch Ratings and Standard and Poor's. Such ratings reflect only the view of the rating agency and should not be interpreted as a recommendation to buy, sell or hold our securities. These ratings may be revised or withdrawn at any time by the agencies at their discretion.

Cash Flows from Operating, Investing and Financing Activities

The following table summarizes our cash flows from operating, investing and financing activities for the periods indicated (dollars in thousands). For information regarding the individual components of our cash flow amounts, see our Unaudited Condensed Statements of Consolidated Cash Flows included under Item 1 of this Quarterly Report.

	For the Nine Months Ended September 30,	
	2008	**2007**
Net cash flows provided by operating activities	$ 973,044	$ 937,835
Cash used in investing activities	1,709,203	2,039,495
Cash provided by financing activities	751,820	1,122,575

Net cash flows provided by operating activities are largely dependent on earnings from our business activities. As a result, these cash flows are exposed to certain risks. We operate predominantly in the midstream energy industry. We provide services for producers and consumers of natural gas, NGLs, crude oil and certain petrochemicals. The products that we process, sell or transport are principally used as fuel for residential, agricultural and commercial heating; feedstocks in petrochemical manufacturing; and in the production of motor gasoline. Reduced demand for our services or products by industrial customers, whether because of a decline in general economic conditions, reduced demand for the end products made with our products, or increased competition from other service providers or producers due to pricing differences or other reasons, could have a negative impact on our earnings and operating cash flows.

We use the indirect method to compute net cash flows provided by operating activities. See Note 17 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report for information regarding this method of presentation.

Cash used in investing activities primarily represents expenditures for additions to property, plant and equipment, business combinations and investments in unconsolidated affiliates. Cash provided by financing activities generally consists of borrowings and repayments of debt, distributions to partners and proceeds from the issuance of equity securities. Amounts presented in our Unaudited Condensed Statements of Consolidated Cash Flows for borrowings and repayments under debt agreements are influenced by the magnitude of cash receipts and payments under our revolving credit facilities.

The following information highlights the significant period-to-period variances in our cash flow amounts:

Comparison of Nine Months Ended September 30, 2008 with Nine Months Ended September 30, 2007

Operating Activities. Net cash flows provided by operating activities were $973.0 million for the nine months ended September 30, 2008 compared to $937.8 million for the nine months ended September 30, 2007. This $35.2 million increase in net cash flows provided by operating activities was primarily due to the following:

- Net cash flows from consolidated operations (excluding cash payments for interest) increased $130.6 million period-to-period. This improvement in operating cash flow is generally due to an increase in gross operating margin between periods (see "Results of Operations" included within this Item 2) adjusted for the timing of related cash receipts and disbursements.

- Cash payments for interest increased $112.9 million period-to-period primarily due to increased borrowings to finance our capital spending program and for general partnership purposes.

- Increased distributions received from unconsolidated affiliates of $17.5 million for the nine months ended September 30, 2008 compared to the nine months ended September 30, 2007 due primarily to improved operations and earnings at Jonah Gas Gathering Company ("Jonah").

Investing Activities. Cash used in investing activities was $1.71 billion for the nine months ended September 30, 2008 compared to $2.04 billion for the nine months ended September 30, 2007. This $330.3 million decrease in cash used in investing activities was primarily due to the following:

- Capital spending for property, plant and equipment, net of contributions in aid of construction, decreased $167.6 million period-to-period. For additional information related to our capital spending program, see "Capital Spending" included within this Item 2.

- Cash outlays for investments in unconsolidated affiliates decreased by $257.1 million period-to-period. During the second quarter of 2007, we contributed $216.5 million to an unconsolidated affiliate, Cameron Highway. In return, Cameron Highway used these funds, along with an equal contribution from our 50% joint venture partner in Cameron Highway, to repay $430.0 million in outstanding debt. In addition, cash contributions to Jonah decreased $50.0 million period-to-period as a result of the timing of construction expenditures related to the Jonah Phase V expansion, which was completed in June 2008. Also, in the second quarter of 2008 we acquired a 50% interest in White River Hub, LLC ("White River Hub") and have contributed cash of $10.0 million since its acquisition.

- A $32.7 million increase in restricted cash (a cash outflow) due to margin requirements related to financial instruments held in 2008 and proceeds held in connection with the Petal GO Zone bonds in 2007.

- An increase of $56.3 million in cash used for business combinations primarily relating to the acquisition of the remaining interest in Dixie in August 2008.

Financing Activities. Cash provided by financing activities was $751.8 million for the nine months ended September 30, 2008 compared to $1.12 billion for the nine months ended September 30, 2007. This $370.8 million decrease in cash provided by financing activities was primarily due to the following:

- Net borrowings under our consolidated debt agreements were $1.54 billion during the nine months ended September 30, 2008 compared to $1.47 billion during the nine months ended September 30, 2007. The $69.4 million increase was attributable to increased period-to-period borrowings to fund general partnership purposes.

- Cash distributions to our partners and minority interests increased $77.8 million period-to-period primarily due to an increase in our common units outstanding and quarterly distribution rates, and an increase in the quarterly distribution rates of Duncan Energy Partners.

- Contributions from minority interests decreased $302.9 million period-to-period due to the initial public offering of Duncan Energy Partners in February 2007, which generated proceeds of approximately $291.0 million.

- The early termination and settlement of interest rate hedging financial instruments during the first nine months of 2008 resulted in net cash payments of $22.1 million compared to net cash receipts of $48.9 million during the same period in 2007, causing a $71.0 million decrease in financing cash flows between periods.

Capital Spending

An integral part of our business strategy involves expansion through business combinations, growth capital projects and investments in joint ventures. We believe that we are positioned to continue to grow our system of assets through the construction of new facilities and to capitalize on expected increases in natural gas and/or crude oil production from resource basins such as the Piceance Basin of western Colorado, the Greater Green River Basin in Wyoming, the Barnett Shale in North Texas and the deepwater Gulf of Mexico.

Management continues to analyze potential acquisitions, joint ventures and similar transactions with businesses that operate in complementary markets or geographic regions. In past years, major oil and gas companies have sold non-strategic assets in the midstream energy sector in which we operate. We forecast that this trend will continue, and expect independent oil and natural gas companies to consider similar divestitures.

The following table summarizes our capital spending by activity on a cash basis for the periods indicated (dollars in thousands):

	For the Nine Months Ended September 30,	
	2008	**2007**
Capital spending for property, plant and equipment, net of contributions in aid of construction costs	$ 1,464,439	$ 1,631,993
Capital spending for business combinations	57,090	785
Capital spending for acquisition of intangible assets (1)	5,126	--
Capital spending for investments in unconsolidated affiliates (2)	35,307	318,491
Total capital spending	$ 1,561,962	$ 1,951,269

(1) Represents the acquisition of permits for our Mont Belvieu storage facility.
(2) Capital spending for the nine months ended September 30, 2007 includes $216.5 million in cash contributions to Cameron Highway to fund our share of the repayment of its debt obligations.

Based on information currently available, we estimate our consolidated capital spending for property, plant and equipment for the remainder of 2008 (i.e., the fourth quarter) will approximate $555.2 million, which includes estimated expenditures of $494.6 million for growth capital projects and $60.6 million for sustaining capital expenditures.

Our forecast of consolidated capital expenditures is based on our current announced strategic operating and growth plans, which are dependent upon our ability to generate the required funds from either operating cash flows or from other means, including borrowings under debt agreements, issuance of equity and potential divestitures of certain assets to third and/or related parties. Our forecast of capital expenditures may change due to factors beyond our control, such as weather related issues, changes in supplier prices or adverse economic conditions. Furthermore, our forecast may change as a result of decisions made by management at a later date, which may include acquisitions or decisions to take on additional partners.

Our success in raising capital, including the formation of joint ventures to share costs and risks, continues to be a principal factor that determines how much capital we can invest. We believe our access to capital resources is sufficient to meet the demands of our current and future operating growth needs, and although we currently intend to make the forecasted expenditures discussed above, we may adjust the timing and amounts of projected expenditures in response to changes in capital markets.

At September 30, 2008, we had approximately $541.2 million in purchase commitments outstanding that relate to our capital spending for property, plant and equipment. These commitments primarily relate to construction of our Barnett Shale natural gas pipeline project and Meeker natural gas processing plant expansion.

Spending Update Regarding Significant Ongoing Announced Growth Capital Projects

The following table summarizes information regarding selected significant announced growth capital projects (dollars in millions). Actual costs noted for each project reflects our share of cash expenditures as of September 30, 2008, excluding capitalized interest. The forecast amount noted for each project also reflects our share of project expenditures, excluding estimated capitalized interest.

Project Name	Estimated Date of Completion	Actual Costs	Current Forecast Total Cost
Mont Belvieu Storage Well Optimization Projects	Fourth Quarter 2008	$ 197.9	$ 235.4
Meeker II natural gas processing plant	Fourth Quarter 2008	372.2	451.8
ExxonMobil Conditioning & Treating Facility – Piceance Basin	Fourth Quarter 2008	164.5	184.6
Sherman Extension Pipeline (Barnett Shale)	2009	309.8	489.3
Shenzi Oil Pipeline	2009	121.4	160.1
Marathon Piceance Basin pipeline projects	2009	26.5	154.3
Trinity River Basin Extension	2009	--	232.6
Expansion of Wilson natural gas storage facility	2010	47.0	105.7
Texas Offshore Port System (TOPS and PACE)	2010	0.2	617.4

Pipeline Integrity Costs

Our NGL, petrochemical and natural gas pipelines are subject to pipeline safety programs administered by the U.S. Department of Transportation, through its Office of Pipeline Safety. The following table summarizes our pipeline integrity costs, net of indemnity payments received from El Paso, for the periods indicated (dollars in thousands):

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
Expensed	$ 14,556	$ 11,315	$ 38,396	$ 34,987
Capitalized	16,159	15,679	38,934	41,543
Total	$ 30,715	$ 26,994	$ 77,330	$ 76,530

We expect our cash outlay for the pipeline integrity program, irrespective of whether such costs are capitalized or expensed, to approximate $34.7 million for the remainder of 2008. This amount includes $2.7 million attributable to pipeline integrity projects of Duncan Energy Partners.

Overview of Critical Accounting Policies and Estimates

A summary of the significant accounting policies we have adopted and followed in the preparation of our consolidated financial statements is included in our Annual Report on Form 10-K for the year ended December 31, 2007. Certain of these accounting policies require the use of estimates. As more fully described therein, the following estimates, in our opinion, are subjective in nature, require the exercise of judgment and involve complex analysis: depreciation methods and estimated useful lives of property, plant and equipment; measuring recoverability of long-lived assets and equity method investments; amortization methods and estimated useful lives of qualifying intangible assets; methods we employ to measure the fair value of goodwill; revenue recognition policies and use of estimates for revenues and expenses; reserves for environmental matters; and natural gas imbalances. These estimates are based on our current knowledge and understanding and may change as a result of actions we may take in the future. Changes in these estimates will occur as a result of the passage of time and the occurrence of future events.

Subsequent changes in these estimates may have a significant impact on our financial position, results of operations and cash flows.

On a quarterly basis, we monitor the underlying business fundamentals of our investments in unconsolidated affiliates and test such investments for impairment when impairment indicators are present. As a result of our reviews for the third quarter of 2008, no impairment charges were required. We have the intent and ability to hold these investments, which are integral to our operations.

Other Items

Contractual Obligations

The following information summarizes significant changes in our contractual obligations since those presented in our Annual Report on Form 10-K at December 31, 2007 (dollars in thousands).

		Payment or Settlement due by Period			
Contractual Obligations	**Total**	**Less than 1 year**	**1-3 years**	**4-5 years**	**More than 5 years**
Scheduled maturities of long-term debt (1)	$ 8,434,201	$ --	$ 1,726,000	$ 1,900,701	$ 4,807,500
Estimated cash payments for interest (2)	$ 9,212,927	$ 488,865	$ 867,389	$ 723,280	$ 7,133,393
Purchase obligations:					
Product purchase commitments:					
Estimated payment obligations:					
Natural gas (3)	$ 5,707,213	$ 261,703	$ 985,430	$ 1,232,670	$ 3,227,410
Underlying volume commitment:					
Natural gas (in BBtus) (3)	927,765	45,360	158,775	199,505	524,125
Service payment commitments for pipeline capacity reservation (4)	$ 157,633	$ 2,730	$ 27,414	$ 30,074	$ 97,415

(1) Represents scheduled maturities of consolidated debt obligations at September 30, 2008. For additional information regarding or consolidated debt obligations, see Note 10 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report.

(2) Our estimated cash payments for interest are based on the principle amount of consolidated debt obligations outstanding at September 30, 2008. With respect to variable-rate debt, we applied the weighted-average interest rates paid during the nine months ended September 30, 2008. With respect to fixed-rate debt, we applied the stated coupon rate of each debt instrument. Our estimate of cash payments for interest gives effect to interest rate swap agreements in place at September 30, 2008. In addition, our estimated cash payments are significantly influenced by the long-term maturities of our $550.0 million Junior Notes A (due August 2066) and $700.0 million Junior Notes B (due January 2068). Our estimated cash payments for interest assume that such subordinated debt obligations are not called prior to maturity.

(3) Reflects commitments associated with new natural gas purchase agreements executed during the second and third quarters of 2008 in connection with our natural gas marketing activities.

(4) Reflects commitments associated with a pipeline capacity reservation agreement executed during the third quarter of 2008 in connection with our natural gas marketing activities.

Off-Balance Sheet Arrangements

There have been no significant changes with regards to our off-balance sheet arrangements since those reported in our Annual Report on Form 10-K for the year ended December 31, 2007.

Summary of Related Party Transactions

The following table summarizes our revenue and expense transactions with related parties for the periods indicated (dollars in thousands).

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	2007	2008	2007
Revenues from consolidated operations:				
EPCO and affiliates	$ 47,215	$ 12,673	$ 91,922	$ 42,778
Energy Transfer Equity and subsidiaries	99,583	78,957	412,975	121,521
Unconsolidated affiliates	153,361	87,209	318,710	215,015
Total	$ 300,159	$ 178,839	$ 823,607	$ 379,314
Operating costs and expenses:				
EPCO and affiliates	$ 87,991	$ 72,296	$ 274,406	$ 219,879
Energy Transfer Equity and subsidiaries	56,528	2,614	134,447	8,385
Unconsolidated affiliates	20,688	6,414	68,214	22,628
Total	$ 165,207	$ 81,324	$ 477,067	$ 250,892
General and administrative costs:				
EPCO and affiliates	$ 13,403	$ 11,504	$ 44,631	$ 45,292
Unconsolidated affiliates	(37)	--	(37)	--
Total	$ 13,366	$ 11,504	$ 44,594	$ 45,292
Other expense:				
EPCO and affiliates	$ --	$ --	$ (274)	$ 170

For additional information regarding our related party transactions, see Note 13 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report.

We have an extensive and ongoing relationship with EPCO and its affiliates, including TEPPCO. Our revenues from EPCO and affiliates are primarily associated with sales of NGL products. Our expenses with EPCO and affiliates are primarily due to (i) reimbursements we pay EPCO in connection with an administrative services agreement (the “ASA”) and (ii) purchases of NGL products.

TEPPCO became a related party to us in February 2005 when its general partner was acquired by private company affiliates of EPCO. Our relationship with TEPPCO was further strengthened by the acquisition of TEPPCO’s general partner by Enterprise GP Holdings in May 2007. Enterprise GP Holdings also owns our general partner. TEPPCO is also a joint venture partner with us in Jonah Gas Gathering Company and the Texas Offshore Port System.

On February 5, 2007, our consolidated subsidiary, Duncan Energy Partners, completed an initial public offering of its units, which generated net proceeds of approximately $291.0 million. Duncan Energy Partners was formed in September 2006 to acquire, own and operate a diversified portfolio of midstream energy assets and to support the growth objectives of EPO.

Enterprise GP Holdings acquired equity method investments in Energy Transfer Equity and its general partner in May 2007. As a result, Energy Transfer Equity and its consolidated subsidiaries became related parties to our consolidated businesses.

Many of our unconsolidated affiliates perform supporting or complementary roles to our consolidated business operations. The majority of our revenues from unconsolidated affiliates are earned from our sale of natural gas to Evangeline. The majority of our expenses with unconsolidated affiliates pertain to (i) our purchase of natural gas from Jonah and (ii) NGL transportation, storage and fractionation services we receive from K/D/S Promix, L.L.C.

Non-GAAP reconciliations

A reconciliation of our measurement of total non-GAAP gross operating margin to GAAP operating income and income before provision for income taxes and minority interest follows (dollars in thousands):

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2008	**2007**	**2008**	**2007**
Total segment gross operating margin	$ 478,922	$ 363,721	$ 1,535,500	$ 1,061,568
Adjustments to reconcile total segment gross operating margin to operating income:				
Depreciation, amortization and accretion in operating costs and expenses	(138,417)	(133,869)	(408,601)	(374,522)
Operating lease expense paid by EPCO	(526)	(526)	(1,579)	(1,579)
Loss (gain) from asset sales and related transactions in operating costs and expenses	857	219	1,699	(5,445)
General and administrative costs	(21,720)	(18,715)	(66,901)	(66,706)
Operating income	319,116	210,830	1,060,118	613,316
Other expense, net	(101,479)	(83,369)	(287,672)	(213,327)
Income before provision for income taxes and minority interest	$ 217,637	$ 127,461	$ 772,446	$ 399,989

EPCO subleases to us certain equipment located at our Mont Belvieu facility and 100 railcars for $1 per year (the “retained leases”). These subleases are part of the ASA that we executed with EPCO in connection with our formation in 1998. EPCO holds this equipment pursuant to operating leases for which it has retained the corresponding cash lease payment obligation. We record the full value of such lease payments made by EPCO as a non-cash related party operating expense, with the offset to partners’ equity recorded as a general contribution to our partnership. Apart from the partnership interests we granted to EPCO at our formation, EPCO does not receive any additional ownership rights as a result of its contribution to us of the retained leases.

For the three and nine months ended September 30, 2008, we recorded $0.5 million and $1.6 million, respectively, of retained lease expense. We have exercised our election under the retained leases to purchase a cogeneration unit in December 2008 for $2.3 million. Should we decide to exercise the purchase option associated with the remaining agreement, we would pay the original lessor $3.1 million in June 2016.

Recent Accounting Pronouncements

On January 1, 2008, we adopted the provisions of Statement of Financial Accounting Standards (“SFAS”) 157, Fair Value Measurements, which apply to financial assets and liabilities. SFAS 157 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at a specified measurement date. See Note 4 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report for information regarding fair value disclosures pertaining to our financial assets and liabilities.

For information regarding accounting developments during the first nine months of 2008 that will affect our future financial statements, see Note 2 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report.

Weather-related Risks

We participate as a named insured in EPCO’s insurance program, which provides us with property damage, business interruption and other coverages, the scope and amounts of which are customary and sufficient for the nature and extent of our operations. While we believe EPCO maintains adequate insurance coverage on our behalf, insurance will not cover every type of interruption that might occur. If we were to incur a significant liability for which we were not fully insured, it could have a material impact on our consolidated financial position, results of operations and cash flows. In addition, the proceeds of any such insurance may not be paid in a timely manner and may be insufficient to reimburse us for our repair costs or lost income. Any event that interrupts the revenues generated by our consolidated operations, or which causes us to make significant expenditures not covered by insurance, could reduce our ability to pay distributions to our partners and, accordingly, adversely affect the market price of our common units.

For windstorm events such as hurricanes and tropical storms, EPCO's deductible for onshore physical damage is $10.0 million per storm. For offshore assets, the windstorm deductible is $10.0 million per storm plus a one-time $15.0 million aggregate deductible per policy period. For non-windstorm events, EPCO's deductible for onshore and offshore physical damage is $5.0 million per occurrence. In meeting the deductible amounts, property damage costs are aggregated for EPCO and its affiliates, including us. Accordingly, our exposure with respect to the deductibles may be equal to or less than the stated amounts depending on whether other EPCO or affiliate assets are also affected by an event.

To qualify for business interruption coverage in connection with a windstorm event, covered assets must be out-of-service in excess of 60 days for onshore assets and 75 days for offshore assets. To qualify for business interruption coverage in connection with a non-windstorm event, covered onshore and offshore assets must be out-of-service in excess of 60 days.

Hurricanes Gustav and Ike

In the third quarter of 2008, our onshore and offshore facilities located along the Gulf Coast of Texas and Louisiana were adversely impacted by Hurricanes Gustav and Ike. The disruptions in natural gas, NGL and crude oil production caused by these storms resulted in decreased volumes for some of our pipeline systems, natural gas processing plants, NGL fractionators and offshore platforms, which, in turn, caused a decrease in gross operating margin from these operations. As a result of our allocated share of EPCO's insurance deductibles for windstorm coverage, we expensed a combined $46.0 million of repair costs for property damage in connection with these two storms. We expect to file property damage insurance claims to the extent repair costs exceed this amount. Due to the recent nature of these storms, we are still evaluating the total cost of repairs and the potential for business interruption claims on certain assets.

See Note 16 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report for information regarding insurance matters in connection with Hurricanes Katrina and Rita.

Item 3. *Quantitative and Qualitative Disclosures about Market Risk.*

We are exposed to financial market risks, including changes in commodity prices, interest rates and foreign exchange rates. We may use financial instruments (e.g., futures, forwards, swaps, options and other financial instruments with similar characteristics) to mitigate the risks of certain identifiable and anticipated transactions. In general, the types of risks we attempt to hedge are those related to (i) the variability of future earnings, (ii) fair values of certain debt instruments and (iii) cash flows resulting from changes in applicable interest rates, commodity prices or exchange rates.

We recognize financial instruments as assets and liabilities on our Unaudited Condensed Consolidated Balance Sheets based on fair value. Fair value is generally defined as the amount at which a financial instrument could be exchanged in a current transaction between willing parties, not in a forced or liquidation sale. The estimated fair values of our financial instruments have been determined using available market information and appropriate valuation techniques. We must use considerable judgment, however, in interpreting market data and developing these estimates. Accordingly, our fair value estimates are not necessarily indicative of the amounts that we could realize upon disposition of these instruments.

The use of different market assumptions and/or estimation techniques could have a material effect on our estimates of fair value.

Changes in fair value of financial instrument contracts are recognized in earnings in the current period unless specific hedge accounting criteria are met. If the financial instrument meets the criteria of a fair value hedge, gains and losses incurred on the instrument will be recorded in earnings to offset corresponding losses and gains on the hedged item. If the financial instrument meets the criteria of a cash flow hedge, gains and losses incurred on the instrument are recorded in accumulated other comprehensive income. Gains and losses on cash flow hedges are reclassified from accumulated other comprehensive income to earnings when the forecasted transaction occurs or, as appropriate, over the economic life of the hedged item. A contract designated as a hedge of an anticipated transaction that is no longer likely to occur is immediately recognized in earnings.

To qualify for hedge accounting, the item to be hedged must expose us to risk and the related hedging instrument must reduce the exposure and meet the formal hedging requirements of SFAS 133, Accounting for Derivative Instruments and Hedging Activities (as amended and interpreted). We formally designate the financial instrument as a hedge and document and assess the effectiveness of the hedge at its inception and thereafter on a quarterly basis. Any hedge ineffectiveness is immediately recognized in earnings.

We routinely review our outstanding financial instruments in light of current market conditions. If market conditions warrant, some financial instruments may be closed out in advance of their contractual settlement dates thus realizing income or loss depending on the specific hedging criteria. When this occurs, we may enter into a new financial instrument to reestablish the hedge to which the closed instrument relates.

Interest Rate Risk Hedging Program

Our interest rate exposure results from variable and fixed interest rate borrowings under various debt agreements. We manage a portion of our interest rate exposures by utilizing interest rate swaps and similar arrangements, which allow us to convert a portion of fixed rate debt into variable rate debt or a portion of variable rate debt into fixed rate debt.

Fair Value Hedges – Interest Rate Swaps

As summarized in the following table, we had five interest rate swap agreements outstanding at September 30, 2008 that were accounted for as fair value hedges.

Hedged Fixed Rate Debt	Number of Swaps	Period Covered by Swap	Termination Date of Swap	Fixed to Variable Rate (1)	Notional Value
Senior Notes C, 6.375% fixed rate, due Feb. 2013	1	Jan. 2004 to Feb. 2013	Feb. 2013	6.375% to 5.02%	$100.0 million
Senior Notes G, 5.60% fixed rate, due Oct. 2014	4	4th Qtr. 2004 to Oct. 2014	Oct. 2014	5.60% to 3.63%	$400.0 million

(1) The variable rate indicated is the all-in variable rate for the current settlement period.

The aggregate fair value of the five interest rate swaps at September 30, 2008 was an asset of $13.2 million, with an offsetting increase in the fair value of the underlying debt. There were eleven interest rate swaps outstanding at December 31, 2007 having an aggregate fair value of $14.8 million (an asset). Interest expense for the three months ended September 30, 2008 and 2007 includes a $1.8 million benefit and a $2.3 million loss, respectively, from interest rate swap agreements. For the nine months ended September 30, 2008 and 2007, interest expense reflects a benefit of $3.2 million and a loss of $6.9 million, respectively, from interest rate swap agreements.

The following table summarizes the termination of our interest rate swaps during 2008 (dollars in millions):

	Notional Value	Cash Gains (1)
Interest rate swap portfolio, December 31, 2007	$ 1,050.0	$ --
First quarter of 2008 terminations	(200.0)	6.3
Second quarter of 2008 terminations	(250.0)	12.0
Third quarter of 2008 terminations (2)	(100.0)	--
Interest rate swap portfolio, September 30, 2008	$ 500.0	$ 18.3

(1) Cash gains resulting from the termination, or monetization, of interest rate swaps will be amortized to earnings as a reduction to interest expense over the remaining life of the underlying debt.
(2) In early October 2008, one counterparty filed for bankruptcy. At September 30, 2008, the fair value of this interest rate swap was $3.4 million and this amount has been fully reserved. Hedge accounting for this swap has been discontinued.

The following table shows the effect of hypothetical price movements on the estimated fair value of our interest rate swap portfolio and the related change in fair value ("FV") of the underlying debt at the dates indicated (dollars in millions). Income is not affected by changes in the fair value of these swaps; however, these swaps effectively convert the hedged portion of fixed-rate debt to variable-rate debt. As a result, interest expense (and related cash outlays for debt service) will increase or decrease with the change in the periodic "reset" rate associated with the respective swap. Typically, the reset rate is an agreed upon index rate published for the first day of the six-month interest calculation period.

		Portfolio Fair Value at	
Scenario	Resulting Classification	September 30, 2008	October 21, 2008
FV assuming no change in underlying interest rates	*Asset*	$ 13.2	$ 20.1
FV assuming 10% increase in underlying interest rates	*Asset*	3.0	11.2
FV assuming 10% decrease in underlying interest rates	*Asset*	23.3	28.9

Cash Flow Hedges – Interest Rate Swaps

Duncan Energy Partners had three floating-to-fixed interest rate swap agreements outstanding at September, 2008 that were accounted for as cash flow hedges.

Hedged Variable Rate Debt	Number of Swaps	Period Covered by Swap	Termination Date of Swap	Variable to Fixed Rate (1)	Notional Value
Duncan Energy Partners' Revolver, due Feb. 2011	3	Sep. 2007 to Sep. 2010	Sep. 2010	3.77% to 4.62%	$175.0 million

(1) Amounts receivable from or payable to the swap counterparties are settled every three months (the "settlement period").

We recognized losses of $0.8 million and $1.6 million from these swap agreements during the three and nine months ended September 30, 2008, respectively. The aggregate fair values of these interest rate swaps at September 30, 2008 and December 31, 2007 were liabilities of $4.3 million and $3.8 million, respectively. As cash flow hedges, any increase or decrease in fair value of the financial instrument (to the extent effective) would be recorded as other comprehensive income and amortized into earnings based on the settlement period being hedged. Over the next twelve months, we expect to reclassify $1.4 million of losses to earnings as an increase in interest expense.

The following table shows the effect of hypothetical price movements on the estimated fair value of Duncan Energy Partners' interest rate swap portfolio (dollars in millions).

		Portfolio Fair Value at	
Scenario	Resulting Classification	September 30, 2008	October 21, 2008
FV assuming no change in underlying interest rates	*Liability*	$ (4.3)	$ (6.3)
FV assuming 10% increase in underlying interest rates	*Liability*	(3.3)	(5.5)
FV assuming 10% decrease in underlying interest rates	*Liability*	(5.3)	(7.1)

Cash Flow Hedges – Treasury Locks

We occasionally use treasury lock financial instruments to hedge the underlying U.S. treasury rates related to our anticipated issuances of debt. Cash gains or losses on the termination, or monetization, of such instruments are amortized to earnings using the effective interest method over the estimated term of the underlying fixed-rate debt. Each of our treasury lock transactions were designated as a cash flow hedge. The following table summarizes changes in our treasury lock portfolio since December 31, 2007 (dollars in millions).

	Notional Value	Cash Losses (1)
Treasury lock portfolio, December 31, 2007	$ 600.0	$ --
First quarter of 2008 terminations	(350.0)	27.7
Second quarter of 2008 terminations	(250.0)	12.7
Treasury lock portfolio, September 30, 2008	$ --	$ 40.4

(1) Cash losses are included in net interest rate financial instrument losses in the Unaudited Condensed Statements of Consolidated Comprehensive Income.

We expect to reclassify $1.8 million of cumulative net gains from the monetization of treasury lock financial instruments to earnings (as a decrease in interest expense) over the next twelve months. This includes financial instruments that were settled in years prior to 2008.

Commodity Risk Hedging Program

The prices of natural gas, NGLs and certain petrochemical products are subject to fluctuations in response to changes in supply, market uncertainty and a variety of additional factors that are beyond our control. In order to manage the price risks associated with such products, we may enter into commodity financial instruments.

The primary purpose of our commodity risk management activities is to reduce our exposure to price risks associated with (i) natural gas purchases, (ii) the value of NGL production and inventories, (iii) related firm commitments, (iv) fluctuations in transportation revenues where the underlying fees are based on natural gas index prices and (v) certain anticipated transactions involving either natural gas, NGLs or certain petrochemical products. From time to time, we inject natural gas into storage and may utilize hedging instruments to lock in the value of our inventory positions. The commodity financial instruments we utilize may be settled in cash or with another financial instrument.

We assess the risk of our commodity financial instrument portfolio using a sensitivity analysis model. The sensitivity analysis applied to the portfolio measures the potential income or loss (i.e., the change in fair value of the portfolio) based upon a hypothetical 10% movement in the underlying quoted market prices of the commodity financial instruments outstanding at the date indicated within the following table.

We have segregated our commodity financial instruments portfolio between those financial instruments utilized in connection with our natural gas marketing activities and those used in connection with our NGL and petrochemical operations.

Natural gas marketing activities. At September 30, 2008 and December 31, 2007, the aggregate fair values of those financial instruments utilized in connection with our natural gas marketing activities was an asset of $0.8 million and a liability of $0.3 million, respectively. Our natural gas marketing business and its related use of financial instruments has increased since December 31, 2007. We currently utilize mark-to-market accounting for substantially all of the financial instruments utilized in connection with our natural gas marketing activities. The following table presents gains and losses recognized in earnings from this portion of the commodity financial instruments portfolio for the periods indicated (dollars in millions):

Three months ended September 30, 2008	Gains	$	13.2
Three months ended September 30, 2007	Losses	$	(0.6)
Nine months ended September 30, 2008	Gains	$	7.8
Nine months ended September 30, 2007	Losses	$	(0.1)

The following table shows the effect of hypothetical price movements on the estimated fair value of this component of the overall portfolio at the dates presented (dollars in millions):

		Portfolio Fair Value at	
Scenario	**Resulting Classification**	**September 30, 2008**	**October 21, 2008**
FV assuming no change in underlying commodity prices	*Asset (Liability)*	$ 0.8	$ (0.5)
FV assuming 10% increase in underlying commodity prices	*(Liability)*	(3.8)	(7.8)
FV assuming 10% decrease in underlying commodity prices	*Asset*	6.0	6.9

The change in fair value of the instruments between September 30, 2008 and October 21, 2008 is primarily due to a decrease in natural gas prices.

NGL and petrochemical operations. At September 30, 2008 and December 31, 2007, the aggregate fair values of financial instruments utilized in connection with our NGL and petrochemical operations were liabilities of $116.6 million and $19.0 million, respectively. The change in fair value between December 31, 2007 and September 30, 2008 is primarily due to a decrease in the price of natural gas and an increase in volumes hedged. Almost all of the financial instruments within this portion of the commodity financial instruments portfolio are accounted for as cash flow hedges, with a small number accounted for using mark-to-market accounting.

EPO has employed a program to economically hedge a portion of earnings from its natural gas processing business (a component of its NGL Pipelines & Services business segment). This program consists of (i) the forward sale of a portion of EPO's expected equity NGL production volumes at fixed prices through 2009 and (ii) the purchase (using commodity financial instruments) of the amount of natural gas expected to be consumed as plant thermal reduction ("PTR") in the production of such equity NGL volumes. The objective of this strategy is to hedge a level of gross margins (i.e., NGL sales revenues less actual costs for PTR and the gain or loss on the PTR hedge) associated with the forward sales contracts by fixing the cost of natural gas used for PTR, through the use of commodity financial instruments. At September 30, 2008, this hedging program had hedged future gross margins before plant operating expenses of $588.8 million for 28.8 million barrels of forecasted NGL forward sales transactions extending through 2009.

NGL forward sales contracts are not accounted for as financial instruments under SFAS 133; therefore, changes in the aggregate economic value of these sales contracts are not reflected in earnings and comprehensive income until the volumes are delivered to customers. On the other hand, the commodity financial instruments used to purchase the related quantities of PTR (i.e., "PTR hedges") are accounted for as cash flow hedges; therefore, changes in the aggregate fair value of the PTR hedges are presented in other comprehensive income.

Prior to actual settlement, if the market price of natural gas is less than the price stipulated in a PTR hedge, we recognize an unrealized loss in other comprehensive income for the excess of the natural gas price stated in the PTR hedge over the market price. To the extent that we realize such financial losses upon settlement of the instrument, the losses are added to the actual cost we have to pay for PTR (which would then be based on the lower market price). The end result of this relationship – financial gain/loss on the PTR hedges plus the market price of actual natural gas purchases at the time of consumption – is that our total cost of natural gas used for PTR approximates the amount we originally hedged under this program The converse is true if the price of natural gas decreases. During the third quarter of 2008, the price of natural gas decreased approximately 45% from June 30, 2008. As a result, we recognized unrealized losses in other comprehensive income with respect to the PTR hedges of $258.4 million during the third quarter of 2008. For the nine months ended September 30, 2008, we recognized unrealized losses in other comprehensive income of $126.0 million with respect to the PTR hedging program. Once the forecasted NGL forward sales transactions occur, any realized gains and losses on the cash flow hedges would be reclassified into earnings at that time.

At November 1, 2008, this program had hedged future gross margins before plant operating expenses of $550.0 million for 27.3 million barrels of forecasted NGL forward sales transactions extending through 2009. The aggregate fair value of the PTR cash flow hedges at this date was a liability of $155.3 million.

The following table presents gains and losses recognized in earnings from this portion of the commodity financial instruments portfolio for the periods indicated (dollars in millions):

Three months ended September 30, 2008 (1)	Losses	$	(7.2)
Three months ended September 30, 2007	Losses	$	(10.1)
Nine months ended September 30, 2008 (2)	Gains	$	1.7
Nine months ended September 30, 2007	Losses	$	(11.9)

(1) Includes ineffectiveness of $5.6 million (an expense).
(2) Includes ineffectiveness of $2.8 million (an expense).

The following table shows the effect of hypothetical price movements on the estimated fair value of this component of the overall portfolio at the dates presented (dollars in millions):

		Portfolio Fair Value at	
Scenario	**Resulting Classification**	**September 30, 2008**	**October 21, 2008**
FV assuming no change in underlying commodity prices	*(Liability)*	$ (116.6)	$ (107.4)
FV assuming 10% increase in underlying commodity prices	*(Liability)*	(97.3)	(86.0)
FV assuming 10% decrease in underlying commodity prices	*(Liability)*	(136.0)	(128.8)

The change in fair value of the NGL and petrochemical portfolio between September 30, 2008 and October 21, 2008 is primarily due to a decrease in natural gas prices. A significant number of the financial instruments in this portfolio hedge the purchase of physical natural gas. If natural gas prices fall below the price stipulated in such financial instruments, we recognize a liability for the difference; however, if prices partially or fully recover, this liability would be reduced or eliminated, as appropriate.

Foreign Currency Hedging Program

We are exposed to foreign currency exchange rate risk primarily through our Canadian NGL marketing subsidiary. As a result, we could be adversely affected by fluctuations in the foreign currency exchange rate between the U.S. dollar and the Canadian dollar. We attempt to hedge this risk using foreign exchange purchase contracts to fix the exchange rate. Mark-to-market accounting is utilized for these contracts, which typically have a duration of one month. For the nine months ended September 30, 2008, we recorded minimal gains from these financial instruments. No such amounts were recorded in the third quarter of 2008.

Fair Value Information

On January 1, 2008, we adopted the provisions of SFAS 157 that apply to financial assets and liabilities. SFAS 157 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at a specified measurement date. See Note 4 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report for information regarding fair value disclosures pertaining to our financial assets and liabilities.

Accumulated Other Comprehensive Income (Loss)

Accumulated other comprehensive income (loss) primarily includes the effective portion of the gain or loss on financial instruments designated and qualified as a cash flow hedge, foreign currency adjustments and Dixie's minimum pension liability adjustments. Amounts accumulated in other comprehensive income (loss) from cash flow hedges are reclassified into earnings in the same period(s) in which the hedged forecasted transactions (such as a forecasted forward sale of NGLs) affect earnings. If it becomes probable that the forecasted transaction will not occur, the net gain or loss in accumulated other comprehensive income (loss) must be immediately reclassified.

The following table presents the components of accumulated other comprehensive income (loss) at the dates indicated:

	September 30, 2008	December 31, 2007
Commodity financial instruments – cash flow hedges (1)	$ (129,913)	$ (21,619)
Interest rate financial instruments – cash flow hedges	9,714	34,980
Foreign currency cash flow hedges	--	1,308
Foreign currency translation adjustment (2)	1,652	1,200
Pension and postretirement benefit plans (3)	324	588
Total accumulated other comprehensive income (loss)	$ (118,223)	$ 16,457

(1) The negative change in fair value of commodity financial instruments between December 31, 2007 and September 30, 2008 is primarily due to a significant decrease in natural gas prices during the third quarter of 2008.
(2) Relates to transactions of our Canadian NGL marketing subsidiary.
(3) See Note 2 of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report for additional information regarding Dixie's pension and postretirement benefit plans.

Item 4. *Controls and Procedures.*

Our management, with the participation of the Chief Executive Officer ("CEO") and Chief Financial Officer ("CFO") of Enterprise Products GP, has evaluated the effectiveness of our disclosure controls and procedures, as of September 30, 2008. Based on their evaluation, the CEO and CFO of Enterprise Products GP have concluded that our disclosure controls and procedures (as defined in Rule 13a-15(e)) are effective at a reasonable assurance level.

There have been no changes in our internal controls over financial reporting (as defined in Rule 13a-15(f) under the Securities Exchange Act of 1934) during our last fiscal quarter that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Disclosure controls and procedures are designed to provide reasonable assurance that information required to be disclosed by us in reports that are filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time specified in the Commission's rules and forms, including to provide reasonable assurance that such information is accumulated and communicated to our management, including the CEO and CFO of our general partner, as appropriate, to allow timely decisions regarding required disclosures. Our management does not expect that our disclosure controls and procedures will prevent all errors and all fraud. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Based on the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Partnership have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple errors or mistakes. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is also based in part upon certain assumptions about the likelihood of future events. Therefore, a control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

The certifications of our general partner's CEO and CFO required under Sections 302 and 906 of the Sarbanes-Oxley Act of 2002 have been included as exhibits to this Quarterly Report on Form 10-Q.

PART II. OTHER INFORMATION.

Item 1. *Legal Proceedings*.

See Part I, Item 1, Financial Statements, Note 15, "Commitments and Contingencies – Litigation," of the Notes to Unaudited Condensed Consolidated Financial Statements included under Item 1 of this Quarterly Report, which is incorporated herein by reference.

Item 1A. *Risk Factors*.

Apart from that discussed below, there have been no significant changes in our risk factors since December 31, 2007. For a detailed discussion of our risk factors, please read Part I, Item 1A "Risk Factors," in our Annual Report on Form 10-K for the year ended December 31, 2007.

Our recently announced TOPS joint venture, like other projects for new facilities, is subject to various business, operational and regulatory risks and may not be successful.

The TOPS joint venture is expected to represent an important component of our Offshore Pipelines & Services segment, requiring an estimated $617.4 million in capital contributions from us through 2011 (excluding capitalized interest). We, as well as each of our other two joint venture partners, will own a one-third interest in TOPS, and we will act as operator and construction manager for TOPS. We may be unable to make required capital contributions due to an inability to access capital markets or otherwise, in which event our interest could be diluted, and we could suffer other adverse consequences. Please read the risk factor in Item 1A of our most recent Form 10-K "*We may not be able to fully execute our growth strategy if we encounter illiquid capital markets or increased competition for investment opportunities*."

Delays in completing construction or commencement of operations of TOPS due to any cause would delay our future operating cash flows, which could have a material adverse effect on the success of the TOPS project and on our business, results of operations, financial condition and prospects. As with our other construction projects for new facilities, it may take a period of time before we realize any expected cash flows from such assets. Please read the risk factor in Item 1A of our most recent Form 10-K "*Our operating cash flows from our capital projects may not be immediate*."

Commencement of the TOPS joint venture operations, like other new facilities, is also subject to obtaining necessary regulatory and third-party approvals. The offshore terminal will require approval by the U.S. Coast Guard and issuance of a Deepwater Port License, while the onshore pipeline and storage facilities will be subject to review by the U.S. Environmental Protection Agency, Army Corps of Engineers and Department of Transportation. Obtaining such approvals is a time consuming process. For example, we estimate that the Deepwater Port License could take as long as two years, assuming there are no delaying factors. These and other regulatory, environmental, political and legal risks are beyond our control and may also require the expenditure of unexpected amounts of capital. Please read the risk factor in Item 1A of our most recent Form 10-K "*Our construction of new assets is subject to regulatory, environmental, political, legal and economic risks, which may result in delays, increased costs or decreased cash flows*."

The TOPS joint venture is also subject to significant logistical, technological and staffing requirements, as well as force majeure events such as hurricanes along the Gulf Coast, that could result in delays or significant increases in the project's current estimated costs. Please read the risk factor in Item 1A of our most recent Form 10-K "*Our actual construction, development and acquisition costs could exceed forecasted amounts*."

The global financial crisis may have impacts on our business and financial condition that we currently cannot predict.

The continued credit crisis and related turmoil in the global financial system has had, and may continue to have, an impact on our business and our financial condition. We may face significant challenges if conditions in the financial markets do not improve. Our ability to access the capital markets may be severely restricted at a time when we would like, or need, to do so, which could have an adverse impact on our ability to meet our capital commitments and flexibility to react to changing economic and business conditions. The credit crisis could have a negative impact on our lenders or our customers, causing them to fail to meet their obligations to us. Additionally, demand for our services and products depends on activity and expenditure levels in the energy industry, which are directly and negatively impacted by depressed oil and gas prices. Any of these factors could lead to reduced usage of our pipelines and energy logistics services, which could have a material negative impact on our revenues and prospects.

Item 2. *Unregistered Sales of Equity Securities and Use of Proceeds.*

As of September 30, 2008, we and our affiliates are authorized to repurchase up to 618,400 common units under the December 1998 common unit repurchase program. We did not repurchase any of our common units in connection with this announced program during the three or nine months ended September 30, 2008.

The following table summarizes our repurchase activity during 2008 in connection with other arrangements:

Period	Total Number of Units Purchased	Average Price Paid per Unit	Total Number of of Units Purchased as Part of Publicly Announced Plans	Maximum Number of Units That May Yet Be Purchased Under the Plans
May 2008	21,413 (1)	$30.37	-0-	-0-
August 2008	4,940 (2)	$29.19	-0-	-0-
September 2008	4,565 (3)	$25.77	-0-	-0-

(1) Of the 67,500 restricted unit awards that vested in May 2008 and converted to common units, 21,413 of these units were sold back to the partnership by employees to cover related withholding tax requirements.
(2) Of the 28,650 restricted unit awards that vested in August 2008 and converted to common units, 4,940 of these units were sold back to the partnership by employees to cover related withholding tax requirements.
(3) Of the 16,500 restricted unit awards that vested in September 2008 and converted to common units, 4,565 of these units were sold back to the partnership by employees to cover related withholding tax requirements.

Item 3. *Defaults upon Senior Securities.*

None.

Item 4. *Submission of Matters to a Vote of Security Holders.*

On January 29, 2008, we held a special meeting where our unitholders where asked to approve the terms of the Enterprise Products 2008 Long-Term Incentive Plan (the “2008 LTIP”). See Item 4 of our Annual Report on Form 10-K for information regarding this matter and related vote totals.

Item 5. ***Other Information.***

Amendments to Partnership Agreement

On November 6, 2008, our general partner amended our agreement of limited partnership to amend Section 7.7(i) to clarify and to provide that any amendment of Section 7.7 shall not impair an indemnitee's right to receive expense advancement, in addition to indemnification, from us as otherwise provided for under the partnership agreement. In addition, the member of our general partner amended its limited liability company agreement to make a similar change.

A copy of the amendments to our partnership agreement and our general partner's limited liability company agreement are attached hereto as Exhibit 3.5 and Exhibit 3.7, respectively, and are incorporated by reference herein.

Item 6. ***Exhibits.***

Exhibit Number	Exhibit*
2.1	Merger Agreement, dated as of December 15, 2003, by and among Enterprise Products Partners L.P., Enterprise Products GP, LLC, Enterprise Products Management LLC, GulfTerra Energy Partners, L.P. and GulfTerra Energy Company, L.L.C. (incorporated by reference to Exhibit 2.1 to Form 8-K filed December 15, 2003).
2.2	Amendment No. 1 to Merger Agreement, dated as of August 31, 2004, by and among Enterprise Products Partners L.P., Enterprise Products GP, LLC, Enterprise Products Management LLC, GulfTerra Energy Partners, L.P. and GulfTerra Energy Company, L.L.C. (incorporated by reference to Exhibit 2.1 to Form 8-K filed September 7, 2004).
2.3	Parent Company Agreement, dated as of December 15, 2003, by and among Enterprise Products Partners L.P., Enterprise Products GP, LLC, Enterprise Products GTM, LLC, El Paso Corporation, Sabine River Investors I, L.L.C., Sabine River Investors II, L.L.C., El Paso EPN Investments, L.L.C. and GulfTerra GP Holding Company (incorporated by reference to Exhibit 2.2 to Form 8-K filed December 15, 2003).
2.4	Amendment No. 1 to Parent Company Agreement, dated as of April 19, 2004, by and among Enterprise Products Partners L.P., Enterprise Products GP, LLC, Enterprise Products GTM, LLC, El Paso Corporation, Sabine River Investors I, L.L.C., Sabine River Investors II, L.L.C., El Paso EPN Investments, L.L.C. and GulfTerra GP Holding Company (incorporated by reference to Exhibit 2.1 to the Form 8-K filed April 21, 2004).
2.5	Purchase and Sale Agreement (Gas Plants), dated as of December 15, 2003, by and between El Paso Corporation, El Paso Field Services Management, Inc., El Paso Transmission, L.L.C., El Paso Field Services Holding Company and Enterprise Products Operating L.P. (incorporated by reference to Exhibit 2.4 to Form 8-K filed December 15, 2003).
3.1	Certificate of Limited Partnership of Enterprise Products Partners L.P. (incorporated by reference to Exhibit 3.6 to Form 10-Q filed November 8, 2007).
3.2	Fifth Amended and Restated Agreement of Limited Partnership of Enterprise Products Partners L.P., dated effective as of August 8, 2005 (incorporated by reference to Exhibit 3.1 to Form 8-K filed August 10, 2005).
3.3	First Amendment to Fifth Amended and Restated Partnership Agreement of Enterprise Products Partners L.P. dated as of December 27, 2007 (incorporated by reference to Exhibit 3.1 to Form 8-K/A filed January 3, 2008).
3.4	Second Amendment to Fifth Amended and Restated Partnership Agreement of Enterprise Products Partners L.P. dated as of April 14, 2008 (incorporated by reference to Exhibit 10.1 to Form 8-K filed April 16, 2008).
3.5#	Third Amendment to Fifth Amended and Restated Partnership Agreement of Enterprise Products Partners L.P. dated as of November 6, 2008.

3.6	Fifth Amended and Restated Limited Liability Company Agreement of Enterprise Products GP, LLC, dated as of November 7, 2007 (incorporated by reference to Exhibit 3.2 to Form 10-Q filed November 8, 2007).
3.7#	First Amendment to Fifth Amended and Restated Limited Liability Company Agreement of Enterprise Products GP, LLC, dated as of November 6, 2008.
3.8	Limited Liability Company Agreement of Enterprise Products Operating LLC dated as of June 30, 2007 (incorporated by reference to Exhibit 3.3 to Form 10-Q filed on August 8, 2007).
3.9	Certificate of Incorporation of Enterprise Products OLPGP, Inc., dated December 3, 2003 (incorporated by reference to Exhibit 3.5 to Form S-4 Registration Statement, Reg. No. 333-121665, filed December 27, 2004).
3.10	Bylaws of Enterprise Products OLPGP, Inc., dated December 8, 2003 (incorporated by reference to Exhibit 3.6 to Form S-4 Registration Statement, Reg. No. 333-121665, filed December 27, 2004).
3.11	Certificate of Limited Partnership of Duncan Energy Partners L.P. (incorporated by reference to Exhibit 3.1 to Duncan Energy Partners L.P. Form S-1 Registration Statement, Reg. No. 333-138371, filed November 2, 2006).
3.12	Amended and Restated Agreement of Limited Partnership of Duncan Energy Partners L.P., dated February 5, 2007 (incorporated by reference to Exhibit 3.1 to Duncan Energy Partners L.P.'s Form 8-K/A filed February 5, 2007).
3.13	First Amendment to Amended and Restated Partnership Agreement of Duncan Energy Partners L.P. dated as of December 27, 2007 (incorporated by reference to Exhibit 3.1 to Duncan Energy Partners L.P.'s Form 8-K/A filed on January 3, 2008).
4.1	Form of Common Unit certificate (incorporated by reference to Exhibit 4.1 to Registration Statement on Form S-1/A; File No. 333-52537, filed July 21, 1998).
4.2	Indenture dated as of March 15, 2000, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and First Union National Bank, as Trustee (incorporated by reference to Exhibit 4.1 to Form 8-K filed March 10, 2000).
4.3	First Supplemental Indenture dated as of January 22, 2003, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wachovia Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.2 to Registration Statement on Form S-4, Reg. No. 333-102776, filed January 28, 2003).
4.4	Second Supplemental Indenture dated as of February 14, 2003, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wachovia Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.3 to Form 10-K filed March 31, 2003).
4.5	Third Supplemental Indenture dated as of June 30, 2007, among Enterprise Products Operating LLC, as Issuer, Enterprise Products Partners L.P., as Guarantor, and U.S. Bank National Association, as successor Trustee (incorporated by reference to Exhibit 4.55 to Form 10-Q filed on August 8, 2007) .
4.6	Amended and Restated Revolving Credit Agreement dated as of November 19, 2007 among Enterprise Products Operating LLC, the financial institutions party thereto as lenders, Wachovia Bank, National Association, as Administrative Agent, Issuing Bank and Swingline Lender, Citibank, N.A. and JPMorgan Chase Bank, as Co-Syndication Agents, and SunTrust Bank, Mizuho Corporate Bank, Ltd. and The Bank of Nova Scotia, as Co-Documentation Agents (incorporated by reference to Exhibit 10.1 to Form 8-K filed on November 20, 2007).
4.7	Amended and Restated Guaranty Agreement dated as of November 19, 2007 executed by Enterprise Products Partners L.P. in favor of Wachovia Bank, National Association, as Administrative Agent (incorporated by reference to Exhibit 10.2 to Form 8-K filed on November 20, 2007).
4.8	Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.1 to Form 8-K filed on October 6, 2004).

4.9	First Supplemental Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.2 to Form 8-K filed on October 6, 2004).
4.10	Second Supplemental Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.3 to Form 8-K filed on October 6, 2004).
4.11	Third Supplemental Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.4 to Form 8-K filed on October 6, 2004).
4.12	Fourth Supplemental Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.5 to Form 8-K filed on October 6, 2004).
4.13	Fifth Supplemental Indenture dated as of March 2, 2005, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.2 to Form 8-K filed on March 3, 2005).
4.14	Sixth Supplemental Indenture dated as of March 2, 2005, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.3 to Form 8-K filed on March 3, 2005).
4.15	Seventh Supplemental Indenture dated as of June 1, 2005, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.46 to Form 10-Q filed November 4, 2005).
4.16	Eighth Supplemental Indenture dated as of July 18, 2006 to Indenture dated October 4, 2004 among Enterprise Products Operating L.P., as issuer, Enterprise Products Partners L.P., as parent guarantor, and Wells Fargo Bank, National Association, as trustee (incorporated by reference to exhibit 4.2 to Form 8-K filed July 19, 2006).
4.17	Ninth Supplemental Indenture, dated as of May 24, 2007, by and among Enterprise Products Operating L.P., as issuer, Enterprise Products Partners L.P., as parent guarantor, and Wells Fargo Bank, National Association, as trustee (incorporated by reference to Exhibit 4.2 to the Current Report on Form 8-K filed by Enterprise Products Partners L.P. on May 24, 2007).

Section 2: EX-3.5 (EXHIBIT 3.5)

Exhibit 3.5

AMENDMENT NO. 3 TO THE FIFTH AMENDED AND RESTATED AGREEMENT OF LIMITED PARTNERSHIP OF ENTERPRISE PRODUCTS PARTNERS L.P.

This Amendment No. 3 (this "*Amendment No.3*") to the Fifth Amended and Restated Agreement of Limited Partnership of Enterprise Products Partners L.P. dated effective as of August 8, 2005 (the "*Partnership Agreement*") is hereby adopted by Enterprise Products GP, LLC, a Delaware limited liability company (the "*General Partner*"), as general partner of the Partnership. Capitalized terms used but not defined herein are used as defined in the Partnership Agreement.

WHEREAS, acting pursuant to the power and authority granted to it under Section 13.1(d) of the Partnership Agreement, the General Partner has determined that the following amendment to the Partnership Agreement does not require the approval of any Limited Partner.

NOW THEREFORE, the General Partner does hereby amend the Partnership Agreement as follows:

Section 1. Sections 7.7(i) is hereby amended to read in full as follows:

(i) No amendment, modification or repeal of this Section 7.7 or any provision hereof shall in any manner terminate, reduce or impair the right of any past, present or future Indemnitee to receive indemnification (including expense advancement as provided by Section 7.7(b)) from the Partnership, nor the obligations of the Partnership to indemnify, or advance the expenses of, any such Indemnitee under and in accordance with the provisions of this Section 7.7 as in effect immediately prior to such amendment, modification or repeal with respect to claims arising from or relating to matters occurring, in whole or in part, prior to such amendment, modification or repeal, regardless of when such claims may arise or be asserted, and provided such Person became an Indemnitee hereunder prior to such amendment, modification or repeal.

Section 2. Except as hereby amended, the Partnership Agreement shall remain in full force and effect.

Section 3. This Amendment No. 3 shall be governed by, and interpreted in accordance with, the laws of the State of Delaware, all rights and remedies being governed by such laws without regard to principles of conflicts of laws.

IN WITNESS WHEREOF, this Amendment No. 3 has been executed as of November 6, 2008.

Section 3: EX-3.7 (EXHIBIT 3.7)

Exhibit 3.7

FIRST AMENDMENT TO THE FIFTH AMENDED AND RESTATED LIMITED LIABILITY COMPANY AGREEMENT OF ENTERPRISE PRODUCTS GP, LLC

This First Amendment dated November 6, 2008 to the Fifth Amended and Restated Limited Liability Company Agreement (this "Amendment") of Enterprise Products GP, LLC ("EPD GP"), dated November 7, 2007, is executed by Enterprise GP Holdings L.P.

("EPE"). Capitalized terms used but not defined in this Amendment shall have the meaning set forth in the Limited Liability Company Agreement of EPD GP dated November 7, 2007 (the "LLC Agreement").

RECITALS

WHEREAS, EPE Holdings, LLC (the "Company") owns a 0.01% general partner interest in and is the sole general partner of EPE;

WHEREAS, EPE is the sole member of EPD GP;

WHEREAS, EPD GP owns a 2% general partnership interest in Enterprise Products Partners L.P., a Delaware limited partnership ("EPD LP"), and is the sole general partner of EPD LP;

WHEREAS, the Company, in its capacity as general partner of EPE, has determined that it is advisable to amend the LLC Agreement.

NOW, THEREFORE, in consideration of the agreements and obligations set forth herein and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged and intending to be legally bound, EPE hereby agrees as follows:

AGREEMENT

1. Section 6.06(i) of the LLC Agreement shall be deleted and restated in its entirety as follows:

(i) No amendment, modification or repeal of this Section 6.06 or any provision hereof shall in any manner terminate, reduce or impair either the right of any past, present or future Indemnitee to receive indemnification (including expense advancement as provided by Section 6.06(b)) from the Company or the obligation of the Company to indemnify, or advance the expenses of, any such Indemnitee under and in accordance with the provisions of this Section 6.06 as in effect immediately prior to such amendment, modification or repeal with respect to claims arising from or relating to matters occurring, in whole or in part, prior to such amendment, modification or repeal, regardless of when such claims may be asserted, and provided such Person became an Indemnitee hereunder prior to such amendment, modification or repeal.

2. Except as otherwise expressly provided by this Amendment, all of the terms, conditions and provisions of the LLC Agreement shall remain the same. This Amendment shall be governed by and construed under the laws of the State of Delaware as applied to agreements entered into solely between residents of, and to be performed entirely within, such state.

[*Signature Page Follows*]

IN WITNESS WHEREOF, the undersigned has executed this Amendment to Limited Liability Company Agreement as of November 6, 2008.

CERTIFICATIONS

I, Michael A. Creel, certify that:

1. I have reviewed this quarterly report on Form 10-Q of Enterprise Products Partners L.P.;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

   a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

   a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
   b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

The aggregate market value of the common units of *Enterprise Products Partners L.P.* ("EPD") held by non-affiliates at June 30, 2007, based on the closing price of such equity securities in the daily composite list for transactions on the New York Stock Exchange, was approximately $9.1 billion. This figure excludes common units beneficially owned by certain affiliates, including (i) Dan L. Duncan, (ii) Enterprise GP Holdings L.P. and (iii) certain trusts established for the benefit of Mr. Duncan's family. There were 435,297,303 common units of EPD outstanding at February 1, 2008.

ENTERPRISE PRODUCTS PARTNERS L.P.
TABLE OF CONTENTS

SIGNIFICANT RELATIONSHIPS REFERENCED IN THIS ANNUAL REPORT

Unless the context requires otherwise, references to "we," "us," "our," or "Enterprise Products Partners" are intended to mean the business and operations of Enterprise Products Partners L.P. and its consolidated subsidiaries.

References to "EPO" mean Enterprise Products Operating LLC as successor in interest by merger to Enterprise Products Operating L.P., which is a wholly owned subsidiary of Enterprise Products Partners through which Enterprise Products Partners conducts substantially all of its business.

References to "Duncan Energy Partners" mean Duncan Energy Partners L.P., which is a consolidated subsidiary of EPO. Duncan Energy Partners is a publicly traded Delaware limited partnership, the common units of which are listed on the New York Stock Exchange ("NYSE") under the ticker symbol "DEP." References to "DEP GP" mean DEP Holdings, LLC, which is the general partner of Duncan Energy Partners and is wholly owned by EPO.

References to "EPGP" mean Enterprise Products GP, LLC, which is our general partner.

References to "Enterprise GP Holdings" mean Enterprise GP Holdings L.P., a publicly traded affiliate, the units of which are listed on the NYSE under the ticker symbol "EPE." Enterprise GP Holdings owns Enterprise Products GP. References to "EPE Holdings" mean EPE Holdings, LLC, which is the general partner of Enterprise GP Holdings.

References to "TEPPCO" mean TEPPCO Partners, L.P., a publicly traded affiliate, the common units of which are listed on the NYSE under the ticker symbol "TPP." References to "TEPPCO GP" refer to Texas Eastern Products Pipeline Company, LLC, which is the general partner of TEPPCO and is wholly owned by Enterprise GP Holdings.

References to "Energy Transfer Equity" mean the business and operations of Energy Transfer Equity, L.P. and its consolidated subsidiaries, which include Energy Transfer Partners, L.P. ("ETP"). Energy Transfer Equity is a publicly traded Delaware limited partnership, the common units of which are listed on the NYSE under the ticker symbol "ETE." The general partner of Energy Transfer Equity is LE GP, LLC ("LE GP"). On May 7, 2007, Enterprise GP Holdings acquired non-controlling interests in both LE GP and Energy Transfer Equity.

References to "Employee Partnerships" mean EPE Unit L.P. ("EPE Unit I"), EPE Unit II, L.P. ("EPE Unit II") and EPE Unit III, L.P. ("EPE Unit III"), collectively, which are private company affiliates of EPCO, Inc. See Note 25 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report for information regarding the formation of Enterprise Unit L.P. in February 2008.

References to "EPCO" mean EPCO, Inc. and its wholly-owned private company affiliates, which are related party affiliates to all of the foregoing named entities.

We, EPO, Duncan Energy Partners, DEP GP, EPGP, Enterprise GP Holdings, EPE Holdings, TEPPCO and TEPPCO GP are affiliates under the common control of Dan L. Duncan, the Group Co-Chairman and controlling shareholder of EPCO.

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

This annual report contains various forward-looking statements and information that are based on our beliefs and those of our general partner, as well as assumptions made by us and information currently available to us. When used in this document, words such as "anticipate," "project," "expect," "plan," "seek," "goal," "forecast," "intend," "could," "should," "will," "believe," "may," "potential" and similar expressions and statements regarding our plans and objectives for future operations, are intended to identify forward-looking statements. Although we and our general partner believe that such expectations reflected in such forward-looking statements are reasonable, neither we nor our general partner can give any assurances that such expectations will prove to be correct. Such statements are subject to a variety of risks, uncertainties and assumptions as described in more detail in Item 1A of this annual report. If one or more of these risks or uncertainties materialize, or if underlying assumptions prove incorrect, our actual results may vary materially from those anticipated, estimated, projected or expected. You should not put undue reliance on any forward-looking statements.

Items 1 and 2. *Business and Properties*.

General

We are a North American midstream energy company providing a wide range of services to producers and consumers of natural gas, natural gas liquids ("NGLs"), crude oil and certain petrochemicals. In addition, we are an industry leader in the development of pipeline and other midstream energy infrastructure in the continental United States and Gulf of Mexico. We conduct substantially all of our business through EPO. Our principal executive offices are located at 1100 Louisiana, 10th Floor, Houston, Texas 77002, our telephone number is (713) 381-6500 and our website is www.epplp.com.

We are a publicly traded Delaware limited partnership formed in 1998, the common units of which are listed on the NYSE under the ticker symbol "EPD." We are owned 98% by our limited partners and 2% by our general partner, EPGP. Our general partner is owned by a publicly traded affiliate, Enterprise GP Holdings, the common units of which are listed on the NYSE under the ticker symbol "EPE."

Business Strategy

We operate an integrated network of midstream energy assets that includes: natural gas gathering, treating, processing, transportation and storage; NGL fractionation (or separation), transportation, storage and import and export terminalling; crude oil transportation; offshore production platform services; and petrochemical transportation and services. Our business strategies are to:

- capitalize on expected increases in natural gas, NGL and crude oil production resulting from development activities in the Rocky Mountains and U.S. Gulf Coast regions, including the Gulf of Mexico;
- capitalize on expected demand growth for natural gas, NGLs, crude oil and refined products;
- maintain a diversified portfolio of midstream energy assets and expand this asset base through growth capital projects and accretive acquisitions of complementary midstream energy assets;
- share capital costs and risks through joint ventures or alliances with strategic partners, including those that will provide the raw materials for these growth projects or purchase the project's end products; and
- increase fee-based cash flows by investing in pipelines and other fee-based businesses.

Table of Contents

As noted above, part of our business strategy involves expansion through growth capital projects. We expect that these projects will enhance our existing asset base and provide us with additional growth opportunities in the future. For information regarding our growth capital projects, see "Capital Spending" included under Item 7 of this annual report.

Financial Information by Business Segment

For information regarding our business segments, see Note 16 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Recent Developments

For information regarding our recent developments, see "Overview of Business – Recent Developments" included under Item 7 of this annual report, which is incorporated by reference into this Item 1.

Segment Discussion

Our midstream energy asset network links producers of natural gas, NGLs and crude oil from some of the largest supply basins in the United States, Canada and the Gulf of Mexico with domestic consumers and international markets. We have four reportable business segments:

- NGL Pipelines & Services;
- Onshore Natural Gas Pipelines & Services;
- Offshore Pipelines & Services; and
- Petrochemical Services.

Our business segments are generally organized and managed according to the type of services rendered (or technologies employed) and products produced and/or sold.

The following sections present an overview of our business segments, including information regarding the principal products produced, services rendered, seasonality, competition and regulation. Our results of operations and financial condition are subject to a variety of risks. For information regarding our key risk factors, see Item 1A of this annual report.

Our business activities are subject to various federal, state and local laws and regulations governing a wide variety of topics, including commercial, operational, environmental, safety and other matters. For a discussion of the principal effects such laws and regulations have on our business, see "Regulation" and "Environmental and Safety Matters" included within this Item 1.

Our revenues are derived from a wide customer base. During 2007, 2006 and 2005, our largest customer was The Dow Chemical Company and its affiliates, which accounted for 6.9%, 6.1% and 6.8%, respectively, of our consolidated revenues.

Table of Contents

As generally used in the energy industry and in this document, the identified terms have the following meanings:

/d	= per day
BBtus	= billion British thermal units
Bcf	= billion cubic feet
MBPD	= thousand barrels per day
MMBbls	= million barrels
MMBtus	= million British thermal units
MMcf	= million cubic feet

The following discussion of our business segments provides information regarding our principal plants, pipelines and other assets. For information regarding our results of operations, including significant measures of historical throughput, production and processing rates, see Item 7 of this annual report.

NGL Pipelines & Services

Our NGL Pipelines & Services business segment includes our (i) natural gas processing business and related NGL marketing activities, (ii) NGL pipelines aggregating approximately 13,758 miles including our 7,808-mile Mid-America Pipeline System, (iii) NGL and related product storage facilities and (iv) NGL fractionation facilities located in Texas and Louisiana. This segment also includes our import and export terminal operations.

NGL products (ethane, propane, normal butane, isobutane and natural gasoline) are used as raw materials by the petrochemical industry, as feedstocks by refiners in the production of motor gasoline and by industrial and residential users as fuel. Ethane is primarily used in the petrochemical industry as a feedstock for ethylene production, one of the basic building blocks for a wide range of plastics and other chemical products. Propane is used both as a petrochemical feedstock in the production of ethylene and propylene and as a heating, engine and industrial fuel. Normal butane is used as a petrochemical feedstock in the production of ethylene and butadiene (a key ingredient of synthetic rubber), as a blendstock for motor gasoline and to derive isobutane through isomerization. Isobutane is fractionated from mixed butane (a mixed stream of normal butane and isobutane) or produced from normal butane through the process of isomerization, principally for use in refinery alkylation to enhance the octane content of motor gasoline, in the production of isooctane and other octane additives, and in the production of propylene oxide. Natural gasoline, a mixture of pentanes and heavier hydrocarbons, is primarily used as a blendstock for motor gasoline or as a petrochemical feedstock.

Natural gas processing and related NGL marketing activities. At the core of our natural gas processing business are 26 processing plants located in Colorado, Louisiana, Mississippi, New Mexico, Texas and Wyoming. Natural gas produced at the wellhead especially in association with crude oil contains varying amounts of NGLs. This "rich" natural gas in its raw form is usually not acceptable for transportation in the nation's major natural gas pipeline systems or for commercial use as a fuel. Natural gas processing plants remove the NGLs from the natural gas stream, enabling the natural gas to meet transmission pipeline and commercial quality specifications. In addition, on an energy equivalent basis, NGLs generally have a greater economic value as a raw material for petrochemical and motor gasoline production than their value as components of the natural gas stream. After extraction, we typically transport the mixed NGLs to a centralized facility for fractionation (or separation) into purity NGL products such as ethane, propane, normal butane, isobutane and natural gasoline. The purity NGL products can then be used in our NGL marketing activities to meet contractual requirements or sold on spot and forward markets.

When operating and extraction costs of natural gas processing plants are higher than the incremental value of the NGL products that would be extracted from a stream of natural gas, the recovery levels of certain NGL products, principally ethane, may be reduced or eliminated. This leads to a reduction in NGL volumes available for transportation and fractionation.

In our natural gas processing activities, we enter into margin-band contracts, percent-of-liquids contracts, percent-of-proceeds contracts, fee-based contracts, hybrid contracts (a combination of percent-of-liquids and fee-based contract terms) and keepwhole contracts. Under margin-band and keepwhole contracts, we take ownership of mixed NGLs extracted from the producer's natural gas stream and recognize revenue when the extracted NGLs are delivered and sold to customers on NGL marketing sales contracts. In the same way, revenue is recognized under our percent-of-liquids contracts except that the volume of NGLs we earn and sell is less than the total amount of NGLs extracted from the producers' natural gas. Under a percent-of-liquids contract, the producer retains title to the remaining percentage of mixed NGLs we extract and generally bears the natural gas cost for shrinkage and plant fuel. Under a percent-of-proceeds contract, we share in the proceeds generated from the sale of the mixed NGLs we extract on the producer's behalf. If a cash fee for natural gas processing services is stipulated by the contract, we record revenue when the natural gas has been processed and delivered to the producer. The NGL volumes we earn and take title to in connection with our processing activities are referred to as our equity NGL production.

In general, our percent-of-liquids, hybrid and keepwhole contracts give us the right (but not the obligation) to process natural gas for a producer; thus, we are protected from processing at an economic loss during times when the sum of our costs exceeds the value of the mixed NGLs of which we would take ownership. Generally, our natural gas processing agreements have terms ranging from month-to-month to life of the producing lease. Intermediate terms of one to ten years are also common.

To the extent that we are obligated under our margin-band and keepwhole gas processing contracts to compensate the producer for the natural gas equivalent energy value of mixed NGLs we extract from the natural gas stream, we are exposed to various risks, primarily commodity price fluctuations. However, our margin band contracts contain terms which limit our exposure to such risks. The prices of natural gas and NGLs are subject to fluctuations in response to changes in supply, market uncertainty and a variety of additional factors that are beyond our control. Periodically, we attempt to mitigate these risks through the use of commodity financial instruments. For information regarding our use of commodity financial instruments, see "Quantitative and Qualitative Disclosures About Market Risks" included under Item 7A of this annual report.

Our NGL marketing activities generate revenues from the sale and delivery of NGLs obtained through our processing activities and purchases from third parties on the open market. These sales contracts may also include forward product sales contracts. In general, the sales prices referenced in these contracts are market-related and can include pricing differentials for such factors as delivery location.

NGL pipelines, storage facilities and import/export terminals. Our NGL pipeline, storage and terminalling operations include approximately 13,758 miles of NGL pipelines, 154.9 million barrels of working capacity for underground NGL and related product storage and two import/export facilities.

Our NGL pipelines transport mixed NGLs and other hydrocarbons from natural gas processing facilities, refineries and import terminals to fractionation plants and storage facilities; distribute and collect NGL products to and from petrochemical plants and refineries; and deliver propane to customers along the Dixie Pipeline and certain sections of the Mid-America Pipeline System. Revenue from our NGL pipeline transportation agreements is generally based upon a fixed fee per gallon of liquids transported multiplied by the volume delivered. Accordingly, the results of operations for this business are generally dependent upon the volume of product transported and the level of fees charged to customers (including those charged to our NGL and petrochemical marketing activities, which are eliminated in consolidation). The transportation fees charged under these arrangements are either contractual or regulated by governmental agencies, including the Federal Energy Regulatory Commission ("FERC"). Typically, we do not take title to the products transported in our NGL pipelines; rather, the shipper retains title and the associated commodity price risk.

Our NGL and related product storage facilities are integral parts of our operations. In general, our underground storage wells are used to store our and our customers' mixed NGLs, NGL products and petrochemical products. Under our NGL and related product storage agreements, we charge customers monthly storage reservation fees to reserve storage capacity in our underground caverns. The customers pay reservation fees based on the quantity of capacity reserved rather than the actual quantity utilized. When a customer exceeds its reserved capacity, we charge those customers an excess storage fee. In addition, we charge our customers throughput fees based on volumes injected and withdrawn from the storage facility. Accordingly, the profitability of our storage operations is dependent upon the level of capacity reserved by our customers, the volume of product injected and withdrawn from our underground caverns and the level of fees charged.

We operate NGL import and export facilities located on the Houston Ship Channel in southeast Texas. Our import facility is primarily used to offload volumes for delivery to our NGL storage and fractionation facilities near Mont Belvieu, Texas. Our export facility includes an NGL products chiller and related equipment used for loading refrigerated marine tankers for third-party export customers. Revenues from our import and export services are primarily based on fees per unit of volume loaded or unloaded and may also include demand payments. Accordingly, the profitability of our import and export activities primarily depends on the available quantities of NGLs to be loaded and offloaded and the fees we charge for these services.

NGL fractionation. We own or have interests in eight NGL fractionation facilities located in Texas and Louisiana. NGL fractionation facilities separate mixed NGL streams into purity NGL products. The three primary sources of mixed NGLs fractionated in the United States are (i) domestic natural gas processing plants, (ii) domestic crude oil refineries and (iii) imports of butane and propane mixtures. The mixed NGLs delivered from domestic natural gas processing plants and crude oil refineries to our NGL fractionation facilities are typically transported by NGL pipelines and, to a lesser extent, by railcar and truck.

Extraction of mixed NGLs by natural gas processing plants represents the largest source of volumes processed by our NGL fractionators. Based upon industry data, we believe that sufficient volumes of mixed NGLs, especially those originating from Gulf Coast and Rocky Mountain natural gas processing plants, will be available for fractionation in commercially viable quantities for the foreseeable future. Significant volumes of mixed NGLs are contractually committed to our NGL fractionation facilities by joint owners and third-party customers.

The majority of our NGL fractionation facilities process mixed NGL streams for third-party customers and support our NGL marketing activities under fee-based arrangements. These fees (typically in cents per gallon) are subject to adjustment for changes in certain fractionation expenses, including natural gas fuel costs. At our Norco facility, we perform fractionation services for certain customers under percent-of-liquids contracts. The results of operations of our NGL fractionation business are dependent upon the volume of mixed NGLs fractionated and either the level of fractionation fees charged (under fee-based contracts) or the value of NGLs received (under percent-of-liquids arrangements). We are exposed to fluctuations in NGL prices to the extent we fractionate volumes for customers under percent-of-liquids arrangements. Our fee-based customers generally retain title to the NGLs that we process for them.

Seasonality. Our natural gas processing and NGL fractionation operations exhibit little to no seasonal variation. Likewise, our NGL pipeline operations have not exhibited a significant degree of seasonality overall. However, propane transportation volumes are generally higher in the October through March timeframe in connection with increased use of propane for heating in the upper Midwest and southeastern United States. Our facilities located in the southern United States may be affected by weather events such as hurricanes and tropical storms originating in the Gulf of Mexico.

We operate our NGL and related product storage facilities based on the needs and requirements of our customers in the NGL, petrochemical, heating and other related industries. We usually experience an increase in the demand for storage services during the spring and summer months due to increased feedstock storage requirements for motor gasoline production and a decrease during the fall and winter months when propane inventories are being drawn for heating needs. In general, our import volumes peak during the spring and summer months and our export volumes are at their highest levels during the winter months.

In support of our commercial goals, our NGL marketing activities rely on inventories of mixed NGLs and purity NGL products. These inventories are the result of accumulated equity NGL production volumes, imports and other spot and contract purchases. Our inventories of ethane, propane and normal butane are typically higher on a seasonal basis from March through November as each are normally in higher demand and at higher price levels during winter months. Isobutane and natural gasoline inventories are generally stable throughout the year. Our inventory cycle begins in late-February to mid-March (the seasonal low point); builds through September; remains level until early December; before being drawn through winter until the seasonal low is reached again.

Competition. Our natural gas processing business and NGL marketing activities encounter competition from fully integrated oil companies, intrastate pipeline companies, major interstate pipeline companies and their non-regulated affiliates, and independent processors. Each of our competitors has varying levels of financial and personnel resources, and competition generally revolves around price, service and location.

In the markets served by our NGL pipelines, we compete with a number of intrastate and interstate liquids pipelines companies (including those affiliated with major oil, petrochemical and gas companies) and barge, rail and truck fleet operations. In general, our NGL pipelines compete with these entities in terms of transportation fees and service.

Our competitors in the NGL and related product storage businesses are integrated major oil companies, chemical companies and other storage and pipeline companies. We compete with other storage service providers primarily in terms of the fees charged, number of pipeline connections and operational dependability. Our import and export operations compete with those operated by major oil and chemical companies primarily in terms of loading and offloading volumes per hour.

We compete with a number of NGL fractionators in Texas, Louisiana and Kansas. Although competition for NGL fractionation services is primarily based on the fractionation fee charged, the ability of an NGL fractionator to receive mixed NGLs, store and distribute NGL products is also an important competitive factor and is a function of the existence of the necessary pipeline and storage infrastructure.

Properties. The following table summarizes the significant natural gas processing assets of our NGL Pipelines & Services business segment at February 1, 2008.

Description of Asset	Location(s)	Our Ownership Interest	Net Gas Processing Capacity (Bcf/d) (1)	Total Gas Processing Capacity (Bcf/d)
Natural gas processing facilities:				
Pioneer (2)	Wyoming	100%	1.35	1.35
Meeker (3)	Colorado	100%	0.75	0.75
Toca	Louisiana	63.9%	0.70	1.10
Chaco	New Mexico	100%	0.65	0.65
North Terrebonne	Louisiana	48.8%	0.63	1.30
Calumet	Louisiana	32.0%	0.51	1.60
Neptune	Louisiana	66%	0.43	0.65
Pascagoula	Mississippi	40%	0.40	1.50
Yscloskey	Louisiana	18.3%	0.34	1.85
Thompsonville	Texas	100%	0.30	0.30
Shoup	Texas	100%	0.29	0.29
Gilmore	Texas	100%	0.26	0.26
Armstrong	Texas	100%	0.25	0.25
Matagorda	Texas	100%	0.25	0.25
Others (11 facilities) (4)	Texas, New Mexico, Louisiana	Various (5)	1.27	3.44
Total processing capacities			8.38	15.54

(1) The approximate net natural gas processing capacity does not necessarily correspond to our ownership interest in each facility. It is based on a variety of factors such as volumes processed at the facility and ownership interest in the facility.

(2) We acquired a silica gel natural gas processing facility from TEPPCO in March 2006 and subsequently increased the processing capacity from 0.3 Bcf/d to 0.6 Bcf/d. In addition, we constructed a new cryogenic processing facility having 0.75 Bcf/d of processing capacity, which became operational in February 2008.

(3) In October 2007, we commenced natural gas processing operations at our Meeker facility. Phase II of the Meeker facility, which is under construction and expected to be completed in the third quarter of 2008, will double the natural gas processing capacity to 1.5 Bcf/d at this facility.

(4) Includes our Venice, Blue Water, Sea Robin and Burns Point facilities located in Louisiana; Indian Basin and Carlsbad facilities located in New Mexico; and San Martin, Delmita, Sonora, Shilling and Indian Springs facilities located in Texas. We acquired the Indians Springs facility in January 2005. Our ownership in the Venice plant is through our 13.1% equity method investment in Venice Energy Services Company, L.L.C. ("VESCO").

(5) Our ownership in these facilities ranges from 7.4% to 100%.

At the core of our natural gas processing business are 26 processing plants located in Texas, Louisiana, Mississippi, New Mexico, Colorado and Wyoming. Our natural gas processing facilities can be characterized as two distinct types: (i) straddle plants situated on mainline natural gas pipelines owned either by us or by third parties or (ii) field plants that process natural gas from gathering pipelines. We operate the Toca, Chaco, North Terrebonne, Calumet, Neptune, Carlsbad, Meeker and Pioneer plants and all of the Texas facilities. On a weighted-average basis, utilization rates for these assets were 63%, 56% and 53% during the years ended December 31, 2007, 2006 and 2005, respectively. These rates reflect the periods in which we owned an interest in such facilities.

Our NGL marketing activities utilize a fleet of approximately 445 railcars, the majority of which are leased. These railcars are used to deliver feedstocks to our facilities and to distribute NGLs throughout the United States and parts of Canada. We have rail loading and unloading facilities in Alabama, Arizona, California, Kansas, Louisiana, Minnesota, Mississippi, Nevada, North Carolina and Texas. These facilities service both our rail shipments and those of our customers.

The following table summarizes the significant NGL pipelines and related storage assets of our NGL Pipelines & Services business segment at February 1, 2008.

Description of Asset	Location(s)	Our Ownership Interest	Length (Miles)	Useable Storage Capacity (MMBbls)
NGL pipelines:				
Mid-America Pipeline System	Midwest and Western U.S.	100%	7,808	
Dixie Pipeline	South and Southeastern U.S.	74.2% (1)	1,371	
Seminole Pipeline	Texas	90% (2)	1,342	
EPD South Texas NGL System	Texas	100%	1,039	
Louisiana Pipeline System	Louisiana	Various (3)	612	
Promix NGL Gathering System	Louisiana	50%	364	
DEP South Texas NGL Pipeline System	Texas	100% (4)	286	
Houston Ship Channel	Texas	100%	266	
Lou-Tex NGL	Texas, Louisiana	100%	205	
Others (5 systems) (5)	Various	Various	465	
Total miles			13,758	
NGL and related product storage facilities by state:				
Texas (6)				124.5
Louisiana				15.3
Mississippi				5.7
Others (Arizona, Georgia, Iowa, Kansas, Nebraska, Oklahoma)				9.4
Total capacity (7)				154.9

(1) We hold a 74.2% interest in this system through a majority owned subsidiary, Dixie Pipeline Company ("Dixie").

(2) We hold a 90% interest in this system through a majority owned subsidiary, Seminole Pipeline Company ("Seminole").

(3) Of the 612 total miles for this system, we own 100% of 559 miles and 43.5% of the remaining 53 miles.

(4) Reflects consolidated ownership of this system by EPO (34%) and Duncan Energy Partners (66%).

(5) Includes our Tri-States, Belle Rose, Wilprise, and Chunchula pipelines located in the coastal regions of Alabama, Louisiana, and Mississippi and our Meeker pipeline in Colorado. We completed the Meeker pipeline in 2007, which transports NGLs from our Meeker natural gas processing facility to the Mid-America Pipeline System.

(6) The amount shown for Texas includes 33 underground caverns with an aggregate useable storage capacity of approximately 100 MMBbls that we own jointly with Duncan Energy Partners. These caverns are located in Mont Belvieu, Texas.

(7) The 154.9 MMBbls of total useable storage capacity includes 20.8 MMBbls held under operating leases. The leased facilities are located in Texas, Louisiana and Kansas.

The maximum number of barrels that our NGL pipelines can transport per day depends upon the operating balance achieved at a given point in time between various segments of the systems. Since the operating balance is dependent upon the mix of products to be shipped and demand levels at various delivery points, the exact capacities of our NGL pipelines cannot be determined. We measure the utilization rates of such pipelines in terms of net throughput (i.e., on a net basis in accordance with our ownership interest). Total net throughput volumes for these pipelines were 1,583 MBPD, 1,450 MBPD and 1,360 MBPD during the years ended December 31, 2007, 2006 and 2005, respectively.

The following information highlights the general use of each of our principal NGL pipelines. We operate our NGL pipelines with the exception of Tri-States and a small portion of the Louisiana Pipeline System.

- The *Mid-America Pipeline System* is a regulated NGL pipeline system consisting of three primary segments: the 2,785-mile Rocky Mountain pipeline, the 2,771-mile Conway North pipeline and the 2,252-mile Conway South pipeline. This system covers thirteen states: Wyoming, Utah, Colorado, New Mexico, Texas, Oklahoma, Kansas, Missouri, Nebraska, Iowa, Illinois, Minnesota and Wisconsin. The Rocky Mountain pipeline transports mixed NGLs from the Rocky Mountain Overthrust and San Juan Basin areas to the Hobbs hub located on the Texas-New Mexico border. During 2007, the Rocky Mountain pipeline's capacity was increased by 50 MBPD. The Conway North segment links the NGL hub at Conway, Kansas to refineries, petrochemical plants and propane markets in the upper Midwest. In addition, the

Conway North segment has access to NGL supplies from Canada's Western Sedimentary Basin through third-party connections. The Conway South pipeline, which completed an expansion in 2007, connects the Conway hub with Kansas refineries and transports NGLs to and from Conway, Kansas to the Hobbs hub. The Mid-America Pipeline System interconnects with our Seminole Pipeline and Hobbs NGL fractionator and storage facility at the Hobbs hub. We also own fifteen unregulated propane terminals that are an integral part of the Mid-America Pipeline System.

During 2007, approximately 51% of the volumes transported on the Mid-America Pipeline System were mixed NGLs originating from natural gas processing plants located in the Permian Basin in west Texas, the Hugoton Basin of southwestern Kansas, the San Juan Basin of northwest New Mexico, the Piceance Basin of Colorado, the Uintah Basin of Colorado and Utah and the Greater Green River Basin of southwestern Wyoming. The remaining volumes are generally purity NGL products originating from NGL fractionators in the mid-continent areas of Kansas, Oklahoma, and Texas, as well as deliveries from Canada.

- The *Dixie Pipeline* is a regulated propane pipeline extending from southeast Texas and Louisiana to markets in the southeastern United States. Propane supplies transported on this system primarily originate from southeast Texas, southern Louisiana and Mississippi. This system operates in seven states: Texas, Louisiana, Mississippi, Alabama, Georgia, South Carolina and North Carolina.

- The *Seminole Pipeline* is a regulated pipeline that transports NGLs from the Hobbs hub and the Permian Basin area of west Texas to markets in southeastern Texas. NGLs originating on the Mid-America Pipeline System are the primary source of throughput for the Seminole Pipeline.

- The *EPD South Texas NGL System* is a network of NGL gathering and transportation pipelines located in south Texas. The system includes 379 miles of pipeline used to gather and transport mixed NGLs from our south Texas natural gas processing facilities to our south Texas NGL fractionation facilities. The pipeline system also includes approximately 660 miles of pipelines that deliver NGLs from our south Texas fractionation facilities to refineries and petrochemical plants located between Corpus Christi and Houston, Texas and within the Texas City-Houston area, as well as to common carrier NGL pipelines.

- The *Louisiana Pipeline System* is a network of NGL pipelines located in Louisiana. This system transports NGLs originating in southern Louisiana and Texas to refineries and petrochemical companies along the Mississippi River corridor in southern Louisiana. This system also provides transportation services for our natural gas processing plants, NGL fractionators and other facilities located in Louisiana.

- The *Promix NGL Gathering System* is a NGL pipeline system that gathers mixed NGLs from natural gas processing plants in Louisiana for delivery to an NGL fractionator owned by K/D/S Promix, L.L.C. ("Promix"). This gathering system is an integral part of the Promix NGL fractionation facility. Our ownership interest in this pipeline is held indirectly through our equity method investment in Promix.

- The *DEP South Texas NGL Pipeline System* transports NGLs from our Shoup and Armstrong fractionation facilities in south Texas to Mont Belvieu, Texas. This system became operational in January 2007.

  We contributed a direct 66% equity interest in South Texas NGL Pipelines, LLC ("South Texas NGL"), our subsidiary that owns the DEP South Texas NGL Pipeline System, to Duncan Energy Partners effective February 1, 2007. We own the remaining 34% direct equity interest in South Texas NGL. For additional information regarding Duncan Energy Partners, see "Other Items – Initial Public Offering of Duncan Energy Partners" included under Item 7 of this annual report.

- The *Houston Ship Channel* pipeline system is a collection of pipelines extending from our Houston Ship Channel import/export facility and Morgan's Point facility to Mont Belvieu, Texas.

This system is used to deliver NGL products to third-party petrochemical plants and refineries as well as to deliver feedstocks to our Mont Belvieu facilities.

- The *Lou-Tex NGL* pipeline system is used to provide transportation services for NGLs and refinery grade propylene between the Louisiana and Texas markets. We also use this pipeline to transport mixed NGLs from certain of our Louisiana gas processing plants to our Mont Belvieu NGL fractionation facility.

Our NGL and related product storage facilities are integral parts of our pipeline and other operations. In general, these underground storage facilities are used to store NGLs and petrochemical products for us and our customers. Our underground storage facilities include locations in Arizona and Kansas that were acquired in July 2005. We operate these facilities, with the exception of certain storage locations operated for us by a third party in Louisiana.

We contributed a direct 66% equity interest in our subsidiary, Mont Belvieu Caverns, LLC ("Mont Belvieu Caverns"), to Duncan Energy Partners on February 5, 2007. We own the remaining 34% direct equity interest in Mont Belvieu Caverns. Mont Belvieu Caverns owns 33 underground storage caverns with an aggregate underground storage capacity of approximately 100 MMBbls, and a brine system with approximately 20 MMBbls of above-ground storage pit capacity and two brine production wells. These assets store and deliver NGLs (such as ethane and propane) and certain petrochemical products for industrial customers located along the upper Texas Gulf Coast. In 2007, we modified certain wells at our Mont Belvieu Caverns' facility to enable us to also store refined products such as motor gasoline and diesel fuel. For information regarding our ongoing Mont Belvieu storage well optimization projects, see "Liquidity and Capital Resources – Capital Spending" included under Item 7 of this annual report.

The following table summarizes the significant NGL fractionation assets of our NGL Pipelines & Services business segment at February 1, 2008.

Description of Asset	Location(s)	Our Ownership Interest	Net Plant Capacity (MBPD) (1)	Total Plant Capacity (MBPD)
NGL fractionation facilities:				
Mont Belvieu	Texas	75%	178	230
Shoup and Armstrong	Texas	100%	87	87
Hobbs	Texas	100%	75	75
Norco	Louisiana	100%	75	75
Promix	Louisiana	50%	73	145
BRF	Louisiana	32.2%	19	60
Tebone	Louisiana	43.5%	12	30
Total plant capacities			519	702

(1) The approximate net NGL fractionation capacity does not necessarily correspond to our ownership interest in each facility. It is based on a variety of factors such as volumes processed at the facility and ownership interest in the facility.

The following information highlights the general use of each of our principal NGL fractionation facilities. We operate all of our NGL fractionation facilities.

- Our *Mont Belvieu* NGL fractionation facility is located at Mont Belvieu, Texas, which is a key hub of the domestic and international NGL industry. This facility fractionates mixed NGLs from several major NGL supply basins in North America including the Mid-Continent, Permian Basin, San Juan Basin, Rocky Mountain Overthrust, East Texas and the Gulf Coast.

- Our *Shoup* and *Armstrong* NGL fractionation facilities fractionate mixed NGLs supplied by our south Texas natural gas processing plants. The Shoup and Armstrong facilities supply NGLs transported by the DEP South Texas NGL Pipeline System.

- The *Hobbs* NGL fractionation facility is located in Gaines County, Texas, where it serves petrochemical end users and refineries in West Texas, New Mexico and California. In addition, the Hobbs facility can supply exports to northern Mexico through existing pipeline infrastructure. The Hobbs facility receives mixed NGLs from several major supply basins including Mid-Continent, Permian Basin, San Juan Basin and the Rocky Mountain Overthrust. The facility is strategically located at the interconnect of our Mid-America Pipeline System and Seminole Pipeline, providing us flexibility to supply the nation's largest NGL hub at Mont Belvieu, Texas as well as access to the second-largest NGL hub at Conway, Kansas.

- The *Norco* NGL fractionation facility receives mixed NGLs via pipeline from refineries and natural gas processing plants located in southern Louisiana and along the Mississippi and Alabama Gulf Coast, including our Yscloskey, Pascagoula, Venice and Toca facilities.

- The *Promix* NGL fractionation facility receives mixed NGLs via pipeline from natural gas processing plants located in southern Louisiana and along the Mississippi Gulf Coast, including our Calumet, Neptune, Burns Point and Pascagoula facilities. In addition to the 364-mile Promix NGL Gathering System, Promix owns five NGL storage caverns and a barge loading facility that is integral to its operations.

- The *BRF* facility fractionates mixed NGLs from natural gas processing plants located in Alabama, Mississippi and southern Louisiana.

On a weighted-average basis, utilization rates for our NGL fractionators were 80%, 75% and 74% during the years ended December 31, 2007, 2006 and 2005, respectively. These rates reflect the periods in which we owned an interest in such facilities. We own direct consolidated interests in all of our NGL fractionation facilities with the exception of a 50% interest in a facility owned by Promix and a 32.2% interest in a facility owned by Baton Rouge Fractionators LLC ("BRF").

Our NGL operations include import and export facilities located on the Houston Ship Channel in southeast Texas. We own an import and export facility located on land we lease from Oiltanking Houston LP ("OTTI"). In June 2007, we completed an expansion of our OTTI facilities, which significantly increased our loading and offloading capabilities. Our OTTI import facility can now offload NGLs from tanker vessels at rates up to 20,000 barrels per hour depending on the product. Our OTTI export facility can now load cargoes of refrigerated propane and butane onto tanker vessels at rates up to 6,700 barrels per hour. Previously, our offloading rate was up to 10,000 barrels per hour (depending on product) and our maximum loading rate was 5,000 barrels per hour. In addition to our OTTI facilities, we own a barge dock that can load or offload two barges of NGLs or refinery-grade propylene simultaneously at rates up to 5,000 barrels per hour. Our average combined NGL import and export volumes were 84 MBPD, 127 MBPD and 119 MBPD for 2007, 2006 and 2005, respectively.

Onshore Natural Gas Pipelines & Services

Our Onshore Natural Gas Pipelines & Services business segment includes approximately 17,758 miles of onshore natural gas pipeline systems that provide for the gathering and transmission of natural gas in Alabama, Colorado, Louisiana, Mississippi, New Mexico, Texas and Wyoming. We own two salt dome natural gas storage facilities located in Mississippi and lease natural gas storage facilities located in Texas and Louisiana. This segment also includes our natural gas marketing activities.

Onshore natural gas pipelines and related natural gas marketing. Our onshore natural gas pipeline systems provide for the gathering and transmission of natural gas from onshore developments, such as the San Juan, Barnett Shale, Permian, Piceance and Greater Green River supply basins in the Western U.S., and from offshore developments in the Gulf of Mexico through connections with offshore pipelines. Typically, these systems receive natural gas from producers, other pipelines or shippers through system interconnects and redeliver the natural gas to processing facilities, local gas distribution companies, industrial or municipal customers or to other onshore pipelines.

Certain of our onshore natural gas pipelines generate revenues from transportation agreements where shippers are billed a fee per unit of volume transported (typically in MMBtus) multiplied by the volume delivered. The transportation fees charged under these arrangements are either contractual or regulated by governmental agencies, including the FERC. Intrastate natural gas pipelines (such as our Acadian Gas and Alabama Intrastate systems) may also purchase natural gas from producers and suppliers and resell such natural gas to customers such as electric utility companies, local natural gas distribution companies and industrial customers.

We entered the natural gas marketing business in 2001 when we acquired the Acadian Gas System. In 2007, we initiated an expansion of this marketing business to leverage off our other natural gas pipeline assets. Our natural gas marketing activities generate revenues from the sale and delivery of natural gas obtained primarily from (i) third party well-head purchases, (ii) our natural gas processing plants or (iii) the open market. In general, our natural gas sales contracts utilize market-based pricing and can incorporate pricing differentials for factors such as delivery location. We expect our natural gas marketing business to continue to grow in the future. Our consolidated revenues from this business were $1.6 billion, $1.2 billion and $1.1 billion for the years ended December 31, 2007, 2006 and 2005, respectively.

We are exposed to commodity price risk to the extent that we take title to natural gas volumes through our natural gas marketing activities or through certain contracts on our intrastate natural gas pipelines. In addition, our San Juan, Waha, Carlsbad and Jonah pipelines provide aggregating and bundling services, in which we purchase and resell natural gas for certain small producers. Also, several of our gathering systems, while not providing marketing services, have some exposure to risks related to commodity prices through transportation arrangements with shippers. For example, approximately 95% of the fee-based gathering arrangements of our San Juan Gathering System are calculated using a percentage of a regional price index for natural gas. We use commodity financial instruments from time to time to mitigate our exposure to risks related to commodity prices. For information regarding our use of commodity financial instruments, see "Quantitative and Qualitative Disclosures About Market Risks" included under Item 7A of this annual report.

Underground natural gas storage. We own two underground salt dome natural gas storage facilities located near Hattiesburg, Mississippi that are ideally situated to serve the domestic Northeast, Mid-Atlantic and Southeast natural gas markets. On a combined basis, these facilities (our Petal Gas Storage ("Petal") and Hattiesburg Gas Storage ("Hattiesburg") locations) are capable of delivering in excess of 1.4 Bcf/d of natural gas into five interstate pipeline systems. We also lease underground salt dome natural gas storage caverns that serve markets in Texas and Louisiana.

The ability of salt dome storage caverns to handle high levels of injections and withdrawals of natural gas benefits customers who desire the ability to meet load swings and to cover major supply interruption events, such as hurricanes and temporary losses of production. High injection and withdrawal rates also allow customers to take advantage of periods of volatile natural gas prices and respond in situations where they have natural gas imbalance issues on pipelines connected to the storage facilities. Our salt dome storage facilities permit sustained periods of high natural gas deliveries, including the ability to quickly switch from full injection to full withdrawal.

Under our natural gas storage contracts, there are typically two components of revenues: (i) monthly demand payments, which are associated with storage capacity reservation and paid regardless of the customer's usage, and (ii) storage fees per unit of volume stored at our facilities.

Seasonality. Typically, our onshore natural gas pipelines experience higher throughput rates during the summer months as natural gas-fired power generation facilities increase output to meet residential and commercial demand for electricity for air conditioning and in the winter months natural gas is needed as fuel for residential and commercial heating. Likewise, this seasonality also impacts the timing of injections and withdrawals at our natural gas storage facilities.

Competition. Within their market areas, our onshore natural gas pipelines compete with other onshore natural gas pipelines on the basis of price (in terms of transportation fees and/or natural gas selling prices), service and flexibility. Our competitive position within the onshore market is enhanced by our longstanding relationships with customers and the limited number of delivery pipelines connected (or capable of being economically connected) to the customers we serve.

Competition for natural gas storage is primarily based on location and the ability to deliver natural gas in a timely and reliable manner. Our natural gas storage facilities compete with other providers of natural gas storage, including other salt dome storage facilities and depleted reservoir facilities. We believe that the locations of our natural gas storage facilities allow us to compete effectively with other companies who provide natural gas storage services.

Properties. The following table summarizes the significant assets of our Onshore Natural Gas Pipelines & Services business segment at February 1, 2008.

Description of Asset	Location(s)	Our Ownership Interest	Length (Miles)	Approx. Net Capacity, Natural Gas (MMcf/d)	Gross Capacity (Bcf)
Onshore natural gas pipelines:					
Texas Intrastate System	Texas	100% (1)	6,976	5,155	
Piceance Creek Gathering System	Colorado	100%	48	1,600	
San Juan Gathering System	New Mexico, Colorado	100%	6,065	1,200	
Acadian Gas System	Louisiana	Various (2)	1,042	1,149	
Jonah Gathering System	Wyoming	19.4%	643	387	
Waha Gathering System	Texas, New Mexico	100%	465	380	
Carlsbad Gathering System	Texas, New Mexico	100%	919	220	
Alabama Intrastate System	Alabama	100%	408	200	
Encinal Gathering System	Texas	100%	449	143	
Other (6 systems) (3)	Texas, Mississippi	Various (4)	743		
Total miles			17,758		
Natural gas storage facilities:					
Petal	Mississippi	100%			14.1
Hattiesburg	Mississippi	100%			4.0
Wilson	Texas	Leased (5)			6.4
Acadian	Louisiana	Leased (6)			3.0
Total gross capacity					27.5

(1) We own a 50% undivided interest in the 641-mile Channel pipeline system, which is a component of the Texas Intrastate System. The remaining 50% is owned by affiliates of Energy Transfer Equity. In addition, we own less than a 100% undivided interest in certain segments of the Enterprise Texas pipeline system.

(2) Reflects consolidated ownership of Acadian Gas by EPO (34%) and Duncan Energy Partners (66%). Also includes the 49.5% equity investment that Acadian Gas has in the Evangeline pipeline.

(3) Includes the Delmita, Big Thicket, Indian Springs and Canales gathering systems located in Texas and the Petal and Hattiesburg pipelines located in Mississippi. The Delmita and Big Thicket gathering systems are integral parts of our natural gas processing operations, the results of operations and assets of which are accounted for under our NGL Pipelines & Services business segment. We acquired the Canales gathering system in connection with the Encinal acquisition in July 2006. The Petal and Hattiesburg pipelines are integral components of our natural gas storage operations.

(4) We own 100% of these assets with the exception of the Indian Springs system, in which we own an 80% undivided interest through a consolidated subsidiary.

(5) This facility is held under an operating lease that expires in January 2028.

(6) We hold this facility under an operating lease that expires in December 2012.

On a weighted-average basis, aggregate utilization rates for our onshore natural gas pipelines were approximately 64%, 71% and 73% during the years ended December 31, 2007, 2006 and 2005, respectively. The utilization rate for 2007 excludes our Piceance Creek Gathering System, which operated at an average utilization rate of 24% during 2007 as volumes ramped-up on this system. Our utilization rates reflect the periods in which we owned an interest in such assets, or, for recently constructed assets, since the dates such assets were placed into service.

The following information highlights the general use of each of our principal onshore natural gas pipelines and storage facilities, all of which we operate.

- The *Texas Intrastate System* gathers and transports natural gas from supply basins in Texas (from both onshore and offshore sources) to local gas distribution companies and electric generation and industrial and municipal consumers as well as to connections with intrastate and interstate pipelines. This system serves important natural gas producing regions and commercial markets in Texas, including Corpus Christi, the San Antonio/Austin area, the Beaumont/Orange area, the Houston area, and the Houston Ship Channel industrial market. The Texas Intrastate System is comprised of the 6,106-mile Enterprise Texas pipeline system, the 229-mile TPC Offshore gathering system and the 641-mile Channel pipeline system. The leased Wilson natural gas storage facility is an integral part of the Texas Intrastate System.

  In November 2006, we announced an expansion of our Texas Intrastate System with the construction of the Sherman Extension that will transport up to 1.1 Bcf/d of natural gas from the growing Barnett Shale area of North Texas. For information regarding this expansion projects, see "Liquidity and Capital Resources — Capital Spending" included under Item 7 of this annual report.

- The *Piceance Creek Gathering System* consists of a recently constructed natural gas gathering pipeline located in the Piceance Basin of northwestern Colorado. We acquired this pipeline from EnCana Oil & Gas ("EnCana") in December 2006. The Piceance Creek Gathering System extends from a connection with EnCana's Great Divide Gathering System located near Parachute, Colorado, northward through the heart of the Piceance Basin to our 1.5 Bcf/d Meeker natural gas treating and processing complex, which completed its first phase of construction in October 2007. We placed the Piceance Creek Gathering System into service in January 2007 and it currently transports approximately 520 MMcf/d of natural gas. With connectivity to EnCana's Great Divide Gathering System, our Piceance Creek Gathering System has access to natural gas production from the southern portion of the Piceance basin, including production from EnCana's Mamm Creek field.

- The *San Juan Gathering System* serves natural gas producers in the San Juan Basin of New Mexico and Colorado. This system gathers natural gas production from over 10,630 producing wells in the San Juan Basin and delivers the natural gas to natural gas processing facilities, including our Chaco facility.

  In November 2007, we and the Jicarilla Apache Nation announced the formation of a joint venture to own and operate natural gas gathering assets located on or near Jicarilla Apache Nation reservation lands. For additional information regarding this new joint venture, see "Recent Developments" included under Item 7 of this annual report.

- The *Acadian Gas System* purchases, transports, stores and sells natural gas in Louisiana. The Acadian Gas System is comprised of the 577-mile Cypress pipeline, 438-mile Acadian pipeline and the 27-mile Evangeline pipeline. The leased Acadian natural gas storage facility is an integral part of the Acadian Gas System.

  We contributed a direct 66% equity interest in Acadian Gas, LLC ("Acadian Gas"), which is a subsidiary that owns the Cypress and Acadian pipelines, to Duncan Energy Partners on February 5, 2007. We own the remaining 34% direct equity interest in Acadian Gas. For additional information regarding Duncan Energy Partners, see "Other Items — Initial Public Offering of Duncan Energy Partners" included under Item 7 of this annual report. Acadian Gas owns a 49.5% indirect interest in the Evangeline pipeline.

- The *Jonah Gathering System* is located in the Greater Green River Basin of southwestern Wyoming. This system gathers natural gas from the Jonah and Pinedale fields for delivery to regional natural gas processing plants, including our Pioneer facility, and major interstate

Table of Contents

pipelines. Our ownership in this gathering system is through our 19.4% equity method investment in Jonah Gas Gathering Company, which we acquired from TEPPCO in August 2006. We completed the first portion of the Phase V expansion the Jonah Gathering System in July 2007.

Currently the gross gathering capacity of this system is 2.0 Bcf/d (net to our interest, 387 MMcf/d) and is expected to increase to 2.4 Bcf/d upon the completion of the final stage of this expansion in April 2008. For additional information regarding this joint venture arrangement with TEPPCO, see Item 13 of this annual report.

- The *Waha and Carlsbad Gathering Systems* (formerly our Permian Basin System) gather natural gas from wells in the Permian Basin region of Texas and New Mexico and deliver natural gas into the El Paso Natural Gas, Transwestern and Oasis pipelines.

- The *Alabama Intrastate System* mainly gathers coal bed methane from wells in the Black Warrior Basin in Alabama. This system is also involved in the purchase, transportation and sale of natural gas.

- The *Encinal Gathering System* gathers natural gas from the Olmos and Wilcox formations in south Texas and delivers into our Texas Intrastate System, which delivers the natural gas into our south Texas facilities for processing. We acquired this gathering system in connection with the Encinal acquisition in July 2006.

- Our *Petal* and *Hattiesburg* underground storage facilities are strategically situated to serve the domestic Northeast, Mid-Atlantic and Southeast natural gas markets and are capable of delivering in excess of 1.4 Bcf/d of natural gas into five interstate pipeline systems.

We are developing a new natural gas storage cavern located at our Petal facility. The new cavern is designed to store approximately 7.9 Bcf of natural gas, of which approximately 5.0 Bcf will be working gas capacity and 2.9 Bcf will be the base gas requirements needed to support minimum pressures. This expansion project was approved by the FERC and is projected to commence operations during the second quarter of 2008. We have long-term, binding precedent agreements on the majority of the new capacity.

We are developing additional natural gas storage capacity at our Wilson facility. In addition, we are constructing various natural gas gathering pipelines and related assets in the Rocky Mountains region in support of long-term service agreements with major producers. For information regarding these expansion projects, see "Liquidity and Capital Resources — Capital Spending" included under Item 7 of this annual report.

Offshore Pipelines & Services

Our Offshore Pipelines & Services business segment includes (i) approximately 1,555 miles of offshore natural gas pipelines strategically located to serve production areas including some of the most active drilling and development regions in the Gulf of Mexico, (ii) approximately 914 miles of offshore Gulf of Mexico crude oil pipeline systems and (iii) six multi-purpose offshore hub platforms located in the Gulf of Mexico with crude oil or natural gas processing capabilities.

Offshore natural gas pipelines. Our offshore natural gas pipeline systems provide for the gathering and transmission of natural gas from production developments located in the Gulf of Mexico, primarily offshore Louisiana and Texas. Typically, these systems receive natural gas from producers, other pipelines and shippers through system interconnects and transport the natural gas to various downstream pipelines, including major interstate transmission pipelines that access multiple markets in the eastern half of the United States.

Our revenues from offshore natural gas pipelines are derived from fee-based agreements and are typically based on transportation fees per unit of volume transported (generally in MMBtus) multiplied by the volume delivered. These transportation agreements tend to be long-term in nature, often involving life-of-reserve commitments with firm and interruptible components. We do not take title to the natural gas volumes that are transported on our natural gas pipeline systems; rather, the shipper retains title and the associated commodity price risk.

Offshore oil pipelines. We own interests in several offshore oil pipeline systems, which are located in the vicinity of oil-producing areas in the Gulf of Mexico. Typically, these systems receive crude oil from offshore production developments, other pipelines or shippers through system interconnects and deliver the oil to either onshore locations or to other offshore interconnecting pipelines.

The majority of revenues from our offshore crude oil pipelines are derived from purchase and sale arrangements whereby we purchase oil from shippers at various receipt points along our crude oil pipelines for an index-based price (less a price differential) and sell the oil back to the shippers at various redelivery points at the same index-based price. Net revenue recognized from such arrangements is based on a price differential per unit of volume (typically in barrels) multiplied by the volume delivered. In addition, certain of our offshore crude oil pipelines generate revenues based upon a transportation fee per unit of volume (typically in barrels) multiplied by the volume delivered to the customer. A substantial portion of the revenues generated by our offshore crude oil pipeline systems are attributable to (i) production from reserves committed under long-term contracts for the productive life of the relevant field or (ii) contracts for the purchase and sale of crude oil with terms from two to twelve months. The revenues we earn for our services are dependent on the volume of crude oil to be delivered and the amount and term of the reserve commitment by the customer.

Offshore platforms. We have ownership interests in six multi-purpose offshore hub platforms located in the Gulf of Mexico with crude oil or natural gas processing capabilities. Offshore platforms are critical components of the offshore infrastructure in the Gulf of Mexico, supporting drilling and producing operations, and therefore play a key role in the overall development of offshore oil and natural gas reserves. Platforms are used to: (i) interconnect with the offshore pipeline grid; (ii) provide an efficient means to perform pipeline maintenance; (iii) locate compression, separation, production handling and other facilities; (iv) conduct drilling operations during the initial development phase of an oil and natural gas property; and (v) process off-lease production.

Revenues from offshore platform services generally consist of demand payments and commodity charges. Demand fees represent charges to customers served by our offshore platforms regardless of the volume the customer delivers to the platform. Revenues from commodity charges are based on a fixed-fee per unit of volume delivered to the platform (typically per MMcf of natural gas or per barrel of crude oil) multiplied by the total volume of each product delivered. Contracts for platform services often include both demand payments and commodity charges, but demand payments generally expire after a contractually fixed period of time and in some instances may be subject to cancellation by customers. Our Independence Hub and Marco Polo offshore platforms earn a significant amount of demand revenues. The Independence Hub platform will earn $55.2 million of demand revenues annually through March 2012. The Marco Polo platform will earn $25.2 million of demand revenues annually through April 2009.

Seasonality. Our offshore operations exhibit little to no effects of seasonality; however, they may be affected by weather events such as hurricanes and tropical storms in the Gulf of Mexico.

Competition. Within their market area, our offshore natural gas and oil pipelines compete with other pipelines (both regulated and unregulated systems) primarily on the basis of price (in terms of transportation fees), available capacity and connections to downstream markets. To a limited extent, our competition includes other offshore pipeline systems, built, owned and operated by producers to handle their own production and, as capacity is available, production for others. We compete with other platform service providers on the basis of proximity and access to existing reserves and pipeline systems, as well as costs and rates. Furthermore, our competitors may possess greater capital resources than we have available, which could enable them to address business opportunities more quickly than us.

Properties. The following table summarizes the significant assets of our Offshore Pipelines & Services business segment at February 1, 2008, all of which are located in the Gulf of Mexico primarily offshore Louisiana and Texas.

Description of Asset	Our Ownership Interest	Length (Miles)	Water Depth (Feet)	Approximate Net Capacity Natural Gas (MMcf/d)	Approximate Net Capacity Crude Oil (MPBD)
Offshore natural gas pipelines:					
High Island Offshore System	100%	291		1,800	
Viosca Knoll Gathering System	100%	172		1,000	
Independence Trail (1)	100%	134		1,000	
Green Canyon Laterals	Various (2)	95		599	
Anaconda Gathering System (3)	100%	137		550	
Phoenix Gathering System	100%	77		450	
Falcon Natural Gas Pipeline	100%	14		400	
Manta Ray Offshore Gathering System	25.7%	250		206	
Nautilus System	25.7%	101		154	
VESCO Gathering System	13.1%	260		105	
Nemo Gathering System	33.9%	24		102	
Total miles		1,555			
Offshore crude oil pipelines:					
Cameron Highway Oil Pipeline	50%	374			250
Poseidon Oil Pipeline System	36%	372			144
Allegheny Oil Pipeline	100%	43			140
Marco Polo Oil Pipeline	100%	37			120
Constitution Oil Pipeline	100%	67			80
Typhoon Oil Pipeline	100%	17			80
Tarantula Oil Pipeline	100%	4			30
Total miles		914			
Offshore platforms:					
Independence Hub (1)	80%		8,000	800	NA
Marco Polo	50%		4,300	150	60
Viosca Knoll 817	100%		671	145	5
Garden Banks 72	50%		518	40	18
East Cameron 373	100%		441	195	3
Falcon Nest	100%		389	400	3

(1) In July 2007, the Independence Hub platform and Independence Trail pipeline received first production from deepwater production wells connected to the Independence Hub platform. The Independence Hub platform began earning demand revenues in March 2007.

(2) Our ownership interests in the Green Canyon Laterals ranges from 0% to 100%.

(3) Data shown for the Anaconda Gathering System includes the 30-mile Constitution natural gas pipeline, which we constructed and placed into service in 2006. The Constitution natural gas pipeline has a net capacity of approximately 200 MMcf/d.

We operate our offshore natural gas pipelines, with the exception of the VESCO Gathering System, Manta Ray Offshore Gathering System, Nautilus System, Nemo Gathering System and certain components of the Green Canyon Laterals. On a weighted-average basis, aggregate utilization rates for our offshore natural gas pipelines were approximately 24%, 26% and 30% during the years ended December 31, 2007, 2006 and 2005, respectively. These rates reflect the periods in which we owned an interest in such assets.

The following information highlights the general use of each of our principal Gulf of Mexico offshore natural gas pipelines.

- The *High Island Offshore System* ("HIOS") transports natural gas from producing fields located in the Galveston, Garden Banks, West Cameron, High Island and East Breaks areas of the Gulf of Mexico to the ANR pipeline system, Tennessee Gas Pipeline and the U-T Offshore System. The HIOS pipeline system includes eight pipeline junction and service platforms. This system also includes the 86-mile East Breaks System that connects the Hoover-Diana deepwater platform located in Alaminos Canyon Block 25 to the HIOS pipeline system.

Table of Contents

- The *Viosca Knoll Gathering System* transports natural gas from producing fields located in the Main Pass, Mississippi Canyon and Viosca Knoll areas to several major interstate pipelines, including the Tennessee Gas, Columbia Gulf, Southern Natural, Transco, Dauphin Island Gathering System and Destin Pipelines.
- The *Independence Trail* natural gas pipeline transports natural gas from our Independence Hub platform to the Tennessee Gas Pipeline. Natural gas transported on the Independence Trail comes from production fields in the Atwater Valley, DeSoto Canyon, Lloyd Ridge and Mississippi Canyon areas of the Gulf of Mexico. This pipeline includes one pipeline junction platform at West Delta 68. We completed construction of the Independence Trail natural gas pipeline during 2006. In July 2007, the Independence Trail pipeline received first production from deepwater wells connected to the Independence Hub platform.
- The *Green Canyon Laterals* consist of 20 pipeline laterals (which are extensions of natural gas pipelines) that transport natural gas to downstream pipelines, including the HIOS.
- The *Anaconda Gathering System* connects our Marco Polo platform and the third-party owned Constitution platform to the ANR pipeline system. The Anaconda Gathering System includes our wholly-owned Typhoon, Marco Polo and Constitution natural gas pipelines. The Constitution natural gas pipeline serves the Constitution and Ticonderoga fields located in the central Gulf of Mexico.
- The *Phoenix Gathering System* connects the Red Hawk platform located in the Garden Banks area of the Gulf of Mexico to the ANR pipeline system.
- The *Falcon Natural Gas Pipeline* delivers natural gas processed at our Falcon Nest platform to a connection with the Central Texas Gathering System located on the Brazos Addition Block 133 platform.
- The *Manta Ray Offshore Gathering System* transports natural gas from producing fields located in the Green Canyon, Southern Green Canyon, Ship Shoal, South Timbalier and Ewing Bank areas of the Gulf of Mexico to numerous downstream pipelines, including our Nautilus System. Our ownership interest in this pipeline is held indirectly through our equity method investment in Neptune Pipeline Company, L.L.C. ("Neptune").
- The *Nautilus System* connects our Manta Ray Offshore Gathering System to our Neptune natural gas processing plant on the Louisiana gulf coast. Our ownership interest in this pipeline is held indirectly through our equity method investment in Neptune.
- The *VESCO Gathering System* is a 260-mile regulated natural gas pipeline system associated with the Venice natural gas processing plant in Louisiana. This pipeline is an integral part of the natural gas processing operations of VESCO. Our 13.1% interest in this system is held through our equity method investment in VESCO.
- The *Nemo Gathering System* transports natural gas from Green Canyon developments to an interconnect with our Manta Ray Offshore Gathering System. Our ownership interest in this pipeline is held indirectly through our equity method investment in Nemo Gathering Company, LLC.

Table of Contents

The following information highlights the general use of each of our principal Gulf of Mexico offshore crude oil pipelines, all of which we operate. On a weighted-average basis, aggregate utilization rates for our offshore crude oil pipelines were approximately 19%, 18% and 17% during the years ended December 31, 2007, 2006 and 2005, respectively. These rates reflect the periods in which we owned an interest in such assets.

- The *Cameron Highway Oil Pipeline* gathers crude oil production from deepwater areas of the Gulf of Mexico, primarily the South Green Canyon area, for delivery to refineries and terminals in southeast Texas. This pipeline includes one pipeline junction platform. Our 50% joint control ownership interest in this pipeline is held indirectly through our equity method investment in Cameron Highway Oil Pipeline Company ("Cameron Highway").

- The *Poseidon Oil Pipeline System* gathers production from the outer continental shelf and deepwater areas of the Gulf of Mexico for delivery to onshore locations in south Louisiana. This system includes one pipeline junction platform. Our ownership interest in this pipeline is held indirectly through our equity method investment in Poseidon Oil Pipeline Company, LLC.

- The *Allegheny Oil Pipeline* connects the Allegheny and South Timbalier 316 platforms in the Green Canyon area of the Gulf of Mexico with our Cameron Highway Oil Pipeline and Poseidon Oil Pipeline System.

- The *Marco Polo Oil Pipeline* transports crude oil from our Marco Polo platform to an interconnect with our Allegheny Oil Pipeline in Green Canyon Block 164.

- The *Constitution Oil Pipeline* serves the Constitution and Ticonderoga fields located in the central Gulf of Mexico. The Constitution Oil Pipeline connects with our Cameron Highway Oil Pipeline and Poseidon Oil Pipeline System at a pipeline junction platform.

In October 2006, we announced the execution of definitive agreements with producers to construct, own and operate an oil export pipeline that will provide firm gathering services from the BHP Billiton Plc-operated Shenzi production field located in the South Green Canyon area of the central Gulf of Mexico. For information regarding this project, see "Liquidity and Capital Resources — Capital Spending" included under Item 7 of this annual report.

The following information highlights the general use of each of our principal Gulf of Mexico offshore platforms. We operate these offshore platforms with the exception of the Marco Polo platform, Independence Hub platform and East Cameron 373.

On a weighted-average basis, utilization rates with respect to natural gas processing capacity of our offshore platforms were approximately 29%, 17% and 27% during the years ended December 31, 2007, 2006 and 2005, respectively. Likewise, utilization rates for our offshore platforms were approximately 26%, 19% and 9%, respectively, in connection with platform crude oil processing capacity. These rates reflect the periods in which we owned an interest in such assets. In addition to the offshore platforms we identified in the preceding table, we own or have an ownership interest in fourteen pipeline junction and service platforms. Our pipeline junction and service platforms do not have processing capacity.

- The *Independence Hub* platform is located in Mississippi Canyon Block 920. This platform processes natural gas gathered from production fields in the Atwater Valley, DeSoto Canyon, Lloyd Ridge and Mississippi Canyon areas of the Gulf of Mexico. We successfully installed the Independence Hub platform and began earning demand revenues in March 2007. In July 2007, the Independence Hub platform received first production from deepwater wells connected to the platform. Currently, the platform is receiving approximately 900 MMcf/d of natural gas from fifteen wells.

- The *Marco Polo* platform, which is located in Green Canyon Block 608, processes crude oil and natural gas from the Marco Polo, K2, K2 North and Genghis Khan fields. These fields are located

Table of Contents

in the South Green Canyon area of the Gulf of Mexico. Our 50% joint control ownership interest in this platform is held indirectly through our equity method investment in Deepwater Gateway, L.L.C.

- The *Viosca Knoll 817* platform is centrally located on our Viosca Knoll Gathering System. This platform primarily serves as a base for gathering deepwater production in the area, including the Ram Powell development.
- The *Garden Banks 72* platform serves as a base for gathering deepwater production from the Garden Banks Block 161 development and the Garden Banks Block 378 and 158 leases. This platform also serves as a junction platform for our Cameron Highway Oil Pipeline and Poseidon Oil Pipeline System.
- The *East Cameron 373* platform serves as the host for East Cameron Block 373 production and also processes production from Garden Banks Blocks 108, 152, 197, 200 and 201.
- The *Falcon Nest* platform, which is located in the Mustang Island Block 103 area of the Gulf of Mexico, currently processes natural gas from the Falcon field.

Petrochemical Services

Our Petrochemical Services business segment includes five propylene fractionation facilities, an isomerization complex, and an octane additive production facility. This segment also includes approximately 683 miles of petrochemical pipeline systems.

Propylene fractionation. Our propylene fractionation business consists primarily of five propylene fractionation facilities located in Texas and Louisiana, and approximately 613 miles of various propylene pipeline systems. These operations also include an export facility located on the Houston Ship Channel and our petrochemical marketing activities.

In general, propylene fractionation plants separate refinery grade propylene (a mixture of propane and propylene) into either polymer grade propylene or chemical grade propylene along with by-products of propane and mixed butane. Polymer grade propylene can also be produced from chemical grade propylene feedstock. Chemical grade propylene is also a by-product of olefin (ethylene) production. The demand for polymer grade propylene is attributable to the manufacture of polypropylene, which has a variety of end uses, including packaging film, fiber for carpets and upholstery and molded plastic parts for appliance, automotive, houseware and medical products. Chemical grade propylene is a basic petrochemical used in plastics, synthetic fibers and foams.

Results of operations for our polymer grade propylene plants are generally dependent upon toll processing arrangements and petrochemical marketing activities. These processing arrangements typically include a base-processing fee per gallon (or other unit of measurement) subject to adjustment for changes in natural gas, electricity and labor costs, which are the primary costs of propylene fractionation and isomerization operations. Our petrochemical marketing activities generate revenues from the sale and delivery of products obtained through our processing activities and purchases from third parties on the open market. In general, we sell our petrochemical products at market-related prices, which may include pricing differentials for such factors as delivery location.

As part of our petrochemical marketing activities, we have several long-term polymer grade propylene sales agreements. To meet our petrochemical marketing obligations, we have entered into several agreements to purchase refinery grade propylene. To limit the exposure of our petrochemical marketing activities to price risk, we attempt to match the timing and price of our feedstock purchases with those of the sales of end products.

Isomerization. Our isomerization business includes three butamer reactor units and eight associated deisobutanizer units located in Mont Belvieu, Texas, which comprise the largest commercial isomerization complex in the United States. In addition, this business includes a 70-mile pipeline system used to transport high-purity isobutane from Mont Belvieu, Texas to Port Neches, Texas.

Our commercial isomerization units convert normal butane into mixed butane, which is subsequently fractionated into normal butane, isobutane and high purity isobutane. The primary uses of isobutane are currently for the production of propylene oxide, isooctane and alkylate for motor gasoline. The demand for commercial isomerization services depends upon the industry's requirements for high purity isobutane and isobutane in excess of naturally occurring isobutane produced from NGL fractionation and refinery operations.

The results of operation of this business are generally dependent upon the volume of normal and mixed butanes processed and the level of toll processing fees charged to customers. Our isomerization facility provides processing services to meet the needs of third-party customers and our other businesses, including our NGL marketing activities and octane additive production facility.

Octane enhancement. We own and operate an octane additive production facility located in Mont Belvieu, Texas designed to produce isooctane, which is an additive used in reformulated motor gasoline blends to increase octane, and isobutylene. The facility produces isooctane and isobutylene using feedstocks of high-purity isobutane, which is supplied using production from our isomerization units. Prior to mid-2005, the facility produced methyl tertiary butyl ether ("MTBE"). We modified the facility to produce isooctane and isobutylene. Depending on the outcome of various factors, the facility may be further modified in the future to produce alkylate, another motor gasoline additive.

Seasonality. Overall, the propylene fractionation business exhibits little seasonality. Our isomerization operations experience slightly higher demand in the spring and summer months due to the demand for isobutane-based fuel additives used in the production of motor gasoline. Likewise, isooctane prices have been stronger during the April to September period of each year, which corresponds with the summer driving season.

Competition. We compete with numerous producers of polymer grade propylene, which include many of the major refiners and petrochemical companies on the Gulf Coast. Generally, the propylene fractionation business competes in terms of the level of toll processing fees charged and access to pipeline and storage infrastructure. Our petrochemical marketing activities encounter competition from fully integrated oil companies and various petrochemical companies. Our petrochemical marketing competitors have varying levels of financial and personnel resources and competition generally revolves around price, service, logistics and location.

In the isomerization market, we compete primarily with facilities located in Kansas, Louisiana and New Mexico. Competitive factors affecting this business include the level of toll processing fees charged, the quality of isobutane that can be produced and access to pipeline and storage infrastructure. We also compete with other octane additive manufacturing companies primarily on the basis of price.

Properties. The following table summarizes the significant assets of our Petrochemical Services segment at February 1, 2008, all of which we operate.

Description of Asset	Location(s)	Our Ownership Interest	Net Plant Capacity (MBPD)	Total Plant Capacity (MBPD)	Length (Miles)
Propylene fractionation facilities:					
Mont Belvieu (4 plants)	Texas	Various (1)	73	87	
BRPC	Louisiana	30% (2)	7	23	
Total capacity			80	110	
Isomerization facility:					
Mont Belvieu (3)	Texas	100%	116	116	
Petrochemical pipelines:					
Lou-Tex and Sabine Propylene	Texas, Louisiana	100% (4)			284
Texas City RGP Gathering System	Texas	100%			105
Lake Charles	Texas, Louisiana	50%			83
Others (6 systems) (5)	Texas	Various (6)			211
Total miles					683
Octane additive production facilities:					
Mont Belvieu	Texas	100%	12	12	

(1) We own a 54.6% interest and lease the remaining 45.4% of a facility having 17 MBPD of plant capacity. We own a 66.7% interest in a second facility having 41 MBPD of total plant capacity. We own 100% of the remaining two facilities, which have 14 MBPD and 15 MBPD of plant capacity, respectively.

(2) Our ownership interest in this facility is held indirectly through our equity method investment in Baton Rouge Propylene Concentrator LLC ("BRPC").

(3) On a weighted-average basis, utilization rates for this facility were approximately 78%, 70% and 70% during 2007, 2006 and 2005, respectively.

(4) Reflects consolidated ownership of these pipelines by EPO (34%) and Duncan Energy Partners (66%).

(5) Includes our Texas City PGP Delivery System and Port Neches, Bay Area, La Porte, Port Arthur and Bayport petrochemical pipelines.

(6) We own 100% of these pipelines with the exception of the 17-mile La Porte pipeline, in which we hold an aggregate 50% indirect interest through our equity method investments in La Porte Pipeline Company L.P. and La Porte Pipeline GP, L.L.C.

We produce polymer grade propylene at our Mont Belvieu location and chemical grade propylene at our BRPC facility. The primary purpose of the BRPC unit is to fractionate refinery grade propylene produced by an affiliate of ExxonMobil Corporation into chemical grade propylene. The production of polymer grade propylene from our Mont Belvieu plants is primarily used in our petrochemical marketing activities. On a weighted-average basis, aggregate utilization rates of our propylene fractionation facilities were approximately 86%, 86% and 83% during the years ended December 31, 2007, 2006 and 2005, respectively. This business segment also includes an above-ground polymer grade propylene storage and export facility located in Seabrook, Texas. This facility can load vessels at rates up to 5,000 barrels per hour.

The Lou-Tex propylene pipeline is used to transport chemical grade propylene from Sorrento, Louisiana to Mont Belvieu, Texas. The Sabine pipeline is used to transport polymer grade propylene from Port Arthur, Texas to a pipeline interconnect in Cameron Parish, Louisiana. We own these pipelines through our subsidiaries, Enterprise Lou-Tex Propylene Pipeline L.P. ("Lou-Tex Propylene") and Sabine Propylene Pipeline L.P. ("Sabine Propylene"). On February 5, 2007, we contributed a direct 66% equity interest in our subsidiaries that own the Lou-Tex Propylene and Sabine Propylene pipelines to Duncan Energy Partners. We own the remaining 34% direct interest in these subsidiaries. For additional information regarding Duncan Energy Partners, see "Other Items - Initial Public Offering of Duncan Energy Partners" included under Item 7 of this annual report.

The maximum number of barrels that our petrochemical pipelines can transport per day depends upon the operating balance achieved at a given point in time between various segments of the systems. Since the operating balance is dependent upon the mix of products to be shipped and demand levels at various delivery points, the exact capacities of our petrochemical pipelines cannot be determined. We measure the utilization rates of such pipelines in terms of net throughput (i.e., on a net basis in accordance with our ownership interest). Total net throughput volumes for these pipelines were 105 MBPD, 97 MBPD and 64 MBPD during the years ended December 31, 2007, 2006 and 2005, respectively.

Our octane additive facility currently has an isooctane production capacity of 12 MBPD. The facility was capable of producing only MTBE prior to mid-2005 at a rate up to 15.5 MBPD. On a weighted-average combined product basis, utilization rates for this facility were approximately 58%, 58% and 29% during the years ended December 31, 2007, 2006 and 2005, respectively.

Title to Properties

Our real property holdings fall into two basic categories: (i) parcels that we and our unconsolidated affiliates own in fee (e.g., we own the land upon which our Mont Belvieu NGL fractionator is constructed) and (ii) parcels in which our interests and those of our unconsolidated affiliates are derived from leases, easements, rights-of-way, permits or licenses from landowners or governmental authorities permitting the use of such land for our operations. The fee sites upon which our significant facilities are located have been owned by us or our predecessors in title for many years without any material challenge known to us relating to title to the land upon which the assets are located, and we believe that we have satisfactory title to such fee sites. We and our unconsolidated affiliates have no knowledge of any challenge to the underlying fee title of any material lease, easement, right-of-way, permit or license held by us or to our rights pursuant to any material lease, easement, right-of-way, permit or license, and we believe that we have satisfactory rights pursuant to all of our material leases, easements, rights-of-way, permits and licenses.

Capital Spending

We are committed to the long-term growth and viability of Enterprise Products Partners. Part of our business strategy involves expansion through business combinations, growth capital projects and investments in joint ventures. We believe we are positioned to continue to grow our system of assets through the construction of new facilities and to capitalize on expected future production increases from such areas as the Piceance Basin of western Colorado, the Greater Green River Basin in Wyoming, the Barnett Shale in North Texas, and the deepwater Gulf of Mexico. For a discussion of our capital spending program, see "Capital Spending" included under Item 7 of this annual report.

Regulation

Interstate Regulation

Liquids Pipelines. Certain of our crude oil and NGL pipeline systems (collectively referred to as "liquids pipelines") are interstate common carrier pipelines subject to regulation by the FERC under the Interstate Commerce Act ("ICA") and the Energy Policy Act of 1992 ("Energy Policy Act"). The ICA prescribes that interstate tariffs must be just and reasonable and must not be unduly discriminatory or confer any undue preference upon any shipper. FERC regulations require that interstate oil pipeline transportation rates be filed with the FERC and posted publicly.

The ICA permits interested persons to challenge proposed new or changed rates and authorizes the FERC to investigate such rates and to suspend their effectiveness for a period of up to seven months. If, upon completion of an investigation, the FERC finds that the new or changed rate is unlawful, it may require the carrier to refund the revenues in excess of the prior tariff during the term of the investigation. The FERC may also investigate, upon complaint or on its own motion, rates that are already in effect and may order a carrier to change its rates prospectively. Upon an appropriate showing, a shipper may obtain reparations for damages sustained for a period of up to two years prior to the filing of its complaint.

The Energy Policy Act deemed liquids pipeline rates that were in effect for the twelve months preceding enactment and that had not been subject to complaint, protest or investigation, just and reasonable under the Energy Policy Act (i.e., "grandfathered"). Some, but not all, our interstate liquids pipeline rates are considered grandfathered under the Energy Policy Act. Certain other rates for our interstate liquids pipeline services are charged pursuant to a FERC-approved indexing methodology, which allows a pipeline to charge rates up to a prescribed ceiling that changes annually based on the change from year-to-year in the Producer Price Index for finished goods ("PPI"). A rate increase within the indexed rate ceiling is presumed to be just and reasonable unless a protesting party can demonstrate that the rate increase is substantially in excess of the pipeline's costs. Effective March 21, 2006, FERC concluded that for the five-year period commencing July 1, 2006, liquids pipelines charging indexed rates may adjust their indexed ceilings annually by the PPI plus 1.3%.

As an alternative to using the indexing methodology, interstate liquids pipelines may elect to support rate filings by using a cost-of-service methodology, competitive market showings ("Market-Based Rates") or agreements with all of the pipeline's shippers that the rate is acceptable.

Because of the complexity of ratemaking, the lawfulness of any rate is never assured. The FERC uses prescribed rate methodologies for approving regulated tariff rates for transporting crude oil and refined products. These methodologies may limit our ability to set rates based on our actual costs or may delay the use of rates reflecting higher costs. Changes in the FERC's approved methodology for approving rates could adversely affect us. Adverse decisions by the FERC in approving our regulated rates could adversely affect our cash flow. Challenges to our tariff rates could be filed with the FERC. We believe the transportation rates currently charged by our interstate common carrier liquids pipelines are in accordance with the ICA. However, we cannot predict the rates we will be allowed to charge in the future for transportation services by such pipelines.

The Lou-Tex Propylene and Sabine Propylene pipelines are interstate common carrier pipelines regulated under the ICA by the Surface Transportation Board ("STB"), a part of the United States Department of Transportation. If the STB finds that a carrier's rates are not just and reasonable or are unduly discriminatory or preferential, it may prescribe a reasonable rate. In determining a reasonable rate, the STB will consider, among other factors, the effect of the rate on the volumes transported by that carrier, the carrier's revenue needs and the availability of other economic transportation alternatives.

The STB does not need to provide rate relief unless shippers lack effective competitive alternatives. If the STB determines that effective competitive alternatives are not available and a pipeline holds market power, then we may be required to show that our rates are reasonable.

Natural Gas Pipelines. Our interstate natural gas pipelines and storage facilities that provide services in interstate commerce are regulated by the FERC under the Natural Gas Act of 1938 ("NGA"). Under the NGA, the rates for service on these interstate facilities must be just and reasonable and not unduly discriminatory. We operate these interstate facilities pursuant to tariffs which set forth terms and conditions of service. These tariffs must be filed with and approved by the FERC pursuant to its regulations and orders. Our tariff rates may be lowered on a prospective basis only by the FERC, on its own initiative, or as a result of challenges to the rates by third parties if they are found unlawful. Unless the FERC grants specific authority to charge market-based rates, our rates are derived based on a cost-of-service methodology.

One element of the FERC's cost-of-service methodology as it affects partnerships such as ours is an income tax allowance. Pursuant to an order on remand of a decision by the U.S. Court of Appeals for the District of Columbia Circuit in *BP West Coast, LLC v. FERC* and a policy statement regarding income tax allowance issued by the FERC, the FERC will permit a pipeline to include in cost-of-service a tax allowance to reflect actual or potential tax liability on its public utility income attributable to all partnership or limited liability company interests if the ultimate owner of the interest has an actual or potential income tax liability on such income. Whether a pipeline's owners have such actual or potential income tax liability will be reviewed by the FERC on a case by case basis. Both the FERC's income tax allowance policy and its initial application in an individual pipeline proceeding were appealed to the United States Court of Appeals for the District of Columbia (the "D.C. Circuit"). In May 2007, the D.C. Circuit issued an opinion in ExxonMobil Oil Corporation, et al. v. FERC, which denied the appeals and upheld the FERC's tax allowance policy and the application of that policy in the individual pipeline proceeding. The FERC has issued additional orders reaffirming and clarifying its policy regarding the inclusion of an income tax allowance in rates. Most recently, the FERC issued an order in December 2007 which, among other things, affirmed the FERC's conclusion that the tax liability may be an actual or potential liability, further clarified its income tax allowance policy and concluded that the concept of a potential tax liability recognizes that tax liability may be deferred. However, the FERC left open the possibility that it could require different criteria before permitting an income tax allowance. Rehearing requests of the December 2007 order are pending at the FERC.

The FERC's authority over companies that provide natural gas pipeline transportation or storage services in interstate commerce also includes (i) certification, construction, and operation of certain new facilities; (ii) the acquisition, extension, disposition or abandonment of such facilities; (iii) the maintenance of accounts and records; (iv) the initiation, extension and termination of regulated services; and (v) various other matters. In addition, pursuant to the Energy Policy Act of 2005, the NGA and the Natural Gas Policy Act of 1978 ("NGPA") were amended to increase civil and criminal penalties for any violation of the NGA, NGPA and any rules, regulations or orders of the FERC up to $1 million per day per violation.

Offshore Pipelines. Our offshore natural gas gathering pipelines and crude oil pipeline systems are subject to federal regulation under the Outer Continental Shelf Lands Act ("OCSLA"), which requires that all pipelines operating on or across the outer continental shelf provide nondiscriminatory transportation service.

Intrastate Regulation

Our intrastate NGL and natural gas pipelines are subject to regulation in many states, including Alabama, Colorado, Louisiana, Mississippi, New Mexico and Texas. Certain of our intrastate pipelines are subject to limited regulation by the FERC under the NGPA as they provide transportation and storage service pursuant to Section 311 of the NGPA and the FERC's regulations. Under Section 311 of the NGPA, an intrastate pipeline company may transport gas for an interstate pipeline or any local distribution company served by an interstate pipeline. We are required to provide these services on an open and nondiscriminatory basis. The rates for 311 service may be established by the FERC or the respective state agency, but may not exceed a fair and equitable rate.

Certain other of our pipeline systems operate within a single state and provide intrastate pipeline transportation services. These pipeline systems are subject to various regulations and statutes mandated by state regulatory authorities. Although the applicable state statutes and regulations vary, they generally require that intrastate pipelines publish tariffs setting forth all rates, rules and regulations applying to intrastate service, and generally require that pipeline rates and practices be reasonable and nondiscriminatory. Shippers may also challenge our intrastate tariff rates and practices on our pipelines.

Sales of Natural Gas

We are engaged in natural gas marketing activities. The resale of natural gas in interstate commerce made by intrastate pipelines or their affiliates is subject to FERC regulation unless the gas is produced by the pipeline carrier or an affiliate. Under current federal rules, however, the price at which we sell natural gas currently is not regulated, insofar as the interstate market is concerned and, for the most part, is not subject to state regulation. The FERC's rules require pipelines and their marketing affiliates who sell natural gas in interstate commerce subject to the FERC's jurisdiction to adhere to a code of conduct prohibiting market manipulation and transactions that have no legitimate business purpose or result in prices not reflective of legitimate forces of supply and demand. Those who violate this code of conduct may be subject to suspension or loss of authorization to perform such sales, disgorgement of unjust profits, or other appropriate non-monetary remedies imposed by the FERC. The FERC currently has a rulemaking pending which would implement revisions to these rules. The FERC is continually proposing and implementing new rules and regulations affecting segments of the natural gas industry. We cannot predict the ultimate impact of these regulatory changes on our natural gas marketing activities; however, we believe that any new regulations will also be applied to other natural gas marketers with whom we compete.

Environmental and Safety Matters

General

Our operations are subject to multiple environmental obligations and potential liabilities under a variety of federal, state and local laws and regulations. These include, without limitation: the Comprehensive Environmental Response, Compensation, and Liability Act; the Resource Conservation and Recovery Act; the Clean Air Act; the Federal Water Pollution Control Act or the Clean Water Act; the Oil Pollution Act; and analogous state and local laws and regulations. Such laws and regulations affect many aspects of our present and future operations, and generally require us to obtain and comply with a wide variety of environmental registrations, licenses, permits, inspections and other approvals, with respect to air emissions, water quality, wastewater discharges, and solid and hazardous waste management. Failure to comply with these requirements may expose us to fines, penalties and/or interruptions in our operations that could influence our results of operations. If an accidental leak, spill or release of hazardous substances occurs at a facility that we own, operate or otherwise use, or where we send materials for treatment or disposal, we could be held jointly and severally liable for all resulting liabilities, including investigation, remedial and clean-up costs. Likewise, we could be required to remove or remediate previously disposed wastes or property contamination, including groundwater contamination. Any or all of this could materially affect our results of operations and cash flows.

We believe our operations are in material compliance with applicable environmental and safety laws and regulations, other than certain matters discussed under Item 3 of this annual report, and that compliance with existing environmental and safety laws and regulations are not expected to have a material adverse effect on our financial position, results of operations or cash flows. Environmental and safety laws and regulations are subject to change. The clear trend in environmental regulation is to place more restrictions and limitations on activities that may be perceived to affect the environment, and thus there can be no assurance as to the amount or timing of future expenditures for environmental regulation compliance or remediation, and actual future expenditures may be different from the amounts we currently anticipate. Revised or additional regulations that result in increased compliance costs or additional operating restrictions, particularly if those costs are not fully recoverable from our customers, could have a material adverse effect on our business, financial position, results of operations and cash flows.

Water

The Federal Water Pollution Control Act of 1972, as renamed and amended as the Clean Water Act ("CWA"), and analogous state laws impose restrictions and strict controls regarding the discharge of pollutants into navigable waters of the United States, as well as state waters. Permits must be obtained to discharge pollutants into these waters. The CWA imposes substantial civil and criminal penalties for non-compliance. The EPA has promulgated regulations that require us to have permits in order to discharge storm water runoff. The EPA has entered into agreements with states in which we operate whereby the permits are administered by the respective states.

The primary federal law for oil spill liability is the Oil Pollution Act of 1990 ("OPA"), which addresses three principal areas of oil pollution — prevention, containment and cleanup, and liability. OPA subjects owners of certain facilities to strict, joint and potentially unlimited liability for containment and removal costs, natural resource damages and certain other consequences of an oil spill, where such spill is into navigable waters, along shorelines or in the exclusive economic zone of the U.S. Any unpermitted release of petroleum or other pollutants from our operations could also result in fines or penalties. OPA applies to vessels, offshore platforms and onshore facilities, including terminals, pipelines and transfer facilities. In order to handle, store or transport oil, shore facilities are required to file oil spill response plans with the United States Coast Guard, the United States Department of Transportation Office of Pipeline Safety ("OPS") or the EPA, as appropriate.

Some states maintain groundwater protection programs that require permits for discharges or operations that may impact groundwater conditions. Contamination resulting from spills or releases of petroleum products is an inherent risk within our industry. To the extent that groundwater contamination requiring remediation exists along our pipeline systems as a result of past operation, we believe any such contamination could be controlled or remedied without having a material adverse effect on our financial position, but such costs are site specific and we cannot predict that the effect will not be material in the aggregate.

Air Emissions

Our operations are subject to the Federal Clean Air Act (the "Clean Air Act") and comparable state laws and regulations. These laws and regulations regulate emissions of air pollutants from various industrial sources, including our facilities, and also impose various monitoring and reporting requirements. Such laws and regulations may require that we obtain pre-approval for the construction or modification of certain projects or facilities expected to produce air emissions or result in the increase of existing air emissions, obtain and strictly comply with air permits containing various emissions and operational limitations, or utilize specific emission control technologies to limit emissions.

Our permits and related compliance obligations under the Clean Air Act, as well as recent or soon to be adopted changes to state implementation plans for controlling air emissions in regional, non-attainment areas, may require our operations to incur capital expenditures to add to or modify existing air emission control equipment and strategies. In addition, some of our facilities are included within the categories of hazardous air pollutant sources, which are subject to increasing regulation under the Clean Air

Act and many state laws. Our failure to comply with these requirements could subject us to monetary penalties, injunctions, conditions or restrictions on operations, and enforcement actions. We may be required to incur certain capital expenditures in the future for air pollution control equipment in connection with obtaining and maintaining operating permits and approvals for air emissions. We believe, however, that such requirements will not have a material adverse effect on our operations, and the requirements are not expected to be any more burdensome to us than to any other similarly situated companies.

Congress and some states are considering proposed legislation directed at reducing "greenhouse gas emissions." It is not possible at this time to predict how legislation that may be enacted to address greenhouse gas emissions would impact our business. However, future laws and regulations could result in increased compliance costs or additional operating restrictions, and could have a material adverse effect on our business, financial position, results of operations and cash flows.

Solid Waste

In our normal operations, we generate hazardous and non-hazardous solid wastes, including hazardous substances, that are subject to the requirements of the federal Resource Conservation and Recovery Act ("RCRA") and comparable state laws, which impose detailed requirements for the handling, storage treatment and disposal of hazardous and solid waste. We also utilize waste minimization and recycling processes to reduce the volumes of our waste. Amendments to RCRA required the EPA to promulgate regulations banning the land disposal of all hazardous wastes unless the waste meets certain treatment standards or the land-disposal method meets certain waste containment criteria. In the past, although we utilized operating and disposal practices that were standard in the industry at the time, hydrocarbons and other materials may have been disposed of or released. In the future we may be required to remove or remediate these materials.

Environmental Remediation

The Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"), also known as "Superfund," imposes liability, without regard to fault or the legality of the original act, on certain classes of persons who contributed to the release of a "hazardous substance" into the environment. These persons include the owner or operator of a facility where a release occurred, transporters that select the site of disposal of hazardous substances and companies that disposed of or arranged for the disposal of any hazardous substances found at a facility. Under CERCLA, these persons may be subject to joint and several liability for the costs of cleaning up the hazardous substances that have been released into the environment, for damages to natural resources and for the costs of certain health studies. CERCLA also authorizes the EPA and, in some instances, third parties to take actions in response to threats to the public health or the environment and to seek to recover the costs they incur from the responsible classes of persons. It is not uncommon for neighboring landowners and other third parties to file claims for personal injury and property damage allegedly caused by hazardous substances or other pollutants released into the environment. Despite the "petroleum exclusion" of CERCLA that currently encompasses natural gas, we may nonetheless handle "hazardous substances" subject to CERCLA in the course of our operations and our pipeline systems may generate wastes that fall within CERCLA's definition of a "hazardous substance." In the event a disposal facility previously used by us requires clean up in the future, we may be responsible under CERCLA for all or part of the costs required to clean up sites at which such wastes have been disposed.

Pipeline Safety Matters

We are subject to regulation by the United States Department of Transportation ("DOT") under the Accountable Pipeline and Safety Partnership Act of 1996, sometimes referred to as the Hazardous Liquid Pipeline Safety Act ("HLPSA"), and comparable state statutes relating to the design, installation, testing, construction, operation, replacement and management of our pipeline facilities. The HLPSA covers petroleum and petroleum products. The HLPSA requires any entity that owns or operates pipeline facilities to (i) comply with such regulations, (ii) permit access to and copying of records, (iii) file certain reports and

(iv) provide information as required by the Secretary of Transportation. We believe that we are in material compliance with these HLPSA regulations.

We are subject to the DOT regulation requiring qualification of pipeline personnel. The regulation requires pipeline operators to develop and maintain a written qualification program for individuals performing covered tasks on pipeline facilities. The intent of this regulation is to ensure a qualified work force and to reduce the probability and consequence of incidents caused by human error. The regulation establishes qualification requirements for individuals performing covered tasks. We believe that we are in material compliance with these DOT regulations.

We are also subject to the DOT Integrity Management regulations, which specify how companies should assess, evaluate, validate and maintain the integrity of pipeline segments that, in the event of a release, could impact High Consequence Areas ("HCAs"). HCAs are defined to include populated areas, unusually sensitive environmental areas and commercially navigable waterways. The regulation requires the development and implementation of an Integrity Management Program ("IMP") that utilizes internal pipeline inspection, pressure testing, or other equally effective means to assess the integrity of HCA pipeline segments. The regulation also requires periodic review of HCA pipeline segments to ensure adequate preventative and mitigative measures exist and that companies take prompt action to address integrity issues raised by the assessment and analysis. In compliance with these DOT regulations, we identified our HCA pipeline segments and have developed an IMP. We believe that the established IMP meets the requirements of these DOT regulations.

Risk Management Plans

We are subject to the EPA's Risk Management Plan ("RMP") regulations at certain facilities. These regulations are intended to work with the Occupational Safety and Health Act ("OSHA") Process Safety Management regulations (see "Safety Matters" below) to minimize the offsite consequences of catastrophic releases. The regulations required us to develop and implement a risk management program that includes a five-year accident history, an offsite consequence analysis process, a prevention program and an emergency response program. We believe we are operating in material compliance with our risk management program.

Safety Matters

Certain of our facilities are also subject to the requirements of the federal OSHA and comparable state statutes. We believe we are in material compliance with OSHA and state requirements, including general industry standards, record keeping requirements and monitoring of occupational exposures.

We are subject to OSHA Process Safety Management ("PSM") regulations, which are designed to prevent or minimize the consequences of catastrophic releases of toxic, reactive, flammable or explosive chemicals. These regulations apply to any process which involves a chemical at or above the specified thresholds or any process which involves certain flammable liquid or gas. We believe we are in material compliance with the OSHA PSM regulations.

The OSHA hazard communication standard, the EPA community right-to-know regulations under Title III of the federal Superfund Amendment and Reauthorization Act and comparable state statutes require us to organize and disclose information about the hazardous materials used in our operations. Certain parts of this information must be reported to employees, state and local governmental authorities and local citizens upon request.

Employees

Like many publicly traded partnerships, we have no employees. All of our management, administrative and operating functions are performed by employees of EPCO pursuant to an administrative services agreement. As of December 31, 2007, there were approximately 3,200 EPCO personnel that spend all or a portion of their time engaged in our business. Approximately 1,900 of these individuals devote all

Table of Contents

of their time performing management and operating duties for us. We reimburse EPCO for 100% of the costs it incurs to employ these individuals. The remaining approximate 1,300 personnel are part of EPCO's shared service organization and spend all or a portion of their time engaged in our business. The cost for their services is reimbursed to EPCO and is generally based on the percentage of time such employees perform services on our behalf during the year. For additional information regarding the administrative services agreement and our relationship with EPCO, see Note 17 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Available Information

As a large accelerated filer, we electronically file certain documents with the U.S. Securities and Exchange Commission ("SEC"). We file annual reports on Form 10-K; quarterly reports on Form 10-Q; and current reports on Form 8-K (as appropriate); along with any related amendments and supplements thereto. From time-to-time, we may also file registration statements and related documents in connection with equity or debt offerings. You may read and copy any materials we file with the SEC at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549. You may obtain information regarding the Public Reference Room by calling the SEC at 1-800-SEC-0330. In addition, the SEC maintains an Internet website at www.sec.gov that contains reports and other information regarding registrants that file electronically with the SEC, including us.

We provide electronic access to our periodic and current reports on our Internet website, www.epplp.com. These reports are available as soon as reasonably practicable after we electronically file such materials with, or furnish such materials to, the SEC. You may also contact our investor relations department at (866) 230-0745 for paper copies of these reports free of charge.

Item 1A. *Risk Factors*.

An investment in our common units involves certain risks. If any of these risks were to occur, our business, results of operations, cash flows and financial condition could be materially adversely affected. In that case, the trading price of our common units could decline, and you could lose part or all of your investment.

The following section lists some, but not all, of the key risk factors that may have a direct impact on our business, results of operations, cash flows and financial condition.

Risks Relating to Our Business

Changes in demand for and production of hydrocarbon products may materially adversely affect our results of operations, cash flows and financial condition.

We operate predominantly in the midstream energy sector which includes gathering, transporting, processing, fractionating and storing natural gas, NGLs and crude oil. As such, our results of operations, cash flows and financial condition may be materially adversely affected by changes in the prices of these hydrocarbon products and by changes in the relative price levels among these hydrocarbon products. Changes in prices and changes in the relative price levels may impact demand for hydrocarbon products, which in turn may impact production, demand and volumes of product for which we provide services. We may also incur credit and price risk to the extent counterparties do not perform in connection with our marketing of natural gas, NGLs and propylene.

In the past, the price of natural gas has been extremely volatile, and we expect this volatility to continue. The NYMEX daily settlement price for natural gas for the prompt month contract in 2005 ranged from a high of \$15.38 per MMBtu to a low of \$5.79 per MMBtu. In 2006, the same index ranged from a high of \$10.63 per MMBtu to a low of \$4.20 per MMBtu. In 2007, the same index ranged from a high of \$8.64 per MMBtu to a low of \$5.38 per MMBtu.

Table of Contents

Generally, the prices of natural gas, NGLs, crude oil and other hydrocarbon products are subject to fluctuations in response to changes in supply, demand, market uncertainty and a variety of additional factors that are impossible to control. Some of these factors include:

- the level of domestic production and consumer product demand;
- the availability of imported oil and natural gas;
- actions taken by foreign oil and natural gas producing nations;
- the availability of transportation systems with adequate capacity;
- the availability of competitive fuels;
- fluctuating and seasonal demand for oil, natural gas and NGLs;
- the impact of conservation efforts;
- the extent of governmental regulation and taxation of production; and
- the overall economic environment.

We are exposed to natural gas and NGL commodity price risk under certain of our natural gas processing and gathering and NGL fractionation contracts that provide for our fees to be calculated based on a regional natural gas or NGL price index or to be paid in-kind by taking title to natural gas or NGLs. A decrease in natural gas and NGL prices can result in lower margins from these contracts, which may materially adversely affect our results of operations, cash flows and financial position.

A decline in the volume of natural gas, NGLs and crude oil delivered to our facilities could adversely affect our results of operations, cash flows and financial condition.

Our profitability could be materially impacted by a decline in the volume of natural gas, NGLs and crude oil transported, gathered or processed at our facilities. A material decrease in natural gas or crude oil production or crude oil refining, as a result of depressed commodity prices, a decrease in domestic and international exploration and development activities or otherwise, could result in a decline in the volume of natural gas, NGLs and crude oil handled by our facilities.

The crude oil, natural gas and NGLs currently transported, gathered or processed at our facilities originate from existing domestic and international resource basins, which naturally deplete over time. To offset this natural decline, our facilities will need access to production from newly discovered properties that are either being developed or expected to be developed. Exploration and development of new oil and natural gas reserves is capital intensive, particularly offshore in the Gulf of Mexico. Many economic and business factors are beyond our control and can adversely affect the decision by producers to explore for and develop new reserves. These factors could include relatively low oil and natural gas prices, cost and availability of equipment and labor, regulatory changes, capital budget limitations, the lack of available capital or the probability of success in finding hydrocarbons. For example, a sustained decline in the price of natural gas and crude oil could result in a decrease in natural gas and crude oil exploration and development activities in the regions where our facilities are located. This could result in a decrease in volumes to our offshore platforms, natural gas processing plants, natural gas, crude oil and NGL pipelines, and NGL fractionators, which would have a material adverse affect on our results of operations, cash flows and financial position. Additional reserves, if discovered, may not be developed in the near future or at all.

In addition, imported liquified natural gas ("LNG"), is expected to be a significant component of future natural gas supply to the United States. Much of this increase in LNG supplies is expected to be imported through new LNG facilities to be developed over the next decade. Twelve LNG projects have been approved by the FERC to be constructed in the Gulf Coast region and an additional two LNG projects

Table of Contents

have been proposed for the region. We cannot predict which, if any, of these projects will be constructed. We may not realize expected increases in future natural gas supply available to our facilities and pipelines if (i) a significant number of these new projects fail to be developed with their announced capacity, (ii) there are significant delays in such development, (iii) they are built in locations where they are not connected to our assets or (iv) they do not influence sources of supply on our systems. If the expected increase in natural gas supply through imported LNG is not realized, projected natural gas throughput on our pipelines would decline, which could have a material adverse effect on our results of operations, cash flows and financial position.

A decrease in demand for NGL products by the petrochemical, refining or heating industries could materially adversely affect our results of operations, cash flows and financial position.

A decrease in demand for NGL products by the petrochemical, refining or heating industries, whether because of general economic conditions, reduced demand by consumers for the end products made with NGL products, increased competition from petroleum-based products due to pricing differences, adverse weather conditions, government regulations affecting prices and production levels of natural gas or the content of motor gasoline or other reasons, could materially adversely affect our results of operations, cash flows and financial position. For example:

Ethane. Ethane is primarily used in the petrochemical industry as feedstock for ethylene, one of the basic building blocks for a wide range of plastics and other chemical products. If natural gas prices increase significantly in relation to NGL product prices or if the demand for ethylene falls (and, therefore, the demand for ethane by NGL producers falls), it may be more profitable for natural gas producers to leave the ethane in the natural gas stream to be burned as fuel than to extract the ethane from the mixed NGL stream for sale as an ethylene feedstock.

Propane. The demand for propane as a heating fuel is significantly affected by weather conditions. Unusually warm winters could cause the demand for propane to decline significantly and could cause a significant decline in the volumes of propane that we transport.

Isobutane. A reduction in demand for motor gasoline additives may reduce demand for isobutane. During periods in which the difference in market prices between isobutane and normal butane is low or inventory values are high relative to current prices for normal butane or isobutane, our operating margin from selling isobutane could be reduced.

Propylene. Propylene is sold to petrochemical companies for a variety of uses, principally for the production of polypropylene. Propylene is subject to rapid and material price fluctuations. Any downturn in the domestic or international economy could cause reduced demand for, and an oversupply of propylene, which could cause a reduction in the volumes of propylene that we transport.

We face competition from third parties in our midstream businesses.

Even if reserves exist in the areas accessed by our facilities and are ultimately produced, we may not be chosen by the producers in these areas to gather, transport, process, fractionate, store or otherwise handle the hydrocarbons that are produced. We compete with others, including producers of oil and natural gas, for any such production on the basis of many factors, including but not limited to:

- geographic proximity to the production;
- costs of connection;
- available capacity;
- rates; and
- access to markets.

Our future debt level may limit our flexibility to obtain additional financing and pursue other business opportunities.

As of December 31, 2007, we had approximately $6.90 billion of consolidated debt outstanding including Duncan Energy Partners, which had approximately $200.0 million outstanding under its credit facility. The amount of our future debt could have significant effects on our operations, including, among other things:

- a substantial portion of our cash flow, including that of Duncan Energy Partners, could be dedicated to the payment of principal and interest on our future debt and may not be available for other purposes, including the payment of distributions on our common units and capital expenditures;
- credit rating agencies may view our debt level negatively;
- covenants contained in our existing and future credit and debt arrangements will require us to continue to meet financial tests that may adversely affect our flexibility in planning for and reacting to changes in our business, including possible acquisition opportunities;
- our ability to obtain additional financing, if necessary, for working capital, capital expenditures, acquisitions or other purposes may be impaired or such financing may not be available on favorable terms;
- we may be at a competitive disadvantage relative to similar companies that have less debt; and
- we may be more vulnerable to adverse economic and industry conditions as a result of our significant debt level.

Our public debt indentures currently do not limit the amount of future indebtedness that we can create, incur, assume or guarantee. Although EPO's Multi-Year Revolving Credit Facility restricts our ability to incur additional debt above certain levels, any debt we may incur in compliance with these restrictions may still be substantial. For information regarding EPO's Multi-Year Revolving Credit Facility, see Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

EPO's Multi-Year Revolving Credit Facility and each of its indentures for public debt contain conventional financial covenants and other restrictions. For example, we are prohibited from making distributions to our partners if such distributions would cause an event of default or otherwise violate a covenant under EPO's Multi-Year Revolving Credit Facility. In addition, under the terms of our junior subordinated notes, generally, if we elect to defer interest payments thereon, we are restricted from making distributions with respect to our equity securities. A breach of any of these restrictions by us could permit our lenders or noteholders, as applicable, to declare all amounts outstanding under these debt agreements to be immediately due and payable and, in the case of EPO's Multi-Year Revolving Credit Facility, to terminate all commitments to extend further credit. For additional information regarding EPO's Multi-Year Revolving Credit Facility, see Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Our ability to access capital markets to raise capital on favorable terms will be affected by our debt level, the amount of our debt maturing in the next several years and current maturities, and by prevailing market conditions. Moreover, if the rating agencies were to downgrade our credit ratings, then we could experience an increase in our borrowing costs, difficulty assessing capital markets or a reduction in the market price of our common units. Such a development could adversely affect our ability to obtain financing for working capital, capital expenditures or acquisitions or to refinance existing indebtedness. If we are unable to access the capital markets on favorable terms in the future, we might be forced to seek extensions for some of our short-term securities or to refinance some of our debt obligations through bank credit, as opposed to long-term public debt securities or equity securities. The price and terms upon which we might receive such extensions or additional bank credit, if at all, could be more onerous than those contained in existing debt agreements. Any such arrangements could, in turn, increase the risk that our leverage may adversely affect our future financial and operating flexibility and thereby impact our ability to pay cash distributions at expected rates.

We may not be able to fully execute our growth strategy if we encounter illiquid capital markets or increased competition for investment opportunities.

Our strategy contemplates growth through the development and acquisition of a wide range of midstream and other energy infrastructure assets while maintaining a strong balance sheet. This strategy includes constructing and acquiring additional assets and businesses to enhance our ability to compete effectively and diversifying our asset portfolio, thereby providing more stable cash flow. We regularly consider and enter into discussions regarding, and are currently contemplating and/or pursuing, potential joint ventures, stand alone projects or other transactions that we believe will present opportunities to realize synergies, expand our role in the energy infrastructure business and increase our market position.

We will require substantial new capital to finance the future development and acquisition of assets and businesses. Any limitations on our access to capital will impair our ability to execute this strategy. If the cost of such capital becomes too expensive, our ability to develop or acquire accretive assets will be limited. We may not be able to raise the necessary funds on satisfactory terms, if at all. The primary factors that influence our initial cost of equity include market conditions, fees we pay to underwriters and other offering costs, which include amounts we pay for legal and accounting services. The primary factors influencing our cost of borrowing include interest rates, credit spreads, covenants, underwriting or loan origination fees and similar charges we pay to lenders.

In addition, we are experiencing increased competition for the types of assets and businesses we have historically purchased or acquired. Increased competition for a limited pool of assets could result in our losing to other bidders more often or acquiring assets at less attractive prices. Either occurrence would limit our ability to fully execute our growth strategy. Our inability to execute our growth strategy may materially adversely affect our ability to maintain or pay higher distributions in the future.

Our operating cash flows from our capital projects may not be immediate.

We are engaged in several construction projects involving existing and new facilities for which we have expended or will expend significant capital, and our operating cash flow from a particular project may not increase until a period of time after its completion. For instance, if we build a new pipeline or platform or expand an existing facility, the design, construction, development and installation may occur over an extended period of time, and we may not receive any material increase in operating cash flow from that project until a period of time after it is placed in service. If we experience any unanticipated or extended delays in generating operating cash flow from these projects, we may be required to reduce or reprioritize our capital budget, sell non-core assets, access the capital markets or decrease or limit distributions to unitholders in order to meet our capital requirements.

Our growth strategy may adversely affect our results of operations if we do not successfully integrate the businesses that we acquire or if we substantially increase our indebtedness and contingent liabilities to make acquisitions.

Our growth strategy includes making accretive acquisitions. As a result, from time to time, we will evaluate and acquire assets and businesses (either ourselves or Duncan Energy Partners may do so) that we believe complement our existing operations. We may be unable to integrate successfully businesses we acquire in the future. We may incur substantial expenses or encounter delays or other problems in connection with our growth strategy that could negatively impact our results of operations, cash flows and financial condition.

Moreover, acquisitions and business expansions involve numerous risks, including but not limited to:

- difficulties in the assimilation of the operations, technologies, services and products of the acquired companies or business segments;
- establishing the internal controls and procedures that we are required to maintain under the Sarbanes-Oxley Act of 2002;
- managing relationships with new joint venture partners with whom we have not previously partnered;
- inefficiencies and complexities that can arise because of unfamiliarity with new assets and the businesses associated with them, including with their markets; and
- diversion of the attention of management and other personnel from day-to-day business to the development or acquisition of new businesses and other business opportunities.

If consummated, any acquisition or investment would also likely result in the incurrence of indebtedness and contingent liabilities and an increase in interest expense and depreciation, accretion and amortization expenses. As a result, our capitalization and results of operations may change significantly following an acquisition. A substantial increase in our indebtedness and contingent liabilities could have a material adverse effect on our results of operations, cash flows and financial condition. In addition, any anticipated benefits of a material acquisition, such as expected cost savings, may not be fully realized, if at all.

Acquisitions that appear to be accretive may nevertheless reduce our cash from operations on a per unit basis.

Even if we make acquisitions that we believe will be accretive, these acquisitions may nevertheless reduce our cash from operations on a per unit basis. Any acquisition involves potential risks, including, among other things:

- mistaken assumptions about volumes, revenues and costs, including synergies;
- an inability to integrate successfully the businesses we acquire;
- decrease in our liquidity as a result of our using a significant portion of our available cash or borrowing capacity to finance the acquisition;
- a significant increase in our interest expense or financial leverage if we incur additional debt to finance the acquisition;
- the assumption of unknown liabilities for which we are not indemnified or for which our indemnity is inadequate;
- an inability to hire, train or retain qualified personnel to manage and operate our growing business and assets;
- limitations on rights to indemnity from the seller;
- mistaken assumptions about the overall costs of equity or debt;
- the diversion of management's and employees' attention from other business concerns;
- unforeseen difficulties operating in new product areas or new geographic areas; and

- customer or key employee losses at the acquired businesses.

If we consummate any future acquisitions, our capitalization and results of operations may change significantly, and you will not have the opportunity to evaluate the economic, financial and other relevant information that we will consider in determining the application of these funds and other resources.

Our actual construction, development and acquisition costs could exceed forecasted amounts.

We have significant expenditures for the development and construction of midstream energy infrastructure assets, including construction and development projects with significant logistical, technological and staffing challenges. We may not be able to complete our projects at the costs we estimated at the time of each project's initiation or that we currently estimate. For example, material and labor costs associated with our projects in the Rocky Mountains region increased over time due to factors such as higher transportation costs and the availability of construction personnel. Similarly, force majeure events such as hurricanes along the Gulf Coast may cause delays, shortages of skilled labor and additional expenses for these construction and development projects, as were experienced with Hurricanes Katrina and Rita during 2005.

Our construction of new assets is subject to regulatory, environmental, political, legal and economic risks, which may result in delays, increased costs or decreased cash flows.

One of the ways we intend to grow our business is through the construction of new midstream energy assets. The construction of new assets involves numerous operational, regulatory, environmental, political and legal risks beyond our control and may require the expenditure of significant amounts of capital. These potential risks include, among other things, the following:

- we may be unable to complete construction projects on schedule or at the budgeted cost due to the unavailability of required construction personnel or materials, accidents, weather conditions or an inability to obtain necessary permits;
- we will not receive any material increases in revenues until the project is completed, even though we may have expended considerable funds during the construction phase, which may be prolonged;
- we may construct facilities to capture anticipated future growth in production in a region in which such growth does not materialize;
- since we are not engaged in the exploration for and development of natural gas reserves, we may not have access to third-party estimates of reserves in an area prior to our constructing facilities in the area. As a result, we may construct facilities in an area where the reserves are materially lower than we anticipate;
- where we do rely on third-party estimates of reserves in making a decision to construct facilities, these estimates may prove to be inaccurate because there are numerous uncertainties inherent in estimating reserves; and
- we may be unable to obtain rights-of-way to construct additional pipelines or the cost to do so may be uneconomical.

A materialization of any of these risks could adversely affect our ability to achieve growth in the level of our cash flows or realize benefits from expansion opportunities or construction projects.

We may not be able to consummate future public offerings of Duncan Energy Partners' debt and equity securities on terms that we expect or at all, which would result in less cash available for us to fund our capital spending program.

Duncan Energy Partners was formed in part to acquire, own and operate midstream energy businesses of ours. In the future, we may contribute additional equity interests in our subsidiaries to Duncan Energy Partners and use the proceeds we receive from Duncan Energy Partners to fund our capital spending program. Although Duncan Energy Partners successfully completed its initial public offering of partnership units in February 2007, there is no guarantee that, in the event of a proposed future contribution, Duncan Energy Partners will be able to complete future offerings of its securities in amounts that we would expect. If this occurs, we may have less cash available to fund our capital spending program, which could result in less cash distributions.

Substantially all of the common units in us that are owned by EPCO and its affiliates are pledged as security under EPCO's credit facility. Additionally, all of the member interests in our general partner and all of the common units in us that are owned by Enterprise GP Holdings are pledged under its credit facility. Upon an event of default under either of these credit facilities, a change in ownership or control of us could ultimately result.

An affiliate of EPCO has pledged substantially all of its common units in us as security under its credit facility. EPCO's credit facility contains customary and other events of default relating to defaults of EPCO and certain of its subsidiaries, including certain defaults by us and other affiliates of EPCO. An event of default, followed by a foreclosure on EPCO's pledged collateral, could ultimately result in a change in ownership of us. In addition, the 100% membership interest in our general partner and the 13,454,498 of our common units that are owned by Enterprise GP Holdings are pledged under Enterprise GP Holdings' credit facility. Enterprise GP Holdings' credit facility contains customary and other events of default. Upon an event of default, the lenders under Enterprise GP Holdings' credit facility could foreclose on Enterprise GP Holdings' assets, which could ultimately result in a change in control of our general partner and a change in the ownership of our units held by Enterprise GP Holdings.

The credit and risk profile of our general partner and its owners could adversely affect our credit ratings and profile.

The credit and business risk profiles of the general partner or owners of a general partner may be factors in credit evaluations of a limited partnership by the nationally recognized debt rating agencies. This is because the general partner can exercise significant influence over the business activities of the partnership, including its cash distribution and acquisition strategy and business risk profile. Another factor that may be considered is the financial condition of the general partner and its owners, including the degree of their financial leverage and their dependence on cash flow from the partnership to service their indebtedness.

Entities controlling the owner of our general partner have significant indebtedness outstanding and are dependent principally on the cash distributions from their limited partner equity interests in us, Enterprise GP Holdings and TEPPCO to service such indebtedness. Any distributions by us, Enterprise GP Holdings and TEPPCO to such entities will be made only after satisfying our then current obligations to creditors. Although we have taken certain steps in our organizational structure, financial reporting and contractual relationships to reflect the separateness of us and our general partner from the entities that control our general partner, our credit ratings and business risk profile could be adversely affected if the ratings and risk profiles of EPCO or the entities that control our general partner were viewed as substantially lower or more risky than ours.

The interruption of distributions to us from our subsidiaries and joint ventures may affect our ability to satisfy our obligations and to make distributions to our partners.

We are a partnership holding company with no business operations and our operating subsidiaries conduct all of our operations and own all of our operating assets. Our only significant assets are the ownership interests we own in our subsidiaries and joint ventures. As a result, we depend upon the earnings and cash flow of our subsidiaries and joint ventures and the distribution of that cash to us in order to meet our obligations and to allow us to make distributions to our partners. The ability of our subsidiaries and joint ventures to make distributions to us may be restricted by, among other things, the provisions of existing and future indebtedness, applicable state partnership and limited liability company laws and other laws and regulations, including FERC policies. For example, all cash flows from Evangeline are currently used to service its debt.

In addition, the charter documents governing our joint ventures typically allow their respective joint venture management committees sole discretion regarding the occurrence and amount of distributions. Some of the joint ventures in which we participate have separate credit agreements that contain various restrictive covenants. Among other things, those covenants may limit or restrict the joint venture's ability to make distributions to us under certain circumstances. Accordingly, our joint ventures may be unable to make distributions to us at current levels if at all.

We may be unable to cause our joint ventures to take or not to take certain actions unless some or all of our joint venture participants agree.

We participate in several joint ventures. Due to the nature of some of these arrangements, each participant in these joint ventures has made substantial investments in the joint venture and, accordingly, has required that the relevant charter documents contain certain features designed to provide each participant with the opportunity to participate in the management of the joint venture and to protect its investment, as well as any other assets which may be substantially dependent on or otherwise affected by the activities of that joint venture. These participation and protective features customarily include a corporate governance structure that requires at least a majority-in-interest vote to authorize many basic activities and requires a greater voting interest (sometimes up to 100%) to authorize more significant activities. Examples of these more significant activities are large expenditures or contractual commitments, the construction or acquisition of assets, borrowing money or otherwise raising capital, transactions with affiliates of a joint venture participant, litigation and transactions not in the ordinary course of business, among others. Thus, without the concurrence of joint venture participants with enough voting interests, we may be unable to cause any of our joint ventures to take or not to take certain actions, even though those actions may be in the best interest of us or the particular joint venture.

Moreover, any joint venture owner may sell, transfer or otherwise modify its ownership interest in a joint venture, whether in a transaction involving third parties or the other joint venture owners. Any such transaction could result in us being required to partner with different or additional parties.

A natural disaster, catastrophe or other event could result in severe personal injury, property damage and environmental damage, which could curtail our operations and otherwise materially adversely affect our cash flow and, accordingly, affect the market price of our common units.

Some of our operations involve risks of personal injury, property damage and environmental damage, which could curtail our operations and otherwise materially adversely affect our cash flow. For example, natural gas facilities operate at high pressures, sometimes in excess of 1,100 pounds per square inch. We also operate oil and natural gas facilities located underwater in the Gulf of Mexico, which can involve complexities, such as extreme water pressure. Virtually all of our operations are exposed to potential natural disasters, including hurricanes, tornadoes, storms, floods and/or earthquakes. The location of our assets and our customers' assets in the U.S. Gulf Coast region makes them particularly vulnerable to hurricane risk.

If one or more facilities that are owned by us or that deliver oil, natural gas or other products to us are damaged by severe weather or any other disaster, accident, catastrophe or event, our operations could be significantly interrupted. Similar interruptions could result from damage to production or other facilities that supply our facilities or other stoppages arising from factors beyond our control. These interruptions might involve significant damage to people, property or the environment, and repairs might take from a week or less for a minor incident to six months or more for a major interruption. Additionally, some of the storage contracts that we are a party to obligate us to indemnify our customers for any damage or injury occurring during the period in which the customers' natural gas is in our possession. Any event that interrupts the revenues generated by our operations, or which causes us to make significant expenditures not covered by insurance, could reduce our cash available for paying distributions and, accordingly, adversely affect the market price of our common units.

We believe that EPCO maintains adequate insurance coverage on behalf of us, although insurance will not cover many types of interruptions that might occur and will not cover amounts up to applicable deductibles. As a result of market conditions, premiums and deductibles for certain insurance policies can increase substantially, and in some instances, certain insurance may become unavailable or available only for reduced amounts of coverage. For example, change in the insurance markets subsequent to the terrorist attacks on September 11, 2001 and the hurricanes in 2005 have made it more difficult for us to obtain certain types of coverage. As a result, EPCO may not be able to renew existing insurance policies on behalf of us or procure other desirable insurance on commercially reasonable terms, if at all. If we were to incur a significant liability for which we were not fully insured, it could have a material adverse effect on our financial position and results of operations. In addition, the proceeds of any such insurance may not be paid in a timely manner and may be insufficient if such an event were to occur.

An impairment of goodwill and intangible assets could reduce our earnings.

At December 31, 2007, our balance sheet reflected $591.7 million of goodwill and $917.0 million of intangible assets. Goodwill is recorded when the purchase price of a business exceeds the fair market value of the tangible and separately measurable intangible net assets. Generally accepted accounting principles in the United States ("GAAP") require us to test goodwill for impairment on an annual basis or when events or circumstances occur indicating that goodwill might be impaired. Long-lived assets such as intangible assets with finite useful lives are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. If we determine that any of our goodwill or intangible assets were impaired, we would be required to take an immediate charge to earnings with a correlative effect on partners' equity and balance sheet leverage as measured by debt to total capitalization.

Increases in interest rates could materially adversely affect our business, results of operations, cash flows and financial condition.

In addition to our exposure to commodity prices, we have significant exposure to increases in interest rates. As of December 31, 2007, we had approximately $6.90 billion of consolidated debt, of which approximately $5.03 billion was at fixed interest rates and approximately $1.87 billion was at variable interest rates, after giving effect to existing interest swap arrangements. From time to time, we may enter into additional interest rate swap arrangements, which could increase our exposure to variable interest rates. As a result, our results of operations, cash flows and financial condition, could be materially adversely affected by significant increases in interest rates.

An increase in interest rates may also cause a corresponding decline in demand for equity investments, in general, and in particular for yield-based equity investments such as our common units. Any such reduction in demand for our common units resulting from other more attractive investment opportunities may cause the trading price of our common units to decline.

The use of derivative financial instruments could result in material financial losses by us.

We historically have sought to limit a portion of the adverse effects resulting from changes in oil and natural gas commodity prices and interest rates by using financial derivative instruments and other hedging mechanisms from time to time. To the extent that we hedge our commodity price and interest rate exposures, we will forego the benefits we would otherwise experience if commodity prices or interest rates were to change in our favor. In addition, even though monitored by management, hedging activities can result in losses. Such losses could occur under various circumstances, including if a counterparty does not perform its obligations under the hedge arrangement, the hedge is imperfect, or hedging policies and procedures are not followed.

Our pipeline integrity program may impose significant costs and liabilities on us.

The U.S. Department of Transportation issued final rules (effective March 2001 with respect to hazardous liquid pipelines and February 2004 with respect to natural gas pipelines) requiring pipeline operators to develop integrity management programs to comprehensively evaluate their pipelines, and take measures to protect pipeline segments located in what the rules refer to as "high consequence areas." The final rule resulted from the enactment of the Pipeline Safety Improvement Act of 2002. At this time, we cannot predict the ultimate costs of compliance with this rule because those costs will depend on the number and extent of any repairs found to be necessary as a result of the pipeline integrity testing that is required by the rule. We will continue our pipeline integrity testing programs to assess and maintain the integrity of our pipelines. The results of these tests could cause us to incur significant and unanticipated capital and operating expenditures for repairs or upgrades deemed necessary to ensure the continued safe and reliable operation of our pipelines.

Environmental costs and liabilities and changing environmental regulation could materially affect our results of operations, cash flows and financial condition.

Our operations are subject to extensive federal, state and local regulatory requirements relating to environmental affairs, health and safety, waste management and chemical and petroleum products. Governmental authorities have the power to enforce compliance with applicable regulations and permits and to subject violators to civil and criminal penalties, including substantial fines, injunctions or both. Certain environmental laws, including CERCLA and analogous state laws and regulations, impose strict, joint and several liability for costs required to cleanup and restore sites where hazardous substances or hydrocarbons have been disposed or otherwise released. Moreover, third parties, including neighboring landowners, may also have the right to pursue legal actions to enforce compliance or to recover for personal injury and property damage allegedly caused by the release of hazardous substances, hydrocarbons or other waste products into the environment.

We will make expenditures in connection with environmental matters as part of normal capital expenditure programs. However, future environmental law developments, such as stricter laws, regulations, permits or enforcement policies, could significantly increase some costs of our operations, including the handling, manufacture, use, emission or disposal of substances and wastes.

Federal, state or local regulatory measures could materially adversely affect our business, results of operations, cash flows and financial condition.

The FERC regulates our interstate natural gas pipelines and natural gas storage facilities under the Natural Gas Act, and interstate NGL and petrochemical pipelines under the ICA. The STB regulates our interstate propylene pipelines. State regulatory agencies regulate our intrastate natural gas and NGL pipelines, intrastate storage facilities and gathering lines.

Under the Natural Gas Act, the FERC has authority to regulate natural gas companies that provide natural gas pipeline transportation services in interstate commerce. Its authority to regulate those services is comprehensive and includes the rates charged for the services, terms and condition of service and certification and construction of new facilities. The FERC requires that our services are provided on a non-discriminatory basis so that all shippers have open access to our pipelines and storage. Pursuant to the FERC’s jurisdiction over interstate gas pipeline rates, existing pipeline rates may be challenged by customer complaint or by the FERC Staff and proposed rate increases may be challenged by protest.

We have interests in natural gas pipeline facilities offshore from Texas and Louisiana. These facilities are subject to regulation by the FERC and other federal agencies, including the Department of Interior, under the Outer Continental Shelf Lands Act, and by the Department of Transportation’s Office of Pipeline Safety under the Natural Gas Pipeline Safety Act.

Our intrastate NGL and natural gas pipelines are subject to regulation in many states, including Alabama, Colorado, Louisiana, Mississippi, New Mexico and Texas, and by the FERC pursuant to Section 311 of the Natural Gas Policy Act. We also have natural gas underground storage facilities in Louisiana, Mississippi and Texas. Although state regulation is typically less onerous than at the FERC, proposed and existing rates subject to state regulation and the provision of services on a non-discriminatory basis are also subject to challenge by protest and complaint, respectively.

For a general overview of federal, state and local regulation applicable to our assets, see Item 1 of this annual report. This regulatory oversight can affect certain aspects of our business and the market for our products and could materially adversely affect our cash flows.

We are subject to strict regulations at many of our facilities regarding employee safety, and failure to comply with these regulations could adversely affect our ability to make distributions to you.

The workplaces associated with our facilities are subject to the requirements of the federal Occupational Safety and Health Act, or OSHA, and comparable state statutes that regulate the protection of the health and safety of workers. In addition, the OSHA hazard communication standard requires that we maintain information about hazardous materials used or produced in our operations and that we provide this information to employees, state and local governmental authorities and local residents. The failure to comply with OSHA requirements or general industry standards, keep adequate records or monitor occupational exposure to regulated substances could have a material adverse effect on our business, financial condition, results of operations and ability to make distributions to you.

Terrorist attacks aimed at our facilities could adversely affect our business, results of operations, cash flows and financial condition.

Since the September 11, 2001 terrorist attacks on the United States, the United States government has issued warnings that energy assets, including our nation's pipeline infrastructure, may be the future target of terrorist organizations. Any terrorist attack on our facilities or pipelines or those of our customers could have a material adverse effect on our business.

We depend on the leadership and involvement of Dan L. Duncan and other key personnel for the success of our businesses.

We depend on the leadership, involvement and services of Dan L. Duncan, the founder of EPCO and the chairman of our general partner and other key personnel. Mr. Duncan has been integral to our success and the success of EPCO due in part to his ability to identify and develop business opportunities, make strategic decisions and attract and retain key personnel. The loss of his leadership and involvement or the services of certain key members of our senior management team could have a material adverse effect on our business, results of operations, cash flows, market price of our securities and financial condition.

EPCO's employees may be subjected to conflicts in managing our business and the allocation of time and compensation costs between our business and the business of EPCO and its other affiliates.

We have no officers or employees and rely solely on officers of our general partner and employees of EPCO. Certain of our officers are also officers of EPCO and other affiliates of EPCO. These relationships may create conflicts of interest regarding corporate opportunities and other matters, and the resolution of any such conflicts may not always be in our or our unitholders' best interests. In addition, these overlapping officers allocate their time among us, EPCO and other affiliates of EPCO. These officers face potential conflicts regarding the allocation of their time, which may adversely affect our business, results of operations and financial condition.

We have entered into an administrative services agreement that governs business opportunities among entities controlled by EPCO, which includes us and our general partner, Enterprise GP Holdings and its general partner, Duncan Energy Partners and its general partner and TEPPCO and its general partner.

For information regarding how business opportunities are handled within the EPCO group of companies, please read Item 13 of this annual report.

We do not have an independent compensation committee, and aspects of the compensation of our executive officers and other key employees, including base salary, are not reviewed or approved by our independent directors. The determination of executive officer and key employee compensation could involve conflicts of interest resulting in economically unfavorable arrangements for us.

Risks Relating to Our Partnership Structure

We may issue additional securities without the approval of our common unitholders.

At any time, we may issue an unlimited number of limited partner interests of any type (to parties other than our affiliates) without the approval of our unitholders. Our partnership agreement does not give our common unitholders the right to approve the issuance of equity securities including equity securities ranking senior to our common units. The issuance of additional common units or other equity securities of equal or senior rank will have the following effects:

- the ownership interest of a unitholder immediately prior to the issuance will decrease;
- the amount of cash available for distributions on each common unit may decrease;
- the ratio of taxable income to distributions may increase;
- the relative voting strength of each previously outstanding common unit may be diminished; and
- the market price of our common units may decline.

We may not have sufficient cash from operations to pay distributions at the current level following establishment of cash reserves and payments of fees and expenses, including payments to EPGP.

Because distributions on our common units are dependent on the amount of cash we generate, distributions may fluctuate based on our performance. We cannot guarantee that we will continue to pay distributions at the current level each quarter. The actual amount of cash that is available to be distributed each quarter will depend upon numerous factors, some of which are beyond our control and the control of EPGP. These factors include but are not limited to the following:

- the level of our operating costs;
- the level of competition in our business segments;
- prevailing economic conditions;
- the level of capital expenditures we make;
- the restrictions contained in our debt agreements and our debt service requirements;
- fluctuations in our working capital needs;
- the cost of acquisitions, if any; and
- the amount, if any, of cash reserves established by EPGP in its sole discretion.

In addition, you should be aware that the amount of cash we have available for distribution depends primarily on our cash flow, including cash flow from financial reserves and working capital borrowings, not solely on profitability, which is affected by non-cash items. As a result, we may make cash distributions during periods when we record losses and we may not make distributions during periods when we record net income.

We do not have the same flexibility as other types of organizations to accumulate cash and equity to protect against illiquidity in the future.

Unlike a corporation, our partnership agreement requires us to make quarterly distributions to our unitholders of all available cash reduced by any amounts of reserves for commitments and contingencies, including capital and operating costs and debt service requirements. The value of our units and other limited partner interests may decrease in correlation with decreases in the amount we distribute per unit. Accordingly, if we experience a liquidity problem in the future, we may not be able to issue more equity to recapitalize.

Cost reimbursements and fees due to EPCO and its affiliates, including our general partner may be substantial and will reduce our cash available for distribution to holders of our units.

Prior to making any distribution on our units, we will reimburse EPCO and its affiliates, including officers and directors of EPGP, for all expenses they incur on our behalf, including allocated overhead. These amounts will include all costs incurred in managing and operating us, including costs for rendering administrative staff and support services to us, and overhead allocated to us by EPCO. The payment of these amounts could adversely affect our ability to pay cash distributions to holders of our units. EPCO has sole discretion to determine the amount of these expenses. In addition, EPCO and its affiliates may provide other services to us for which we will be charged fees as determined by EPCO.

EPGP and its affiliates have limited fiduciary responsibilities to, and conflicts of interest with respect to, our partnership, which may permit it to favor its own interests to your detriment.

The directors and officers of EPGP and its affiliates have duties to manage EPGP in a manner that is beneficial to its members. At the same time, EPGP has duties to manage our partnership in a manner that is beneficial to us. Therefore, EPGP's duties to us may conflict with the duties of its officers and directors to its members. Such conflicts may include, among others, the following:

- neither our partnership agreement nor any other agreement requires EPGP or EPCO to pursue a business strategy that favors us;
- decisions of EPGP regarding the amount and timing of asset purchases and sales, cash expenditures, borrowings, issuances of additional units and reserves in any quarter may affect the level of cash available to pay quarterly distributions to unitholders and EPGP;
- under our partnership agreement, EPGP determines which costs incurred by it and its affiliates are reimbursable by us;
- EPGP is allowed to resolve any conflicts of interest involving us and EPGP and its affiliates;
- EPGP is allowed to take into account the interests of parties other than us, such as EPCO, in resolving conflicts of interest, which has the effect of limiting its fiduciary duty to unitholders;
- any resolution of a conflict of interest by EPGP not made in bad faith and that is fair and reasonable to us shall be binding on the partners and shall not be a breach of our partnership agreement;
- affiliates of EPGP, including TEPPCO, may compete with us in certain circumstances;
- EPGP has limited its liability and reduced its fiduciary duties and has also restricted the remedies available to our unitholders for actions that might, without the limitations, constitute breaches of fiduciary duty. As a result of purchasing our units, you are deemed to consent to some actions and

conflicts of interest that might otherwise constitute a breach of fiduciary or other duties under applicable law;

- we do not have any employees and we rely solely on employees of EPCO and its affiliates;
- in some instances, EPGP may cause us to borrow funds in order to permit the payment of distributions, even if the purpose or effect of the borrowing is to make incentive distributions;
- our partnership agreement does not restrict EPGP from causing us to pay it or its affiliates for any services rendered to us or entering into additional contractual arrangements with any of these entities on our behalf;
- EPGP intends to limit its liability regarding our contractual and other obligations and, in some circumstances, may be entitled to be indemnified by us;
- EPGP controls the enforcement of obligations owed to us by our general partner and its affiliates; and
- EPGP decides whether to retain separate counsel, accountants or others to perform services for us.

We have significant business relationships with entities controlled by Dan L. Duncan, including EPCO and TEPPCO. For detailed information on these relationships and related transactions with these entities, see Item 13 included within this annual report.

Unitholders have limited voting rights and are not entitled to elect our general partner or its directors, which could lower the trading price of our common units. In addition, even if unitholders are dissatisfied, they cannot easily remove our general partner.

Unlike the holders of common stock in a corporation, unitholders have only limited voting rights on matters affecting our business and, therefore, limited ability to influence management's decisions regarding our business. Unitholders did not elect EPGP or its directors and will have no right to elect our general partner or its directors on an annual or other continuing basis. The board of directors of our general partner, including the independent directors, is chosen by the owners of the general partner and not by the unitholders.

Furthermore, if unitholders are dissatisfied with the performance of our general partner, they currently have no practical ability to remove EPGP or its officers or directors. EPGP may not be removed except upon the vote of the holders of at least 60% of our outstanding units voting together as a single class. Because affiliates of EPGP currently own approximately 34.0% of our outstanding common units, the removal of EPGP as our general partner is highly unlikely without the consent of both EPGP and its affiliates. As a result of this provision, the trading price of our common units may be lower than other forms of equity ownership because of the absence or reduction of a takeover premium in the trading price.

Our partnership agreement restricts the voting rights of unitholders owning 20% or more of our common units.

Unitholders' voting rights are further restricted by a provision in our partnership agreement stating that any units held by a person that owns 20% or more of any class of our common units then outstanding, other than our general partner and its affiliates, cannot be voted on any matter. In addition, our partnership agreement contains provisions limiting the ability of unitholders to call meetings or to acquire information about our operations, as well as other provisions limiting our unitholders' ability to influence the manner or direction of our management. As a result of this provision, the trading price of our common units may be lower than other forms of equity ownership because of the absence or reduction of a takeover premium in the trading price.

EPGP has a limited call right that may require common unitholders to sell their units at an undesirable time or price.

If at any time EPGP and its affiliates own 85% or more of the common units then outstanding, EPGP will have the right, but not the obligation, which it may assign to any of its affiliates or to us, to acquire all, but not less than all, of the remaining common units held by unaffiliated persons at a price not less than the then current market price. As a result, common unitholders may be required to sell their common units at an undesirable time or price and may therefore not receive any return on their investment. They may also incur a tax liability upon a sale of their units.

Our common unitholders may not have limited liability if a court finds that limited partner actions constitute control of our business.

Under Delaware law, common unitholders could be held liable for our obligations to the same extent as a general partner if a court determined that the right of limited partners to remove our general partner or to take other action under our partnership agreement constituted participation in the "control" of our business.

Under Delaware law, our general partner generally has unlimited liability for our obligations, such as our debts and environmental liabilities, except for those of our contractual obligations that are expressly made without recourse to our general partner.

The limitations on the liability of holders of limited partner interests for the obligations of a limited partnership have not been clearly established in some of the states in which we do business. You could have unlimited liability for our obligations if a court or government agency determined that:

- we were conducting business in a state, but had not complied with that particular state’s partnership statute; or
- your right to act with other unitholders to remove or replace our general partner, to approve some amendments to our partnership agreement or to take other actions under our partnership agreement constituted "control" of our business.

Unitholders may have liability to repay distributions.

Under certain circumstances, our unitholders may have to repay amounts wrongfully returned or distributed to them. Under Section 17-607 of the Delaware Revised Uniform Limited Partnership Act (the "Delaware Act"), we may not make a distribution to our unitholders if the distribution would cause our liabilities to exceed the fair value of our assets. Liabilities to partners on account of their partnership interests and liabilities that are non-recourse to the partnership are not counted for purposes of determining whether a distribution is permitted. Delaware law provides that for a period of three years from the date of an impermissible distribution, limited partners who received the distribution and who knew at the time of the distribution that it violated Delaware law will be liable to the limited partnership for the distribution amount. A purchaser of common units who becomes a limited partner is liable for the obligations of the transferring limited partner to make contributions to the partnership that are known to such purchaser of common units at the time it became a limited partner and for unknown obligations if the liabilities could be determined from our partnership agreement.

Sales of a large number of our outstanding common units in the market may depress the market price of our common units.

Sales of a substantial number of our common units in the public market could cause the market price of our common units to decline. As of February 1, 2008, we had 435,241,826 common units outstanding. Sales of a substantial number of these common units in the trading markets, whether in a single transaction or series of transactions, or the possibility that these sales may occur, could reduce the market price of our outstanding common units. In addition, these sales, or the possibility that these sales may occur, could make it more difficult for us to sell our common units in the future.

Our general partner's interest in us and the control of our general partner may be transferred to a third party without unitholder consent.

After June 30, 2008, our general partner, in accordance with our partnership agreement, may transfer its general partner interest without the consent of unitholders. In addition, our general partner may transfer its general partner interest to a third party in a merger or consolidation or in a sale of all or substantially all of its assets without the consent of our unitholders. Furthermore, there is no restriction in our partnership agreement on the ability of Enterprise GP Holdings or its affiliates to transfer their equity interests in our general partner to a third party. The new equity owner of our general partner would then be in a position to replace the board of directors and officers of our general partner with their own choices and to influence the decisions taken by the board of directors and officers of our general partner.

Tax Risks to Common Unitholders

Our tax treatment depends on our status as a partnership for federal income tax purposes, as well as our not being subject to a material amount of entity-level taxation by individual states. If the IRS were to treat us as a corporation or if we were to become subject to a material amount of entity-level taxation for state tax purposes, then our cash available for distribution to our common unitholders would be substantially reduced.

The anticipated after-tax economic benefit of an investment in our common units depends largely on our being treated as a partnership for federal income tax purposes. We have not requested, and do not plan to request, a ruling from the Internal Revenue Service ("IRS") on this matter.

If we were treated as a corporation for federal income tax purposes, we would pay federal income tax on our taxable income at the corporate tax rate, which is currently a maximum of 35%. Distributions to our unitholders would generally be taxed again as corporate distributions, and no income, gains, losses or deductions would flow through to our unitholders. Because a tax would be imposed upon us as a corporation, the cash available for distributions to our common unitholders would be substantially reduced. Thus, treatment of us as a corporation would result in a material reduction in the after-tax return to our common unitholders, likely causing a substantial reduction in the value of our common units.

Current law may change, causing us to be treated as a corporation for federal income tax purposes or otherwise subjecting us to a material amount of entity level taxation. In addition, because of widespread state budget deficits and other reasons, several states (including Texas) are evaluating ways to enhance state-tax collections. For example, with respect to tax reports due on or after January 1, 2008, our operating subsidiaries are subject to the Revised Texas Franchise Tax on that portion of their revenue generated in Texas. Specifically, the Revised Texas Franchise Tax is imposed at a maximum effective rate of 0.7% of the operating subsidiaries' gross revenue that is apportioned to Texas. If any additional state were to impose an entity-level tax upon us or our operating subsidiaries, the cash available for distribution to our common unitholders would be reduced.

The tax treatment of publicly traded partnerships or an investment in our common units could be subject to potential legislative, judicial or administrative changes and differing interpretations, possibly on a retroactive basis.

The present U.S. federal income tax treatment of publicly traded partnerships, including us, or an investment in our common units may be modified by administrative, legislative or judicial interpretation at any time. Any modification to the U.S. federal income tax laws and interpretations thereof could make it more difficult or impossible to meet the exception for us to be treated as a partnership for U.S. federal income tax purposes that is not taxable as a corporation, or Qualifying Income Exception, affect or cause us to change our business activities, affect the tax considerations of an investment in us, change the character or treatment of portions of our income and adversely affect an investment in our common units. For example, in response to certain recent developments, members of Congress are considering substantive changes to the definition of qualifying income under Section 7704(d) of the Internal Revenue Code. It is possible that these legislative efforts could result in changes to the existing U.S. tax laws that affect publicly traded partnerships, including us. Modifications to the U.S. federal income tax laws and interpretations thereof may or may not be applied retroactively. We are unable to predict whether any changes will ultimately be enacted. Any such changes could negatively impact the value of an investment in our common units.

We prorate our items of income, gain, loss and deduction between transferors and transferees of our common units each month based upon the ownership of our common units on the first day of each month, instead of on the basis of the date a particular common unit is transferred.

We prorate our items of income, gain, loss and deduction between transferors and transferees of our common units each month based upon the ownership of our common units on the first day of each month, instead of on the basis of the date a particular unit is transferred. The use of this proration method may not be permitted under existing Treasury regulations, and, accordingly, our counsel is unable to opine as to the validity of this method. If the IRS were to successfully challenge this method or new Treasury regulations were issued, we may be required to change the allocation of items of income, gain, loss and deduction among our unitholders.

A successful IRS contest of the federal income tax positions we take may adversely impact the market for our common units, and the costs of any contests will be borne by our unitholders and our general partner.

The IRS may adopt positions that differ from the positions we take, even positions taken with advice of counsel. It may be necessary to resort to administrative or court proceedings to sustain some or all of the positions we take. A court may not agree with some or all of the positions we take. Any contest with the IRS may materially and adversely impact the market for our common units and the price at which our common units trade. In addition, the costs of any contest with the IRS, principally legal, accounting and related fees, will be borne indirectly by our unitholders and our general partner.

Even if our common unitholders do not receive any cash distributions from us, they will be required to pay taxes on their share of our taxable income.

Common unitholders will be required to pay federal income taxes and, in some cases, state and local income taxes on their share of our taxable income whether or not they receive any cash distributions from us. Our common unitholders may not receive cash distributions from us equal to their share of our taxable income or even equal to the actual tax liability which results from their share of our taxable income.

Tax gain or loss on the disposition of our common units could be different than expected.

If a common unitholder sells its common units, the unitholder will recognize a gain or loss equal to the difference between the amount realized and the unitholder's tax basis in those common units. Prior distributions to a unitholder in excess of the total net taxable income a unitholder is allocated for a common unit, which decreased the unitholder's tax basis in that common unit, will, in effect, become taxable income to the unitholder if the common unit is sold at a price greater than the unitholder's tax basis in that common unit, even if the price the unitholder receives is less than the unitholder's original cost. A substantial portion of the amount realized, whether or not representing gain, may be ordinary income to a unitholder.

Tax-exempt entities and non-U.S. persons face unique tax issues from owning common units that may result in adverse tax consequences to them.

Investments in common units by tax-exempt entities, such as individual retirement accounts (known as IRAs), other retirement plans and non-U.S. persons raises issues unique to them. For example, virtually all of our income allocated to unitholders who are organizations exempt from federal income tax, including individual retirement accounts and other retirement plans, will be unrelated business taxable income and will be taxable to them. Distributions to non-U.S. persons will be reduced by withholding taxes at the highest applicable effective tax rate, and non-U.S. persons will be required to file United States federal income tax returns and pay tax on their share of our taxable income.

We will treat each purchaser of our common units as having the same tax benefits without regard to the units purchased. The IRS may challenge this treatment, which could adversely affect the value of our common units.

Because we cannot match transferors and transferees of common units, we adopt depreciation and amortization positions that may not conform with all aspects of applicable Treasury regulations. A successful IRS challenge to those positions could adversely affect the amount of tax benefits available to a common unitholder. It also could affect the timing of these tax benefits or the amount of gain from a sale of common units and could have a negative impact on the value of our common units or result in audit adjustments to the common unitholder's tax returns.

Our common unitholders will likely be subject to state and local taxes and return filing requirements in states where they do not live as a result of an investment in our common units.

In addition to federal income taxes, our common unitholders will likely be subject to other taxes, including state and local income taxes, unincorporated business taxes and estate, inheritance or intangible taxes that are imposed by the various jurisdictions in which we do business or own property. Our common unitholders will likely be required to file state and local income tax returns and pay state and local income taxes in some or all of these various jurisdictions. Further, they may be subject to penalties for failure to comply with those requirements. We may own property or conduct business in other states or foreign countries in the future. It is the responsibility of the common unitholder to file all federal, state and local tax returns.

The sale or exchange of 50% or more of our capital and profits interests during any twelve-month period will result in the termination of our partnership for federal income tax purposes.

We will be considered to have terminated for federal income tax purposes if there is a sale or exchange of 50% or more of the total interests in our capital and profits within a twelve-month period. Our termination would, among other things, result in the closing of our taxable year for all unitholders and could result in a deferral of depreciation deductions allowable in computing our taxable income.

We have adopted certain valuation methodologies that may result in a shift of income, gain, loss and deduction between EPGP and our unitholders. The IRS may challenge this treatment, which could adversely affect the value of our common units.

When we issue additional common units or engage in certain other transactions, we determine the fair market value of our assets and allocate any unrealized gain or loss attributable to our assets to the capital accounts of our unitholders and EPGP. Our methodology may be viewed as understating the value of our assets. In that case, there may be a shift of income, gain, loss and deduction between certain unitholders and EPGP, which may be unfavorable to such unitholders. Moreover, subsequent purchasers of common units may have a greater portion of their Internal Revenue code Section 743(b) adjustment allocated to our tangible assets and a lesser portion allocated to our intangible assets. The IRS may challenge our methods, or our allocation of the Section 743(b) adjustment attributable to our tangible and intangible assets, and allocations of income, gain, loss and deduction between EPGP and certain of our unitholders.

A successful IRS challenge to these methods or allocations could adversely affect the amount of taxable income or loss being allocated to our unitholders. It also could affect the amount of gain from a unitholder's sale of common units and could have a negative impact on the value of the common units or result in audit adjustments to the unitholder's tax returns.

Item 1B. ***Unresolved Staff Comments*.**

None.

Item 3. ***Legal Proceedings*.**

On occasion, we or our unconsolidated affiliates are named as defendants in litigation relating to our normal business activities, including regulatory and environmental matters. Although we are insured against various business risks to the extent we believe it is prudent, there is no assurance that the nature and amount of such insurance will be adequate, in every case, to indemnify us against liabilities arising from future legal proceedings as a result of our ordinary business activities. We are unaware of any significant litigation, pending or threatened, that could have a significant adverse effect on our financial position, cash flows or results of operations. For detailed information regarding our legal proceedings, see Note 20 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Item 4. ***Submission of Matters to a Vote of Security Holders*.**

There were no matters voted on by our unitholders during the fourth quarter of 2007. On January 29, 2008, we held a special meeting where our unitholders where asked to approve the terms of the Enterprise Products 2008 Long-Term Incentive Plan (the "Enterprise Products 2008 LTIP"), which provides for awards of (i) options to purchase our common units, (ii) restricted units, (iii) phantom units, (iv) distribution equivalent rights and (v) common unit appreciation rights. These awards would be available for grant to employees and consultants of EPCO, including those who provide services on our behalf, and non-employee directors of our general partner. The Enterprise Products 2008 LTIP provides for the issuance of up to 10,000,000 of our common units as awards to such individuals. The following is a summary of the votes cast by our unitholders, which approved the terms of the Enterprise Products 2008 LTIP.

	Number of Votes Cast
For	243,283,982
Against	13,383,667
Abstentions	2,236,957

PART II

Item 5. *Market for Registrant's Common Equity, Related Unitholder Matters and Issuer Purchases of Equity Securities.*

Market Information and Cash Distributions

Our common units are listed on the NYSE under the ticker symbol "EPD." As of February 1, 2008, there were approximately 904 unitholders of record of our common units. The following table presents the high and low sales prices for our common units during the periods indicated (as reported by the NYSE Composite Transaction Tape) and the amount, record date and payment date of the quarterly cash distributions we paid on each of our common units.

	Price Ranges		Cash Distribution History		
	High	Low	Per Unit	Record Date	Payment Date
2006					
1st Quarter	$26.000	$23.690	$0.4450	Apr. 28, 2006	May 10, 2006
2nd Quarter	$25.710	$23.760	$0.4525	Jul. 31, 2006	Aug. 10, 2006
3rd Quarter	$27.060	$25.000	$0.4600	Oct. 31, 2006	Nov. 8, 2006
4th Quarter	$29.980	$26.050	$0.4675	Jan. 31, 2007	Feb. 8, 2007
2007					
1st Quarter	$32.750	$28.060	$0.4750	Apr. 30, 2007	May 10, 2007
2nd Quarter	$33.350	$30.220	$0.4825	Jul. 31, 2007	Aug. 9, 2007
3rd Quarter	$33.700	$26.136	$0.4900	Oct. 31, 2007	Nov. 8, 2007
4th Quarter	$32.450	$29.920	$0.5000	Jan. 31, 2008	Feb. 7, 2008

The quarterly cash distributions shown in the table above correspond to cash flows for the quarters indicated. The actual cash distributions (i.e., the payments made to our partners) occur within 45 days after the end of such quarter. We expect to fund our quarterly cash distributions to partners primarily with cash provided by operating activities. For additional information regarding our cash flows from operating activities, see "Liquidity and Capital Resources" included under Item 7 of this annual report. Although the payment of cash distributions is not guaranteed, we expect to continue to pay comparable cash distributions in the future.

Recent Sales of Unregistered Securities

There were no sales of unregistered equity securities during 2007.

Common Units Authorized for Issuance Under Equity Compensation Plan

See "Securities Authorized for Issuance Under Equity Compensation Plans" under Item 12 of this annual report, which is incorporated by reference into this Item 5.

Issuer Purchases of Equity Securities

We have not repurchased any of our common units since 2002. In December 1998, we announced a common unit repurchase program whereby we, together with certain affiliates, intended to repurchase up to 2,000,000 of our common units for the purpose of granting options to management and key employees (amount adjusted for the 2-for-1 unit split in May 2002). As of February 1, 2008, we and our affiliates could repurchase up to 618,400 additional common units under this repurchase program.

Item 6. ***Selected Financial Data*****.**

The following table presents selected historical consolidated financial data of our partnership. This information has been derived from our audited financial statements and should be read in conjunction with the audited financial statements included under Item 8 of this annual report. In addition, information regarding our results of operations and liquidity and capital resources can be found under Item 7 of this annual report. As presented in the table, amounts are in thousands (except per unit data).

	As of December 31,				
	2007	2006	2005	2004	2003
Financial position data: (1)					
Total assets	$16,608,007	$13,989,718	$12,591,016	$11,315,461	$4,802,814
Long-term and current maturities of debt (4)	$ 6,906,145	$ 5,295,590	$ 4,833,781	$ 4,281,236	$2,139,548
Partners' equity (5)	$ 6,131,649	$ 6,480,233	$ 5,679,309	$ 5,328,785	$1,705,953
Total units outstanding (excluding treasury) (5)	435,297	432,408	389,861	364,786	217,780

(1) In general, our historical operating results and financial position have been affected by numerous acquisitions since 2002. Our most significant transaction to date was the GulfTerra Merger, which was completed on September 30, 2004. The aggregate value of the total consideration we paid or issued to complete the GulfTerra Merger was approximately $4 billion. We accounted for the GulfTerra Merger and our other acquisitions using purchase accounting; therefore, the operating results of these acquired entities are included in our financial results prospectively from their respective acquisition dates.

(2) Amounts presented for the years ended December 31, 2006, 2005 and 2004 are before the cumulative effect of accounting changes.

(3) Distributions per common unit represent declared cash distributions with respect to the four fiscal quarters of each period presented.

(4) In general, the balances of our long-term and current maturities of debt have increased over time as a result of financing all or a portion of acquisitions and other capital spending.

(5) We regularly issue common units through underwritten public offerings and, less frequently, in connection with acquisitions or other transactions. The increase in partners' equity since 2003 has been the result of such transactions, with the September 2004 issuance of 104.5 million common units in connection with the GulfTerra Merger being our largest. For additional information regarding our partners' equity and unit history, see Note 15 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Item 7. ***Management's Discussion and Analysis of Financial Condition and Results of Operations.***

For the years ended December 31, 2007, 2006 and 2005.

The following information should be read in conjunction with our consolidated financial statements and our accompanying notes included under Item 8 of this annual report. Our discussion and analysis includes the following:

- Cautionary Note Regarding Forward-Looking Statements.
- Significant Relationships Referenced in this Discussion and Analysis.
- Overview of Business.
- Recent Developments – Discusses significant developments during the year ended December 31, 2007.
- Results of Operations – Discusses material year-to-year variances in our Statements of Consolidated Operations.
- Liquidity and Capital Resources – Addresses available sources of liquidity and capital resources and includes a discussion of our capital spending program.
- Critical Accounting Policies and Estimates.
- Other Items – Includes information related to contractual obligations, off-balance sheet arrangements, related party transactions, recent accounting pronouncements and similar disclosures.

As generally used in the energy industry and in this discussion, the identified terms have the following meanings:

/d	= per day
BBtus	= billion British thermal units
Bcf	= billion cubic feet
MBPD	= thousand barrels per day
MMBbls	= million barrels
MMBtus	= million British thermal units
MMcf	= million cubic feet

Our financial statements have been prepared in accordance with U.S generally accepted accounting principles ("GAAP").

Cautionary Note Regarding Forward-Looking Statements

This discussion contains various forward-looking statements and information that are based on our beliefs and those of our general partner, as well as assumptions made by us and information currently available to us. When used in this document, words such as "anticipate," "project," "expect," "plan," "seek," "goal," "forecast," "intend," "could," "should," "will," "believe," "may," "potential" and similar expressions and statements regarding our plans and objectives for future operations, are intended to identify forward-looking statements. Although we and our general partner believe that such expectations reflected in such forward-looking statements are reasonable, neither we nor our general partner can give any assurances that such expectations will prove to be correct. Such statements are subject to a variety of risks, uncertainties and assumptions as described in more detail in Item 1A of this annual report. If one or more of these risks or uncertainties materialize, or if underlying assumptions

Table of Contents

prove incorrect, our actual results may vary materially from those anticipated, estimated, projected or expected. You should not put undue reliance on any forward-looking statements.

Significant Relationships Referenced in this Discussion and Analysis

Unless the context requires otherwise, references to "we," "us," "our," or "Enterprise Products Partners" are intended to mean the business and operations of Enterprise Products Partners L.P. and its consolidated subsidiaries.

References to "EPO" mean Enterprise Products Operating LLC as successor in interest by merger to Enterprise Products Operating L.P., which is a wholly owned subsidiary of Enterprise Products Partners through which Enterprise Products Partners conducts substantially all of its business.

References to "Duncan Energy Partners" mean Duncan Energy Partners L.P., which is a consolidated subsidiary of EPO. Duncan Energy Partners is a publicly traded Delaware limited partnership, the common units of which are listed on the NYSE under the ticker symbol "DEP." References to "DEP GP" mean DEP Holdings, LLC, which is the general partner of Duncan Energy Partners and is wholly owned by EPO.

References to "EPGP" mean Enterprise Products GP, LLC, which is our general partner.

References to "Enterprise GP Holdings" mean Enterprise GP Holdings L.P., a publicly traded affiliate, the units of which are listed on the NYSE under the ticker symbol "EPE." Enterprise GP Holdings owns Enterprise Products GP. References to "EPE Holdings" mean EPE Holdings, LLC, which is the general partner of Enterprise GP Holdings.

References to "TEPPCO" mean TEPPCO Partners, L.P., a publicly traded affiliate, the common units of which are listed on the NYSE under the ticker symbol "TPP." References to "TEPPCO GP" refer to Texas Eastern Products Pipeline Company, LLC, which is the general partner of TEPPCO and is wholly owned by Enterprise GP Holdings.

References to "Energy Transfer Equity" mean the business and operations of Energy Transfer Equity, L.P. and its consolidated subsidiaries, which include Energy Transfer Partners, L.P. ("ETP"). Energy Transfer Equity is a publicly traded Delaware limited partnership, the common units of which are listed on the NYSE under the ticker symbol "ETE." The general partner of Energy Transfer Equity is LE GP, LLC ("LE GP"). On May 7, 2007, Enterprise GP Holdings acquired non-controlling interests in both LE GP and Energy Transfer Equity.

References to "Employee Partnerships" mean EPE Unit L.P. ("EPE Unit I"), EPE Unit II, L.P. ("EPE Unit II") and EPE Unit III, L.P. ("EPE Unit III"), collectively, which are private company affiliates of EPCO, Inc. See Note 25 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report for information regarding the formation of Enterprise Unit L.P. in February 2008.

References to "EPCO" mean EPCO, Inc. and its wholly-owned private company affiliates, which are related party affiliates to all of the foregoing named entities.

We, EPO, Duncan Energy Partners, DEP GP, EPGP, Enterprise GP Holdings, EPE Holdings, TEPPCO and TEPPCO GP are affiliates under the common control of Dan L. Duncan, the Group Co-Chairman and controlling shareholder of EPCO.

Overview of Business

We are a North American midstream energy company providing a wide range of services to producers and consumers of natural gas, natural gas liquids ("NGLs"), and crude oil, and certain petrochemicals. In addition, we are an industry leader in the development of pipeline and other midstream energy infrastructure in the continental United States and Gulf of Mexico. We are a publicly traded

Delaware limited partnership formed in 1998, the common units of which are listed on the New York Stock Exchange ("NYSE") under the ticker symbol "EPD."

We conduct substantially all of our business through EPO. We are owned 98% by our limited partners and 2% by our general partner, EPGP. EPGP is owned 100% by Enterprise GP Holdings, a publicly traded affiliate listed on the NYSE under the ticker symbol "EPE." We, EPGP and Enterprise GP Holdings are affiliates and under the common control of Dan L. Duncan, the Chairman and controlling shareholder of EPCO.

Our midstream energy asset network links producers of natural gas, NGLs and crude oil from some of the largest supply basins in the United States, Canada and the Gulf of Mexico with domestic consumers and international markets. We have four reportable business segments: NGL Pipelines & Services; Onshore Natural Gas Pipelines & Services; Offshore Pipelines & Services; and Petrochemical Services. Our business segments are generally organized and managed according to the type of services rendered (or technologies employed) and products produced and/or sold.

Recent Developments

The following information highlights our significant developments since January 1, 2007 through the date of this filing.

Questar Pipeline and Enterprise Products Partners Enter Into Definitive Agreements to Construct New Rockies Natural Gas Pipeline Hub

In February 2008, we entered into definitive agreements with Questar Pipeline Company ("Questar") to develop a new natural gas pipeline hub in the Rockies. As proposed, the White River Hub would be a header system that will be owned equally by us and Questar. The facilities would connect our natural gas processing complex near Meeker, Colorado, with up to six interstate pipelines in the Piceance Basin area, including the Questar Pipeline.

Our Pioneer Cryogenic Natural Gas Processing Facility Commences Operations

In February 2008, we commenced operations at our recently completed Pioneer cryogenic natural gas processing facility. Located near the Opal Hub in southwestern Wyoming, this new facility is designed to process up to 750 MMcf/d of natural gas and extract as much as 30 MBPD of NGLs. We intend to maintain the operational capability of our Pioneer silica gel natural gas processing plant, which is located adjacent to the Pioneer cryogenic plant, as a back-up to provide producers with additional assurance of our processing capability at the complex. NGLs extracted at our Pioneer complex are transported on our Mid-America Pipeline System and ultimately to our Hobbs and Mont Belvieu NGL fractionators.

We and the Jicarilla Apache Nation Announce Plans to Form Joint Venture involving our San Juan Natural Gas Gathering Assets

In November 2007, we and the Jicarilla Apache Nation announced our plans for the formation of a joint venture to own and operate natural gas gathering assets located on or near Jicarilla Apache Nation reservation lands. The joint venture would own and operate gathering assets in northwest New Mexico that were previously 100% owned by us. In order to take effect, the agreements related to the joint venture must be approved by the U.S. Department of the Interior. The Jicarilla Apache Nation is a federally-recognized Indian tribe, whose Reservation was established in 1887 and now consists of approximately 880,000 acres of land located on the eastern edge of the San Juan Basin.

Under the terms of the joint venture agreement, we would receive relatively equivalent value for our contributions of (i) 545 miles of gathering lines, which have an approximate throughput of 31 MMcf/d, (ii) related gathering assets and (iii) 40 MMcf/d of redelivery and natural gas processing capacity through our San Juan Gathering System. The Jicarilla Apache Nation would contribute rights for access and use of reservation lands for operation and expansion of the joint venture gathering system, which will be operated by us. The joint venture assets are currently part of our San Juan Gathering System, which is comprised of approximately 6,065 miles of natural gas pipelines in New Mexico and Colorado that gather more than 1 Bcf/d of natural gas.

EPO Increases and Extends its Multi-Year Revolving Credit Facility

In November 2007, EPO amended its existing Multi-Year Revolving Credit Facility to, among other terms, increase total bank commitments from $1.25 billion to $1.75 billion and extend the maturity date to November 2012. In addition, the amendment provides us with the option to further increase commitments under the credit facility up to a maximum of $2.25 billion upon satisfaction of certain conditions. For additional information regarding this issuance of debt, see Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Our Meeker Natural Gas Processing Facility Commences Operations

In October 2007, we commenced natural gas processing operations at our Meeker I facility, which recently completed its first phase of construction. Located in Colorado's Piceance Basin, our Meeker I facility has a processing capacity of 750 MMcf/d of natural gas and is capable of extracting up to 35 MBPD of mixed NGLs. The Meeker II facility, which is under construction and expected to be completed in the third quarter of 2008, will double its processing capacity to 1.5 Bcf/d of natural gas and 70 MBPD of mixed NGLs.

The two phases are supported by long-term commitments from producers, including EnCana and ExxonMobil. By the end of 2008, natural gas volumes processed at the facility are expected to exceed 800 MMcf/d, which we believe could yield to us approximately 40 MBPD of equity NGLs in full extraction mode. The Piceance Basin represents one of the most prolific and fastest growing energy producing areas in the nation, and the completion of our Meeker facility provides the region with valuable midstream infrastructure needed to accommodate those growing volumes.

Completion of the Final Phase of our Mid-America Pipeline Expansion Project

In October 2007, we completed the expansion of the Rocky Mountain portion of our Mid-America Pipeline ("MAPL") system. The final phase of this project consisted of installing new pumps and the modification of existing pumps, which increased system capacity by 20 MBPD. The first phase, which was completed in April 2007, provided an additional 30 MBPD of system capacity. Overall, these expansion projects increased the capacity of MAPL's Rocky Mountain system from 225 MBPD to 275 MBPD. This expansion will accommodate expected mixed NGL volumes originating from our Meeker, Pioneer and Chaco facilities.

EPO Issues $800.0 Million of Senior Notes

In September 2007, EPO sold $800.0 million in principal amount of 6.30% fixed-rate, unsecured senior notes due September 2017. Net proceeds from this offering were used to temporarily reduce borrowings outstanding under EPO's Multi-Year Revolving Credit Facility. In October 2007, EPO used borrowing capacity under its revolver to repay $500.0 million in principal amount due under its maturing Senior Notes E. For additional information regarding this issuance of debt, see Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Expansion of our Mont Belvieu Petrochemical Assets Completed

In August 2007, we completed the expansion of our petrochemical assets in Mont Belvieu and southeast Texas. This expansion project included (i) the construction of a fourth propylene fractionator at our Mont Belvieu complex, which increased our propylene/propane fractionation capacity by approximately one billion pounds per year, or 15 MBPD, and (ii) the expansion of two refinery grade propylene pipelines which added 50 MBPD of capacity into Mont Belvieu.

Table of Contents

Completion of our Hobbs NGL Fractionator

In August 2007, we completed construction of our Hobbs NGL fractionator, which is designed to handle up to 75 MBPD of mixed NGLs. The new fractionator is strategically located at the interconnection of our MAPL and our Seminole pipelines near Hobbs, New Mexico. Our Hobbs NGL fractionator offers another key hub for separating mixed NGLs produced at our Meeker, Pioneer and Chaco facilities into purity NGL products.

Changes in our Management Team

In July 2007, we announced changes to our senior management team that became effective August 1, 2007. The board of directors of our general partner elected Michael A. Creel president and chief executive officer, W. Randall Fowler executive vice president and chief financial officer, and William Ordemann executive vice president and chief operating officer. Mr. Creel replaces Robert G. Phillips who resigned effective June 30, 2007. Mr. Fowler was promoted to fill the position left vacant by Mr. Creel's promotion. Mr. Ordemann was promoted to fill the position vacated by Dr. Ralph S. Cunningham, who is now the president and chief executive officer of Enterprise GP Holdings. Mr. Creel had previously held this position.

Our Independence Hub Platform and Trail Pipeline Receive First Production

In July 2007, our Independence Hub platform and Independence Trail pipeline received first production from deepwater production wells connected to the Independence Hub platform. As a result, these assets began earning fee-based revenues for natural gas processing and transportation services. These amounts are in addition to the demand fee revenues that Independence Hub began earning in March 2007. Currently, the platform is receiving approximately 900 MMcf/d of natural gas from fifteen wells.

We and TEPPCO Complete the First Portion of the Jonah Phase V Expansion Project

In July 2007, we completed the first portion of the Phase V Expansion of the Jonah Gathering System, which increased the system gathering capacity to 2.0 Bcf/d. The second and final phase of the expansion, which is targeted for completion in April 2008, is expected to increase the system's gathering capacity further to 2.4 Bcf/d.

Expansion of our Houston Ship Channel NGL Import and Export Terminal Completed

In June 2007, we announced the completion of our project to expand the capabilities of our import/export terminal at the Houston Ship Channel to handle incremental volumes of natural gas liquids and liquefied petroleum gases.

EPO Issues $700.0 Million of Junior Notes

In May 2007, EPO sold $700 million in principal amount of fixed/floating unsecured junior subordinated notes due January 2068. Net proceeds from this offering were used by EPO to temporarily reduce borrowings outstanding under its Multi-Year Revolving Credit Facility and for general partnership purposes. For additional information regarding this issuance of debt, see Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Creation of our Natural Gas Services and Marketing Business

In March 2007, we announced the expansion of our natural gas services and marketing business similar to our existing NGL and petrochemical marketing businesses. This business will include all of our existing natural gas supply and marketing activities, which currently include producer wellhead services, facility fuel procurement, pipeline and storage capacity optimization and a full range of market customer delivery arrangements. This initiative is expected to broaden our role in the natural gas markets by linking our extensive U.S. natural gas pipeline and storage assets, thus providing customers with value-added solutions and reducing our operating costs through enhanced fuel procurement practices.

Duncan Energy Partners Completes its Initial Public Offering

In February 2007, a consolidated subsidiary of ours, Duncan Energy Partners, completed its underwritten initial public offering of 14,950,000 common units. Duncan Energy Partners, a Delaware limited partnership, was formed by EPO to acquire ownership interests in certain of our midstream energy businesses. EPO owns the 2% general partner interest and 5,351,571 common units of Duncan Energy Partners as well as a direct 34% equity interest in each of Duncan Energy Partners operating subsidiaries. For additional information regarding Duncan Energy Partners, see "Other Items – Initial Public Offering of Duncan Energy Partners" included within this Item 7.

Results of Operations

We have four reportable business segments: NGL Pipelines & Services; Onshore Natural Gas Pipelines & Services; Offshore Pipelines & Services; and Petrochemical Services. Our business segments are generally organized and managed according to the type of services rendered (or technologies employed) and products produced and/or sold.

We evaluate segment performance based on the non-GAAP financial measure of gross operating margin. Gross operating margin (either in total or by individual segment) is an important performance measure of the core profitability of our operations. This measure forms the basis of our internal financial reporting and is used by senior management in deciding how to allocate capital resources among business segments. We believe that investors benefit from having access to the same financial measures that our management uses in evaluating segment results. The GAAP financial measure most directly comparable to total segment gross operating margin is operating income. Our non-GAAP financial measure of total segment gross operating margin should not be considered as an alternative to GAAP operating income.

We define total segment gross operating margin as consolidated operating income before (i) depreciation, amortization and accretion expense; (ii) operating lease expenses for which we do not have the payment obligation; (iii) gains and losses on the sale of assets; and (iv) general and administrative costs. Gross operating margin is exclusive of other income and expense transactions, provision for income taxes, minority interest, extraordinary charges and the cumulative effect of change in accounting principle. Gross operating margin by segment is calculated by subtracting segment operating costs and expenses (net of the adjustments noted above) from segment revenues, with both segment totals before the elimination of intersegment and intrasegment transactions. Intercompany accounts and transactions are eliminated in consolidation.

We include earnings from equity method unconsolidated affiliates in our measurement of segment gross operating margin and operating income. Our equity investments with industry partners are a vital component of our business strategy. They are a means by which we conduct our operations to align our interests with those of our customers and/or suppliers. This method of operation also enables us to achieve favorable economies of scale relative to the level of investment and business risk assumed versus what we could accomplish on a stand-alone basis. Many of these businesses perform supporting or complementary roles to our other business operations. As circumstances dictate, we may increase our ownership interest in equity investments, which could result in their subsequent consolidation into our operations.

Our consolidated gross operating margin amounts include the gross operating margin amounts of Duncan Energy Partners on a 100% basis. Volumetric data associated with the operations of Duncan Energy Partners are also included on a 100% basis in our consolidated statistical data.

For additional information regarding our business segments, see Note 16 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Table of Contents

Selected Price and Volumetric Data

The following table illustrates selected annual and quarterly industry index prices for natural gas, crude oil and selected NGL and petrochemical products for the periods presented.

	Natural Gas, $/MMBtu	Crude Oil, $/barrel	Ethane, $/gallon	Propane, $/gallon	Normal Butane, $/gallon	Isobutane, $/gallon	Natural Gasoline, $/gallon	Polymer Grade Propylene, $/pound	Refinery Grade Propylene, $/pound
	(1)	(2)	(1)	(1)	(1)	(1)	(1)	(1)	(1)
2005 Averages	$8.64	$56.47	$0.62	$0.91	$1.09	$1.15	$1.26	$0.42	$0.37
2006 Averages	$7.24	$66.09	$0.66	$1.01	$1.20	$1.24	$1.44	$0.47	$0.41
2007									
1st Quarter	$6.77	$58.02	$0.59	$0.97	$1.13	$1.22	$1.37	$0.45	$0.40
2nd Quarter	$7.55	$64.97	$0.72	$1.13	$1.33	$1.45	$1.65	$0.51	$0.46
3rd Quarter	$6.16	$75.48	$0.82	$1.23	$1.44	$1.49	$1.68	$0.52	$0.46
4th Quarter	$6.97	$90.75	$1.04	$1.51	$1.79	$1.80	$2.01	$0.59	$0.54
2007 Averages	$6.86	$72.30	$0.79	$1.21	$1.42	$1.49	$1.68	$0.52	$0.47

(1) Natural gas, NGL, polymer grade propylene and refinery grade propylene prices represent an average of various commercial index prices including Oil Price Information Service ("OPIS") and Chemical Market Associates, Inc. ("CMAI"). Natural gas price is representative of Henry-Hub I-FERC. NGL prices are representative of Mont Belvieu Non-TET pricing. Polymer-grade propylene represents average CMAI contract pricing. Refinery grade propylene represents an average of CMAI spot prices.

(2) Crude oil price is representative of an index price for West Texas Intermediate.

The following table presents our significant average throughput, production and processing volumetric data. These statistics are reported on a net basis, taking into account our ownership interests in certain joint ventures and reflect the periods in which we owned an interest in such operations. These statistics include volumes for newly constructed assets since the dates such assets were placed into service and for recently purchased assets since the date of acquisition.

	For the Year Ended December 31,		
	2007	2006	2005
NGL Pipelines & Services, net:			
NGL transportation volumes (MBPD)	1,666	1,577	1,478
NGL fractionation volumes (MBPD)	394	312	292
Equity NGL production (MBPD) (1)	88	63	68
Fee-based natural gas processing (MMcf/d)	2,565	2,218	1,767
Onshore Natural Gas Pipelines & Services, net:			
Natural gas transportation volumes (BBtus/d)	6,632	6,012	5,916
Offshore Pipelines & Services, net:			
Natural gas transportation volumes (BBtus/d)	1,641	1,520	1,780
Crude oil transportation volumes (MBPD)	163	153	127
Platform gas processing (MMcf/d)	494	159	252
Platform oil processing (MBPD)	24	15	7
Petrochemical Services, net:			
Butane isomerization volumes (MBPD)	90	81	81
Propylene fractionation volumes (MBPD)	68	56	55
Octane additive production volumes (MBPD)	9	9	6
Petrochemical transportation volumes (MBPD)	105	97	64
Total, net:			
NGL, crude oil and petrochemical transportation volumes (MBPD)	1,934	1,827	1,669
Natural gas transportation volumes (BBtus/d)	8,273	7,532	7,696
Equivalent transportation volumes (MBPD) (2)	4,111	3,809	3,694

(1) Volumes for 2005 have been revised to incorporate asset-level definitions of equity NGL production volumes.

(2) Reflects equivalent energy volumes where 3.8 MMBtus of natural gas are equivalent to one barrel of NGLs.

Comparison of Results of Operations

The following table summarizes the key components of our results of operations for the periods indicated (dollars in thousands):

	For the Year Ended December 31, 2007	2006	2005
Revenues	$16,950,125	$13,990,969	$12,256,959
Operating costs and expenses	16,009,051	13,089,091	11,546,225
General and administrative costs	87,695	63,391	62,266
Equity in income of unconsolidated affiliates	29,658	21,565	14,548
Operating income	883,037	860,052	663,016
Interest expense	311,764	238,023	230,549
Provision for income taxes	15,257	21,323	8,362
Minority interest	30,643	9,079	5,760
Net income	533,674	601,155	419,508

Our gross operating margin by segment and in total is as follows for the periods indicated (dollars in thousands):

	For the Year Ended December 31, 2007	2006	2005
Gross operating margin by segment:			
NGL Pipelines & Services	$ 812,521	$ 752,548	$ 579,706
Onshore Natural Gas Pipelines & Services	335,683	333,399	353,076
Offshore Pipeline & Services	171,551	103,407	77,505
Petrochemical Services	172,313	173,095	126,060
Total segment gross operating margin	$1,492,068	$1,362,449	$1,136,347

For a reconciliation of non-GAAP gross operating margin to GAAP operating income and further to GAAP income before provision for income taxes, minority interest and the cumulative effect of changes in accounting principles, see "Other Items — Non-GAAP reconciliations" included within this Item 7.

The following table summarizes the contribution to consolidated revenues from the sale of NGL, natural gas and petrochemical products during the periods indicated (dollars in thousands):

	For the Year Ended December 31, 2007	2006	2005
NGL Pipelines & Services:			
Sale of NGL products	$11,822,291	$9,496,926	$8,176,370
Percent of consolidated revenues	70%	68%	67%
Onshore Natural Gas Pipelines & Services:			
Sale of natural gas	$ 1,633,214	$1,228,916	$1,065,542
Percent of consolidated revenues	10%	9%	9%
Petrochemical Services:			
Sale of petrochemical products	$ 1,796,251	$1,545,693	$1,311,956
Percent of consolidated revenues	11%	11%	11%

Comparison of 2007 with 2006

Revenues for 2007 were $16.95 billion compared to $13.99 billion for 2006. The increase in consolidated revenues year-to-year is primarily due to higher sales volumes and energy commodity prices in 2007 relative to 2006. These factors accounted for a $2.98 billion increase in consolidated revenues associated with our marketing activities. Revenues from business interruption insurance proceeds totaled $36.1 million in 2007 compared to $63.9 million in 2006.

Operating costs and expenses were $16.01 billion for 2007 versus $13.09 billion for 2006. The year-to-year increase in consolidated operating costs and expenses is primarily due to an increase in the cost of sales associated with our marketing activities. The cost of sales of our NGL, natural gas and petrochemical products increased $2.46 billion year-to-year as a result of an increase in volumes and higher energy commodity prices. Operating costs and expenses associated with our natural gas processing plants increased $185.7 million year-to-year as a result of higher energy commodity prices in 2007 relative to 2006. Operating costs and expenses associated with assets we constructed and placed into service or acquired since January 1, 2006 increased $188.1 million year-to-year.

General and administrative costs were $87.7 million for 2007 compared to $63.4 million for 2006. The $24.3 million year-to-year increase in general and administrative costs is primarily due to the recognition of a severance obligation during 2007 and an increase in legal fees.

Changes in our revenues and costs and expenses year-to-year are explained in part by changes in energy commodity prices. The weighted-average indicative market price for NGLs was $1.19 per gallon during 2007 versus $1.00 per gallon during 2006, a year-to-year increase of 19%. Our determination of the weighted-average indicative market price for NGLs is based on U.S. Gulf Coast prices for such products at Mont Belvieu, which is the primary industry hub for domestic NGL production. The market price of natural gas (as measured at Henry Hub) averaged $6.86 per MMBtu during 2007 versus $7.24 per MMBtu during 2006. For additional historical energy commodity pricing information, see the table on page 58.

Equity earnings from unconsolidated affiliates were $29.7 million for 2007 compared to $21.6 million for 2006. Equity earnings from our investment in Jonah increased $9.1 million year-to-year. Equity earnings for 2007 include a non-cash impairment charge of $7.0 million associated with our investment in Nemo compared to a non-cash impairment charge of $7.4 million in 2006 related to our investment in Neptune. Collectively, equity earnings from our other unconsolidated affiliates decreased $1.4 million year-to-year primarily due to the sale of our investment in Coyote Gas Treating, LLC in August 2006.

Operating income for 2007 was $883.0 million compared to $860.1 million for 2006. Collectively, the aforementioned changes in revenues, costs and expenses and equity earnings contributed to the $22.9 million increase in operating income year-to-year.

Interest expense increased $73.7 million year-to-year primarily due to our issuance of junior subordinated notes in the second quarter of 2007 and third quarter of 2006 and the issuance of Senior Notes L in the third quarter of 2007. Our consolidated interest expense for 2007 includes $11.6 million associated with Duncan Energy Partners' credit facility. Our average debt principal outstanding was $6.26 billion in 2007 compared to $4.93 billion in 2006. Minority interest increased $21.6 million year-to-year attributable to the public unit holders of Duncan Energy Partners and third-party ownership interests in the Independence Hub platform.

As a result of items noted in the previous paragraphs, our consolidated net income decreased $67.5 million year-to-year to $533.7 million in 2007 compared to $601.2 million in 2006. Net income for 2006 includes a $1.5 million benefit relating to the cumulative effect of change in accounting principle. For additional information regarding the cumulative effect of change in accounting principle we recorded in 2006, see Note 8 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

The following information highlights significant year-to-year variances in gross operating margin by business segment:

NGL Pipelines & Services. Gross operating margin from this business segment was $812.5 million for 2007 compared to $752.5 million for 2006. Gross operating margin for 2007 includes $32.7 million of proceeds from business interruption insurance claims compared to $40.4 million of proceeds during 2006. Strong demand for NGLs in 2007 compared to 2006 led to higher natural gas processing margins, increased volumes of natural gas processed under fee-based contracts and higher NGL throughput volumes at certain of our pipelines and fractionation facilities. The following paragraphs provide a discussion of segment results excluding proceeds from business interruption insurance claims.

Gross operating margin from NGL pipelines and storage was $302.2 million for 2007 compared to $265.7 million for 2006. Total NGL transportation volumes increased to 1,666 MBPD during 2007 from 1,577 MBPD during 2006. The $36.5 million year-to-year increase in gross operating margin is primarily due to higher pipeline transportation and NGL storage volumes at certain of our facilities and higher transportation fees charged to shippers on our Mid-America Pipeline System. Our DEP South Texas NGL Pipeline contributed $21.1 million of gross operating margin and 73 MBPD of NGL transportation volumes during 2007. The increase in gross operating margin year-to-year was partially offset by lower volumes and higher costs resulting from the November 2007 rupture of the Dixie Pipeline and a one-time benefit in 2006 for the settlement of a pipeline contamination incident.

Gross operating margin from our natural gas processing and related NGL marketing business was $389.1 million for 2007 compared to $359.7 million for 2006. The $29.4 million increase in gross operating margin year-to-year is largely due to improved results from our south Texas, Louisiana and Chaco natural gas processing facilities attributable to higher volumes and equity NGL sales revenues. Fee-based processing volumes increased to 2.6 Bcf/d during 2007 from 2.2 Bcf/d during 2006. Equity NGL production increased to 88 MBPD during 2007 from 63 MBPD during 2006. The year-to-year increase in gross operating margin from this business was partially offset by expenses associated with start-up delays at our Meeker and Pioneer natural gas processing plants.

The start-up delays at both our Meeker and Pioneer facilities are attributable to the replacement of defective high pressure valves and the need to address third-party engineering design problems. We are actively engaged in efforts to obtain recovery for certain of our losses. During 2007, we entered into transactions to economically hedge a percentage of the expected NGL production at these facilities, which entailed the physical forward sale of NGLs and the purchase of natural gas. As a result of the unexpected downtime at our Meeker facility and the delayed start-up of our Pioneer facility, the actual NGL production and natural gas consumption during the fourth quarter of 2007 was less than the volume we hedged. The cost to replace the defective valves and the expense resulting from a non-cash, mark-to-market charge on the short, or over hedged, NGL balance and the liquidation of the long natural gas position totaled $30.0 million during 2007. Gross operating margin generated by our Meeker facility from actual production was offset by a decrease in gross operating margin from our NGL marketing business.

Gross operating margin from NGL fractionation was $88.4 million for 2007 compared to $86.8 million for 2006. Fractionation volumes increased from 312 MBPD during 2006 to 394 MBPD during 2007. The year-to-year increase in gross operating margin of $1.6 million is primarily due to higher volumes at our Norco NGL fractionator during 2007 relative to 2006. Our Norco NGL fractionator returned to normal operating rates in the second quarter of 2006 after suffering a reduction of fractionation volumes due to the effects of Hurricane Katrina. Gross operating margin attributable to our Hobbs NGL fractionator, which became operational in August 2007, was largely offset by start-up expenses. Fractionation volumes for 2007 include 36 MBPD from our Hobbs fractionator.

Onshore Natural Gas Pipelines & Services. Gross operating margin from this business segment was $335.7 million for 2007 compared to $333.4 million for 2006. Our total onshore natural gas transportation volumes were 6,632 BBtu/d for 2007 compared to 6,012 BBtu/d for 2006. Gross operating margin from our onshore natural gas pipeline business was $307.2 million for 2007 compared to $312.3 million for 2006. The $5.1 million year-to-year decrease in gross operating margin from this business is largely due to higher operating costs on our Acadian Gas System, Waha and Carlsbad Gathering Systems and our Texas Intrastate System.

Results from our onshore natural gas pipeline business for 2007 include $5.5 million of gross operating margin from our Piceance Creek Gathering System, which we acquired in December 2006. Equity earnings from our investment in Jonah increased $9.1 million year-to-year. The Piceance Creek Gathering System and our net share of the gathering volumes on the Jonah Gathering System contributed 789 BBtu/d, collectively, of natural gas gathering volumes during 2007.

Gross operating margin from our natural gas storage business was $28.4 million for 2007 compared to $21.1 million for 2006. The $7.3 million year-to-year increase in gross operating margin is largely due to improved results from our Wilson natural gas storage facility attributable to lower repair costs in 2007 relative to 2006 and a 2006 loss on the sale of cushion gas. All repairs are now complete on the three storage wells at our Wilson facility that were taken out of service in the second quarter of 2006. We are in the process of dewatering the caverns and returning working gas storage capacity to service, which should be largely complete in the second quarter of 2008. Gross operating margin from our Petal facility includes an $8.4 million benefit in 2006 for a well measurement gain.

Offshore Pipelines & Services. Gross operating margin from this business segment was $171.6 million for 2007 compared to $103.4 million for 2006, a year-to-year increase of $68.2 million. Our Independence project contributed $85.0 million of gross operating margin during 2007 on average natural gas throughput of 423 BBtus/d. Segment gross operating margin for 2007 includes $3.4 million of proceeds from business interruption insurance claims compared to $23.5 million of proceeds in 2006. The following paragraphs provide a discussion of segment results excluding proceeds from business interruption insurance claims.

Gross operating margin from our offshore platform services business was $111.7 million for 2007 compared to $34.6 million for 2006. The $77.1 million year-to-year increase in gross operating margin is primarily due to our start up of the Independence Hub Platform in 2007, which contributed $63.6 million of gross operating margin in 2007. In addition, gross operating margin from this business increased $13.5 million year-to-year primarily due to higher volumes during 2007 versus 2006. Our net platform natural gas processing volumes increased to 494 MMcf/d in 2007 from 159 MMcf/d in 2006.

Gross operating margin from our offshore natural gas pipeline business was $35.4 million for 2007 compared to $22.4 million for 2006. Offshore natural gas transportation volumes were 1,641 BBtu/d during 2007 versus 1,520 BBtu/d during 2006. Our Independence Trail Pipeline reported $21.4 million of gross operating margin and 423 BBtus/d of transportation volumes for 2007. Results from our Independence Trail Pipeline were partially offset by a decrease in volumes and revenues from our Viosca Knoll Gathering System and Constitution Gas Pipeline. Gross operating margin for 2007 includes a non-cash impairment charge of $7.0 million associated with our investment in Nemo compared to charge of $7.4 million in 2006 related to our investment in Neptune.

Gross operating margin from our offshore crude oil pipeline business was $21.1 million for 2007 versus $23.0 million for 2006. The $1.9 million year-to-year decrease in gross operating margin is primarily due to lower transportation volumes on our certain of our offshore crude oil pipelines and higher operating costs on our Poseidon Oil Pipeline System during 2007 relative to 2006. An increase in revenues year-to-year on our Cameron Highway Oil Pipeline System attributable to higher volumes was more than offset by a one-time expense of $8.8 million associated with the early termination of Cameron Highway's credit facility. Crude oil transportation volumes on our Cameron Highway Oil Pipeline System net to our ownership interest were 44 MBPD during 2007 compared to 32 MBPD during 2006. Total offshore crude oil transportation volumes were 163 MBPD during 2007 versus 153 MBPD during 2006.

BP P.L.C. announced in December 2007 that crude oil and natural gas production from its Atlantis Development had commenced. Crude oil volumes from this development are transported on our Cameron Highway Oil Pipeline System. Natural gas production from the Atlantis development is transported on our Manta Ray Gathering System and Nautilus Pipeline and processed at our Neptune facility. Recovered NGLs are fractionated at our Promix fractionator.

Petrochemical Services. Gross operating margin from this business segment was $172.3 million for 2007 compared to $173.1 million for 2006. Gross operating margin from our butane isomerization business was $91.4 million for 2007 compared to $73.2 million for 2006. The $18.2 million year-to-year increase in gross operating margin is attributable to higher processing volumes and by-products sales revenues. Butane isomerization volumes were 90 MBPD for 2007 compared to 81 MBPD for 2006.

Gross operating margin from our propylene fractionation and pipeline activities was $62.6 million for 2007 versus $63.4 million for 2006. The $0.8 million year-to-year decrease in gross operating margin is primarily attributable to higher operating costs and expenses attributable to our propylene pipelines and our propylene storage and export facility. Petrochemical transportation volumes were 105 MBPD during 2007 compared to 97 MBPD during 2006. Gross operating margin from octane enhancement was $18.3 million for 2007 compared to $36.6 million for 2006. The year-to-year decrease of $18.3 million is primarily due to lower sales margins in 2007 relative to 2006. Octane enhancement production was 9 MBPD during 2007 and 2006.

Comparison of 2006 with 2005

Revenues for 2006 were $13.99 billion compared to $12.26 billion for 2005. The increase in consolidated revenues year-to-year is primarily due to higher sales volumes and energy commodity prices in 2006 relative to 2005. These factors accounted for a $1.72 billion increase in consolidated revenues associated with our marketing activities. Revenues for 2006 include $63.9 million of proceeds from business interruption insurance claims compared to $4.8 million of proceeds for 2005.

Operating costs and expenses were $13.09 billion for 2006 versus $11.55 billion for 2005. The year-to-year increase in consolidated operating costs and expenses is primarily due to an increase in the cost of sales associated with our marketing activities. The cost of sales of our NGL and petrochemical products increased $1.21 billion year-to-year as a result of an increase in volumes and higher energy commodity prices. Operating costs and expenses associated with our natural gas processing plants increased $258.7 million as a result of higher energy commodity prices in 2006 relative to 2005. General and administrative costs increased $1.1 million year-to-year primarily due to higher costs associated with FERC rate case filings for our Mid-America Pipeline System and Texas Intrastate System.

Changes in our revenues and costs and expenses year-to-year are explained in part by changes in energy commodity prices. The weighted-average indicative market price for NGLs was $1.00 per gallon during 2006 versus $0.91 per gallon during 2005, a year-to-year increase of 10%. The Henry Hub market price of natural gas averaged $7.24 per MMBtu during 2006 versus $8.64 per MMBtu during 2005. Polymer grade and refinery grade propylene index prices increased 12% year-to-year.

Equity earnings from unconsolidated affiliates were $21.6 million for 2006 compared to $14.5 million for 2005. An increase in volumes from offshore production led to a collective $11.8 million increase year-to-year in equity earnings from Poseidon and Deepwater Gateway. Equity earnings from Cameron Highway increased $4.9 million year-to-year. Our equity earnings for 2005 included an $11.5 million charge associated with the refinancing of Cameron Highway's project finance debt. Also, equity earnings from our investment in Neptune decreased $10.3 million year-to-year primarily due to a $7.4 million non-cash impairment charged recorded in 2006 associated with this investment.

Operating income for 2006 was $860.1 million compared to $663.0 million for 2005. Collectively, the aforementioned changes in revenues, costs and expenses and equity earnings contributed to the $197.1 million increase in operating income year-to-year.

Interest expense increased $7.5 million year-to-year primarily due to our issuance of junior notes in 2006 and an increase in interest rates charged on our variable rate debt. Our average debt principal outstanding was $4.93 billion in 2006 compared to $4.63 billion in 2005.

As a result of items noted in the previous paragraphs, our consolidated net income increased $181.6 million year-to-year to $601.2 million in 2006 compared to $419.5 million in 2005. Net income for both years includes the recognition of non-cash amounts related to the cumulative effect of changes in accounting principles. We recorded a $1.5 million benefit in 2006 and a $4.2 million charge in 2005 related to such changes. For additional information regarding the cumulative effect of changes in accounting principles we recorded in 2006 and 2005, see Note 8 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

The following information highlights significant year-to-year variances in gross operating margin by business segment:

NGL Pipelines & Services. Gross operating margin from this business segment was $752.5 million for 2006 compared to $579.7 million for 2005. Gross operating margin for 2006 includes $40.4 million of proceeds from business interruption insurance claims compared to $4.8 million of proceeds during 2005. Strong demand for NGLs in 2006 compared to 2005 led to higher natural gas processing margins, increased volumes of natural gas processed under fee-based contracts and higher NGL throughput volumes at certain of our pipelines and fractionation facilities. The following paragraphs provide a discussion of segment results excluding proceeds from business interruption proceeds.

Gross operating margin from NGL pipelines and storage was $265.7 million for 2006 compared to $205.0 million for 2005. Total NGL transportation volumes increased to 1,577 MBPD during 2006 from 1,478 MBPD during 2005. The $60.7 million year-to-year increase in gross operating margin is primarily due to higher NGL transportation and storage volumes at certain of our facilities and the affects of a higher average transportation rate charged to shippers on our Mid-America pipeline. Also, segment gross operating margin in 2006 from our Dixie pipeline system benefited from lower pipeline integrity and maintenance costs year-to-year and the settlement of claims associated with a pipeline contamination incident in 2005.

Gross operating margin from our natural gas processing and related NGL marketing business was $359.6 million for 2006 compared to $308.5 million for 2005. The $51.1 million increase in gross operating margin year-to-year is largely due to improved results from our south Texas and Louisiana natural gas processing facilities, which benefited from strong demand for NGLs, a favorable processing environment and higher levels of offshore natural gas production available for processing. Fee-based processing volumes increased to 2.2 Bcf/d during 2006 from 1.8 Bcf/d during 2005. Lastly, gross operating margin from natural gas processing for 2006 includes $9.6 million from processing contracts we acquired in connection with the Encinal acquisition in July 2006 and $9.4 million from the Pioneer facility, which we acquired from TEPPCO in March 2006.

Gross operating margin from NGL fractionation was $86.8 million for 2006 compared to $61.5 million for 2005. Fractionation volumes increased from 292 MBPD during 2005 to 312 MBPD during 2006. The year-to-year increase in gross operating margin of $25.3 million is largely due to increased fractionation volumes at our Norco NGL fractionator. This facility suffered a reduction of volumes in the second half of 2005 due to the effects of Hurricanes Katrina and Rita. Also, our Mont Belvieu NGL fractionator benefited from a 15 MBPD expansion project that was completed during the second quarter of 2006.

Onshore Natural Gas Pipelines & Services. Gross operating margin from this business segment was $333.4 million for 2006 compared to $353.1 million for 2005. Our total onshore natural gas transportation volumes were 6,012 BBtu/d during 2006 compared to 5,916 BBtu/d for 2005. A $24.7 million increase in segment gross operating margin from our Texas Intrastate System year-to-year was more than offset by lower gross operating margin from our San Juan Gathering System and Wilson natural gas storage facility. Gross operating margin from our Texas Intrastate System increased to $117.7 million for 2006 from $93 million for 2005 due to higher transportation fees and lower operating costs year-to-year.

Segment gross operating margin from our San Juan Gathering System decreased $26.7 million year-to-year attributable to lower revenues from certain gathering contracts in which the fees are based on an index price for natural gas. Average index prices for natural gas were significantly higher during 2005 relative to 2006 due to supply interruptions and higher regional demand caused by Hurricanes Katrina and Rita. Natural gas gathering volumes for the San Juan Gathering System were 1,192 BBtu/d for 2006 and 1,186 BBtu/d for 2005.

In addition, gross operating margin from this segment decreased $21.9 million year-to-year as a result of mechanical problems associated with three storage caverns located at our Wilson natural gas storage facility in Texas, which caused these wells to be taken out of service for most of 2006. This includes $7.9 million in losses associated with the sale of cushion gas from these wells.

Lastly, gross operating margin for 2006 includes $1.8 million from the Encinal natural gas gathering system that we acquired in July 2006. The Encinal natural gas gathering system contributed 89 BBtu/d of gathering volumes during 2006.

Offshore Pipelines & Services. Gross operating margin from this business segment was $103.4 million for 2006 compared to $77.5 million for 2005. Segment gross operating margin for 2006 includes $23.5 million of proceeds from business interruption insurance claims. As a result of industry losses associated with these storms, insurance costs for offshore operations have increased dramatically. Insurance costs for our offshore assets were $21.6 million for 2006 compared to $6.5 million for 2005. The following paragraphs provide a discussion of segment results excluding proceeds from business interruption proceeds.

Gross operating margin from our offshore crude oil pipelines was $23.0 million for 2006 versus $0.3 million for 2005. Our Marco Polo and Poseidon oil pipelines posted higher crude oil transportation volumes during 2006 due to increased production activity by our customers. Collectively, gross operating margin from the Marco Polo and Poseidon oil pipelines improved $10.1 million year-to-year. Our Constitution Oil Pipeline, which was placed into service during the first quarter of 2006, contributed $8.8 million to segment gross operating margin during 2006. Total offshore crude oil transportation volumes were 153 MBPD during 2006 versus 127 MBPD during 2005.

Gross operating margin from our offshore natural gas pipelines was $22.4 million for 2006 compared to $37.1 million for 2005. Offshore natural gas transportation volumes were 1,520 BBtu/d during 2006 versus 1,780 BBtu/d during 2005. The $14.7 million decrease in gross operating margin year-to-year is largely due to increased insurance costs and a non-cash impairment charge of $7.4 million recorded in 2006 associated with our investment in Neptune. Also, 2006 includes gross operating margin of $8.4 million and transportation volumes of 50 BBtu/d from the Constitution natural gas pipeline, which was placed in service during the first quarter of 2006.

Gross operating margin from our offshore platforms was $34.5 million for 2006 compared to $40.1 million for 2005. The decrease in gross operating margin year-to-year is primarily due to reduced offshore production during 2006 compared to 2005 as a result of Hurricanes Katrina and Rita. Equity earnings from Deepwater Gateway, which owns the Marco Polo platform, increased $7.8 million year-to-year primarily due to higher processing volumes.

Petrochemical Services. Gross operating margin from this business segment was $173.1 million for 2006 compared to $126.1 million for 2005. The $47.0 million year-to-year increase in gross operating margin is primarily due to improved results from our octane enhancement business attributable to higher isooctane sales volumes and prices. Gross operating margin from this business was $36.6 million for 2006 compared to $3.6 million for 2005. Isooctane, a high octane, low vapor pressure motor gasoline additive, complements the increasing use of ethanol, which has a high vapor pressure. Our isooctane production facility commenced operations in the second quarter of 2005.

Gross operating margin from our propylene fractionation and pipeline activities was $63.4 million for 2006 versus $55.9 million for 2005. The year-to-year increase in gross operating margin of $7.5 million is primarily due to improved polymer grade propylene sales prices and volumes and the addition of the Texas City refinery-grade propylene pipeline, which we completed during 2005. Petrochemical transportation volumes were 97 MBPD during 2006 compared to 64 MBPD during 2005. Gross operating margin from butane isomerization was $73.2 million for 2006 compared to $66.6 million for 2005. The year-to-year increase of $6.6 million is primarily due to higher processing fees and lower fuel costs. Butane isomerization volumes were 81 MBPD during 2006 and 2005.

General Outlook for 2008

We are currently in a major asset construction phase that began in 2005. Fiscal 2007 was a transitional year as we completed construction of several major projects and placed them into service for a portion of 2007. These projects included the Independence Hub platform and Trail pipeline, Meeker natural gas processing plant, Hobbs NGL fractionator, expansion of Mid-America NGL pipeline and a new propylene fractionator at Mont Belvieu. Additionally, in February 2008, we placed the Pioneer cryogenic natural gas processing plant in service. In 2008, we expect these major projects to contribute significant new sources of revenue, operating income and cash flow from operations as volumes increase to these facilities.

During the second half of 2008, construction of additional growth projects should be completed; placed in service and begin to contribute new sources of revenue, operating income and cash flow from operations. These include the expansion of the Meeker natural gas processing plant, Exxon central treating facility and the Sherman Extension natural gas pipeline.

We are continuing to work to expand our relationships with existing customers and pursue service agreements with new customers that would provide additional volumes to both our existing and newly constructed assets. Based on current general and industry economic conditions,

- We believe that drilling and production activities in the major producing areas where we operate, including the Gulf of Mexico and supply basins in Texas, San Juan and the Rocky Mountains, could result in increased demand for our midstream energy services. As a result, we expect higher transportation and processing volumes for certain of our existing and newly constructed assets due to increased natural gas, NGL and crude oil production from both onshore and offshore producing areas.

- We expect the volume of natural gas and NGLs available to our facilities in Texas to increase as a result of drilling activity and long-term agreements executed with new customers. We expect natural gas transportation volumes on our Texas Intrastate System to increase during 2008 as we supply the Houston, Texas area with natural gas volumes under a long-term agreement with CenterPoint Energy and begin operations on the Sherman Extension pipeline in the Barnett Shale region of North Texas in the fourth quarter of 2008.

- We believe that the current strength of the domestic and global economies should continue to drive increased demand for all forms of energy despite fluctuating commodity prices. Our largest NGL consuming customers in the ethylene industry continue to see strong demand for their products. Ethane and propane continue to be the preferred feedstocks for the ethylene industry due to the higher cost of crude oil derivatives.

- Longer term, we believe the expansion of crude oil refineries on the U.S. Gulf Coast could result in opportunities to provide additional midstream services through our existing assets and support the construction of new pipeline and storage facilities.

Liquidity and Capital Resources

Our primary cash requirements, in addition to normal operating expenses and debt service, are for working capital, capital expenditures, business acquisitions and distributions to our partners. We expect to fund our short-term needs for such items as operating expenses and sustaining capital expenditures with operating cash flows and short-term revolving credit arrangements. Capital expenditures for long-term needs resulting from internal growth projects and business acquisitions are expected to be funded by a variety of sources (either separately or in combination) including net cash flows provided by operating activities, borrowings under credit facilities, the issuance of additional equity and debt securities and proceeds from divestitures of ownership interest in assets to affiliates or third parties. We expect to fund cash distributions to partners primarily with operating cash flows. Our debt service requirements are expected to be funded by operating cash flows and/or refinancing arrangements.

At December 31, 2007, we had $39.7 million of unrestricted cash on hand and approximately $1.02 billion of available credit under EPO's Multi-Year Revolving Credit Facility. In total, we had approximately $6.90 billion in principal outstanding under consolidated debt agreements at December 31, 2007. For detailed information regarding our consolidated debt obligations and those of our unconsolidated affiliates, see Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

As a result of our growth objectives, we expect to access debt and equity capital markets from time-to-time and we believe that financing arrangements to support our growth activities can be obtained on reasonable terms. Furthermore, we believe that maintenance of an investment grade credit rating combined with continued ready access to debt and equity capital at reasonable rates and sufficient trade credit to operate our businesses efficiently provide a solid foundation to meet our long and short-term liquidity and capital resource requirements.

Registration Statements

We may issue equity or debt securities to assist us in meeting our liquidity and capital spending requirements. Duncan Energy Partners may do likewise in meeting its liquidity and capital spending requirements. Enterprise Products Partners L.P. and EPO have a universal shelf registration statement on file with the U.S. Securities and Exchange Commission ("SEC") that would allow these entities to issue an unlimited amount of debt and equity securities for general partnership purposes.

During 2003, we instituted a distribution reinvestment plan ("DRIP"). We have a registration statement on file with the SEC covering the issuance of up to 25,000,000 common units in connection with the DRIP. The DRIP provides unitholders of record and beneficial owners of our common units a voluntary means by which they can increase the number of common units they own by reinvesting the quarterly cash distributions they would otherwise receive into the purchase of additional common units. During the year ended December 31, 2007, we issued 1,923,640 common units in connection with our DRIP, which generated proceeds of $56.3 million from plan participants.

We also have a registration statement on file related to our employee unit purchase plan, under which we can issue up to 1,200,000 common units. Under this plan, employees of EPCO can purchase our common units at a 10% discount through payroll deductions. During the year ended December 31, 2007, we issued 132,975 common units to employees under this plan, which generated proceeds of $4.0 million.

In February 2007, Duncan Energy Partners completed its initial public offering of 14,950,000 common units, the majority of proceeds from which were distributed to us. Duncan Energy Partners may issue additional amounts of equity in the future in connection with other acquisitions. For additional information regarding Duncan Energy Partners, see "Other Items — Initial Public Offering of Duncan Energy Partners" within this Item 7.

For information regarding our public debt obligations or partnership equity, see Notes 14 and 15, respectively, of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Credit Ratings of EPO

At February 1, 2008, the investment-grade credit ratings of EPO's debt securities were Baa3 by Moody's Investor Services; BBB- by Fitch Ratings; and BBB- by Standard and Poor's. A rating reflects only the view of a rating agency and is not a recommendation to buy, sell or hold any security. Any rating can be revised upward or downward or withdrawn at any time by a rating agency if it determines that the circumstances warrant such a change and should be evaluated independently of any other rating.

Based on the characteristics of the $1.25 billion of fixed/floating unsecured junior subordinated notes that EPO issued in 2006 and 2007, the rating agencies assigned partial equity treatment to the notes.

Moody’s Investor Services and Standard and Poor’s each assigned 50% equity treatment and Fitch Ratings assigned 75% equity treatment.

In connection with the construction of our Pascagoula, Mississippi natural gas processing plant, EPO entered into a $54 million, ten-year, fixed-rate loan with the Mississippi Business Finance Corporation ("MBFC"). The indenture agreement for this loan contains an acceleration clause whereby if EPO’s credit rating by Moody’s Investor Services declines below Baa3 in combination with our credit rating at Standard & Poor’s declining below BBB-, the $54.0 million principal balance of this loan, together with all accrued and unpaid interest would become immediately due and payable 120 days following such event. If such an event occurred, EPO would have to either redeem the Pascagoula MBFC Loan or provide an alternative credit agreement to support its obligation under this loan.

Cash Flows from Operating, Investing and Financing Activities

The following table summarizes our cash flows from operating, investing and financing activities for the periods indicated (dollars in thousands). For information regarding the individual components of our cash flow amounts, see the Statements of Consolidated Cash Flows included under Item 8 of this annual report.

	For the Year Ended December 31,		
	2007	2006	2005
Net cash flows provided by operating activities	$1,590,941	$1,175,069	$ 631,708
Cash used in investing activities	2,533,607	1,689,288	1,130,395
Cash provided by financing activities	979,355	494,972	516,229

Net cash flows provided by operating activities is largely dependent on earnings from our business activities. As a result, these cash flows are exposed to certain risks. We operate predominantly in the midstream energy industry. We provide services for producers and consumers of natural gas, NGLs and crude oil. The products that we process, sell or transport are principally used as fuel for residential, agricultural and commercial heating; feedstocks in petrochemical manufacturing; and in the production of motor gasoline. Reduced demand for our services or products by industrial customers, whether because of general economic conditions, reduced demand for the end products made with our products or increased competition from other service providers or producers due to pricing differences or other reasons could have a negative impact on our earnings and thus the availability of cash from operating activities. For a more complete discussion of these and other risk factors pertinent to our business, see Item 1A of this annual report.

Our Statements of Consolidated Cash Flows are prepared using the indirect method. The indirect method derives net cash flows from operating activities by adjusting net income to remove (i) the effects of all deferrals of past operating cash receipts and payments, such as changes during the period in inventory, deferred income and similar transactions, (ii) the effects of all accruals of expected future operating cash receipts and cash payments, such as changes during the period in receivables and payables, (iii) the effects of all items classified as investing or financing cash flows, such as gains or losses on sale of property, plant and equipment or extinguishment of debt, and (iv) other non-cash amounts such as depreciation, amortization, operating lease expense paid by EPCO and changes in the fair market value of financial instruments. Equity in income from unconsolidated affiliates is also a non-cash item that must be removed in determining net cash provided by operating activities. Our cash flows from operating activities reflect the actual cash distributions we receive from such investees.

In general, the net effect of changes in operating accounts results from the timing of cash receipts from sales and cash payments for purchases and other expenses during each period. Increases or decreases in inventory are influenced by the quantity of products held in connection with our marketing activities and changes in energy commodity prices.

Cash used in investing activities primarily represents expenditures for capital projects, business combinations, asset purchases and investments in unconsolidated affiliates. Cash provided by (or used in) financing activities generally consists of borrowings and repayments of debt, distributions to partners and proceeds from the issuance of equity securities. Amounts presented in our Statements of Consolidated Cash Flows for borrowings and repayments under debt agreements are influenced by the magnitude of cash receipts and payments under our revolving credit facilities.

The following information highlights the significant year-to-year variances in our cash flow amounts:

Comparison of 2007 with 2006

Operating activities. Net cash flow provided by operating activities was $1.59 billion for the year ended December 31, 2007 compared to $1.18 billion for the year ended December 31, 2006.

- Our net cash flows from consolidated businesses (excluding cash payments for interest and taxes and distributions received from unconsolidated affiliates) increased $436.9 million year-to-year. The improvement in cash flow is generally due to increased gross operating margin (see "Results of Operations" within this Item 7) and the timing of related cash collections and disbursements between periods. The $436.9 million year-to-year increase also includes a $42.1 million increase in cash proceeds we received from insurance claims related to certain named storms. See Note 21 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report for information regarding insurance matters.
- Cash distributions received from unconsolidated affiliates increased $30.6 million year-to-year primarily due to improved earnings from our Gulf of Mexico investments, which were negatively impacted during the year ended December 31, 2006 as a result of the lingering effects of Hurricanes Katrina and Rita.
- Cash payments for interest increased $56.2 million year-to-year primarily due to increased borrowings to finance our capital spending program. Our average debt balance for the year ended December 31, 2007 was $6.26 billion compared to $4.93 billion for the year ended December 31, 2006.
- Cash payments for federal and state income taxes decreased $4.7 million year-to-year.

Investing activities. Cash used in investing activities was $2.55 billion for the year ended December 31, 2007 compared to $1.69 billion for the year ended December 31, 2006. The $864.3 million year-to-year increase in cash outflows is primarily due to an $847.7 million increase in capital spending for property, plant and equipment and a $194.6 million increase in investments in unconsolidated affiliates, partially offset by a $240.7 million decrease in cash outlays for business combinations. For additional information related to our capital spending for property, plant and equipment, see "Capital Spending" included within this Item 7.

During the year ended December 31, 2007 we contributed $216.5 million to an unconsolidated affiliate, Cameron Highway Oil Pipeline Company ("Cameron Highway"). In return, Cameron Highway used these funds, along with an equal contribution from our 50% joint venture partner in Cameron Highway, to repay its $430.0 million in outstanding debt.

During the year ended December 31, 2006, we paid $100.0 million for a 100% interest in Piceance Creek Pipeline, LLC and paid Lewis Energy Group, L.P. ("Lewis") $145.2 million in cash in connection with the Encinal acquisition. Our spending for business combinations during the year ended December 31, 2007 was primarily limited to the $35.0 million we paid to acquire the South Monco pipeline business.

Financing activities. Cash provided by financing activities was $979.4 million for the year ended December 31, 2007 versus $495.0 million for the year ended December 31, 2006. The following information highlights significant factors that influenced the $484.4 million year-to-year change in cash provided by financing activities:

- Net borrowings under our consolidated debt agreements increased $1.10 billion year-to-year. In May 2007, EPO sold $700.0 million in principal amount of fixed/floating unsecured junior subordinated notes (Junior Notes B"). In September 2007, EPO sold $800.0 million in principal amount of fixed-rate unsecured senior notes ("Senior Notes L") and in October 2007, EPO repaid $500.0 million in principal amount of Senior Notes E. For information regarding our consolidated debt obligations, see Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

- Net proceeds from the issuance of our common units decreased $788.0 million year-to-year. We had underwritten equity offerings in March and September of 2006 that generated net proceeds of $750.8 million reflecting the sale of 31,050,000 common units.

- Contributions from minority interests increased $275.4 million year-to-year primarily due to the initial public offering of Duncan Energy Partners in February 2007, which generated net proceeds of $290.5 million from the sale of 14,950,000 of its common units. See "Other Items — Initial Public Offering of Duncan Energy Partners" within this Item 7 for additional information regarding this offering.

- Cash distributions to our partners increased $137.9 million year-to-year due to an increase in common units outstanding and our quarterly cash distribution rates.

- We received $48.9 million from the settlement of treasury lock contracts during the year ended December 31, 2007 related to our interest rate hedging activities.

Comparison of 2006 with 2005

Operating activities. Net cash flow provided by operating activities was $1.18 billion for the year ended December 31, 2006 compared to $631.7 million for the year ended December 31, 2006.

- Our net cash flows from consolidated businesses (excluding cash payments for interest and taxes and distributions received from unconsolidated affiliates) increased $569.6 million year-to-year. The improvement in cash flow is generally due to increased earnings (see "Results of Operations" within this Item 7) and the timing of related cash collections and disbursements between periods. The $569.6 million year-to-year increase also includes a $93.7 million increase in cash proceeds we received from insurance claims related to certain named storms.

- Cash distributions received from unconsolidated affiliates decreased $13.0 million year-to-year primarily due to the lingering effects of Hurricanes Katrina and Rita on our Gulf of Mexico investments during the year ended December 31, 2006.

- Cash payments for interest increased $7.9 million year-to-year. Our average debt balance for the year ended December 31, 2006 was $4.93 billion compared to $4.63 billion for the year ended December 31, 2005.

- Cash payments for federal and state income taxes increased $5.3 million year-to-year.

Investing activities. Cash used in investing activities was $1.7 billion for the year ended December 31, 2006 compared to $1.1 billion for the year ended December 31, 2005. Our cash outlays for business combinations were $276.5 million in 2006 versus $326.6 million in 2005. During the year ended December 31, 2006, we paid $100.0 million for a 100% interest in Piceance Creek Pipeline, LLC and paid Lewis $145.2 million in cash in connection with the Encinal acquisition. Our cash outlay for acquisitions during 2005 included (i) $145.5 million for storage assets purchased from Ferrellgas LP, (ii) $74.9 million for indirect interests in certain East Texas natural gas gathering and processing assets, (iii) $68.6 million for additional ownership interests in Dixie and (iv) $25.0 million for the remaining ownership interests in our Mid-America Pipeline System and an additional interest in the Seminole Pipeline.

Proceeds from the sale of assets during 2005 include $42.1 million from the sale of our investment in Starfish Pipeline Company, LLC ("Starfish"). We were required to divest our ownership interest in this entity by the Federal Trade Commission in order to gain its approval for our merger with GulfTerra Energy Partners, L.P. in September 2004. In addition, we received $47.5 million as a return of our investment in

Cameron Highway in June 2005. As a result of refinancing its project debt, Cameron Highway was authorized by its lenders to make this special distribution.

Investments in unconsolidated affiliates were $138.3 million for the year ended December 31, 2006 compared to $87.3 million for the year ended December 31, 2005. The 2006 period includes $120.1 million we invested to date in the Phase V expansion project of Jonah. The 2005 period primarily reflects $72.0 million we contributed to Deepwater Gateway to fund our share of the repayment of its construction loan in March 2005.

For additional information related to our capital spending program, see "Capital Spending" included within this Item 7.

Financing activities Cash provided by financing activities was $495.0 million for the year ended December 31, 2006 compared to $516.2 million for the year ended December 31, 2005. As a result of our capital spending program, we utilized EPO's Multi-Year Revolving Credit Facility in varying degrees throughout 2006. During 2006, we applied all or a portion of the net proceeds from equity and debt offerings to reduce debt outstanding. We used $430 million of net proceeds from our March 2006 equity offering and $260 million of net proceeds from our September 2006 equity offering to temporarily reduce amounts due under EPO's Multi-Year Revolving Credit Facility. We also used the net proceeds from the EPO's issuance of Junior Subordinated Notes A in the third quarter of 2006 to reduce debt outstanding under this facility. We used any remaining net proceeds from these offerings in 2006 for general partnership purposes.

During 2005, our EPO issued an aggregate of $1 billion in senior notes, the proceeds of which were used to repay $350.0 million due under Senior Notes A, to temporarily reduce amounts outstanding under our bank credit facilities and for general partnership purposes. Additionally, we repaid the remaining $242.2 million that was due under EPO's 364-Day Acquisition Credit Facility (which was used to finance elements of the GulfTerra Merger) using proceeds generated from our February 2005 equity offering.

Net proceeds from the issuance of our limited partner interests were $857.2 million for 2006 compared to $646.9 million for 2005. With respect to equity offerings (including sales through our distribution reinvestment program and employee unit purchase plan), we issued 34,824,649 common units 2006 versus 23,979,740 common units during 2005. Net proceeds from underwritten equity offerings were $750.8 million during 2006 reflecting the sale of 31,050,000 common units and $555.5 million during 2005 reflecting the sale of 21,250,000 common units. Our distribution reinvestment program and related employee unit purchase plan generated net proceeds of $96.9 million during 2006, including $50 million reinvested by EPCO. In comparison, this program generated proceeds of $69.7 million during 2005, including $30 million reinvested by EPCO.

Cash distributions to partners increased from $716.7 million during 2005 to $843.3 million during 2006. The year-to-year increase in cash distributions is due to an increase in common units outstanding and quarterly cash distribution rates. Cash contributions from minority interests were $27.6 million for 2006 compared to $39.1 million for 2005.

Capital Spending

An integral part of our business strategy involves expansion through business combinations, growth capital projects and investments in joint ventures. We believe that we are positioned to continue to grow our system of assets through the construction of new facilities and to capitalize on expected increases in natural gas and/or crude oil production from resource basins such as the Piceance Basin of western Colorado, the Greater Green River Basin in Wyoming, Barnett Shale in North Texas, and the deepwater Gulf of Mexico.

Management continues to analyze potential acquisitions, joint ventures and similar transactions with businesses that operate in complementary markets or geographic regions. In recent years, major oil and gas companies have sold non-strategic assets in the midstream energy sector in which we operate. We

Table of Contents

forecast that this trend will continue, and expect independent oil and natural gas companies to consider similar divestitures.

The following table summarizes our capital spending by activity for the periods indicated (dollars in thousands):

	For the Year Ended December 31,		
	2007	2006	2005
Capital spending for business combinations:			
Encinal acquisition, excluding non-cash consideration (1)	$ 114	$ 145,197	$ —
Piceance Basin Gathering System acquisition	368	100,000	—
South Monco Pipeline System acquisition	35,000	—	—
Canadian Enterprise Gas Products acquisition	—	17,690	—
NGL underground storage and terminalling assets purchased from Ferrellgas	—	—	145,522
Indirect interests in the Indian Springs natural gas gathering and processing assets	—	—	74,854
Additional ownership interests in Dixie Pipeline Company ("Dixie")	311	12,913	68,608
Additional ownership interests in Mid-America and Seminole pipeline systems	—	—	25,000
Other business combinations	—	700	12,618
Total	35,793	276,500	326,602
Capital spending for property, plant and equipment, net: (2)			
Growth capital projects (3)	1,986,157	1,148,123	719,372
Sustaining capital projects (4)	142,096	132,455	98,077
Total	2,128,253	1,280,578	817,449
Capital spending for intangible assets:			
Acquisition of intangible assets	11,232	—	—
Total	11,232	—	—
Capital spending attributable to unconsolidated affiliates:			
Investments in unconsolidated affiliates (5)	343,009	127,422	88,044
Total	343,009	127,422	88,044
Total capital spending	$2,518,287	$1,684,500	$1,232,095

(1) Excludes $181.1 million of non-cash consideration paid to the seller in the form of 7,115,844 of our common units. See Note 12 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report for additional information regarding our business combinations.

(2) On certain of our capital projects, third parties are obligated to reimburse us for all or a portion of project expenditures. The majority of such arrangements are associated with projects related to pipeline construction and production well tie-ins. Contributions in aid of construction costs were $57.5 million, $60.5 million and $47.0 million for the years ended December 31, 2007, 2006 and 2005, respectively.

(3) Growth capital projects either result in additional revenue streams from existing assets or expand our asset base through construction of new facilities that will generate additional revenue streams.

(4) Sustaining capital expenditures are capital expenditures (as defined by GAAP) resulting from improvements to and major renewals of existing assets. Such expenditures serve to maintain existing operations but do not generate additional revenues.

(5) Fiscal 2007 includes $216.5 million in cash contributions to Cameron Highway Oil Pipeline Company ("Cameron Highway") to fund our share of the repayment of its debt obligations.

Based on information currently available, we estimate our consolidated capital spending for 2008 will approximate $1.7 billion, which includes estimated expenditures of $1.5 billion for growth capital projects and acquisitions and $0.2 billion for sustaining capital expenditures.

Our forecast of consolidated capital expenditures is based on our current strategic operating and growth plans, which are dependent upon our ability to generate the required funds from either operating cash flows or from other means, including borrowings under debt agreements, issuance of equity, and potential divestitures of certain assets to third and/or related parties. Our forecast of capital expenditures may change due to factors beyond our control, such as weather related issues, changes in supplier prices or adverse economic conditions. Furthermore, our forecast may change as a result of decisions made by management at a later date, which may include acquisitions or decisions to take on additional partners.

Our success in raising capital, including the formation of joint ventures to share costs and risks, continues to be a principal factor that determines how much capital we can invest. We believe our access to capital resources is sufficient to meet the demands of our current and future operating growth needs, and although we currently intend to make the forecasted expenditures discussed above, we may adjust the timing and amounts of projected expenditures in response to changes in capital markets.

At December 31, 2007, we had approximately $569.7 million in purchase commitments outstanding that relate to our capital spending for property, plant and equipment. These commitments primarily relate to construction of our Barnett Shale natural gas pipeline project and Meeker and Pioneer natural gas processing plants.

Significant Ongoing Growth Capital Projects

The following table summarizes information regarding our current significant growth capital projects as of February 1, 2008 (dollars in millions). The capital spending amount noted for each project at December 31, 2007 includes accrued expenditures and capitalized interest as of this date. The forecast amount noted for each project includes a provision for estimated capitalized interest.

Project Name	Estimated Date of Completion	Actual Costs Through December 31, 2007	Current Forecast Total Cost
Pioneer II natural gas processing plant	First Quarter 2008	$279.9	$360.2
Expansion of Petal natural gas storage facility	Second Quarter 2008	65.3	96.5
Meeker II natural gas processing plant	Third Quarter 2008	137.5	399.5
Sherman Extension Pipeline (Barnett Shale)	Fourth Quarter 2008	30.9	477.9
ExxonMobil Conditioning & Treating Facility — Piceance Basin	Fourth Quarter 2008	122.3	195.4
Mont Belvieu Storage Well Optimization Projects	Fourth Quarter 2008	131.0	180.5
Shenzi Oil Pipeline	2009	76.2	171.2
Marathon Piceance Basin pipeline projects	2009	3.3	114.8
Expansion of Wilson natural gas storage facility	2010	2.4	113.7

Pioneer cryogenic natural gas processing plant. In July 2006, we began construction of a cryogenic natural gas processing plant located adjacent to the silica gel plant we acquired from TEPPCO in March 2006 and subsequently expanded. The Pioneer cryogenic facility commenced operations in February 2008. This new facility has a processing capacity of 750 MMcf/d and can handle expected production growth from the Jonah and Pinedale fields located in the Greater Green River Basin in Wyoming. At full rates, the Pioneer cryogenic facility is expected to recover up to 30 MBPD of NGLs.

Expansion of Petal natural gas storage facility. We are developing a new natural gas storage cavern located on the Petal Salt Dome near Petal, Mississippi. The cavern is designed to store approximately 7.9 Bcf of natural gas, of which approximately 5.0 Bcf will be working gas capacity and 2.9 Bcf will be the base gas requirements needed to support minimum pressures. This expansion project was approved by the Federal Energy Regulatory Commission and is projected to commence operations during the second quarter of 2008. We have long-term, binding precedent agreements on the majority of the capacity.

Meeker II natural gas processing plant. In October 2007, we commenced natural gas processing operations at our Meeker I facility, which recently completed its first phase of construction. Located in Colorado's Piceance Basin, our Meeker I facility has a processing capacity of 750 MMcf/d of natural gas and is capable of extracting up to 35 MBPD of mixed NGLs. The Meeker II facility, which is under construction and expected to be completed in the third quarter of 2008, will double its processing capacity to 1.5 Bcf/d of natural gas and 70 MBPD of mixed NGLs.

Sherman Extension Pipeline (Barnett Shale). In November 2006, we announced an expansion of our Texas Intrastate System with the construction of the Sherman Extension that will transport up to 1.1 Bcf/d of natural gas from the growing Barnett Shale area of North Texas. The Sherman Extension is supported by long-term contracts with Devon Energy Corporation, the largest producer in the Barnett Shale area, and significant indications of interest from leading producers and gatherers in the Fort Worth basin, as well as other shippers on our Texas Intrastate Pipeline system. At its terminus, the new pipeline system will make deliveries into Boardwalk Pipeline Partners L.P.'s ("Boardwalk") Gulf Crossing Expansion Project, which will provide export capacity for Barnett Shale natural gas production to multiple delivery points in Louisiana, Mississippi and Alabama that offer access to attractive markets in the Northeast and Southeast United States. In addition, the Sherman Extension will provide natural gas producers in East Texas and the Waha area of West Texas with access to these higher value markets through our Texas Intrastate Pipeline system. The Sherman Extension will originate near Morgan Mill, Texas and extend through the center of the current Barnett Shale development area to Sherman, Texas.

The Barnett Shale is considered to be one of the largest unconventional natural gas resource plays in North America, covering approximately 14 counties and over seven million acres in the Fort Worth basin in North Texas. Current natural gas production is estimated at 3.4 Bcf/d from approximately 7,800 wells. Approximately 190 rigs are currently estimated to be working to develop Barnett Shale acreage in the region. According to the United States Geological Survey, the Barnett Shale has the resource potential of approximately 26 trillion cubic feet of natural gas.

ExxonMobil Conditioning & Treating Facility — Piceance Basin. In November 2006, we entered into a 30-year agreement with Exxon Mobil Corporation ("ExxonMobil") to provide gathering, compression, treating and conditioning services for natural gas produced from its Piceance Creek Development Project, which encompasses more than 29,000 acres in Rio Blanco County, Colorado. Under terms of the agreement, ExxonMobil dedicated all of its natural gas production from this development to us for processing. To provide these services, we are constructing new plant and pipeline facilities to compress the natural gas, treat it to remove impurities, extract NGLs, and deliver the gas to various pipeline transmission systems that serve the region.

Mont Belvieu Storage Well Optimization Projects. These projects are designed to improve our ability and efficiency of storing and handling NGLs and other products at our Mont Belvieu Caverns underground storage facility. These projects include new pipelines that interconnect our three storage facilities in Mont Belvieu (i.e. East, West and North locations) as well as a brine pipeline that interconnects our various above ground storage pits. Also included in this effort are several infrastructure related projects that will allow us to handle higher inbound and outbound NGL injection rates into and out of the caverns. In general this series of projects should allow us to better utilize our current asset base and allow for future growth.

Shenzi Oil Pipeline. In October 2006, we announced the execution of definitive agreements with producers to construct, own and operate an oil export pipeline that will provide firm gathering services from the BHP Billiton Plc-operated Shenzi production field located in the South Green Canyon area of the central Gulf of Mexico. The Shenzi oil export pipeline will originate at the Shenzi Field, located in 4,300 feet of water at Green Canyon Block 653, approximately 120 miles off the coast of Louisiana. The 83-mile, 20-inch diameter pipeline will have the capacity to transport up to 230 MBPD of crude oil and will connect the Shenzi Field to our Cameron Highway Oil Pipeline and Poseidon Oil Pipeline System at our Ship Shoal 332B junction platform. We own a 50% interest in the Cameron Highway Oil Pipeline and a 36% interest in the Poseidon Oil Pipeline System and operate both pipelines. The Shenzi oil export pipeline will connect to a platform being constructed by BHP Billiton Plc to develop the Shenzi Field, which is expected to begin production in mid-2009.

Marathon Piceance Basin pipeline projects. In December 2006, we entered into a long-term contract with Marathon Oil Company ("Marathon") to provide a range of midstream energy services, including natural gas gathering, compression, treating and processing, for Marathon's natural gas production in the Piceance Basin of northwest Colorado. Under the terms of the contract, we are constructing fifty miles of gathering lines to connect Marathon's multi-well drilling sites, production from which is expected to peak at approximately 180 MMcf/d, to our Piceance Creek Gathering System. From there, the natural gas will be delivered to our Meeker natural gas processing facility.

Expansion of Wilson natural gas storage facility. We are developing a new natural gas storage cavern located on the Boling Salt Dome near Boling, Texas. The cavern is designed to store approximately 7.9 Bcf of natural gas, of which approximately 5.0 Bcf will be working gas capacity and 2.9 Bcf will be the base gas requirements needed to support minimum pressures. This expansion project was approved by the Texas Railroad Commission and is projected to commence operations in 2010. We expect to secure binding precedent agreements on all capacity before the cavern commences operations.

Pipeline Integrity Costs

Our NGL, petrochemical and natural gas pipelines are subject to pipeline safety programs administered by the U.S. Department of Transportation, through its Office of Pipeline Safety. This federal agency has issued safety regulations containing requirements for the development of integrity management programs for hazardous liquid pipelines (which include NGL and petrochemical pipelines) and natural gas pipelines. In general, these regulations require companies to assess the condition of their pipelines in certain high consequence areas (as defined by the regulation) and to perform any necessary repairs.

In April 2002, a subsidiary of ours acquired several midstream energy assets located in Texas and New Mexico from El Paso Corporation ("El Paso"). These assets included the Texas Intrastate System and the Waha and Carlsbad Gathering Systems. With respect to such assets, El Paso agreed to indemnify our subsidiary for any pipeline integrity costs it incurred (whether paid or payable) for five years following the acquisition date. The indemnity provisions did not take effect until such costs exceeded $3.3 million annually; however, the amount reimbursable by El Paso was capped at $50.2 million in the aggregate. In 2007 and 2006, we recovered $31.1 million and $13.7 million, respectively from El Paso related to our 2006 and 2005 expenditures. During 2007, we received a final amount of $5.4 million from El Paso related to this indemnity.

The following table summarizes our pipeline integrity costs, net of indemnity payments from El Paso, for the periods indicated (dollars in thousands):

	For the Year Ended December 31,		
	2007	**2006**	**2005**
Expensed	$43,499	$26,397	$17,245
Capitalized	52,420	38,180	24,964
Total	$95,919	$64,577	$42,209

We expect our cash outlay for the pipeline integrity program, irrespective of whether such costs are capitalized or expensed to approximate $65 million in 2008.

Critical Accounting Policies and Estimates

In our financial reporting process, we employ methods, estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of our financial statements. These methods, estimates and assumptions also affect the reported amounts of revenues and expenses during the reporting period. Investors should be aware that actual results could differ from these estimates if the underlying assumptions prove to be incorrect. The following describes the estimation risk currently underlying our most significant financial statement items:

Depreciation methods and estimated useful lives of property, plant and equipment

In general, depreciation is the systematic and rational allocation of an asset's cost, less its residual value (if any), to the periods it benefits. The majority of our property, plant and equipment is depreciated using the straight-line method, which results in depreciation expense being incurred evenly over the life of the assets. Our estimate of depreciation incorporates assumptions regarding the useful economic lives and residual values of our assets. At the time we place our assets in service, we believe such assumptions are reasonable; however, circumstances may develop that would cause us to change these assumptions, which would change our depreciation amounts prospectively.

Examples of such circumstances include:

- changes in laws and regulations that limit the estimated economic life of an asset;
- changes in technology that render an asset obsolete;
- changes in expected salvage values; or
- changes in the forecast life of applicable resource basins, if any.

At December 31, 2007 and 2006, the net book value of our property, plant and equipment was $11.59 billion and $9.83 billion, respectively. We recorded $414.9 million, $350.8 million, and $328.7 million in depreciation expense for the years ended December 31, 2007, 2006 and 2005, respectively.

For additional information regarding our property, plant and equipment, see Notes 2 and 10 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Measuring recoverability of long-lived assets and equity method investments

In general, long-lived assets (including intangible assets with finite useful lives and property, plant and equipment) are reviewed for impairment whenever events or changes in circumstances indicate that their carrying amount may not be recoverable. Examples of such events or changes might be production declines that are not replaced by new discoveries or long-term decreases in the demand or price of natural gas, oil or NGLs. Long-lived assets with recorded values that are not expected to be recovered through expected future cash flows are written-down to their estimated fair values. The carrying value of a long-lived asset is not recoverable if it exceeds the sum of undiscounted estimated cash flows expected to result from the use and eventual disposition of the existing asset. Our estimates of such undiscounted cash flows are based on a number of assumptions including anticipated operating margins and volumes; estimated useful life of the asset or asset group; and estimated salvage values. An impairment charge would be recorded for the excess of a long-lived asset's carrying value over its estimated fair value, which is based on a series of assumptions similar to those used to derive undiscounted cash flows. Those assumptions also include usage of probabilities for a range of possible outcomes, market values and replacement cost estimates.

An equity method investment is evaluated for impairment whenever events or changes in circumstances indicate that there is a possible loss in value of the investment other than a temporary decline. Examples of such events include sustained operating losses of the investee or long-term negative changes in the investee's industry. The carrying value of an equity method investment is not recoverable if it exceeds the sum of discounted estimated cash flows expected to be derived from the investment. This estimate of discounted cash flows is based on a number of assumptions including discount rates; probabilities assigned to different cash flow scenarios; anticipated margins and volumes and estimated useful life of the investment. A significant change in these underlying assumptions could result in our recording an impairment charge.

We recognized a non-cash asset impairment charge related to property, plant and equipment of $0.1 million in 2006, which is reflected as a component of operating costs and expenses. No such asset impairment charges were recorded in 2007 and 2005.

During 2007, we evaluated our equity method investment in Nemo Gathering Company, LLC for impairment. As a result of this evaluation, we recorded a $7.0 million non-cash impairment charge that is a component of equity income from unconsolidated affiliates for the year ended December 31, 2007. Similarly, during the year ended December 31, 2006, we evaluated our equity method investment in Neptune Pipeline Company, L.L.C. for impairment and recorded a $7.4 million non-cash impairment charge. We had no such impairment charges during the year ended December 31, 2005.

For additional information regarding impairment charges associated with our long-lived assets and equity method investments, see Notes 2 and 11 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Amortization methods and estimated useful lives of qualifying intangible assets

The specific, identifiable intangible assets of a business enterprise depend largely upon the nature of its operations. Potential intangible assets include intellectual property, such as technology, patents, trademarks and trade names, customer contracts and relationships, and non-compete agreements, as well as other intangible assets. The method used to value each intangible asset will vary depending upon the nature of the asset, the business in which it is utilized, and the economic returns it is generating or is expected to generate.

Our customer relationship intangible assets primarily represent the customer base we acquired in connection with business combinations and asset purchases. The value we assigned to these customer relationships is being amortized to earnings using methods that closely resemble the pattern in which the economic benefits of the underlying oil and natural gas resource bases from which the customers produce are estimated to be consumed or otherwise used. Our estimate of the useful life of each resource base is based on a number of factors, including reserve estimates, the economic viability of production and exploration activities and other industry factors.

Our contract-based intangible assets represent the rights we own arising from discrete contractual agreements, such as the long-term rights we possess under the Shell natural gas processing agreement. A contract-based intangible asset with a finite life is amortized over its estimated useful life (or term), which is the period over which the asset is expected to contribute directly or indirectly to the cash flows of an entity. Our estimates of useful life are based on a number of factors, including:

- the expected useful life of the related tangible assets (e.g., fractionation facility, pipeline, etc.);
- any legal or regulatory developments that would impact such contractual rights; and
- any contractual provisions that enable us to renew or extend such agreements.

If our underlying assumptions regarding the estimated useful life of an intangible asset change, then the amortization period for such asset would be adjusted accordingly. Additionally, if we determine that an intangible asset's unamortized cost may not be recoverable due to impairment; we may be required to reduce the carrying value and the subsequent useful life of the asset. Any such write-down of the value and unfavorable change in the useful life of an intangible asset would increase operating costs and expenses at that time.

At December 31, 2007 and 2006, the carrying value of our intangible asset portfolio was $917.0 million and $1.0 billion, respectively. We recorded $89.7 million, $88.8 million, and $88.9 million in amortization expense associated with our intangible assets for the years ended December 31, 2007, 2006 and 2005, respectively.

For additional information regarding our intangible assets, see Notes 2 and 13 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Methods we employ to measure the fair value of goodwill

Goodwill represents the excess of the purchase prices we paid for certain businesses over their respective fair values. We do not amortize goodwill; however, we test our goodwill (at the reporting unit level) for impairment during the second quarter of each fiscal year, and more frequently, if circumstances indicate it is more likely than not that the fair value of goodwill is below its carrying amount. Our goodwill testing involves the determination of a reporting unit's fair value, which is predicated on our assumptions regarding the future economic prospects of the reporting unit.

Such assumptions include:

- discrete financial forecasts for the assets contained within the reporting unit, which rely on management's estimates of operating margins and transportation volumes;
- long-term growth rates for cash flows beyond the discrete forecast period; and
- appropriate discount rates.

If the fair value of the reporting unit (including its inherent goodwill) is less than its carrying value, a charge to earnings is required to reduce the carrying value of goodwill to its implied fair value. At December 31, 2007 and 2006, the carrying value of our goodwill was $591.7 million and $590.5 million, respectively. We did not record any goodwill impairment charges during the years ended December 31, 2007, 2006 and 2005.

For additional information regarding our goodwill, see Notes 2 and 13 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Our revenue recognition policies and use of estimates for revenues and expenses

In general, we recognize revenue from our customers when all of the following criteria are met:

- persuasive evidence of an exchange arrangement exists;
- delivery has occurred or services have been rendered;
- the buyer's price is fixed or determinable; and
- collectability is reasonably assured.

We record revenue when sales contracts are settled (i.e., either physical delivery of product has taken place or the services designated in the contract have been performed). We record any necessary allowance for doubtful accounts as required by our established policy.

Our use of certain estimates for revenues and expenses has increased as a result of SEC regulations that require us to submit financial information on accelerated time frames. Such estimates are necessary due to the timing of compiling actual billing information and receiving third-party data needed to record transactions for financial reporting purposes. One example of such use of estimates is the accrual of an estimate of processing plant revenue and the cost of natural gas for a given month (prior to receiving actual customer and vendor-related plant operating information for the subject period). These estimates reverse in the following month and are offset by the corresponding actual customer billing and vendor-invoiced amounts. Accordingly, we include one month of certain estimated data in our results of operations. Such estimates are generally based on actual volume and price data through the first part of the month and estimated for the remainder of the month, adjusted accordingly for any known or expected changes in volumes or rates through the end of the month.

If the basis of our estimates proves to be substantially incorrect, it could result in material adjustments in results of operations between periods. On an ongoing basis, we review our estimates based on currently available information. Changes in facts and circumstances may result in revised estimates and could affect our reported financial statements and accompanying notes.

Reserves for environmental matters

Each of our business segments is subject to federal, state and local laws and regulations governing environmental quality and pollution control. Such laws and regulations may, in certain instances, require us to remediate current or former operating sites where specified substances have been released or disposed of. We accrue reserves for environmental matters when our assessments indicate that it is probable that a liability has been incurred and an amount can be reasonably estimated. Our assessments are based on studies, as well as site surveys, to determine the extent of any environmental damage and the necessary requirements to remediate this damage. Future environmental developments, such as increasingly strict environmental laws and additional claims for damages to property, employees and other persons resulting from current or past operations, could result in substantial additional costs beyond our current reserves.

At December 31, 2007 and 2006, we had a liability for environmental remediation of $26.5 million and $24.2 million, respectively, which was derived from a range of reasonable estimates based upon studies and site surveys. We follow the provisions of AICPA Statement of Position 96-1, which provides key guidance on recognition, measurement and disclosure of remediation liabilities. We have recorded our best estimate of the cost of remediation activities.

See Item 3 of this annual report for recent developments regarding environmental matters.

Natural gas imbalances

In the pipeline transportation business, natural gas imbalances frequently result from differences in gas volumes received from and delivered to our customers. Such differences occur when a customer delivers more or less gas into our pipelines than is physically redelivered back to them during a particular time period. The vast majority of our settlements are through in-kind arrangements whereby incremental volumes are delivered to a customer (in the case of an imbalance payable) or received from a customer (in the case of an imbalance receivable). Such in-kind deliveries are on-going and take place over several months. In some cases, settlements of imbalances accumulated over a period of time are ultimately cashed out and are generally negotiated at values which approximate average market prices over a period of time. As a result, for gas imbalances that are ultimately settled over future periods, we estimate the value of such current assets and liabilities using average market prices, which is representative of the estimated value of the imbalances upon final settlement. Changes in natural gas prices may impact our estimates.

At December 31, 2007 and 2006, our imbalance receivables, net of allowance for doubtful accounts, were $60.9 million and $97.8 million, respectively, and are reflected as a component of "Accounts and notes receivable — trade" on our balance sheets. At December 31, 2007 and 2006, our imbalance payables were $38.3 million and $51.2 million, respectively, and are reflected as a component of "Accrued gas payables" on our balance sheets.

Other Items

Initial Public Offering of Duncan Energy Partners

In September 2006, we formed a consolidated subsidiary, Duncan Energy Partners, to acquire, own and operate a diversified portfolio of midstream energy assets and to support the growth objectives of EPO. On February 5, 2007, Duncan Energy Partners completed its initial public offering of 14,950,000 common units (including an overallotment amount of 1,950,000 common units) at $21.00 per unit, which generated net proceeds to Duncan Energy Partners of $291.9 million. As consideration for assets contributed and reimbursement for capital expenditures related to these assets, Duncan Energy Partners distributed $260.6 million of these net proceeds to us along with $198.9 million in borrowings under its credit facility and a final amount of 5,351,571 common units of Duncan Energy Partners. Duncan Energy Partners used $38.5 million of net proceeds from the overallotment to redeem 1,950,000 of the 7,301,571 common units it had originally issued to Enterprise Products Partners, resulting in the final amount of 5,351,571 common units beneficially owned by Enterprise Products Partners. We used the cash received from Duncan Energy Partners to temporarily reduce amounts outstanding under EPO's Multi-Year Revolving Credit Facility.

We contributed 66% of our equity interests in the following subsidiaries to Duncan Energy Partners:

- Mont Belvieu Caverns, which owns salt dome storage caverns located in Mont Belvieu, Texas that receive, store and deliver NGLs and certain petrochemical products for industrial customers located along the upper Texas Gulf Coast, which has the largest concentration of petrochemical plants and refineries in the United States;
- Acadian Gas, which owns an onshore natural gas pipeline system that gathers, transports, stores and markets natural gas in Louisiana. The Acadian Gas system links natural gas supplies from onshore and offshore Gulf of Mexico developments (including offshore pipelines, continental shelf and deepwater production) with local gas distribution companies, electric generation plants and industrial customers, including those in the Baton Rouge-New Orleans-Mississippi River corridor. A subsidiary of Acadian Gas owns our 49.5% equity interest in Evangeline;
- Sabine Propylene, which transports polymer-grade propylene between Port Arthur, Texas and a pipeline interconnect located in Cameron Parish, Louisiana;
- Lou-Tex Propylene, which transports chemical-grade propylene from Sorrento, Louisiana to Mont Belvieu, Texas; and
- South Texas NGL, which began transporting NGLs from Corpus Christi, Texas to Mont Belvieu, Texas in January 2007. South Texas NGL owns the DEP South Texas NGL Pipeline System.

In addition to the 34% ownership interest we retained in each of these entities, we also own the 2% general partner interest in Duncan Energy Partners and 26.4% of Duncan Energy Partners' outstanding common units. Accordingly, we have in effect retained a net economic interest of approximately 52.4% in Duncan Energy Partners as of December 31, 2007. EPO directs the business operations of Duncan Energy Partners through its ownership and control of the general partner of Duncan Energy Partners.

For financial reporting purposes, we consolidate the financial statements of Duncan Energy Partners with those of our own and reflect its operations as a component of our business segments. Also, due to common control of the entities by Dan L. Duncan, the initial consolidated balance sheet of Duncan Energy Partners reflects our historical carrying basis in each of the subsidiaries contributed to Duncan Energy Partners.

The public ownership of Duncan Energy Partners' net assets and earnings are presented as a component of minority interest in our consolidated financial statements. The public owners of Duncan Energy Partners have no direct equity interests in us as a result of this transaction. The borrowings of Duncan Energy Partners are presented as part of our consolidated debt; however, we do not have any obligation for the payment of interest or repayment of borrowings incurred by Duncan Energy Partners. For additional information regarding Duncan Energy Partners, see Note 17 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

In certain cases, EPO is responsible for funding 100% of project costs rather than sharing such costs with Duncan Energy Partners in accordance with the existing sharing ratio of 66% funded by Duncan Energy Partners and 34% funded by EPO. Under the Omnibus Agreement, EPO agreed to make additional contributions to Duncan Energy Partners as reimbursement for Duncan Energy Partners' 66% share of any excess project costs above (i) the $28.6 million of estimated project costs to complete the Phase II expansions of the DEP South Texas NGL Pipeline System and (ii) $14.1 million of estimated project costs for additional Mont Belvieu brine production capacity and above-ground storage reservoir projects. These projects were in progress at the time of Duncan Energy Partners' initial public offering. In December 2007, EPO made cash contributions totaling $9.9 million to Duncan Energy Partners' subsidiaries in connection with the Omnibus Agreement.

In December 2007, EPO made an additional $38.1 million cash contribution to Mont Belvieu Caverns for capital expenditures in which Duncan Energy Partners is not a participant. This contribution was in accordance with provisions of the Mont Belvieu Caverns' limited liability company agreement, which states that when Duncan Energy Partners elects to not participate in certain projects, then EPO is responsible for funding 100% of such projects. To the extent such non-participated projects generate incremental earnings for Mont Belvieu Caverns in the future, the sharing ratio for Mont Belvieu Caverns will be adjusted to allocate such incremental cash flows to EPO. Under the terms of the agreement, Duncan Energy Partners may elect to reacquire for consideration a 66% share of these projects at a later date.

Insurance Matters

We participate as named insureds in EPCO's current insurance program, which provides us with property damage, business interruption and other coverages, which are customary for the nature and scope of our operations. EPCO attempts to place all insurance coverage with carriers having ratings of "A" or higher. However, two carriers associated with the EPCO insurance program were downgraded by Standard & Poor's during 2006. One of these carriers is currently rated at "A-" and the other, "BBB." At present, there is no indication that these two carriers would be unable to fulfill any insuring obligation. Furthermore, we currently do not have any claims which might be affected by these carriers. EPCO continues to monitor these situations. For additional information regarding our significant risks and uncertainties due to hurricanes, see Note 21 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Contractual Obligations

The following table summarizes our significant contractual obligations at December 31, 2007 (dollars in thousands).

Contractual Obligations	Total	Payment or Settlement due by Period Less than 1 year	1-3 years	3-5 years	More than 5 years
Scheduled maturities of long-term debt (1)	$ 6,896,500	$ —	$1,091,840	$1,347,160	$ 4,457,500
Estimated cash payments for interest (2)	$ 9,071,523	$ 437,686	$ 831,740	$ 676,622	$ 7,125,475
Operating lease obligations (3)	$ 325,705	$ 27,785	$ 49,172	$ 46,922	$ 201,826
Purchase obligations: (4)					
Product purchase commitments:					
Estimated payment obligations:					
Natural gas	$ 685,600	$ 137,345	$ 273,940	$ 274,315	$ —
NGLs	$ 4,041,275	$ 697,277	$ 830,264	$ 830,264	$ 1,683,470
Petrochemicals	$ 4,065,675	$1,751,152	$1,261,071	$ 375,368	$ 678,084
Other	$ 60,385	$ 31,392	$ 17,114	$ 3,831	$ 8,048
Underlying major volume commitments:					
Natural gas (in BBtus)	91,350	18,300	36,500	36,550	—
NGLs (in MBbls)	50,798	9,745	10,172	10,172	20,709
Petrochemicals (in MBbls)	45,207	20,115	13,704	4,097	7,291
Service payment commitments	$ 8,962	$ 6,745	$ 1,657	$ 186	$ 374
Capital expenditure commitments (5)	$ 569,654	$ 569,654	$ —	$ —	$ —
Other Long-Term Liabilities, as reflected in our Consolidated Balance Sheet (6)	$ 73,748	$ —	$ 23,680	$ 3,229	$ 46,839
Total	$25,799,027	$3,659,036	$4,380,478	$3,557,897	$14,201,616

(1) Represents our scheduled future maturities of consolidated debt obligations for the periods indicated. See Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report for information regarding our debt obligations.

(2) Our estimated cash payments for interest are based on the principle amount of consolidated debt obligations outstanding at December 31, 2007. With respect to variable-rate debt, we applied the weighted-average interest rates paid during 2007. See Note 14 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report for information regarding variable interest rates charged in 2007 under our credit agreements. In addition, our estimate of cash payments for interest gives effect to interest rate swap agreements in place at December 31, 2007. See Note 7 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report. Our estimated cash payments for interest are significantly influenced by the long-term maturities of our $550.0 million Junior Notes A (due August 2066) and $700.0 million Junior Notes B (due January 2068). Our estimated cash payments for interest assume that the Junior Note obligations are not called prior to maturity.

(3) Primarily represents operating leases for (i) underground caverns for the storage of natural gas and NGLs, (ii) leased office space with an affiliate of EPCO, (iii) a railcar unloading terminal in Mont Belvieu, Texas and (iv) land held pursuant to right-of-way agreements.

(4) Represents enforceable and legally binding agreements to purchase goods or services based on the contractual terms of each agreement at December 31, 2007.

(5) Represents our short-term unconditional payment obligations relating to our capital projects.

(6) As presented on our Consolidated Balance Sheet at December 31, 2007, other long-term liabilities consist primarily of (i) liabilities for our asset retirement obligations and (ii) liabilities for environmental remediation costs. For information regarding our environmental remediation costs and asset retirement obligations, see Notes 2 and 10 respectively, of our Notes to Consolidated Financial Statements included under Item 8 of this annual report.

For additional information regarding our significant contractual obligations involving operating leases and purchase obligations, see Note 20 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Off-Balance Sheet Arrangements

Except for the following information regarding debt obligations of certain unconsolidated affiliates, we have no off-balance sheet arrangements, as described in Item 303(a)(4)(ii) of Regulation S-K, that have or are reasonably expected to have a material current or future effect on our financial condition, revenues, expenses, results of operations, liquidity, capital expenditures or capital resources. The following information summarizes the significant terms of such unconsolidated debt obligations.

Poseidon. At December 31, 2007, Poseidon's debt obligations consisted of $91.0 million outstanding under its $150.0 million revolving credit facility. Amounts borrowed under this facility mature in May 2011 and are secured by substantially all of Poseidon's assets.

Evangeline. At December 31, 2007, Evangeline's debt obligations consisted of (i) $13.2 million in principal amount of 9.90% fixed rate Series B senior secured notes due December 2010 and (ii) a $7.5 million subordinated note payable. Enterprise Products Partners had $1.1 million of letters of credit outstanding on December 31, 2007 that were furnished on behalf of Evangeline's debt.

Summary of Related Party Transactions

The following table summarizes our related party transactions for the periods indicated (dollars in thousands).

	For the Year Ended December 31,		
	2007	2006	2005
Revenues from consolidated operations			
EPCO and affiliates	$362,076	$ 98,671	$ 311
Unconsolidated affiliates	290,640	304,559	367,204
Total	$652,716	$403,230	$367,515
Operating costs and expenses			
EPCO and affiliates	$329,699	$311,537	$293,134
Unconsolidated affiliates	32,765	31,606	23,563
Total	$362,464	$343,143	$316,697
General and administrative expenses			
EPCO and affiliates	$ 56,518	$ 41,265	$ 40,954

For additional information regarding our related party transactions, see Note 17 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report. For information regarding certain business relationships and related transactions, see Item 13 of this annual report.

We have an extensive and ongoing relationship with EPCO and its affiliates, including TEPPCO and Energy Transfer Equity. Our revenues from EPCO and affiliates are primarily associated with sales of NGL products. Our expenses with EPCO and affiliates are primarily due to (i) reimbursements we pay EPCO in connection with an administrative services agreement and (ii) purchases of NGL products. TEPPCO is an affiliate of ours due to the common control relationship of both entities. Enterprise GP Holdings acquired non-controlling ownership interests in both ETE GP and Energy Transfer Equity in May 2007. As a result of this transaction, ETE GP and Energy Transfer Equity became related parties to us.

Many of our unconsolidated affiliates perform supporting or complementary roles to our consolidated business operations. The majority of our revenues from unconsolidated affiliates relate to natural gas sales to a Louisiana affiliate. The majority of our expenses with unconsolidated affiliates pertain to payments we make to K/D/S Promix, L.L.C. for NGL transportation, storage and fractionation services.

On February 5, 2007, our consolidated subsidiary, Duncan Energy Partners, completed an underwritten initial public offering of its common units. Duncan Energy Partners was formed in September 2006 as a Delaware limited partnership to, among other things, acquire ownership interests in certain of our midstream energy businesses. For additional information regarding Duncan Energy Partners, see "Other Items — Initial Public Offering of Duncan Energy Partners" within this section.

Non-GAAP reconciliations

A reconciliation of our measurement of total non-GAAP gross operating margin to GAAP operating income and income before provision for income taxes, minority interest and the cumulative effect of changes in accounting principles follows (dollars in thousands):

	For the Year the Ended December 31,		
	2007	2006	2005
Total segment gross operating margin	$1,492,068	$1,362,449	$1,136,347
Adjustments to reconcile total gross operating margin			
To operating income:			
Depreciation, amortization and accretion in operating costs and expenses	(513,840)	(440,256)	(413,441)
Operating lease expense paid by EPCO	(2,105)	(2,109)	(2,112)
Gain (loss) on sale of assets in operating costs and expenses	(5,391)	3,359	4,488
General and administrative costs	(87,695)	(63,391)	(62,266)
Consolidated operating income	883,037	860,052	663,016
Other expense, net	(303,463)	(229,967)	(225,178)
Income before provision for income taxes, minority interest and the cumulative effect of changes in accounting principles	$ 579,574	$ 630,085	$ 437,838

EPCO subleases to us certain equipment located at our Mont Belvieu facility and 100 railcars for $1 per year (the "retained leases"). These subleases are part of the administrative services agreement that we executed with EPCO in connection with our formation in 1998. EPCO holds this equipment pursuant to operating leases for which it has retained the corresponding cash lease payment obligation. We record the full value of such lease payments made by EPCO as a non-cash related party operating expense, with the offset to partners' equity recorded as a general contribution to our partnership. Apart from the partnership interests we granted to EPCO at our formation, EPCO does not receive any additional ownership rights as a result of its contribution to us of the retained leases. For additional information regarding the administrative services agreement and the retained leases, see Item 13 of this annual report.

Cumulative effect of changes in accounting principles

Our Statements of Consolidated Operations reflect the following cumulative effects of changes in accounting principles:

- We recognized, as a benefit, a cumulative effect of a change in accounting principle of $1.5 million in 2006 based on the Statement of Financial Accounting Standards ("SFAS") 123(R), "Share-Based Payment," requirements to recognize compensation expense based upon the grant date fair value of an equity award and the application of an estimated forfeiture rate to unvested awards.

- We recorded a $4.2 million non-cash expense related to certain asset retirement obligations in 2005 due to our implementation of FIN 47 as of December 31, 2005.

For additional information regarding these changes in accounting principles, including a presentation of the pro forma effects these changes would have had on our historical earnings, see Note 8 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Recent Accounting Pronouncements

Several new accounting standards have recently been issued that will or may affect our future financial statements:

- Statement of Financial Accounting Standards ("SFAS") 157, "Fair Value Measurements;"
- SFAS 160, "Noncontrolling Interests in Consolidated Financial Statements — an amendment of ARB No. 51;" and
- SFAS 141(R), "Business Combinations."

For additional information regarding these recent accounting developments and others that may affect our future financial statements, see Note 3 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Item 7A. *Quantitative and Qualitative Disclosures About Market Risk.*

We are exposed to financial market risks, including changes in commodity prices, interest rates and foreign exchange rates. In addition, we are exposed to fluctuations in exchange rates between the U.S. dollar and Canadian dollar. We may use financial instruments (i.e., futures, forwards, swaps, options and other financial instruments with similar characteristics) to mitigate the risks of certain identifiable and anticipated transactions. In general, the type of risks we attempt to hedge are those related to (i) the variability of future earnings, (ii) fair values of certain debt instruments and (iii) cash flows resulting from changes in applicable interest rates, commodity prices or exchange rates.

We recognize financial instruments as assets and liabilities on our Consolidated Balance Sheets based on fair value. Fair value is generally defined as the amount at which a financial instrument could be exchanged in a current transaction between willing parties, not in a forced or liquidation sale. The estimated fair values of our financial instruments have been determined using available market information and appropriate valuation techniques. We must use considerable judgment, however, in interpreting market data and developing these estimates. Accordingly, our fair value estimates are not necessarily indicative of the amounts that we could realize upon disposition of these instruments. The use of different market assumptions and/or estimation techniques could have a material effect on our estimates of fair value.

Changes in the fair value of financial instrument contracts are recognized currently in earnings unless specific hedge accounting criteria are met. If the financial instruments meet those criteria, the instrument's gains and losses offset the related results of the hedged item in earnings for a fair value hedge and are deferred in other comprehensive income for a cash flow hedge. Gains and losses related to a cash flow hedge are reclassified into earnings when the forecasted transaction affects earnings. For additional information regarding our accounting for financial instruments, see Note 7 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

To qualify as a hedge, the item to be hedged must be exposed to commodity, interest rate or exchange rate risk and the hedging instrument must reduce the exposure and meet the hedging requirements of SFAS 133, "Accounting for Derivative Instruments and Hedging Activities" (as amended and interpreted). We must formally designate the financial instrument as a hedge and document and assess the effectiveness of the hedge at inception and on a quarterly basis. Any ineffectiveness of the hedge is recorded in current earnings.

We routinely review our outstanding financial instruments in light of current market conditions. If market conditions warrant, some financial instruments may be closed out in advance of their contractual settlement dates thus realizing income or loss depending on the specific hedging criteria. When this occurs, we may enter into a new financial instrument to reestablish the hedge to which the closed instrument relates.

Table of Contents

Interest Rate Risk Hedging Program

Our interest rate exposure results from variable and fixed rate borrowings under various debt agreements. We manage a portion of our interest rate exposures by utilizing interest rate swaps and similar arrangements, which allow us to convert a portion of fixed rate debt into variable rate debt or a portion of variable rate debt into fixed rate debt. The following information summarizes significant components of our interest rate risk hedging portfolio:

Fair value hedges — Interest rate swaps

As summarized in the following table, we had eleven interest rate swap agreements outstanding at December 31, 2007 that were accounted for as fair value hedges.

Hedged Fixed Rate Debt	Number Of Swaps	Period Covered by Swap	Termination Date of Swap	Fixed to Variable Rate (1)	Notional Amount
Senior Notes B, 7.50% fixed rate, due Feb. 2011	1	Jan. 2004 to Feb. 2011	Feb. 2011	7.50% to 8.65%	$50 million
Senior Notes C, 6.375% fixed rate, due Feb. 2013	2	Jan. 2004 to Feb. 2013	Feb. 2013	6.38% to 7.19%	$200 million
Senior Notes G, 5.6% fixed rate, due Oct. 2014	6	4th Qtr. 2004 to Oct. 2014	Oct. 2014	5.60% to 6.13%	$600 million
Senior Notes K, 4.95% fixed rate, due June 2010	2	Aug. 2005 to June 2010	June 2010	4.95% to 5.33%	$200 million

(1) The variable rate indicated is the all-in variable rate for the current settlement period.

We have designated these interest rate swaps as fair value hedges under SFAS 133 since they mitigate changes in the fair value of the underlying fixed rate debt. As effective fair value hedges, an increase in the fair value of these interest rate swaps is equally offset by an increase in the fair value of the underlying hedged debt. The offsetting changes in fair value have no effect on current period interest expense.

These eleven agreements have a combined notional amount of $1.1 billion and match the maturity dates of the underlying debt being hedged. Under each swap agreement, we pay the counterparty a variable interest rate based on six-month London interbank offered rate ("LIBOR") (plus an applicable margin as defined in each swap agreement), and receive back from the counterparty a fixed interest rate payment based on the stated interest rate of the debt being hedged, with both payments calculated using the notional amounts stated in each swap agreement. We settle amounts receivable from or payable to the counterparties every six months (the "settlement period"). The settlement amount is amortized ratably to earnings as either an increase or a decrease in interest expense over the settlement period.

The total fair value of these eleven interest rate swaps at December 31, 2007, was an asset of $14.8 million, with an offsetting decrease in the fair value of the underlying debt. Interest expense for the years ended December 31, 2007, 2006 and 2005 reflects a $8.9 million loss, $5.2 million loss and $10.8 million benefit from these swap agreements, respectively.

The following table shows the effect of hypothetical price movements on the estimated fair value of our interest rate swap portfolio and the related change in fair value ("FV") of the underlying debt at the dates indicated (dollars in thousands). Income is not affected by changes in the fair value of these swaps; however, these swaps effectively convert the hedged portion of fixed-rate debt to variable-rate debt. As a result, interest expense (and related cash outlays for debt service) will increase or decrease with the change in the periodic "reset" rate associated with the respective swap. Typically, the reset rate is an agreed upon index rate published for the first day of the six-month interest calculation period.

Scenario	Resulting Classification	Swap Fair Value at December 31, 2006	December 31, 2007	February 12, 2008
FV assuming no change in underlying interest rates	*Asset (Liability)*	$(29,060)	$14,839	$42,544
FV assuming 10% increase in underlying interest rates	*Asset (Liability)*	(56,249)	(5,425)	24,479
FV assuming 10% decrease in underlying interest rates	*Asset (Liability)*	(1,872)	35,102	60,610

The fair value of the interest rate swaps excludes related hedged amounts we have recorded in earnings. The change in fair value between December 31, 2007 and February 12, 2008 is primarily due to a decrease in market interest rates relative to the interest rates used to determine the fair value of our financial instruments at December 31, 2007. The underlying floating LIBOR forward interest rate curve used to determine the February 12, 2008 fair values ranged from approximately 2.25% to 5.53% using 6-month reset periods ranging from February 2008 to March 2014.

Cash flow hedges — Interest Rate Swaps

Duncan Energy Partners had three interest rate swap agreements outstanding at December 31, 2007 that were accounted for as cash flow hedges.

Hedged Variable Rate Debt	Number Of Swaps	Period Covered by Swap	Termination Date of Swap	Variable to Fixed Rate(1)	Notional Value
Duncan Energy Partners' Revolver, due Feb. 2011	3	Sep. 2007 to Sep. 2010	Sep. 2010	4.84% to 4.62%	$175.0 million

(1) Amounts receivable from or payable to the swap counterparties are settled every three months (the "settlement period").

In September 2007, Duncan Energy Partners executed three floating-to-fixed interest rate swaps having a combined notional value of $175.0 million. The purpose of these financial instruments is to reduce the sensitivity of Duncan Energy Partners' earnings to variable interest rates charged under its revolving credit facility. It recognized a $0.2 million benefit from these swaps in interest expense during 2007, which includes ineffectiveness of $0.2 million (an expense) and income of $0.4 million. In 2008, Duncan Energy Partners expects to reclassify $0.7 million of accumulated other comprehensive loss that was generated by these interest rate swaps as an increase to interest expense.

At December 31, 2007, the aggregate fair value of these interest rate swaps was a liability of $3.8 million. As cash flow hedges, any increase or decrease in fair value (to the extent effective) would be recorded into other comprehensive income and amortized into income based on the settlement period hedged. Any ineffectiveness is recorded directly into earnings as an increase in interest expense. The following table shows the effect of hypothetical price movements on the estimated fair value of Duncan Energy Partners' interest rate swap portfolio (dollars in thousands).

		Swap Fair Value at	
Scenario	Resulting Classification	December 31, 2007	February 12, 2008
FV assuming no change in underlying interest rates	*Liability*	$3,782	$7,749
FV assuming 10% increase in underlying interest rates	*Liability*	2,245	6,563
FV assuming 10% decrease in underlying interest rates	*Liability*	5,319	8,934

Cash flow hedges — Treasury locks

At times, we may use treasury lock financial instruments to hedge the underlying U.S. treasury rates related to our anticipated issuances of debt. A treasury lock is a specialized agreement that fixes the price (or yield) on a specific treasury security for an established period of time. A treasury lock purchaser is protected from a rise in the yield of the underlying treasury security during the lock period. Each of the treasury lock transactions was designated as a cash flow hedge under SFAS 133.

To the extent effective, gains and losses on the value of the treasury locks will be deferred until the forecasted debt is issued and will be amortized to earnings over the life of the debt. No ineffectiveness was recognized as of December 31, 2007. Gains or losses on the termination of such instruments are amortized to earnings using the effective interest method over the estimated term of the underlying fixed-rate debt.

The following table summarizes changes in our treasury lock portfolio since December 31, 2005 (dollars in millions):

	Notional Amount	Cash Gain
Second quarter of 2006 additions to portfolio (1)	$ 250.0	$ —
Third quarter of 2006 additions to portfolio (1)	50.0	—
Third quarter of 2006 terminations (2)	(300.0)	—
Fourth quarter of 2006 additions to portfolio (3)	562.5	—
Treasury lock portfolio, December 31, 2006 (4)	562.5	—
First quarter of 2007 additions to portfolio (3)	437.5	—
Second quarter of 2007 terminations (5)	(875.0)	42.3
Third quarter of 2007 additions to portfolio (6)	875.0	—
Third quarter of 2007 terminations (7)	(750.0)	6.6
Fourth quarter of 2007 additions to portfolio (8)	350.0	—
Treasury lock portfolio, December 31, 2007 (4)	$ 600.0	$48.9

(1) EPO entered into these transactions related to its anticipated issuances of debt in 2006.

(2) Terminations relate to the issuance of the Junior Notes A ($300.0 million).

(3) EPO entered into these transactions related to its anticipated issuances of debt in 2007.

(4) The fair value of open financial instruments at December 31, 2006 and 2007 was an asset of $11.2 million and a liability of $19.6 million, respectively.

(5) Terminations relate to the issuance of the Junior Notes B ($500.0 million) and Senior Notes L ($375.0 million). Of the $42.3 million gain, $10.6 million relates to the Junior Notes B and the remainder to the Senior Notes L and its successor debt.

(6) EPO entered into these transactions related to its issuance of the Senior Notes L (including its successor debt) in August 2007 ($500.0 million) and anticipated issuance of debt during the first half of 2008 ($250.0 million)

(7) Terminations relate to the issuance of the Senior Notes L and its successor debt.

(8) EPO entered into these transactions in anticipated issuance of debt during the first half of 2008.

Commodity Risk Hedging Program

The prices of natural gas, NGLs and certain petrochemical products are subject to fluctuations in response to changes in supply, market uncertainty and a variety of additional factors that are beyond our control. In order to manage the price risks associated with such products, we may enter into commodity financial instruments.

The primary purpose of our commodity risk management activities is to hedge our exposure to price risks associated with (i) natural gas purchases, (ii) the value of NGL production and inventories, (iii) related firm commitments, (iv) fluctuations in transportation revenues where the underlying fees are based on natural gas index prices and (v) certain anticipated transactions involving either natural gas, NGLs or certain petrochemical products. From time to time, we inject natural gas into storage and utilize hedging instruments to lock in the value of our inventory positions. The commodity financial instruments we utilize may be settled in cash or with another financial instrument.

The fair value of our commodity financial instrument portfolio, which primarily consisted of cash flow hedges, at December 31, 2007 was a liability of $19.3 million. During the years ended December 31, 2007, 2006 and 2005, we recorded a $28.6 million loss, $10.3 million income and $1.1 million income, respectively, related to our commodity financial instruments, which is included in operating costs and expenses on our Statements of Consolidated Operations. Included in the $28.6 million loss recorded during 2007, was ineffectiveness of $0.9 million (an expense) related to our commodity hedges. These contracts will terminate during 2008, and any amounts remaining in accumulated other comprehensive income will be recorded in earnings.

We assess the risk of our commodity financial instrument portfolio using a sensitivity analysis model. The sensitivity analysis applied to this portfolio measures the potential income or loss (i.e., the change in fair value of the portfolio) based upon a hypothetical 10% movement in the underlying quoted market prices of the commodity financial instruments outstanding at the date indicated within the following table.

Table of Contents

The following table shows the effect of hypothetical price movements on the estimated fair value of this portfolio at the dates presented (dollars in thousands):

Scenario	Resulting Classification	Commodity Financial Instrument Portfolio FV December 31, 2006	December 31, 2007	February 12, 2008
FV assuming no change in underlying commodity prices	*Asset (Liability)*	$ (3,184)	$ (19,305)	$ 25,941
FV assuming 10% increase in underlying commodity prices	*Asset (Liability)*	(2,119)	9,903	52,974
FV assuming 10% decrease in underlying commodity prices	*Liability*	(4,249)	(48,513)	(1,114)

The increase in portfolio fair value between December 31, 2007 and February 12, 2008 is primarily due to an increase in the price of natural gas.

Foreign Currency Hedging Program

We are exposed to foreign currency exchange rate risk through our Canadian NGL marketing subsidiary and certain construction agreements with respect to our Pioneer processing plant where payments are indexed to the Canadian dollar. As a result, we could be adversely affected by fluctuations in the foreign currency exchange rate between the U.S. dollar and the Canadian dollar. We attempt to hedge this risk using foreign exchange purchase contracts to fix the exchange rate.

Mark-to-market accounting is utilized for those foreign exchange contracts associated with our Canadian NGL marketing business. The duration of these contracts is typically one month. As of December 31, 2007, $4.7 million of these exchange contracts were outstanding, all of which settled in January 2008. In January 2008, we entered into $3.7 million of such instruments.

The foreign exchange contracts associated with our construction activities are accounted for using hedge accounting. At December 31, 2007, the fair value of these contracts was $1.3 million. These contracts settle through May 2008.

Product Purchase Commitments

We have long and short-term purchase commitments for NGLs, petrochemicals and natural gas with several suppliers. The purchase prices that we are obligated to pay under these contracts are based on market prices at the time we take delivery of the volumes. For additional information regarding these commitments, see "Contractual Obligations" included under Item 7 of this annual report.

Item 8. ***Financial Statements and Supplementary Data.***

ENTERPRISE PRODUCTS PARTNERS L.P.
INDEX TO FINANCIAL STATEMENTS

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors of Enterprise Products GP, LLC and
Unitholders of Enterprise Products Partners L.P.
Houston, Texas

We have audited the accompanying consolidated balance sheets of Enterprise Products Partners L.P. and subsidiaries (the "Company") as of December 31, 2007 and 2006, and the related statements of consolidated operations, consolidated comprehensive income, consolidated cash flows and consolidated partners' equity for each of the three years in the period ended December 31, 2007. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Enterprise Products Partners L.P. and subsidiaries at December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2007, in conformity with accounting principles generally accepted in the United States of America.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2007, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 28, 2008 expressed an unqualified opinion on the Company's internal control over financial reporting.

/s/ DELOITTE & TOUCHE LLP

ENTERPRISE PRODUCTS PARTNERS L.P.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Except per unit amounts, or as noted within the context of each footnote disclosure, the dollar amounts presented in the tabular data within these footnote disclosures are stated in thousands of dollars.

Note 1. Partnership Organization

Enterprise Products Partners L.P. is a publicly traded Delaware limited partnership, the common units of which are listed on the New York Stock Exchange ("NYSE") under the ticker symbol "EPD." Unless the context requires otherwise, references to "we," "us," "our," or "Enterprise Products Partners" are intended to mean the business and operations of Enterprise Products Partners L.P. and its consolidated subsidiaries.

We were formed in April 1998 to own and operate certain natural gas liquids ("NGLs") related businesses of EPCO, Inc. ("EPCO"). We conduct substantially all of our business through our wholly owned subsidiary, Enterprise Products Operating LLC ("EPO"), as successor in interest by merger to Enterprise Products Operating L.P. We are owned 98% by our limited partners and 2% by Enterprise Products GP, LLC (our general partner, referred to as "EPGP"). EPGP is owned 100% by Enterprise GP Holdings L.P. ("Enterprise GP Holdings"), a publicly traded affiliate, the units of which are listed on the NYSE under the ticker symbol "EPE." The general partner of Enterprise GP Holdings is EPE Holdings, LLC ("EPE Holdings"), a wholly owned subsidiary of Dan Duncan LLC, the membership interests of which are owned by Dan L. Duncan. We, EPGP, Enterprise GP Holdings, EPE Holdings and Dan Duncan LLC are affiliates and under common control of Dan L. Duncan, the Group Co-Chairman and controlling shareholder of EPCO.

References to "TEPPCO" mean TEPPCO Partners, L.P., a publicly traded affiliate, the common units of which are listed on the NYSE under the ticker symbol "TPP." References to "TEPPCO GP" refer to Texas Eastern Products Pipeline Company, LLC, which is the general partner of TEPPCO and is wholly owned by Enterprise GP Holdings.

References to "Energy Transfer Equity" mean the business and operations of Energy Transfer Equity, L.P. and its consolidated subsidiaries. References to "LE GP" mean LE GP, LLC, which is the general partner of Energy Transfer Equity. On May 7, 2007, Enterprise GP Holdings acquired non-controlling interests in both LE GP and Energy Transfer Equity.

References to "Employee Partnerships" mean EPE Unit L.P. ("EPE Unit I"), EPE Unit II, L.P. ("EPE Unit II") and EPE Unit III, L.P. ("EPE Unit III"), collectively, which are private company affiliates of EPCO, Inc. See Note 25 for information regarding the formation of Enterprise Unit L.P. in February 2008.

On February 5, 2007, a consolidated subsidiary of ours, Duncan Energy Partners L.P. ("Duncan Energy Partners"), completed an initial public offering of its common units (see Note 17). Duncan Energy Partners owns equity interests in certain of our midstream energy businesses. References to "DEP GP" mean DEP Holdings, LLC, which is the general partner of Duncan Energy Partners and is wholly owned by EPO.

For financial reporting purposes, we consolidate the financial statements of Duncan Energy Partners with those of our own and reflect its operations in our business segments. We control Duncan Energy Partners through our ownership of its general partner. Also, due to common control of the entities by Dan L. Duncan, the initial consolidated balance sheet of Duncan Energy Partners reflects our historical carrying basis in each of the subsidiaries contributed to Duncan Energy Partners. Public ownership of Duncan Energy Partners' net assets and earnings are presented as a component of minority interest in our consolidated financial statements. The borrowings of Duncan Energy Partners are presented as part of our consolidated debt; however, we do not have any obligation for the payment of interest or repayment of borrowings incurred by Duncan Energy Partners.

Note 2. Summary of Significant Accounting Policies

Allowance for Doubtful Accounts

Our allowance for doubtful accounts is determined based on specific identification and estimates of future uncollectible accounts. Our procedure for determining the allowance for doubtful accounts is based on (i) historical experience with customers, (ii) the perceived financial stability of customers based on our research, and (iii) the levels of credit we grant to customers. In addition, we may increase the allowance account in response to the specific identification of customers involved in bankruptcy proceedings and similar financial difficulties. On a routine basis, we review estimates associated with the allowance for doubtful accounts to ensure that we have recorded sufficient reserves to cover potential losses. Our allowance also includes estimates for uncollectible natural gas imbalances based on specific identification of accounts.

The following table presents the activity of our allowance for doubtful accounts for the years ended December 31, 2007, 2006 and 2005:

	For the Years Ended December 31,		
	2007	2006	2005
Balance at beginning of period	$23,406	$ 37,329	$32,773
Charges to expense	2,614	473	5,391
Acquisition-related additions and other	—	—	5,541
Deductions	(4,361)	(14,396)	(6,376)
Balance at end of period	$21,659	$ 23,406	$37,329

Cash and Cash Equivalents

Cash and cash equivalents represent unrestricted cash on hand and highly liquid investments with original maturities of less than three months from the date of purchase.

Our Statements of Consolidated Cash Flows are prepared using the indirect method. The indirect method derives net cash flows from operating activities by adjusting net income to remove (i) the effects of all deferrals of past operating cash receipts and payments, such as changes during the period in inventory, deferred income and similar transactions, (ii) the effects of all accruals of expected future operating cash receipts and cash payments, such as changes during the period in receivables and payables, (iii) the effects of all items classified as investing or financing cash flows, such as gains or losses on sale of property, plant and equipment or extinguishment of debt, and (iv) other non-cash amounts such as depreciation, amortization and changes in the fair market value of financial instruments.

Consolidation Policy

We evaluate our financial interests in business enterprises to determine if they represent variable interest entities where we are the primary beneficiary. If such criteria are met, we consolidate the financial statements of such businesses with those of our own. Our consolidated financial statements include our accounts and those of our majority-owned subsidiaries in which we have a controlling interest, after the elimination of all material intercompany accounts and transactions. We also consolidate other entities and ventures in which we possess a controlling financial interest as well as partnership interests where we are the sole general partner of the partnership.

If the entity is organized as a limited partnership or limited liability company and maintains separate ownership accounts, we account for our investment using the equity method if our ownership interest is between 3% and 50% and we exercise significant influence over the entity's operating and financial policies. For all other types of investments, we apply the equity method of accounting if our ownership interest is between 20% and 50% and we exercise significant influence over the entity's operating and financial policies. Our proportionate share of profits and losses from transactions with equity method unconsolidated affiliates are eliminated in consolidation to the extent such amounts are material and remain on our balance sheet (or those of our equity method investments) in inventory or similar accounts.

If our ownership interest in an entity does not provide us with either control or significant influence, we account for the investment using the cost method.

Contingencies

Certain conditions may exist as of the date our financial statements are issued, which may result in a loss to us but which will only be resolved when one or more future events occur or fail to occur. Our management and its legal counsel assess such contingent liabilities, and such assessment inherently involves an exercise in judgment. In assessing loss contingencies related to legal proceedings that are pending against us or unasserted claims that may result in proceedings, our management and legal counsel evaluate the perceived merits of any legal proceedings or unasserted claims as well as the perceived merits of the amount of relief sought or expected to be sought therein.

If the assessment of a contingency indicates that it is probable that a material loss has been incurred and the amount of liability can be estimated, then the estimated liability would be accrued in our financial statements. If the assessment indicates that a potentially material loss contingency is not probable but is reasonably possible, or is probable but cannot be estimated, then the nature of the contingent liability, together with an estimate of the range of possible loss (if determinable and material), is disclosed.

Loss contingencies considered remote are generally not disclosed unless they involve guarantees, in which case the guarantees would be disclosed.

Current Assets and Current Liabilities

We present, as individual captions in our consolidated balance sheets, all components of current assets and current liabilities that exceed five percent of total current assets and liabilities, respectively.

Deferred Revenues

We recognize revenues when earned (see Note 4). Amounts billed in advance of the period in which the service is rendered or product delivered are recorded as deferred revenue.

Earnings Per Unit

Earnings per unit is based on the amount of income allocated to limited partners and the weighted-average number of units outstanding during the period. See Note 19 for additional information regarding our earnings per unit.

Employee Benefit Plans

In 2005, we acquired a controlling ownership interest in Dixie Pipeline Company ("Dixie"), which resulted in Dixie becoming a consolidated subsidiary of ours. Dixie employs the personnel that operate its pipeline system and certain of these employees are eligible to participate in a defined contribution plan and pension and postretirement benefit plans.

Statement of Financial Accounting Standards ("SFAS") 158, "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106, and 132(R)," requires businesses to record the over-funded or under-funded status of defined benefit pension and other postretirement plans as an asset or liability at a measurement date and to recognize annual changes in the funded status of each plan through other comprehensive income. At December 31, 2006, Dixie adopted the provisions of SFAS 158. See Note 6 for additional information regarding Dixie's employee benefit plans.

Environmental Costs

Environmental costs for remediation are accrued based on estimates of known remediation requirements. Such accruals are based on management's best estimate of the ultimate cost to remediate a site and are adjusted as further information and circumstances develop. Those estimates may change substantially depending on information about the nature and extent of contamination, appropriate remediation technologies, and regulatory approvals. Ongoing environmental compliance costs are charged to expense as incurred. In accruing for environmental remediation liabilities, costs of future expenditures for environmental remediation are not discounted to their present value, unless the amount and timing of the expenditures are fixed or reliably determinable. Expenditures to mitigate or prevent future environmental contamination are capitalized.

Environmental costs and related accruals were not significant prior to the GulfTerra Merger. As a result of the merger, we assumed an environmental liability for remediation costs associated with mercury gas meters. The balance of this environmental liability was $17.2 million and $20.3 million at December 31, 2007 and 2006, respectively. At December 31, 2007 and 2006, total reserves for environmental liabilities, including those related to the mercury gas meters, were $26.5 million and $24.2 million, respectively. At December 31, 2007 and 2006, $6.3 million and $7.1 million, respectively, of these amounts are classified as current liabilities.

In February 2007, we reserved $6.5 million in cash we received from a third party to fund anticipated future environmental remediation costs. These expected costs are associated with assets acquired in connection with the GulfTerra Merger. Previously, the third party had been obligated to indemnify us for such costs. As a result of the settlement, this indemnification arrangement was terminated.

The following table presents the activity of our environmental reserves for the years ended December 31, 2007, 2006 and 2005:

	For the Years Ended December 31,		
	2007	2006	2005
Balance at beginning of period	$24,178	$22,090	$22,119
Charges to expense	375	1,105	139
Acquisition-related additions and other	6,499	8,811	—
Deductions	(4,593)	(7,828)	(168)
Balance at end of period	$26,459	$24,178	$22,090

Estimates

Preparing our consolidated financial statements in conformity with generally accepted accounting principles in the United States of America ("GAAP") requires management to make estimates and assumptions that affect reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Our actual results could differ from these estimates. On an ongoing basis, management reviews its estimates based on currently available information. Changes in facts and circumstances may result in revised estimates.

Exchange Contracts

Exchanges are contractual agreements for the movements of natural gas liquids ("NGLs") and certain petrochemical products between parties to satisfy timing and logistical needs of the parties. Net exchange volumes borrowed from us under such agreements are valued and included in accounts receivable, and net exchange volumes loaned to us under such agreements are valued and accrued as a liability in accrued product payables.

Receivables and payables arising from exchange transactions are settled with movements of products rather than with cash. When payment or receipt of monetary consideration is required for product differentials and service costs, such items are recognized in our consolidated financial statements on a net basis.

Exit and Disposal Costs

Exit and disposal costs are charges associated with an exit activity not associated with a business combination or with a disposal activity covered by SFAS 144, "Accounting for the Impairment or Disposal of Long-Lived Assets." Examples of these costs include (i) termination benefits provided to current employees that are involuntarily terminated under the terms of a benefit arrangement that, in substance, is not an ongoing benefit arrangement or an individual deferred compensation contract, (ii) costs to terminate a contract that is not a capital lease, and (iii) costs to consolidate facilities or relocate employees. In accordance with SFAS 146, "Accounting for Costs Associated with Exit and Disposal Activities," we recognize such costs when they are incurred rather than at the date of our commitment to an exit or disposal plan.

Financial Instruments

We use financial instruments such as swaps, forward and other contracts to manage price risks associated with inventories, firm commitments, interest rates, foreign currency and certain anticipated transactions. We recognize these transactions on our balance sheet as assets and liabilities based on the instrument's fair value. Fair value is generally defined as the amount at which the financial instrument could be exchanged in a current transaction between willing parties, not in a forced or liquidation sale.

Changes in fair value of financial instrument contracts are recognized currently in earnings unless specific hedge accounting criteria are met. If the financial instrument meets the criteria of a fair value hedge, gains and losses incurred on the instrument will be recorded in earnings to offset corresponding losses and gains on the hedged item. If the financial instrument meets the criteria of a cash flow hedge, gains and losses incurred on the instrument are recorded in accumulated other comprehensive income ("AOCI"). Gains and losses on cash flow hedges are reclassified from accumulated other comprehensive income to earnings when the forecasted transaction occurs or, as appropriate, over the economic life of the underlying asset. A contract designated as a hedge of an anticipated transaction that is no longer likely to occur is immediately recognized in earnings.

To qualify as a hedge, the item to be hedged must expose us to risk and the related hedging instrument must reduce the exposure and meet the hedging requirements of SFAS 133, "Accounting for Derivative Instruments and Hedging Activities" (as amended and interpreted). We formally designate the financial instrument as a hedge and document and assess the effectiveness of the hedge at its inception and thereafter on a quarterly basis. Any hedge ineffectiveness is immediately recognized in earnings. See Note 7 for additional information regarding our financial instruments.

Foreign Currency Translation

We own a NGL marketing business located in Canada. The financial statements of this foreign subsidiary are translated into U.S. dollars from the Canadian dollar, which is the subsidiary's functional currency, using the current rate method. Its assets and liabilities are translated at the rate of exchange in effect at the balance sheet date, while revenue and expense items are translated at average rates of exchange during the reporting period. Exchange gains and losses arising from foreign currency translation adjustments are reflected as separate components of accumulated other comprehensive income in the accompanying Consolidated Balance Sheets. Our net cash flows from this Canadian subsidiary may be adversely affected by changes in foreign currency exchange rates. We attempt to hedge this currency risk (see Note 7).

Table of Contents

Impairment Testing for Goodwill

Our goodwill amounts are assessed for impairment (i) on a routine annual basis or (ii) when impairment indicators are present. If such indicators occur (e.g., the loss of a significant customer, economic obsolescence of plant assets, etc.), the estimated fair value of the reporting unit to which the goodwill is assigned is determined and compared to its book value. If the fair value of the reporting unit exceeds its book value including associated goodwill amounts, the goodwill is considered to be unimpaired and no impairment charge is required. If the fair value of the reporting unit is less than its book value including associated goodwill amounts, a charge to earnings is recorded to reduce the carrying value of the goodwill to its implied fair value. We have not recognized any impairment losses related to goodwill for any of the periods presented. See Note 13 for additional information regarding our goodwill.

Impairment Testing for Long-Lived Assets

Long-lived assets (including intangible assets with finite useful lives and property, plant and equipment) are reviewed for impairment when events or changes in circumstances indicate that the carrying amount of such assets may not be recoverable.

Long-lived assets with carrying values that are not expected to be recovered through future cash flows are written-down to their estimated fair values in accordance with SFAS 144. The carrying value of a long-lived asset is deemed not recoverable if it exceeds the sum of undiscounted cash flows expected to result from the use and eventual disposition of the asset. If the asset carrying value exceeds the sum of its undiscounted cash flows, a non-cash asset impairment charge equal to the excess of the asset's carrying value over its estimated fair value is recorded. Fair value is defined as the amount at which an asset or liability could be bought or settled in an arm's-length transaction. We measure fair value using market price indicators or, in the absence of such data, appropriate valuation techniques.

We recorded a non-cash asset impairment charge of $0.1 million in 2006, which is reflected as a component of operating costs and expenses in our 2006 Statement of Consolidated Operations. No asset impairment charges were recorded in 2007 and 2005.

Impairment Testing for Unconsolidated Affiliates

We evaluate our equity method investments for impairment when events or changes in circumstances indicate that there is a loss in value of the investment attributable to an other than temporary decline. Examples of such events or changes in circumstances include continuing operating losses of the entity and/or long-term negative changes in the entity's industry. In the event we determine that the loss in value of an investment is other than a temporary decline, we record a charge to earnings to adjust the carrying value of the investment to its estimated fair value.

During 2007, we evaluated our equity method investment in Nemo Gathering Company, LLC for impairment. As a result of this evaluation, we recorded a $7.0 million non-cash impairment charge that is a component of equity income from unconsolidated affiliates for the year ended December 31, 2007. Similarly, during 2006, we evaluated our investment in Neptune Pipeline Company, L.L.C. ("Neptune") for impairment. As a result of this evaluation, we recorded a $7.4 million non-cash impairment charge that is a component of equity income from unconsolidated affiliates for the year ended December 31, 2006. We had no such impairment charges during the year ended December 31, 2005. See Note 11 for additional information regarding our equity method investments.

Income Taxes

Provision for income taxes is primarily applicable to our state tax obligations under the Revised Texas Franchise Tax ("the Revised Texas Franchise Tax") and certain federal and state tax obligations of Seminole Pipeline Company ("Seminole") and Dixie, both of which are consolidated subsidiaries of ours. Deferred income tax assets and liabilities are recognized for temporary differences between the assets and liabilities of our tax paying entities for financial reporting and tax purposes.

In general, legal entities that conduct business in Texas are subject to the Revised Texas Franchise Tax. In May 2006, the State of Texas expanded its pre-existing franchise tax to include limited partnerships, limited liability companies, corporations and limited liability partnerships. As a result of the change in tax law, our tax status in the State of Texas has changed from non-taxable to taxable.

Since we are structured as a pass-through entity, we are not subject to federal income taxes. As a result, our partners are individually responsible for paying federal income taxes on their share of our taxable income. Since we do not have access to information regarding each partner's tax basis, we cannot readily determine the total difference in the basis of our net assets for financial and tax reporting purposes.

In accordance with Financial Accounting Standards Board Interpretation ("FIN") 48, "Accounting for Uncertainty in Income Taxes," we must recognize the tax effects of any uncertain tax positions we may adopt, if the position taken by us is more likely than not sustainable. If a tax position meets such criteria, the tax effect to be recognized by us would be the largest amount of benefit with more than a 50% chance of being realized upon settlement. This guidance was effective January 1, 2007, and our adoption of this guidance had no material impact on our financial position, results of operations or cash flows. See Note 18 for additional information regarding our income taxes.

Inventories

Inventories primarily consist of NGLs, certain petrochemical products and natural gas volumes that are valued at the lower of average cost or market. We capitalize, as a cost of inventory, shipping and handling charges directly related to volumes we purchase from third parties or take title to in connection with processing or other agreements. As these volumes are sold and delivered out of inventory, the average cost of these products (including freight-in charges that have been capitalized) are charged to operating costs and expenses. Shipping and handling fees associated with products we sell and deliver to customers are charged to operating costs and expenses as incurred. See Note 9 for additional information regarding our inventories.

Minority Interest

As presented in our Consolidated Balance Sheets, minority interest represents third-party ownership interests in the net assets of our consolidated subsidiaries. For financial reporting purposes, the assets and liabilities of our majority owned subsidiaries are consolidated with those of our own, with any third-party ownership in such amounts presented as minority interest. Effective February 1, 2007, the public owners of Duncan Energy Partners' common units are presented as a minority interest in our consolidated financial statements.

Minority interest, as reflected on our December 31, 2007 balance sheet, consists of $288.6 million attributable to third party owners of Duncan Energy Partners and the remainder to our other consolidated affiliates.

Minority interest expense for the year ended December 31, 2007 includes $13.9 million attributable to third party owners of Duncan Energy Partners. The remaining minority interest expense amounts for 2007 and likewise those for 2006 are attributable to our other consolidated affiliates.

Contributions from minority interests for the year ended December 31, 2007 includes $290.5 million received from third parties in connection with the initial public offering of Duncan Energy Partners in February 2007.

Natural Gas Imbalances

In the natural gas pipeline transportation business, imbalances frequently result from differences in natural gas volumes received from and delivered to our customers. Such differences occur when a customer delivers more or less gas into our pipelines than is physically redelivered back to them during a particular time period. We have various fee-based agreements with customers to transport their natural gas through our pipelines. Our customers retain ownership of their natural gas shipped through our pipelines. As such, our pipeline transportation activities are not intended to create physical volume differences that would result in significant accounting or economic events for either our customers or us during the course of the arrangement.

We settle pipeline gas imbalances through either (i) physical delivery of in-kind gas or (ii) in cash. These settlements follow contractual guidelines or common industry practices. As imbalances occur, they may be settled (i) on a monthly basis, (ii) at the end of the agreement or (iii) in accordance with industry practice, including negotiated settlements. Certain of our natural gas pipelines have a regulated tariff rate mechanism requiring customer imbalance settlements each month at current market prices.

However, the vast majority of our settlements are through in-kind arrangements whereby incremental volumes are delivered to a customer (in the case of an imbalance payable) or received from a customer (in the case of an imbalance receivable). Such in-kind deliveries are on-going and take place over several periods. In some cases, settlements of imbalances built up over a period of time are ultimately cashed out and are generally negotiated at values which approximate average market prices over a period of time. For those gas imbalances that are ultimately settled over future periods, we estimate the value of such current assets and liabilities using average market prices, which is representative of the estimated value of the imbalances upon final settlement. Changes in natural gas prices may impact our estimates.

At December 31, 2007 and 2006, our natural gas imbalance receivables, net of allowance for doubtful accounts, were $60.9 million and $97.8 million, respectively, and are reflected as a component of "Accounts and notes receivable — trade" on our Consolidated Balance Sheets. At December 31, 2007 and 2006, our imbalance payables were $38.3 million and $51.2 million, respectively, and are reflected as a component of "Accrued product payables" on our Consolidated Balance Sheets.

Property, Plant and Equipment

Property, plant and equipment is recorded at cost. Expenditures for additions, improvements and other enhancements to property, plant and equipment are capitalized and minor replacements, maintenance, and repairs that do not extend asset life or add value are charged to expense as incurred. When property, plant and equipment assets are retired or otherwise disposed of, the related cost and accumulated depreciation is removed from the accounts and any resulting gain or loss is included in the results of operations for the respective period. For financial statement purposes, depreciation is recorded based on the estimated useful lives of the related assets primarily using the straight-line method. Where appropriate, we use other depreciation methods (generally accelerated) for tax purposes. See Note 10 for additional information regarding our property, plant and equipment.

Certain of our plant operations entail periodic planned outages for major maintenance activities. These planned shutdowns typically result in significant expenditures, which are principally comprised of amounts paid to third parties for materials, contract services and related items. We use the expense-as-incurred method for our planned major maintenance activities that benefit periods in excess of one year or for periods that are not determinable. We use the deferral method for our annual planned major maintenance activities.

Asset retirement obligations ("AROs") are legal obligations associated with the retirement of tangible long-lived assets that result from their acquisition, construction, development and/or normal operation. When an ARO is incurred, we record a liability for the ARO and capitalize an equal amount as an increase in the carrying value of the related long-lived asset. Over time, the liability is accreted to its present value (accretion expense) and the capitalized amount is depreciated over the remaining useful life of the related long-lived asset. To the extent we do not settle an ARO liability at our recorded amounts, we will incur a gain or loss.

Table of Contents

Reclassifications

A reclassification was made to the Statements of Operations for the year ended December 31, 2005 to consistently reflect our 2005 revenues due to a reclassification of $12.7 million from "Third-parties" to "Related-parties" attributable to our Onshore Natural Gas Pipelines & Services business segment. Such reclassification related to the presentation of our 49.5% equity method investment in Evangeline Gas Pipeline Company, L.P. and Evangeline Gas Corp. (collectively "Evangeline") which revised its disclosures. A reclassification was made to the Statements of Consolidated Comprehensive Income for the year ended December 31, 2006 to include $2.2 million in reclassification adjustments for losses included in net income related to financial instruments and $8.7 million in net interest rate financial instrument gains to conform to the current year presentation of such activities.

Restricted Cash

Restricted cash represents amounts held by (i) a brokerage firm in connection with our commodity financial instruments portfolio and physical natural gas purchases made on the New York Mercantile Exchange ("NYMEX") exchange, and (ii) us for the future settlement of current liabilities we assumed in connection with our acquisition of a Canadian affiliate in October 2006.

Revenue Recognition

See Note 4 for information regarding our revenue recognition policies.

Start-Up and Organization Costs

Start-up costs and organization costs are expensed as incurred. Start-up costs are defined as one-time activities related to opening a new facility, introducing a new product or service, conducting activities in a new territory, pursuing a new class of customer, initiating a new process in an existing facility, or some new operation. Routine ongoing efforts to improve existing facilities, products or services are not considered start-up costs. Organization costs include legal fees, promotional costs and similar charges incurred in connection with the formation of a business.

Unit-Based Awards

We account for unit-based awards in accordance with SFAS 123(R), "Share-Based Payment." Prior to January 1, 2006, our unit-based awards were accounted for using the intrinsic value method described in Accounting Principles Board Opinion ("APB") 25, "Accounting for Stock Issued to Employees." The following table discloses the pro forma effect of unit-based compensation amounts on our net income and earnings per unit for the year ended December 31, 2005 as if we had applied the provisions of SFAS 123(R) instead of APB 25. The effects of applying SFAS 123(R) in the following pro forma disclosures may not be indicative of future amounts as additional awards in future years are anticipated. No pro forma adjustments are required for restricted unit awards in 2005 since compensation expense related to these awards was based on their estimated fair values. See Note 5 for additional information regarding our unit-based awards.

Reported net income	$ 419,508
Additional unit option-based compensation expense estimated using fair value-based method	(708)
Reduction in compensation expense related to Employee Partnership equity awards	1,271
Pro forma net income	$ 420,071
Basic and diluted earnings per unit:	
As reported	$ 0.91
Pro forma	$ 0.91

Note 3. Recent Accounting Developments

The following information summarizes recently issued accounting guidance that will or may affect our future financial statements:

SFAS 157

SFAS 157, "Fair Value Measurements," defines fair value, establishes a framework for measuring fair value in GAAP and expands disclosures about fair value measurements. SFAS 157 applies only to fair-value measurements that are already required (or permitted) by other accounting standards and is expected to increase the consistency of those measurements. SFAS 157 emphasizes that fair value is a market-based measurement that should be determined based on the assumptions that market participants would use in pricing an asset or liability. Companies will be required to disclose the extent to which fair value is used to measure assets and liabilities, the inputs used to develop such measurements, and the effect of certain of the measurements on earnings (or changes in net assets) during a period.

Certain requirements of SFAS 157 are effective for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. The effective date for other requirements of SFAS 157 has been deferred for one year. We adopted the provisions of SFAS 157 which are effective for fiscal years beginning after November 15, 2007 and there was no impact on our financial statements. Management is currently evaluating the impact that the deferred provisions of SFAS 157 will have on the disclosures in our financial statements in 2009.

SFAS 141(R)

SFAS 141(R), "Business Combinations," replaces SFAS 141, "Business Combinations." SFAS 141(R) retains the fundamental requirements of SFAS 141 that the acquisition method of accounting (previously termed the "purchase method") be used for all business combinations and for an acquirer to be identified for each business combination. SFAS 141(R) defines the acquirer as the entity that obtains control of one or more businesses in a business combination and establishes the acquisition date as the date that the acquirer achieves control. This new guidance also retains guidance in SFAS 141 for identifying and recognizing intangible assets separately from goodwill.

The objective of SFAS 141(R) is to improve the relevance, representational faithfulness, and comparability of the information a reporting entity provides in its financial reports about business combinations and their effects. To accomplish this, SFAS 141(R) establishes principles and requirements for how the acquirer:

- Recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, and any noncontrolling interests in the acquiree.
- Recognizes and measures the goodwill acquired in the business combination or a gain from a bargain purchase. SFAS 141(R) defines a bargain purchase as a business combination in which the total acquisition-date fair value of the identifiable net assets acquired exceeds the fair value of the consideration transferred plus any noncontrolling interest in the acquiree, and requires the acquirer to recognize that excess in earnings as a gain attributable to the acquirer.
- Determines what information to disclose to enable users of the financial statements to evaluate the nature and financial effects of the business combination.

SFAS 141(R) also requires that direct costs of an acquisition (e.g. finder’s fees, outside consultants, etc.) be expensed as incurred and not capitalized as part of the purchase price.

As a calendar year-end entity, we will adopt SFAS 141(R) on January 1, 2009. Although we are still evaluating this new guidance, we expect that it will have an impact on the way in which we evaluate acquisitions. For example, we have made several acquisitions in the past where the fair value of assets acquired and liabilities assumed was in excess of the purchase price. In those cases, a bargain purchase would have been recognized under SFAS 141(R). Conversely, we will no longer capitalize transaction fees and other direct costs.

SFAS 160

SFAS 160, "Noncontrolling Interests in Consolidated Financial Statements — an amendment of ARB No. 51," establishes accounting and reporting standards for non-controlling interests, which have been referred to as minority interests in prior accounting literature. A noncontrolling interest is the portion of equity in a subsidiary not attributable, directly or indirectly, to a parent company. This new standard requires, among other things, that (i) ownership interests of noncontrolling interests be presented as a component of equity on the balance sheet (i.e. elimination of the mezzanine "minority interest" category); (ii) elimination of minority interest expense as a line item on the statement of income and, as a result, that net income be allocated between the parent and noncontrolling interests on the face of the statement of income; and (iii) enhanced disclosures regarding noncontrolling interests. As a calendar year-end entity, we will adopt SFAS 160 on January 1, 2009 and apply its presentation and disclosure requirements retrospectively.

Note 4. Revenue Recognition

In general, we recognize revenue from our customers when all of the following criteria are met: (i) persuasive evidence of an exchange arrangement exists, (ii) delivery has occurred or services have been rendered, (iii) the buyer’s price is fixed or determinable and (iv) collectability is reasonably assured. The following information provides a general description our underlying revenue recognition policies by business segment:

NGL Pipelines & Services

This aspect of our business generates revenues primarily from the provision of natural gas processing, NGL pipeline transportation, product storage and NGL fractionation services and the sale of NGLs. In our natural gas processing activities, we enter into margin-band contracts, percent-of-liquids contracts, percent-of-proceeds contracts, fee-based contracts, hybrid-contracts (i.e. mixed percent-of-liquids and fee-based) and keepwhole contracts. Under margin-band and keepwhole contracts, we take ownership of mixed NGLs extracted from the producer’s natural gas stream and recognize revenue when the extracted NGLs are delivered and sold to customers under NGL marketing sales contracts. In the same way, revenue is recognized under our percent-of-liquids contracts except that the volume of NGLs we extract and sell is less than the total amount of NGLs extracted from the producers’ natural gas. Under a percent-of-liquids contract, the producer retains title to the remaining percentage of mixed NGLs we extract. Under a percent-of-proceeds contract, we share in the proceeds generated from the sale of the mixed NGLs we extract on the producer’s behalf. If a cash fee for natural gas processing services is stipulated by the contract, we record revenue when the natural gas has been processed and delivered to the producer.

Our NGL marketing activities generate revenues from the sale of NGLs obtained from either our natural gas processing activities or purchased from third parties on the open market. Revenues from these sales contracts are recognized when the NGLs are delivered to customers. In general, the sales prices referenced in these contracts are market-related and can include pricing differentials for such factors as delivery location.

Under our NGL pipeline transportation contracts and tariffs, revenue is recognized when volumes have been delivered to customers. Revenue from these contracts and tariffs is generally based upon a fixed fee per gallon of liquids transported multiplied by the volume delivered. Transportation fees charged under these arrangements are either contractual or regulated by governmental agencies such as the Federal Energy Regulatory Commission ("FERC").

We collect storage revenues under our NGL and related product storage contracts based on the number of days a customer has volumes in storage multiplied by a storage rate (as defined in each contract). Under these contracts, revenue is recognized ratably over the length of the storage period. With respect to capacity reservation agreements, we collect a fee for reserving storage capacity for customers in our underground storage wells. Under these agreements, revenue is recognized ratably over the specified reservation period. Excess storage fees are collected when customers exceed their reservation amounts and are recognized in the period of occurrence.

Revenues from product terminalling activities (applicable to our import and export operations) are recorded in the period such services are provided. Customers are typically billed a fee per unit of volume loaded or unloaded. With respect to export operations, revenues may also include demand payments charged to customers who reserve the use of our export facilities and later fail to use them. Demand fee revenues are recognized when the customer fails to utilize the specified export facility as required by contract.

We enter into fee-based arrangements and percent-of-liquids contracts for the NGL fractionation services we provide to customers. Under such fee-based arrangements, revenue is recognized in the period services are provided. Such fee-based arrangements typically include a base-processing fee (typically in cents per gallon) that is subject to adjustment for changes in certain fractionation expenses (e.g. natural gas fuel costs). Certain of our NGL fractionation facilities generate revenues using percent-of-liquids contracts. Such contracts allow us to retain a contractually determined percentage of the customer's fractionated NGL products as payment for services rendered. Revenue is recognized from such arrangements when we sell and deliver the retained NGLs to customers.

Onshore Natural Gas Pipelines & Services

This aspect of our business generates revenues primarily from the provision of natural gas pipeline transportation and gathering services; natural gas storage services; and from the sale of natural gas. Certain of our onshore natural gas pipelines generate revenues from transportation and gathering agreements as customers are billed a fee per unit of volume multiplied by the volume delivered or gathered. Fees charged under these arrangements are either contractual or regulated by governmental agencies such as the FERC. Revenues associated with these fee-based contracts are recognized when volumes have been delivered.

Revenues from natural gas storage contracts typically have two components: (i) a monthly demand payment, which is associated with storage capacity reservations, and (ii) a storage fee per unit of volume held at each location. Revenues from demand payments are recognized during the period the customer reserves capacity. Revenues from storage fees are recognized in the period the services are provided.

Our natural gas marketing activities generate revenues from the sale of natural gas purchased from third parties on the open market. Revenues from these sales contracts are recognized when the natural gas is delivered to customers. In general, the sales prices referenced in these contracts are market-related and can include pricing differentials for such factors as delivery location.

Offshore Pipelines & Services

This aspect of our business generates revenues from the provision of offshore natural gas and crude oil pipeline transportation services and related offshore platform operations. Our offshore natural gas pipelines generate revenues through fee-based contracts or tariffs where revenues are equal to the product of a fee per unit of volume (typically in MMBtus) multiplied by the volume of natural gas transported. Revenues associated with these fee-based contracts and tariffs are recognized when natural gas volumes have been delivered.

The majority of our revenues from offshore crude oil pipelines are derived from purchase and sale arrangements whereby crude oil is purchased from shippers at various receipt points along the pipeline for an index-based price (less a price differential) and sold back to the shippers at various redelivery points at the same index-based price. Net revenue recognized from such arrangements is based on the price differential per unit of volume (typically in barrels) multiplied by the volume delivered. In addition, certain offshore crude oil pipelines generate revenues based upon a gathering fee per unit of volume (typically in barrels) multiplied by the volume delivered to the customer. Revenues from both arrangements are recognized when the crude oil is delivered.

Revenues from offshore platform services generally consist of demand payments and commodity charges. Revenues from platform services are recognized in the period the services are provided. Demand fees represent charges to customers served by our offshore platforms regardless of the volume the customer delivers to the platform. Revenues from commodity charges are based on a fixed-fee per unit of volume delivered to the platform (typically per MMcf of natural gas or per barrel of crude oil) multiplied by the total volume of each product delivered. Contracts for platform services often include both demand payments and commodity charges, but demand payments generally expire after a contractually fixed period of time and in some instances may be subject to cancellation by customers. Our Independence Hub and Marco Polo offshore platforms earn a significant amount of demand revenues. The Independence Hub platform will earn $55.2 million of demand revenues annually through March 2012. The Marco Polo platform will earn $25.2 million of demand revenues annually through April 2009.

Petrochemical Services

This aspect of our business generates revenues from the provision of isomerization and propylene fractionation services and the sale of certain petrochemical products. Our isomerization and propylene fractionation operations generate revenues through fee-based arrangements, which typically include a base-processing fee per gallon (or other unit of measurement) subject to adjustment for changes in natural gas, electricity and labor costs, which are the primary costs of propylene fractionation and isomerization operations. Revenues resulting from such agreements are recognized in the period the services are provided.

Our petrochemical marketing activities generate revenues from the sale of propylene and other petrochemicals obtained from either its processing activities or purchased from third parties on the open market. Revenues from these sales contracts are recognized when the petrochemicals are delivered to customers. In general, the sales prices referenced in these contracts are market-related and can include pricing differentials for such factors as delivery location.

Note 5. Accounting for Unit-Based Awards

Since January 1, 2006, we account for unit-based awards in accordance with SFAS 123(R) (see Note 2). The following table summarizes our unit-based compensation amounts by plan during each of the periods indicated:

	For the Years Ended December 31,		
	2007	2006	2005
EPCO 1998 Long-Term Incentive Plan ("1998 Plan")			
Unit options	$ 4,447	$ 701	$ —
Restricted units	7,721	5,019	3,776
Total 1998 Plan (1)	12,168	5,720	3,776
Employee Partnerships	3,911	2,146	2,043
DEP Holdings, LLC Unit Appreciation Rights	69	—	—
Total consolidated expense	$ 16,148	$ 7,866	$ 5,819

(1) Amounts for the year ended December 31, 2007 include $4.6 million associated with the resignation of our former chief executive officer.

See Note 25 for information regarding the formation of the Enterprise Products 2008 Long-Term Incentive Plan in January 2008 and Enterprise Unit L.P. in February 2008.

SFAS 123(R) requires us to recognize compensation expense related to unit-based awards based on the fair value of the award at grant date. The fair value of restricted unit awards (i.e. time-vested units under SFAS 123(R)) is based on the market price of the underlying common units on the date of grant. The fair value of other unit-based awards is estimated using the Black-Scholes option pricing model. Under

SFAS 123(R), the fair value of an equity-classified award (such as a restricted unit award) is amortized to earnings on a straight-line basis over the requisite service or vesting period. Compensation expense for liability-classified awards (such as unit appreciation rights ("UARs")) is recognized over the requisite service or vesting period of an award based on the fair value of the award remeasured at each reporting period. Liability-type awards are cash settled upon vesting.

As used in the context of the EPCO plans, the term "restricted unit" represents a time-vested unit under SFAS 123(R). Such awards are non-vested until the required service period expires.

Upon our adoption of SFAS 123(R), we recognized, as a benefit, a cumulative effect of a change in accounting principle of $1.5 million based on the SFAS 123(R) requirement to recognize compensation expense based upon the grant date fair value of an equity award and the application of an estimated forfeiture rate to unvested awards. In addition, previously recognized deferred compensation expense of $14.6 million related to our restricted common units was reversed on January 1, 2006.

Prior to our adoption of SFAS 123(R), we did not recognize any compensation expense related to unit options; however, compensation expense was recognized in connection with awards granted by EPE Unit L.P. ("EPE Unit I") and the issuance of restricted units. The effects of applying SFAS 123(R) during the year ended December 31, 2006 did not have a material effect on our net income or basic and diluted earnings per unit. Since we adopted SFAS 123(R) using the modified prospective method, we have not restated the financial statements of prior periods to reflect this new standard.

1998 Plan

Unit option awards. Under the 1998 Plan, non-qualified incentive options to purchase a fixed number of our common units may be granted to EPCO’s key employees who perform management, administrative or operational functions for us. When issued, the exercise price of each option grant is equivalent to the market price of the underlying equity on the date of grant. In general, options granted under the 1998 Plan have a cliff vesting period of four years and remain exercisable for ten years from the date of grant.

In order to fund its obligations under the 1998 Plan, EPCO may purchase common units at fair value either in the open market or directly from us. When employees exercise unit options, we reimburse EPCO for the cash difference between the strike price paid by the employee and the actual purchase price paid by EPCO for the units issued to the employee.

The fair value of each unit option is estimated on the date of grant using the Black-Scholes option pricing model, which incorporates various assumptions including expected life of the options, risk-free interest rates, expected distribution yield on our common units, and expected unit price volatility of our common units. In general, our assumption of expected life of the options represents the period of time that the options are expected to be outstanding based on an analysis of historical option activity. Our selection of the risk-free interest rate is based on published yields for U.S. government securities with comparable terms. The expected distribution yield and unit price volatility is estimated based on several factors, which include an analysis of our historical unit price volatility and distribution yield over a period equal to the expected life of the option.

The 1998 Plan provides for the issuance of up to 7,000,000 of our common units. After giving effect to outstanding option awards at December 31, 2007 and the issuance and forfeiture of restricted unit awards through December 31, 2007, a total of 1,282,256 additional common units could be issued under the 1998 Plan.

The following table presents option activity under the 1998 Plan for the periods indicated:

	Number of Units	Weighted-average strike price (dollars/unit)	Weighted-average remaining contractual term (in years)	Aggregate Intrinsic Value (1)
Outstanding at December 31, 2004	2,463,000	$18.84		
Granted (2)	530,000	26.49		
Exercised	(826,000)	14.77		
Forfeited	(85,000)	24.73		
Outstanding at December 31, 2005	2,082,000	22.16		
Granted (3)	590,000	24.85		
Exercised	(211,000)	15.95		
Forfeited	(45,000)	24.28		
Outstanding at December 31, 2006	2,416,000	23.32		
Granted (4)	895,000	30.63		
Exercised	(256,000)	19.26		
Settled or forfeited (5)	(740,000)	24.62		
Outstanding at December 31, 2007 (6)	2,315,000	26.18	7.73	$3,291
Options exercisable at:				
December 31, 2005	727,000	$19.19	5.54	$3,503
December 31, 2006	591,000	$20.85	5.11	$4,808
December 31, 2007 (6)	335,000	$22.06	3.96	$3,291

(1) Aggregate intrinsic value reflects fully vested unit options at the date indicated.

(2) The total grant date fair value of these awards was $0.7 million based on the following assumptions: (i) weighted-average expected life of options of seven years; (ii) weighted-average risk-free interest rate of 4.2%; (iii) weighted-average expected distribution yield on our common units of 9.2%; and (iv) weighted-average expected unit price volatility on our common units of 20.0%.

(3) The total grant date fair value of these awards was $1.2 million based on the following assumptions: (i) weighted-average expected life of options of seven years; (ii) weighted-average risk-free interest rate of 5.0%; (iii) weighted-average expected distribution yield on our common units of 8.9%; and (iv) weighted-average expected unit price volatility on our common units of 23.5%.

(4) The total grant date fair value of these awards was $2.4 million based on the following assumptions: (i) expected life of options of seven years; (ii) weighted-average risk-free interest rate of 4.8%; (iii) weighted-average expected distribution yield on our common units of 8.4%; and (iv) weighted-average expected unit price volatility on our common units of 23.2%.

(5) Includes the settlement of 710,000 options in connection with the resignation of our former chief executive officer.

(6) We were committed to issue 2,315,000 and 2,416,000 of our common units at December 31, 2007 and 2006, respectively, if all outstanding options awarded under the 1998 Plan (as of these dates) were exercised. An additional 285,000, 380,000, 510,000 and 805,000 of these options are exercisable in 2008, 2009, 2010 and 2011, respectively.

The total intrinsic value of option awards exercised during the years ended December 31, 2007, 2006 and 2005 were $3.0 million, $2.2 million and $9.2 million, respectively. At December 31, 2007, there was an estimated $2.8 million of total unrecognized compensation cost related to nonvested option awards granted under the 1998 Plan. We expect to recognize this amount over a weighted-average period of 3.0 years. We will recognize our share of these costs in accordance with the EPCO administrative services agreement (see Note 17).

During the years ended December 31, 2007 and 2006, we received cash of $7.5 million and $5.6 million, respectively from the exercise of option awards granted under the 1998 Plan. Conversely, our option-related reimbursements to EPCO were $3.0 million and $1.8 million, respectively.

Restricted unit awards. Under the 1998 Plan, we may also issue restricted common units to key employees of EPCO and directors of our general partner. In general, the restricted unit awards allow recipients to acquire the underlying common units at no cost to the recipient once a defined cliff vesting period expires, subject to certain forfeiture provisions. The restrictions on such units generally lapse four years from the date of grant. Compensation expense is recognized on a straight-line basis over the vesting period. Fair value of such restricted units is based on the market price of the underlying common units on the date of grant and an allowance for estimated forfeitures.

Each recipient is also entitled to cash distributions equal to the product of the number of restricted units outstanding for the participant and the cash distribution per unit paid by us to our unitholders. Since restricted units are issued securities, such distributions are reflected as a component of cash distributions to partners as shown on our statements of consolidated cash flows. We paid $2.6 million, $1.6 million and $0.9 million in cash distributions with respect to restricted units during the years ended December 31, 2007, 2006 and 2005, respectively.

The following table summarizes information regarding our restricted unit awards for the periods indicated:

	Number of Units	Weighted-Average Grant Date Fair Value per Unit(1)
Restricted units at December 31, 2004	488,525	
Granted (2)	362,011	$26.43
Vested	(6,484)	$22.00
Forfeited	(92,448)	$24.03
Restricted units at December 31, 2005	751,604	
Granted (3)	466,400	$25.21
Vested	(42,136)	$24.02
Forfeited	(70,631)	$22.86
Restricted units at December 31, 2006	1,105,237	
Granted (4)	738,040	$25.61
Vested	(4,884)	$25.28
Forfeited	(36,800)	$23.51
Settled (5)	(113,053)	$23.24
Restricted units at December 31, 2007	1,688,540	

(1) Determined by dividing the aggregate grant date fair value of awards (including an allowance for forfeitures) by the number of awards issued.

(2) Aggregate grant date fair value of restricted unit awards issued during 2005 was $8.8 million based on grant date market prices of our common units ranging from $25.83 to $26.95 per unit and an estimated forfeiture rate of 8.2%.

(3) Aggregate grant date fair value of restricted unit awards issued during 2006 was $10.8 million based on grant date market prices of our common units ranging from $24.85 to $27.45 per unit and estimated forfeiture rates ranging from 7.8% to 9.8%.

(4) Aggregate grant date fair value of restricted unit awards issued during 2007 was $18.9 million based on grant date market prices of our common units ranging from $28.00 to $31.83 per unit and estimated forfeiture rates ranging from 4.6% to 17.0%.

(5) Reflects the settlement of restricted units in connection with the resignation of our former chief executive officer.

The total fair value of restricted units that vested during the year ended December 31, 2007 was $0.1 million. At December 31, 2007, there was an estimated $25.5 million of total unrecognized compensation cost related to restricted unit awards granted under the 1998 Plan, which we expect to recognize over a weighted-average period of 2.4 years. We will recognize our share of such costs in accordance with the EPCO administrative services agreement.

Phantom unit awards. The 1998 Plan also provides for the issuance of phantom unit awards. These liability awards are automatically redeemed for cash based on the vested portion of the fair market value of the phantom units at redemption dates in each award. The fair market value of each phantom unit award is equal to the market closing price of our common units on the redemption date. Each participant is required to redeem their phantom units as they vest, which typically is four years from the date the award is granted. No phantom unit awards have been issued to date under the 1998 Plan.

The 1998 Plan also provides for the award of distribution equivalent rights ("DERs") in tandem with its phantom unit awards. A DER entitles the participant to cash distributions equal to the product of the number of phantom units outstanding for the participant and the cash distribution rate paid by us to our unitholders.

Employee Partnerships

EPCO formed the Employee Partnerships to serve as an incentive arrangement for key employees of EPCO by providing them a "profits interest" in the Employee Partnerships. Certain EPCO employees who work on behalf of us and EPCO were issued Class B limited partner interests and admitted as Class B limited partners without any capital contribution. The profits interest awards (i.e., the Class B limited partner interests) in the Employee Partnerships entitles each holder to participate in the appreciation in value of Enterprise GP Holdings' Units. The Class B limited partner interests are subject to forfeiture if the participating employee's employment with EPCO is terminated prior to vesting, with customary exceptions for death, disability and certain retirements. The risk of forfeiture will also lapse upon certain change in control events.

Prior to our adoption of SFAS 123(R), the estimated value of these awards was accounted for in a manner similar to a stock appreciation right. Starting January 1, 2006, compensation expense attributable to these awards was based on the estimated grant date fair value of each award. A portion of the fair value of these equity-based awards is allocated to us under the EPCO administrative services agreement as a non-cash expense. We are not responsible for reimbursing EPCO for any expenses of the Employee

Partnerships, including the value of any contributions of cash or units of Enterprise GP Holdings made by private company affiliates of EPCO at the formation of each Employee Partnership.

Currently, there are four Employee Partnerships. EPE Unit I was formed in August 2005 in connection with Enterprise GP Holdings' initial public offering. EPE Unit II was formed in December 2006. EPE Unit III was formed in May 2007.

At December 31, 2007, there was an estimated $26.9 million of combined unrecognized compensation cost related to the Employee Partnerships. We will recognize our share of these costs in accordance with the EPCO administrative services agreement over a weighted-average period of 3.9 years.

The following is a discussion of significant terms of EPE Unit I, EPE Unit II, and EPE Unit III.

EPE Unit I. In connection with the initial public offering of Enterprise GP Holdings in August 2005, EPE Unit I was formed to serve as an incentive arrangement for certain employees of EPCO through a "profits interest" in EPE Unit I. In August 2005, EPE Unit I used $51.0 million in contributions it received from its Class A limited partner (an affiliate of EPCO) to purchase 1,821,428 units of Enterprise GP Holdings. Certain EPCO employees, including all of EPGP's executive officers other than Dan L. Duncan and Dr. Ralph S. Cunningham, were admitted as Class B limited partners of EPE Unit I without any capital contributions.

Unless otherwise agreed to by EPCO, the Class A limited partner and a majority of the Class B limited partners, EPE Unit I will be liquidated upon the earlier of (i) August 2010 or (ii) a change in control of Enterprise GP Holdings or its general partner, EPE Holdings. Upon liquidation of EPE Unit I, units having a fair market value equal to the Class A limited partner's capital base, plus any Class A preferred return for the quarter in which liquidation occurs, will be distributed to the Class A limited partner. Any remaining units will be distributed to the Class B limited partners as a residual profits interest award in EPE Unit I.

As adjusted for forfeitures and regrants, the grant date fair value of the Class B limited partnership interests in EPE Unit I was $12.2 million at December 31, 2007. This fair value was estimated using the Black-Scholes option pricing model, which incorporates various assumptions including (i) an expected life of the awards ranging from three to five years, (ii) risk-free interest rates ranging from 4.1% to 5.0%, (iii) an expected distribution yield on units of Enterprise GP Holdings ranging from 3.0% to 4.2%, and (iv) an expected unit price volatility for Enterprise GP Holdings' units ranging from 17.4% to 30.0%.

EPE Unit II. In December 2006, EPE Unit II, L.P. was formed to serve as an incentive arrangement for Dr. Ralph S. Cunningham, an executive officer of our general partner. The officer, who is not a participant in EPE Unit I, was granted a "profits interest" award in EPE Unit II. EPCO serves as the general partner of EPE Unit II.

At inception, EPE Unit II used $1.5 million in contributions it received from an affiliate of EPCO (which was admitted as the Class A limited partner of EPE Unit II as a result of such contribution) to purchase 40,725 units of Enterprise GP Holdings at an average price of $36.91 per unit in December 2006. The officer was issued a Class B limited partner interest in EPE Unit II without any capital contribution.

Unless otherwise agreed upon by EPCO, the Class A limited partner and the Class B limited partner, EPE Unit II will be liquidated upon the earlier of (i) December 2011 or (ii) a change in control of Enterprise GP Holdings or its general partner, EPE Holdings. Upon liquidation of the EPE Unit II, units having a fair market value equal to the Class A limited partner's capital base will be distributed to the Class A limited partner, plus any Class A preferred return for the quarter in which liquidation occurs. Any remaining units will be distributed to the Class B limited partner as a residual profits interest award in EPE Unit II.

The grant date fair value of the Class B limited partnership interests in EPE Unit II was $0.2 million at December 31, 2007. This fair value was estimated on the date of grant using the Black-Scholes option pricing model, which incorporated various assumptions including (i) an expected life of the award of five years, (ii) risk-free interest rate of 4.4%, (iii) an expected distribution yield on units of Enterprise GP Holdings of 3.8%, and (iv) an expected Enterprise GP Holdings unit price volatility of 18.7%.

EPE Unit III. EPE Unit III owns 4,421,326 units of Enterprise GP Holdings contributed to it by a private company affiliate of EPCO, which, in turn, was made the Class A limited partner of EPE Unit III. The units of Enterprise GP Holdings contributed by the Class A limited partner had a fair value of $170.0 million on the date of contribution (the "Class A limited partner capital base"). Certain EPCO employees were issued Class B limited partner interests and admitted as Class B limited partners of EPE Unit III without any capital contribution. The profits interest awards (i.e., Class B limited partner interests) in EPE Unit III entitle the holder to participate in the appreciation in value of Enterprise GP Holdings' units owned by EPE Unit III.

Unless otherwise agreed to by EPCO, the Class A limited partner and a majority in interest of the Class B limited partners of EPE Unit III, EPE Unit III will be liquidated upon the earlier of: (i) May 7, 2012 or (ii) a change in control of Enterprise GP Holdings or its general partner. EPE Unit III has the following material terms regarding its quarterly cash distribution to partners:

- Distributions of Cash flow - Each quarter, 100% of the cash distributions received by EPE Unit III from Enterprise GP Holdings will be distributed to the Class A limited partner until it has received an amount equal to the pro rata Class A preferred return (as defined below), and any remaining distributions received by EPE Unit III will be distributed to the Class B limited partners. The Class A preferred return equals 3.797% per annum, of the Class A limited partner's capital base. The Class A limited partner's capital base equals approximately $170.0 million plus any unpaid Class A preferred return from prior periods, less any distributions made by EPE Unit III of proceeds from the sale of Enterprise GP Holdings' units owned by EPE Unit III (as described below).

- Liquidating Distributions - Upon liquidation of EPE Unit III, Enterprise GP Holdings' units having a fair market value equal to the Class A limited partner capital base will be distributed to a private company affiliate of EPCO, plus any accrued Class A preferred return for the quarter in which liquidation occurs. Any remaining units of Enterprise GP Holdings will be distributed to the Class B limited partners.

- Sale Proceeds - If EPE Unit III sells any of the 4,421,326 units of Enterprise GP Holdings that it owns, the sale proceeds will be distributed to the Class A limited partner and the Class B limited partners in the same manner as liquidating distributions described above.

The Class B limited partner interests in EPE Unit III that are owned by EPCO employees are subject to forfeiture if the participating employee's employment with EPCO and its affiliates is terminated prior to May 7, 2012, with customary exceptions for death, disability and certain retirements. The risk of forfeiture associated with the Class B limited partner interests in EPE Unit III will also lapse upon certain change of control events.

As adjusted for forfeitures and regrants, the grant date fair value of the Class B limited partnership interests in EPE Unit III was $23.0 million at December 31, 2007. This fair value was estimated using the Black-Scholes option pricing model, which incorporates various assumptions including (i) an expected life of the awards ranging from four to five years, (ii) risk-free interest rates ranging from 3.5% to 4.9%, (iii) an expected distribution yield on units of Enterprise GP Holdings ranging from 4.0% to 4.3%, and (iv) an expected unit price volatility for Enterprise GP Holdings' units ranging from 16.9% to 17.6%.

DEP Holdings, LLC Unit Appreciation Rights

The non-employee directors of DEP Holdings, LLC, the general partner of Duncan Energy Partners ("DEP GP"), have been granted UARs in the form of letter agreements. These liability awards are not part of any established long-term incentive plan of EPCO, Enterprise GP Holdings or us. The compensation expense associated with these awards is recognized by DEP GP, which is our consolidated subsidiary. The UARs entitle each non-employee director to receive a cash payment on the vesting date equal to the excess, if any, of the fair market value of Enterprise GP Holdings' units (determined as of a future vesting date) over the grant date fair value. If a director resigns prior to vesting, his UAR awards are forfeited. These UARs are accounted for similar to liability awards under SFAS 123(R) since they will be settled with cash.

As of December 31, 2007, a total of 90,000 UARs had been granted to non-employee directors of DEP GP that cliff vest in 2012. If a director resigns prior to vesting, his UAR awards are forfeited. The grant date fair value with respect to these UARs is based on an Enterprise GP Holdings' unit price of $36.68.

Note 6. Employee Benefit Plans

Dixie employs the personnel that operate its pipeline system and certain of these employees are eligible to participate in a defined contribution plan and pension and postretirement benefit plans. Due to the immaterial nature of Dixie's employee benefit plans to our consolidated financial position, results of operations and cash flows, our discussion is limited to the following:

Defined Contribution Plan

Dixie contributed $0.3 million to its company-sponsored defined contribution plan for each of the years ended December 31, 2007 and 2006.

Pension and Postretirement Benefit Plans

Dixie's pension plan is a noncontributory defined benefit plan that provides for the payment of benefits to retirees based on their age at retirement, years of service and average compensation. Dixie's postretirement benefit plan also provides medical and life insurance to retired employees. The medical plan is contributory and the life insurance plan is noncontributory. Dixie employees hired after July 1, 2004 are not eligible for pension and other benefit plans after retirement.

The following table presents Dixie's benefit obligations, fair value of plan assets and funded status at December 31, 2007.

	Pension Plan	Postretirement Plan
Projected benefit obligation	$7,250	$5,882
Accumulated benefit obligation	4,971	—
Fair value of plan assets	5,572	—
Unfunded liability	1,678	5,882
Funded status (liability)	1,678	5,882

Projected benefit obligations and net periodic benefit costs are based on actuarial estimates and assumptions. The weighted-average actuarial assumptions used in determining the projected benefit obligation at December 31, 2007 were as follows: discount rate of 5.75%; rate of compensation increase of 4.00% and 5.00% for the pension and postretirement plans, respectively; and a medical trend rate of 8.00% for 2008 grading to an ultimate trend of 5.00% for 2010 and later years. Dixie's net pension and postretirement benefit costs for 2007 were $1.1 million (including settlement loss of $0.6 million) and $0.4 million, respectively. Dixie's net pension and postretirement benefit costs for 2006 were $0.7 million and $0.3 million, respectively.

Future benefits expected to be paid from Dixie's pension and postretirement plans are as follows for the periods indicated:

	Pension Plan	Postretirement Plan
2008	$ 218	$ 389
2009	287	422
2010	324	467
2011	518	505
2012	534	497
2013 through 2017	3,779	2,353
Total	$5,660	$4,633

On December 31, 2006, Dixie adopted the recognition and disclosure provisions of SFAS 158. Dixie uses a December 31 measurement date of these plans. SFAS 158 requires Dixie to recognize the funded status of its defined benefit pension and other postretirement plans as an asset or liability in its statement of financial position and to recognize changes in that funded status in the year in which the changes occur through comprehensive income.

The incremental effects of Dixie's implementation of SFAS 158 on our Consolidated Balance Sheets at December 31, 2006 are presented in the following table.

	At December 31, 2006		
	Prior to Adopting SFAS 158	Effect of Adopting SFAS 158	As reported
Liability for Dixie benefit plans	$ 6,404	$ 751	$ 7,155
Deferred income taxes	—	(287)	(287)
Total liabilities	7,509,021	464	7,509,485
Accumulated other comprehensive income	—	(464)	(464)
Total equity	6,480,697	(464)	6,480,233

Included in Accumulated Other Comprehensive Income ("AOCI") on the Consolidated Balance Sheet at December 31, 2007 and 2006 are the following amounts that have not been recognized in net periodic pension costs (in millions):

	At December 31,	
	2007	2006
Unrecognized transition obligation	$ 1.0	$ 1.2
Net of tax	0.6	0.7
Unrecognized prior service cost credit	(1.2)	(1.5)
Net of tax	(0.8)	(0.9)
Unrecognized net actuarial loss	2.8	3.1
Net of tax	1.7	1.9

Note 7. Financial Instruments

We are exposed to financial market risks, including changes in commodity prices, interest rates and foreign exchange rates. In addition, we are exposed to fluctuations in exchange rates between the U.S. dollar and Canadian dollar. We may use financial instruments (i.e., futures, forwards, swaps, options and other financial instruments with similar characteristics) to mitigate the risks of certain identifiable and anticipated transactions. In general, the type of risks we attempt to hedge are those related to (i) the variability of future earnings, (ii) fair values of certain debt instruments and (iii) cash flows resulting from changes in applicable interest rates, commodity prices or exchange rates.

We recognize financial instruments as assets and liabilities on our Consolidated Balance Sheets based on fair value. Fair value is generally defined as the amount at which a financial instrument could be exchanged in a current transaction between willing parties, not in a forced or liquidation sale. The estimated fair values of our financial instruments have been determined using available market information and appropriate valuation techniques. We must use considerable judgment, however, in interpreting market data and developing these estimates. Accordingly, our fair value estimates are not necessarily indicative of the amounts that we could realize upon disposition of these instruments. The use of different market assumptions and/or estimation techniques could have a material effect on our estimates of fair value.

Changes in the fair value of financial instrument contracts are recognized currently in earnings unless specific hedge accounting criteria are met. If the financial instruments meet those criteria, the instrument's gains and losses offset the related results of the hedged item in earnings for a fair value hedge and are deferred in other comprehensive income for a cash flow hedge. Gains and losses related to a cash flow hedge are reclassified into earnings when the forecasted transaction affects earnings. For additional information regarding our accounting for financial instruments, see Note 2 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

To qualify as a hedge, the item to be hedged must be exposed to commodity, interest rate or exchange rate risk and the hedging instrument must reduce the exposure and meet the hedging requirements of SFAS 133, "Accounting for Derivative Instruments and Hedging Activities" (as amended and interpreted). We must formally designate the financial instrument as a hedge and document and assess the effectiveness of the hedge at inception and on a quarterly basis. Any ineffectiveness of the hedge is recorded in current earnings.

We routinely review our outstanding financial instruments in light of current market conditions. If market conditions warrant, some financial instruments may be closed out in advance of their contractual settlement dates thus realizing income or loss depending on the specific hedging criteria. When this occurs, we may enter into a new financial instrument to reestablish the hedge to which the closed instrument relates.

Interest Rate Risk Hedging Program

Our interest rate exposure results from variable and fixed rate borrowings under various debt agreements. We manage a portion of our interest rate exposures by utilizing interest rate swaps and similar arrangements, which allow us to convert a portion of fixed rate debt into variable rate debt or a portion of variable rate debt into fixed rate debt. The following information summarizes significant components of our interest rate risk hedging portfolio:

Fair value hedges – Interest rate swaps

As summarized in the following table, we had eleven interest rate swap agreements outstanding at December 31, 2007 that were accounted for as fair value hedges.

Hedged Fixed Rate Debt	Number Of Swaps	Period Covered by Swap	Termination Date of Swap	Fixed to Variable Rate (1)	Notional Amount
Senior Notes B, 7.50% fixed rate, due Feb. 2011	1	Jan. 2004 to Feb. 2011	Feb. 2011	7.50% to 8.65%	$50 million
Senior Notes C, 6.375% fixed rate, due Feb. 2013	2	Jan. 2004 to Feb. 2013	Feb. 2013	6.38% to 7.19%	$200 million
Senior Notes G, 5.6% fixed rate, due Oct. 2014	6	4th Qtr. 2004 to Oct. 2014	Oct. 2014	5.60% to 6.13%	$600 million
Senior Notes K, 4.95% fixed rate, due June 2010	2	Aug. 2005 to June 2010	June 2010	4.95% to 5.33%	$200 million

(1) The variable rate indicated is the all-in variable rate for the current settlement period.

We have designated these eleven interest rate swaps as fair value hedges under SFAS 133 since they mitigate changes in the fair value of the underlying fixed rate debt. As effective fair value hedges, an increase in the fair value of these interest rate swaps is equally offset by an increase in the fair value of the underlying hedged debt. The offsetting changes in fair value have no effect on current period interest expense.

These eleven agreements have a combined notional amount of $1.1 billion and match the maturity dates of the underlying debt being hedged. Under each swap agreement, we pay the counterparty a variable interest rate based on six-month London interbank offered rate ("LIBOR") (plus an applicable margin as defined in each swap agreement), and receive back from the counterparty a fixed interest rate payment based on the stated interest rate of the debt being hedged, with both payments calculated using the notional amounts stated in each swap agreement. We settle amounts receivable from or payable to the counterparties every six months (the "settlement period"). The settlement amount is amortized ratably to earnings as either an increase or a decrease in interest expense over the settlement period.

The total fair value of these eleven interest rate swaps at December 31, 2007, was an asset of $14.8 million, with an offsetting decrease in the fair value of the underlying debt. Interest expense for the years ended December 31, 2007, 2006 and 2005 reflects a $8.9 million loss, $5.2 million loss and $10.8 million benefit from these swap agreements, respectively.

Cash flow hedges – Interest Rate Swaps

Duncan Energy Partners had three interest rate swap agreements outstanding at December 31, 2007 that were accounted for as cash flow hedges.

Hedged Variable Rate Debt	Number Of Swaps	Period Covered by Swap	Termination Date of Swap	Variable to Fixed Rate(1)	Notional Value
Duncan Energy Partners' Revolver, due Feb. 2011	3	Sep. 2007 to Sep. 2010	Sep. 2010	4.84% to 4.62%	$175.0 million

(1) Amounts receivable from or payable to the swap counterparties are settled every three months (the "settlement period").

In September 2007, Duncan Energy Partners executed three floating-to-fixed interest rate swaps having a combined notional value of $175.0 million. The purpose of these financial instruments is to reduce the sensitivity of Duncan Energy Partners' earnings to variable interest rates charged under its revolving credit facility. It recognized a $0.2 million benefit from these swaps in interest expense during 2007, which includes ineffectiveness of $0.2 million (an expense) and income of $0.4 million. In 2008, Duncan Energy Partners expects to reclassify $0.7 million of accumulated other comprehensive loss that was generated by these interest rate swaps as an increase to interest expense.

At December 31, 2007, the aggregate fair value of these interest rate swaps was a liability of $3.8 million. As cash flow hedges, any increase or decrease in fair value (to the extent effective) would be recorded into other comprehensive income and amortized into income based on the settlement period hedged. Any ineffectiveness is recorded directly into earnings as an increase in interest expense.

Cash flow hedges – Treasury locks

At times, we may use treasury lock financial instruments to hedge the underlying U.S. treasury rates related to our anticipated issuances of debt. A treasury lock is a specialized agreement that fixes the price (or yield) on a specific treasury security for an established period of time. A treasury lock purchaser is protected from a rise in the yield of the underlying treasury security during the lock period. Each of the treasury lock transactions was designated as a cash flow hedge under SFAS 133.

Table of Contents

To the extent effective, gains and losses on the value of the treasury locks will be deferred until the forecasted debt is issued and will be amortized to earnings over the life of the debt. No ineffectiveness was recognized as of December 31, 2007. Gains or losses on the termination of such instruments are amortized to earnings using the effective interest method over the estimated term of the underlying fixed-rate debt. The following table summarizes changes in our treasury lock portfolio since December 31, 2005 (dollars in millions):

	Notional Amount	Cash Gain
Second quarter of 2006 additions to portfolio (1)	$ 250.0	$ —
Third quarter of 2006 additions to portfolio (1)	50.0	—
Third quarter of 2006 terminations (2)	(300.0)	—
Fourth quarter of 2006 additions to portfolio (3)	562.5	—
Treasury lock portfolio, December 31, 2006 (4)	562.5	—
First quarter of 2007 additions to portfolio (3)	437.5	—
Second quarter of 2007 terminations (5)	(875.0)	42.3
Third quarter of 2007 additions to portfolio (6)	875.0	—
Third quarter of 2007 terminations (7)	(750.0)	6.6
Fourth quarter of 2007 additions to portfolio (8)	350.0	—
Treasury lock portfolio, December 31, 2007 (4)	$ 600.0	$48.9

(1) EPO entered into these transactions related to its anticipated issuances of debt in 2006.

(2) Terminations relate to the issuance of the Junior Notes A ($300.0 million).

(3) EPO entered into these transactions related to its anticipated issuances of debt in 2007.

(4) The fair value of open financial instruments at December 31, 2006 and 2007 was an asset of $11.2 million and a liability of $19.6 million, respectively.

(5) Terminations relate to the issuance of the Junior Notes B ($500.0 million) and Senior Notes L ($375.0 million). Of the $42.3 million gain, $10.6 million relates to the Junior Notes B and the remainder to the Senior Notes L and its successor debt.

(6) EPO entered into these transactions related to its issuance of the Senior Notes L (including its successor debt) in August 2007 ($500.0 million) and anticipated issuance of debt during the first half of 2008 ($250.0 million).

(7) Terminations relate to the issuance of the Senior Notes L and its successor debt.

(8) EPO entered into these transactions in anticipated issuance of debt during the first half of 2008.

Commodity Risk Hedging Program

The prices of natural gas, NGLs and certain petrochemical products are subject to fluctuations in response to changes in supply, market uncertainty and a variety of additional factors that are beyond our control. In order to manage the price risks associated with such products, we may enter into commodity financial instruments.

The primary purpose of our commodity risk management activities is to hedge our exposure to price risks associated with (i) natural gas purchases, (ii) the value of NGL production and inventories, (iii) related firm commitments, (iv) fluctuations in transportation revenues where the underlying fees are based on natural gas index prices and (v) certain anticipated transactions involving either natural gas, NGLs or certain petrochemical products. From time to time, we inject natural gas into storage and utilize hedging instruments to lock in the value of our inventory positions. The commodity financial instruments we utilize may be settled in cash or with another financial instrument.

The fair value of our commodity financial instrument portfolio, which primarily consisted of cash flow hedges, at December 31, 2007 was a liability of $19.3 million. During the years ended December 31, 2007, 2006 and 2005, we recorded a $28.6 million loss, $10.3 million income and $1.1 million income, respectively, related to our commodity financial instruments, which is included in operating costs and expenses on our Statements of Consolidated Operations. Included in the $28.6 million loss recorded during 2007, was ineffectiveness of $0.9 million (an expense) related to our commodity hedges. These contracts will terminate during 2008, and any amounts remaining in accumulated other comprehensive income will be recorded in earnings.

Foreign Currency Hedging Program

We are exposed to foreign currency exchange rate risk through our Canadian NGL marketing subsidiary and certain construction agreements with respect to our Pioneer processing plant where payments are indexed to the Canadian dollar. As a result, we could be adversely affected by fluctuations in the foreign currency exchange rate between the U.S. dollar and the Canadian dollar. We attempt to hedge this risk using foreign exchange purchase contracts to fix the exchange rate.

Mark-to-market accounting is utilized for those foreign exchange contracts associated with our Canadian NGL marketing business. The duration of these contracts is typically one month. As of December 31, 2007, $4.7 million of these exchange contracts were outstanding, all of which settled in January 2008. In January 2008, we entered into $3.7 million of such instruments.

The foreign exchange contracts associated with our construction activities are accounted for using hedge accounting. At December 31, 2007, the fair value of these contracts was $1.3 million. These contracts settle through May 2008.

Fair Value Information

Cash and cash equivalents, accounts receivable, accounts payable and accrued expenses are carried at amounts which reasonably approximate their fair values due to their short-term nature. The estimated fair values of our fixed rate debt are based on quoted market prices for such debt or debt of similar terms and maturities. The carrying amounts of our variable rate debt obligations reasonably approximate their fair values due to their variable interest rates. The fair values associated with our interest rate and commodity hedging portfolios were developed using available market information and appropriate valuation techniques. The following table presents the estimated fair values of our financial instruments at the dates indicated:

	At December 31, 2007		At December 31, 2006	
Financial Instruments	Carrying Value	Fair Value	Carrying Value	Fair Value
Financial assets:				
Cash and cash equivalents	$ 92,866	$ 92,866	$ 46,286	$ 46,286
Accounts receivable	2,010,544	2,010,544	1,323,028	1,323,028
Commodity financial instruments (1)	338	338	1,472	1,472
Foreign currency hedging financial instruments (2)	1,308	1,308	—	—
Interest rate hedging financial instruments (3)	14,839	14,839	11,203	11,203
Financial liabilities:				
Accounts payable and accrued expenses	2,755,647	2,755,647	1,774,976	1,774,976
Fixed-rate debt (principal amount)	5,904,000	5,867,899	4,909,068	4,955,176
Variable-rate debt	992,500	992,500	420,000	420,000
Commodity financial instruments (1)	19,643	19,643	4,655	4,655
Foreign currency hedging financial instruments (2)	27	27	—	—
Interest rate hedging financial instruments (3)	23,422	23,422	29,060	29,060

(1) Represent commodity financial instrument transactions that either have not settled or have settled and not been invoiced. Settled and invoiced transactions are reflected in either accounts receivable or accounts payable depending on the outcome of the transaction.

(2) Relates to the hedging of our exposure to fluctuations in the Canadian dollar.

(3) Represent interest rate hedging financial instrument transactions that have not settled. Settled transactions are reflected in either accounts receivable or accounts payable depending on the outcome of the transaction.

Note 8. Cumulative Effect of Changes in Accounting Principles

During the years ended December 31, 2006 and 2005, we recorded various amounts related to the cumulative effect of changes in accounting principles, including a benefit of $1.5 million in January 2006 related to the implementation of SFAS 123(R) and a charge of $4.2 million in December 2005 related to our implementation of FIN 47.

See Note 6 regarding the balance sheet impact of adopting SFAS 158 at December 31, 2006, which had no effect on net income.

Effect of Implementation of Staff Accounting Bulletin ("SAB") 108

SAB 108, "Considering the Effects of Prior Year Misstatements when Quantifying Misstatements in Current Year Financial Statements," addresses how the effects of the carryover or reversal of prior year misstatements should be considered in quantifying a current year misstatement. This SAB requires us to quantify errors using both a balance sheet and an income statement approach and evaluate whether either approach results in quantifying a misstatement that, when all relevant quantitative and qualitative factors are considered, is material. The provisions of SAB 108 did not have a material impact on our consolidated financial statements.

Effect of Implementation of SFAS 123(R)

SFAS 123(R) requires us to recognize compensation expense related to unit-based awards based on the fair value of the award at grant date. The fair value of restricted unit awards is based on the market price of the underlying common units on the date of grant. The fair value of other unit-based awards is estimated using the Black-Scholes option pricing model. Under SFAS 123(R), the fair value of an equity-classified award is amortized to earnings on a straight-line basis over the requisite service or vesting period for equity-classified awards. Compensation for liability-classified awards is recognized over the requisite service or vesting period of an award based on the fair value of the award remeasured at each reporting period. Liability awards will be cash settled upon vesting.

Upon adoption of SFAS 123(R), we recognized, as a benefit, the cumulative effect of a change in accounting principle of $1.5 million based on the SFAS 123(R) requirement to recognize compensation expense based upon the grant date fair value of unit-based awards and the application of an estimated forfeiture rate to unvested awards. See Notes 2 and 5 for additional information regarding our accounting for equity awards.

Effect of Implementation of FIN 47

In December 2005, we adopted FIN 47, "Accounting for Conditional Asset Retirement Obligations – An Interpretation for FAS 143," which required us to record a liability for AROs in which the timing and/or amount of settlement of the obligation is uncertain. These conditional asset retirement obligations were not addressed in SFAS 143, which we adopted on January 1, 2003. We recorded a charge of $4.2 million in connection with our implementation of FIN 47, which represents the depreciation and accretion expense we would have recognized in prior periods had we recorded these conditional asset retirement obligations when incurred. See Note 10 for additional information regarding our AROs.

Table of Contents

The following table shows unaudited pro forma net income for the years ended December 31, 2006 and 2005, assuming these accounting changes noted above were applied retroactively to January 1, 2005.

	For the Years Ended December 31,	
	2006	2005
Pro Forma income statement amounts:		
Historical net income	$601,155	$419,508
Adjustments to derive pro forma net income:		
Effect of implementation of SFAS 123(R):		
Remove cumulative effect of change in accounting principle recorded in January 2006	(1,472)	—
Additional compensation expense that would have been recorded for unit options	—	(708)
Remove compensation expense related to awards of profits interests in EPE Unit L.P.	—	1,271
Effect of implementation of FIN 47:		
Remove cumulative effect of change in accounting principle recorded in December 2005	—	4,208
Record depreciation and accretion expense associated with conditional asset retirement obligations	—	(735)
Pro forma net income	599,683	423,544
EPGP interest	(96,969)	(71,077)
Pro forma net income available to limited partners	$502,714	$352,467
Pro forma per unit data (basic):		
Historical units outstanding	414,442	382,463
Per unit data:		
As reported	$ 1.22	$ 0.91
Pro forma	$ 1.21	$ 0.92
Pro forma per unit data (diluted):		
Historical units outstanding	414,759	382,963
Per unit data:		
As reported	$ 1.22	$ 0.91
Pro forma	$ 1.21	$ 0.92

Note 9. Inventories

Our inventory amounts were as follows at the dates indicated:

	At December 31,	
	2007	2006
Working inventory (1)	$ 342,589	$ 387,973
Forward-sales inventory (2)	11,693	35,871
Total inventory	$ 354,282	$ 423,844

(1) Working inventory is comprised of inventories of natural gas, NGLs and certain petrochemical products that are either available-for-sale or used in the provision for services.

(2) Forward sales inventory consists of segregated NGL and natural gas volumes dedicated to the fulfillment of forward-sales contracts.

Our inventory values reflect payments for product purchases, freight charges associated with such purchase volumes, terminal and storage fees, vessel inspection costs, demurrage charges and other related costs. We value our inventories at the lower of average cost or market.

Operating costs and expenses, as presented on our Statements of Consolidated Operations, include cost of sales amounts related to the sale of inventories. Our costs of sales were $14.5 billion, $11.8 billion and $10.3 billion for the years ended December 31, 2007, 2006 and 2005, respectively.

In those instances where we take ownership of inventory volumes through percent-of-liquids contracts and similar arrangements (as opposed to actually purchasing volumes for cash from third parties, see Note 4), these volumes are valued at market-related prices during the month in which they are acquired. We capitalize as a component of inventory those ancillary costs (e.g. freight-in and other handling and processing charges) incurred in connection with volumes obtained through such contracts.

Due to fluctuating commodity prices in the NGL, natural gas and petrochemical industry, we recognize lower of cost or market ("LCM") adjustments when the carrying value of our inventories exceed their net realizable value. These non-cash charges are a component of cost of sales in the period they are recognized and generally affect our segment operating results in the following manner:

- Write-downs of NGL inventories are recorded as a cost of our NGL marketing activities within our NGL Pipelines & Services business segment;
- Write-downs of natural gas inventories are recorded as a cost of our natural gas pipeline operations within our Onshore Natural Gas Pipelines & Services business segment; and
- Write-downs of petrochemical inventories are recorded as a cost of our petrochemical marketing activities or octane additive production business within our Petrochemical Services business segment, as applicable.

For the years ended December 31, 2007, 2006 and 2005, we recognized LCM adjustments of approximately $13.3 million, $18.6 million and $21.9 million, respectively. To the extent our commodity hedging strategies address inventory-related risks and are successful, these inventory valuation adjustments are mitigated or offset. See Note 7 for a description of our commodity hedging activities.

Note 10. Property, Plant and Equipment

Our property, plant and equipment values and accumulated depreciation balances were as follows at the dates indicated:

	Estimated Useful Life in Years	At December 31, 2007	At December 31, 2006
Plants and pipelines (1)	3-35 (5)	$10,884,819	$ 8,774,683
Underground and other storage facilities (2)	5-35 (6)	720,795	596,649
Platforms and facilities (3)	23-31	637,812	161,839
Transportation equipment (4)	3-10	32,627	27,008
Land		48,172	40,010
Construction in progress		1,173,988	1,734,083
Total		13,498,213	11,334,272
Less accumulated depreciation		1,910,949	1,501,725
Property, plant and equipment, net		$11,587,264	$ 9,832,547

(1) Plants and pipelines include processing plants; NGL, petrochemical, oil and natural gas pipelines; terminal loading and unloading facilities; office furniture and equipment; buildings; laboratory and shop equipment; and related assets.

(2) Underground and other storage facilities include underground product storage caverns; storage tanks; water wells; and related assets.

(3) Platforms and facilities include offshore platforms and related facilities and other associated assets.

(4) Transportation equipment includes vehicles and similar assets used in our operations.

(5) In general, the estimated useful lives of major components of this category are as follows: processing plants, 20-35 years; pipelines, 18-35 years (with some equipment at 5 years); terminal facilities, 10-35 years; office furniture and equipment, 3-20 years; buildings 20-35 years; and laboratory and shop equipment, 5-35 years.

(6) In general, the estimated useful lives of major components of this category are as follows: underground storage facilities, 20-35 years (with some components at 5 years); storage tanks, 10-35 years; and water wells, 25-35 years (with some components at 5 years).

Table of Contents

The following table summarizes our depreciation expense and capitalized interest amounts for the periods indicated:

	For the Years Ended December 31,		
	2007	2006	2005
Depreciation expense (1)	$414,901	$350,832	$328,736
Capitalized interest (2)	$ 75,476	$ 55,660	$ 22,046

(1) Depreciation expense is a component of operating costs and expenses as presented in our Statements of Consolidated Operations.

(2) Capitalized interest increases the carrying value of the associated asset and reduces interest expense during the period it is recorded.

Asset retirement obligations

We have recorded asset retirement obligations related to legal requirements to perform retirement activities as specified in contractual arrangements and/or governmental regulations. In general, our asset retirement obligations primarily result from (i) right-of-way agreements associated with our pipeline operations, (ii) leases of plant sites and (iii) regulatory requirements triggered by the abandonment or retirement of certain underground storage assets and offshore facilities. In addition, our asset retirement obligations may result from the renovation or demolition of certain assets containing hazardous substances such as asbestos.

Previously, we recorded asset retirement obligations associated with the future retirement and removal activities of certain offshore assets located in the Gulf of Mexico. In December 2005, we adopted FIN 47 and recorded an additional $10.1 million in connection with conditional asset retirement obligations. The cumulative effect of this change in accounting principle for years prior to 2005 was a non-cash charge of $4.2 million. None of our assets are legally restricted for purposes of settling asset retirement obligations.

The following table presents information regarding our asset retirement obligations since December 31, 2005.

Asset retirement obligation liability balance, December 31, 2005	$ 16,795
Liabilities incurred	1,977
Liabilities settled	(1,348)
Revisions in estimated cash flows	5,650
Accretion expense	1,329
Asset retirement obligation liability balance, December 31, 2006	24,403
Liabilities incurred	1,673
Liabilities settled	(5,069)
Revisions in estimated cash flows	15,645
Accretion expense	3,962
Asset retirement obligation liability balance, December 31, 2007	$ 40,614

Property, plant and equipment at December 31, 2007 and 2006 includes $10.6 million and $3.0 million, respectively, of asset retirement costs capitalized as an increase in the associated long-lived asset. Also, based on information currently available, we estimate that accretion expense will approximate $2.0 million for each of the years 2008 and 2009, $2.1 million for 2010, $2.3 million for 2011 and $2.5 million for 2012.

Certain of our unconsolidated affiliates have AROs recorded at December 31, 2007 and 2006 relating to contractual agreements and regulatory requirements. These amounts are immaterial to our financial statements.

Table of Contents

Note 11. Investments In and Advances to Unconsolidated Affiliates

We own interests in a number of related businesses that are accounted for using the equity method of accounting. Our investments in and advances to unconsolidated affiliates are grouped according to the business segment to which they relate. See Note 16 for a general discussion of our business segments. The following table shows our investments in and advances to unconsolidated affiliates at the dates indicated.

	Ownership Percentage at December 31, 2007	Investments in and advances to Unconsolidated Affiliates at December 31, 2007	December 31, 2006
NGL Pipelines & Services:			
VESCO	13.1%	$ 40,129	$ 39,618
K/D/S Promix, L.L.C. ("Promix")	50%	51,537	46,140
Baton Rouge Fractionators LLC ("BRF")	32.3%	25,423	25,471
Onshore Natural Gas Pipelines & Services:			
Jonah Gas Gathering Company ("Jonah")	19.4%	235,837	120,370
Evangeline (1)	49.5%	3,490	4,221
Offshore Pipelines & Services:			
Poseidon Oil Pipeline, L.L.C. ("Poseidon")	36%	58,423	62,324
Cameron Highway Oil Pipeline Company ("Cameron Highway") (2)	50%	256,588	60,216
Deepwater Gateway, L.L.C. ("Deepwater Gateway")	50%	111,221	117,646
Neptune Pipeline Company, L.L.C. ("Neptune") (3)	25.7%	55,468	58,789
Nemo Gathering Company, LLC ("Nemo") (4)	33.9%	2,888	11,161
Petrochemical Services:			
Baton Rouge Propylene Concentrator, LLC ("BRPC")	30%	13,282	13,912
La Porte (5)	50%	4,053	4,691
Total		$858,339	$564,559

(1) Refers to our ownership interests in Evangeline Gas Pipeline Company, L.P. and Evangeline Gas Corp., collectively.

(2) During the year ended December 31, 2007, we contributed $216.5 million to Cameron Highway to fund our portion of the repayment of Cameron Highway’s debt.

(3) The December 31, 2006 amount includes a $7.4 million non-cash impairment charge attributable to our investment in Neptune.

(4) The December 31, 2007 amount includes a $7.0 million non-cash impairment charge attributable to our investment in Nemo.

(5) Refers to our ownership interests in La Porte Pipeline Company, L.P. and La Porte GP, LLC, collectively.

On occasion, the price we pay to acquire an ownership interest in a company exceeds the underlying book value of the capital accounts we acquire. Such excess cost amounts are included within the carrying values of our investments in and advances to unconsolidated affiliates. At December 31, 2007 and 2006, our investments in Promix, La Porte, Neptune, Poseidon, Cameron Highway, Nemo and Jonah included excess cost amounts totaling $43.8 million and $38.7 million, respectively, all of which were attributable to the fair value of the underlying tangible assets of these entities exceeding their book carrying values at the time of our acquisition of interests in these entities. To the extent that we attribute all or a portion of an excess cost amount to higher fair values, we amortize such excess cost as a reduction in equity earnings in a manner similar to depreciation. To the extent we attribute an excess cost amount to goodwill, we do not amortize this amount but it is subject to evaluation for impairment. Amortization of such excess cost amounts was $2.6 million, $2.1 million and $2.3 million for the years ended December 31, 2007, 2006 and 2005, respectively.

The following table presents our equity in income (loss) of unconsolidated affiliates for the periods indicated:

	For the Year Ended December 31,		
	2007	2006	2005
NGL Pipelines & Services:			
Dixie	$ —	$ —	$ 1,103
VESCO	3,507	1,719	1,412
Belle Rose	—	—	(151)
Promix	514	1,353	1,876
BRF	2,010	2,643	1,313
Onshore Natural Gas Pipelines & Services:			
Evangeline	183	958	331
Coyote	—	1,676	2,053
Jonah	9,357	238	—
Offshore Pipelines & Services:			
Poseidon	10,020	11,310	7,279
Cameron Highway (1)	(11,200)	(11,000)	(15,872)
Deepwater Gateway	20,606	18,392	10,612
Neptune (2)	(821)	(8,294)	2,019
Nemo (3)	(5,977)	1,501	1,774
Starfish Pipeline Company, LLC ("Starfish") (4)	—	—	313
Petrochemical Services:			
BRPC	2,266	1,864	1,224
La Porte	(807)	(795)	(738)
Total	$ 29,658	$ 21,565	$ 14,548

(1) Equity earnings from Cameron Highway for the year ended December 31, 2005 were reduced by a charge of $11.5 million for costs associated with the refinancing of Cameron Highway's project debt.

(2) Equity earnings from Neptune for 2006 include a $7.4 million non-cash impairment charge.

(3) Equity earnings from Nemo for 2007 include a $7.0 million non-cash impairment charge.

(4) We were required under a consent decree published for comment by the U.S. Federal Trade Commission on September 30, 2004 to sell our 50% interest in Starfish. On March 31, 2005, we sold this asset to a third-party.

NGL Pipelines & Services

At December 31, 2007, our NGL Pipelines & Services segment included the following unconsolidated affiliates accounted for using the equity method:

VESCO. We own a 13.1% interest in VESCO, which owns a natural gas processing facility and related assets located in south Louisiana.

Promix. We own a 50.0% interest in Promix, which owns an NGL fractionation facility and related storage and pipeline assets located in south Louisiana.

BRF. We own an approximate 32.3% interest in BRF, which owns an NGL fractionation facility located in south Louisiana.

The combined balance sheet information for the last two years and results of operations data for the last three years of this segment's current unconsolidated affiliates are summarized below.

	At December 31, 2007	At December 31, 2006
BALANCE SHEET DATA:		
Current assets	$112,352	$ 62,138
Property, plant and equipment, net	270,586	242,083
Other assets	11,686	12,189
Total assets	$394,624	$316,410
Current liabilities	$ 75,314	$ 30,686
Other liabilities	9,095	8,117
Combined equity	310,215	277,607
Total liabilities and combined equity	$394,624	$316,410

	For the Year Ended December 31, 2007	2006	2005
INCOME STATEMENT DATA:			
Revenues	$220,381	$190,320	$207,775
Operating income (loss)	41,147	(26,885)	6,696
Net income (loss)	26,506	(25,543)	6,509

Onshore Natural Gas Pipelines & Services

At December 31, 2007, our Onshore Natural Gas Pipelines & Services segment included the following unconsolidated affiliates accounted for using the equity method:

Evangeline. We own an approximate 49.5% aggregate interest in Evangeline, which owns a natural gas pipeline located in south Louisiana. A subsidiary of Acadian Gas, LLC owns the Evangeline interests, which were contributed to Duncan Energy Partners in February 2007 in connection with its initial public offering (see Note 17).

Coyote. We owned a 50.0% interest in Coyote during 2005, which owns a natural gas treating facility located in the San Juan Basin of southwestern Colorado. During 2006, we sold our interest in Coyote and recorded a gain on the sale of $3.3 million.

Jonah. Our equity interest in Jonah at December 31, 2007 is based on capital contributions we made to Jonah in connection with its Phase V expansion project through this date. We completed Phase I of this expansion in July 2007 entitling us to approximately 19.4% in earnings and ownership with the remaining 80.6% entitlement to TEPPCO. See Note 17 for additional information regarding our Jonah affiliate. Jonah owns the Jonah Gas Gathering System located in the Greater Green River Basin of southwestern Wyoming.

The combined balance sheet information for the last two years and results of operations data for the last three years of this segment's current unconsolidated affiliates are summarized below.

	At December 31, 2007	At December 31, 2006
BALANCE SHEET DATA:		
Current assets	$ 83,962	$ 65,048
Property, plant and equipment, net	915,572	639,641
Other assets	176,091	192,027
Total assets	$1,175,625	$896,716
Current liabilities	$ 43,951	$ 49,708
Other liabilities	25,002	28,802
Combined equity	1,106,672	818,206
Total liabilities and combined equity	$1,175,625	$896,716

	For the Year Ended December 31, 2007	2006	2005
INCOME STATEMENT DATA:			
Revenues	$477,077	$372,240	$347,561
Operating income	98,549	48,387	9,142
Net income	93,491	40,608	4,668

Offshore Pipelines & Services

At December 31, 2007, our Offshore Pipelines & Services segment included the following unconsolidated affiliates accounted for using the equity method:

Poseidon. We own a 36.0% interest in Poseidon, which owns a crude oil pipeline that gathers production from the outer continental shelf and deepwater areas of the Gulf of Mexico for delivery to onshore locations in south Louisiana.

Cameron Highway. We own a 50.0% interest in Cameron Highway, which owns a crude oil pipeline that gathers production from deepwater areas of the Gulf of Mexico, primarily the South Green Canyon area, for delivery to refineries and terminals in southeast Texas. The Cameron Highway Oil Pipeline commenced operations during the first quarter of 2005.

Cameron Highway repaid its $365.0 million Series A notes and $50.0 million Series B notes in 2007 using cash contributions from its partners. We funded our 50% share of the capital contributions using borrowings under EPO's Multi-Year Revolving Credit Facility. Cameron Highway incurred a $14.1 million make-whole premium in connection with the repayment of its Series A notes.

Deepwater Gateway. We own a 50.0% interest in Deepwater Gateway, which owns the Marco Polo platform located in the Gulf of Mexico. The Marco Polo platform processes crude oil and natural gas production from the Marco Polo, K2, K2 North and Ghengis Khan fields located in the South Green Canyon area of the Gulf of Mexico.

Neptune. We own a 25.7% interest in Neptune, which owns the Manta Ray Offshore Gathering and Nautilus Systems, which are natural gas pipelines located in the Gulf of Mexico.

Nemo. We own a 33.9% interest in Nemo, which owns the Nemo Gathering System, which is a natural gas pipeline located in the Gulf of Mexico.

In connection with obtaining regulatory approval for the GulfTerra Merger, we were required by the U.S. Federal Trade Commission to sell our ownership interest in Starfish by March 31, 2005. In March 2005, we sold this asset to a third-party for $42.1 million in cash and realized a gain on the sale of $5.5 million.

Table of Contents

The combined balance sheet information for the last two years and results of operations data for the last three years of this segment's current unconsolidated affiliates are summarized below.

	At December 31, 2007	At December 31, 2006
BALANCE SHEET DATA:		
Current assets	$ 46,795	$ 56,689
Property, plant and equipment, net	1,122,108	1,178,811
Other assets	4,338	10,108
Total assets	$1,173,241	$1,245,608
Current liabilities	$ 19,720	$ 22,043
Other liabilities	96,791	510,773
Combined equity	1,056,730	712,792
Total liabilities and combined equity	$1,173,241	$1,245,608

	For the Year Ended December 31, 2007	2006	2005
INCOME STATEMENT DATA:			
Revenues	$156,780	$153,996	$154,297
Operating income	85,550	71,977	78,027
Net income	53,590	42,732	29,086

Neptune owns the Manta Ray Offshore Gathering System ("Manta Ray") and Nautilus Pipeline System ("Nautilus"). Manta Ray gathers natural gas originating from producing fields located in the Green Canyon, Southern Green Canyon, Ship Shoal, South Timbalier and Ewing Bank areas of the Gulf of Mexico to numerous downstream pipelines, including the Nautilus pipeline. Nautilus connects our Manta Ray pipeline to our Neptune natural gas processing plant located in south Louisiana. Due to a recent decrease in throughput volumes on the Manta Ray and Nautilus pipelines, we evaluated our 25.7% investment in Neptune for impairment during the third quarter of 2006. The decrease in throughput volumes is primarily due to underperformance of certain fields, natural depletion and hurricane-related delays in starting new production. These factors contributed to significant delays in throughput volumes Neptune expects to receive. As a result, Neptune has experienced operating losses in recent periods.

At December 31, 2005, the carrying value of our investment in Neptune was $68.1 million, which included $10.9 million of excess cost related to its original acquisition in 2001. Our review of Neptune's estimated cash flows during the third quarter of 2006 indicated that the carrying value of our investment exceeded its fair value, which resulted in a non-cash impairment charge of $7.4 million. This loss is recorded as a component of "Equity in income of unconsolidated affiliates" in our Statement of Consolidated Operations for the year ended December 31, 2006. After recording this impairment charge, the carrying value of our investment in Neptune at December 31, 2006 was $58.8 million.

Nemo was formed in 1999 to construct, own and operate the Nemo Gathering System, a 24-mile natural gas gathering system in the Gulf of Mexico offshore Louisiana. The Nemo Gathering System, which began operations in 2001, gathers natural gas from certain developments in the Green Canyon area of the Gulf of Mexico to a pipeline interconnect with the Manta Ray Gathering System. Due to a recent decrease in throughput volumes on the Nemo Gathering System, we evaluated our 33.9% investment in Nemo for impairment during the second quarter of 2007. The decrease in throughput volumes is primarily due to underperformance of certain fields and natural depletion.

At December 31, 2006, the carrying value of our investment in Nemo was $11.2 million, which included $0.6 million of excess cost related to its original acquisition in 2001. Our review of Nemo's estimated future cash flows during the second quarter of 2007 indicated that the carrying value of our investment exceeded its fair value, which resulted in a non-cash impairment charge of $7.0 million. This loss is recorded as a component of "Equity in income of unconsolidated affiliates" in our Statement of Consolidated Operations for the year ended December 31, 2007. After recording this impairment charge, the carrying value of our investment in Nemo at December 31, 2007 was $2.9 million.

Our investments in Neptune and Nemo were written down to fair value, which management estimated using recognized business valuation techniques. The fair value analysis is based upon management's expectation of future cash flows, which incorporates certain industry information and assumptions made by management. For example, the individual reviews of Neptune and Nemo included management estimates regarding natural gas reserves of producers served by both Neptune and Nemo, respectively. If the assumptions underlying our fair value analysis change and expected cash flows are reduced, additional impairment charges may result.

Petrochemical Services

At December 31, 2007, our Petrochemical Services segment included the following unconsolidated affiliates accounted for using the equity method:

BRPC. We own a 30.0% interest in BRPC, which owns a propylene fractionation facility located in south Louisiana.

La Porte. We own an aggregate 50.0% interest in La Porte, which owns a propylene pipeline extending from Mont Belvieu, Texas to La Porte, Texas.

The combined balance sheet information for the last two years and results of operations data for the last three years of this segment's current unconsolidated affiliates are summarized below.

	At December 31,	
	2007	2006
BALANCE SHEET DATA:		
Current assets	$ 3,187	$ 3,324
Property, plant and equipment, net	47,322	51,159
Total assets	$50,509	$54,483
Current liabilities	$ 970	$ 832
Other liabilities	2	2
Combined equity	49,537	53,649
Total liabilities and combined equity	$50,509	$54,483

	For the Year Ended December 31,		
	2007	2006	2005
INCOME STATEMENT DATA:			
Revenues	$19,844	$19,014	$16,849
Operating income	5,961	4,626	2,606
Net income	6,029	4,729	2,650

Note 12. Business Combinations

2007 Transactions

Our expenditures for business combination during the year ended December 31, 2007 were $35.8 million, which primarily reflect the $35.0 million we spent to acquire the South Monco natural gas pipeline business ("South Monco") in December 2007. This business includes approximately 128 miles of natural gas pipelines located in southeast Texas. The remaining business combination-related amounts for 2007 consist of purchase price adjustments to prior period transactions.

On a pro forma consolidated basis, our revenues, costs and expenses, operating income, net income and earnings per unit amounts would not have differed materially from those we actually reported for 2007 and 2006 due to immaterial nature of our 2007 business combination transactions.

Table of Contents

We accounted for our 2007 business combinations using the purchase method of accounting and, accordingly, such costs have been allocated to assets acquired and liabilities assumed based on estimated preliminary fair values. Such preliminary values have been developed using recognized business valuation techniques and are subject to change pending a final valuation analysis. We expect to finalize the purchase price allocations for these transactions during 2008.

	South Monco Acquisition	Other	Total
Assets acquired in business combination:			
Property, plant and equipment, net	$36,000	$ 8,386	$44,386
Intangible assets	—	(8,460)	(8,460)
Total assets acquired	36,000	(74)	35,926
Liabilities assumed in business combination:			
Other long-term liabilities	(1,000)	(244)	(1,244)
Total liabilities assumed	(1,000)	(244)	(1,244)

Total cash used for business combinations	35,000	793	35,793
Goodwill	$ —	$ 1,111	$ 1,111

2006 Transactions

Our expenditures for business combinations during the year ended December 31, 2006 were $276.5 million and primarily reflect the Encinal and Piceance Creek acquisitions described below.

Encinal Acquisition. In July 2006, we acquired the Encinal and Canales natural gas gathering systems and related gathering and processing contracts that comprised the South Texas natural gas transportation and processing business of an affiliate of Lewis Energy Group, L.P. ("Lewis"). The aggregate value of total consideration we paid or issued to complete this business combination (referred to as the "Encinal acquisition") was $326.3 million, which consisted of $145.2 million in cash and 7,115,844 of our common units.

The Encinal and Canales gathering systems are located in South Texas and are connected to over 1,450 natural gas wells producing from the Olmos and Wilcox formations. The Encinal system consists of 449 miles of pipeline, which is comprised of 277 miles of pipeline we acquired from Lewis in this transaction and 172 miles of pipeline that we own and had previously leased to Lewis. The Canales gathering system is comprised of 32 miles of pipeline. Currently, natural gas volumes gathered by the Encinal and Canales systems are transported by our existing Texas Intrastate System and are processed by our South Texas natural gas processing plants.

The Encinal and Canales gathering systems will be supported by a life of reserves gathering and processing dedication by Lewis related to its natural gas production from the Olmos formation. In addition, we entered into a 10-year agreement with Lewis for the transportation of natural gas treated at its proposed Big Reef facility. This facility will treat natural gas from the southern portion of the Edwards Trend in South Texas. We also entered into a 10-year agreement with Lewis for the gathering and processing of rich gas it produces from below the Olmos formation.

The total consideration we paid or granted to Lewis in connection with the Encinal acquisition is as follows:

Cash payment to Lewis	$ 145,197
Fair value of our 7,115,844 common units issued to Lewis	181,112
Total consideration	$ 326,309

In accordance with purchase accounting, the value of our common units issued to Lewis was based on the average closing price of such units immediately prior to and after the transaction was announced on July 12, 2006. For purposes of this calculation, the average closing price was $25.45 per unit.

Table of Contents

Since the closing date of the Encinal acquisition was July 1, 2006, our Statements of Consolidated Operations do not include any earnings from these assets prior to this date. Given the relative size of the Encinal acquisition to our other business combination transactions during 2006, the following table presents selected pro forma earnings information for the years ended December 31, 2006 and 2005 as if the Encinal acquisition had been completed on January 1, 2006 and 2005, respectively, instead of July 1, 2006. This information was prepared based on financial data available to us and reflects certain estimates and assumptions made by our management. Our pro forma financial information is not necessarily indicative of what our consolidated financial results would have been had the Encinal acquisition actually occurred on January 1, 2005. The amounts shown in the following table are in millions, except per unit amounts.

	For the Year Ended December 31,	
	2006	2005
Pro forma earnings data:		
Revenues	$14,066	$12,408
Costs and expenses	$13,228	$11,758
Operating income	$ 859	$ 664
Net income	$ 598	$ 418
Basic earnings per unit ("EPU"):		
Units outstanding, as reported	414	382
Units outstanding, pro forma	422	389
Basic EPU, as reported	$ 1.22	$ 0.91
Basic EPU, pro forma	$ 1.19	$ 0.89
Diluted EPU:		
Units outstanding, as reported	415	383
Units outstanding, pro forma	422	390
Diluted EPU, as reported	$ 1.22	$ 0.91
Diluted EPU, pro forma	$ 1.19	$ 0.89

Piceance Creek Acquisition. In December 2006, one of our affiliates, Enterprise Gas Processing, LLC, purchased a 100% interest in Piceance Creek Pipeline, LLC ("Piceance Creek"), for cash consideration of $100.0 million. Piceance Creek was wholly owned by EnCana Oil & Gas ("EnCana").

The assets of Piceance Creek consist of a recently constructed 48-mile natural gas gathering pipeline, the Piceance Creek Gathering System, located in the Piceance Basin of northwestern Colorado. The Piceance Creek Gathering System has a transportation capacity of 1.6 billion cubic feet per day ("Bcf/d") of natural gas and extends from a connection with EnCana's Great Divide Gathering System located near Parachute, Colorado, northward through the heart of the Piceance Basin to our 1.5 Bcf/d Meeker natural gas treating and processing complex. Connectivity to EnCana's Great Divide Gathering System will provide the Piceance Creek Gathering System with access to production from the southern portion of the Piceance basin, including production from EnCana's Mamm Creek field. The Piceance Creek Gathering System was placed in service in January 2007 and began transporting initial volumes of approximately 300 million cubic feet per day ("MMcf/d") of natural gas. Currently, we transport approximately 520 MMcf/d of natural gas volumes, with a significant portion of these volumes being produced by EnCana, one of the largest natural gas producers in the region. In conjunction with our acquisition of Piceance Creek, EnCana signed a long-term, fixed fee gathering agreement with us and dedicated significant production to the Piceance Creek Gathering System for the life of the associated lease holdings.

Other Transactions. In addition to the Encinal and Piceance Creek acquisitions, our business combinations during 2006 included the purchase of (i) an additional 8.2% ownership interest in Dixie for $12.9 million, (ii) all of the capital stock of an affiliated NGL marketing company located in Canada from related parties for $17.7 million (see Note 17) and (iii) a storage business in Flagstaff, Arizona for $0.7 million.

Table of Contents

2005 Transactions

Our expenditures for business combinations during the year ended December 31, 2005 were $326.6 million. In January 2005, we acquired indirect ownership interests in the Indian Springs Gathering System and Indian Springs natural gas processing plant for $74.9 million. In January and February 2005, we acquired an additional 46% of the ownership interests in Dixie for $68.6 million. In June 2005, we acquired additional indirect ownership interests in our Mid-America Pipeline System and Seminole Pipeline for $25.0 million. Also in June 2005, we acquired an additional 41.7% ownership interest in Belle Rose, which owns a NGL pipeline located in Louisiana, for $4.4 million. In July 2005, we purchased three underground NGL storage facilities and four propane terminals from Ferrellgas L.P. ("Ferrellgas") for $145.5 million in cash. Dixie and Belle Rose became consolidated subsidiaries of ours in 2005 as a result of our acquisition of additional ownership interests in these two entities.

Note 13. Intangible Assets and Goodwill

Identifiable Intangible Assets

The following table summarizes our intangible assets at the dates indicated:

	At December 31, 2007			At December 31, 2006		
	Gross Value	Accum. Amort.	Carrying Value	Gross Value	Accum. Amort.	Carrying Value
NGL Pipelines & Services:						
Shell Processing Agreement	$ 206,216	$ (78,252)	$127,964	$ 206,216	$ (67,204)	$ 139,012
Encinal gas processing customer relationship	127,119	(17,470)	109,649	127,119	(6,049)	121,070
STMA and GulfTerra NGL Business customer relationships	49,784	(17,537)	32,247	49,784	(12,980)	36,804
Pioneer gas processing contracts	37,752	(736)	37,016	37,752	—	37,752
Markham NGL storage contracts	32,664	(14,154)	18,510	32,664	(9,800)	22,864
Toca-Western contracts	31,229	(8,718)	22,511	31,229	(7,156)	24,073
Piceance Creek customer relationship	—	—	—	8,460	—	8,460
Other	35,261	(10,087)	25,174	35,370	(7,455)	27,915
Segment total	520,025	(146,954)	373,071	528,594	(110,644)	417,950
Onshore Natural Gas Pipelines & Services:						
San Juan Gathering System customer relationships	331,311	(73,087)	258,224	331,311	(52,318)	278,993
Petal & Hattiesburg natural gas storage contracts	100,499	(27,931)	72,568	100,499	(19,337)	81,162
Other	31,741	(8,381)	23,360	31,741	(5,747)	25,994
Segment total	463,551	(109,399)	354,152	463,551	(77,402)	386,149
Offshore Pipelines & Services:						
Offshore pipeline & platform customer relationships	205,845	(73,905)	131,940	205,845	(54,636)	151,209
Other	1,167	(49)	1,118	1,167	—	1,167
Segment total	207,012	(73,954)	133,058	207,012	(54,636)	152,376
Petrochemical Services:						
Mont Belvieu propylene fractionation contracts	53,000	(8,960)	44,040	53,000	(7,445)	45,555
Other	14,906	(2,227)	12,679	3,674	(1,749)	1,925
Segment total	67,906	(11,187)	56,719	56,674	(9,194)	47,480
Total all segments	$1,258,494	$(341,494)	$917,000	$1,255,831	$(251,876)	$1,003,955

We paid $11.2 million for certain air emission credits related to our Mont Belvieu complex in 2007. These items were recorded as intangible assets within our Petrochemical Services business segment.

The following table presents the amortization expense of our intangible assets by segment for the periods indicated:

	For the Year Ended December 31,		
	2007	2006	2005
NGL Pipelines & Services	$36,419	$31,159	$26,350
Onshore Natural Gas Pipelines & Services	31,997	33,447	35,080
Offshore Pipelines & Services	19,318	22,156	25,515
Petrochemical Services	1,993	1,993	1,993
Total all segments	$89,727	$88,755	$88,938

Based on information currently available, we estimate that amortization expense associated with existing intangible assets will approximate $86.3 million in 2008, $80.4 million in 2009, $75.8 million in 2010, $70.1 million in 2011 and $60.7 million in 2012.

In general, our intangible assets fall within two categories – contract-based intangible assets and customer relationships. Contract-based intangible assets represent commercial rights we acquired in connection with business combinations or asset purchases. Customer relationship intangible assets represent customer bases that we acquired in connection with business combinations and asset purchases. The values assigned to intangible assets are amortized to earnings using either (i) a straight-line approach or (ii) other methods that closely resemble the pattern in which the economic benefits of associated resource bases are estimated to be consumed or otherwise used, as appropriate.

We acquired $141.3 million of intangible assets during the year ended December 31, 2006, primarily attributable to customer relationships we acquired in connection with the Encinal acquisition. The $132.9 million of intangible assets we acquired in connection with the Encinal acquisition (see Note 12) represents the value we assigned to customer relationships, particularly the long-term relationship we now have with Lewis through natural gas processing and gathering arrangements. We recorded $127.1 million in our NGL Pipelines & Services segment associated with processing arrangements and $5.8 million in our Onshore Natural Gas Pipelines & Services segment associated with gathering arrangements. These intangible assets will be amortized to earnings over a 20-year life using methods that closely resemble the pattern in which we estimate the depletion of the underlying natural gas resources to occur.

We acquired numerous customer relationship and contract-based intangible assets in connection with the GulfTerra Merger. The customer relationship intangible assets represent the exploration and production, natural gas processing and NGL fractionation customer bases served by GulfTerra and the South Texas midstream assets at the time the merger was completed. The contract-based intangible assets represent the rights we acquired in connection with discrete contracts to provide storage services for natural gas and NGLs that GulfTerra had entered into prior to the merger.

The value we assigned to these customer relationships is being amortized to earnings using methods that closely resemble the pattern in which the economic benefits of the underlying oil and natural gas resource bases from which the customers produce are estimated to be consumed or otherwise used. Our estimate of the useful life of each resource base is based on a number of factors, including reserve estimates, the economic viability of production and exploration activities and other industry factors. This group of intangible assets primarily consists of the (i) Offshore Pipelines & Platforms customer relationships; (ii) San Juan Gathering System customer relationships; (iii) Texas Intrastate pipeline customer relationships; and (iv) STMA and GulfTerra NGL Business customer relationships.

The contract-based intangible assets we acquired in connection with the GulfTerra Merger are being amortized over the estimated useful life (or term) of each agreement, which we estimate to range from two to eighteen years. This group of intangible assets consists of the (i) Petal and Hattiesburg natural gas storage contracts and (ii) Markham NGL storage contracts.

The Shell Processing Agreement grants us the right to process Shell’s (or its assignee’s) current and future production within the state and federal waters of the Gulf of Mexico. We acquired this

Table of Contents

intangible asset in connection with our 1999 purchase of certain of Shell's midstream energy assets located along the Gulf Coast. The value of the Shell Processing Agreement is being amortized on a straight-line basis over the remainder of its initial 20-year contract term through 2019.

Goodwill

Goodwill represents the excess of the purchase price of an acquired business over the amounts assigned to assets acquired and liabilities assumed in the transaction. Goodwill is not amortized; however, it is subject to annual impairment testing. The following table summarizes our goodwill amounts by segment at the dates indicated:

	At December 31,	
	2007	**2006**
NGL Pipelines & Services		
GulfTerra Merger	$ 23,854	$ 23,854
Acquisition of Indian Springs natural gas processing business	13,162	13,162
Encinal acquisition	95,280	95,166
Other	21,410	20,413
Onshore Natural Gas Pipelines & Services		
GulfTerra Merger	279,956	279,956
Acquisition of Indian Springs natural gas gathering business	2,165	2,165
Offshore Pipelines & Services		
GulfTerra Merger	82,135	82,135
Petrochemical Services		
Acquisition of Mont Belvieu propylene fractionation business	73,690	73,690
Total	$591,652	$590,541

Goodwill recorded in connection with the GulfTerra Merger can be attributed to our belief (at the time the merger was consummated) that the combined partnerships would benefit from the strategic location of each partnership's assets and the industry relationships that each possessed. In addition, we expected that various operating synergies could develop (such as reduced general and administrative costs and interest savings) that would result in improved financial results for the merged entity. Based on miles of pipelines, GulfTerra was one of the largest natural gas gathering and transportation companies in the United States, serving producers in the central and western Gulf of Mexico and onshore in Texas and New Mexico. These regions offer us significant growth potential through the acquisition and construction of additional pipelines, platforms, processing and storage facilities and other midstream energy infrastructure.

In 2006, the only significant change in goodwill was the recording of $95.2 million in connection with our preliminary purchase price allocation for the Encinal acquisition. Management attributes this goodwill to potential future benefits we may realize from our other south Texas processing and NGL businesses as a result of acquiring the Encinal business. Specifically, our acquisition of the long-term dedication rights associated with the Encinal business is expected to add value to our south Texas processing facilities and related NGL businesses due to increased volumes. The Encinal goodwill is recorded as part of the NGL Pipelines & Services business segment due to management's belief that such future benefits will accrue to businesses classified within this segment.

The remainder of our goodwill amounts is associated with prior acquisitions, principally that of our purchase of a propylene fractionation business in February 2002 and our acquisition of indirect ownership interests in the Indian Springs natural gas gathering and processing business in January 2005.

Table of Contents

Note 14. Debt Obligations

Our consolidated debt obligations consisted of the following at the dates indicated:

	At December 31, 2007	At December 31, 2006
EPO senior debt obligations:		
Multi-Year Revolving Credit Facility, variable rate, due November 2012 (1)	$ 725,000	$ 410,000
Pascagoula MBFC Loan, 8.70% fixed-rate, due March 2010	54,000	54,000
Senior Notes B, 7.50% fixed-rate, due February 2011	450,000	450,000
Senior Notes C, 6.375% fixed-rate, due February 2013	350,000	350,000
Senior Notes D, 6.875% fixed-rate, due March 2033	500,000	500,000
Senior Notes E, 4.00% fixed-rate, due October 2007 (2)	—	500,000
Senior Notes F, 4.625% fixed-rate, due October 2009	500,000	500,000
Senior Notes G, 5.60% fixed-rate, due October 2014	650,000	650,000
Senior Notes H, 6.65% fixed-rate, due October 2034	350,000	350,000
Senior Notes I, 5.00% fixed-rate, due March 2015	250,000	250,000
Senior Notes J, 5.75% fixed-rate, due March 2035	250,000	250,000
Senior Notes K, 4.950% fixed-rate, due June 2010	500,000	500,000
Senior Notes L, 6.30% fixed-rate, due September 2017	800,000	—
Petal GO Zone Bonds, variable rate, due August 2034	57,500	—
Duncan Energy Partners' debt obligation:		
$300 Million Revolving Credit Facility, variable rate, due February 2011	200,000	—
Dixie Revolving Credit Facility, variable rate, due June 2010	10,000	10,000
Other, 8.75% fixed-rate, due June 2010 (3)	—	5,068
Total principal amount of senior debt obligations	5,646,500	4,779,068
EPO Junior Subordinated Notes A, due August 2066	550,000	550,000
EPO Junior Subordinated Notes B, due January 2068	700,000	—
Total principal amount of senior and junior debt obligations	6,896,500	5,329,068
Other, including unamortized discounts and premiums and changes in fair value (4)	9,645	(33,478)
Long-term debt	$6,906,145	$5,295,590
Standby letters of credit outstanding	$ 1,100	$ 49,858

(1) In November 2007, EPO executed an amended and restated revolving credit agreement governing its Multi-Year Revolving Credit Facility. This new credit agreement increases the capacity from $1.25 billion to $1.75 billion and extends the maturity date of amounts borrowed under EPO's Multi-Year Revolving Credit Facility from October 2011 to November 2012.

(2) In accordance with SFAS 6, "Classification of Short-Term Obligations Expected to be Refinanced," long-term and current maturities of debt reflects the classification of such obligations at December 31, 2006. With respect to Senior Notes E, EPO repaid this note in October 2007, using cash and available credit capacity under its then $1.25 billion Multi-Year Revolving Credit Facility.

(3) Represents remaining debt obligations assumed in connection with the GulfTerra Merger, which were redeemed in the fourth quarter of 2007.

(4) The December 31, 2007 amount includes an asset of $14.8 million related to fair value hedges offset by a net $5.2 million in unamortized discounts. The December 31, 2006 amount includes a liability of $29.1 million related to fair value hedges and a net $4.4 million in unamortized discounts.

Letters of credit

At December 31, 2007, we had $1.1 million of standby letters outstanding under Duncan Energy Partners' Revolving Credit Facility. At December 31, 2006, we had $49.9 million in standby letters of credit outstanding, all of which were issued under EPO's Multi-Year Revolving Credit Facility. As of February 1, 2008, our standby letters of credit outstanding were $1.1 million under Duncan Energy Partners' Revolving Credit Facility.

Parent-Subsidiary guarantor relationships

We act as guarantor of the debt obligations of EPO with the exception of the Dixie revolving credit facility and the senior subordinated notes we assumed in connection with the GulfTerra Merger. If EPO were to default on any debt we guarantee, we would be responsible for full repayment of that obligation. We do not act as guarantor of the debt obligations of Duncan Energy Partners.

EPO's senior indebtedness is structurally subordinated to and ranks junior in right of payment to the indebtedness of GulfTerra and Dixie. This subordination feature exists only to the extent that the repayment of debt incurred by GulfTerra and Dixie is dependent upon the assets and operations of these two entities. The Dixie revolving credit facility is an unsecured obligation of Dixie (of which we own 74.2% of its capital stock). The senior subordinated notes of GulfTerra are unsecured obligations of GulfTerra (of which we own 100% of its limited and general partnership interests).

EPO's debt obligations

Multi-Year Revolving Credit Facility. In November 2007, EPO executed an amended and restated Multi-Year Revolving Credit Facility totaling $1.75 billion, which replaced an existing $1.25 billion multi-year revolving credit agreement. Amounts borrowed under the amended and restated credit agreement mature in November 2012, although EPO is permitted, 30 to 60 days before the maturity date in effect, to convert the principal balance of the revolving loans then outstanding into a non-revolving, one-year term loan (the "term-out option"). There is no sublimit on the amount of standby letters of credit that can be outstanding under the amended facility. EPO's borrowings under this agreement are unsecured general obligations that are non-recourse to EPGP. We have guaranteed repayment of amounts due under this revolving credit agreement through an unsecured guarantee.

As defined by the credit agreement, variable interest rates charged under this facility bear interest at a Eurodollar rate plus an applicable margin. In addition, EPO is required to pay a quarterly facility fee on each lender's commitment irrespective of commitment usage.

The applicable margins will be increased by 0.100% per annum for each day that the total outstanding loans and letter of credit obligations under the facility exceeds fifty percent of the total lender commitments. Also, upon the conversion of the revolving loans to term loans pursuant to the term-out option described above, the applicable margin will increase by 0.125% per annum and, if immediately prior to such conversion, the total amount of outstanding loans and letter of credit obligations under the facility exceeds fifty percent of the total lender commitments, the applicable margin with respect to the term loans will increase by an additional 0.10% per annum.

EPO may increase the amount that may be borrowed under the facility, without the consent of the lenders, by an amount not exceeding $500.0 million by adding to the facility one or more new lenders and/or requesting that the commitments of existing lenders be increased, although none of the existing lenders has agreed to or is obligated to increase its existing commitment. EPO may request unlimited one-year extensions of the maturity date by delivering a written request to the administrative agent, but any such extension shall be effective only if consented to by the required lenders in their sole discretion.

The Multi-Year Revolving Credit Facility contains various covenants related to EPO's ability to incur certain indebtedness; grant certain liens; enter into certain merger or consolidation transactions; and make certain investments. The loan agreement also requires EPO to satisfy certain financial covenants at the end of each fiscal quarter. The credit agreement also restricts EPO's ability to pay cash distributions to us if a default or an event of default (as defined in the credit agreement) has occurred and is continuing at the time such distribution is scheduled to be paid.

Pascagoula MBFC Loan. In connection with the construction of our Pascagoula, Mississippi natural gas processing plant in 2000, EPO entered into a ten-year fixed-rate loan with the Mississippi Business Finance Corporation ("MBFC"). This loan is subject to a make-whole redemption right and is guaranteed by us through an unsecured and unsubordinated guarantee. The Pascagoula MBFC Loan contains certain covenants including the maintenance of appropriate levels of insurance on the Pascagoula facility.

The indenture agreement for this loan contains an acceleration clause whereby if EPO's credit rating by Moody's declines below Baa3 in combination with our credit rating at Standard & Poor's declining below BBB-, the $54 million principal balance of this loan, together with all accrued and unpaid interest, would become immediately due and payable 120 days following such event. If such an event occurred, we would have to either redeem the Pascagoula MBFC Loan or provide an alternative credit agreement to support our obligation under this loan.

Senior Notes B through L. These fixed-rate notes are unsecured obligations of EPO and rank equally with its existing and future unsecured and unsubordinated indebtedness. They are senior to any future subordinated indebtedness. EPO's borrowings under these notes are non-recourse to EPGP. We have guaranteed repayment of amounts due under these notes through an unsecured and unsubordinated guarantee. Our guarantee of such notes is non-recourse to EPGP. The Senior Notes are subject to make-whole redemption rights and were issued under indentures containing certain covenants, which generally restrict EPO's ability, with certain exceptions, to incur debt secured by liens and engage in sale and leaseback transactions.

EPO used net proceeds from its issuance of Senior Notes L to temporarily reduce indebtedness outstanding under its Multi-Year Revolving Credit Facility and for general partnership purposes. In October 2007, EPO used borrowing capacity under its Multi-Year Revolving Credit Facility to repay its $500.0 million Senior Notes E.

Petal GO Zone Bonds. In August 2007, Petal borrowed $57.5 million from the MBFC pursuant to a loan agreement and promissory note between Petal and the MBFC to pay a portion of the costs of certain natural gas storage facilities located in Petal, Mississippi. The promissory note between Petal and MBFC is guaranteed by EPO and supported by a letter of credit issued by Petal. On the same date, the MBFC issued $57.5 million in Gulf Opportunity Zone Tax-Exempt ("GO Zone") bonds to various third parties. A portion of the GO Zone bond proceeds are being held by a third party trustee and reflected as a component of other assets on our balance sheet. The remaining proceeds held by the trustee will be released to us as we spend capital to complete the construction of the natural gas storage facilities. At December 31, 2007, $17.9 million of the GO Zone bond proceeds remained held by the third party trustee. The promissory note and the GO Zone bonds have identical terms including floating interest rates and maturities of twenty-seven years. The bonds and the associated tax incentives are authorized under the Mississippi Business Finance Act and the Gulf Opportunity Zone Act of 2005.

Petal MBFC Loan. In August 2007, Petal Gas Storage L.L.C. ("Petal"), a wholly owned subsidiary of EPO, entered into a loan agreement and a promissory note with the MBFC under which Petal may borrow up to $29.5 million. On the same date, the MBFC issued taxable bonds to EPO in the maximum amount of $29.5 million. As of December 31, 2007, there was $8.9 million outstanding under the loan and the bonds. EPO will make advances on the bonds to the MBFC and the MBFC will in turn make identical advances to Petal under the promissory note. The promissory note and the taxable bonds have identical terms including fixed interest rates of 5.90% and maturities of fifteen years. The bonds and the associated tax incentives are authorized under the Mississippi Business Finance Act. Petal may prepay on the promissory note without penalty, and thus cause the bonds to be redeemed, any time after one year from their date of issue. The loan and bonds are netted in preparing our consolidated balance sheet, as well the related interest expense and income amounts are netted in preparing our consolidated income statement.

Junior Notes A. In the third quarter of 2006, EPO sold $550.0 million in principal amount of fixed/floating, unsecured, long-term subordinated notes due 2066 ("Junior Notes A"). EPO used the proceeds from this subordinated debt to temporarily reduce borrowings outstanding under its Multi-Year Revolving Credit Facility and for general partnership purposes. EPO's payment obligations under Junior Notes A are subordinated to all of its current and future senior indebtedness (as defined in the related indenture agreement). We guaranteed EPO's repayment of amounts due under Junior Notes A through an unsecured and subordinated guarantee.

The indenture agreement governing Junior Notes A allows EPO to defer interest payments on one or more occasions for up to ten consecutive years, subject to certain conditions. The indenture agreement also provides that, unless (i) all deferred interest on Junior Notes A has been paid in full as of the most recent interest payment date, (ii) no event of default under the indenture agreement has occurred and is continuing and (iii) we are not in default of our obligations under related guarantee agreements, neither we nor EPO cannot declare or make any distributions to any of our respective equity securities or make any

Table of Contents

payments on indebtedness or other obligations that rank pari passu with or are subordinated to the Junior Notes A.

The Junior Notes A bear interest at a fixed annual rate of 8.375% from July 2006 to August 2016, payable semi-annually in arrears in February and August of each year, which commenced in February 2007. After August 2016, the Junior Notes A will bear variable rate interest at an annual rate equal to the 3-month LIBOR rate for the related interest period plus 3.708%, payable quarterly in arrears in February, May, August and November of each year commencing in November 2016. Interest payments may be deferred on a cumulative basis for up to ten consecutive years, subject to the certain provisions. The Junior Notes A mature in August 2066 and are not redeemable by EPO prior to August 2016 without payment of a make-whole premium.

In connection with the issuance of Junior Notes A, EPO entered into a Replacement Capital Covenant in favor of the covered debt holders (as defined in the underlying documents) pursuant to which EPO agreed for the benefit of such debt holders that it would not redeem or repurchase such junior notes unless such redemption or repurchase is made using proceeds from the of issuance of certain securities.

Junior Notes B. EPO sold $700 million in principal amount of fixed/floating, unsecured, long-term subordinated notes due January 2068 ("Junior Notes B") during the second quarter of 2007. EPO used the proceeds from this subordinated debt to temporarily reduce borrowings outstanding under its Multi-Year Revolving Credit Facility and for general partnership purposes. EPO's payment obligations under Junior Notes B are subordinated to all of its current and future senior indebtedness (as defined in the Indenture Agreement). We have guaranteed repayment of amounts due under Junior Notes B through an unsecured and subordinated guarantee.

The indenture agreement governing Junior Notes B allows EPO to defer interest payments on one or more occasions for up to ten consecutive years subject to certain conditions. During any period in which interest payments are deferred and subject to certain exceptions, neither we nor EPO can declare or make any distributions to any of our respective equity securities or make any payments on indebtedness or other obligations that rank pari passu with or are subordinate to Junior Notes B. Junior Notes B rank pari passu with Junior Notes A.

The Junior Notes B will bear interest at a fixed annual rate of 7.034% through January 15, 2018, payable semi-annually in arrears in January and July of each year, commencing in January 2008. After January 2018, the Junior Notes B will bear variable rate interest at the greater of (1) the sum of the 3-month LIBOR for the related interest period plus a spread of 268 basis points or (2) 7.034% per annum, payable quarterly in arrears in January, April, July and October of each year commencing in April 2018. Interest payments may be deferred on a cumulative basis for up to ten consecutive years, subject to certain provisions. The Junior Notes B mature in January 2068 and are not redeemable by EPO prior to January 2018 without payment of a make-whole premium.

In connection with the issuance of Junior Notes B, we and EPO entered into a Replacement Capital Covenant in favor of the covered debt holders (as named therein) pursuant to which we and EPO agreed for the benefit of such debt holders that neither we nor EPO would redeem or repurchase such junior notes on or before January 15, 2038, unless such redemption or repurchase is made from the proceeds of issuance of certain securities.

Duncan Energy Partners' debt obligation

We consolidate the debt of Duncan Energy Partners with that of our own; however, we do not have the obligation to make interest payments or debt payments with respect to the debt of Duncan Energy Partners.

Duncan Energy Partners entered into a $300.0 million revolving credit facility, all of which may be used for letters of credit, with a $30.0 million sublimit for Swingline loans. Letters of credit outstanding under this facility reduce the amount available for borrowings. At the closing of its initial public offering, Duncan Energy Partners made its initial borrowing of $200.0 million under the facility to fund a $198.9 million cash distribution to EPO and the remainder to pay debt issuance costs. At December 31, 2007, the principal balance outstanding under this facility was $200.0 million.

This credit facility matures in February 2011 and will be used by Duncan Energy Partners in the future to fund working capital and other capital requirements and for general partnership purposes. Duncan Energy Partners may make up to two requests for one-year extensions of the maturity date (subject to certain restrictions). The revolving credit facility is available to pay distributions upon the initial contribution of assets to Duncan Energy Partners, fund working capital, make acquisitions and provide payment for general purposes. Duncan Energy Partners can increase the revolving credit facility, without consent of the lenders, by an amount not to exceed $150.0 million by adding to the facility one or more new lenders and/or increasing the commitments of existing lenders. No existing lender is required to increase its commitment, unless it agrees to do so in its sole discretion.

This revolving credit facility offers the following unsecured loans, each having different interest requirements: (i) LIBOR loans bear interest at a rate per annum equal to LIBOR plus the applicable LIBOR margin (as defined in the credit agreement), (ii) Base Rate loans bear interest at a rate per annum equal to the higher of (a) the rate of interest publicly announced by the administrative agent, Wachovia Bank, National Association, as its Base Rate and (b) 0.5% per annum above the Federal Funds Rate in effect on such date and (iii) Swingline loans bear interest at a rate per annum equal to LIBOR plus an applicable LIBOR margin.

The Duncan Energy Partners' credit facility contains certain financial and other customary covenants. Also, if an event of default exists under the credit agreement, the lenders will be able to accelerate the maturity date of amounts borrowed under the credit agreement and exercise other rights and remedies.

Dixie Revolving Credit Facility

As a result of acquiring a controlling interest in Dixie in February 2005, we began consolidating the financial statements of Dixie with those of our own. In accordance with GAAP, we consolidate the debt of Dixie with that of our own; however we do not have the obligation to make interest or debt payments with respect to Dixie's debt. Dixie's debt obligations consist of a senior, unsecured revolving credit facility having a borrowing capacity of $28.0 million. The maturity date of this facility was extended from June 2007 to June 2010 in August 2006.

As defined in the Dixie credit agreement, variable interest rates charged under this facility generally bear interest, at our election at the time of each borrowing, at either (i) a Eurodollar rate plus an applicable margin or (ii) the greater of (a) the Prime Rate or (b) the Federal Funds Rate plus $^1/_2$%.

The credit agreement contains various covenants related to Dixie's ability to incur certain indebtedness; grant certain liens; enter into merger transactions; and make certain investments. The loan agreement also requires Dixie to satisfy a minimum net worth financial covenant. The revolving credit agreement restricts Dixie's ability to pay cash dividends to us and its other stockholders if a default or an event of default (as defined in the credit agreement) has occurred and its continuing at the time such dividend is scheduled to be paid.

Canadian Debt Obligations

In May 2007, Canadian Enterprise Gas Products, Ltd. ("Canadian Enterprise"), a wholly-owned subsidiary of EPO, entered into a $30.0 million Canadian revolving credit facility with The Bank of Nova Scotia. The credit facility, which includes the issuance of letters of credit, matures in October 2011. Letters of credit outstanding under this facility reduce the amount available for borrowings.

Borrowings may be made in Canadian or U.S. dollars. Canadian denominated borrowings may be comprised of Canadian Prime Rate ("CPR") loans or Bankers' Acceptances and U.S. denominated borrowings may be comprised of Alternative Base Rate ("ABR") or Eurodollar loans, each having different interest rate requirements. CPR loans bear interest at a rate determined by reference to the Canadian Prime Rate. ABR loans bear interest at a rate determined by reference to an alternative base rate as defined in the credit agreement. Eurodollar loans bear interest at a rate determined by the LIBOR plus an applicable rate as defined in the credit agreement. Bankers' Acceptances carry interest at the rate for Canadian bankers' acceptances plus an applicable rate as defined in the credit agreement.

The credit facility contains customary covenants and events of default. The restrictive covenants limit Canadian Enterprise from materially changing the nature of its business or operations, dissolving, or completing mergers. A continuing event of default would accelerate the maturity of amounts borrowed under the credit facility. The obligations under the credit facility are guaranteed by EPO. As of December 31, 2007, there were no debt obligations outstanding under this credit facility.

Covenants

We are in compliance with the covenants of our consolidated debt agreements at December 31, 2007 and 2006.

Information regarding variable interest rates paid

The following table shows the range of interest rates paid and weighted-average interest rate paid on our consolidated variable-rate debt obligations during the year ended December 31, 2007.

	Range of interest rates paid	Weighted-average interest rate paid
EPO's Multi-Year Revolving Credit Facility	5.10% to 8.25%	5.78%
Duncan Energy Partners' Revolving Credit Facility	5.52% to 6.42%	6.23%
Dixie Revolving Credit Facility	5.50% to 5.67%	5.63%
Canadian Enterprise Revolving Credit Facility	5.01% to 5.82%	5.68%
Petal GO Zone Bonds	3.11% to 4.15%	3.56%

Consolidated debt maturity table

The following table presents the scheduled maturities of principal amounts of our debt obligations for the next five years and in total thereafter.

2008	$ —
2009	500,000
2010	591,840
2011	650,000
2012	697,160
Thereafter	4,457,500
Total scheduled principal payments	$6,896,500

In accordance with SFAS 6, long-term and current maturities of debt reflect the classification of such obligations at December 31, 2006. With respect to the $500.0 million in principal that was due under Senior Notes E in October 2007, EPO repaid this note in October 2007 using cash and available credit capacity under its Multi-Year Revolving Credit Facility. The preceding table and our Consolidated Balance Sheet at December 31, 2006 reflect this ability to refinance.

Debt Obligations of Unconsolidated Affiliates

We have two unconsolidated affiliates with long-term debt obligations. The following table shows (i) our ownership interest in each entity at December 31, 2007, (ii) total debt of each unconsolidated affiliate at December 31, 2007 (on a 100% basis to the affiliate) and (iii) the corresponding scheduled maturities of such debt.

	Our Ownership Interest	Total	Scheduled Maturities of Debt					
			2008	2009	2010	2011	2012	After 2012
Poseidon	36%	$ 91,000	$ —	$ —	$ —	$91,000	$—	$—
Evangeline	49.5%	20,650	5,000	5,000	10,650	—	—	—
Total		$111,650	$5,000	$5,000	$10,650	$91,000	$—	$—

The credit agreements of our unconsolidated affiliates contain various affirmative and negative covenants, including financial covenants. These businesses were in compliance with such covenants at December 31, 2007. The credit agreements of our unconsolidated affiliates restrict their ability to pay cash dividends if a default or an event of default (as defined in each credit agreement) has occurred and is continuing at the time such dividend is scheduled to be paid. Cameron Highway repaid its debt obligations during the second quarter of 2007 using pro rata capital contributions from EPO and its joint venture partner in Cameron Highway.

The following information summarizes significant terms of the debt obligations of our unconsolidated affiliates at December 31, 2007:

Poseidon. Poseidon has $91.0 million outstanding under its $150.0 million revolving credit facility that matures in May 2011. Interest rates charged under this revolving credit facility are variable and depend on the ratio of Poseidon’s total debt to its earnings before interest, taxes, depreciation and amortization. This credit agreement is secured by substantially all of Poseidon’s assets. The variable interest rates charged on this debt at December 31, 2007 and 2006 were 6.62% and 6.68%, respectively.

Evangeline. At December 31, 2007, short and long-term debt for Evangeline consisted of (i) $13.2 million in principal amount of 9.90% fixed-rate Series B senior secured notes due December 2010 and (ii) a $7.5 million subordinated note payable. The Series B senior secured notes are collateralized by Evangeline’s property, plant and equipment; proceeds from a gas sales contract; and by a debt service reserve requirement. Scheduled principal repayments on the Series B notes are $5.0 million annually through 2009 with a final repayment in 2010 of approximately $3.2 million. The trust indenture governing the Series B notes contains covenants such as requirements to maintain certain financial ratios.

Evangeline incurred the subordinated note payable as a result of its acquisition of a contract-based intangible asset in the 1990s. This note is subject to a subordination agreement which prevents the repayment of principal and accrued interest on the note until such time as the Series B noteholders are either fully cash secured through debt service accounts or have been completely repaid. Variable rate interest accrues on the subordinated note at a Eurodollar rate plus $^{1}/_{2}$%. The variable interest rates charged on this note at December 31, 2007 and 2006 were 5.88% and 6.08%, respectively. Accrued interest payable related to the subordinated note was $9.1 million and $7.9 million at December 31, 2007 and 2006, respectively.

Note 15. Partners’ Equity and Distributions

Our common units represent limited partner interests, which give the holders thereof the right to participate in distributions and to exercise the other rights or privileges available to them under our Fifth Amended and Restated Agreement of Limited Partnership (together with all amendments thereto, the "Partnership Agreement"). We are managed by our general partner, EPGP.

In accordance with the Partnership Agreement, capital accounts are maintained for our general partner and limited partners. The capital account provisions of our Partnership Agreement incorporate principles established for U.S. Federal income tax purposes and are not comparable to the equity accounts reflected under GAAP in our consolidated financial statements.

Our Partnership Agreement sets forth the calculation to be used in determining the amount and priority of cash distributions that our limited partners and general partner will receive. The Partnership Agreement also contains provisions for the allocation of net earnings and losses to our limited partners and general partner. For purposes of maintaining partner capital accounts, the Partnership Agreement specifies that items of income and loss shall be allocated among the partners in accordance with their respective percentage interests. Normal income and loss allocations according to percentage interests are done only after giving effect to priority earnings allocations in an amount equal to incentive cash distributions allocated to our general partner.

In August 2005, we revised our Partnership Agreement to allow EPGP, at its discretion, to elect not to make its proportionate capital contributions to us in connection with our issuance of limited partner interests, in which case its 2% general partner interest would be proportionately reduced. At the time of such offerings, EPGP has historically contributed cash to us to maintain its 2% general partner interest. EPGP made such cash contributions to us during the years ended December 31, 2007 and 2006. If EPGP exercises this option in the future, the amount of earnings we allocate to it and the cash distributions it receives from us will be reduced accordingly. If this occurs, EPGP can, under certain conditions, restore its full 2% general partner interest by making additional cash contributions to us.

Equity offerings and registration statements

In general, the Partnership Agreement authorizes us to issue an unlimited number of additional limited partner interests and other equity securities for such consideration and on such terms and conditions as may be established by EPGP in its sole discretion (subject, under certain circumstances, to the approval of our unitholders).

In August 2007, we filed a universal shelf registration statement with the SEC that allows us to issue an unlimited amount of debt and equity securities.

During 2003, we instituted a distribution reinvestment plan ("DRIP"). In April 2007, we filed a registration statement with the SEC authorizing the issuance of up to 25,000,000 common units in connection with the DRIP. The DRIP provides unitholders of record and beneficial owners of our common units a voluntary means by which they can increase the number of common units they own by reinvesting the quarterly cash distributions they would otherwise receive into the purchase of additional common units. A total of 16,102,737 common units have been issued under this registration statement through December 31, 2007.

We also have a registration statement on file related to our employee unit purchase plan, under which we can issue up to 1,200,000 common units. Under this plan, employees of EPCO can purchase our common units at a 10% discount through payroll deductions. A total of 495,661 common units have been issued to employees under this plan through December 31, 2007.

The following table reflects the number of common units issued and the net proceeds received from underwritten and other common unit offerings completed during the years ended December 31, 2007, 2006 and 2005:

Table of Contents

	Net Proceeds from Sale of Common Units			
	Number of common units issued	Contributed by Limited Partners	Contributed by General Partner	Total Net Proceeds
Fiscal 2005:				
Underwritten offerings	21,250,000	$544,347	$11,109	$555,456
Other offerings, primarily DRIP	2,729,740	68,269	1,393	69,662
Total 2005	23,979,740	$612,616	$12,502	$625,118
Fiscal 2006:				
Underwritten offerings	31,050,000	$735,819	$15,003	$750,822
Other offerings, primarily DRIP	3,774,649	95,006	1,940	96,946
Total 2006	34,824,649	$830,825	$16,943	$847,768
Fiscal 2007:				
Other offerings, primarily DRIP	2,056,615	$ 60,445	$ 1,232	$ 61,677
Total 2007	2,056,615	$ 60,445	$ 1,232	$ 61,677

Other offerings primarily represent the issuance of common units under our distribution reinvestment plan. Net proceeds received from our underwritten offerings completed during 2005 were generally used to repay an interim credit facility related to the GulfTerra Merger and to temporarily reduce borrowings outstanding under EPO’s Multi-Year Revolving Credit Facility. Net proceeds from our other offerings were used for general partnership purposes.

Net proceeds received from our underwritten and other offerings completed during 2006 were used to temporarily reduce borrowings outstanding under EPO’s Multi-Year Revolving Credit Facility and for general partnership purposes.

Net proceeds received from our other offerings completed during 2007 were used to temporarily reduce borrowings outstanding under EPO’s Multi-Year Revolving Credit Facility and for general partnership purposes.

Summary of Changes in Outstanding Units

The following table summarizes changes in our outstanding units since December 31, 2004:

	Common Units	Restricted Common Units	Treasury Units
Balance, December 31, 2004	364,297,340	488,525	427,200
Units issued in connection with underwritten offerings	21,250,000	—	—
Units issued in connection with other offerings	2,729,740	—	—
Units issued in connection with equity-based awards	826,000	362,011	—
Forfeiture of restricted units	—	(92,448)	—
Conversion of restricted units to common units	6,484	(6,484)	—
Cancellation of treasury units	—	—	(427,200)
Balance, December 31, 2005	389,109,564	751,604	—
Units issued in connection with underwritten offerings	31,050,000	—	—
Units issued in connection with other offerings	3,774,649	—	—
Units issued in connection with equity-based awards	211,000	466,400	—
Forfeiture of restricted units	—	(70,631)	—
Conversion of restricted units to common units	42,136	(42,136)	—
Units issued in connection with Encinal acquisition	7,115,844	—	—
Balance, December 31, 2006	431,303,193	1,105,237	—
Units issued in connection with other offerings	2,056,615	—	—
Units issued in connection with equity-based awards	244,071	738,040	—
Forfeiture or settlement of restricted units	—	(149,853)	—
Conversion of restricted units to common units	4,884	(4,884)	—
Balance, December 31, 2007	433,608,763	1,688,540	—

Treasury Units. In 2000, we and a consolidated trust (the "1999 Trust") were authorized by EPGP to repurchase up to 2,000,000 publicly-held common units under an announced buy-back program. The repurchases would be made during periods of temporary market weakness at price levels that would be accretive to our remaining unitholders. After deducting for repurchases under the program in prior periods, we and the 1999 Trust could repurchase up to 618,400 common units at December 31, 2005. We cancelled our 427,200 treasury units in 2005.

Summary of Changes in Limited Partners' Equity

The following table details the changes in limited partners' equity since December 31, 2004:

	Common units	Restricted Common units	Total
Balance, December 31, 2004	$5,204,940	$ 12,327	$5,217,267
Net income	347,948	564	348,512
Operating leases paid by EPCO	2,067	3	2,070
Cash distributions to partners	(629,629)	(931)	(630,560)
Unit option reimbursements to EPCO	(9,199)	—	(9,199)
Net proceeds from sales of common units	612,616	—	612,616
Proceeds from exercise of unit options	21,374	—	21,374
Issuance of restricted units	—	9,478	9,478
Vesting of restricted units	143	(143)	—
Forfeiture of restricted units	—	(2,663)	(2,663)
Amortization of equity-based awards	1,355	3	1,358
Cancellation of treasury units	(8,915)	—	(8,915)
Balance, December 31, 2005	5,542,700	18,638	5,561,338
Net income	502,969	1,187	504,156
Operating leases paid by EPCO	2,062	5	2,067
Cash distributions to partners	(738,004)	(1,628)	(739,632)
Unit option reimbursements to EPCO	(1,818)	—	(1,818)
Net proceeds from sales of common units	830,825	—	830,825
Common units issued in connection with Encinal acquisition	181,112	—	181,112
Proceeds from exercise of unit options	5,601		5,601
Amortization of equity-based awards	2,209	6,073	8,282
Change in accounting method for equity Awards (see Note 5)	(896)	(14,919)	(15,815)
Acquisition-related disbursement of cash	(6,183)	(16)	(6,199)
Balance, December 31, 2006	6,320,577	9,340	6,329,917
Net income	416,323	1,405	417,728
Operating leases paid by EPCO	2,056	7	2,063
Cash distributions to partners	(831,155)	(2,638)	(833,793)
Unit option reimbursements to EPCO	(2,999)	—	(2,999)
Net proceeds from sales of common units	60,445	—	60,445
Proceeds from exercise of unit options	7,549	—	7,549
Repurchase of restricted units and options	(512)	(1,056)	(1,568)
Amortization of equity-based awards	4,663	8,890	13,553
Balance, December 31, 2007	$5,976,947	$ 15,948	$5,992,895

In October 2006, we acquired all of the capital stock of an affiliated NGL marketing company located in Canada from EPCO and Dan L. Duncan for $17.7 million in cash. The amount we paid for this business exceeded the carrying values of the assets acquired and liabilities assumed from this related party (which is under common control with us) by $6.3 million, of which $6.2 million was allocated to limited partners and $0.1 million to our general partner. The excess of the acquisition price over the net book value of this business at the time of acquisition is treated as a deemed distribution to our owners and presented as an "Acquisition-related disbursement of cash" in our Statement of Partners' Equity for the year ended December 31, 2006. The total purchase price is a component of "Cash used for business combinations" as presented in our Statement of Consolidated Cash Flows for the year ended December 31, 2006 (see Note 12).

Table of Contents

Distributions to Partners

The percentage interest of EPGP in our quarterly cash distributions is increased after certain specified target levels of quarterly distribution rates are met. At current distribution rates, we are in the highest tier of such incentive targets. EPGP's quarterly incentive distribution thresholds are as follows:

- 2% of quarterly cash distributions up to $0.253 per unit;
- 15% of quarterly cash distributions from $0.253 per unit up to $0.3085 per unit; and
- 25% of quarterly cash distributions that exceed $0.3085 per unit.

We paid incentive distributions of $107.4 million, $86.7 million and $63.9 million to EPGP during the years ended December 31, 2007, 2006 and 2005, respectively.

The following table presents our declared quarterly cash distribution rates per unit since the first quarter of 2006 and the related record and distribution payment dates. The quarterly cash distribution rates per unit correspond to the fiscal quarters indicated. Actual cash distributions are paid within 45 days after the end of such fiscal quarter.

	Distribution per Unit	Record Date	Payment Date
2006			
1st Quarter	$0.4450	Apr. 28, 2006	May 10, 2006
2nd Quarter	$0.4525	Jul. 31, 2006	Aug. 10, 2006
3rd Quarter	$0.4600	Oct. 31, 2006	Nov. 8, 2006
4th Quarter	$0.4675	Jan. 31, 2007	Feb. 8, 2007
2007			
1st Quarter	$0.4750	Apr. 30, 2007	May 10, 2007
2nd Quarter	$0.4825	Jul. 31, 2007	Aug. 9, 2007
3rd Quarter	$0.4900	Oct. 31, 2007	Nov. 8, 2007
4th Quarter	$0.5000	Jan. 31, 2008	Feb. 7, 2008

Accumulated Other Comprehensive Income

The following table presents the components of accumulated other comprehensive income at the dates indicated:

	At December 31, 2007	At December 31, 2006
Commodity financial instruments (1)	$(21,619)	$ (3,622)
Interest rate financial instruments (1)	34,980	26,034
Foreign currency hedges (1)	1,308	—
Foreign currency translation adjustment (1)	1,200	(807)
Pension and postretirement benefit plans (2)	588	(464)
Total accumulated other comprehensive income	$ 16,457	$21,141

(1) See Note 2 for additional information regarding these components of accumulated other comprehensive income.

(2) See Note 6 for additional information regarding pension and postretirement benefit plans.

Note 16. Business Segments

We have four reportable business segments: NGL Pipelines & Services; Onshore Natural Gas Pipelines & Services; Offshore Pipelines & Services; and Petrochemical Services. Our business segments are generally organized and managed according to the type of services rendered (or technologies employed) and products produced and/or sold.

We evaluate segment performance based on the non-GAAP financial measure of gross operating margin. Gross operating margin (either in total or by individual segment) is an important performance measure of the core profitability of our operations. This measure forms the basis of our internal financial reporting and is used by senior management in deciding how to allocate capital resources among business segments. We believe that investors benefit from having access to the same financial measures that our management uses in evaluating segment results. The GAAP financial measure most directly comparable to total segment gross operating margin is operating income. Our non-GAAP financial measure of total segment gross operating margin should not be considered an alternative to GAAP operating income.

We define total segment gross operating margin as consolidated operating income before: (i) depreciation, amortization and accretion expense; (ii) operating lease expenses for which we do not have the payment obligation; (iii) gains and losses on the sale of assets; and (iv) general and administrative costs. Gross operating margin is exclusive of other income and expense transactions, provision for income taxes, minority interest, extraordinary charges and the cumulative effect of change in accounting principle. Gross operating margin by segment is calculated by subtracting segment operating costs and expenses (net of the adjustments noted above) from segment revenues, with both segment totals before the elimination of intersegment and intrasegment transactions.

Segment revenues include intersegment and intrasegment transactions, which are generally based on transactions made at market-related rates. Our consolidated revenues reflect the elimination of intercompany (both intersegment and intrasegment) transactions.

We include equity earnings from unconsolidated affiliates in our measurement of segment gross operating margin and operating income. Our equity investments with industry partners are a vital component of our business strategy. They are a means by which we conduct our operations to align our interests with those of our customers and/or suppliers. This method of operation enables us to achieve favorable economies of scale relative to the level of investment and business risk assumed versus what we could accomplish on a stand-alone basis. Many of these businesses perform supporting or complementary roles to our other business operations.

Our integrated midstream energy asset system (including the midstream energy assets of our equity method investees) provides services to producers and consumers of natural gas, NGLs, crude oil and certain petrochemicals. In general, hydrocarbons enter our asset system in a number of ways, such as an offshore natural gas or crude oil pipeline, an offshore platform, a natural gas processing plant, an onshore natural gas gathering pipeline, an NGL fractionator, an NGL storage facility, or an NGL transportation or distribution pipeline.

Many of our equity investees are included within our integrated midstream asset system. For example, we have ownership interests in several offshore natural gas and crude oil pipelines. Other examples include our use of the Promix NGL fractionator to process mixed NGLs extracted by our gas plants. The fractionated NGLs we receive from Promix can then be sold in our NGL marketing activities. Given the integral nature of our equity method investees to our operations, we believe the presentation of earnings from such investees as a component of gross operating margin and operating income is meaningful and appropriate.

Historically, substantially all of our consolidated revenues were earned in the United States and derived from a wide customer base. The majority of our plant-based operations are located in Texas, Louisiana, Mississippi, New Mexico and Wyoming. Our natural gas, NGL and crude oil pipelines are located in a number of regions of the United States including (i) the Gulf of Mexico offshore Texas and Louisiana; (ii) the south and southeastern United States (primarily in Texas, Louisiana, Mississippi and Alabama); and (iii) certain regions of the central and western United States, including the Rocky Mountains. Our marketing activities are headquartered in Houston, Texas and serve customers in a number of regions of the United States including the Gulf Coast, West Coast and Mid-Continent areas.

Consolidated property, plant and equipment and investments in and advances to unconsolidated affiliates are assigned to each segment on the basis of each asset's or investment's principal operations.

Table of Contents

The principal reconciling difference between consolidated property, plant and equipment and the total value of segment assets is construction-in-progress. Segment assets represent the net book carrying value of facilities and other assets that contribute to gross operating margin of that particular segment. Since assets under construction generally do not contribute to segment gross operating margin, such assets are excluded from segment asset totals until they are placed in service. Consolidated intangible assets and goodwill are assigned to each segment based on the classification of the assets to which they relate.

We consolidate the financial statements of Duncan Energy Partners with those of our own. As a result, our consolidated gross operating margin amounts include the gross operating margin amounts of Duncan Energy Partners on a 100% basis.

The following table shows our measurement of total segment gross operating margin for the periods indicated:

		For the Year Ended December 31,		
		2007	2006	2005
Revenues (1)		$ 16,950,125	$ 13,990,969	$ 12,256,959
Less:	Operating costs and expenses (1)	(16,009,051)	(13,089,091)	(11,546,225)
Add:	Equity in income of unconsolidated affiliates (1)	29,658	21,565	14,548
	Depreciation, amortization and accretion in operating costs and expenses (2)	513,840	440,256	413,441
	Operating lease expenses paid by EPCO (2)	2,105	2,109	2,112
	Loss (gain) on sale of assets in operating costs and expenses (2)	5,391	(3,359)	(4,488)
Total segment gross operating margin		$ 1,492,068	$ 1,362,449	$ 1,136,347

(1) These amounts are taken from our Statements of Consolidated Operations.

(2) These non-cash expenses are taken from the operating activities section of our Statements of Consolidated Cash Flows.

A reconciliation of our total segment gross operating margin to operating income and income before provision for income taxes, minority interest and the cumulative effect of changes in accounting principles follows:

	For the Year Ended December 31,		
	2007	2006	2005
Total segment gross operating margin	$1,492,068	$1,362,449	$1,136,347
Adjustments to reconcile total segment gross operating margin to operating income:			
Depreciation, amortization and accretion in operating costs and expenses	(513,840)	(440,256)	(413,441)
Operating lease expense paid by EPCO	(2,105)	(2,109)	(2,112)
Gain (loss) on sale of assets in operating costs and expenses	(5,391)	3,359	4,488
General and administrative costs	(87,695)	(63,391)	(62,266)
Consolidated operating income	883,037	860,052	663,016
Other expense, net	(303,463)	(229,967)	(225,178)
Income before provision for income taxes, minority interest and cumulative effect of change in accounting principle	$ 579,574	$ 630,085	$ 437,838

Information by segment, together with reconciliations to our consolidated totals, is presented in the following table:

	Reportable Segments					
	NGL Pipelines & Services	Onshore Natural Gas Pipelines & Services	Offshore Pipelines & Services	Petrochemical Services	Adjustments and Eliminations	Consolidated Totals
Revenues from third parties:						
Year ended December 31, 2007	$12,101,715	$1,788,219	$ 222,642	$2,184,833	$ —	$16,297,409
Year ended December 31, 2006	10,079,534	1,407,872	144,065	1,956,268	—	13,587,739
Year ended December 31, 2005	9,006,730	1,185,577	110,100	1,587,037	—	11,889,444
Revenues from related parties:						
Year ended December 31, 2007	369,654	281,876	1,169	17	—	652,716
Year ended December 31, 2006	110,409	291,023	1,798	—	—	403,230
Year ended December 31, 2005	16,689	350,025	696	105	—	367,515
Intersegment and intrasegment revenues:						
Year ended December 31, 2007	5,346,571	191,741	1,959	514,852	(6,055,123)	—
Year ended December 31, 2006	4,131,776	113,132	1,679	383,754	(4,630,341)	—
Year ended December 31, 2005	3,334,763	41,576	1,353	346,458	(3,724,150)	—
Total revenues:						
Year ended December 31, 2007	17,817,940	2,261,836	225,770	2,699,702	(6,055,123)	16,950,125
Year ended December 31, 2006	14,321,719	1,812,027	147,542	2,340,022	(4,630,341)	13,990,969
Year ended December 31, 2005	12,358,182	1,577,178	112,149	1,933,600	(3,724,150)	12,256,959
Equity in income of unconsolidated affiliates:						
Year ended December 31, 2007	6,031	9,540	12,628	1,459	—	29,658
Year ended December 31, 2006	5,715	2,872	11,909	1,069	—	21,565
Year ended December 31, 2005	5,553	2,384	6,125	486	—	14,548
Gross operating margin by individual business segment and in total:						
Year ended December 31, 2007	812,521	335,683	171,551	172,313	—	1,492,068
Year ended December 31, 2006	752,548	333,399	103,407	173,095	—	1,362,449
Year ended December 31, 2005	579,706	353,076	77,505	126,060	—	1,136,347
Segment assets:						
At December 31, 2007	4,570,555	3,702,297	1,452,568	687,856	1,173,988	11,587,264
At December 31, 2006	3,249,486	3,611,974	734,659	502,345	1,734,083	9,832,547
Investments in and advances to unconsolidated affiliates (see Note 11):						
At December 31, 2007	117,089	239,327	484,588	17,335	—	858,339
At December 31, 2006	111,229	124,591	310,136	18,603	—	564,559
Intangible Assets (see Note 13):						
At December 31, 2007	373,071	354,152	133,058	56,719	—	917,000
At December 31, 2006	417,950	386,149	152,376	47,480	—	1,003,955
Goodwill (see Note 13):						
At December 31, 2007	153,706	282,121	82,135	73,690	—	591,652
At December 31, 2006	152,595	282,121	82,135	73,690	—	590,541

In general, our historical operating results and/or financial position have been affected by business combinations and other acquisitions. The operating results of entities and assets we acquire are included in our financial results prospectively from their purchase dates.

Table of Contents

Note 17. Related Party Transactions

The following table summarizes our related party transactions for the periods indicated.

	For the Year Ended December 31,		
	2007	2006	2005
Revenues from consolidated operations			
EPCO and affiliates	$362,076	$ 98,671	$ 311
Unconsolidated affiliates	290,640	304,559	367,204
Total	$652,716	$403,230	$367,515
Operating costs and expenses			
EPCO and affiliates	$329,699	$311,537	$293,134
Unconsolidated affiliates	32,765	31,606	23,563
Total	$362,464	$343,143	$316,697
General and administrative expenses			
EPCO and affiliates	$ 56,518	$ 41,265	$ 40,954

We believe that the terms and provisions of our related party agreements are fair to us; however, such agreements and transactions may not be as favorable to us as we could have obtained from unaffiliated third parties.

Relationship with EPCO and affiliates

We have an extensive and ongoing relationship with EPCO and its affiliates, which include the following significant entities that are not a part of our consolidated group of companies:

- EPCO and its private company subsidiaries;
- EPGP, our sole general partner;
- Enterprise GP Holdings, which owns and controls our general partner;
- TEPPCO, which is owned and controlled by Enterprise GP Holdings;
- the Employee Partnerships (see Note 5); and
- Energy Transfer Equity, an equity method investment of Enterprise GP Holdings.

We also have an ongoing relationship with Duncan Energy Partners, the financial statements of which are consolidated with those of our own. Our transactions with Duncan Energy Partners are eliminated in consolidation. A description of our relationship with Duncan Energy Partners is presented within this Note 17.

EPCO is a private company controlled by Dan L. Duncan, who is also a Director and Chairman of EPGP, our general partner. At December 31, 2007, EPCO and its affiliates beneficially owned 147,986,045 (or 34.0%) of our outstanding common units, which includes 13,454,498 of our common units owned by Enterprise GP Holdings. In addition, at December 31, 2007, EPCO and its affiliates beneficially owned 77.1% of the limited partner interests of Enterprise GP Holdings and 100% of its general partner, EPE Holdings. Enterprise GP Holdings owns all of the membership interests of EPGP. The principal business activity of EPGP is to act as our managing partner. The executive officers and certain of the directors of EPGP and EPE Holdings are employees of EPCO.

As our general partner, EPGP received cash distributions of $124.4 million, $101.8 million and $76.8 million from us during the years ended December 31, 2007, 2006 and 2005, respectively. These amounts include incentive distributions of $107.4 million, $86.7 million and $63.9 million for the years ended December 31, 2007, 2006 and 2005, respectively.

We and EPGP are both separate legal entities apart from each other and apart from EPCO, Enterprise GP Holdings and their respective other affiliates, with assets and liabilities that are separate from those of EPCO, Enterprise GP Holdings and their respective other affiliates. EPCO and its private company subsidiaries and affiliates depend on the cash distributions they receive from us, Enterprise GP Holdings and other investments to fund their other operations and to meet their debt obligations. EPCO and its private company affiliates received $355.5 million, $306.5 million and $243.9 million in cash distributions from us and Enterprise GP Holdings during the years ended December 31, 2007, 2006 and 2005, respectively.

The ownership interests in us that are owned or controlled by Enterprise GP Holdings are pledged as security under its credit facility. In addition, substantially all of the ownership interests in us that are owned or controlled by EPCO and its affiliates, other than those interests owned by Enterprise GP Holdings, Dan Duncan LLC and certain trusts affiliated with Dan L. Duncan, are pledged as security under the credit facility of a private company affiliate of EPCO. This credit facility contains customary and other events of default relating to EPCO and certain affiliates, including Enterprise GP Holdings, TEPPCO and us.

We have entered into an agreement with EPCO to provide trucking services to us for the transportation of NGLs and other products. For the years ended December 31, 2007, 2006 and 2005, we paid this trucking affiliate $17.5 million, $20.7 million and $17.6 million, respectively, for such services.

We lease office space in various buildings from affiliates of EPCO. The rental rates in these lease agreements approximate market rates. For the years ended December 31, 2007, 2006 and 2005, we paid EPCO $5.6 million, $3.0 million and $2.7 million, respectively, for office space leases.

Historically, we entered into transactions with a Canadian affiliate of EPCO for the purchase and sale of NGL products in the normal course of business. These transactions were at market-related prices. We acquired this affiliate in October 2006 and began consolidating its financial statements with those of our own from the date of acquisition. For the year ended December 31, 2005 our revenues from this former affiliate were $0.3 million and our purchases were $61.0 million. For the nine months ended September 30, 2006, our revenues from this former affiliate were $55.8 million and our purchases were $43.4 million.

EPCO Administrative Services Agreement

We have no employees. All of our operating functions and general and administrative support services are provided by employees of EPCO pursuant to an administrative services agreement (the "ASA"). We, Duncan Energy Partners, Enterprise GP Holdings, TEPPCO and our respective general partners are parties to the ASA. The significant terms of the ASA are as follows:

- EPCO will provide selling, general and administrative services, and management and operating services, as may be necessary to manage and operate our businesses, properties and assets (all in accordance with prudent industry practices). EPCO will employ or otherwise retain the services of such personnel as may be necessary to provide such services.

- We are required to reimburse EPCO for its services in an amount equal to the sum of all costs and expenses incurred by EPCO which are directly or indirectly related to our business or activities (including expenses reasonably allocated to us by EPCO). In addition, we have agreed to pay all sales, use, excise, value added or similar taxes, if any, that may be applicable from time to time in respect of the services provided to us by EPCO.

- EPCO will allow us to participate as named insureds in its overall insurance program, with the associated premiums and other costs being allocated to us.

Under the ASA, EPCO subleases to us (for $1 per year) certain equipment which it holds pursuant to operating leases and has assigned to us its purchase option under such leases (the "retained leases").

EPCO remains liable for the actual cash lease payments associated with these agreements. We record the full value of these payments made by EPCO on our behalf as a non-cash related party operating lease expense, with the offset to partners' equity accounted for as a general contribution to our partnership. At December 31, 2007, the retained leases were for a cogeneration unit and approximately 100 railcars. Should we decide to exercise the purchase options associated with the retained leases, $2.3 million would be payable in 2008 and $3.1 million in 2016.

Our operating costs and expenses for the years ended December 31, 2007, 2006 and 2005 include reimbursement payments to EPCO for the costs it incurs to operate our facilities, including compensation of employees. We reimburse EPCO for actual direct and indirect expenses it incurs related to the operation of our assets. These reimbursements were $273.0 million, $285.4 million and $273.8 million during the years ended December 31, 2007, 2006 and 2005, respectively.

Likewise, our general and administrative costs for the years ended December 31, 2007, 2006 and 2005 include amounts we reimburse to EPCO for administrative services, including compensation of employees. In general, our reimbursement to EPCO for administrative services is either (i) on an actual basis for direct expenses it may incur on our behalf (e.g., the purchase of office supplies) or (ii) based on an allocation of such charges between the various parties to ASA based on the estimated use of such services by each party (e.g., the allocation of general legal or accounting salaries based on estimates of time spent on each entity's business and affairs). These reimbursements were $56.5 million, $41.3 million and $41.0 million during the years ended December 31, 2007, 2006 and 2005, respectively.

The ASA also addresses potential conflicts that may arise among Enterprise Products Partners (including EPGP), Enterprise GP Holdings (including EPE Holdings), Duncan Energy Partners (including DEP GP), and the EPCO Group. The EPCO Group includes EPCO and its other affiliates, but excludes Enterprise Products Partners, Enterprise GP Holdings, Duncan Energy Partners and their respective general partners. With respect to potential conflicts, the ASA provides, among other things, that:

- If a business opportunity to acquire "equity securities" (as defined below) is presented to the EPCO Group, Enterprise Products Partners (including EPGP), Enterprise GP Holdings (including EPE Holdings), Duncan Energy Partners (including DEP GP), then Enterprise GP Holdings will have the first right to pursue such opportunity. The term "equity securities" is defined to include:

  - general partner interests (or securities which have characteristics similar to general partner interests) or interests in "persons" that own or control such general partner or similar interests (collectively, "GP Interests") and securities convertible, exercisable, exchangeable or otherwise representing ownership or control of such GP Interests; and

  - incentive distribution rights and limited partner interests (or securities which have characteristics similar to incentive distribution rights or limited partner interests) in publicly traded partnerships or interests in "persons" that own or control such limited partner or similar interests (collectively, "non-GP Interests"); provided that such non-GP Interests are associated with GP Interests and are owned by the owners of GP Interests or their respective affiliates.

  Enterprise GP Holdings will be presumed to want to acquire the equity securities until such time as EPE Holdings advises the EPCO Group, EPGP and DEP GP that it has abandoned the pursuit of such business opportunity. In the event that the purchase price of the equity securities is reasonably likely to equal or exceed $100 million, the decision to decline the acquisition will be made by the Chief Executive Officer of EPE Holdings after consultation with and subject to the approval of the ACG Committee of EPE Holdings. If the purchase price is reasonably likely to be less than $100 million, the Chief Executive Officer of EPE Holdings may make the determination to decline the acquisition without consulting the ACG Committee of EPE Holdings.

  In the event that Enterprise GP Holdings abandons the acquisition and so notifies the EPCO Group, EPGP and DEP GP, Enterprise Products Partners will have the second right to pursue such acquisition. Enterprise Products Partners will be presumed to want to acquire the equity securities until such time as EPGP advises the EPCO Group and DEP GP that Enterprise Products Partners has abandoned the pursuit of such acquisition. In determining whether or not to pursue the acquisition, Enterprise Products Partners will follow the same procedures applicable to Enterprise GP Holdings, as described above but utilizing EPGP's Chief Executive Officer and ACG Committee.

In its sole discretion, Enterprise Products Partners may affirmatively direct such acquisition opportunity to Duncan Energy Partners. In the event this occurs, Duncan Energy Partners may pursue such acquisition.

In the event Enterprise Products Partners abandons the acquisition opportunity for the equity securities and so notifies the EPCO Group and DEP GP, the EPCO Group may pursue the acquisition or offer the opportunity to TEPPCO (including TEPPCO GP) and their controlled affiliates, in either case, without any further obligation to any other party or offer such opportunity to other affiliates.

- If any business opportunity not covered by the preceding bullet point (i.e. not involving "equity securities") is presented to the EPCO Group, Enterprise Products Partners (including EPGP), Enterprise GP Holdings (including EPE Holdings), or Duncan Energy Partners (including DEP GP), Enterprise Products Partners will have the first right to pursue such opportunity either for itself or, if desired by Enterprise Products Partners in its sole discretion, for the benefit of Duncan Energy Partners. It will be presumed that Enterprise Products Partners will pursue the business opportunity until such time as its general partner advises the EPCO Group, EPE Holdings and DEP GP that it has abandoned the pursuit of such business opportunity.

  In the event the purchase price or cost associated with the business opportunity is reasonably likely to equal or exceed $100 million, any decision to decline the business opportunity will be made by the Chief Executive Officer of EPGP after consultation with and subject to the approval of the ACG Committee of EPGP. If the purchase price or cost is reasonably likely to be less than $100 million, the Chief Executive Officer of EPGP may make the determination to decline the business opportunity without consulting EPGP's ACG Committee.

  In its sole discretion, Enterprise Products Partners may affirmatively direct such acquisition opportunity to Duncan Energy Partners. In the event this occurs, Duncan Energy Partners may pursue such acquisition.

  In the event that Enterprise Products Partners abandons the business opportunity for itself and Duncan Energy Partners and so notifies the EPCO Group, EPE Holdings and DEP GP, Enterprise GP Holdings will have the second right to pursue such business opportunity. It will be presumed that Enterprise GP Holdings will pursue such acquisition until such time as its general partner declines such opportunity (in accordance with the procedures described above for Enterprise Products Partners) and advises the EPCO Group that it has abandoned the pursuit of such business opportunity. Should this occur, the EPCO Group may either pursue the business opportunity or offer the business opportunity to TEPPCO (including TEPPCO GP) and their controlled affiliates without any further obligation to any other party or offer such opportunity to other affiliates.

None of Enterprise Products Partners, Enterprise GP Holdings, Duncan Energy Partners or their respective general partners or the EPCO Group have any obligation to present business opportunities to TEPPCO (including TEPPCO GP) or their controlled affiliates. Likewise, TEPPCO (including TEPPCO GP) and their controlled affiliates have no obligation to present business opportunities to Enterprise Products Partners, Enterprise GP Holdings, Duncan Energy Partners or their respective general partners or the EPCO Group.

Relationship with TEPPCO

TEPPCO became a related party to us in February 2005 in connection with the acquisition of TEPPCO GP by a private company subsidiary of EPCO. In May 2007, Enterprise GP Holdings purchased TEPPCO GP from this private company subsidiary of EPCO.

We received $67.6 million, $42.9 million and a nominal amount from TEPPCO during the years ended December 31, 2007, 2006 and 2005, respectively, from the sale of hydrocarbon products. We paid TEPPCO $19.4 million, $24.0 million and $17.2 million for NGL pipeline transportation and storage services during the years ended December 31, 2007, 2006 and 2005, respectively.

Purchase of Pioneer I plant from TEPPCO. In March 2006, we paid TEPPCO $38.2 million for its Pioneer I natural gas processing plant located in Opal, Wyoming and certain natural gas processing rights related to natural gas production from the Jonah and Pinedale fields located in the Greater Green River Basin in Wyoming. After an in-depth consideration of all relevant factors, this transaction was approved by the ACG Committee of our general partner and the Audit and Conflicts Committee of the general partner of TEPPCO. In addition, each party received a fairness opinion rendered by an independent advisor. TEPPCO will have no continued involvement in the contracts or in the operations of the Pioneer facility.

Jonah Joint Venture with TEPPCO. In August 2006, we became a joint venture partner with TEPPCO in its Jonah Gas Gathering Company ("Jonah"), which owns the Jonah Gas Gathering System located in the Greater Green River Basin of southwestern Wyoming. The Jonah Gathering System gathers and transports natural gas produced from the Jonah and Pinedale fields to regional natural gas processing plants and major interstate pipelines that deliver natural gas to end-user markets.

Prior to entering into the Jonah joint venture, we managed the construction of the Phase V expansion and funded the initial construction costs under a letter of intent we entered into in February 2006. In connection with the joint venture arrangement, we and TEPPCO plan to continue the Phase V expansion, which is expected to increase the capacity of the Jonah Gathering System from 1.5 Bcf/d to 2.4 Bcf/d and to significantly reduce system operating pressures, which we anticipate will lead to increased production rates and ultimate reserve recoveries. The first portion of the expansion, which has increased the system gathering capacity to 2.0 Bcf/d, was completed in July 2007 and the final phase of this expansion is expected to be completed by April 2008. The total anticipated cost of the Phase V expansion is expected to be approximately $505.0 million. We continue to manage the Phase V construction project.

Since August 1, 2006, we and TEPPCO have equally shared in the construction costs of the Phase V expansion. TEPPCO has reimbursed us $261.6 million, which represents 50% of total Phase V costs incurred through December 31, 2007. We had a receivable of $9.9 million from TEPPCO at December 31, 2007 for Phase V expansion costs.

TEPPCO was entitled to all distributions from the joint venture until specified milestones were achieved, at which point, we became entitled to receive 50% of the incremental cash flow from portions of the system placed in service as part of the expansion. Since the first phase of this expansion was reached in July 2007, we and TEPPCO have shared earnings based on a formula that takes into account our respective capital contributions, including expenditures by TEPPCO prior to the expansion.

At December 31, 2007, we owned an approximate 19.4% interest in Jonah and TEPPCO owns 80.6%. We operate the Jonah system. We account for our investment in the Jonah joint venture using the equity method.

The Jonah joint venture is governed by a management committee comprised of two representatives approved by us and two appointed by TEPPCO, each with equal voting power. After an in-depth consideration of all relevant factors, this transaction was approved by the ACG Committee of our general partner and the Audit and Conflicts Committee of the general partner of TEPPCO. The ACG Committee of our general partner received a fairness opinion in connection with this transaction. The transaction was reviewed and recommended for approval by the Audit and Conflicts Committee of TEPPCO GP with assistance from an independent financial advisor.

We have agreed to indemnify TEPPCO from any and all losses, claims, demands, suits, liabilities, costs and expenses arising out of or related to breaches of our representations, warranties, or covenants related to the Jonah joint venture. A claim for indemnification cannot be filed until the losses suffered by TEPPCO exceed $1.0 million. The maximum potential amount of future payments under the indemnity agreement is limited to $100.0 million. All indemnity payments are net of insurance recoveries that TEPPCO may receive from third-party insurance carriers. We carry insurance coverage that may offset any payments required under the indemnification.

Purchase of Houston-area pipelines from TEPPCO. In October 2006, we purchased certain idle pipeline assets in the Houston, Texas area from TEPPCO for $11.7 million in cash. The acquired pipelines became part of our Texas Intrastate System. The purchase of this asset was in accordance with the Board-approved management authorization policy.

Purchase and lease of pipelines for DEP South Texas NGL Pipeline System from TEPPCO. In January 2007, we purchased a 10-mile segment of pipeline from TEPPCO located in the Houston area for $8.0 million. This pipeline segment is part of the DEP South Texas NGL Pipeline System that commenced operations in January 2007. In addition, we entered into a lease with TEPPCO for an 11-mile interconnecting pipeline located in the Houston area that is part of the DEP South Texas NGL Pipeline System. Although the primary term of the lease expired in September 2007, it is being renewed on a month-to-month basis until construction of a parallel pipeline is completed in early 2008. These transactions were in accordance with the Board-approved management authorization policy.

Relationship with Energy Transfer Equity

Enterprise GP Holdings acquired equity method investments in Energy Transfer Equity and its general partner in May 2007. As a result, Energy Transfer Equity and its consolidated subsidiaries became related parties to our consolidated businesses.

For the eight months ended December 31, 2007, we recorded $294.4 million of revenues from Energy Transfer Partners, L.P. ("ETP"), primarily from NGL marketing activities. We incurred $35.2 million in operating costs and expenses for the eight months ended December 31, 2007. We have a long-term revenue generating contract with Titan Energy Partners, L.P. ("Titan"), a consolidated subsidiary of ETP. Titan purchases substantially all of its propane requirements from us. The contract continues until March 31, 2010 and contains renewal and extension options. We and Energy Transfer Company ("ETC OLP") transport natural gas on each other's systems and share operating expenses on certain pipelines. ETC OLP also sells natural gas to us.

Relationships with Unconsolidated Affiliates

Many of our unconsolidated affiliates perform supporting or complementary roles to our other business operations. See Note 16 of the Notes to Consolidated Financial Statements for a discussion of this alignment of commercial interests. Since we and our affiliates hold ownership interests in these entities and directly or indirectly benefit from our related party transactions with such entities, they are presented here.

The following information summarizes significant related party transactions with our current unconsolidated affiliates:

- We sell natural gas to Evangeline, which, in turn, uses the natural gas to satisfy supply commitments it has with a major Louisiana utility. Revenues from Evangeline were $268.0 million, $277.7 million and $331.5 million for the years ended December 31, 2007, 2006 and 2005. In addition, we furnished $1.1 million in letters of credit on behalf of Evangeline at December 31, 2007.

- We pay Promix for the transportation, storage and fractionation of NGLs. In addition, we sell natural gas to Promix for its plant fuel requirements. Expenses with Promix were $30.4 million, $34.9 million and $26.0 million for the years ended December 31, 2007, 2006 and 2005. Revenues from Promix were $17.3 million, $21.8 million and $25.8 million for the years ended December 31, 2007, 2006 and 2005.

- We perform management services for certain of our unconsolidated affiliates. We charged such affiliates $9.3 million, $8.9 million and $8.3 million for the years ended December 31, 2007, 2006 and 2005.

Relationship with Duncan Energy Partners

In September 2006, we formed a consolidated subsidiary, Duncan Energy Partners, to acquire, own and operate a diversified portfolio of midstream energy assets and to support the growth objectives of EPO. On February 5, 2007, this subsidiary completed its initial public offering of 14,950,000 common units at $21.00 per unit, which generated net proceeds to Duncan Energy Partners of $291.9 million. As consideration for assets contributed and reimbursement for capital expenditures related to these assets, Duncan Energy Partners distributed $260.6 million of these net proceeds to Enterprise Products Partners (along with $198.9 million in borrowings under its credit facility and a final amount of 5,351,571 common units of Duncan Energy Partners). Duncan Energy Partners used $38.5 million of net proceeds from the overallotment to redeem 1,950,000 of the 7,301,571 common units it had originally issued to Enterprise Products Partners, resulting in the final amount of 5,351,571 common units beneficially owned by Enterprise Products Partners. We used the cash received from Duncan Energy Partners to temporarily reduce amounts outstanding under EPO's Multi-Year Revolving Credit Facility.

In addition to the 34% direct ownership interest we retained in certain subsidiaries of Duncan Energy Partners, we also own the 2% general partner interest in Duncan Energy Partners and 26.4% of Duncan Energy Partners' outstanding common units. EPO directs the business operations of Duncan Energy Partners through its control of Duncan Holdings, LLC ("DEP GP"). Certain of our officers and directors are also beneficial owners of common units of Duncan Energy Partners (see Item 12).

For financial reporting purposes, we consolidate the financial statements of Duncan Energy Partners with those of our own and reflect its operations in our business segments. All intercompany transactions between us and Duncan Energy Partners are eliminated in the preparation of our consolidated financial statements. Also, due to common control of the entities by Dan L. Duncan, the initial consolidated balance sheet of Duncan Energy Partners reflects our historical carrying basis in each of the subsidiaries contributed to Duncan Energy Partners. Public ownership of Duncan Energy Partners' net assets and earnings are presented as a component of minority interest in our consolidated financial statements.

The borrowings of Duncan Energy Partners are presented as part of our consolidated debt; however, we do not have any obligation for the payment of interest or repayment of borrowings incurred by Duncan Energy Partners.

We have significant involvement with all of the subsidiaries of Duncan Energy Partners, including the following types of transactions: (i) we utilize storage services provided by Mont Belvieu Caverns to support our Mont Belvieu fractionation and other businesses; (ii) we buy natural gas from and sell natural gas to Acadian Gas in connection with our normal business activities; and (iii) we are the sole shipper on the DEP South Texas NGL Pipeline System.

We may contribute other equity interests in our subsidiaries to Duncan Energy Partners in the near term and use the proceeds we receive from Duncan Energy Partners to fund our capital spending program.

For additional information regarding Duncan Energy Partners, see "Other Items — Initial Public Offering of Duncan Energy Partners" under Item 7 of this annual report.

Omnibus Agreement. On February 5, 2007, EPO and Duncan Energy Partners entered into an Omnibus Agreement that governs our relationship with Duncan Energy Partners on the following matters:

- indemnification for certain environmental liabilities, tax liabilities and right-of-way defects;
- reimbursement of certain expenditures incurred by DEP South Texas NGL and Mont Belvieu Caverns;
- a right of first refusal to EPO in Duncan Energy Partners' current and future subsidiaries and a right of first refusal on the material assets of these entities, other than sales of inventory and other assets in the ordinary course of business; and
- a preemptive right with respect to equity securities issued by certain of Duncan Energy Partners' subsidiaries, other than as consideration in an acquisition or in connection with a loan or debt financing.

EPO has indemnified Duncan Energy Partners against certain pre-February 2007 environmental and related liabilities associated with the assets EPO contributed to Duncan Energy Partners at the time of its initial public offering. These liabilities include both known and unknown environmental and related liabilities. This indemnification obligation will terminate on February 5, 2010. There is an aggregate cap of $15.0 million on the amount of indemnity coverage. In addition, Duncan Energy Partners is not entitled to indemnification until the aggregate amount of claims it incurs exceeds $250 thousand. Liabilities resulting from a change of law after February 5, 2007 are excluded from the EPO environmental indemnity. In addition, EPO has indemnified Duncan Energy Partners for liabilities related to:

- certain defects in the easement rights or fee ownership interests in and to the lands on which any assets contributed to Duncan Energy Partners in connection with its initial public offering are located and failure to obtain certain consents and permits necessary to conduct its business that arise through February 5, 2010; and
- certain income tax liabilities attributable to the operation of the assets contributed to Duncan Energy Partners in connection with its initial public offering prior to February 5, 2007.

The Omnibus Agreement may not be amended without the prior approval of the ACG Committee if the proposed amendment will, in the reasonable discretion of DEP GP, adversely affect holders of the it's common units.

Neither we, nor EPO and any of its affiliates are restricted under the Omnibus Agreement from competing with Duncan Energy Partners. Except as otherwise expressly agreed in the EPCO administrative services agreement, EPO and any of its affiliates may acquire, construct or dispose of additional midstream energy or other assets in the future without any obligation to offer Duncan Energy Partners the opportunity to purchase or construct those assets. These agreements are in addition to other agreements relating to business opportunities and potential conflicts of interest set forth in the administrative services agreement with EPO, EPCO and other affiliates of EPCO.

In certain cases, EPO is responsible for funding 100% of project costs rather than sharing such costs with Duncan Energy Partners in accordance with the existing sharing ratio of 66% funded by Duncan Energy Partners and 34% funded by EPO. Under the Omnibus Agreement, EPO agreed to make additional contributions to Duncan Energy Partners as reimbursement for Duncan Energy Partners' 66% share of any excess project costs above (i) the $28.6 million of estimated project costs to complete the Phase II expansions of the DEP South Texas NGL Pipeline System and (ii) $14.1 million of estimated project costs for additional Mont Belvieu brine production capacity and above-ground storage reservoir projects. These projects were in progress at the time of Duncan Energy Partners' initial public offering. In December 2007, EPO made cash contributions totaling $9.9 million to Duncan Energy Partners' subsidiaries in connection with the Omnibus Agreement.

In December 2007, EPO made an additional $38.1 million cash contribution to Mont Belvieu Caverns for capital expenditures in which Duncan Energy Partners is not a participant. This contribution was in accordance with provisions of the Mont Belvieu Caverns' limited liability company agreement, which states that when Duncan Energy Partners elects to not participate in certain projects, then EPO is responsible for funding 100% of such projects. To the extent such non-participated projects generate incremental earnings for Mont Belvieu Caverns in the future, the sharing ratio for Mont Belvieu Caverns will be adjusted to allocate such incremental cash flows to EPO. Under the terms of the agreement, Duncan Energy Partners may elect to reacquire for consideration a 66% share of these projects at a later date.

Note 18. Provision for Income Taxes

Our provision for income taxes relates primarily to federal and state income taxes of Seminole and Dixie, our two largest corporations subject to such income taxes. In addition, with the amendment of the Texas Franchise Tax in 2006, we have become a taxable entity in the state of Texas. Our federal and state income tax provision is summarized below:

	For the Year Ended December 31,		
	2007	2006	2005
Current:			
Federal	$ 4,828	$ 7,694	$1,105
State	3,871	1,148	301
Total current	8,699	8,842	1,406
Deferred:			
Federal	2,784	6,109	5,968
State	3,774	6,372	988
Total deferred	6,558	12,481	6,956
Total provision for income taxes	$15,257	$21,323	$8,362

A reconciliation of the provision for income taxes with amounts determined by applying the statutory U.S. federal income tax rate to income before income taxes is as follows:

	For the Year Ended December 31,		
	2007	2006	2005
Pre Tax Net Book Income ("NBI")	$579,574	$630,085	$437,838
Revised Texas franchise tax	7,146	8,119	—
State income taxes (net of federal benefit)	325	(396)	838
Federal income taxes computed by applying the federal statutory rate to NBI of corporate entities	5,318	13,347	7,656
Taxes charged to cumulative effect of changes in accounting principle	—	(3)	65
Valuation allowance	2,347	123	—
Other permanent differences	121	133	(197)
Provision for income taxes	15,257	$ 21,323	$ 8,362
Effective income tax rate	2.6%	3.4%	1.9%

Significant components of deferred tax liabilities and deferred tax assets as of December 31, 2007 and 2006 are as follows:

	At December 31, 2007	At December 31, 2006
Deferred Tax Assets:		
Net operating loss carryovers	$ 23,270	$ 19,175
Credit carryover	26	26
Charitable contribution carryover	16	12
Employee benefit plans	3,214	1,990
Deferred revenue	642	328
Reserve for legal fees and damages	478	—
Equity investment in partnerships	409	223
Asset retirement obligation	80	43
Accruals	1,068	709
Total Deferred Tax Assets	29,203	22,506
Valuation allowance	(5,345)	(2,994)
Net Deferred Tax Assets	23,858	19,512
Deferred Tax Liabilities:		
Property, plant and equipment	40,520	30,604
Other	99	78
Total Deferred Tax Liabilities	40,619	30,682
Total Net Deferred Tax Liabilities	$ (16,761)	$ (11,170)
Current portion of total net deferred tax assets	$ 1,081	$ 698
Long-term portion of total net deferred tax liabilities	$ (17,842)	$ (11,868)

We had net operating loss carryovers of $23.3 million and $19.2 million at December 31, 2007 and 2006, respectively. These losses expire in various years between 2008 and 2028 and are subject to limitations on their utilization. We record a valuation allowance to reduce our deferred tax assets to the amount of future tax benefit that is more likely than not to be realized. The valuation allowance was $5.3 million and $3.0 million at December 31, 2007 and 2006, respectively, and serves to reduce the recognized tax benefit associated with carryovers of our corporate entities to an amount that will, more likely than not, be realized. The $2.3 million increase in valuation allowance for 2007 is comprised primarily of $1.6 million for Canadian Enterprise Gas Products, Ltd.

On May 18, 2006, the State of Texas enacted House Bill 3 which revised the pre-existing state franchise tax. In general, legal entities that conduct business in Texas are subject to the Revised Texas Franchise Tax, including previously non-taxable entities such as limited partnerships and limited liability partnerships. The tax is assessed on Texas sourced taxable margin which is defined as the lesser of (i) 70% of total revenue or (ii) total revenue less (a) cost of goods sold or (b) compensation and benefits.

Although the bill states that the Revised Texas Franchise Tax is not an income tax, it has the characteristics of an income tax since it is determined by applying a tax rate to a base that considers both revenues and expenses. Due to the enactment of the Revised Texas Franchise Tax, we recorded a net deferred tax liability of $3.8 million and $6.6 million during the years ended December 31, 2007 and 2006, respectively. The offsetting net charge of $3.8 million and $6.6 million is shown on our Statement of Consolidated Operations for the years ended December 31, 2007 and 2006, respectively, as a component of provision for income taxes.

Note 19. Earnings Per Unit

Basic earnings per unit is computed by dividing net income or loss allocated to limited partner interests by the weighted-average number of distribution-bearing units outstanding during a period. Diluted earnings per unit is computed by dividing net income or loss allocated to limited partner interests by the sum of (i) the weighted-average number of distribution-bearing units outstanding during a period (as used in determining basic earnings per unit); (ii) the weighted-average number of performance-based phantom units outstanding during a period; and (iii) the number of incremental common units resulting from the assumed exercise of dilutive unit options outstanding during a period (the "incremental option units").

In a period of net losses, restricted units, phantom units and incremental option units are excluded from the calculation of diluted earnings per unit due to their antidilutive effect. The dilutive incremental option units are calculated using the treasury stock method, which assumes that proceeds from the exercise of all in-the-money options at the end of each period are used to repurchase common units at an average market value during the period. The amount of common units remaining after the proceeds are exhausted represents the potentially dilutive effect of the securities.

The amount of net income or loss allocated to limited partner interests is net of our general partner's share of such earnings. The following table presents the allocation of net income to EPGP for the periods indicated:

	For The Year Ended December 31,		
	2007	2006	2005
Net income	$ 533,674	$601,155	$419,508
Less incentive earnings allocations to EPGP	(107,421)	(86,710)	(63,884)
Net income available after incentive earnings allocation	426,253	514,445	355,624
Multiplied by EPGP ownership interest	2.0%	2.0%	2.0%
Standard earnings allocation to EPGP	$ 8,525	$ 10,289	$ 7,112
Incentive earnings allocation to EPGP	$ 107,421	$ 86,710	$ 63,884
Standard earnings allocation to EPGP	8,525	10,289	7,112
EPGP interest in net income	$ 115,946	$ 96,999	$ 70,996

The following table presents our calculation of basic and diluted earnings per unit for the periods indicated:

	For The Year Ended December 31,		
	2007	2006	2005
Income before change in accounting principle and EPGP interest	$ 533,674	$ 599,683	$ 423,716
Cumulative effect of change in accounting principle	—	1,472	(4,208)
Net income	533,674	601,155	419,508
EPGP interest in net income	(115,946)	(96,999)	(70,996)
Net income available to limited partners	$ 417,728	$ 504,156	$ 348,512
BASIC EARNINGS PER UNIT			
Numerator			
Income before change in accounting principle and EPGP interest	$ 533,674	$ 599,683	$ 423,716

Limited partners' interest in net income	$ 0.96	$ 1.22	$ 0.91

Note 20. Commitments and Contingencies

Litigation

On occasion, we or our unconsolidated affiliates are named as defendants in litigation relating to our normal business activities, including regulatory and environmental matters. Although we are insured against various business risks to the extent we believe it is prudent, there is no assurance that the nature and amount of such insurance will be adequate, in every case, to indemnify us against liabilities arising from future legal proceedings as a result of our ordinary business activities. We are unaware of any significant litigation, pending or threatened, that could have a significant adverse effect on our financial position, cash flows or results of operations.

On September 18, 2006, Peter Brinckerhoff, a purported unitholder of TEPPCO, filed a complaint in the Court of Chancery of New Castle County in the State of Delaware, in his individual capacity, as a putative class action on behalf of other unitholders of TEPPCO, and derivatively on behalf of TEPPCO, concerning, among other things, certain transactions involving TEPPCO and us or our affiliates. Mr. Brinkerhoff filed an amended complaint on July 12, 2007. The amended complaint names as defendants (i) TEPPCO, its current and certain former directors, and certain of its affiliates; (ii) us and certain of our affiliates; (iii) EPCO, Inc.; and (iv) Dan L. Duncan.

The amended complaint alleges, among other things, that the defendants have caused TEPPCO to enter into certain transactions with us or our affiliates that were unfair to TEPPCO or otherwise unfairly favored us or our affiliates over TEPPCO. These transactions are alleged to include the joint venture to further expand the Jonah Gathering System entered into by TEPPCO and one of our affiliates in August 2006 and the sale by TEPPCO to one of our affiliates of the Pioneer gas processing plant in March 2006. The amended complaint seeks (i) rescission of these transactions or an award of rescissory damages with respect thereto; (ii) damages for profits and special benefits allegedly obtained by defendants as a result of the alleged wrongdoings in the amended complaint; and (iii) awarding plaintiff costs of the action, including fees and expenses of his attorneys and experts. We believe this lawsuit is without merit and intend to vigorously defend against it. See Note 17 for additional information regarding our relationship with TEPPCO.

On February 13, 2007, EPO received notice from the U.S. Department of Justice ("DOJ") that it was the subject of a criminal investigation related to an ammonia release in Kingman County, Kansas on October 27, 2004 from a pressurized anhydrous ammonia pipeline owned by a third party, Magellan Ammonia Pipeline, L.P. ("Magellan"). EPO is the operator of this pipeline. On February 14, 2007, EPO received a letter from the Environment and Natural Resources Division ("ENRD") of the DOJ regarding this incident and a previous release of ammonia on September 27, 2004 from the same pipeline. The ENRD has indicated that it may pursue civil damages against EPO and Magellan as a result of these incidents. Based on this correspondence from the ENRD, the statutory maximum amount of civil fines that could be assessed against EPO and Magellan is up to $17.4 million in the aggregate. EPO is cooperating with the DOJ and is hopeful that an expeditious resolution of this civil matter acceptable to all parties will be reached in the near future. Magellan has agreed to indemnify EPO for the civil matter. On September 4, 2007, we and the DOJ entered into a plea agreement whereby a wholly-owned subsidiary of EPO, Mapletree, LLC, pleaded guilty to a misdemeanor charge of negligence in connection with the releases and paid a fine of $1.0 million. The plea agreement concludes the DOJ’s criminal investigation into the ammonia releases. At this time, we do not believe that a final resolution of the civil claims by the ENRD will have a material impact on our consolidated financial position, cash flows or results of operations.

On October 25, 2006, a rupture in the Magellan Ammonia Pipeline resulted in the release of ammonia near Clay Center, Kansas. The pipeline has been repaired and environmental remediation tasks related to this incident have been completed. At this time, we do not believe that this incident will have a material impact on our consolidated financial position, cash flows or results of operations.

Several lawsuits have been filed by municipalities and other water suppliers against a number of manufacturers of reformulated gasoline containing methyl tertiary butyl ether. In general, such suits have not named manufacturers of this product as defendants, and there have been no such lawsuits filed against our subsidiary that owns an octane-additive production facility. It is possible, however, that former manufacturers such as our subsidiary could ultimately be added as defendants in such lawsuits or in new lawsuits.

Table of Contents

Contractual Obligations

The following table summarizes our various contractual obligations at December 31, 2007. A description of each type of contractual obligation follows:

	Payment or Settlement due by Period						
Contractual Obligations	**Total**	**2008**	**2009**	**2010**	**2011**	**2012**	**Thereafter**
Scheduled maturities of long-term debt	$6,896,500	$ —	$500,000	$591,840	$650,000	$697,160	$4,457,500
Operating lease obligations	$ 325,705	$ 27,785	$ 25,866	$ 23,306	$ 23,785	$ 23,137	$ 201,826
Purchase obligations:							
Product purchase commitments:							
Estimated payment obligations:							
Natural gas	$ 685,600	$ 137,345	$136,970	$136,970	$136,970	$137,345	$ —
NGLs	$4,041,275	$ 697,277	$415,132	$415,132	$415,132	$415,132	$1,683,470
Petrochemicals	$4,065,675	$1,751,152	$746,916	$514,155	$233,745	$141,623	$ 678,084
Other	$ 60,385	$ 31,392	$ 14,962	$ 2,152	$ 2,051	$ 1,780	$ 8,048
Underlying major volume commitments:							
Natural gas (in BBtus)	91,350	18,300	18,250	18,250	18,250	18,300	—
NGLs (in MBbls)	50,798	9,745	5,086	5,086	5,086	5,086	20,709
Petrochemicals (in MBbls)	45,207	20,115	8,100	5,604	2,541	1,556	7,291
Service payment commitments	$ 8,962	$ 6,745	$ 1,564	$ 93	$ 93	$ 93	$ 374
Capital expenditure commitments	$ 569,654	$ 569,654	$ —	$ —	$ —	$ —	$ —

*Scheduled Maturities of Long-Term Debt***.** We have long-term and short-term payment obligations under debt agreements such as the indentures governing EPO's senior notes and the credit agreement governing EPO's Multi-Year Revolving Credit Facility. Amounts shown in the preceding table represent our scheduled future maturities of debt principal for the periods indicated. See Note 14 for additional information regarding our consolidated debt obligations.

Operating Lease Obligations. We lease certain property, plant and equipment under noncancelable and cancelable operating leases. Amounts shown in the preceding table represent minimum cash lease payment obligations under our operating leases with terms in excess of one year.

Our significant lease agreements involve (i) the lease of underground caverns for the storage of natural gas and NGLs, (ii) leased office space with an affiliate of EPCO, (iii) a railcar unloading terminal in Mont Belvieu, Texas and (iv) land held pursuant to right-of-way agreements. In general, our material lease agreements have original terms that range from 2 to 28 years and include renewal options that could extend the agreements for up to an additional 20 years.

Lease expense is charged to operating costs and expenses on a straight line basis over the period of expected economic benefit. Contingent rental payments are expensed as incurred. We are generally required to perform routine maintenance on the underlying leased assets. In addition, certain leases give us the option to make leasehold improvements. Maintenance and repairs of leased assets resulting from our operations are charged to expense as incurred. We did not make any significant leasehold improvements during the years ended December 31, 2007, 2006 or 2005; however, we did incur $9.3 million of repair costs associated with our lease of an underground natural gas storage facility in 2006.

The operating lease commitments shown in the preceding table exclude the non-cash, related party expense associated with equipment leases contributed to us by EPCO at our formation (the "retained leases"). EPCO remains liable for the actual cash lease payments associated with these agreements, which it accounts for as operating leases. At December 31, 2007, the retained leases were for a cogeneration unit and approximately 100 railcars. EPCO's minimum future rental payments under these leases are $2.1 million for 2008, $0.7 million for each of the years 2009 through 2015 and $0.3 million for 2016. We record the full value of these payments made by EPCO on our behalf as a non-cash related party operating lease expense, with the offset to partners' equity accounted for as a general contribution to our partnership.

The retained lease agreements contain lessee purchase options, which are at prices that approximate fair value of the underlying leased assets. EPCO has assigned these purchase options to us.

Should we decide to exercise the remaining purchase options, up to an additional $2.3 million would be payable in 2008 and $3.1 million in 2016.

Lease and rental expense included in operating costs and expenses was $38.5 million, $39.3 million and $34.9 million during the years ended December 31, 2007, 2006 and 2005, respectively.

*Purchase Obligations***.** We define a purchase obligation as an agreement to purchase goods or services that is enforceable and legally binding (unconditional) on us that specifies all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum or variable price provisions; and the approximate timing of the transactions. We have classified our unconditional purchase obligations into the following categories:

- We have long and short-term product purchase obligations for NGLs, certain petrochemicals and natural gas with third-party suppliers. The prices that we are obligated to pay under these contracts approximate market prices at the time we take delivery of the volumes. The preceding table shows our volume commitments and estimated payment obligations under these contracts for the periods indicated. Our estimated future payment obligations are based on the contractual price under each contract for purchases made at December 31, 2007 applied to all future volume commitments. Actual future payment obligations may vary depending on market prices at the time of delivery. At December 31, 2007, we do not have any product purchase commitments with fixed or minimum pricing provisions with remaining terms in excess of one year.

- We have long and short-term commitments to pay third-party providers for services such as equipment maintenance agreements. Our contractual payment obligations vary by contract. The preceding table shows our future payment obligations under these service contracts.

- We have short-term payment obligations relating to our capital projects and those of our unconsolidated affiliates. These commitments represent unconditional payment obligations to vendors for services rendered or products purchased. The preceding table presents our share of such commitments for the periods indicated.

Commitments under equity compensation plans of EPCO

In accordance with our agreements with EPCO, we reimburse EPCO for our share of its compensation expense associated with certain employees who perform management, administrative and operating functions for us (see Note 17). This includes costs associated with unit option awards granted to these employees to purchase our common units. At December 31, 2007, there were 2,315,000 unit options outstanding for which we were responsible for reimbursing EPCO for the costs of such awards.

The weighted-average strike price of unit option awards outstanding at December 31, 2007 was $26.18 per common unit. At December 31, 2007, 335,000 of these unit options were exercisable. An additional 285,000, 380,000, 510,000 and 805,000 of these unit options will be exercisable in 2008, 2009, 2010 and 2011, respectively. As these options are exercised, we will reimburse EPCO in the form of a special cash distribution for the difference between the strike price paid by the employee and the actual purchase price paid for the units awarded to the employee. See Note 5 for additional information regarding our accounting for equity awards.

Performance Guaranty

In December 2004, a subsidiary of ours entered into the Independence Hub Agreement (the "Agreement") with six oil and natural gas producers. The Agreement, as amended, obligated our subsidiary to construct the Independence Hub offshore platform and to process 1 Bcf/d of natural gas and condensate for the producers. We guaranteed to the producers the construction-related performance of our subsidiary up to an amount of $340.8 million. The performance guaranty expired during the second quarter of 2007. However at December 31, 2006, as a component of other current liabilities on our Consolidated Balance Sheet, we recorded the fair value of the performance guaranty at an estimated $1.2 million using an expected present value approach. This was in accordance with FIN 45, "Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others,"

Other Claims

As part of our normal business activities with joint venture partners and certain customers and suppliers, we occasionally have claims made against us as a result of disputes related to contractual agreements or similar arrangements. As of December 31, 2007, claims against us totaled approximately $37.9 million. These matters are in various stages of assessment and the ultimate outcome of such disputes cannot be reasonably estimated. However, in our opinion, the likelihood of a material adverse outcome related to disputes against us is remote. Accordingly, accruals for loss contingencies related to these matters, if any, that might result from the resolution of such disputes have not been reflected in our consolidated financial statements.

Other Commitments

We transport and store natural gas, NGLs and petrochemicals for third parties under various processing, storage, transportation and similar agreements. These volumes are (i) accrued as product payables on our Consolidated Balance Sheets, (i) in transit for delivery to our customers or (iii) held at our storage facilities for redelivery to our customers. We are insured against any physical loss of such volumes due to catastrophic events. Under the terms of our natural gas, NGL and petrochemical storage agreements, we are generally required to redeliver volumes to the owner on demand. At December 31, 2007, NGL and petrochemical products aggregating 25.2 million barrels were due to be redelivered to their owners along with 16,223 BBtus of natural gas. See Note 2 for more information regarding accrued product payables.

Note 21. Significant Risks and Uncertainties

Nature of Operations in Midstream Energy Industry

Our operations are within the midstream energy industry, which includes gathering, transporting, processing, fractionating and storing natural gas, NGLs, certain petrochemicals and crude oil. As such, our results of operations, cash flows and financial condition may be affected by changes in the commodity prices of these hydrocarbon products, including changes in the relative price levels among these products. In general, the prices of natural gas, NGLs, crude oil and other hydrocarbon products are subject to fluctuations in response to changes in supply, market uncertainty and a variety of additional factors that are beyond our control.

Our profitability could be impacted by a decline in the volume of hydrocarbon products transported, gathered or processed at our facilities. A material decrease in natural gas or crude oil production or crude oil refining for reasons such as depressed commodity prices or a decrease in exploration and development activities, could result in a decline in the volume of natural gas, NGLs and crude oil handled by our facilities.

A reduction in demand for NGL products by the petrochemical, refining or heating industries, whether because of (i) general economic conditions, (ii) reduced demand by consumers for the end products made using NGLs, (iii) increased competition from petroleum-based products due to pricing differences, (iv) adverse weather conditions, (v) government regulations affecting energy commodity prices, production levels of hydrocarbons or the content of motor gasoline or (vi) other reasons, could adversely affect our results of operations, cash flows and financial position.

Credit Risk due to Industry Concentrations

A substantial portion of our revenues are derived from companies in the domestic natural gas, NGL and petrochemical industries. This concentration could affect our overall exposure to credit risk since these customers may be affected by similar economic or other conditions. We generally do not require collateral for our accounts receivable; however, we do attempt to negotiate offset, prepayment, or automatic debit agreements with customers that are deemed to be credit risks in order to minimize our potential exposure to any defaults.

Our revenues are derived from a wide customer base. During 2007, 2006 and 2005, our largest customer was The Dow Chemical Company and its affiliates, which accounted for 6.9%, 6.1% and 6.8%, respectively, of our consolidated revenues.

Counterparty Risk with respect to Financial Instruments

Where we are exposed to credit risk in our financial instrument transactions, we analyze the counterparty's financial condition prior to entering into an agreement, establish credit and/or margin limits and monitor the appropriateness of these limits on an ongoing basis. We generally do not require collateral for our financial instrument transactions.

Weather-Related Risks

We participate as named insureds in EPCO's current insurance program, which provides us with property damage, business interruption and other coverages, which are customary for the nature and scope of our operations. EPCO attempts to place all insurance coverage with carriers having ratings of "A" or higher. However, two carriers associated with the EPCO insurance program were downgraded by Standard & Poor's during 2006. One of these carriers is currently at "A-" and the other, "BBB." At present, there is no indication that these two carriers would be unable to fulfill any insuring obligation. Furthermore, we currently do not have any claims which might be affected by these carriers. EPCO continues to monitor these situations.

We believe EPCO maintains adequate insurance coverage on our behalf; however, insurance will not cover every type of interruption that might occur. As a result of severe hurricanes such as Katrina and Rita that occurred in 2005, market conditions for obtaining property damage insurance coverage were difficult during 2006. Under EPCO's renewed insurance programs, coverage was more restrictive, including increased physical damage and business interruption deductibles. For example, our deductible for onshore physical damage increased from $2.5 million to $5.0 million per event and our deductible period for onshore business interruption claims increased from 30 days to 60 days. Additional restrictions will be applied in connection with damage caused by named windstorms.

In addition to changes in coverage, the cost of property damage insurance increased substantially between 2006 and prior periods. At present, our annualized cost of insurance premiums for all lines of coverage is approximately $52.4 million. During the year ended December 31, 2006, our annualized cost of insurance premiums for all lines of coverage was approximately $49.2 million, which represented a $28.1 million, or 133%, increase from our 2005 annualized insurance cost.

If we were to incur a significant liability for which we were not fully insured, it could have a material impact on our consolidated financial position and results of operations. In addition, the proceeds of any such insurance may not be paid in a timely manner and may be insufficient to reimburse us for repair costs or lost income. Any event that interrupts the revenues generated by our consolidated operations, or which causes us to make significant expenditures not covered by insurance, could reduce our ability to pay distributions to partners and, accordingly, adversely affect the market price of our common units.

The following is a discussion of the general status of our insurance claims related to recent significant storm events. To the extent we include any estimate or range of estimates regarding the dollar value of damages, please be aware that a change in our estimates may occur as additional information becomes available.

Hurricane Ivan insurance claims. During the years ended December 31, 2007 and 2006, we received cash reimbursements from insurance carriers totaling $1.3 million and $24.1 million, respectively,

Table of Contents

related to property damage claims. If the final recovery of funds is different than the amount previously expended, we will recognize an income impact at that time.

We have submitted business interruption insurance claims for our estimated losses caused by Hurricane Ivan, which struck the eastern U.S. Gulf Coast region in September 2004. During the years ended December 31, 2007 and 2006, we received $0.4 million and $17.4 million of nonrefundable cash proceeds from such claims. We are continuing our efforts to collect residual balances and expect to complete the process during 2008. To the extent we receive nonrefundable cash proceeds from business interruption insurance claims, they are recorded as a gain in our Statements of Consolidated Operations in the period of receipt.

Hurricanes Katrina and Rita insurance claims. Hurricanes Katrina and Rita, both significant storms, affected certain of our Gulf Coast assets in August and September of 2005, respectively. With respect to these storms, we have $37.6 million of estimated property damage claims outstanding at December 31, 2007, that we believe are probable of collection during the period 2008 through 2009. We continue to pursue collection of our property damage claims related to these named storms. As of December 31, 2007, we had received practically all proceeds from our business interruption claims related to these storm events.

The following table summarizes proceeds we received during the periods indicated from business interruption and property damage insurance claims with respect to certain named storms:

	For the Year Ended December 31,	
	2007	**2006**
Business interruption proceeds:		
Hurricane Ivan	$ 377	$17,382
Hurricane Katrina	19,005	24,500
Hurricane Rita	14,955	22,000
Other	996	—
Total proceeds	35,333	63,882
Property damage proceeds:		
Hurricane Ivan	1,273	24,104
Hurricane Katrina	79,651	7,500
Hurricane Rita	24,105	3,000
Other	184	—
Total proceeds	105,213	34,604
Total	$140,546	$98,486

During 2007, we collected $0.8 million of business interruption proceeds that were not related to storm events. As well, during 2005, we received $4.8 million of nonrefundable cash proceeds from business interruption claims.

Note 22. Supplemental Cash Flow Information

The following table provides information regarding (i) the net effect of changes in our operating assets and liabilities; (ii) cash payments for interest and (iii) cash payments for federal and state income taxes for the periods indicated.

	For the Year Ended December 31,		
	2007	2006	2005
Decrease (increase) in:			
Accounts and notes receivable	$(703,346)	$155,628	$(363,857)
Inventories	(14,051)	(66,288)	(148,846)
Prepaid and other current assets	41,266	14,261	(51,163)
Other assets	5,630	(22,581)	58,762
Increase (decrease) in:			
Accounts payable	53,981	(12,278)	45,802
Accrued product payables	862,941	(8,344)	349,979
Accrued expenses	120,054	(62,963)	(161,989)
Accrued interest	40,107	19,671	858
Other current liabilities	37,248	74,206	2,274
Other liabilities	(2,524)	(7,894)	1,785
Net effect of changes in operating accounts	$ 441,306	$ 83,418	$(266,395)
Cash payments for interest, net of $75,476, $55,660 and $22,046 capitalized in 2007, 2006 and 2005, respectively	$ 325,339	$213,365	$ 239,088
Cash payments for federal and state income taxes	$ 5,760	$ 10,497	$ 5,160

The following table provides supplemental cash flow information regarding business combinations we completed during the periods indicated. See Note 12, for additional information regarding our business combination transactions.

	For the Year Ended December 31,		
	2007	2006	2005
Assets acquired	$37,037	$ 477,015	$353,176
Less liabilities assumed	(1,244)	(19,403)	(23,940)
Net assets acquired	35,793	457,612	329,236
Less equity issued	—	(181,112)	—
Less cash acquired	—	—	(2,634)
Cash used for business combinations, net of cash received	$35,793	$ 276,500	$326,602

We incurred liabilities for construction in progress that had not been paid at December 31, 2007, 2006 and 2005 of $95.5 million, $195.1 million and $130.2 million, respectively. Such amounts are not included under the caption "Capital expenditures" on the Statements of Consolidated Cash Flows.

Third parties may be obligated to reimburse us for all or a portion of expenditures on certain of our capital projects. The majority of such arrangements are associated with projects related to pipeline construction and production well tie-ins. We received $57.5 million, $60.5 million and $47.0 million as contributions in aid of our construction costs during the years ended December 31, 2007, 2006 and 2005, respectively.

In June 2005, we received $47.5 million in cash from Cameron Highway as a return of investment. These funds were distributed to us in connection with the refinancing of Cameron Highway’s project debt.

Table of Contents

Note 23. Quarterly Financial Information (Unaudited)

The following table presents selected quarterly financial data for the years ended December 31, 2007 and 2006:

	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
For the Year Ended December 31, 2007:				
Revenues	$3,322,854	$4,212,806	$4,111,996	$5,302,469
Operating income	187,924	214,562	210,830	269,721
Income before change in accounting principle	112,045	142,154	117,606	161,869
Net income	112,045	142,154	117,606	161,869
Income per unit before change in accounting principle:				
Basic	$ 0.20	$ 0.26	$ 0.20	$ 0.30
Diluted	$ 0.20	$ 0.26	$ 0.20	$ 0.30
Net income per unit:				
Basic	$ 0.20	$ 0.26	$ 0.20	$ 0.30
Diluted	$ 0.20	$ 0.26	$ 0.20	$ 0.30
For the Year Ended December 31, 2006:				
Revenues	$3,250,074	$3,517,853	$3,872,525	$3,350,517
Operating income	193,500	186,045	274,184	206,323
Income before change in accounting principle	132,302	126,295	208,302	132,784
Net income	133,777	126,295	208,302	132,781
Income per unit before change in accounting principle:				
Basic	$ 0.28	$ 0.26	$ 0.43	$ 0.25
Diluted	$ 0.28	$ 0.26	$ 0.43	$ 0.25
Net income per unit:				
Basic	$ 0.28	$ 0.26	$ 0.43	$ 0.25
Diluted	$ 0.28	$ 0.26	$ 0.43	$ 0.25

Note 24. Condensed Financial Information of EPO

EPO conducts substantially all of our business. Currently, we have no independent operations and no material assets outside those of EPO. EPO consolidates the financial statements of Duncan Energy Partners with those of its own.

We guarantee the debt obligations of EPO, with the exception of the Dixie revolving credit facility, Duncan Energy Partners' credit facility and the senior subordinated notes assumed in connection with the GulfTerra Merger. If EPO were to default on any debt we guarantee, we would be responsible for full repayment of that obligation. See Note 14 for additional information regarding our consolidated debt obligations.

The reconciling items between our consolidated financial statements and those of EPO are insignificant. The following table presents condensed consolidated balance sheet data for EPO at the dates indicated:

	At December 31,	
	2007	2006
ASSETS		
Current assets	$ 2,544,973	$ 1,915,937
Property, plant and equipment, net	11,587,264	9,832,547
Investments in and advances to unconsolidated affiliates, net	858,339	564,559
Intangible assets, net	917,000	1,003,955
Goodwill	591,652	590,541
Deferred tax asset	3,113	1,632
Other assets	112,345	74,103
Total	$16,614,686	$13,983,274
LIABILITIES AND PARTNERS' EQUITY		
Current liabilities	$ 3,044,002	$ 1,986,444
Long-term debt	6,906,145	5,295,590
Other long-term liabilities	95,112	99,845
Minority interest	439,854	136,249
Partners' equity	6,129,573	6,465,146
Total	$16,614,686	$13,983,274
Total EPO debt obligations guaranteed by us	$ 6,686,500	$ 5,314,000

The following table presents condensed consolidated statements of operations data for EPO for the periods indicated:

	For the Year Ended December 31,		
	2007	2006	2005
Revenues	$16,950,125	$13,990,969	$12,256,959
Costs and expenses	16,094,248	13,148,530	11,605,923
Equity in income of unconsolidated affiliates	29,658	21,565	14,548
Operating income	885,535	864,004	665,584
Other expense	(305,236)	(231,876)	(226,075)
Income before provision for income taxes, minority interest and change in accounting principle	580,299	632,128	439,509
Provision for income taxes	(15,317)	(21,198)	(8,362)
Income before minority interest and change in accounting principle	564,982	610,930	431,147

Income before change in accounting principle	534,245	601,740	425,158
Cumulative effect of change in accounting principle	—	1,472	(4,208)
Net income	$ 534,245	$ 603,212	$ 420,950

Note 25. Subsequent Event

Enterprise Products 2008 Long-Term Incentive Plan

On January 29, 2008, the unitholders of Enterprise Products Partners approved the Enterprise Products 2008 Long-Term Incentive Plan (the "Incentive Plan"), which provides for awards of the Partnership's common units and other rights to the Partnership's non-employee directors and to consultants and employees of EPCO and its affiliates providing services to the Partnership. Awards under the Incentive Plan may be granted in the form of restricted units, phantom units, unit options, unit appreciation rights and distribution equivalent rights. The Incentive Plan will be administered by EPGP's ACG Committee. Up to 10,000,000 of the Partnership's common units may be granted as awards under the Incentive Plan, with such amount subject to adjustment as provided for under the terms of the plan.

The exercise price of unit options or UARs awarded to participants will be determined by the ACG Committee (at its discretion) at the date of grant and may be no less than the fair market value of the option award as of the date of grant. The Incentive Plan may be amended or terminated at any time by the Board of Directors of EPCO or EPGP's ACG Committee; however, any material amendment, such as a significant increase in the number of units available under the plan or a change in the types of awards available under the plan, would require the approval of the unitholders of the Partnership. The ACG Committee is also authorized to make adjustments in the terms and conditions of, and the criteria included in awards under the plan in specified circumstances. The Incentive Plan is effective until January 29, 2018 or, if earlier, the time which all available units under the Incentive Plan have been delivered to participants or the time of termination of the plan by EPCO or EPGP's ACG Committee.

Enterprise Unit L.P. Long-Term Incentive Plan

On February 20, 2008, EPCO formed Enterprise Unit L.P. ("Enterprise LP") to serve as an incentive arrangement for certain employees of EPCO through a "profits interest" in Enterprise LP. On that date, EPCO Holdings, Inc. ("EPCO Holdings") agreed to contribute $18,000,000 in the aggregate (the "Initial Contribution") to Enterprise LP and was admitted as the Class A limited partner. Certain key employees of EPCO including our Chief Executive Officer and Chief Financial Officer were issued Class B limited partner interests and admitted as Class B limited partners of Enterprise LP without any capital contribution. As with the awards granted in connection with the other Employee Partnerships, these awards are designed to provide additional long-term incentive compensation for such employees. The profits interest awards (or Class B limited partner interests) in Enterprise LP entitle the holder to participate in the appreciation in value of Enterprise GP Holdings units and our common units and are subject to forfeiture.

A portion of the fair value of these equity awards will be allocated to us under the EPCO administrative services agreement as a non-cash expense. We will not reimburse EPCO, Enterprise LP or any of their affiliates or partners, through the administrative services agreement or otherwise, for any expenses related to Enterprise LP, including the Initial Contribution by EPCO Holdings.

The Class B limited partner interests in Enterprise LP that are owned by EPCO employees are subject to forfeiture if the participating employee's employment with EPCO and its affiliates is terminated prior to February 20, 2014, with customary exceptions for death, disability and certain retirements. The risk of forfeiture associated with the Class B limited partner interests in Enterprise LP will also lapse upon certain change of control events.

Unless otherwise agreed to by EPCO, EPCO Holdings and a majority in interest of the Class B limited partners of Enterprise LP, Enterprise LP will terminate at the earlier of February 20, 2014 (six years from the date of the agreement) or a change in control of us or Enterprise GP Holdings. Enterprise LP has the following material terms regarding its quarterly cash distribution to partners:

- Distributions of cash flow - Each quarter, 100% of the cash distributions received by Enterprise LP from Enterprise GP Holdings and us will be distributed to the Class A limited partner until EPCO Holdings has received an amount equal to the Class A preferred return (as defined below), and any remaining distributions received by Enterprise LP will be distributed to the Class B limited partners. The Class A preferred return equals the Class A capital base (as defined below) multiplied by 5.0% per annum. The Class A limited partner's capital base equals the amount of any contributions of cash or cash equivalents made by the Class A limited partner to Enterprise LP, plus any unpaid Class A preferred return from prior periods, less any distributions made by Enterprise LP of proceeds from the sale of units owned by Enterprise LP (as described below).

- Liquidating Distributions - Upon liquidation of Enterprise LP, units having a fair market value equal to the Class A limited partner capital base will be distributed to EPCO Holdings, plus any accrued Class A preferred return for the quarter in which liquidation occurs. Any remaining units will be distributed to the Class B limited partners.

- Sale Proceeds - If Enterprise LP sells any units that it beneficially owns, the sale proceeds will be distributed to the Class A limited partner and the Class B limited partners in the same manner as liquidating distributions described above.

Item 9. ***Changes in and Disagreements with Accountants on Accounting and Financial Disclosure*.**

None.

Item 9A. ***Controls and Procedures*.**

Disclosure controls and procedures

Our management, with the participation of the chief executive officer ("CEO") and chief financial officer ("CFO") of our general partner, has evaluated the effectiveness of our disclosure controls and procedures, including internal controls over financial reporting, as of December 31, 2007. This evaluation concluded that our disclosure controls and procedures, including internal controls over financial reporting, are effective to provide us with a reasonable assurance that the information required to be disclosed in reports filed with the SEC is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms. Our management noted no material weaknesses in the design or operation of our internal controls over financial reporting that are likely to adversely affect our ability to record, process, summarize and report financial information. In addition, no fraud involving management or employees who have a significant role in our internal controls over financial reporting was detected.

The disclosure controls and procedures are also designed to provide reasonable assurance that such information is accumulated and communicated to our management, including the CEO and CFO of our general partner, as appropriate to allow such persons to make timely decisions regarding required disclosures.

Our management does not expect that our disclosure controls and procedures will prevent all errors and all fraud. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Based on the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within Enterprise Products Partners have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple errors or mistakes. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is also based in part upon certain assumptions about the likelihood of future events. Therefore, a control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

Internal control over financial reporting

Our internal controls over financial reporting are designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of our financial statements in accordance with GAAP. These internal controls over financial reporting were designed under the supervision of our management, including the CEO and CFO of our general partner, and include policies and procedures that:

(i) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of our assets,

(ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP, and that our receipts and expenditures are being made only in accordance with authorizations of our management and directors; and

(iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on our financial statements.

In accordance with Item 308 of SEC Regulation S-K, management is required to provide an annual report regarding internal controls over our financial reporting. This report, which includes management's assessment of the effectiveness of our internal controls over financial reporting, is found elsewhere in this Item 9A.

There were no changes in our internal controls over financial reporting (as defined in Rule 13a-15(f) under the Securities Exchange Act of 1934) or in other factors during the fourth quarter of 2007, that have materially affected or are reasonably likely to materially affect our internal controls over financial reporting.

The certifications of our general partner's CEO and CFO required under Sections 302 and 906 of the Sarbanes-Oxley Act of 2002 have been included as exhibits to this annual report on Form 10-K.

MANAGEMENT'S ANNUAL REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AS OF DECEMBER 31, 2007

The management of Enterprise Products Partners L.P. and its consolidated subsidiaries, including its Chief Executive Officer and Chief Financial Officer, is responsible for establishing and maintaining adequate internal control over financial reporting, as defined in Rules 13a-15(f) and 15d-15(f) of the Securities Exchange Act of 1934, as amended. Our internal control system was designed to provide reasonable assurance to Enterprise Products Partners' management and board of directors regarding the preparation and fair presentation of published financial statements. However, our management does not represent that our disclosure controls and procedures or internal controls over financial reporting will prevent all error and all fraud. A control system, no matter how well conceived and operated, can provide only a reasonable, not an absolute, assurance that the objectives of the control system are met.

Our management assessed the effectiveness of Enterprise Products Partners' internal control over financial reporting as of December 31, 2007. In making this assessment, it used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO") in Internal Control—Integrated Framework. This assessment included design effectiveness and operating effectiveness of internal controls over financial reporting as well as the safeguarding of assets. Based on our assessment, we believe that, as of December 31, 2007, Enterprise Products Partners' internal control over financial reporting is effective based on those criteria.

Our Audit, Conflicts and Governance Committee is composed of directors who are not officers or employees of our general partner. It meets regularly with members of management, the internal auditors and the representatives of the independent registered public accounting firm to discuss the adequacy of Enterprise Products Partners' internal controls over financial reporting, financial statements and the nature, extent and results of the audit effort. Management reviews with the Audit, Conflicts and Governance Committee all of Enterprise Products Partners' significant accounting policies and assumptions affecting the results of operations. Both the independent registered public accounting firm and internal auditors have direct access to the Audit, Conflicts and Governance Committee without the presence of management.

Our independent registered public accounting firm has issued an attestation report on our internal control over financial reporting. That report is included under Item 9A of this annual report.

Pursuant to the requirements of Rules 13a-15(f) and 15d-15(f) of the Securities Exchange Act of 1934, as amended, this Annual Report on Internal Control Over Financial Reporting has been signed below by the following persons on behalf of the registrant and in the capacities indicated below on February 29, 2008.

Name: W. Randall Fowler
Title: Chief Financial Officer of our general partner, Enterprise Products GP, LLC

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors of Enterprise Products GP, LLC and
Unitholders of Enterprise Products Partners L.P.
Houston, Texas

We have audited the internal control over financial reporting of Enterprise Products Partners LP and subsidiaries (the "Company") as of December 31, 2007, based on criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company’s management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management’s Annual Report on Internal Control over Financial Reporting as of December 31, 2007. Our responsibility is to express an opinion on the Company’s internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company’s internal control over financial reporting is a process designed by, or under the supervision of, the company’s principal executive and principal financial officers, or persons performing similar functions, and effected by the company’s board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company’s internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company’s assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet and the related statements of consolidated operations, consolidated comprehensive income, consolidated cash flows, and consolidated partners’ equity as of and for the year ended December 31, 2007 of the Company and our report dated February 28, 2008 expressed an unqualified opinion on those financial statements.

Item 9B. *Other Information*.

None.

PART III

Item 10. *Directors, Executive Officers and Corporate Governance*.

Partnership Management

As is commonly the case with publicly traded limited partnerships, we do not directly employ any of the persons responsible for the management or operations of our business. These functions are performed by the employees of EPCO pursuant to an administrative services agreement under the direction of the Board of Directors (the "Board") and executive officers of EPGP. For a description of the administrative services agreement, see "Certain Relationships and Related Transactions — Relationship with EPCO" under Item 13 of this annual report.

The executive officers of our general partner are elected for one-year terms and may be removed, with or without cause, only by the Board. Our unitholders do not elect the officers or directors of our general partner. Dan. L. Duncan, through his indirect control of EPGP, has the ability to elect, remove and replace at any time, all of the officers and directors of our general partner. Each member of the Board of our general partner serves until such member's death, resignation or removal. The employees of EPCO who served as directors of EPGP were Messrs. Dan L. Duncan, Michael A. Creel, W. Randall Fowler, Ralph S. Cunningham and Richard H. Bachmann.

Because we are a limited partnership and meet the definition of a "controlled company" under the listing standards of the NYSE, we are not required to comply with certain requirements of the NYSE. Accordingly, we have elected to not comply with Section 303A.01 of the NYSE Listed Company Manual, which would require that the Board of our general partner be comprised of a majority of independent directors. In addition, we have elected to not comply with Sections 303A.04 and 303A.05 of the NYSE Listed Company Manual, which would require that the Board of our general partner maintain a Nominating Committee and a Compensation Committee, each consisting entirely of independent directors.

Notwithstanding any contractual limitation on its obligations or duties, EPGP is liable for all debts we incur (to the extent not paid by us), except to the extent that such indebtedness or other obligations are non-recourse to EPGP. Whenever possible, EPGP intends to make any such indebtedness or other obligations non-recourse to itself.

Under our limited partnership agreement and subject to specified limitations, we will indemnify to the fullest extent permitted by Delaware law, from and against all losses, claims, damages or similar events any director or officer, or while serving as director or officer, any person who is or was serving as a tax matters member or as a director, officer, tax matters member, employee, partner, manager, fiduciary or trustee of our partnership or any of our affiliates. Additionally, we will indemnify to the fullest extent permitted by law, from and against all losses, claims, damages or similar events any person who is or was an employee (other than an officer) or agent of our partnership.

Table of Contents

Corporate Governance

We are committed to sound principles of governance. Such principles are critical for us to achieve our performance goals, and maintain the trust and confidence of investors, employees, suppliers, business partners and stakeholders.

A key element for strong governance is independent members of the Board of Directors. Pursuant to the NYSE listing standards, a director will be considered independent if the Board determines that he or she does not have a material relationship with EPGP or us (either directly or as a partner, unitholder or officer of an organization that has a material relationship with EPGP or us). Based on the foregoing, the Board has affirmatively determined that Messrs. Rex C. Ross, Charles M. Rampacek and E. William Barnett are "independent" directors under the NYSE rules.

As required by the Sarbanes-Oxley Act of 2002, the SEC adopted rules that direct national securities exchanges and associations to prohibit the listing of securities of a public company if its audit committee members do not satisfy a heightened independence standard. In order to meet this standard, members of such audit committees may not receive any consulting fee, advisory fee or other compensation from the public company other than fees for service as a director or committee member and may not be considered an affiliate of the public company. Neither EPGP nor any individual member of its ACG Committee has relied on any exemption in the NYSE rules to establish such individual's independence. Based on the foregoing criteria, the Board has affirmatively determined that all members of its ACG Committee satisfy this heightened independence requirement.

Code of Conduct and Ethics and Corporate Governance Guidelines

EPGP has adopted a "Code of Conduct" that applies to all directors, officers and employees. This code sets out our requirements for compliance with legal and ethical standards in the conduct of our business, including general business principles, legal and ethical obligations, compliance policies for specific subjects, obtaining guidance, the reporting of compliance issues and discipline for violations of the code.

Our Code of Conduct also establishes policies applicable to our chief executive officer, chief financial officer, principal accounting officer and senior financial and other managers to prevent wrongdoing and to promote honest and ethical conduct, including ethical handling of actual and apparent conflicts of interest, compliance with applicable laws, rules and regulations, full, fair, accurate, timely and understandable disclosure in public communications and prompt internal reporting of violations of the code.

Governance guidelines, together with committee charter, provide the framework for effective governance. The Board has adopted the *Governance Guidelines of Enterprise Products Partners,* which address several matters, including qualifications for directors, responsibilities of directors, retirement of directors, the composition and responsibility of ACG Committee, the conduct and frequency of board and committee meetings, management succession, director access to management and outside advisors, director compensation, director orientation and continuing education, and annual self-evaluation of the board. The Board recognizes that effective governance is an on-going process, and thus, the Board will review the Governance Guidelines of Duncan Energy Partners annually or more often as deemed necessary.

We provide access through our website at www.epplp.com to current information relating to governance, including the Code of Conduct, the Governance Guidelines of Enterprise Products Partners and other matters impacting our governance principles. You may also contact our investor relations department at (866) 230-0745 for printed copies of these documents free of charge.

ACG Committee

The sole committee of the Board is its ACG Committee. In accordance with NYSE rules and Section 3(a)(58)(A) of the Securities Exchange Act of 1934, the Board has named three of its members to serve on its ACG Committee. The members of the ACG Committee are independent directors, free from any relationship with us or any of our subsidiaries that would interfere with the exercise of independent judgment.

The members of the ACG Committee must have a basic understanding of finance and accounting and be able to read and understand fundamental financial statements, and at least one member of the ACG Committee shall have accounting or related financial management expertise. The members of the ACG Committee are Messrs. Ross, Rampacek and Barnett. The Board has affirmatively determined that Mr. Rampacek satisfies the definition of "audit committee financial expert" as defined in Item 401(h) of Regulation S-K promulgated by the SEC.

The ACG Committee’s duties are addressing audit and conflicts-related items and general corporate governance. From an audit and conflicts standpoint, the primary responsibilities of the ACG Committee include:

- review potential conflicts of interest, including related party transactions;
- monitoring the integrity of our financial reporting process and related systems of internal control;
- ensuring our legal and regulatory compliance and that of EPGP;
- overseeing the independence and performance of our independent public accountant;
- approving all services performed by our independent public accountant;
- providing for an avenue of communication among the independent public accountant, management, internal audit function and the Board;
- encouraging adherence to and continuous improvement of our policies, procedures and practices at all levels;
- reviewing areas of potential significant financial risk to our businesses; and
- approving awards granted under our long-term incentive plans.

If the Board believes that a particular matter presents a conflict of interest and proposes a resolution, the ACG Committee has the authority to review such matter to determine if the proposed resolution is fair and reasonable to us. Any matters approved by the ACG Committee are conclusively deemed to be fair and reasonable to our business, approved by all of our partners and not a breach by EPGP or the Board of any duties they may owe us or our unitholders.

Pursuant to its formal written charter, the ACG Committee has the authority to conduct any investigation appropriate to fulfilling its responsibilities, and it has direct access to our independent public accountants as well as any EPCO personnel whom it deems necessary in fulfilling its responsibilities. The ACG Committee has the ability to retain, at our expense, special legal, accounting or other consultants or experts it deems necessary in the performance of its duties.

From a governance standpoint, the ACG Committee’s primary duties and responsibilities are to develop and recommend to the Board a set of governance principles applicable to us and review such guidelines from time to time, making any changes that the ACG Committee deems necessary. The ACG Committee assists the Board in fulfilling its oversight responsibilities.

A copy of the ACG Committee charter is available on our website, www.epplp.com. You may also contact our investor relations department at (866) 230-0745 for a printed copy of this document free of charge.

NYSE Corporate Governance Listing Standards

On April 2, 2007, Robert G. Phillips, our chief executive officer on such date, certified to the NYSE (as required by Section 303A.12(a) of the NYSE Listed Company Manual) that he was not aware of any violation by us of the NYSE's Corporate Governance listing standards as of April 2, 2007.

Executive Sessions of Non-Management Directors

The Board holds regular executive sessions in which non-management directors meet without any members of management present. The purpose of these executive sessions is to promote open and candid discussion among the non-management directors. During such executive sessions, one director is designated as the "presiding director," who is responsible for leading and facilitating such executive sessions. Currently, the presiding director is Mr. Barnett.

In accordance with NYSE rules, we have established a toll-free, confidential telephone hotline (the "Hotline") so that interested parties may communicate with the presiding director or with all the non-management directors as a group. All calls to this Hotline are reported to the chairman of the ACG Committee, who is responsible for communicating any necessary information to the other non-management directors. The number of our confidential Hotline is (877) 888-0002.

Directors and Executive Officers of EPGP

The following table sets forth the name, age and position of each of the directors and executive officers of EPGP at February 29, 2008. Each executive officer holds the same respective office shown below in the general partner of the Operating Partnership.

Name	Age	Position with EPGP
Dan L. Duncan (1)	75	Director and Chairman
Michael A. Creel (1)	54	Director, President and Chief Executive Officer
W. Randall Fowler (1)	51	Director, Executive Vice President and Chief Financial Officer
Richard H. Bachmann (1)	55	Director, Executive Vice President, Chief Legal Officer and Secretary
Dr. Ralph S. Cunningham	67	Director
E. William Barnett (2,3)	75	Director
Rex C. Ross (2)	64	Director
Charles M. Rampacek (2)	64	Director
William Ordemann (1)	48	Executive Vice President and Chief Operating Officer
James H. Lytal (1)	50	Executive Vice President
A.J. Teague (1)	62	Executive Vice President
Gil H. Radtke	46	Senior Vice President
James M. Collingsworth	53	Senior Vice President
Michael J. Knesek (1)	53	Senior Vice President, Controller and Principal Accounting Officer

(1) Executive officer

(2) Member of ACG Committee

(3) Chairman of ACG Committee

The following information presents a brief history of the business experience of our directors and executive officers serving as of December 31, 2007:

Dan L. Duncan. Mr. Duncan was elected Chairman and a Director of EPGP in April 1998, Chairman and a Director of the general partner of EPO in December 2003, Chairman and a Director of EPE Holdings in August 2005 and Chairman and a Director of DEP GP in October 2006. Mr. Duncan served as the sole Chairman of EPCO from 1979 to December 2007. Mr. Duncan now serves as Group Co-Chairman of EPCO with his daughter, Ms. Randa Duncan Williams, also a Director of EPE Holdings. He also serves as a Honorary Trustee of the Board of Trustees of the Texas Heart Institute at Saint Luke's Episcopal Hospital.

Michael A. Creel. Mr. Creel was elected President and Chief Executive Officer of EPGP in August 2007. From June 2000 to August 2007, Mr. Creel served as Chief Financial Officer of EPGP and an Executive Vice President of EPGP from January 2001 to August 2007. Mr. Creel, a certified public accountant, also served as a Senior Vice President of EPGP from November 1999 to January 2001.

In December 2007, Mr. Creel was elected Group Vice Chairman and Chief Financial Officer of EPCO. Prior to these elections in EPCO, Mr. Creel served as Chief Operating Officer from April 2005 to December 2007 and Chief Financial Officer from June 2000 to April 2005 for EPCO. He also serves as a Director of DEP GP and EPGP since October 2006 and 2005, respectively. Mr. Creel served as President, Chief Executive Officer and a Director of EPE Holdings from August 2005 through August 2007. In October 2005, Mr. Creel was elected a Director of Edge Petroleum Corporation (a publicly traded oil and natural gas exploration and production company).

W. Randall Fowler. Mr. Fowler was elected Executive Vice President and Chief Financial Officer of EPGP, EPE Holdings and DEP GP in August 2007. Mr. Fowler has served as Senior Vice President and Treasurer of EPGP from February 2005 to August 2007 and of DEP GP from October 2006 to August 2007. In February 2006, Mr. Fowler became a Director of EPGP and EPE Holdings and of DEP GP since October 2006. Mr. Fowler also served as Senior Vice President and Chief Financial Officer of EPE Holdings from August 2005 to August 2007.

Mr. Fowler was elected President and Chief Executive Officer of EPCO in December 2007. Prior to these elections, he served as Chief Financial Officer of EPCO from April 2005 to December 2007. Mr. Fowler, a certified public accountant (inactive), joined Enterprise Products Partners as Director of Investor Relations in January 1999.

Richard H. Bachmann. Mr. Bachmann was elected an Executive Vice President, Chief Legal Officer and Secretary of EPGP and a Director of EPGP in February 2006. He previously served as a Director of EPGP from June 2000 to January 2004. Mr. Bachmann has served as a Director of the general partner of EPO since December 2003 and has served as Executive Vice President, Chief Legal Officer and Secretary of EPE Holdings since August 2005.

Mr. Bachmann was elected Group Vice Chairman, Chief Legal Officer and Secretary of EPCO in December 2007. In October 2006, Mr. Bachmann was elected President, Chief Executive Officer and a Director of DEP GP. Mr. Bachmann was also elected a Director of DEP GP in October 2006 and a Director of EPE Holdings in February 2006. Since January 1999, Mr. Bachmann has served as a Director of EPCO. In November 2006, Mr. Bachmann was appointed an independent manager of Constellation Energy Partners LLC. Mr. Bachmann also serves as a member of the audit, compensation and nominating and governance committee of Constellation Energy Partners LLC.

Dr. Ralph S. Cunningham. Dr. Cunningham was elected a Director of EPGP in February 2006 and also served as a Director of EPGP from 1998 until March 2005. In addition to these duties Dr. Cunningham served as Group Executive Vice President and Chief Operating Officer of EPGP from December 2005 to August 2007 and Interim President and Interim Chief Executive Officer from June 2007 to August 2007. Dr. Cunningham was elected President and Chief Executive Officer of EPE Holdings in August 2007. He served as Chairman and a Director of TEPPCO GP from March 2005 until November 2005.

Dr. Cunningham was elected a Group Vice Chairman of EPCO in December 2007 and served as a Director from 1987 to 1997. He serves as a Director of Tetra Technologies, Inc. (a publicly traded energy services and chemical company), EnCana Corporation (a Canadian publicly traded independent oil and natural gas company) and Agrium, Inc. (a Canadian publicly traded agricultural chemicals company). Dr. Cunningham retired in 1997 from CITGO Petroleum Corporation, where he had served as President and Chief Executive Officer since 1995.

E. William Barnett. Mr. Barnett was elected a Director of EPGP in March 2005. Mr. Barnett is a member of our ACG Committee and serves as its Chairman. Mr. Barnett practiced law with Baker Botts

L.L.P. from 1958 until his retirement in 2004. In 1984, he became Managing Partner of Baker Botts L.L.P. and continued in that role for fourteen years until 1998. He was Senior Counsel to the firm from 1998 until June 2004, when he retired from the firm. Mr. Barnett served as Chairman of the Board of Trustees of Rice University from 1996 to July 2005.

Mr. Barnett is a Life Trustee of The University of Texas Law School Foundation; a Director of St. Luke's Episcopal Health System; and a Director and former Chairman of the Houston Zoo, Inc. (the operating arm of the Houston Zoo). He is a Director of Reliant Energy, Inc. (a publicly traded electric services company) and Westlake Chemical Corporation (a publicly traded chemical company). Mr. Barnett is Chairman of the Advisory Board of the Baker Institute for Public Policy at Rice University and a Director and former Chairman of the Greater Houston Partnership. Mr. Barnett served as a Trustee of the Baylor College of Medicine from 1993 until 2004.

Rex C. Ross. Mr. Ross was elected a Director of EPGP in October 2006 and is a member of its ACG Committee. Mr. Ross serves as a Director of Schlumberger Technology Corporation, the holding company for all Schlumberger Limited assets and entities in the United States. Prior to his executive retirement from Schlumberger Limited in May 2004, Mr. Ross held a number of executive management positions during his 11-year career with the company, including President of Schlumberger Oilfield Services North America; President, Schlumberger GeoQuest; and President of SchlumbergerSema North & South America. Mr. Ross also serves on the board of directors of Gulfmark Offshore, Inc. (a publicly traded offshore marine services company) and is a member of its Governance Committee.

Charles M. Rampacek. Mr. Rampacek was elected a Director of EPGP in October 2006 and is a member of its ACG Committee. Mr. Rampacek is currently a business and management consultant in the energy industry. Mr. Rampacek served as Chairman, Chief Executive Officer and President of Probex Corporation ("Probex"), an energy technology company that developed a proprietary used oil recovery process, from 2000 until his retirement in 2003. Prior to joining Probex Corporation, Mr. Rampacek was President and Chief Executive Officer of Lyondell-Citgo Refining L.P, a manufacturer of petroleum products, from 1996 through 2000. From 1982 to 1995, he held various executive positions with Tenneco Inc. and its energy-related subsidiaries, including President of Tenneco Gas Transportation Company, Executive Vice President of Tenneco Gas Operations and Senior Vice President of Refining and Supply. Mr. Rampacek also spent 16 years with Exxon Company USA, where he held various supervisory and management positions. Mr. Rampacek has been a Director of Flowserve Corporation since 1998 and is Chairman of its Corporate Governance and Nominating Committee and a member of its Organization and Compensation Committee.

In 2005, two complaints requesting recovery of certain costs were filed against former officers and directors of Probex Corporation as a result of the bankruptcy of Probex in 2003. These complaints were defended under Probex's director and officer insurance by AIG and settlement was reached and paid by AIG with bankruptcy court approval in the first half of 2006. An additional complaint was filed in 2005 against noteholders of certain Probex debt of which Mr. Rampacek was one. A settlement of $2,000 was reached and approved by the bankruptcy court in the first half of 2006.

William Ordemann. Mr. Ordemann was elected an Executive Vice President and the Chief Operating Officer of EPGP in August 2007. He previously served as a Senior Vice President of EPGP from September 2001 to August 2007 and was a Vice President of EPGP from October 1999 to September 2001. Mr. Ordemann joined us in connection with our purchase of certain midstream energy assets from affiliates of Shell Oil Company in 1999. Prior to joining us, he was a Vice President of Shell Midstream Enterprises, LLC from January 1997 to February 1998, and Vice President of Tejas Natural Gas Liquids, LLC from February 1998 to September 1999.

James H. Lytal. Mr. Lytal was elected an Executive Vice President of EPGP in September 2004. Mr. Lytal served as a Director of the general partner of GulfTerra Energy Partners, L.P. from August 1994 until September 2004, and as President of GulfTerra and its general partner from July 1995 until September 2004. He served as a Senior Vice President of GulfTerra and its general partner from August 1994 to June 1995. Prior to joining GulfTerra, Mr. Lytal served in various capacities with the oil and gas exploration and production and natural gas pipeline businesses of United Gas Pipeline Company, Texas Oil and Gas, Inc. and American Pipeline Company

A.J. Teague. Mr. Teague was elected an Executive Vice President of EPGP in November 1999. Mr. Teague joined us in connection with our purchase of certain midstream energy assets from affiliates of Shell Oil Company in 1999. From 1998 to 1999, Mr. Teague served as President of Tejas Natural Gas Liquids, LLC

Gil H. Radtke. Mr. Radtke was elected a Senior Vice President of EPGP in February 2002. Mr. Radtke joined us in connection with our purchase of Diamond-Koch's storage and propylene fractionation assets in 2002. Before joining us, Mr. Radtke served as president of the Diamond-Koch joint venture from 1999 to 2002, where he was responsible for its storage, propylene fractionation, pipeline and NGL fractionation businesses. From 1997 to 1999 he was Vice President, Petrochemicals and Storage of Diamond-Koch. In October 2006, Mr. Radtke was elected a Senior Vice President, Chief Operating Officer and a Director of the general partner of Duncan Energy Partners.

James M. Collingsworth. Mr. Collingsworth was elected a Vice President of EPGP in November 2001 and subsequently promoted to a Senior Vice President in November 2002. Mr. Collingsworth joined us in connection with our acquisition of the Mid-America and Seminole Pipeline Systems in 2002. Before joining us, he served as a board member of Texaco Canada Petroleum Inc. from July 1998 to October 2001 and was employed by Texaco from 1991 to 2001 in various management positions, including Senior Vice President of NGL Assets and Business Services from July 1998 to October 2001.

Michael J. Knesek. Mr. Knesek, a certified public accountant, was elected a Senior Vice President of EPGP in February 2005 having served as a Vice President of EPGP since August 2000. Mr. Knesek has been the Principal Accounting Officer and Controller of EPGP since August 2000, EPE Holdings since August 2005 and DEP GP since October 2006. He has served as Senior Vice President of EPE Holdings since August 2005 and of DEP GP since October 2006. Mr. Knesek has been the Controller of EPCO since 1990 and currently serves as one of its Senior Vice Presidents.

Section 16(a) Beneficial Ownership Reporting Compliance

Under federal securities laws, EPGP, directors and executive officers of EPGP, and certain other officers, and any persons holding more than 10% of our common units are required to report their ownership of common units and any changes in their ownership levels to us and the SEC. Specific due dates for these reports have been established by regulation, and we are required to disclose in this annual report any failure to file this information within the specified timeframes. With the exception of the following late filing, all such reporting was done in a timely manner in 2007.

The spouse of Mr. Rex Ross serves as trustee for a trust that benefits, in part, certain of his immediate family members. This trust holds 4,500 common units of Enterprise that have not been previously reported for Section 16 purposes. On November 14, 2007, this trust purchased 1,000 common units of Enterprise at an average price of $31.95 per unit. The remaining 3,500 common units held in the trust were purchased more than six months before Mr. Ross became a Director of EPGP and should have been reflected on his Form 3, which was filed on October 23, 2006. These trust holdings were properly reflected on a Form 4 for Mr. Ross on Friday, February 29, 2008.

Item 11. *Executive Compensation*.

Executive Officer Compensation

We do not directly employ any of the persons responsible for managing our partnership. Instead, we are managed by our general partner, the executive officers of which are employees of EPCO. Our reimbursement of EPCO's compensation costs is governed by the administrative services agreement with EPCO (see Item 13).

Summary Compensation Table

The following table presents consolidated compensation amounts paid, accrued or otherwise expensed by us with respect to the years ended December 31, 2007 and 2006 for our general partner's Chief Executive Officer ("CEO"), Chief Financial Officer ("CFO") and three other most highly compensated executive officers as of December 31, 2007. We also include Robert G. Phillips and Dr. Ralph S. Cunningham, both of whom served as our CEO during 2007 prior to Michael A. Creel's appointment to this position effective August 1, 2007. Collectively, these seven individuals were our "Named Executive Officers" for 2007. Compensation paid or awarded by us with respect to such Named Executive Officers reflects only that portion of compensation paid by EPCO allocated to us pursuant to an administrative services agreement, including an allocation of a portion of the cost of EPCO's equity-based long-term incentive plans.

Name and Principal Position	Year	Salary ($)	Bonus ($) (5)	Unit Awards ($) (6)	Option Awards ($) (7)	All Other Compensation ($) (8)	Total ($)
Michael A. Creel (1)	2007	$361,808	$365,370	$517,707	$ 44,449	$ 108,017	$1,397,351
	2006	306,000	125,000	303,622	23,613	71,812	830,047
Robert G. Phillips (former CEO) (2)	2007	372,300	—	202,755	166,498	8,950,109	9,691,662
	2006	722,500	300,000	660,270	357,209	150,984	2,190,963
Dr. Ralph S. Cunningham (former CEO) (3)	2007	281,828	171,190	231,645	23,564	37,896	746,123
	2006	478,667	250,000	52,815	13,707	33,208	828,397
W. Randall Fowler (4)	2007	213,145	129,720	297,976	25,033	53,425	719,299
	2006	215,875	70,000	173,874	14,242	40,601	514,592
James H. Lytal	2007	386,250	210,000	730,634	77,980	162,494	1,567,358
	2006	367,500	187,500	455,462	47,227	101,639	1,159,328
A. J. Teague	2007	445,660	300,000	587,905	77,980	110,336	1,521,881
	2006	428,480	250,000	299,984	47,227	69,563	1,095,254
Richard H. Bachmann	2007	306,900	186,000	454,130	38,990	94,752	1,080,772
	2006	177,420	75,000	182,174	14,168	43,088	491,850

(1) Mr. Creel was appointed our Chief Executive Officer effective August 1, 2007. He served as our Chief Financial Officer through August 1, 2007. Amounts presented for the years ended December 31, 2007 and 2006 reflect his tenure in both positions.

(2) Mr. Phillips served as our Chief Executive Officer until his resignation effective June 30, 2007. The amount presented as "All Other Compensation" for 2007 includes a separation payment of $8,822,400.

(3) Dr. Cunningham served as our Acting Chief Executive Officer from June 30, 2007 to August 1, 2007. Amounts presented for the years ended December 31, 2007 and 2006 reflect his total compensation allocated to us with respect to these periods.

(4) Mr. Fowler was appointed our Chief Financial Officer effective August 1, 2007. Amounts presented for the years ended December 31, 2007 and 2006 reflect his total compensation allocated to us with respect to these periods.

(5) Amounts represent discretionary annual cash awards accrued for the years ended December 31, 2007 and 2006. Cash awards are paid in February of the following year (e.g. 2007 cash awards are paid in February 2008).

(6) Amounts represent expense recognized in accordance with SFAS 123(R) for the years ended December 31, 2007 and 2006 with respect to restricted unit and Employee Partnership awards.

(7) Amounts represent expense recognized in accordance with SFAS 123(R) for the years ended December 31, 2007 and 2006 with respect to unit options.

(8) Amounts primarily represent (i) matching contributions under funded, qualified, defined contribution retirement plans, (ii) quarterly distributions paid on equity incentive plan awards and (iii) the imputed value of life insurance premiums paid on behalf of the officer.

(9) Mr. Lytal's total compensation for 2007 includes perquisites totaling $13,111.

Compensation Discussion and Analysis

With respect to our Named Executive Officers, compensation paid or awarded by us for the last two fiscal years reflects only that portion of compensation paid by EPCO allocated to us pursuant to the administrative services agreement, including an allocation of a portion of the cost of equity-based long-term incentive plans of EPCO. Dan L. Duncan controls EPCO and has ultimate decision-making authority with respect to the compensation of our Named Executive Officers. The following elements of compensation, and EPCO's decisions with respect to determination of payments, are not subject to approvals by our Board or the ACG Committee. Awards under EPCO's long-term incentive plans are approved by the ACG Committee. We do not have a separate compensation committee.

As discussed below, the elements of EPCO's compensation program, along with EPCO's other rewards (e.g., benefits, work environment, career development), are intended to provide a total rewards package to employees. The compensation package is designed to reward contributions by employees in support of the business strategies of EPCO and its affiliates at both the partnership and individual levels. With respect to the years ended December 31, 2007 and 2006, EPCO's compensation package for Named Executive Officers did not include any elements based on targeted performance-related criteria.

The primary elements of EPCO's compensation program are a combination of annual cash and long-term equity-based incentive compensation. For the years ended December 31, 2007 and 2006, the elements of compensation for the Named Executive Officers consisted of the following:

- Annual base salary;
- Discretionary annual cash awards;
- Awards under long-term incentive arrangements; and
- Other compensation, including very limited perquisites.

In order to assist Mr. Duncan and EPCO with compensation decisions, our Chief Executive Officer and the Senior Vice President of Human Resources for EPCO formulate preliminary compensation recommendations for all of the Named Executive Officers other than our Chief Executive Officer. Mr. Duncan, after consulting with the Senior Vice President of Human Resources for EPCO, independently makes compensation decisions with respect to our Chief Executive Officer. EPCO takes note of market data for determining relevant compensation levels and compensation program elements through the review of and, in certain cases, participation in, various relevant compensation surveys. Mr. Duncan and EPCO do not use any formula or specific performance-based criteria for our Named Executive Officers in connection with services performed for us. All compensation determinations are discretionary and, as noted above, subject to Mr. Duncan's ultimate decision-making authority.

The discretionary cash awards paid to each of our Named Executive Officers were determined by consultation among Mr. Duncan, our Chief Executive Officer and the Senior Vice President of Human Resources for EPCO, subject to Mr. Duncan's final determination. These cash awards, in combination with annual base salaries, are intended to yield competitive total cash compensation levels for the Named Executive Officers and drive performance in support of our business strategies, as well as the performance of other EPCO affiliates for which the Named Executive Officers perform services. It is EPCO's general policy to pay these awards during the first quarter of each year.

The equity awards granted under the EPCO 1998 Plan to our Named Executive Officers were determined by consultation among Mr. Duncan, our Chief Executive Officer and the Senior Vice President of Human Resources for EPCO, and were approved by our general partner's ACG Committee. These awards (restricted units and unit options) are intended to align the long-term interests of the executive officers with those of our unitholders. It is EPCO's general policy to recommend, and the ACG Committee typically approves, these grants to employees during the second quarter of each fiscal year. In addition, our Named Executive Officers are Class B limited partners in certain of the Employee Partnerships. Mr. Duncan approves the issuance of all limited partnership interests in such Employee Partnerships to our Named Executive Officers. See "Summary of Long-Term Incentive Arrangements Underlying 2007 Award Grants" within this Item 11 for information regarding the long-term incentive plans. See Notes 2 and 5 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report for information regarding the accounting for such awards.

EPCO generally does not pay for perquisites for any of our Named Executive Officers, other than reimbursement of certain parking expenses, and expects to continue its policy of covering very limited perquisites allocable to our Named Executive Officers. EPCO also makes matching contributions under its 401(k) plan for the benefit of our Named Executive Officers in the same manner as it does for other EPCO employees.

EPCO does not offer our Named Executive Officers a defined benefit pension plan. Also, none of our Named Executive Officers had nonqualified deferred compensation during the years ended December 31, 2007 or 2006.

We believe that each of the base salary, cash awards, and incentive awards fit the overall compensation objectives of us and of EPCO, as stated above (i.e., to provide competitive compensation opportunities to align and drive employee performance toward the creation of sustained long-term unitholder value, which will also allow us to attract, motivate and retain high quality talent with the skills and competencies required by us).

Compensation Committee Report

We do not have a separate compensation committee. As discussed in the Compensation Discussion and Analysis, we do not directly employ or compensate our Named Executive Officers. Rather, under the administrative services agreement with EPCO, we reimburse EPCO for the compensation of our executive officers. Accordingly, to the extent that decisions are made regarding the compensation policies pursuant to which our Named Executive Officers are compensated, they are made by Dan L. Duncan and EPCO (except for equity awards under long-term incentive plans, as discussed above), and not by our Board of Directors.

In light of the foregoing, the Board of Directors of our general partner has reviewed and discussed the Compensation Discussion and Analysis with management. Based on our review of and discussion with management with respect to the Compensation Discussion and Analysis, we determined that the Compensation Discussion and Analysis be included in this Report.

Notwithstanding anything to the contrary set forth in any previous filings under the Securities Act, as amended, or the Exchange Act, as amended, that incorporate future filings, including this Report, in whole or in part, the foregoing report shall not be incorporated by reference into any such filings.

Table of Contents

Grants of Plan-Based Awards in Fiscal Year 2007

The following table presents information concerning each grant of a plan-based award made to a Named Executive Officer in 2007. The restricted unit and unit option awards granted during 2007 were under EPCO's 1998 Long-Term Incentive Plan (the "1998 Plan"). See "Summary of Long-Term Incentive Arrangements Underlying 2007 Award Grants" within this Item 11 for additional information regarding EPCO's long-term incentive plans.

Name	Grant Date	Estimated Future Payouts Under Equity Incentive Plan Awards Threshold (#)	Target (#)	Maximum (#)	Exercise or Base Price of Option Awards ($/Unit)	Grant Date Fair Value of Unit and Option Awards ($) (1)

Michael A. Creel	5/7/07	—	—	—	—	1,032,387
Dr. Ralph S. Cunningham	5/7/07	—	—	—	—	931,504
W. Randall Fowler	5/7/07	—	—	—	—	787,033
James H. Lytal	5/7/07	—	—	—	—	1,464,621
A.J. Teague	5/7/07	—	—	—	—	1,464,621
Richard H. Bachmann	5/7/07	—	—	—	—	732,021

(1) Amounts presented reflect that portion of grant date fair value allocable to us based on the percentage of time each Named Executive Officer spent on our consolidated business activities during 2007. Based on current allocations, we estimate that the consolidated compensation expense we record for each Named Executive Officer with respect to these awards will equal these amounts over time.

(2) For the period in which the restricted unit awards were outstanding during 2007, we recognized a total of $0.4 million of consolidated compensation expense related to these awards. The remaining portion of grant date fair value will be recognized as expense in future periods.

(3) For the period in which the unit option awards were outstanding during 2007, we recognized a total of $72 thousand of consolidated compensation expense related to these awards. The remaining portion of grant date fair value will be recognized as expense in future periods.

(4) For the period in which the profits interest awards were outstanding during 2007, we recognized a total of $1.0 million of consolidated compensation expense related to these awards. The remaining portion of grant date fair value will be recognized as expense in future periods.

The fair value amounts shown in the preceding table are based on certain assumptions and considerations made by management. The grant date fair values of restricted unit awards issued in May 2007 were based on a market price of Enterprise Products Partners' common units of $30.96 per unit.

The grant date fair values of unit option awards issued in May 2007 were based on the following assumptions: (i) expected life of the options of seven years; (ii) risk-free interest rate of 4.8%; (iii) an expected distribution yield on our common units of 8.4%; and (iv) an expected unit price volatility of our common units of 23.2%.

The fair value of the EPE Unit III profits interest awards issued in May 2007 was based on the following assumptions: (i) remaining life of the award of five years; (ii) risk-free interest rate of 4.6%; (iii) an expected distribution yield on Enterprise GP Holdings' units of 4.1% and (iv) an expected unit price volatility of Enterprise GP Holdings' units of 17.6%.

Awards granted to Robert G. Phillips in May 2007 were cancelled in connection with his $8.8 million cash separation payment paid in June 2007.

Summary of Long-Term Incentive Arrangements Underlying 2007 Award Grants

The following information summarizes the types of awards granted to our Named Executive Officers during the year ended December 31, 2007. For detailed information regarding our accounting for unit-based awards, see Note 5 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Unit option awards. Under EPCO's 1998 Plan, non-qualified, incentive options to purchase a fixed number of our common units may be granted to EPCO's key employees who perform management, administrative or operational functions for us or our affiliates. When issued, the exercise price of each option grant is equivalent to the market price of the underlying equity on the date of grant. In general, options granted under the 1998 Plan have a vesting period of four years and remain exercisable for ten years from the date of grant. In order to fund its obligations under the 1998 Plan, EPCO may purchase common units at fair value either in the open market or directly from us. When employees exercise unit options, we reimburse EPCO for the cash difference between the strike price paid by the employee and the actual purchase price paid by EPCO for the units issued to the employee.

Restricted unit awards. Under the 1998 Plan, EPCO's key employees who perform management, administrative or operational functions for us or our affiliates may be awarded restricted common units. In general, our restricted unit awards allow recipients to acquire the underlying common units (at no cost to the recipient) once a defined vesting period expires, subject to certain forfeiture provisions. The restrictions on such nonvested units generally lapse four years from the date of grant. The fair value of restricted units is based on the market price of the underlying common units on the date of grant less an allowance for estimated forfeitures. Each recipient is also entitled to cash distributions equal to the product of the number of restricted units outstanding for the participant and the cash distribution per unit paid by us to our unitholders.

As used in the context of the EPCO plans, the term "restricted unit" represents a time-vested unit under SFAS 123(R). Such awards are non-vested until the required service period expires.

Phantom unit awards. The EPCO 1998 Plan also provides for the issuance of phantom unit awards. These liability awards are automatically redeemed for cash based on the vested portion of the fair market value of the phantom units at redemption dates in each award. The fair market value of each phantom unit award is equal to the market closing price of our common units on the redemption date. Each participant is required to redeem their phantom units as they vest, which typically is four years from the date the award is granted. No phantom unit awards have been issued to date under the EPCO 1998 Plan.

The EPCO 1998 Plan also provides for the award of distribution equivalent rights ("DERs") in tandem with its phantom unit awards. A DER entitles the participant to cash distributions equal to the product of the number of phantom units outstanding for the participant and the cash distribution rate paid by us to our unitholders.

Profits interests awards. EPCO formed the Employee Partnerships to serve as long-term incentive arrangements for certain employees of EPCO by providing "profits interests" in the underlying limited partnerships (i.e. EPE Unit I, EPE Unit II and EPE Unit III). Our Named Executive Officers have been granted profits interest awards in EPE Unit I (formed in August 2005), EPE Unit II (formed in December 2006) and EPE Unit III (formed in May 2007). The profits interest awards (or Class B limited partner interests) entitle each holder to participate in the appreciation in value of Enterprise GP Holdings' units and are subject to forfeiture. See Item 13 of this annual report for additional information regarding the Employee Partnerships.

The following table provides information regarding the Named Executive Officers' share of such profits interest at December 31, 2007:

Plan Name	Percentage Ownership of Class B Interests (1)	Estimated Liquidation Value To Be Received by Officer (2)
EPE Unit I: (3)		
Michael A. Creel	7.92%	$1,100,679
W. Randall Fowler	5.32%	739,257
James H. Lytal	5.32%	739,257
A.J. Teague	5.32%	739,257
Richard H. Bachmann	7.92%	1,100,679
EPE Unit II: (4)		
Dr. Ralph S. Cunningham	100.0%	$ 0
EPE Unit III: (5)		
Michael A. Creel	7.63%	$ 0
Dr. Ralph S. Cunningham	7.63%	$ 0
W. Randall Fowler	7.63%	$ 0
James H. Lytal	6.36%	$ 0
A.J. Teague	6.36%	$ 0
Richard H. Bachmann	7.63%	$ 0

(1) Reflects Named Executive Officer share of profits interest at December 31, 2007.

(2) Values based on December 31, 2007 closing price of Enterprise GP Holdings' units of $37.02 per unit and taking into account the terms of liquidation outlined in each Employee Partnership agreement.

(3) At December 31, 2007, the total profits interests of EPE Unit I would have been worth $13.9 million, of which each Named Executive Officer would have received his proportionate share.

(4) The EPE Unit II Class B partnership interest had no liquidation value at December 31, 2007 due to a decrease in the market value of Enterprise GP Holdings' units since the formation of EPE Unit II.

(5) The EPE Unit III Class B partnership interests had no liquidation value at December 31, 2007 due to a decrease in the market value of Enterprise GP Holdings' units since the formation of EPE Unit III.

See Note 25 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report for information regarding the formation of Enterprise Products 2008 Long-Term Incentive Plan in January 2008 and Enterprise Unit L.P. in February 2008.

Richard H. Bachmann	8/30/10	—	—	—	—	1,100,679

Option Exercises and Stock Vested Table

The Named Executive Officers did not exercise any unit options during 2007. In addition, the Named Executive Officers did not vest in any equity-based awards during the year.

Director Compensation

The following table presents information regarding compensation paid to the independent directors of our general partner for the year ended December 31, 2007.

Name	Fees Earned or Paid in Cash ($)	Unit Awards ($) (1)	Option Awards ($) (2)	All Other Compensation ($) (5)	Total ($)
E. William Barnett	$77,500	$68,562	$32,948 (3)	$3,933	$182,943
Rex C. Ross	62,500	19,575	34,530 (4)	890	117,496
Charles M. Rampacek	62,500	19,575	34,530 (4)	890	117,496

(1) In November 2007, each of the restricted unit grants made to our independent directors was amended to provide that the restricted units subject to such grants would immediately vest. The amounts presented for each director represent the expense recognized by us related to such restricted units during the year ended December 31, 2007. The number of restricted units that vested for each independent director was as follows: Mr. Barnett, 2,154; Mr. Ross, 615; and Mr. Rampacek, 615.

(2) Amounts presented reflect the compensation expense recognized by EPGP related to unit appreciation rights ("UARs") granted in 2006 under letter agreements. The UARs are accounted for as liability awards under SFAS 123(R) since they will be settled with cash.

(3) At December 31, 2007, the fair value of UARs granted to Mr. Barnett was $96 thousand.

(4) At December 31, 2007, the fair value of UARs granted to each of Mr. Ross and Mr. Rampacek was $102 thousand.

(5) Amounts primarily represent the quarterly cash distributions each independent director received from restricted unit awards prior to the vesting of such awards in November 2007.

Neither we nor EPGP provide any additional compensation to employees of EPCO who serve as directors of EPGP. The employees of EPCO who served as directors of EPGP during 2007 were Messrs. Duncan, Creel, Fowler, Bachmann, Cunningham and Phillips.

Table of Contents

Currently, EPGP's three independent directors, Messrs. Barnett, Ross and Rampacek, are provided cash compensation for their services as follows:

- Each independent director receives $75,000 in cash annually. Prior to August 2007, the annual retainer was $50,000 in cash and $25,000 worth of restricted units.
- If the individual serves as chairman of a committee of the Board of Directors, then he receives an additional $15,000 in cash annually.

The independent directors of our general partner have also received unit-based compensation in the form of UARs. These awards consist of letter agreements with each of the independent directors and are not part of any established long-term incentive plan of the EPCO group of companies. The awards are based upon an incentive plan of EPE Holdings, and are made in the form of UAR grants for non-employee directors. The compensation expense associated with these awards is recognized by EPGP. These UARs entitle the directors to receive a cash amount in the future equal to the excess, if any, of the fair market value of Enterprise GP Holdings' units (determined as of a future vesting date) over the grant date price of such units. If a director resigns prior to vesting, his UAR awards are forfeited.

In August 2006, Mr. Barnett was granted 10,000 UARs under the letter agreement format. The grant date price of these rights was $35.71 per unit. These awards vest in August 2011 or on the date of certain qualifying events (as set forth in the form of grant). At December 31, 2007, the total fair value of these 10,000 UARs was $28 thousand, which was based on the following assumptions: (i) remaining life of award of four years; (ii) risk-free interest rate of 3.6%; (iii) an expected distribution yield on Enterprise GP Holdings' units of 4.4%; and (iv) an expected unit price volatility of Enterprise GP Holdings' units of 16.9%.

In November 2006, Mr. Barnett was issued an additional 20,000 UARs and Mr. Ross and Mr. Rampacek were each granted 30,000 UARs under the letter agreement format. The grant date price of these UARs was $34.10 per unit. These awards vest in November 2011 or on the date of certain qualifying events (as set forth in the form of grant). At December 31, 2007, the total fair value of these 80,000 UARs was $272 thousand, which was based on the following assumptions: (i) remaining life of award of four years; (ii) risk-free interest rate of 3.6%; (iii) an expected distribution yield on Enterprise GP Holdings' units of 4.4%; and (iv) an expected unit price volatility of Enterprise GP Holdings' units of 16.9%.

Item 12. *Security Ownership of Certain Beneficial Owners and Management and Related Unitholder Matters*.

Security Ownership of Certain Beneficial Owners

The following table sets forth certain information as of February 1, 2008, regarding each person known by our general partner to beneficially own more than 5% of our common units.

Title of Class	Name and Address of Beneficial Owner	Amount and Nature of Beneficial Ownership	Percent of Class
Common units	Dan L. Duncan 1100 Louisiana Street, 10th Floor Houston, Texas 77002	— (1)	—%

(1) For a detailed listing of ownership amounts that comprise Mr. Duncan's total beneficial ownership of our common units, see the table presented in the following section, "Security Ownership of Management," within this Item 12.

Security Ownership of Management

Enterprise Products Partners L.P. and Enterprise GP Holdings L.P.

The following table sets forth certain information regarding the beneficial ownership of our common units and the units of Enterprise GP Holdings L.P. as of February 1, 2008 by:

- our Named Executive Officers;
- the current Directors of EPGP; and
- the current directors and executive officers of EPGP as a group.

If an individual does not own any securities in the foregoing registrants, he is not listed in the following table.

Enterprise GP Holdings owns 100% of the membership interests of EPGP. All information with respect to beneficial ownership has been furnished by the respective directors or officers. Each person has sole voting and dispositive power over the securities shown unless otherwise indicated below. The beneficial ownership amounts of certain individuals include options to acquire our common units that are exercisable within 60 days of the filing date of this annual report.

Mr. Duncan owns 50.4% of the voting stock of EPCO and, accordingly, exercises sole voting and dispositive power with respect to our common units beneficially owned by EPCO and its affiliates. The remaining shares of EPCO capital stock are owned primarily by trusts for the benefit of members of Mr. Duncan's family. The address of EPCO is 1100 Louisiana Street, 10th Floor, Houston, Texas 77002.

* *The beneficial ownership of each individual is less than 1% of the registrant's common units outstanding.*

(1) As a result of EPCO's ownership of the general partners of the Employee Partnerships, Mr. Duncan is deemed beneficial owner of the securities held by these entities.

(2) Mr. Duncan is deemed beneficial owner of the securities held by certain family trusts, the beneficiaries of which are shareholders of EPCO.

(3) These individuals are Named Executive Officers.

(4) Cumulatively, this group's beneficial ownership amount includes 150,000 options to acquire common units of Enterprise Products Partners L.P. that were issued under the 1998 Plan. These options are exercisable within 60 days of the filing date of this report.

Essentially all of the ownership interests in us and Enterprise GP Holdings that are owned or controlled by EPCO are pledged as security under the credit facility of an EPCO affiliate. This credit facility contains customary and other events of default relating to EPCO and certain of its affiliates, including Enterprise GP Holdings, TEPPCO and us. In the event of a default under this credit facility, a change in control of Enterprise GP Holdings or us could occur, including a change in control of our respective general partners.

Duncan Energy Partners L.P.

On February 5, 2007, Duncan Energy Partners, a consolidated subsidiary of ours, completed its initial public offering of 14,950,000 common units. Certain of our directors and executive officers purchased common units of Duncan Energy Partners in this offering. The following table presents the beneficial ownership of common units of Duncan Energy Partners by our directors, Named Executive Officers and all directors and officers of our general partner (as a group) at February 1, 2008.

	Duncan Energy Partners	
Name of Beneficial Owner	**Amount And Nature Of Beneficial Ownership**	**Percent of Class**
Dan L. Duncan:		
Through EPO (1)	5,351,571	26.4%
Units owned by family trusts	103,100	*
Total for Dan L. Duncan	5,454,671	26.9%
Richard H. Bachmann (2,3)	10,172	*
Michael A. Creel (3)	7,500	*
Dr. Ralph S. Cunningham (3)	3,000	*

All current directors and executive officers of EPGP, as a group (14 individuals in total)	5,494,943	27.1%

* *The beneficial ownership of each individual is less than 1% of the registrant's units outstanding.*

(1) The number of common units shown for Dan L. Duncan represents the final amount of common units issued to EPO in connection with its contribution of equity interests to Duncan Energy Partners in February 2007.

(2) Mr. Bachmann is the Chief Executive Officer of Duncan Energy Partners.

(3) These individuals are Named Executive Officers.

(4) Mr. Fowler is the Chief Financial Officer of Duncan Energy Partners.

Table of Contents

Securities Authorized for Issuance Under Equity Compensation Plans

The following table sets forth certain information as of December 31, 2007 regarding the 1998 Plan, under which our common units are authorized for issuance to EPCO's key employees and to directors of EPGP through the exercise of unit options.

Plan Category	Number of units to be issued upon exercise of outstanding common unit options	Weighted-average exercise price of outstanding common unit options	Number of units remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a)
	(a)	(b)	(c)
Equity compensation plans approved by unitholders:			
1998 Plan	2,315,000	$26.18	1,282,256
Equity compensation plans not approved by unitholders:			
None.	—	—	—
Total for equity compensation plans	2,315,000	$26.18	1,232,256

(1) Of the 2,315,000 unit options outstanding at December 31, 2007, 335,000 were immediately exercisable and an additional 285,000, 380,000, 510,000 and 805,000 options are exercisable in 2008, 2009, 2010 and 2011, respectively.

1998 Plan

The 1998 Plan is effective until either all available common units under the plan have been issued to participants or the earlier termination of the 1998 Plan by EPCO. The 1998 Plan also provides for the issuance of restricted common units, of which 1,688,540 were outstanding at December 31, 2007. During 2007, a total of 738,040 restricted unit awards were issued to key employees of EPCO and our independent directors. For additional information regarding the 1998 Plan, see Note 5 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Enterprise Products 2008 Long-Term Incentive Plan

On January 29, 2008, the unitholders of Enterprise Products Partners approved the Enterprise Products 2008 Long-Term Incentive Plan (the "Incentive Plan"), which provides for awards of the Partnership's common units and other rights to the Partnership's non-employee directors and to consultants and employees of EPCO and its affiliates providing services to the Partnership. Awards under the Incentive Plan may be granted in the form of restricted units, phantom units, unit options, unit appreciation rights and distribution equivalent rights. The Incentive Plan will be administered by EPGP's ACG Committee. Up to 10,000,000 of the Partnership's common units may be granted as awards under the Incentive Plan, with such amount subject to adjustment as provided for under the terms of the plan.

The exercise price of unit options or UARs awarded to participants will be determined by the ACG Committee (at its discretion) at the date of grant and may be no less than the fair market value of the option award as of the date of grant. The Incentive Plan may be amended or terminated at any time by the Board of Directors of EPCO or EPGP's ACG Committee; however, any material amendment, such as a significant increase in the number of units available under the plan or a change in the types of awards available under the plan, would require the approval of the unitholders of the Partnership. The ACG Committee is also authorized to make adjustments in the terms and conditions of, and the criteria included in awards under the plan in specified circumstances. The Incentive Plan is effective until January 29, 2018 or, if earlier, the time which all available units under the Incentive Plan have been delivered to participants or the time of termination of the plan by EPCO or EPGP's ACG Committee.

Item 13. *Certain Relationships and Related Transactions, and Director Independence*.

Certain Relationships and Related Transactions

The following information summarizes our business relationships and transactions with related parties during the year ended December 31, 2007. We believe that the terms and provisions of our related party agreements are fair to us; however, such agreements and transactions may not be as favorable to us as we could have obtained from unaffiliated third parties. For additional information regarding our related party transactions, see Note 17 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Relationship with EPCO and affiliates

We have an extensive and ongoing relationship with EPCO and its affiliates, which include the following significant entities that are not a part of our consolidated group of companies:

- EPCO and its private company subsidiaries;
- EPGP, our sole general partner;
- Enterprise GP Holdings, which owns and controls our general partner;
- the Employee Partnerships;
- TEPPCO, which is owned and controlled by Enterprise GP Holdings; and
- Energy Transfer Equity, an equity method investment of Enterprise GP Holdings.

We also have an ongoing relationship with Duncan Energy Partners, the financial statements of which are consolidated with those of our own. Our transactions with Duncan Energy Partners are eliminated in consolidation.

EPCO is a private company controlled by Dan L. Duncan, who is also a Director and Chairman of EPGP, our general partner. At December 31, 2007, EPCO and its affiliates beneficially owned 147,986,045 (or 34.0%) of our outstanding common units, which includes 13,454,498 of our common units owned by Enterprise GP Holdings. In addition, at December 31, 2007, EPCO and its affiliates beneficially owned 77.1% of the limited partner interests of Enterprise GP Holdings and 100% of its general partner, EPE Holdings. Enterprise GP Holdings owns all of the membership interests of EPGP. The principal business activity of EPGP is to act as our managing partner. The executive officers and certain of the directors of EPGP and EPE Holdings are employees of EPCO.

As our general partner, EPGP received cash distributions of $124.4 million from us during the year ended December 31, 2007. This amount includes incentive distributions of $107.4 million.

We and EPGP are both separate legal entities apart from each other and apart from EPCO, Enterprise GP Holdings and their respective other affiliates, with assets and liabilities that are separate from those of EPCO, Enterprise GP Holdings and their respective other affiliates. EPCO and its private company subsidiaries and affiliates depend on the cash distributions they receive from us, Enterprise GP Holdings and other investments to fund their other operations and to meet their debt obligations. EPCO and its private company affiliates received $355.5 million in cash distributions from us and Enterprise GP Holdings during the year ended December 31, 2007.

The ownership interests in us that are owned or controlled by Enterprise GP Holdings are pledged as security under its credit facility. In addition, substantially all of the ownership interests in us that are owned or controlled by EPCO and its affiliates, other than those interests owned by Enterprise GP Holdings, Dan Duncan LLC and certain trusts affiliated with Dan L. Duncan, are pledged as security under the credit facility of a private company affiliate of EPCO. This credit facility contains customary and other events of default relating to EPCO and certain affiliates, including Enterprise GP Holdings, TEPPCO and us.

An affiliate of EPCO provides us trucking services for the transportation of NGLs and other products. For the year ended December 31, 2007, we paid this trucking affiliate $17.5 million for such services.

We lease office space in various buildings from affiliates of EPCO. The rental rates in these lease agreements approximate market rates. For the year ended December 31, 2007, we paid EPCO $5.6 million for office space leases.

EPCO Administrative Services Agreement. We have no employees. All of our operating functions and general and administrative support services are provided by employees of EPCO pursuant to an administrative services agreement (the "ASA"). We, Duncan Energy Partners, Enterprise GP Holdings, TEPPCO and our respective general partners are parties to the ASA. The significant terms of the ASA are as follows:

- EPCO will provide selling, general and administrative services, and management and operating services, as may be necessary to manage and operate our businesses, properties and assets (all in accordance with prudent industry practices). EPCO will employ or otherwise retain the services of such personnel as may be necessary to provide such services.
- We are required to reimburse EPCO for its services in an amount equal to the sum of all costs and expenses incurred by EPCO which are directly or indirectly related to our business or activities (including expenses reasonably allocated to us by EPCO). In addition, we have agreed to pay all sales, use, excise, value added or similar taxes, if any, that may be applicable from time to time in respect of the services provided to us by EPCO.
- EPCO will allow us to participate as named insureds in its overall insurance program, with the associated premiums and other costs being allocated to us.

Under the ASA, EPCO subleases to us (for $1 per year) certain equipment which it holds pursuant to operating leases and has assigned to us its purchase option under such leases (the "retained leases"). EPCO remains liable for the actual cash lease payments associated with these agreements. We record the full value of these payments made by EPCO on our behalf as a non-cash related party operating lease expense, with the offset to partners' equity accounted for as a general contribution to our partnership. At December 31, 2007, the retained leases were for a cogeneration unit and approximately 100 railcars. Should we decide to exercise the purchase options associated with the retained leases, $2.3 million would be payable in 2008 and $3.1 million in 2016.

Our operating costs and expenses for the year ended December 31, 2007 include reimbursement payments to EPCO for the costs it incurs to operate our facilities, including compensation of employees. We reimburse EPCO for actual direct and indirect expenses it incurs related to the operation of our assets. Such reimbursements were $273.0 million during the year ended December 31, 2007.

Likewise, our general and administrative costs for the year ended December 31, 2007 includes amounts we reimburse to EPCO for administrative services, including compensation of employees. In general, our reimbursement to EPCO for administrative services is either (i) on an actual basis for direct expenses it may incur on our behalf (e.g., the purchase of office supplies) or (ii) based on an allocation of such charges between the various parties to ASA based on the estimated use of such services by each party (e.g., the allocation of general legal or accounting salaries based on estimates of time spent on each entity's business and affairs). Such reimbursements were $56.5 million during the year ended December 31, 2007.

The ASA also addresses potential conflicts that may arise among Enterprise Products Partners (including EPGP), Enterprise GP Holdings (including EPE Holdings), Duncan Energy Partners (including DEP GP), and the EPCO Group. The EPCO Group includes EPCO and its other affiliates, but excludes Enterprise Products Partners, Enterprise GP Holdings, Duncan Energy Partners and their respective general partners. With respect to potential conflicts, the ASA provides, among other things, that:

- If a business opportunity to acquire "equity securities" (as defined below) is presented to the EPCO Group, Enterprise Products Partners (including EPGP), Enterprise GP Holdings (including EPE Holdings), Duncan Energy Partners (including DEP GP), then Enterprise GP Holdings will have the first right to pursue such opportunity. The term "equity securities" is defined to include:

  - general partner interests (or securities which have characteristics similar to general partner interests) or interests in "persons" that own or control such general partner or similar interests (collectively, "GP Interests") and securities convertible, exercisable, exchangeable or otherwise representing ownership or control of such GP Interests; and

  - incentive distribution rights and limited partner interests (or securities which have characteristics similar to incentive distribution rights or limited partner interests) in publicly traded partnerships or interests in "persons" that own or control such limited partner or similar interests (collectively, "non-GP Interests"); provided that such non-GP Interests are associated with GP Interests and are owned by the owners of GP Interests or their respective affiliates.

  Enterprise GP Holdings will be presumed to want to acquire the equity securities until such time as EPE Holdings advises the EPCO Group, EPGP and DEP GP that it has abandoned the pursuit of such business opportunity. In the event that the purchase price of the equity securities is reasonably likely to equal or exceed $100 million, the decision to decline the acquisition will be made by the Chief Executive Officer of EPE Holdings after consultation with and subject to the approval of the ACG Committee of EPE Holdings. If the purchase price is reasonably likely to be less than $100 million, the Chief Executive Officer of EPE Holdings may make the determination to decline the acquisition without consulting the ACG Committee of EPE Holdings.

  In the event that Enterprise GP Holdings abandons the acquisition and so notifies the EPCO Group, EPGP and DEP GP, Enterprise Products Partners will have the second right to pursue such acquisition. Enterprise Products Partners will be presumed to want to acquire the equity securities until such time as EPGP advises the EPCO Group and DEP GP that Enterprise Products Partners has abandoned the pursuit of such acquisition. In determining whether or not to pursue the acquisition, Enterprise Products Partners will follow the same procedures applicable to Enterprise GP Holdings, as described above but utilizing EPGP’s Chief Executive Officer and ACG Committee.

  In its sole discretion, Enterprise Products Partners may affirmatively direct such acquisition opportunity to Duncan Energy Partners. In the event this occurs, Duncan Energy Partners may pursue such acquisition.

  In the event Enterprise Products Partners abandons the acquisition opportunity for the equity securities and so notifies the EPCO Group and DEP GP, the EPCO Group may pursue the acquisition or offer the opportunity to TEPPCO (including TEPPCO GP) and their controlled affiliates, in either case, without any further obligation to any other party or offer such opportunity to other affiliates.

- If any business opportunity not covered by the preceding bullet point (i.e. not involving "equity securities") is presented to the EPCO Group, Enterprise Products Partners (including EPGP), Enterprise GP Holdings (including EPE Holdings), or Duncan Energy Partners (including DEP GP), Enterprise Products Partners will have the first right to pursue such opportunity either for itself or, if desired by Enterprise Products Partners in its sole discretion, for the benefit of Duncan

Energy Partners. It will be presumed that Enterprise Products Partners will pursue the business opportunity until such time as its general partner advises the EPCO Group, EPE Holdings and DEP GP that it has abandoned the pursuit of such business opportunity.

In the event the purchase price or cost associated with the business opportunity is reasonably likely to equal or exceed $100 million, any decision to decline the business opportunity will be made by the Chief Executive Officer of EPGP after consultation with and subject to the approval of the ACG Committee of EPGP. If the purchase price or cost is reasonably likely to be less than $100 million, the Chief Executive Officer of EPGP may make the determination to decline the business opportunity without consulting EPGP's ACG Committee.

In its sole discretion, Enterprise Products Partners may affirmatively direct such acquisition opportunity to Duncan Energy Partners. In the event this occurs, Duncan Energy Partners may pursue such acquisition.

In the event that Enterprise Products Partners abandons the business opportunity for itself and Duncan Energy Partners and so notifies the EPCO Group, EPE Holdings and DEP GP, Enterprise GP Holdings will have the second right to pursue such business opportunity. It will be presumed that Enterprise GP Holdings will pursue such acquisition until such time as its general partner declines such opportunity (in accordance with the procedures described above for Enterprise Products Partners) and advises the EPCO Group that it has abandoned the pursuit of such business opportunity. Should this occur, the EPCO Group may either pursue the business opportunity or offer the business opportunity to TEPPCO (including TEPPCO GP) and their controlled affiliates without any further obligation to any other party or offer such opportunity to other affiliates.

None of Enterprise Products Partners, Enterprise GP Holdings, Duncan Energy Partners or their respective general partners or the EPCO Group have any obligation to present business opportunities to TEPPCO (including TEPPCO GP) or their controlled affiliates. Likewise, TEPPCO (including TEPPCO GP) and their controlled affiliates have no obligation to present business opportunities to Enterprise Products Partners, Enterprise GP Holdings, Duncan Energy Partners or their respective general partners or the EPCO Group.

Employee Partnerships. EPCO formed the Employee Partnerships to serve as an incentive arrangement for key employees of EPCO by providing them a "profits interest" in such partnerships. Certain EPCO employees who work on behalf of us and EPCO were issued Class B limited partner interests and admitted as Class B limited partners without any capital contribution. The profits interest awards (i.e., the Class B limited partner interests) in the Employee Partnerships entitles each holder to participate in the appreciation in value of the Parent Company's Units. For information regarding the Employee Partnerships, see Note 5 of the Notes to Consolidated Financial Statements included under Item 8 of this annual report.

Relationship with TEPPCO

TEPPCO became a related party to us in February 2005 in connection with the acquisition of TEPPCO GP by a private company subsidiary of EPCO. In May 2007, Enterprise GP Holdings purchased TEPPCO GP from this private company subsidiary of EPCO.

We received $67.6 million from TEPPCO during the year ended December 31, 2007 from the sale of hydrocarbon products. We paid TEPPCO $19.4 million for NGL pipeline transportation and storage services during the year ended December 31, 2007.

In August 2006, we became a joint venture partner with TEPPCO in its Jonah Gas Gathering Company ("Jonah"), which owns the Jonah Gas Gathering System located in the Greater Green River Basin of southwestern Wyoming. The Jonah Gathering System gathers and transports natural gas produced from the Jonah and Pinedale fields to regional natural gas processing plants and major interstate pipelines that deliver natural gas to end-user markets.

Prior to entering into the Jonah joint venture, we managed the construction of the Phase V expansion and funded the initial construction costs under a letter of intent we entered into in February 2006. In connection with the joint venture arrangement, we and TEPPCO plan to continue the Phase V expansion, which is expected to increase the capacity of the Jonah Gathering System from 1.5 Bcf/d to 2.4 Bcf/d and to significantly reduce system operating pressures, which we anticipate will lead to increased production rates and ultimate reserve recoveries. The first portion of the expansion, which has increased the system gathering capacity to 2.0 Bcf/d, was completed in July 2007 and the final phase of this expansion is expected to be completed by April 2008. The total anticipated cost of the Phase V expansion is expected to be approximately $505.0 million. We continue to manage the Phase V construction project.

Since August 1, 2006, we and TEPPCO have equally shared in the construction costs of the Phase V expansion. TEPPCO has reimbursed us $261.6 million, which represents 50% of total Phase V costs incurred through December 31, 2007. We had a receivable of $9.9 million from TEPPCO at December 31, 2007 for Phase V expansion costs.

TEPPCO was entitled to all distributions from the joint venture until specified milestones were achieved, at which point, we became entitled to receive 50% of the incremental cash flow from portions of the system placed in service as part of the expansion. Since the first phase of this expansion was reached in July 2007, we and TEPPCO have shared earnings based on a formula that takes into account our respective capital contributions, including expenditures by TEPPCO prior to the expansion.

At December 31, 2007, we owned an approximate 19.4% interest in Jonah and TEPPCO owns 80.6%. We operate the Jonah system. We account for our investment in the Jonah joint venture using the equity method.

The Jonah joint venture is governed by a management committee comprised of two representatives approved by us and two appointed by TEPPCO, each with equal voting power. After an in-depth consideration of all relevant factors, this transaction was approved by the ACG Committee of our general partner and the Audit and Conflicts Committee of the general partner of TEPPCO. The ACG Committee of our general partner received a fairness opinion in connection with this transaction. The transaction was reviewed and recommended for approval by the Audit and Conflicts Committee of TEPPCO GP with assistance from an independent financial advisor.

We have agreed to indemnify TEPPCO from any and all losses, claims, demands, suits, liabilities, costs and expenses arising out of or related to breaches of our representations, warranties, or covenants related to the Jonah joint venture. A claim for indemnification cannot be filed until the losses suffered by TEPPCO exceed $1.0 million. The maximum potential amount of future payments under the indemnity agreement is limited to $100.0 million. All indemnity payments are net of insurance recoveries that TEPPCO may receive from third-party insurance carriers. We carry insurance coverage that may offset any payments required under the indemnification.

In January 2007, we purchased a 10-mile segment of pipeline from TEPPCO located in the Houston area for $8.0 million. This pipeline segment is part of the DEP South Texas NGL Pipeline System that commenced operations in January 2007. In addition, we entered into a lease with TEPPCO for an 11-mile interconnecting pipeline located in the Houston area that is part of the DEP South Texas NGL Pipeline System. Although the primary term of the lease expired in September 2007, it is being renewed on a month-to-month basis until construction of a parallel pipeline is completed in early 2008. These transactions were in accordance with the Board-approved management authorization policy.

Relationship with Energy Transfer Equity

Enterprise GP Holdings acquired equity method investments in Energy Transfer Equity and its general partner in May 2007. As a result, Energy Transfer Equity and its consolidated subsidiaries became related parties to our consolidated businesses.

For the eight months ended December 31, 2007, we recorded $294.4 million of revenues from Energy Transfer Partners, L.P. ("ETP"), primarily from NGL marketing activities. We incurred $35.2 million in operating costs and expenses for the eight months ended December 31, 2007. We have a long-term revenue generating contract with Titan Energy Partners, L.P. ("Titan"), a consolidated subsidiary of ETP. Titan purchases substantially all of its propane requirements from us. The contract continues until March 31, 2010 and contains renewal and extension options. We and Energy Transfer Company ("ETC OLP") transport natural gas on each other's systems and share operating expenses on certain pipelines. ETC OLP also sells natural gas to us.

Relationships with Unconsolidated Affiliates

Many of our unconsolidated affiliates perform supporting or complementary roles to our other business operations. Since we and our affiliates hold ownership interests in these entities and directly or indirectly benefit from our related party transactions with such entities, they are presented here. The following information summarizes significant related party transactions with our current unconsolidated affiliates:

- We sell natural gas to Evangeline, which, in turn, uses the natural gas to satisfy supply commitments it has with a major Louisiana utility. Revenues from Evangeline were $268.0 million for the year ended December 31, 2007. In addition, we furnished $1.1 million in letters of credit on behalf of Evangeline at December 31, 2007.

- We pay Promix for the transportation, storage and fractionation of NGLs. In addition, we sell natural gas to Promix for its plant fuel requirements. For the year ended December 31, 2007, we recorded revenues of $17.3 million from Promix and paid Promix $30.4 million for its services to us.

- We perform management services for certain of our unconsolidated affiliates. We charged such affiliates $9.3 million for such services during the year ended December 31, 2007.

Relationship with Duncan Energy Partners

In September 2006, we formed a consolidated subsidiary, Duncan Energy Partners, to acquire, own and operate a diversified portfolio of midstream energy assets and to support the growth objectives of EPO. On February 5, 2007, this subsidiary completed its initial public offering of 14,950,000 common units at $21.00 per unit, which generated net proceeds to Duncan Energy Partners of $291.9 million. As consideration for assets contributed and reimbursement for capital expenditures related to these assets, Duncan Energy Partners distributed $260.6 million of these net proceeds to Enterprise Products Partners (along with $198.9 million in borrowings under its credit facility and a final amount of 5,351,571 common units of Duncan Energy Partners). Duncan Energy Partners used $38.5 million of net proceeds from the overallotment to redeem 1,950,000 of the 7,301,571 common units it had originally issued to Enterprise Products Partners, resulting in the final amount of 5,351,571 common units beneficially owned by Enterprise Products Partners. We used the cash received from Duncan Energy Partners to temporarily reduce amounts outstanding under EPO's Multi-Year Revolving Credit Facility.

In addition to the 34% direct ownership interest we retained in certain subsidiaries of Duncan Energy Partners, we also own the 2% general partner interest in Duncan Energy Partners and 26.4% of Duncan Energy Partners' outstanding common units. EPO directs the business operations of Duncan Energy Partners through its control of Duncan Holdings, LLC ("DEP GP"). Certain of our officers and directors are also beneficial owners of common units of Duncan Energy Partners (see Item 12).

For financial reporting purposes, we consolidate the financial statements of Duncan Energy Partners with those of our own and reflect its operations in our business segments. All intercompany transactions between us and Duncan Energy Partners are eliminated in the preparation of our consolidated financial statements. Also, due to common control of the entities by Dan L. Duncan, the initial consolidated balance sheet of Duncan Energy Partners reflects our historical carrying basis in each of the subsidiaries contributed to Duncan Energy Partners. Public ownership of Duncan Energy Partners' net assets and earnings are presented as a component of minority interest in our consolidated financial statements.

The borrowings of Duncan Energy Partners are presented as part of our consolidated debt; however, we do not have any obligation for the payment of interest or repayment of borrowings incurred by Duncan Energy Partners.

We have significant involvement with all of the subsidiaries of Duncan Energy Partners, including the following types of transactions: (i) we utilize storage services provided by Mont Belvieu Caverns to support our Mont Belvieu fractionation and other businesses; (ii) we buy natural gas from and sell natural gas to Acadian Gas in connection with our normal business activities; and (iii) we are the sole shipper on the DEP South Texas NGL Pipeline System.

We may contribute other equity interests in our subsidiaries to Duncan Energy Partners in the near term and use the proceeds we receive from Duncan Energy Partners to fund our capital spending program.

For additional information regarding Duncan Energy Partners, see "Other Items — Initial Public Offering of Duncan Energy Partners" under Item 7 of this annual report.

Omnibus Agreement. On February 5, 2007, EPO and Duncan Energy Partners entered into an Omnibus Agreement that governs our relationship with Duncan Energy Partners on the following matters:

- indemnification for certain environmental liabilities, tax liabilities and right-of-way defects;
- reimbursement of certain expenditures incurred by DEP South Texas NGL and Mont Belvieu Caverns;
- a right of first refusal to EPO in Duncan Energy Partners' current and future subsidiaries and a right of first refusal on the material assets of these entities, other than sales of inventory and other assets in the ordinary course of business; and
- a preemptive right with respect to equity securities issued by certain of Duncan Energy Partners' subsidiaries, other than as consideration in an acquisition or in connection with a loan or debt financing.

EPO has indemnified Duncan Energy Partners against certain pre-February 2007 environmental and related liabilities associated with the assets EPO contributed to Duncan Energy Partners at the time of its initial public offering. These liabilities include both known and unknown environmental and related liabilities. This indemnification obligation will terminate on February 5, 2010. There is an aggregate cap of $15.0 million on the amount of indemnity coverage. In addition, Duncan Energy Partners is not entitled to indemnification until the aggregate amount of claims it incurs exceeds $250 thousand. Liabilities resulting from a change of law after February 5, 2007 are excluded from the EPO environmental indemnity. In addition, EPO has indemnified Duncan Energy Partners for liabilities related to:

- certain defects in the easement rights or fee ownership interests in and to the lands on which any assets contributed to Duncan Energy Partners in connection with its initial public offering are located and failure to obtain certain consents and permits necessary to conduct its business that arise through February 5, 2010; and
- certain income tax liabilities attributable to the operation of the assets contributed to Duncan Energy Partners in connection with its initial public offering prior to February 5, 2007.

The Omnibus Agreement may not be amended without the prior approval of the ACG Committee if the proposed amendment will, in the reasonable discretion of DEP GP, adversely affect holders of the it's common units.

Neither we, nor EPO and any of its affiliates are restricted under the Omnibus Agreement from competing with Duncan Energy Partners. Except as otherwise expressly agreed in the EPCO administrative services agreement, EPO and any of its affiliates may acquire, construct or dispose of additional midstream energy or other assets in the future without any obligation to offer Duncan Energy Partners the opportunity to purchase or construct those assets. These agreements are in addition to other agreements relating to business opportunities and potential conflicts of interest set forth in the administrative services agreement with EPO, EPCO and other affiliates of EPCO.

Under the Omnibus Agreement, EPO agreed to make additional contributions to Duncan Energy Partners as reimbursement for its 66% share of any excess construction costs above (i) the $28.6 million of estimated capital expenditures to complete the Phase II expansions of the DEP South Texas NGL Pipeline System and (ii) $14.1 million of estimated construction costs for additional brine production capacity and above-ground storage reservoir projects at Mont Belvieu, Texas. Both projects were underway at the time of Duncan Energy Partners' initial public offering. In December 2007, EPO made contributions totaling $9.9 million to Duncan Energy Partners' subsidiaries in connection with this provision of the Omnibus Agreement.

Review and Approval of Transactions with Related Parties

Our partnership agreement and ACG Committee charter set forth policies and procedures for the review and approval of certain transactions with persons affiliated with or related to us. As further described below, our partnership agreement and ACG Committee charter set forth procedures by which related party transactions and conflicts of interest may be approved or resolved by our general partner or the ACG Committee. Under our partnership agreement, whenever a potential conflict of interest exists or arises between our general partner or any of its affiliates, on the one hand, and us, any of our subsidiaries or any partner, on the other hand, any resolution or course of action by our general partner or its affiliates in respect of such conflict of interest is permitted and deemed approved by all of our partners, and will not constitute a breach of our partnership agreement or any agreement contemplated by such agreement, or of any duty stated or implied by law or equity, if the resolution or course of action is or, by operation of the partnership agreement is deemed to be, fair and reasonable to us; provided that, any conflict of interest and any resolution of such conflict of interest will be conclusively deemed fair and reasonable to us if such conflict of interest or resolution is (i) approved by a majority of the members of our ACG Committee ("Special Approval"), or (ii) on terms objectively demonstrable to be no less favorable to us than those generally being provided to or available from unrelated third parties.

The ACG Committee (in connection with Special Approval) is authorized in connection with its resolution of any conflict of interest to consider:

- the relative interests of any party to such conflict, agreement, transaction or situation and the benefits and burdens relating to such interest;
- the totality of the relationships between the parties involved (including other transactions that may be particularly favorable or advantageous to the Partnership);
- any customary or accepted industry practices and any customary or historical dealings with a particular person;
- any applicable generally accepted accounting or engineering practices or principles;
- the relative cost of capital of the parties and the consequent rates of return to the equity holders of the parties; and
- such additional factors as the committee determines in its sole discretion to be relevant, reasonable or appropriate under the circumstances.

The review and approval process of the ACG Committee, including factual matters that may be considered in determining whether a transaction is fair and reasonable, is generally governed by Section 7.9 of our partnership agreement. As discussed above, the ACG Committee's Special Approval is conclusively deemed fair and reasonable to us under the partnership agreement.

Related party transactions that do not occur under the ASA and that are not reviewed by the ACG Committee, as described above, may be subject to our general partner's Board-approved written internal review and approval policies and procedures. These internal policies and procedures, which apply to related party transactions as well as transactions with unrelated parties, specify thresholds for our general partner's officers and managers to authorize various categories of transactions, including purchases and sales of assets, expenditures, commercial and financial transactions and legal agreements. The specified thresholds for some categories of transactions are less than $120,000 and for others are substantially greater.

In submitting a matter to the ACG Committee, the Board or the general partner may charge the committee with reviewing the transaction and providing the Board a recommendation, or it may delegate to the committee the power to approve the matter. When so engaged, the ACG Committee Charter provides that, unless the ACG Committee determines otherwise, the committee shall perform the following functions:

- Review a summary of the proposed transaction(s) that outlines (i) its terms and conditions (explicit and implicit), (ii) a brief history of the transaction, and (iii) the impact that the transaction will have on our unitholders and personnel, including earnings per unit and distributable cash flow.
- Review due diligence findings by management and make additional due diligence requests, if deemed necessary.
- Engage third-party independent advisors, where necessary, to provide committee members with comparable market values, legal advice and similar services directly related to the proposed transaction.
- Conduct interviews regarding the proposed transaction with the most knowledgeable company officials to ensure that the committee members have all relevant facts before rendering their judgment.

On November 6, 2007, the ACG Committee charter was amended and restated. The amended and restated charter provides, among other things, that the ACG Committee will review and approve related-party transactions (i) for which Board approval is required by the partnership's management authorization policy (generally, for transactions involving amounts greater than $100 million), (ii) where an officer or director of our general partner or of any partnership subsidiary is a party, (iii) when requested to do so by management of the partnership or the Board, or (iv) pursuant to the limited partnership agreement of the partnership or the limited liability company agreement of our general partner.

In the normal course of business, our management routinely reviews all other related party transactions, including proposed asset purchases and business combinations and purchases and sales of product. As a matter of course, management reviews the terms and conditions of the proposed transactions, performs appropriate levels of due diligence and assesses the impact of the transaction on our partnership. In addition, the ACG Committee reviews a summary of all related party transactions with management on a quarterly basis where the amounts involved exceed $1.0 million and the underlying prices are not market-based. In connection with such review, the ACG Committee received no indication that such transactions were not fair and reasonable to the Company or that management of the Company improperly exercised its authority under our general partner's written internal review and approval policies and procedures.

Table of Contents

The ACG Committee does not separately review individual transactions covered by our administrative services agreement with EPCO, which agreement and related allocation methods have been previously reviewed and approved by the ACG Committee and/or the Board. The administrative services agreement governs numerous day-to-day transactions between us and our subsidiaries and EPCO and its affiliates, including the provision by EPCO of administrative and other services to us and our subsidiaries and our reimbursement of costs for those services.

During the year ended December 31, 2006, the ACG Committee reviewed and approved the purchase of the Pioneer plant from TEPPCO and Jonah Joint Venture with TEPPCO referenced elsewhere in this Item 13. All other transactions with related parties were either governed by the administrative services agreement or effected under our general partner's written internal review and approval policies and procedures.

Director Independence

Messrs. Barnett, Ross and Rampacek have been determined to be independent under the applicable NYSE listing standards and are independent under the rules of the SEC applicable to audit committees. For a discussion of independence standards applicable to the Board and factors considered by the Board in making its independence determinations, please refer to "Corporate Governance" and "ACG Committee" under Item 10 of this annual report.

Item 14. *Principal Accountant Fees and Services*.

We have engaged Deloitte & Touche LLP, the member firms of Deloitte Touche Tohmatsu, and their respective affiliates (collectively, "Deloitte & Touche") as our independent auditor. The following table summarizes fees we paid Deloitte & Touche for independent auditing, tax and related services for each of the last two fiscal years (dollars in thousands):

	For Year Ended December 31,	
	2007	2006
Audit Fees (1)	$3,825	$4,476
Audit-Related Fees (2)	79	13
Tax Fees (3)	341	297
All Other Fees (4)	n/a	n/a

(1) Audit fees represent amounts billed for each of the years presented for professional services rendered in connection with (i) the audit of our annual financial statements and internal controls over financial reporting, (ii) the review of our quarterly financial statements or (iii) those services normally provided in connection with statutory and regulatory filings or engagements including comfort letters, consents and other services related to SEC matters. This information is presented as of the latest practicable date for this annual report.

(2) Audit-related fees represent amounts we were billed in each of the years presented for assurance and related services that are reasonably related to the performance of the annual audit or quarterly reviews. This category primarily includes services relating to internal control assessments and accounting-related consulting.

(3) Tax fees represent amounts we were billed in each of the years presented for professional services rendered in connection with tax compliance, tax advice, and tax planning. This category primarily includes services relating to the preparation of unitholder annual K-1 statements and partnership tax planning.

(4) All other fees represent amounts we were billed in each of the years presented for services not classifiable under the other categories listed in the table above. No such services were rendered by Deloitte & Touche during the last two years.

The ACG Committee of our general partner has approved the use of Deloitte & Touche as our independent principal accountant. In connection with its oversight responsibilities, the ACG Committee has adopted a pre-approval policy regarding any services proposed to be performed by Deloitte & Touche. The pre-approval policy includes four primary service categories: Audit, Audit-related, Tax and Other.

In general, as services are required, management and Deloitte & Touche submit a detailed proposal to the ACG Committee discussing the reasons for the request, the scope of work to be performed, and an estimate of the fee to be charged by Deloitte & Touche for such work. The ACG Committee discusses the request with management and Deloitte & Touche, and if the work is deemed necessary and appropriate for Deloitte & Touche to perform, approves the request subject to the fee amount presented (the initial "pre-approved" fee amount). As part of these discussions, the ACG Committee must determine whether or not the proposed services are permitted under the rules and regulations concerning auditor independence under the Sarbanes-Oxley Act of 2002 as well as rules of the American Institute of Certified Public Accountants. If at a later date, it appears that the initial pre-approved fee amount may be insufficient to complete the work, then management and Deloitte & Touche must present a request to the ACG Committee to increase the approved amount and the reasons for the increase.

Under the pre-approval policy, management cannot act upon its own to authorize an expenditure for services outside of the pre-approved amounts. On a quarterly basis, the ACG Committee is provided a schedule showing Deloitte & Touche's pre-approved amounts compared to actual fees billed for each of the primary service categories. The ACG Committee's pre-approval process helps to ensure the independence of our principal accountant from management.

In order for Deloitte & Touche to maintain its independence, we are prohibited from using them to perform general bookkeeping, management or human resource functions, and any other service not permitted by the Public Company Accounting Oversight Board. The ACG Committee's pre-approval policy also precludes Deloitte & Touche from performing any of these services for us.

PART IV

Item 15. ***Exhibits and Financial Statement Schedules.***

(a)(1) Financial Statements

Our consolidated financial statements are included under Part II, Item 8 of this annual report. For a listing of these statements and accompanying footnotes, see "Index to Financial Statements" under Item 8 of this annual report.

(a)(2) Financial Statement Schedules

All schedules, have been omitted because they are either not applicable, not required or the information called for therein appears in the consolidated financial statements or notes thereto.

(a)(3) Exhibits

2.1 Merger Agreement, dated as of December 15, 2003, by and among Enterprise Products Partners L.P., Enterprise Products GP, LLC, Enterprise Products Management LLC, GulfTerra Energy Partners, L.P. and GulfTerra Energy Company, L.L.C. (incorporated by reference to Exhibit 2.1 to Form 8-K filed December 15, 2003).

2.2 Amendment No. 1 to Merger Agreement, dated as of August 31, 2004, by and among Enterprise Products Partners L.P., Enterprise Products GP, LLC, Enterprise Products Management LLC, GulfTerra Energy Partners, L.P. and GulfTerra Energy Company, L.L.C. (incorporated by reference to Exhibit 2.1 to Form 8-K filed September 7, 2004).

2.3 Parent Company Agreement, dated as of December 15, 2003, by and among Enterprise Products Partners L.P., Enterprise Products GP, LLC, Enterprise Products GTM, LLC, El Paso Corporation, Sabine River Investors I, L.L.C., Sabine River Investors II, L.L.C., El Paso EPN Investments, L.L.C. and GulfTerra GP Holding Company (incorporated by reference to Exhibit 2.2 to Form 8-K filed December 15, 2003).

2.4 Amendment No. 1 to Parent Company Agreement, dated as of April 19, 2004, by and among Enterprise Products Partners L.P., Enterprise Products GP, LLC, Enterprise Products GTM, LLC, El Paso Corporation, Sabine River Investors I, L.L.C., Sabine River Investors II, L.L.C., El Paso EPN Investments, L.L.C. and GulfTerra GP Holding Company (incorporated by reference to Exhibit 2.1 to the Form 8-K filed April 21, 2004).

2.5	Purchase and Sale Agreement (Gas Plants), dated as of December 15, 2003, by and between El Paso Corporation, El Paso Field Services Management, Inc., El Paso Transmission, L.L.C., El Paso Field Services Holding Company and Enterprise Products Operating L.P. (incorporated by reference to Exhibit 2.4 to Form 8-K filed December 15, 2003).
3.1	Certificate of Limited Partnership of Enterprise Products Partners L.P. (incorporated by reference to Exhibit 3.6 to Form 10-Q filed November 8, 2007).
3.2	Fifth Amended and Restated Agreement of Limited Partnership of Enterprise Products Partners L.P., dated effective as of August 8, 2005 (incorporated by reference to Exhibit 3.1 to Form 8-K filed August 10, 2005).
3.3	First Amendment to Fifth Amended and Restated Partnership Agreement of Enterprise Products Partners L.P. dated as of December 27, 2007 (incorporated by reference to Exhibit 3.1 to Form 8-K/A filed January 3, 2008).
3.4	Fifth Amended and Restated Limited Liability Company Agreement of Enterprise Products GP, LLC, dated as of November 7, 2007 (incorporated by reference to Exhibit 3.2 to Form 10-Q filed November 8, 2007).
3.5	Limited Liability Company Agreement of Enterprise Products Operating LLC dated as of June 30, 2007 (incorporated by reference to Exhibit 3.3 to Form 10-Q filed on August 8, 2007).
3.6	Certificate of Incorporation of Enterprise Products OLPGP, Inc., dated December 3, 2003 (incorporated by reference to Exhibit 3.5 to Form S-4 Registration Statement, Reg. No. 333-121665, filed December 27, 2004).
3.7	Bylaws of Enterprise Products OLPGP, Inc., dated December 8, 2003 (incorporated by reference to Exhibit 3.6 to Form S-4 Registration Statement, Reg. No. 333-121665, filed December 27, 2004).
3.8	Certificate of Limited Partnership of Duncan Energy Partners L.P. (incorporated by reference to Exhibit 3.1 to Duncan Energy Partners L.P. Form S-1 Registration Statement, Reg. No. 333-138371, filed November 2, 2006).
3.9	Amended and Restated Agreement of Limited Partnership of Duncan Energy Partners L.P., dated February 5, 2007 (incorporated by reference to Exhibit 3.1 to Duncan Energy Partners L.P.'s Form 8-K/A filed February 5, 2007).
3.10	First Amendment to Amended and Restated Partnership Agreement of Duncan Energy Partners L.P. dated as of December 27, 2007 (incorporated by reference to Exhibit 3.1 to Duncan Energy Partners L.P.'s Form 8-K filed on January 3, 2008).
4.1	Form of Common Unit certificate (incorporated by reference to Exhibit 4.1 to Registration Statement on Form S-1/A; File No. 333-52537, filed July 21, 1998).
4.2	Indenture dated as of March 15, 2000, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and First Union National Bank, as Trustee (incorporated by reference to Exhibit 4.1 to Form 8-K filed March 10, 2000).
4.3	First Supplemental Indenture dated as of January 22, 2003, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wachovia Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.2 to Registration Statement on Form S-4, Reg. No. 333-102776, filed January 28, 2003).
4.4	Second Supplemental Indenture dated as of February 14, 2003, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wachovia Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.3 to Form 10-K filed March 31, 2003).
4.5	Third Supplemental Indenture dated as of June 30, 2007, among Enterprise Products Operating LLC, as Issuer, Enterprise Products Partners L.P., as Guarantor, and U.S. Bank National Association, as successor Trustee (incorporated by reference to Exhibit 4.55 to Form 10-Q filed on August 8, 2007) .
4.6	Amended and Restated Revolving Credit Agreement dated as of November 19, 2007 among Enterprise Products Operating LLC, the financial institutions party thereto as lenders, Wachovia Bank, National Association, as Administrative Agent, Issuing Bank and Swingline Lender, Citibank, N.A. and JPMorgan Chase Bank, as Co-Syndication Agents, and SunTrust Bank, Mizuho Corporate Bank, Ltd. and The Bank of Nova Scotia, as Co-Documentation Agents (incorporated by reference to Exhibit 10.1 to Form 8-K filed on November 20, 2007).

4.7	Amended and Restated Guaranty Agreement dated as of November 19, 2007 executed by Enterprise Products Partners L.P. in favor of Wachovia Bank, National Association, as Administrative Agent (incorporated by reference to Exhibit 10.2 to Form 8-K filed on November 20, 2007).
4.8	Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.1 to Form 8-K filed on October 6, 2004).
4.9	First Supplemental Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.2 to Form 8-K filed on October 6, 2004).
4.10	Second Supplemental Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.3 to Form 8-K filed on October 6, 2004).
4.11	Third Supplemental Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.4 to Form 8-K filed on October 6, 2004).
4.12	Fourth Supplemental Indenture dated as of October 4, 2004, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.5 to Form 8-K filed on October 6, 2004).
4.13	Fifth Supplemental Indenture dated as of March 2, 2005, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.2 to Form 8-K filed on March 3, 2005).
4.14	Sixth Supplemental Indenture dated as of March 2, 2005, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.3 to Form 8-K filed on March 3, 2005).
4.15	Seventh Supplemental Indenture dated as of June 1, 2005, among Enterprise Products Operating L.P., as Issuer, Enterprise Products Partners L.P., as Guarantor, and Wells Fargo Bank, National Association, as Trustee (incorporated by reference to Exhibit 4.46 to Form 10-Q filed November 4, 2005).
4.16	Eighth Supplemental Indenture dated as of July 18, 2006 to Indenture dated October 4, 2004 among Enterprise Products Operating L.P., as issuer, Enterprise Products Partners L.P., as parent guarantor, and Wells Fargo Bank, National Association, as trustee (incorporated by reference to exhibit 4.2 to Form 8-K filed July 19, 2006).
4.17	Ninth Supplemental Indenture, dated as of May 24, 2007, by and among Enterprise Products Operating L.P., as issuer, Enterprise Products Partners L.P., as parent guarantor, and Wells Fargo Bank, National Association, as trustee (incorporated by reference to Exhibit 4.2 to the Current Report on Form 8-K filed by Enterprise Products Partners L.P. on May 24, 2007).
4.18	Tenth Supplemental Indenture, dated as of June 30, 2007, by and among Enterprise Products Operating LLC, as issuer, Enterprise Products Partners L.P., as parent guarantor, and Wells Fargo Bank, National Association, as trustee (incorporated by reference to Exhibit 4.54 to Form 10-Q filed August 8, 2007).
4.19	Eleventh Supplemental Indenture, dated as of September 4, 2007, by and among Enterprise Products Operating LLC, as issuer, Enterprise Products Partners L.P., as parent guarantor, and Wells Fargo Bank, National Association, as trustee (incorporated by reference to Exhibit 4.3 to Form 8-K filed on September 5, 2007).
4.20	Global Note representing $350 million principal amount of 6.375% Series B Senior Notes due 2013 with attached Guarantee (incorporated by reference to Exhibit 4.4 to Registration Statement on Form S-4, Reg. No. 333-102776, filed January 28, 2003).

4.21	Global Note representing $500 million principal amount of 6.875% Series B Senior Notes due 2033 with attached Guarantee (incorporated by reference to Exhibit 4.8 to Form 10-K filed March 31, 2003).
4.22	Global Notes representing $450 million principal amount of 7.50% Senior Notes due 2011 (incorporated by reference to Exhibit 4.1 to Form 8-K filed January 25, 2001).
4.23	Global Note representing $500 million principal amount of 4.000% Series B Senior Notes due 2007 with attached Guarantee (incorporated by reference to Exhibit 4.14 to Form S-3 Registration Statement Reg. No. 333-123150 filed on March 4, 2005).
4.24	Global Note representing $500 million principal amount of 5.600% Series B Senior Notes due 2014 with attached Guarantee (incorporated by reference to Exhibit 4.17 to Form S-3 Registration Statement Reg. No. 333-123150 filed on March 4, 2005).
4.25	Global Note representing $150 million principal amount of 5.600% Series B Senior Notes due 2014 with attached Guarantee (incorporated by reference to Exhibit 4.18 to Form S-3 Registration Statement Reg. No. 333-123150 filed on March 4, 2005).
4.26	Global Note representing $350 million principal amount of 6.650% Series B Senior Notes due 2034 with attached Guarantee (incorporated by reference to Exhibit 4.19 to Form S-3 Registration Statement Reg. No. 333-123150 filed on March 4, 2005).
4.27	Global Note representing $500 million principal amount of 4.625% Series B Senior Notes due 2009 with attached Guarantee (incorporated by reference to Exhibit 4.27 to Form 10-K for the year ended December 31, 2004 filed on March 15, 2005).
4.28	Global Note representing $250,000,000 principal amount of 5.00% Series B Senior Notes due 2015 with attached Guarantee (incorporated by reference to Exhibit 4.31 to Form 10-Q filed on November 4, 2005).

Section 2: EX-12.1 (COMPUTATION OF RATIO OF EARNINGS TO FIXED CHARGES)

EXHIBIT 12.1

ENTERPRISE PRODUCTS PARTNERS L.P.
COMPUTATION OF RATIO OF EARNINGS TO FIXED CHARGES
(Dollars in thousands)

	For the Year Ended December 31,				
	2007	2006	2005	2004	2003
Consolidated income	$ 533,674	$601,155	$419,508	$268,261	$104,546
Add: Minority interest	30,643	9,079	5,760	8,128	3,859
Provision for taxes	15,257	21,323	8,362	3,761	5,293
Less: Equity in (income) loss of unconsolidated affiliates	(29,658)	(21,565)	(14,548)	(52,787)	13,960
Consolidated pre-tax income before minority interest and equity earnings from unconsolidated affiliates	549,916	609,992	419,082	227,363	127,658
Add: Fixed charges	400,065	306,791	264,921	168,463	151,338
Amortization of capitalized interest	9,335	7,894	1,644	974	579
Distributed income of equity investees	73,593	43,032	56,058	68,027	31,882
Subtotal	1,032,909	967,709	741,705	464,827	311,457
Less: Interest capitalized	(75,476)	(55,660)	(22,046)	(2,766)	(1,595)
Minority interest	(30,643)	(9,079)	(5,760)	(8,128)	(3,859)
Total earnings	$ 926,790	$902,970	$713,899	$453,933	$306,003
Fixed charges:					
Interest expense	$ 311,764	$238,023	$230,549	$155,740	$140,806
Capitalized interest	75,476	55,660	22,046	2,766	1,595
Interest portion of rental expense	12,825	13,108	12,326	9,957	8,937
Total	$ 400,065	$306,791	$264,921	$168,463	$151,338
Ratio of earnings to fixed charges	2.32x	2.94x	2.69x	2.69x	2.02x

These computations take into account our consolidated operations and the distributed income from our equity method investees. For purposes of these calculations, "earnings" is the amount resulting from adding and subtracting the following items:

Add the following, as applicable:

- consolidated pre-tax income before minority interest and income or loss from equity investees;
- fixed charges;
- amortization of capitalized interest;
- distributed income of equity investees; and
- our share of pre-tax losses of equity investees for which charges arising from guarantees are included in fixed charges.

From the subtotal of the added items, subtract the following, as applicable:

- interest capitalized;
- preference security dividend requirements of consolidated subsidiaries; and
- minority interest in pre-tax income of subsidiaries that have not incurred fixed charges.

The term "fixed charges" means the sum of the following: interest expensed and capitalized; amortized premiums, discounts and capitalized expenses related to indebtedness; an estimate of interest within rental expenses; and preference dividend requirements of consolidated subsidiaries.

CERTIFICATIONS

I, Michael A. Creel, certify that:

1. I have reviewed this annual report on Form 10-K of Enterprise Products Partners L.P.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15 (f)) for the registrant and have:
   a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
   a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
   b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15 (f)) for the registrant and have:
   a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
   a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
   b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

KINDER MORGAN ENERGY PARTNERS, L.P. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

1. Organization

General

Unless the context requires otherwise, references to “we,” “us,” “our” or the “Partnership” are intended to mean Kinder Morgan Energy Partners, L.P. and its consolidated subsidiaries. We have prepared our accompanying unaudited consolidated financial statements under the rules and regulations of the Securities and Exchange Commission. Under such rules and regulations, we have condensed or omitted certain information and notes normally included in financial statements prepared in conformity with accounting principles generally accepted in the United States of America.

We believe, however, that our disclosures are adequate to make the information presented not misleading. Our consolidated financial statements reflect normal adjustments, and also recurring adjustments that are, in the opinion of our management, necessary for a fair presentation of our financial results for the interim periods. You should read these consolidated financial statements in conjunction with our consolidated financial statements and related notes included in our Annual Report on Form 10-K for the year ended December 31, 2007, referred to in this report as our 2007 Form 10-K.

Knight Inc. (formerly known as Kinder Morgan, Inc.), Kinder Morgan G.P., Inc. and Kinder Morgan Management, LLC

Knight Inc., referred to as “Knight” in this report, is a private company owned by investors led by Richard D. Kinder, Chairman and Chief Executive Officer of Kinder Morgan G.P., Inc. (our general partner), and Kinder Morgan Management, LLC (our general partner’s delegate). Additional investors in Knight include, among others, certain members of Knight’s senior management, most of whom are also senior officers of our general partner and of its delegate. Before completing its going-private transaction on May 30, 2007, and subsequently being renamed, Knight was known as Kinder Morgan, Inc., a Kansas corporation referred to as “KMI” in this report.

Knight indirectly owns all the common stock of our general partner. On July 27, 2007, our general partner issued and sold 100,000 shares of Series A fixed-to-floating rate term cumulative preferred stock due 2057. The consent of holders of a majority of these preferred shares is required with respect to a commencement of or a filing of a voluntary bankruptcy proceeding with respect to us or two of our subsidiaries, SFPP, L.P. and Calnev Pipe Line LLC.

Kinder Morgan Management, LLC, referred to as “KMR” in this report, is a Delaware limited liability company. Our general partner owns all of KMR’s voting securities and, pursuant to a delegation of control agreement, has delegated to KMR, to the fullest extent permitted under Delaware law and our partnership agreement, all of its power and authority to manage and control our business and affairs, except that KMR cannot take certain specified actions without the approval of our general partner. More information on these entities and the delegation of control agreement is contained in our 2007 Form 10-K.

Basis of Presentation

Our consolidated financial statements include our accounts and those of our operating partnerships and their majority-owned and controlled subsidiaries. Our accounting records are maintained in United States dollars, and all references to dollars are United States dollars, except where stated otherwise. All significant intercompany items have been eliminated in consolidation. Certain amounts from prior periods have been reclassified to conform to the current presentation.

Our accompanying consolidated financial statements reflect amounts on a historical cost basis, and, accordingly, do not reflect any purchase accounting adjustments related to the May 30, 2007 going-private transaction of KMI, now known as Knight. In addition, as discussed in Note 2 below, our financial statements included in this report

include the transactions, balances and results of operations of our Trans Mountain pipeline system as if it had been transferred to us on January 1, 2006.

During the second quarter of 2008, we changed the date of our annual goodwill impairment test date to May 31 of each year. This change constitutes a change in the method of applying an accounting principle, as discussed in paragraph 4 of SFAS No. 154, “Accounting Changes and Error Corrections.” For more information on this change, see Note 6.

Also, prior to the third quarter of 2008, we reported five business segments: Products Pipelines; Natural Gas Pipelines; CO_2; Terminals; and Trans Mountain. As discussed in Note 2 below, we acquired (i) a one-third interest in the Express pipeline system; and (ii) the Jet Fuel pipeline system from Knight on August 28, 2008, and following the acquisition of these businesses, the operations of our Trans Mountain, Express and Jet Fuel pipeline systems have been combined to represent the “Kinder Morgan Canada” segment. For more information on our reportable business segments, see Note 11.

Net Income Per Unit

We compute Basic Limited Partners’ Net Income per Unit by dividing our limited partners’ interest in net income by the weighted average number of units outstanding during the period. Diluted Limited Partners’ Net Income per Unit reflects the maximum potential dilution that could occur if units whose issuance depends on the market price of the units at a future date were considered outstanding, or if, by application of the treasury stock method, options to issue units were exercised, both of which would result in the issuance of additional units that would then share in our net income.

Emerging Issues Task Force Issue No. 03-6, or EITF 03-6, “Participating Securities and the Two-Class Method Under FASB Statement No. 128” addresses the computation of earnings per share by entities that have issued securities other than common stock that contractually entitle the holder to participate in dividends and earnings of the entity when, and if, it declares dividends on its securities. In addition, effective January 1, 2009, we will begin calculating our Net Income per Unit according to the provisions of EITF 07-4, “Application of the Two-Class Method under FASB Statement No. 128, Earnings per Share, to Master Limited Partnerships.” EITF 07-4 provides guidance for how current period earnings should be allocated between limited partners and a general partner when the partnership agreement contains incentive distribution rights. For partnerships, under the two-class method, earnings per unit is calculated as if all of the earnings for the period were distributed regardless of whether a general partner has discretion over the amount of distribution to be made for any particular period. For more information regarding EITF 07-4, see Note 15.

2. Acquisitions, Joint Ventures and Divestitures

Acquisitions from Unrelated Entities

During the first nine months of 2008, we recorded purchase price adjustments related to two separate previously completed business acquisitions involving unrelated (third-party) entities, and we made a preliminary purchase price allocation related to a third business acquisition. These three acquisitions were accounted for as business combinations according to the provisions of Statement of Financial Accounting Standards No. 141, “Business Combinations.” SFAS No. 141 requires business combinations involving unrelated entities to be accounted for using the purchase method of accounting, which establishes a new basis of accounting for the purchased assets and liabilities—the acquirer records all the acquired assets and assumed liabilities at their estimated fair market values (not the acquired entity’s book values) as of the acquisition date.

Vancouver Wharves Terminal

On May 30, 2007, we purchased the Vancouver Wharves bulk marine terminal from British Columbia Railway Company, a crown corporation owned by the Province of British Columbia, for an aggregate consideration of $59.5 million, consisting of $38.8 million in cash and $20.7 million in assumed liabilities. The Vancouver Wharves facility is located on the north shore of the Port of Vancouver’s main harbor and includes five deep-sea vessel berths situated on a 139-acre site. The terminal assets include significant rail infrastructure, dry bulk and liquid storage, and material handling systems that allow the terminal to handle over 3.5 million tons of cargo annually. The acquisition both expanded and complemented our existing terminal operations, and all of the acquired assets are included in our Terminals business segment.

In the first half of 2008, we made our final purchase price adjustments to reflect final fair value of acquired assets and final expected value of assumed liabilities. Our adjustments increased “Property, Plant and Equipment, net” by $2.7 million, reduced working capital balances by $1.6 million, and increased long-term liabilities by $1.1 million. Based on our estimate of fair market values, we allocated $53.4 million of our combined purchase price to “Property, Plant and Equipment, net,” and $6.1 million to items included within “Current Assets.”

Marine Terminals, Inc. Assets

Effective September 1, 2007, we acquired certain bulk terminals assets from Marine Terminals, Inc. for an aggregate consideration of $102.1 million, consisting of $100.8 million in cash and assumed liabilities of $1.3 million. The acquired assets and operations are primarily involved in the handling and storage of steel and alloys. The operations consist of two separate facilities located in Blytheville, Arkansas, and individual terminal facilities located in Decatur, Alabama; Hertford, North Carolina; and Berkley, South Carolina. Combined, the five facilities handle approximately 13.5 million tons of alloys and steel products annually and also provide stevedoring and harbor services, scrap handling, and scrap processing services to customers in the steel and alloys industry. The acquisition both expanded and complemented our existing ferro alloy terminal operations and will provide customers further access to our growing national network of marine and rail terminals. All of the acquired assets are included in our Terminals business segment.

In the first nine months of 2008, we paid an additional $0.5 million for purchase price settlements, and we made purchase price adjustments to reflect final fair value of acquired assets and final expected value of assumed liabilities. Our 2008 adjustments primarily reflected changes in the allocation of the purchase cost to intangible assets acquired. Based on our estimate of fair market values, we allocated $60.8 million of our combined purchase price to “Property, Plant and Equipment, net;” $21.7 million to “Other intangibles, net;” $18.6 million to “Goodwill;” and $1.0 million to “Other current assets” and “Deferred charges and other assets.”

The allocation to “Other intangibles, net” included a $20.1 million amount representing the fair value of a service contract entered into with Nucor Corporation, a large domestic steel company with significant operations in the Southeast region of the United States. For valuation purposes, the service contract was determined to have a useful life of 20 years, and pursuant to the contract’s provisions, the acquired terminal facilities will continue to provide Nucor with handling, processing, harboring and warehousing services.

The allocation to “Goodwill,” which is expected to be deductible for tax purposes, was based on the fact that this acquisition both expanded and complemented our existing ferro alloy terminal operations and will provide Nucor and other customers further access to our growing national network of marine and rail terminals. We believe the acquired value of the assets, including all contributing intangible assets, exceeded the fair value of acquired identifiable net assets and liabilities—in the aggregate, these factors represented goodwill.

Wilmington, North Carolina Liquids Terminal

On August 15, 2008, we purchased certain terminal assets from Chemserve, Inc. for an aggregate consideration of $12.7 million, consisting of $11.8 million in cash and $0.9 million in assumed liabilities. The liquids terminal facility is located in Wilmington, North Carolina and stores petroleum products and chemicals. The terminal includes significant transportation infrastructure, and provides liquid and heated storage and custom tank blending capabilities for agricultural and chemical products. The acquisition both expanded and complemented our existing Mid-Atlantic region terminal operations, and all of the acquired assets are included in our Terminals business segment. In the third quarter of 2008, we made a preliminary allocation of our purchase price to reflect the fair value of assets acquired; however, we expect to make our final purchase price allocation in the fourth quarter of 2008, including a final allocation to “Goodwill”.

Pro Forma Information

Pro forma consolidated income statement information that gives effect to all of the acquisitions we have made and all of the joint ventures we have entered into since January 1, 2007 as if they had occurred as of January 1, 2007 is not presented because it would not be materially different from the information presented in our accompanying consolidated statements of income.

Acquisitions from Knight

According to the provisions of Emerging Issues Task Force Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights," effective January 1, 2006, Knight (which indirectly owns all the common stock of our general partner) was deemed to have control over us and no longer accounted for its investment in us under the equity method of accounting. Instead, as of this date, Knight included our accounts, balances and results of operations in its consolidated financial statements and, as required by the provisions of SFAS No. 141, we accounted for each of the two separate acquisitions discussed below as transfers of net assets between entities under common control.

Trans Mountain Pipeline System

On April 30, 2007, we acquired the Trans Mountain pipeline system from Knight for $549.1 million in cash. The transaction was approved by the independent directors of both Knight and KMR following the receipt by such directors of separate fairness opinions from different investment banks. We paid $549 million of the purchase price on April 30, 2007, and we paid the remaining $0.1 million in July 2007.

In April 2008, as a result of finalizing certain "true-up" provisions in our acquisition agreement related to Trans Mountain pipeline expansion spending, we received a cash contribution of $23.4 million from Knight. Pursuant to the accounting provisions concerning transfers of net assets between entities under common control, and consistent with our treatment of cash payments made to Knight for Trans Mountain net assets in 2007, we accounted for this cash contribution as an adjustment to equity—primarily as an increase in "Partners' Capital" in our accompanying consolidated balance sheet. We also included this $23.4 million receipt as a cash inflow item from investing activities in our accompanying consolidated statement of cash flows.

The Trans Mountain pipeline system, which transports crude oil and refined products from Edmonton, Alberta, Canada to marketing terminals and refineries in British Columbia and the state of Washington, completed a pump station expansion in April 2007 that increased pipeline throughput capacity to approximately 260,000 barrels per day. An additional expansion that increased pipeline capacity by 25,000 barrels per day was completed and began service on May 1, 2008. We completed construction on a final 15,000 barrel per day expansion on October 30, 2008, and total pipeline capacity is now approximately 300,000 barrels per day.

In addition, because Trans Mountain's operations are managed separately, involve different products and marketing strategies, and produce discrete financial information that is separately evaluated internally by our management, we identified our Trans Mountain pipeline system as a separate reportable business segment prior to the third quarter of 2008. Following the acquisition of our interests in the Express and Jet Fuel pipeline systems on August 28, 2008, discussed following, we combined the operations of our Trans Mountain, Express and Jet Fuel pipeline systems to represent the "Kinder Morgan Canada" segment.

Express and Jet Fuel Pipeline Systems

Effective August 28, 2008, we acquired Knight's 33 1/3% ownership interest in the Express pipeline system. The pipeline system is a batch-mode, common-carrier, crude oil pipeline system consisting of both the Express Pipeline and the Platte Pipeline (collectively referred to in this report as the Express pipeline system). We also acquired Knight's full ownership of an approximately 25-mile jet fuel pipeline that serves the Vancouver International Airport, located in Vancouver, British Columbia, Canada (referred to in this report as the Jet Fuel pipeline system). As consideration for these assets, we paid to Knight approximately 2.0 million common units, valued at $116.0 million. The acquisition complemented our existing Canadian pipeline system (Trans Mountain), and all of the acquired assets (including an acquired cash balance of $7.4 million) are included in our Kinder Morgan Canada business segment.

The Express Pipeline is a 780-mile, 24-inch diameter pipeline that begins at the crude oil pipeline hub at Hardisty, Alberta and terminates at the Casper, Wyoming facilities of the Platte Pipeline, and includes related metering and storage facilities, including tanks and pump stations. It has a design capacity of approximately 280,000 barrels per day. The Platte Pipeline is a 926-mile, 20-inch diameter pipeline that runs from the crude oil pipeline hub at Casper, Wyoming to refineries and interconnecting pipelines in the Wood River, Illinois area, and includes related pumping and storage facilities, including tanks. The Platte Pipeline has a capacity of approximately 150,000 barrels per day when shipping heavy oil. We now operate the Express pipeline system, and we account for our 33 1/3% ownership in the system under the equity method of accounting. In addition to our 33 1/3% equity ownership, our investment in Express includes an investment in unsecured debenture bonds issued by Express Holdings U.S. L.P., the partnership that maintains ownership of the U.S. portion of the Express pipeline system. For more information on this long-term note receivable, see Note 13.

When accounting for transfers of net assets between entities under common control, the purchase cost provisions (as they relate to purchase business combinations involving unrelated entities) of SFAS No. 141 explicitly do not apply; instead the method of accounting prescribed by SFAS No. 141 for such net asset transfers is similar to the pooling-of-interests method of accounting. Under this method, the carrying amount of net assets recognized in the balance sheets of each combining entity are carried forward to the balance sheet of the combined entity, and no other assets or liabilities are recognized as a result of the combination (that is, no recognition is made for a purchase premium or discount representing any difference between the consideration paid and the book value of the net assets acquired).

Therefore, in each of these two business acquisitions from Knight, we recognized the assets and liabilities acquired at their carrying amounts (historical cost) in the accounts of Knight (the transferring entity) at the date of transfer. The accounting treatment for combinations of entities under common control is consistent with the concept of poolings as combinations of common shareholder (or unitholder) interests, as the carrying amount of the assets and liabilities transferred to us were carried forward to our balance sheet, and all of the acquired equity accounts were also carried forward intact initially, and subsequently adjusted due to differences between (i) the consideration we paid for the acquired net assets; and (ii) the book value (carrying value) of the acquired net assets.

In addition to requiring that assets and liabilities be carried forward at historical costs, SFAS No. 141 also prescribes that for transfers of net assets between entities under common control, all financial statements presented be combined as of the date of common control, and all financial statements and financial information presented for prior periods should be restated to furnish comparative information. However, based upon our management's consideration of all of the quantitative and qualitative aspects of the transfer of the interests in the Express and Jet Fuel pipeline system net assets from Knight to us, we determined that the presentation of combined financial statements which include the financial information of the Express and Jet Fuel pipeline systems would not be materially different from financial statements which did not include such information and accordingly, we elected not to include the financial information of the Express and Jet Fuel pipeline systems in our consolidated financial statements for any periods prior to the transfer date of August 28, 2008.

Our consolidated financial statements and all other financial information included in this report therefore, have been prepared assuming that:

- the transfer of the Trans Mountain pipeline system net assets from Knight to us had occurred at the date when both Trans Mountain and we met the accounting requirements for entities under common control (January 1, 2006); and
- the transfer of both the 33 1/3% interest in the Express pipeline system net assets and the Jet Fuel pipeline system net assets from Knight to us had occurred at the date of transfer (August 28, 2008).

Since our 2007 consolidated results of operations include Trans Mountain's results of operations, we have included Knight's recognition of a $377.1 million goodwill impairment of Trans Mountain recorded in the first quarter of 2007 in our results of operations. We reported this expense separately as "Goodwill impairment expense" in our accompanying consolidated statement of income for the nine months ended September 30, 2007. For more information on this impairment expense, see Note 6.

Joint Ventures

Rockies Express Pipeline LLC

In the first nine months of 2008, we made capital contributions of $306.0 million to West2East Pipeline LLC (the sole owner of Rockies Express Pipeline LLC) to partially fund its Rockies Express Pipeline construction costs. We included this cash contribution as an increase to "Investments" in our accompanying consolidated balance sheet as of September 30, 2008, and we included it within "Contributions to equity investments" in our accompanying consolidated statement of cash flows for the nine months ended September 30, 2008. We own a 51% equity interest in West2East Pipeline LLC.

On June 24, 2008, Rockies Express completed a private offering of an aggregate of $1.3 billion in principal amount of fixed rate senior notes. Rockies Express received net proceeds of approximately $1.29 billion from this offering, after deducting the initial purchasers' discount and estimated offering expenses, and virtually all of the net proceeds from the sale of the notes were used to repay short-term commercial paper borrowings.

All payments of principal and interest in respect of these senior notes are the sole obligation of Rockies Express. Noteholders will have no recourse against us, Sempra Energy or ConocoPhillips (the two other member owners of West2East Pipeline LLC), or against any of our or their respective officers, directors, employees, shareholders, members, managers, unitholders or affiliates for any failure by Rockies Express to perform or comply with its obligations pursuant to the notes or the indenture.

Midcontinent Express Pipeline LLC

In the first nine months of 2008, we made capital contributions of $27.5 million to Midcontinent Express Pipeline LLC to partially fund its Midcontinent Express Pipeline construction costs. We included this cash contribution as an increase to "Investments" in our accompanying consolidated balance sheet as of September 30, 2008, and we included it within "Contributions to equity investments" in our accompanying consolidated statement of cash flows for the nine months ended September 30, 2008. We own a 50% equity interest in West2East Pipeline LLC.

We also received, in the first nine months of 2008, an $89.1 million return of capital from Midcontinent Express Pipeline LLC. In February 2008, Midcontinent entered into and then made borrowings under a new $1.4 billion three-year, unsecured revolving credit facility due February 28, 2011. Midcontinent then made distributions (in excess of cumulative earnings) to its two member owners to reimburse them for prior contributions made to fund its pipeline construction costs, and we reflected this cash receipt separately within the investing section of our accompanying consolidated statement of cash flows.

Fayetteville Express Pipeline LLC

On October 1, 2008, we announced that we have entered into a 50/50 joint venture with Energy Transfer Partners, L.P. to build and develop the Fayetteville Express Pipeline, a new natural gas pipeline that will provide shippers in the Arkansas Fayetteville Shale area with takeaway natural gas capacity, added flexibility, and further access to growing markets. Fayetteville Express Pipeline LLC will construct the approximately 185-mile pipeline, which will originate in Conway County, Arkansas, continue eastward through White County, Arkansas, and terminate at an interconnect with Trunkline Gas Company's pipeline in Quitman County, Mississippi. The new pipeline will also interconnect with Natural Gas Pipeline Company of America LLC's pipeline in White County, Arkansas; Texas Gas Transmission LLC's pipeline in Coahoma County, Mississippi; and ANR Pipeline Company's pipeline in Quitman County, Mississippi. Natural Gas Pipeline Company of America's pipeline is operated and 20% owned by Knight.

The Fayetteville Express Pipeline will have an initial capacity of 2.0 billion cubic feet of natural gas per day. Pending necessary regulatory approvals, the approximately $1.3 billion pipeline project is expected to be in service by late 2010 or early 2011. Fayetteville Express Pipeline LLC has secured binding 10-year commitments totaling approximately 1.85 billion cubic feet per day, and in order to gauge further shipper interest, it is conducting a binding open season from October 8 through November 7, 2008. Depending on shipper support during the open season, capacity on the proposed pipeline may be increased.

Divestitures

North System Natural Gas Liquids Pipeline System – Discontinued Operations

On July 2, 2007, we announced that we entered into an agreement to sell the North System natural gas liquids pipeline and our 50% ownership interest in the Heartland Pipeline Company (collectively referred to in this report as our North System) to ONEOK Partners, L.P. for approximately $298.6 million in cash. Our investment in net assets, including all transaction related accruals, was approximately $145.8 million, most of which represented property, plant and equipment, and we recognized approximately $152.8 million of gain in the fourth quarter of 2007 from the sale of these net assets. In the first half of 2008, following final account and inventory reconciliations, we paid a net amount of $2.4 million to ONEOK to fully settle the sale of (i) working capital items;

(ii) total physical product liquids inventory and inventory obligations for certain liquids products; and (iii) the allocation of pre-acquisition investee distributions. Based primarily upon these adjustments, which were below the amounts reserved, we recognized an additional gain of $1.3 million in the first nine months of 2008, and we reported this gain separately as “Adjustment to gain on disposal of North System” within the discontinued operations section of our accompanying consolidated statement of income for the nine months ended September 30, 2008.

The North System consists of an approximately 1,600-mile interstate common carrier pipeline system that delivers natural gas liquids and refined petroleum products from south central Kansas to the Chicago area. Also included in the sale were eight propane truck-loading terminals, located at various points in three states along the pipeline system, and one multi-product terminal complex located in Morris, Illinois. Prior to the sale, all of the assets were included in our Products Pipelines business segment.

In accordance with SFAS No. 144, “Accounting for the Impairment or Disposal of Long-Lived Assets,” we accounted for the North System business as a discontinued operation whereby the financial results and the gains on disposal of the North System have been reclassified to discontinued operations in our accompanying consolidated statements of income. Summarized financial information of the North System is as follows (in millions):

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	**2007**	**2008**	**2007**
Operating revenues	$ —	$ 14.4	$ —	$ 41.1
Operating expenses	—	(4.1)	—	(14.8)
Depreciation and amortization	—	(2.3)	—	(7.0)
Earnings from equity investments	—	0.6	—	1.8
Income from operations	—	8.6	—	21.1
Gain on disposal	—	—	1.3	—
Earnings from Discontinued Operations	$ —	$ 8.6	$ 1.3	$ 21.1

Additionally, in our accompanying consolidated statement of cash flows for the nine months ended September 30, 2007, we elected not to present separately the North System’s operating and investing cash flows as discontinued operations, and, because the sale of the North System does not change the structure of our internal organization in a manner that causes a change to our reportable business segments pursuant to the provisions of SFAS No. 131, “Disclosures about Segments of an Enterprise and Related Information,” we have included the North System’s financial results within our Products Pipelines business segment disclosures presented in this report for the three and nine months ended September 30, 2007.

Thunder Creek Gas Services, LLC

Effective April 1, 2008, we sold our 25% ownership interest in Thunder Creek Gas Services, LLC to PVR Midstream LLC, a subsidiary of Penn Virginia Corporation. Prior to the sale, we accounted for our investment in Thunder Creek Gas Services, LLC, referred to in this report as Thunder Creek, under the equity method of accounting and included its financial results within our Natural Gas Pipelines business segment. In the second quarter of 2008, we received cash proceeds, net of closing costs and settlements, of approximately $50.7 million for our investment, and we recognized a gain of $13.0 million with respect to this transaction. We used the proceeds from this sale to reduce the outstanding balance on our commercial paper borrowings, and we included the amount of the gain within the caption “Other, net” in our accompanying consolidated statement of income for the nine months ended September 30, 2008.

Thunder Creek provides natural gas gathering, compression and treating service to a number of coal seam gas producers in the Powder River Basin of northeast Wyoming. Thunder Creek’s operations are a combination of mainline and low pressure gathering assets, and throughput volumes include both coal seam and conventional plant residue gas. The mainline assets include 125 miles of mainline pipeline, 230 miles of high and low pressure laterals, approximately 26,600 horsepower of mainline compression, and carbon dioxide removal facilities consisting of a 220 million cubic feet per day carbon dioxide treating plant with natural gas dehydration capability. Devon Energy owns the remaining 75% ownership interest.

3. Litigation, Environmental and Other Contingencies

Below is a brief description of our ongoing material legal proceedings, including any material developments that occurred in such proceedings during the three months ended September 30, 2008. Additional information with respect to these proceedings can be found in Note 16 to our audited financial statements that were filed with our 2007 Form 10-K and in our subsequently filed quarterly reports on Form 10-Q. This Note also contains a description of any material legal proceedings that were initiated against us during the three months ended September 30, 2008.

Federal Energy Regulatory Commission Proceedings

Our SFPP, L.P. and Calnev Pipe Line LLC subsidiaries are involved in various proceedings before the Federal Energy Regulatory Commission, referred to in this note as the FERC. The tariffs and rates charged by SFPP and Calnev are subject to numerous ongoing proceedings at the FERC, including shippers' complaints and protests regarding interstate rates on these pipeline systems. In general, these complaints allege the rates and tariffs charged by SFPP and Calnev are not just and reasonable.

As to SFPP, the issues involved in these proceedings include, among others: (i) whether certain of our Pacific operations' rates are "grandfathered" under the Energy Policy Act of 1992, referred to in this note as EPAct 1992, and therefore deemed to be just and reasonable; (ii) whether "substantially changed circumstances" have occurred with respect to any grandfathered rates such that those rates could be challenged; (iii) whether indexed rate increases may become effective without investigation; (iv) the capital structure to be used in computing the "starting rate base" of our Pacific operations; (v) the level of income tax allowance we may include in our rates; and (vi) the recovery of civil and regulatory litigation expenses and certain pipeline reconditioning and environmental costs incurred by our Pacific operations.

In May 2005, the FERC issued a statement of general policy stating it will permit pipelines to include in cost of service a tax allowance to reflect actual or potential tax liability on their public utility income attributable to all partnership or limited liability company interests, if the ultimate owner of the interest has an actual or potential income tax liability on such income. Whether a pipeline's owners have such actual or potential income tax liability will be reviewed by the FERC on a case-by-case basis. Although the revised policy is generally favorable for pipelines that are organized as tax pass-through entities, it still entails rate risk due to the case-by-case review requirement.

In this note, we refer to SFPP, L.P. as SFPP; Calnev Pipe Line LLC as Calnev; Chevron Products Company as Chevron; Navajo Refining Company, L.P. as Navajo; ARCO Products Company as ARCO; BP West Coast Products, LLC as BP WCP; Texaco Refining and Marketing Inc. as Texaco; Western Refining Company, L.P. as Western Refining; Mobil Oil Corporation as Mobil; ExxonMobil Oil Corporation as ExxonMobil; Tosco Corporation as Tosco; ConocoPhillips Company as ConocoPhillips; Ultramar Diamond Shamrock Corporation/Ultramar Inc. as Ultramar; Valero Energy Corporation as Valero; Valero Marketing and Supply Company as Valero Marketing; and America West Airlines, Inc., Continental Airlines, Inc., Northwest Airlines, Inc., Southwest Airlines Co. and US Airways, Inc., collectively, as the Airline Complainants.

Following are a summary of developments during the third quarter of 2008 and a listing of certain active FERC proceedings pertaining to our Pacific operations:

- FERC Docket No. OR92-8, *et al.*—Complainants/Protestants: Chevron; Navajo; ARCO; BP WCP; Western Refining; ExxonMobil; Tosco; and Texaco (Ultramar is an intervenor)—Defendant: SFPP Consolidated proceeding involving shipper complaints against certain East Line and West Line rates. All six issues (and others) described above are involved in these proceedings. Portions of this proceeding were appealed (and re-appealed) to the United States Court of Appeals for the District of Columbia Circuit, referred to in this note as the D.C. Court, and remanded to the FERC. Portions of this proceeding are currently being held in abeyance by the D.C. Court pending completion of agency proceedings. BP WCP, Chevron, and ExxonMobil requested a hearing before the FERC on remanded grandfathering and income tax allowance issues. The FERC issued an Order on Rehearing, Remand, Compliance, and Tariff Filings on December 26, 2007, which denied the requests for a hearing, and ruled on SFPP's March 7, 2006 compliance filing and remand issues. The

FERC, *inter alia*, affirmed its income tax allowance policy, further clarified the implementation of that policy with respect to SFPP, and required SFPP to file a compliance filing. On February 15, 2008, the FERC issued an order granting and denying rehearing regarding certain findings in the December 2007 order;

- FERC Docket No. OR92-8-025—Complainants/Protestants: BP WCP; ExxonMobil; Chevron; ConocoPhillips; and Ultramar—Defendant: SFPP
  Proceeding involving shipper complaints against rates charged prior to April 1, 1999 at SFPP's Watson Station drain-dry facilities. A settlement reserved the issue of whether reparations were owed for the period prior to April 1, 1999. On February 12, 2008, the FERC ruled that SFPP owed reparations for shipments prior to April 1, 1999, and in March 2008, SFPP made required reparation payments of $23.3 million. SFPP filed a petition for review of the February 12, 2008 order at the D.C. Court, and the case is now being briefed;

- FERC Docket No. OR96-2, *et al.*—Complainants/Protestants: All Shippers except Chevron (which is an intervenor)—Defendant: SFPP
  Consolidated proceeding involving shipper complaints against all SFPP rates. All six issues (and others) described above are involved in these proceedings. Portions of this proceeding were appealed (and re-appealed) to the D.C. Court and remanded to the FERC. Portions of this proceeding are currently being held in abeyance by the D.C. Court pending completion of agency proceedings. The FERC issued an Order on Rehearing, Remand, Compliance, and Tariff Filings on December 26, 2007, which denied the requests for a hearing and ruled on SFPP's March 7, 2006 compliance filing and remand issues. The FERC, *inter alia*, affirmed its income tax allowance policy and further clarified the implementation of that policy with respect to SFPP, and required SFPP to file a compliance filing. On February 15, 2008, the FERC issued an order granting and denying rehearing regarding certain findings in the December 2007 order. On May 2, 2008, the FERC issued an order reopening the record for a paper hearing on issues related to rate of return on equity applicable to the Sepulveda Line service in light of the FERC's policy statement issued in April of 2008 regarding the methodology for determining returns on equity. The parties have filed a settlement regarding the sole issue of the numeric value of the rate of return on equity to be applied in this proceeding with respect to the Sepulveda Line service that, upon approval by the FERC, would obviate the need for the paper hearing;

- FERC Docket Nos. OR02-4 and OR03-5—Complainant/Protestant: Chevron—Defendant: SFPP
  Chevron initiated proceeding to permit Chevron to become complainant in OR96-2. Appealed to the D.C. Court and held in abeyance pending final disposition of the OR96-2 proceedings;

- FERC Docket No. OR04-3—Complainants/Protestants: America West Airlines; Southwest Airlines; Northwest Airlines; and Continental Airlines—Defendant: SFPP
  Complaint alleges that West Line and Watson Station rates are unjust and unreasonable. Unsettled Watson Station issues severed and consolidated into a proceeding focused only on Watson-related issues which has now been settled (see above under FERC Docket No. OR92-8-025). The FERC has set the complaints against the West Line rates for hearing (see below under FERC Docket Nos. OR03-5-000, OR05-4, and OR05-5);

- FERC Docket Nos. OR03-5, OR05-4 and OR05-5—Complainants/Protestants: BP WCP; ExxonMobil; and ConocoPhillips (other shippers intervened)—Defendant: SFPP
  Complaints allege that SFPP's interstate rates are not just and reasonable. The portion of the complaints challenging SFPP's West Line and East Line rates (OR03-5-000) is scheduled for hearing in November of 2008. A hearing was held in May of 2008 regarding the portion of the complaints challenging SFPP's North Line and Oregon Line rates (see below under FERC Docket No. OR03-5-001);

- FERC Docket No. OR03-5-001—Complainants/Protestants: BP WCP; ExxonMobil; and ConocoPhillips (other shippers intervened)—Defendant: SFPP
  The FERC severed the portions of the complaints in Docket Nos. OR03-5, OR05-4, and OR05-5 regarding SFPP's North and Oregon Line rates into a separate proceeding in Docket No. OR03-5-001. A hearing was held in May 2008 and an initial decision is expected in December of 2008;

- FERC Docket No. OR07-1—Complainant/Protestant: Tesoro—Defendant: SFPP
  Complaint alleges that SFPP's North Line rates are not just and reasonable. The FERC is holding the complaint in abeyance pending resolution at the D.C. Court of, among other things, income tax allowance and grandfathering issues. The D.C. Court issued an opinion on these issues on May 29, 2007, upholding the FERC's income tax allowance policy;

- FERC Docket No. OR07-2—Complainant/Protestant: Tesoro—Defendant: SFPP
  Complaint alleges that SFPP's West Line rates are not just and reasonable. The FERC is holding the complaint in abeyance pending resolution at the D.C. Court of, among other things, income tax allowance and grandfathering issues. The D.C. Court issued an opinion on these issues on May 29, 2007, upholding the FERC's income tax allowance policy. A request that the FERC set the complaint for hearing – which SFPP opposed – is pending before the FERC;

- FERC Docket No. OR07-3—Complainants/Protestants: BP WCP; Chevron; ExxonMobil; Tesoro; and Valero Marketing—Defendant: SFPP
  Complaint alleges that SFPP's North Line indexed rate increase was not just and reasonable. The FERC dismissed the complaint and denied rehearing. Petitions for review were filed by BP WCP and ExxonMobil at the D.C. Court. This proceeding is currently in abeyance pending a decision by the D.C. Court in the Tesoro review proceeding related to Docket No. OR07-16.

- FERC Docket No. OR07-4—Complainants/Protestants: BP WCP; Chevron; and ExxonMobil—Defendants: SFPP; Kinder Morgan G.P., Inc.; and Knight Inc.
  Complaint alleges that SFPP's rates are not just and reasonable. The FERC is holding the complaint in abeyance pending resolution at the D.C. Court of, among other things, income tax allowance and grandfathering issues. The D.C. Court issued an opinion on these issues on May 29, 2007, upholding the FERC's income tax allowance policy. Complainants have withdrawn the portions of the complaint directed to SFPP's affiliates;

- FERC Docket Nos. OR07-5 and OR07-7 (consolidated)—Complainants/Protestants: ExxonMobil and Tesoro—Defendants: Calnev; Kinder Morgan G.P., Inc.; and Knight Inc.
  Complaints allege that none of Calnev's current rates are just or reasonable. On July 19, 2007, the FERC accepted and held in abeyance the portion of the complaints against the non-grandfathered portion of Calnev's rates, dismissed with prejudice the complaints against Calnev's affiliates, and allowed complainants to file amended complaints regarding the grandfathered portion of Calnev's rates. Pursuant to a settlement, ExxonMobil filed a notice in April of 2008 withdrawing its complaint in Docket No. OR07-5 and its motion to intervene in Docket No. OR07-7. Tesoro's complaint in Docket No. OR07-7 is still pending before the FERC;

- FERC Docket No. OR07-6—Complainant/Protestant: ConocoPhillips—Defendant: SFPP
  Complaint alleges that SFPP's North Line indexed rate increase was not just and reasonable. The FERC dismissed the complaints in Docket Nos. OR07-3 and OR07-6 in a single order, without consolidating the complaints, and denied the request for rehearing of the dismissal filed in Docket No. OR07-3. Although the FERC orders in these dockets have been appealed by certain of the complainants in Docket No. OR07-3, they were not appealed by ConocoPhillips in Docket No. OR07-6. The FERC's decision in Docket No. OR07-6 is now final;

- FERC Docket Nos. OR07-8 and OR07-11 (consolidated)—Complainants/Protestants: BP WCP and ExxonMobil —Defendant: SFPP
  Complaints allege that SFPP's 2005 indexed rate increase was not just and reasonable. Although the FERC dismissed challenges to SFPP's underlying rate, the FERC declined to dismiss the portion of the OR07-8 Complaint addressing SFPP's July 1, 2005 index-based rate increases. A settlement has been certified to the FERC, and FERC action on the settlement is pending;

- FERC Docket No. OR07-9—Complainant/Protestant: BP WCP—Defendant: SFPP
  Complaint alleges that SFPP's ultra low sulphur diesel (ULSD) recovery fee violates the filed rate doctrine and that, in any event, the recovery fee is unjust and unreasonable. Following dismissal of the complaint by FERC, BP WCP filed a petition for review which the D.C. Court dismissed in March of 2008;

- FERC Docket No. OR07-14—Complainants/Protestants: BP WCP and Chevron—Defendants: SFPP; Calnev, and several affiliates
  Complaint alleges violations of the Interstate Commerce Act and FERC's cash management regulations, seeks review of the FERC Form 6 annual reports of SFPP and Calnev, and again requests interim refunds and reparations. The FERC dismissed the complaints, but directed SFPP and Calnev to review their cash management agreements and records to confirm compliance with FERC requirements and to make corrections, if necessary. Cash management agreements have been filed in compliance with the FERC's directive;

- FERC Docket No. OR07-16—Complainant/Protestant: Tesoro—Defendant: Calnev
  Complaint challenges Calnev's 2005, 2006, and 2007 indexing adjustments. The FERC dismissed the complaint. A petition for review was filed at the D.C. Court by Tesoro, briefing is complete, and oral argument is scheduled for November 18, 2008;

- FERC Docket No. OR07-18—Complainants/Protestants: Airline Complainants; Chevron; and Valero Marketing—Defendant: Calnev
  Complaint alleges that Calnev's rates are unjust and unreasonable and that none of Calnev's rates are grandfathered under EPAct 1992. In December 2007, the FERC issued an order accepting and holding in abeyance the portion of the complaint against the non-grandfathered portion of Calnev's rates. Pursuant to a FERC order, an amended complaint regarding the grandfathering issue has been filed. The FERC has not acted on the amended complaint;

- FERC Docket No. OR07-19—Complainant/Protestant: ConocoPhillips—Defendant: Calnev
  Complaint alleges that Calnev's rates are unjust and unreasonable and that none of Calnev's rates are grandfathered under EPAct 1992. In December 2007, the FERC issued an order accepting and holding in abeyance the portion of the complaint against the non-grandfathered portion of Calnev's rates. Pursuant to a FERC order, an amended complaint regarding the grandfathering issue has been filed. The FERC has not acted on the amended complaint;

- FERC Docket No. OR07-20—Complainant/Protestant: BP WCP—Defendant: SFPP
  Complaint alleges that SFPP's 2007 indexed rate increase was not just and reasonable. The FERC dismissed the complaint and complainant filed a request for rehearing. Prior to a FERC ruling on the request for rehearing, the parties reached a settlement. In February 2008, FERC accepted a joint offer of settlement that dismissed, with prejudice, the East Line index rate portion of the complaint in OR07-20 for the period from June 1, 2006 through and to November 30, 2007. Petition for review was filed by BP WCP at the D.C. Court. This proceeding is currently in abeyance pending a decision by the D.C. Court in the Tesoro review proceeding related to Docket No. OR07-16;

- FERC Docket No. OR07-22—Complainant/Protestant: BP WCP—Defendant: Calnev
  Complaint alleges that Calnev's rates are unjust and unreasonable and that none of Calnev's rates are grandfathered under EPAct 1992. Pursuant to a FERC order, an amended complaint regarding the grandfathering issue has been filed, but the FERC has not acted on the amended complaint;

- FERC Docket No. OR08-13—Complainants/Protestants: BP WCP and ExxonMobil—Defendant: SFPP
  Complaint alleges that all of SFPP's rates are unjust and unreasonable. SFPP filed an answer on August 28, 2008. The FERC has not acted on the complaint. A settlement has been filed with the FERC with respect to the East Line portion of this complaint, and FERC action on the settlement is pending;

- FERC Docket No. OR08-15—Complainants/Protestants: BP WCP and ExxonMobil—Defendant: SFPP
  Complaint challenges SFPP's indexing adjustments that went into effect on July 1, 2008. SFPP filed an answer

on September 8, 2008. The FERC has not acted on the complaint. A settlement has been filed with the FERC with respect to the East Line portion of this complaint, and FERC action on the settlement is pending;

- FERC Docket No. IS05-230 (North Line rate case)—Complainants/Protestants: Shippers—Defendant: SFPP
  SFPP filed to increase North Line rates to reflect increased costs due to installation of new pipe between Concord and Sacramento, California. Various shippers protested. Administrative law judge's decision is pending before the FERC on exceptions. On August 31, 2007, BP WCP and ExxonMobil filed a motion to reopen the record on the issue of SFPP's appropriate rate of return on equity, which SFPP answered on September 18, 2007. On May 2, 2008, the FERC issued an order reopening the record in Docket No. IS05-230 for a paper hearing on issues related to rate of return on equity in light of the FERC's policy statement issued in April of 2008 regarding the methodology for determining returns on equity. The parties have filed a settlement regarding the sole issue of the numeric value of the rate of return on equity to be applied in this proceeding that, upon approval by the FERC, would obviate the need for the paper hearing;

- FERC Docket No. IS05-327—Complainants/Protestants: Shippers—Defendant: SFPP
  SFPP filed to increase certain rates on its pipelines pursuant to FERC's indexing methodology. Various shippers protested, but the FERC determined that the tariff filings were consistent with its regulations. The FERC denied rehearing. The D.C. Court dismissed a petition for review, citing a lack of jurisdiction to review a decision by FERC not to order an investigation;

- FERC Docket No. IS06-283 (East Line rate case)—Complainants/Protestants: Shippers—Defendant: SFPP
  SFPP filed to increase East Line rates to reflect increased costs due to installation of new pipe between El Paso, Texas and Tucson, Arizona. Various shippers protested. This proceeding has been resolved by a settlement that has been approved by the FERC. SFPP made the payments to the parties to the settlement on April 8, 2008 and certified to the FERC that such payments were made on April 9, 2008;

- FERC Docket No. IS06-296—Complainant/Protestant: ExxonMobil—Defendant: Calnev
  Calnev increased its interstate rates pursuant to the FERC's indexing methodology. ExxonMobil protested the indexing adjustment. This proceeding has been resolved by a settlement. On April 18, 2008, ExxonMobil filed a notice withdrawing its protest in Docket No. IS06-296;

- FERC Docket No. IS06-356—Complainants/Protestants: Shippers—Defendant: SFPP
  SFPP filed to increase certain rates on its pipelines pursuant to FERC's indexing methodology. Various shippers protested. The FERC generally found the tariff filings consistent with its regulations but rescinded the index increase for the East Line rates. SFPP requested rehearing regarding the FERC's decision as to the East Line rates, which the FERC denied. In February 2008, the FERC accepted a joint offer of settlement which, among other things, resolved all protests and complaints related to the East Line 2006 indexing adjustment. SFPP made the payments to the parties to the settlement on April 8, 2008;

- FERC Docket No. IS07-137 (Ultra Low Sulfur Diesel (ULSD) surcharge)—Complainants/Protestants: Shippers—Defendant: SFPP
  SFPP filed tariffs reflecting a ULSD recovery fee on diesel products and a ULSD litigation surcharge, and various shippers protested the tariffs. The FERC accepted, subject to refund, the ULSD recovery fee and rejected the ULSD litigation surcharge. Chevron and Tesoro filed requests for rehearing, which the FERC denied by operation of law. BP WCP petitioned the D.C. Court for review of the FERC's denial, the FERC filed a motion to dismiss, and the D.C. Court granted the FERC's motion. In May 2008, the FERC set this proceeding for hearing and initiated settlement proceedings which have resulted in a settlement in principle between the parties;

- FERC Docket No. IS07-229—Complainants/Protestants: BP WCP and ExxonMobil—Defendant: SFPP
  SFPP filed to increase certain rates on its pipelines pursuant to the FERC's indexing methodology. Two shippers filed protests. The FERC found the tariff filings consistent with its regulations but suspended the increased rates subject to refund pending challenges to SFPP's underlying rates. In February 2008, the FERC accepted a joint offer of settlement which, among other things, resolved all protests and complaints related to the East Line 2007 indexing adjustments. In April 2008, SFPP certified payments under the settlement agreement;

- FERC Docket No. IS07-234—Complainants/Protestants: BP WCP and ExxonMobil—Defendant: Calnev
  Calnev filed to increase certain rates on its pipeline pursuant to FERC's indexing methodology. Two shippers protested. The FERC found the tariff filings consistent with its regulations but suspended the increased rates subject to refund pending challenges to SFPP's underlying rates. Calnev and ExxonMobil reached an agreement to settle this and other dockets. On April 18, 2008, ExxonMobil filed a notice withdrawing its protest in Docket No. IS07-234;

- FERC Docket No. IS08-28—Complainants/Protestants: ConocoPhillips; Chevron; BP WCP; ExxonMobil; Southwest Airlines; Western; and Valero—Defendant: SFPP
  SFPP filed to increase its East Line rates based on costs incurred related to an expansion. Various shippers filed protests. Docket No. IS08-389 has been consolidated with this proceeding. A settlement in principle has been reached. A settlement has been filed with the FERC, and FERC action on the settlement is pending;

- FERC Docket No. IS08-302—Complainants/Protestants: Chevron; BP WCP; ExxonMobil; and Tesoro—Defendant: SFPP
  SFPP filed to increase certain rates on its pipelines pursuant to FERC's indexing methodology. Certain shippers protested. The FERC found the tariff filings consistent with its regulations but suspended the increased rates subject to refund (except for the Oregon Line rate) pending challenges to SFPP's underlying rates;

- FERC Docket No. IS08-389—Complainants/Protestants: ConocoPhillips, Valero, Southwest Airlines Co., Navajo, Western—Defendant: SFPP
  SFPP filed to decrease rates on its East Line. In July of 2008, various shippers protested, claiming that the rates should have been further decreased. On July 29, 2008, the FERC accepted and suspended the tariff, subject to refund, to become effective August 1, 2008, consolidated the proceeding with Docket No. IS08-28, and held in abeyance further action pending the outcome of settlement negotiations. A settlement in principle has been reached. A settlement has been filed with the FERC, and FERC action on the settlement is pending;

- FERC Docket No. IS08-390—Complainants/Protestants: BP WCP, ExxonMobil, ConocoPhillips, Valero, Chevron, the Airlines—Defendant: SFPP
  SFPP filed to increase rates on its West Line. In July of 2008, various shippers protested, claiming that the rates are unjust and unreasonable. On July 29, 2008, the FERC suspended the tariffs, to become effective August 1, 2008, subject to refund. A procedural schedule is in place and discovery is ongoing. A hearing is scheduled for June of 2009; and

- Motions to compel payment of interim damages (various dockets)—Complainants/Protestants: Shippers—Defendants: SFPP; Kinder Morgan G.P., Inc.; and Knight Inc.
  Motions seek payment of interim refunds or escrow of funds pending resolution of various complaints and protests involving SFPP. The FERC denied shippers' refund requests in an order issued on December 26, 2007 in Docket Nos. OR92-8, *et al*. On March 19, 2008, ConocoPhillips and Tosco filed a Motion for Interim Refund and Reparations Order. SFPP filed a response on April 3, 2008. The FERC has yet to act on the parties' motion.

In December 2005, SFPP received a FERC order in Docket Nos. OR92-8, *et al*. and OR96-2, *et al*. that directed it to submit compliance filings and revised tariffs. In accordance with the FERC's December 2005 order and its February 2006 order on rehearing, SFPP submitted a compliance filing to the FERC in March 2006, and rate reductions were implemented on May 1, 2006.

In December 2007, as a follow-up to the March 2006 compliance filing, SFPP received a FERC order that directed it to submit revised compliance filings and revised tariffs. In conjunction with this order, our other FERC and California Public Utilities Commission rate cases, and other unrelated litigation matters, we increased our litigation reserves by $140.0 million in the fourth quarter of 2007. We assume that, with respect to our SFPP litigation reserves, any reparations and accrued interest thereon will be paid no earlier than the first quarter of 2009. In accordance with FERC's December 2007 order and its February 2008 order on rehearing, SFPP submitted a compliance filing to FERC in February 2008, and further rate reductions were implemented on March 1, 2008. We estimate that the impact of the new rates on our 2008 budget will be less than $3.0 million.

In the second quarter of 2008, SFPP and Calnev made combined settlement payments to various shippers totaling approximately $6.9 million and in general, if the shippers are successful in proving their claims, they are entitled to reparations or refunds of any excess tariffs or rates paid during the two year period prior to the filing of their complaint, and SFPP and Calnev may be required to reduce the amount of their tariffs or rates for particular services. These proceedings tend to be protracted, with decisions of the FERC often appealed to the federal courts. Based on our review of these FERC proceedings, we estimate that as of September 30, 2008, shippers are seeking approximately $267 million in reparation and refund payments and approximately $45 million in additional annual rate reductions.

California Public Utilities Commission Proceedings

On April 7, 1997, ARCO, Mobil and Texaco filed a complaint against SFPP with the California Public Utilities Commission, referred to in this note as the CPUC. The complaint challenges rates charged by SFPP for intrastate transportation of refined petroleum products through its pipeline system in the state of California and requests prospective rate adjustments and refunds with respect to previously untariffed charges for certain pipeline transportation and related services.

In October 2002, the CPUC issued a resolution, referred to in this note as the Power Surcharge Resolution, approving a 2001 request by SFPP to raise its California rates to reflect increased power costs. The resolution approving the requested rate increase also required SFPP to submit cost data for 2001, 2002, and 2003, and to assist the CPUC in determining whether SFPP's overall rates for California intrastate transportation services are reasonable. The resolution reserves the right to require refunds, from the date of issuance of the resolution, to the extent the CPUC's analysis of cost data to be submitted by SFPP demonstrates that SFPP's California jurisdictional rates are unreasonable in any fashion.

On December 26, 2006, Tesoro filed a complaint challenging the reasonableness of SFPP's intrastate rates for the three-year period from December 2003 through December 2006 and requesting approximately $8 million in reparations. As a result of previous SFPP rate filings and related protests, the rates that are the subject of the Tesoro complaint are being collected subject to refund.

SFPP also has various, pending ratemaking matters before the CPUC that are unrelated to the above-referenced complaints and the Power Surcharge Resolution. Protests to these rate increase applications have been filed by various shippers. As a consequence of the protests, the related rate increases are being collected subject to refund.

All of the above matters have been consolidated and assigned to a single administrative law judge. At the time of this report, it is unknown when a decision from the CPUC regarding the CPUC complaints and the Power Surcharge Resolution will be received. No schedule has been established for hearing and resolution of the consolidated proceedings other than the 1997 CPUC complaint and the Power Surcharge Resolution. Based on our review of these CPUC proceedings, we estimate that shippers are seeking approximately $100 million in reparation and refund payments and approximately $35 million in annual rate reductions.

On June 6, 2008, as required by CPUC order, SFPP and Calnev Pipe Line Company filed separate general rate case applications, neither of which request a change in existing pipeline rates and both of which assert that existing pipeline rates are reasonable. On September 26, 2008, SFPP filed an amendment to its general rate case application, requesting CPUC approval of a $5 million rate increase for intrastate transportation services to become effective November 1, 2008. No action has been taken by the CPUC with respect to either the SFPP amended general rate case filing or the Calnev general rate case filing.

Carbon Dioxide Litigation

Shores and First State Bank of Denton Lawsuits

Kinder Morgan CO_2 Company, L.P. (referred to in this note as Kinder Morgan CO_2), Kinder Morgan G.P., Inc., and Cortez Pipeline Company were among the named defendants in Shores, et al. v. Mobil Oil Corp., et al., No. GC-99-01184 (Statutory Probate Court, Denton County, Texas filed December 22, 1999) and First State Bank of

Denton, et al. v. Mobil Oil Corp., et al., No. 8552-01 (Statutory Probate Court, Denton County, Texas filed March 29, 2001). These cases were originally filed as class actions on behalf of classes of overriding royalty interest owners (Shores) and royalty interest owners (Bank of Denton) for damages relating to alleged underpayment of royalties on carbon dioxide produced from the McElmo Dome Unit. On February 22, 2005, the trial judge dismissed both cases for lack of jurisdiction. Some of the individual plaintiffs in these cases re-filed their claims in new lawsuits (discussed below).

Gerald O. Bailey et al. v. Shell Oil Co. et al/Southern District of Texas Lawsuit

Kinder Morgan CO_2, Kinder Morgan Energy Partners, L.P. and Cortez Pipeline Company are among the defendants in a proceeding in the federal courts for the southern district of Texas. *Gerald O. Bailey et al. v. Shell Oil Company et al.*, (Civil Action Nos. 05-1029 and 05-1829 in the U.S. District Court for the Southern District of Texas—consolidated by Order dated July 18, 2005). The plaintiffs are asserting claims for the underpayment of royalties on carbon dioxide produced from the McElmo Dome Unit. The plaintiffs assert claims for fraud/fraudulent inducement, real estate fraud, negligent misrepresentation, breach of fiduciary and agency duties, breach of contract and covenants, violation of the Colorado Unfair Practices Act, civil theft under Colorado law, conspiracy, unjust enrichment, and open account. Plaintiffs Gerald O. Bailey, Harry Ptasynski, and W.L. Gray & Co. have also asserted claims as private relators under the False Claims Act and for violation of federal and Colorado antitrust laws. The plaintiffs seek actual damages, treble damages, punitive damages, a constructive trust and accounting, and declaratory relief. The defendants filed motions for summary judgment on all claims.

Effective March 5, 2007, all defendants and plaintiffs Bridwell Oil Company, the Alicia Bowdle Trust, and the Estate of Margaret Bridwell Bowdle executed a final settlement agreement which provides for the dismissal of these plaintiffs' claims with prejudice to being refiled. On June 10, 2007, the Houston federal district court entered an order of partial dismissal by which the claims by and against the settling plaintiffs were dismissed with prejudice. The claims asserted by Bailey, Ptasynski, and Gray are not included within the settlement or the order of partial dismissal. Effective April 8, 2008, the Shell and Kinder Morgan defendants and plaintiff Gray entered into an indemnification agreement that provides for the dismissal of Gray's claims with prejudice.

On April 22, 2008, the federal district court granted defendants' motions for summary judgment and ruled that plaintiffs Bailey, Ptasynski, and Gray take nothing on their claims. The court entered final judgment in favor of defendants on April 30, 2008. Defendants have filed a motion seeking sanctions against plaintiff Bailey. The plaintiffs have appealed the final judgment to the United States Fifth Circuit Court of Appeals.

CO_2 Claims Arbitration

Cortez Pipeline Company and Kinder Morgan CO_2, successor to Shell CO_2 Company, Ltd., were among the named defendants in CO_2 Committee, Inc. v. Shell Oil Co., et al., an arbitration initiated on November 28, 2005. The arbitration arose from a dispute over a class action settlement agreement which became final on July 7, 2003 and disposed of five lawsuits formerly pending in the U.S. District Court, District of Colorado. The plaintiffs in such lawsuits primarily included overriding royalty interest owners, royalty interest owners, and small share working interest owners who alleged underpayment of royalties and other payments on carbon dioxide produced from the McElmo Dome Unit. The settlement imposed certain future obligations on the defendants in the underlying litigation. The plaintiff in the arbitration is an entity that was formed as part of the settlement for the purpose of monitoring compliance with the obligations imposed by the settlement agreement. The plaintiff alleged that, in calculating royalty and other payments, defendants used a transportation expense in excess of what is allowed by the settlement agreement, thereby causing alleged underpayments of approximately $12 million. The plaintiff also alleged that Cortez Pipeline Company should have used certain funds to further reduce its debt, which, in turn, would have allegedly increased the value of royalty and other payments by approximately $0.5 million. Defendants denied that there was any breach of the settlement agreement. On August 7, 2006, the arbitration panel issued its opinion finding that defendants did not breach the settlement agreement. On October 25, 2006, the defendants filed an application to confirm the arbitration decision in New Mexico federal district court. On June 21, 2007, the New Mexico federal district court entered final judgment confirming the August 7, 2006 arbitration decision.

On October 2, 2007, the plaintiff initiated a second arbitration (CO2 Committee, Inc. v. Shell CO_2 Company, Ltd., aka Kinder Morgan CO_2 Company, L.P., et al.) against Cortez Pipeline Company, Kinder Morgan CO_2 and an ExxonMobil entity. The second arbitration asserts claims similar to those asserted in the first arbitration. On October 11, 2007, the defendants filed a Complaint for Declaratory Judgment and Injunctive Relief in federal district court in New Mexico. The Complaint seeks dismissal of the second arbitration on the basis of res judicata. In November 2007, the plaintiff in the arbitration moved to dismiss the defendants' Complaint on the grounds that the issues presented should be decided by a panel in a second arbitration. In December 2007, the defendants in the arbitration filed a motion seeking summary judgment on their Complaint and dismissal of the second arbitration. On May 16, 2008, the federal district court in New Mexico granted the plaintiff's motion to dismiss. On June 2, 2008, the defendants in the arbitration filed a motion in the New Mexico federal district court seeking an order confirming that the panel in the first arbitration can preside over the second arbitration. On June 3, 2008, the plaintiff filed a request with the American Arbitration Association seeking administration of the arbitration.

MMS Notice of Noncompliance and Civil Penalty

On December 20, 2006, Kinder Morgan CO_2 received a "Notice of Noncompliance and Civil Penalty: Knowing or Willful Submission of False, Inaccurate, or Misleading Information—Kinder Morgan CO_2 Company, L.P., Case No. CP07-001" from the U.S. Department of the Interior, Minerals Management Service, referred to in this note as the MMS. This Notice, and the MMS's position that Kinder Morgan CO_2 has violated certain reporting obligations, relates to a disagreement between the MMS and Kinder Morgan CO_2 concerning the approved transportation allowance to be used in valuing McElmo Dome carbon dioxide for purposes of calculating federal royalties. The Notice of Noncompliance and Civil Penalty assesses a civil penalty of approximately $2.2 million as of December 15, 2006 (based on a penalty of $500.00 per day for each of 17 alleged violations) for Kinder Morgan CO_2's alleged submission of false, inaccurate, or misleading information relating to the transportation allowance, and federal royalties for CO_2 produced at McElmo Dome, during the period from June 2005 through October 2006. The MMS contends that false, inaccurate, or misleading information was submitted in the 17 monthly Form 2014s containing remittance advice reflecting the royalty payments for the referenced period because they reflected Kinder Morgan CO_2's use of the Cortez Pipeline tariff as the transportation allowance. The MMS claims that the Cortez Pipeline tariff is not the proper transportation allowance and that Kinder Morgan CO_2 should have used its "reasonable actual costs" calculated in accordance with certain federal product valuation regulations as amended effective June 1, 2005. The MMS stated that civil penalties will continue to accrue at the same rate until the alleged violations are corrected.

The MMS set a due date of January 20, 2007 for Kinder Morgan CO_2's payment of the approximately $2.2 million in civil penalties, with interest to accrue daily on that amount in the event payment is not made by such date. Kinder Morgan CO_2 has not paid the penalty. On January 2, 2007, Kinder Morgan CO_2 submitted a response to the Notice of Noncompliance and Civil Penalty challenging the assessment in the Office of Hearings and Appeals of the Department of the Interior. On February 1, 2007, Kinder Morgan CO_2 filed a petition to stay the accrual of penalties until the dispute is resolved. On February 22, 2007, an administrative law judge of the U.S. Department of the Interior issued an order denying Kinder Morgan CO_2's petition to stay the accrual of penalties. A hearing on the Notice of Noncompliance and Civil Penalty was originally set for December 10, 2007. In November 2007, the MMS and Kinder Morgan CO_2 filed a joint motion to vacate the hearing date and stay the accrual of additional penalties to allow the parties to discuss settlement. In November 2007, the administrative law judge granted the joint motion, stayed accrual of additional penalties for the period from November 6, 2007 to February 18, 2008, and reset the hearing date to March 24, 2008. The parties conducted settlement conferences on February 4, 2008 and February 12, 2008. On February 14, 2008, the parties filed a joint motion seeking to vacate the March 24, 2008 hearing and to stay the accrual of additional penalties to allow the parties to continue their settlement discussions. On March 4, 2008, the administrative law judge granted the joint motion. The parties have reached a settlement of the Notice of Noncompliance and Civil Penalty. The settlement agreement is subject to final MMS approval.

Kinder Morgan CO_2 disputes the Notice of Noncompliance and Civil Penalty and believes that it has meritorious defenses. Kinder Morgan CO_2 contends that use of the Cortez Pipeline tariff as the transportation allowance for purposes of calculating federal royalties was approved by the MMS in 1984. This approval was later affirmed as open-ended by the Interior Board of Land Appeals in the 1990s. Accordingly, Kinder Morgan CO_2 has stated to the MMS that its use of the Cortez tariff as the approved federal transportation allowance is authorized and proper. Kinder Morgan CO_2 also disputes the allegation that it has knowingly or willfully submitted false, inaccurate, or misleading information to the MMS. Kinder Morgan CO_2's use of the Cortez Pipeline tariff as the approved federal transportation allowance has been the subject of extensive discussion between the parties. The MMS was, and is, fully apprised of that fact and of the royalty valuation and payment process followed by Kinder Morgan CO_2 generally.

MMS Order to Report and Pay

On March 20, 2007, Kinder Morgan CO_2 received an "Order to Report and Pay" from the MMS. The MMS contends that Kinder Morgan CO_2 has over-reported transportation allowances and underpaid royalties in the amount of approximately $4.6 million for the period from January 1, 2005 through December 31, 2006 as a result of its use of the Cortez Pipeline tariff as the transportation allowance in calculating federal royalties. As noted in the discussion of the Notice of Noncompliance and Civil Penalty proceeding, the MMS claims that the Cortez Pipeline tariff is not the proper transportation allowance and that Kinder Morgan CO_2 must use its "reasonable actual costs" calculated in accordance with certain federal product valuation regulations. The MMS set a due date of April 13, 2007 for Kinder Morgan CO_2's payment of the $4.6 million in claimed additional royalties, with possible late payment charges and civil penalties for failure to pay the assessed amount. Kinder Morgan CO_2 has not paid the $4.6 million, and on April 19, 2007, it submitted a notice of appeal and statement of reasons in response to the Order to Report and Pay, challenging the Order and appealing it to the Director of the MMS in accordance with 30 C.F.R. sec. 290.100, et seq. Also on April 19, 2007, Kinder Morgan CO_2 submitted a petition to suspend compliance with the Order to Report and Pay pending the appeal. The MMS granted Kinder Morgan CO_2's petition to suspend, and approved self-bonding on June 12, 2007. Kinder Morgan CO_2 filed a supplemental statement of reasons in support of its appeal of the Order to Report and Pay on June 15, 2007.

In addition to the March 2007 Order to Report and Pay, in April 2007, Kinder Morgan CO_2 received an "Audit Issue Letter" sent by the Colorado Department of Revenue on behalf of the U.S. Department of the Interior. In the letter, the Department of Revenue states that Kinder Morgan CO_2 has over-reported transportation allowances and underpaid royalties (due to the use of the Cortez Pipeline tariff as the transportation allowance for purposes of federal royalties) in the amount of $8.5 million for the period from April 2000 through December 2004. Kinder Morgan CO_2 responded to the letter in May 2007, outlining its position why use of the Cortez tariff-based transportation allowance is proper. On August 8, 2007, Kinder Morgan CO_2 received an "Order to Report and Pay Additional Royalties" from the MMS. As alleged in the Colorado Audit Issue Letter, the MMS contends that Kinder Morgan CO_2 has over-reported transportation allowances and underpaid royalties in the amount of approximately $8.5 million for the period from April 2000 through December 2004. The MMS's claims underlying the August 2007 Order to Report and Pay are similar to those at issue in the March 2007 Order to Report and Pay. On September 7, 2007, Kinder Morgan CO_2 submitted a notice of appeal and statement of reasons in response to the August 2007 Order to Report and Pay, challenging the Order and appealing it to the Director of the MMS in accordance with 30 C.F.R. sec. 290.100, et seq. Also on September 7, 2007, Kinder Morgan CO_2 submitted a petition to suspend compliance with the Order to Report and Pay pending the appeal. The MMS granted Kinder Morgan CO_2's petition to suspend, and approved self-bonding on September 11, 2007.

The MMS and Kinder Morgan CO_2 have agreed to stay the March 2007 and August 2007 Order to Report and Pay proceedings to allow the parties to discuss settlement. The parties conducted settlement conferences on February 4, 2008 and February 12, 2008 and have reached a settlement of the March 2007 and August 2007 Orders to Report and Pay. The settlement agreement is subject to final MMS approval.

Kinder Morgan CO_2 disputes both the March and August 2007 Orders to Report and Pay and the Colorado Department of Revenue Audit Issue Letter, and as noted above, it contends that use of the Cortez Pipeline tariff as the transportation allowance for purposes of calculating federal royalties was approved by the MMS in 1984 and was affirmed as open-ended by the Interior Board of Land Appeals in the 1990s. The appeals to the MMS Director of the Orders to Report and Pay do not provide for an oral hearing. No further submission or briefing deadlines have been set.

J. Casper Heimann, Pecos Slope Royalty Trust and Rio Petro LTD, individually and on behalf of all other private royalty and overriding royalty owners in the Bravo Dome Carbon Dioxide Unit, New Mexico similarly situated v. Kinder Morgan CO_2 Company, L.P., No. 04-26-CL (8th Judicial District Court, Union County New Mexico)

This case involves a purported class action against Kinder Morgan CO_2 alleging that it has failed to pay the full royalty and overriding royalty ("royalty interests") on the true and proper settlement value of compressed carbon dioxide produced from the Bravo Dome Unit during the period beginning January 1, 2000. The complaint purports to assert claims for violation of the New Mexico Unfair Practices Act, constructive fraud, breach of contract and of the covenant of good faith and fair dealing, breach of the implied covenant to market, and claims for an accounting, unjust enrichment, and injunctive relief. The purported class is comprised of current and former owners, during the period January 2000 to the present, who have private property royalty interests burdening the oil and gas leases held by the defendant, excluding the Commissioner of Public Lands, the United States of America, and those private royalty interests that are not unitized as part of the Bravo Dome Unit. The plaintiffs allege that they were members of a class previously certified as a class action by the United States District Court for the District of New Mexico in the matter Doris Feerer, et al. v. Amoco Production Company, et al., USDC N.M. Civ. No. 95-0012 (the "Feerer Class Action"). Plaintiffs allege that Kinder Morgan CO_2's method of paying royalty interests is contrary to the settlement of the Feerer Class Action. Kinder Morgan CO_2 filed a motion to compel arbitration of this matter pursuant to the arbitration provisions contained in the Feerer Class Action settlement agreement, which motion was denied. Kinder Morgan CO_2 appealed this decision to the New Mexico Court of Appeals, which affirmed the decision of the trial court. The New Mexico Supreme Court granted further review in October 2006, and after hearing oral argument, the New Mexico Supreme Court quashed its prior order granting review. In August 2007, Kinder Morgan CO_2 filed a petition for writ of certiorari with the United States Supreme Court seeking further review. The Petition was denied in December 2007. The case was tried in the trial court in September 2008. The plaintiffs sought $6.8 million in actual damages as well as punitive damages. The jury returned a verdict finding that Kinder Morgan did not breach the settlement agreement and did not breach the claimed duty to market carbon dioxide. The jury also found that Kinder Morgan breached a duty of good faith and fair dealing and found compensatory damages of $0.3 million and punitive damages of $1.2 million. On October 16, 2008, the trial court entered judgment on the verdict.

In addition to the matters listed above, audits and administrative inquiries concerning Kinder Morgan CO_2's payments on carbon dioxide produced from the McElmo Dome and Bravo Dome Units are currently ongoing. These audits and inquiries involve federal agencies and the States of Colorado and New Mexico.

Commercial Litigation Matters

Union Pacific Railroad Company Easements

SFPP, L.P. and Union Pacific Railroad Company (the successor to Southern Pacific Transportation Company and referred to in this note as UPRR) are engaged in a proceeding to determine the extent, if any, to which the rent payable by SFPP for the use of pipeline easements on rights-of-way held by UPRR should be adjusted pursuant to existing contractual arrangements for the ten year period beginning January 1, 2004 (*Union Pacific Railroad Company vs. Santa Fe Pacific Pipelines, Inc., SFPP, L.P., Kinder Morgan Operating L.P. "D", Kinder Morgan G.P., Inc., et al.,* Superior Court of the State of California for the County of Los Angeles, filed July 28, 2004). In February 2007, a trial began to determine the amount payable for easements on UPRR rights-of-way. The trial is ongoing and is expected to conclude in the first quarter of 2009.

SFPP and UPRR are also engaged in multiple disputes over the circumstances under which SFPP must pay for a relocation of its pipeline within the UPRR right of way and the safety standards that govern relocations. SFPP believes that it must pay for relocation of the pipeline only when so required by the railroad's common carrier operations, and in doing so, it need only comply with standards set forth in the federal Pipeline Safety Act in conducting relocations. In July 2006, a trial before a judge regarding the circumstances under which SFPP must pay for relocations concluded, and the judge determined that SFPP must pay for any relocations resulting from any legitimate business purpose of the UPRR. SFPP has appealed this decision. In addition, UPRR contends that it has complete discretion to cause the pipeline to be relocated at SFPP's expense at any time and for any reason, and that

SFPP must comply with the more expensive American Railway Engineering and Maintenance-of-Way standards. Each party is seeking declaratory relief with respect to its positions regarding relocations.

It is difficult to quantify the effects of the outcome of these cases on SFPP because SFPP does not know UPRR's plans for projects or other activities that would cause pipeline relocations. Even if SFPP is successful in advancing its positions, significant relocations for which SFPP must nonetheless bear the expense (i.e. for railroad purposes, with the standards in the federal Pipeline Safety Act applying) would have an adverse effect on our financial position and results of operations. These effects would be even greater in the event SFPP is unsuccessful in one or more of these litigations.

United States of America, ex rel., Jack J. Grynberg v. K N Energy (Civil Action No. 97-D-1233, filed in the U.S. District Court, District of Colorado).

This multi-district litigation proceeding involves four lawsuits filed in 1997 against numerous Kinder Morgan companies. These suits were filed pursuant to the federal False Claims Act and allege underpayment of royalties due to mismeasurement of natural gas produced from federal and Indian lands. The complaints are part of a larger series of similar complaints filed by Mr. Grynberg against 77 natural gas pipelines (approximately 330 other defendants) in various courts throughout the country which were consolidated and transferred to the District of Wyoming.

In May 2005, a Special Master appointed in this litigation found that because there was a prior public disclosure of the allegations and that Grynberg was not an original source, the Court lacked subject matter jurisdiction. As a result, the Special Master recommended that the Court dismiss all the Kinder Morgan defendants. In October 2006, the United States District Court for the District of Wyoming upheld the dismissal of each case against the Kinder Morgan defendants on jurisdictional grounds. Grynberg has appealed this Order to the Tenth Circuit Court of Appeals. Briefing was completed and oral argument was held on September 25, 2008. No decision has yet been issued.

Prior to the dismissal order on jurisdictional grounds, the Kinder Morgan defendants filed Motions to Dismiss and for Sanctions alleging that Grynberg filed his Complaint without evidentiary support and for an improper purpose. On January 8, 2007, after the dismissal order, the Kinder Morgan defendants also filed a Motion for Attorney Fees under the False Claim Act. On April 24, 2007 the Court held a hearing on the Motions to Dismiss and for Sanctions and the Requests for Attorney Fees. A decision is still pending on the Motions to Dismiss and for Sanctions and the Requests for Attorney Fees.

Weldon Johnson and Guy Sparks, individually and as Representative of Others Similarly Situated v. Centerpoint Energy, Inc. et. al., No. 04-327-2 (Circuit Court, Miller County Arkansas).

On October 8, 2004, plaintiffs filed the above-captioned matter against numerous defendants including Kinder Morgan Texas Pipeline L.P.; Kinder Morgan Energy Partners, L.P.; Kinder Morgan G.P., Inc.; KM Texas Pipeline, L.P.; Kinder Morgan Texas Pipeline G.P., Inc.; Kinder Morgan Tejas Pipeline G.P., Inc.; Kinder Morgan Tejas Pipeline, L.P.; Gulf Energy Marketing, LLC; Tejas Gas, LLC; and MidCon Corp. (the "Kinder Morgan defendants"). The complaint purports to bring a class action on behalf of those who purchased natural gas from the CenterPoint defendants from October 1, 1994 to the date of class certification.

The complaint alleges that CenterPoint Energy, Inc., by and through its affiliates, has artificially inflated the price charged to residential consumers for natural gas that it allegedly purchased from the non-CenterPoint defendants, including the Kinder Morgan defendants. The complaint further alleges that in exchange for CenterPoint's purchase of such natural gas at above market prices, the non-CenterPoint defendants, including the Kinder Morgan defendants, sell natural gas to CenterPoint's non-regulated affiliates at prices substantially below market, which in turn sells such natural gas to commercial and industrial consumers and gas marketers at market price. The complaint purports to assert claims for fraud, unlawful enrichment and civil conspiracy against all of the defendants, and seeks relief in the form of actual, exemplary and punitive damages, interest, and attorneys' fees. On June 8, 2007, the Arkansas Supreme Court held that the Arkansas Public Service Commission, referred to in this report as the APSC, has exclusive jurisdiction over any Arkansas plaintiffs' claims that consumers were overcharged for gas in Arkansas and mandated that any such claims be dismissed from this lawsuit. On February 14, 2008, the

Arkansas Supreme Court clarified its previously issued order and mandated that the trial court dismiss the lawsuit in its entirety. On February 29, 2008 the trial court dismissed the case in its entirety. The APSC has initiated an investigation into the allegations set forth in the plaintiffs' complaint.

Leukemia Cluster Litigation

Richard Jernee, et al v. Kinder Morgan Energy Partners, et al, No. CV03-03482 (Second Judicial District Court, State of Nevada, County of Washoe) ("Jernee").

Floyd Sands, et al v. Kinder Morgan Energy Partners, et al, No. CV03-05326 (Second Judicial District Court, State of Nevada, County of Washoe) ("Sands").

On May 30, 2003, plaintiffs, individually and on behalf of Adam Jernee, filed a civil action in the Nevada State trial court against us and several Kinder Morgan related entities and individuals and additional unrelated defendants. Plaintiffs in the Jernee matter claim that defendants negligently and intentionally failed to inspect, repair and replace unidentified segments of their pipeline and facilities, allowing "harmful substances and emissions and gases" to damage "the environment and health of human beings." Plaintiffs claim that "Adam Jernee's death was caused by leukemia that, in turn, is believed to be due to exposure to industrial chemicals and toxins." Plaintiffs purport to assert claims for wrongful death, premises liability, negligence, negligence per se, intentional infliction of emotional distress, negligent infliction of emotional distress, assault and battery, nuisance, fraud, strict liability (ultra hazardous acts), and aiding and abetting, and seek unspecified special, general and punitive damages.

On August 28, 2003, a separate group of plaintiffs, represented by the counsel for the plaintiffs in the Jernee matter, individually and on behalf of Stephanie Suzanne Sands, filed a civil action in the Nevada State trial court against the same defendants and alleging the same claims as in the Jernee case with respect to Stephanie Suzanne Sands. The Jernee case has been consolidated for pretrial purposes with the Sands case. In May 2006, the court granted defendants' motions to dismiss as to the counts purporting to assert claims for fraud, but denied defendants' motions to dismiss as to the remaining counts, as well as defendants' motions to strike portions of the complaint. Defendant Kennametal, Inc. has filed a third-party complaint naming the United States and the United States Navy (the "United States") as additional defendants.

In response, the United States removed the case to the United States District Court for the District of Nevada and filed a motion to dismiss the third-party complaint. Plaintiff has also filed a motion to dismiss the United States and/or to remand the case back to state court. By order dated September 25, 2007, the United States District Court granted the motion to dismiss the United States from the case and remanded the Jernee and Sands cases back to the Second Judicial District Court, State of Nevada, County of Washoe. The cases will now proceed in the State Court. Based on the information available to date, our own preliminary investigation, and the positive results of investigations conducted by State and Federal agencies, we believe that the remaining claims against us in these matters are without merit and intend to defend against them vigorously.

Pipeline Integrity and Releases

From time to time, our pipelines experience leaks and ruptures. These leaks and ruptures may cause explosions, fire, damage to the environment, damage to property and/or personal injury or death. In connection with these incidents, we may be sued for damages caused by an alleged failure to properly mark the locations of our pipelines and/or to properly maintain our pipelines. Depending upon the facts and circumstances of a particular incident, state and federal regulatory authorities may seek civil and/or criminal fines and penalties.

We believe that we conduct our operations in accordance with applicable law. We seek to cooperate with state and federal regulatory authorities in connection with the clean-up of the environment caused by such leaks and ruptures and with any investigations as to the facts and circumstances surrounding the incidents.

Pasadena Terminal Fire

On September 23, 2008, a fire occurred in the pit 3 manifold area of our Pasadena, Texas terminal facility. One of our employees was injured and subsequently died. In addition, the pit 3 manifold was severely damaged. The

cause of the incident is currently under investigation by the Railroad Commission of Texas and the United States Occupational Safety and Health Administration. The remainder of the facility returned to normal operations within 24 hours of the incident.

Walnut Creek, California Pipeline Rupture

On November 9, 2004, excavation equipment operated by Mountain Cascade, Inc., a third-party contractor on a water main installation project hired by East Bay Municipal Utility District, struck and ruptured an underground petroleum pipeline owned and operated by SFPP, L.P. in Walnut Creek, California. An explosion occurred immediately following the rupture that resulted in five fatalities and several injuries to employees or contractors of Mountain Cascade. The explosion and fire also caused property damage.

On May 5, 2005, the California Division of Occupational Safety and Health ("CalOSHA") issued two civil citations against us relating to this incident assessing civil fines of approximately $0.1 million based upon our alleged failure to mark the location of the pipeline properly prior to the excavation of the site by the contractor. On March 24, 2008, we agreed to a settlement with CalOSHA by which the two citations would be reduced to two "unclassified" violations of the CalOSHA regulations and we would pay a fine of $140,000. The settlement is currently awaiting approval by the CalOSHA Appeals Board.

On June 27, 2005, the Office of the California State Fire Marshal, Pipeline Safety Division, referred to in this report as the CSFM, issued a notice of violation against us which also alleged that we did not properly mark the location of the pipeline in violation of state and federal regulations. The CSFM assessed a proposed civil penalty of $0.5 million. On September 9, 2008, we reached an agreement with the CSFM to settle the proposed civil penalty for approximately $0.3 million with no admission of liability.

As a result of the accident, nineteen separate lawsuits were filed. The majority of the cases were personal injury and wrongful death actions that alleged, among other things, that SFPP/Kinder Morgan failed to properly field mark the area where the accident occurred.

Following court ordered mediation, the Kinder Morgan defendants have settled with plaintiffs in all of the wrongful death cases and the personal injury and property damages cases. The only remaining civil case is a claim for equitable indemnity by an engineering company defendant against Kinder Morgan G.P. Services Co., Inc. We have filed a Motion for Summary Judgment with respect to all of the claims in this matter, which motion is currently pending.

Rockies Express Pipeline LLC Wyoming Construction Incident

On November 11, 2006, a bulldozer operated by an employee of Associated Pipeline Contractors, Inc, (a third-party contractor to Rockies Express Pipeline LLC, referred to in this note as REX), struck an existing subsurface natural gas pipeline owned by Wyoming Interstate Company, a subsidiary of El Paso Pipeline Group. The pipeline was ruptured, resulting in an explosion and fire. The incident occurred in a rural area approximately nine miles southwest of Cheyenne, Wyoming. The incident resulted in one fatality (the operator of the bulldozer) and there were no other reported injuries. The cause of the incident was investigated by the U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration, referred to in this report as the PHMSA. In March 2008, PHMSA issued a Notice of Probable Violation, Proposed Civil Penalty and Proposed Compliance Order ("NOPV") to El Paso Corporation in which it concluded that El Paso failed to comply with federal law and its internal policies and procedures regarding protection of its pipeline, resulting in this incident. To date, PHMSA has not issued any NOPV's to REX, and we do not expect that it will do so. Immediately following the incident, REX and El Paso Pipeline Group reached an agreement on a set of additional enhanced safety protocols designed to prevent the reoccurrence of such an incident.

In September 2007, the family of the deceased bulldozer operator filed a wrongful death action against us, REX and several other parties in the District Court of Harris County, Texas, 189 Judicial District, at case number 2007-57916. The plaintiffs seek unspecified compensatory and exemplary damages plus interest, attorney's fees and costs of suit. We have asserted contractual claims for complete indemnification for any and all costs arising from this incident, including any costs related to this lawsuit, against third parties and their insurers. On March 25, 2008 we entered into a settlement agreement with one of the plaintiffs, the decedent's daughter, resolving any and all of her claims against us, REX and its contractors. We were indemnified for the full amount of this settlement by one of REX's contractors. On October 17, 2008, the remaining plaintiffs filed a Notice of Nonsuit, which dismissed the remaining claims against all defendants without prejudice to the plaintiffs' ability to re-file their claims at a later date.

Charlotte, North Carolina

On November 27, 2006, the Plantation Pipeline experienced a release of approximately 4,000 gallons of gasoline from a Plantation Pipe Line Company block valve on a delivery line into a terminal owned by a third party company. Upon discovery of the release, Plantation immediately locked out the delivery of gasoline through that pipe to prevent further releases. Product had flowed onto the surface and into a nearby stream, which is a tributary of Paw Creek, and resulted in loss of fish and other biota. Product recovery and remediation efforts were implemented immediately, including removal of product from the stream. The line was repaired and put back into service within a few days. Remediation efforts are continuing under the direction of the North Carolina Department of Environment and Natural Resources (the "NCDENR"), which issued a Notice of Violation and Recommendation of Enforcement against Plantation on January 8, 2007. Plantation continues to cooperate fully with the NCDENR.

Although Plantation does not believe that penalties are warranted, it has engaged in settlement discussions with the EPA regarding a potential civil penalty for the November 2006 release as part of broader settlement negotiations with the EPA regarding this spill and three other historical releases from Plantation, including a February 2003 release near Hull, Georgia. Plantation has entered into a consent decree with the Department of Justice and the EPA for all four releases for approximately $0.7 million, plus some additional work to be performed to prevent future releases. Although it is not possible to predict the ultimate outcome, we believe, based on our experiences to date, that the ultimate resolution of such items will not have a material adverse impact on our business, financial position, results of operations or cash flows.

In addition, in April 2007, during pipeline maintenance activities near Charlotte, North Carolina, Plantation discovered the presence of historical soil contamination near the pipeline, and reported the presence of impacted soils to the NCDENR. Subsequently, Plantation contacted the owner of the property to request access to the property to investigate the potential contamination. The results of that investigation indicate that there is soil and groundwater contamination which appears to be from an historical turbine fuel release. The groundwater contamination is underneath at least two lots on which there is current construction of single family homes as part of a new residential development. Further investigation and remediation are being conducted under the oversight of the NCDENR. Plantation reached a settlement with the builder of the residential subdivision. Plantation continues to negotiate with the owner of the property to address any potential claims that it may bring.

Barstow, California

The United States Department of Navy has alleged that historic releases of methyl tertiary-butyl ether, referred to in this report as MTBE, from Calnev Pipe Line Company's Barstow terminal (i) has migrated underneath the Navy's Marine Corps Logistics Base in Barstow; (ii) has impacted the Navy's existing groundwater treatment system for unrelated groundwater contamination not alleged to have been caused by Calnev; and (iii) could affect the MCLB's water supply system. Although Calnev believes that it has certain meritorious defenses to the Navy's claims, it is working with the Navy to agree upon an Administrative Settlement Agreement and Order on Consent for CERCLA Removal Action to reimburse the Navy for $0.5 million in past response actions, plus perform other work to ensure protection of the Navy's existing treatment system and water supply.

Oil Spill Near Westridge Terminal, Burnaby, British Columbia

On July 24, 2007, a third-party contractor installing a sewer line for the City of Burnaby struck a crude oil pipeline segment included within our Trans Mountain pipeline system near its Westridge terminal in Burnaby, BC, resulting in a release of approximately 1,400 barrels of crude oil. The release impacted the surrounding neighborhood, several homes and nearby Burrard Inlet. No injuries were reported. To address the release, we initiated a comprehensive emergency response in collaboration with, among others, the City of Burnaby, the BC Ministry of Environment, the National Energy Board, and the National Transportation Safety Board. Cleanup and environmental remediation is near completion. The incident is currently under investigation by Federal and

Provincial agencies. We do not expect this matter to have a material adverse impact on our results of operations or cash flows.

On December 20, 2007 we initiated a lawsuit entitled Trans Mountain Pipeline LP, Trans Mountain Pipeline Inc. and Kinder Morgan Canada Inc. v. The City of Burnaby, et al., Supreme Court of British Columbia, Vancouver Registry No. S078716. The suit alleges that the City of Burnaby and its agents are liable in damages including, but not limited to, all costs and expenses incurred by us as a result of the rupture of the pipeline and subsequent release of crude oil. Defendants have denied liability and discovery has begun.

Although no assurance can be given, we believe that we have meritorious defenses to the actions set forth in this note and, to the extent an assessment of the matter is possible, if it is probable that a liability has been incurred and the amount of loss can be reasonably estimated, we believe that we have established an adequate reserve to cover potential liability.

Additionally, although it is not possible to predict the ultimate outcomes, we also believe, based on our experiences to date, that the ultimate resolution of these matters will not have a material adverse impact on our business, financial position, results of operations or cash flows. As of September 30, 2008, and December 31, 2007, we have recorded a total reserve for legal fees, transportation rate cases and other litigation liabilities in the amount of $232.5 million and $247.9 million, respectively. The reserve is primarily related to various claims from lawsuits arising from our Pacific operations' pipeline transportation rates, and the contingent amount is based on both the circumstances of probability and reasonability of dollar estimates. We regularly assess the likelihood of adverse outcomes resulting from these claims in order to determine the adequacy of our liability provision.

Environmental Matters

Exxon Mobil Corporation v. GATX Corporation, Kinder Morgan Liquids Terminals, Inc. and ST Services, Inc.

On April 23, 2003, Exxon Mobil Corporation filed a complaint in the Superior Court of New Jersey, Gloucester County. We filed our answer to the complaint on June 27, 2003, in which we denied ExxonMobil's claims and allegations as well as included counterclaims against ExxonMobil. The lawsuit relates to environmental remediation obligations at a Paulsboro, New Jersey liquids terminal owned by ExxonMobil from the mid-1950s through November 1989, by GATX Terminals Corp. from 1989 through September 2000, later owned by ST Services, Inc. Prior to selling the terminal to GATX Terminals, ExxonMobil performed the environmental site assessment of the terminal required prior to sale pursuant to state law. During the site assessment, ExxonMobil discovered items that required remediation and the New Jersey Department of Environmental Protection issued an order that required ExxonMobil to perform various remediation activities to remove hydrocarbon contamination at the terminal. ExxonMobil, we understand, is still remediating the site and has not been removed as a responsible party from the state's cleanup order; however, ExxonMobil claims that the remediation continues because of GATX Terminals' storage of a fuel additive, MTBE, at the terminal during GATX Terminals' ownership of the terminal. When GATX Terminals sold the terminal to ST Services, the parties indemnified one another for certain environmental matters. When GATX Terminals was sold to us, GATX Terminals' indemnification obligations, if any, to ST Services may have passed to us.

Consequently, at issue is any indemnification obligation we may owe to ST Services for environmental remediation of MTBE at the terminal. The complaint seeks any and all damages related to remediating MTBE at the terminal, and, according to the New Jersey Spill Compensation and Control Act, treble damages may be available for actual dollars incorrectly spent by the successful party in the lawsuit for remediating MTBE at the terminal. The parties are currently involved in mandatory mediation and met in June and October 2008. No progress was made at any of the mediations. The parties continue to conduct limited discovery. Currently, the mediation judge has ordered all parties' technical consultants to meet to discuss and finalize a remediation program. Following that meeting, it is anticipated that the parties will again convene for another mediation.

On June 25, 2007, the New Jersey Department of Environmental Protection, the Commissioner of the New Jersey Department of Environmental Protection and the Administrator of the New Jersey Spill Compensation Fund, referred to collectively as the plaintiffs, filed a complaint against ExxonMobil Corporation and GATX Terminals Corporation. The complaint was filed in Gloucester County, New Jersey. Both ExxonMobil and we filed third party complaints against ST Services seeking to bring ST into the case. ST Services filed motions to dismiss the

third party complaints. Recently, the court denied ST's motions to dismiss and ST is now joined in the case. Defendants will now file their answers in the case. The plaintiffs seek the costs and damages that the plaintiffs allegedly have incurred or will incur as a result of the discharge of pollutants and hazardous substances at the Paulsboro, New Jersey facility. The costs and damages that the plaintiffs seek include damages to natural resources. In addition, the plaintiffs seek an order compelling the defendants to perform or fund the assessment and restoration of those natural resource damages that are the result of the defendants' actions. As in the case brought by ExxonMobil against GATX Terminals, the issue is whether the plaintiffs' claims are within the scope of the indemnity obligations between GATX Terminals (and therefore, Kinder Morgan Liquids Terminals) and ST Services. ST Services is the current owner and operator at the facility. The court may consolidate the two cases.

Mission Valley Terminal Lawsuit

In August 2007, the City of San Diego, on its own behalf and purporting to act on behalf of the People of the state of California, filed a lawsuit against us and several affiliates seeking injunctive relief and unspecified damages allegedly resulting from hydrocarbon and MTBE impacted soils and groundwater beneath the city's stadium property in San Diego arising from historic operations at the Mission Valley terminal facility. The case was filed in the Superior Court of California, San Diego County, case number 37-2007-00073033-CU-OR-CTL. On September 26, 2007, we removed the case to the United States District Court, Southern District of California, case number 07CV1883WCAB. On October 3, 2007, we filed a Motion to Dismiss all counts of the Complaint. The court denied in part and granted in part the Motion to Dismiss and gave the City leave to amend their complaint. The City submitted its Amended Complaint and we filed an Answer. The parties have commenced with discovery. This site has been, and currently is, under the regulatory oversight and order of the California Regional Water Quality Control Board.

In June 2008, we received an Administrative Civil Liability Complaint from the California Regional Water Quality Control Board for violations and penalties associated with permitted surface water discharge from the remediation system operating at the Mission Valley terminal facility. Currently, we are negotiating a settlement that should include a reduction of alleged violations and associated penalties as well as resolve any past and future issues related to permitted surface water discharge from the remediation system. We do not expect the cost of the settlement to be material.

Portland Harbor DOJ/EPA Investigation

In April 2008, we reached an agreement in principle with the United States Attorney's office for the District of Oregon and the United States Department of Justice regarding a former employee's involvement in the improper disposal of potash (potassium chloride) into the Pacific Ocean in August 2003 at our Portland, Oregon bulk terminal facility. The incident involved an employee making arrangements to have a customer's shipment of potash, which had become wet and no longer met specifications for commercial use, improperly disposed of at sea without a permit. On August 13, 2008, we completed the settlement.

We have fully cooperated with the government's investigation and promptly adopted measures at the terminal to avoid future incidents of this nature. To settle the matter, we entered a plea to a criminal violation of the Ocean Dumping Act, pay a fine of approximately $0.2 million, and make a community service payment of approximately $0.1 million to the Oregon Governor's Fund for the Environment. As part of the settlement, the government and we acknowledged in a joint factual statement of fact filed with the court that (i) no harm was done to the environment; (ii) the former employee's actions constituted a violation of company policy; (iii) we did not benefit financially from the incident; and (iv) no personnel outside of the Portland terminal either approved or had any knowledge of the former employee's arrangements.

Other Environmental

We are subject to environmental cleanup and enforcement actions from time to time. In particular, the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) generally imposes joint and several liability for cleanup and enforcement costs on current or predecessor owners and operators of a site, among others, without regard to fault or the legality of the original conduct. Our operations are also subject to federal, state and local laws and regulations relating to protection of the environment. Although we believe our operations are in substantial compliance with applicable environmental law and regulations, risks of additional costs and liabilities are

inherent in pipeline, terminal and carbon dioxide field and oil field operations, and there can be no assurance that we will not incur significant costs and liabilities. Moreover, it is possible that other developments, such as increasingly stringent environmental laws, regulations and enforcement policies thereunder, and claims for damages to property or persons resulting from our operations, could result in substantial costs and liabilities to us.

We are currently involved in several governmental proceedings involving air, water and waste violations issued by various governmental authorities related to compliance with environmental regulations. As we receive notices of non-compliance, we negotiate and settle these matters. We do not believe that these violations will have a material adverse affect on our business.

We are also currently involved in several governmental proceedings involving groundwater and soil remediation efforts under administrative orders or related state remediation programs issued by various regulatory authorities related to compliance with environmental regulations associated with our assets. We have established a reserve to address the costs associated with the cleanup.

In addition, we are involved with and have been identified as a potentially responsible party in several federal and state superfund sites. Environmental reserves have been established for those sites where our contribution is probable and reasonably estimable. In addition, we are from time to time involved in civil proceedings relating to damages alleged to have occurred as a result of accidental leaks or spills of refined petroleum products, natural gas liquids, natural gas and carbon dioxide. See "—Pipeline Integrity and Releases" above for additional information with respect to ruptures and leaks from our pipelines.

Although it is not possible to predict the ultimate outcomes, we believe that the resolution of the environmental matters set forth in this note will not have a material adverse effect on our business, financial position, results of operations or cash flows. However, we are not able to reasonably estimate when the eventual settlements of these claims will occur and changing circumstances could cause these matters to have a material adverse impact. As of September 30, 2008, we have accrued an environmental reserve of$72.1 million, and we believe the establishment of this environmental reserve is adequate such that the resolution of pending environmental matters will not have a material adverse impact on our business, cash flows, financial position or results of operations. As of December 31, 2007, our environmental reserve totaled $92.0 million. Additionally, many factors may change in the future affecting our reserve estimates, such as (i) regulatory changes; (ii) groundwater and land use near our sites; and (iii) changes in cleanup technology.

Other

We are a defendant in various lawsuits arising from the day-to-day operations of our businesses. Although no assurance can be given, we believe, based on our experiences to date, that the ultimate resolution of such items will not have a material adverse impact on our business, financial position, results of operations or cash flows.

4. Asset Retirement Obligations

According to the provisions of Financial Accounting Standards No. 143, "Accounting for Asset Retirement Obligations," we record liabilities for obligations related to the retirement and removal of long-lived assets used in our businesses. We record, as liabilities, the fair value of asset retirement obligations on a discounted basis when they are incurred, which is typically at the time the assets are installed or acquired. Amounts recorded for the related assets are increased by the amount of these obligations. Over time, the liabilities increase due to the change in their present value, and the initial capitalized costs will be depreciated over the useful lives of the related assets. The liabilities are eventually extinguished when the asset is taken out of service.

In our CO_2 business segment, we are required to plug and abandon oil and gas wells that have been removed from service and to remove our surface wellhead equipment and compressors. As of September 30, 2008 and December 31, 2007, we have recognized asset retirement obligations in the aggregate amount of $73.3 million and $49.2 million, respectively, relating to these requirements at existing sites within our CO_2 business segment. The $24.1 million increase since December 31, 2007 was primarily related to higher estimated service, material and equipment costs related to our legal obligations associated with the retirement of tangible long-lived assets.

In our Natural Gas Pipelines business segment, the operating systems are composed of underground piping, compressor stations and associated facilities, natural gas storage facilities and certain other facilities and equipment. Currently, we have no plans to abandon any of these facilities, the majority of which have been providing utility services for many years. However, if we were to cease providing utility services in total or in any particular area, we would be required to remove certain surface facilities and equipment from land belonging to our customers and others (we would generally have no obligations for removal or remediation with respect to equipment and facilities, such as compressor stations, located on land we own). We believe we can reasonably estimate both the time and costs associated with the retirement of these facilities and as of September 30, 2008 and December 31, 2007, we have recognized asset retirement obligations in the aggregate amount of $2.3 million and $3.0 million, respectively, relating to the businesses within our Natural Gas Pipelines business segment.

We have included $1.4 million of our total asset retirement obligations as of September 30, 2008 with “Accrued other current liabilities” in our accompanying consolidated balance sheet. The remaining $74.2 million obligation is reported separately as a non-current liability. A reconciliation of the beginning and ending aggregate carrying amount of our asset retirement obligations for each of the nine months ended September 30, 2008 and 2007 is as follows (in millions):

	Nine Months Ended September 30,	
	2008	**2007**
Balance at beginning of period	$ 52.2	$ 50.3
Liabilities incurred	25.5	0.2
Liabilities settled	(4.5)	(0.6)
Accretion expense	2.4	2.0
Balance at end of period	$ 75.6	$ 51.9

We have various other obligations throughout our businesses to remove facilities and equipment on rights-of- way and other leased facilities. We currently cannot reasonably estimate the fair value of these obligations because the associated assets have indeterminate lives. These assets include pipelines, certain processing plants and distribution facilities, and certain bulk and liquids terminal facilities. An asset retirement obligation, if any, will be recognized once sufficient information is available to reasonably estimate the fair value of the obligation.

5. Distributions

On August 14, 2008, we paid a cash distribution of $0.99 per unit to our common unitholders and our Class B unitholders for the quarterly period ended June 30, 2008. KMR, our sole i-unitholder, received 1,359,153 additional i-units based on the $0.99 cash distribution per common unit. The distributions were declared on July 16, 2008, payable to unitholders of record as of July 31, 2008.

On October 15, 2008, we declared a cash distribution of $1.02 per unit for the quarterly period ended September 30, 2008. The distribution will be paid on November 14, 2008, to unitholders of record as of October 31, 2008. Our common unitholders and Class B unitholders will receive cash. KMR will receive a distribution of 1,646,891 additional i-units based on the $1.02 distribution per common unit. For each outstanding i-unit that KMR holds, a fraction of an i-unit (0.021570) will be issued. This fraction was determined by dividing:

- $1.02, the cash amount distributed per common unit

by

- $47.287, the average of KMR’s shares’ closing market prices from October 15-28, 2008, the ten consecutive trading days preceding the date on which the shares began to trade ex-dividend under the rules of the New York Stock Exchange.

6. Intangibles

Goodwill

For our investments in affiliated entities that are included in our consolidation, the excess cost over underlying fair value of net assets is referred to as goodwill and reported separately as "Goodwill" in our accompanying consolidated balance sheets. Goodwill is not subject to amortization but must be tested for impairment at least annually. This test requires us to assign goodwill to an appropriate reporting unit and to determine if the implied fair value of the reporting unit's goodwill is less than its carrying amount.

On April 18, 2007, we announced that we would acquire the Trans Mountain pipeline system from Knight, and this transaction was completed April 30, 2007 (see Note 2). Following the provisions of generally accepted accounting principles, the consideration of this transaction caused Knight to consider the fair value of the Trans Mountain pipeline system, and to determine whether goodwill related to these assets was impaired. Based on this determination, Knight recorded a goodwill impairment charge of $377.1 million in the first quarter of 2007, and because we have included all of the historical results of Trans Mountain as though the net assets had been transferred to us on January 1, 2006, this impairment expense is now reflected in our consolidated results of operations.

Changes in the carrying amount of our goodwill for the nine months ended September 30, 2008 are summarized as follows (in millions):

	Products Pipelines	Natural Gas Pipelines	CO_2	Kinder Morgan Canada	Terminals	Total
Balance as of December 31, 2007	$ 263.2	$ 288.4	$ 46.1	$ 251.0	$ 229.1	$ 1,077.8
Acquisitions and purchase price adjs.	—	—	—	—	27.8	27.8
Disposals.	—	—	—	—	—	—
Impairments	—	—	—	—	—	—
Currency translation adjustments	—	—	—	(17.9)	—	(17.9)
Balance as of September 30, 2008	$ 263.2	$ 288.4	$ 46.1	$ 233.1	$ 256.9	$ 1,087.7

Pursuant to our adoption of SFAS No. 142, "Goodwill and Other Intangible Assets" on January 1, 2002, we selected a goodwill impairment measurement date of January 1 of each year; and we have determined that our goodwill was not impaired as of January 1, 2008. In the second quarter of 2008, we changed our impairment measurement date to May 31 of each year. The change was made following our management's decision to match our impairment testing date to the impairment testing date of Knight—following the completion of its going-private transaction on May 30, 2007, Knight established as its goodwill impairment measurement date May 31 of each year. This change to the date of our annual goodwill impairment test constitutes a change in the method of applying an accounting principle, as discussed in paragraph 4 of SFAS No. 154, "Accounting Changes and Error Corrections." We believe that this change in accounting principle is preferable because our test would then be performed at the same time as Knight, which indirectly owns all the common stock of our general partner.

SFAS No. 154 requires an entity to report a change in accounting principle through retrospective application of the new accounting principle to all periods, unless it is impracticable to do so. However, our change to a new testing date, when applied to prior periods, does not yield different financial statement results. Furthermore, there were no impairment charges resulting from the May 31, 2008 impairment testing, and no event indicating an impairment has occurred subsequent to that date.

In addition, according to the provisions of Accounting Principles Board Opinion No. 18, "The Equity Method of Accounting for Investments in Common Stock," we identify any premium or excess cost we pay over our proportionate share of the underlying fair value of net assets acquired and accounted for as investments under the equity method of accounting. This premium or excess cost is referred to as equity method goodwill and is not subject to amortization but rather to periodic impairment testing. As of both September 30, 2008 and December 31, 2007, we have reported$138.2 million in equity method goodwill within the caption "Investments" in our accompanying consolidated balance sheets.

Other Intangibles

Excluding goodwill, our other intangible assets include customer relationships, contracts and agreements, technology-based assets, and lease value. These intangible assets have definite lives, are being amortized on a straight-line basis over their estimated useful lives, and are reported separately as “Other intangibles, net” in our accompanying consolidated balance sheets. Following is information related to our intangible assets subject to amortization (in millions):

	September 30, 2008	December 31, 2007
Customer relationships, contracts and agreements		
Gross carrying amount	$ 246.0	$ 264.1
Accumulated amortization	(47.5)	(36.9)
Net carrying amount	198.5	227.2
Technology-based assets, lease value and other		
Gross carrying amount	13.3	13.3
Accumulated amortization	(2.3)	(1.9)
Net carrying amount	11.0	11.4
Total Other intangibles, net	$ 209.5	$ 238.6

The decrease in the carrying amount of customer relationships, contracts and agreements since December 31, 2007 was primarily due to purchase price adjustments related to the fair value of an intangible customer contract included in our purchase of certain assets from Marine Terminals, Inc. on September 1, 2007. For more information on this acquisition, see Note 2 “Acquisitions and Joint Ventures—Acquisitions from Unrelated Entities—Marine Terminals, Inc. Assets.”

For the three and nine months ended September 30, 2008, the amortization expense on our intangibles totaled $3.8 million and $11.0 million, respectively, and for the same prior year periods, the amortization expense on our intangibles totaled $3.6 million and $10.4 million, respectively. These expense amounts primarily consisted of amortization of our customer relationships, contracts and agreements. As of September 30, 2008, the weighted average amortization period for our intangible assets was approximately 17.5 years. Our estimated amortization expense for these assets for each of the next five fiscal years (2009 – 2013) is approximately $13.8 million, $13.6 million, $13.4 million, $13.1 million and $13.1 million, respectively.

7. Debt

Our outstanding short-term debt as of September 30, 2008 was $284.7 million. The balance consisted of (i) $250.0 million in principal amount of 6.30% senior notes due February 1, 2009; (ii) $18.5 million in principal amount of tax-exempt bonds due April 1, 2024 (our subsidiary Kinder Morgan Operating L.P. “B” is the obligor on the bonds and the bonds are due on demand pursuant to call provisions); (iii) a $9.7 million portion of a 5.40% long-term note payable (our subsidiaries Kinder Morgan Operating L.P. “A” and Kinder Morgan Canada Company are the obligors on the note); and (iv) a $6.5 million portion of 5.23% senior notes (our subsidiary, Kinder Morgan Texas Pipeline, L.P., is the obligor on the notes). The weighted average interest rate on all of our borrowings was approximately 5.30% during the third quarter of 2008 and approximately 6.47% during the third quarter of 2007. For the first nine months of 2008 and 2007, the weighted average interest rate on all of our borrowings was approximately 5.46% and 6.45%, respectively.

Credit Facility

Our $1.85 billion five-year unsecured bank credit facility matures August 18, 2010 and can be amended to allow for borrowings up to $2.1 billion. Borrowings under our credit facility can be used for partnership purposes and as a backup for our commercial paper program. The outstanding balance under our five-year credit facility was $295.0 million as of September 30, 2008. As of December 31, 2007, there were no borrowings under the credit facility.

Our five-year credit facility is with a syndicate of financial institutions, and Wachovia Bank, National Association is the administrative agent. On September 15, 2008, Lehman Brothers Holdings Inc.

filed for bankruptcy protection under the provisions of Chapter 11 of the U.S. Bankruptcy Code. No Lehman Brothers affiliate is an administrative agent for us or any of our subsidiaries; however, one of the Lehman entities is a lending bank providing less than 5% of the commitments in our bank credit facility. Since Lehman Brothers declared bankruptcy, its affiliate which is a party to our credit facility has not met its obligations to lend under that agreement. Thus, it is likely that the available capacity of our facility will be reduced by the Lehman commitment. The commitments of the other banks remain unchanged, and the facility is not defaulted.

As of September 30, 2008, the amount available for borrowing under our credit facility was reduced by an aggregate amount of $681.5 million, consisting of (i) a combined $375 million in three letters of credit that support our hedging of commodity price risks associated with the sale of natural gas, natural gas liquids and crude oil; (ii) a $100 million letter of credit that supports certain proceedings with the California Public Utilities Commission involving refined products tariff charges on the intrastate common carrier operations of our Pacific operations' pipelines in the state of California; (iii) a combined $86.9 million in three letters of credit that support tax-exempt bonds; (iv) a combined $55.9 million in letters of credit that support our pipeline and terminal operations in Canada; (v) a $26.8 million letter of credit that supports our indemnification obligations on the Series D note borrowings of Cortez Capital Corporation; (vi) a $19.9 million letter of credit that supports the construction of our Kinder Morgan Louisiana Pipeline (a natural gas pipeline); and (vii) a combined $17 million in other letters of credit supporting other obligations of us and our subsidiaries.

Commercial Paper Program

Our commercial paper program provides for the issuance of up to $1.85 billion of commercial paper. Our $1.85 billion unsecured five-year bank credit facility supports our commercial paper program, and borrowings under our commercial paper program reduce the borrowings allowed under our credit facility. As of September 30, 2008, we had no outstanding commercial paper borrowings. On October 13, 2008, Standard & Poor's Rating Services lowered our short-term credit rating to A-3 from A-2. As a result of this revision and current commercial paper market conditions, we are currently unable to access commercial paper borrowings. However, we expect that our financing and liquidity needs will continue to be met through borrowings made under our bank credit facility described above.

As of December 31, 2007, we had $589.1 million of commercial paper outstanding with an average interest rate of 5.58%. The borrowings under our commercial paper program were used principally to finance the acquisitions and capital expansions we made during 2007.

Senior Notes

On February 12, 2008, we completed a public offering of senior notes. We issued a total of $900 million in principal amount of senior notes, consisting of $600 million of 5.95% notes due February 15, 2018, and $300 million of 6.95% notes due January 15, 2038. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of approximately $894.1 million, and we used the proceeds to reduce the borrowings under our commercial paper program. The notes due in 2038 constitute a further issuance of the $550 million aggregate principal amount of 6.95% notes we issued on June 21, 2007 and form a single series with those notes.

On June 6, 2008, we completed an additional public offering of senior notes. We issued a total of $700 million in principal amount of senior notes, consisting of $375 million of 5.95% notes due February 15, 2018, and $325 million of 6.95% notes due January 15, 2038. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of approximately $687.7 million, and we used the proceeds to reduce the borrowings under our commercial paper program. The notes due in 2018 constitute a further issuance of the $600 million aggregate principal amount of 5.95% notes we issued on February 12, 2008 and form a single series with those notes. The notes due in 2038 constitute a further issuance of the combined $850 million aggregate principal amount of 6.95% notes we issued on June 21, 2007 and February 12, 2008 and form a single series with those notes.

Kinder Morgan Operating L.P. "A" Debt

As part of the purchase price consideration for our January 1, 2007 acquisition of the remaining approximately 50.2% interest in the Cochin pipeline system that we did not already own, two of our subsidiaries issued a long-term

note payable to the seller having a fair value of $42.3 million. We valued the debt equal to the present value of amounts to be paid, determined using an annual interest rate of 5.40%. The principal amount of the note, along with interest, is due in five equal annual installments of $10.0 million on March 31 in each of 2008, 2009, 2010, 2011 and 2012. Our subsidiaries Kinder Morgan Operating L.P. "A" and Kinder Morgan Canada Company are the obligors on the note, and as of September 30, 2008 and December 31, 2007, the outstanding balance under the note was $36.1 million and $44.6 million, respectively.

Central Florida Pipeline LLC Debt

On July 23, 2008, Central Florida Pipeline LLC paid $5.0 million to retire the outstanding principal amount of its 7.84% senior notes that matured on that date.

Kinder Morgan Operating L.P. "B" Debt

As of December 31, 2007, our subsidiary Kinder Morgan Operating L.P. "B" was the obligor of a principal amount of $23.7 million of tax-exempt bonds due April 1, 2024. The bonds were issued by the Jackson-Union Counties Regional Port District, a political subdivision embracing the territories of Jackson County and Union County in the state of Illinois. These variable rate demand bonds bear interest at a weekly floating market rate and as of December 31, 2007, we had an outstanding letter of credit issued by Wachovia in the amount of $24.1 million that backed-up the $23.7 million principal amount of the bonds and $0.4 million of accrued interest.

In September 2008, pursuant to the standby purchase agreement provisions contained in the bond indenture—which require the sellers of those guarantees to buy the debt back—certain investors elected to put (sell) back their bonds at par plus accrued interest. A total principal and interest amount of $5.2 million was tendered and drawn against our letter of credit and accordingly, we paid this amount pursuant to the letter of credit reimbursement provisions. As of September 30, 2008, our outstanding balance under the bonds was $18.5 million, and the interest rate on these bonds was 9.65%. Our outstanding letter of credit issued by Wachovia totaled $18.9 million, which backs-up the $18.5 million principal amount of the bonds and $0.4 million of interest on the bonds for up to 55 days computed at 12% per annum on the principal amount thereof. In October 2008, an additional principal amount of $0.6 million was tendered and drawn against our letter of credit and we paid this amount pursuant to the letter of credit reimbursement provisions.

Interest Rate Swaps

Information on our interest rate swaps is contained in Note 10.

Contingent Debt

As prescribed by the provisions of Financial Accounting Standards Board Interpretation (FIN) No. 45, "Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others," we disclose certain types of guarantees or indemnifications we have made. These disclosures cover certain types of guarantees included within debt agreements, even if the likelihood of requiring our performance under such guarantee is remote. The following is a description of our contingent debt agreements as of September 30, 2008.

Cortez Pipeline Company Debt

Pursuant to a certain Throughput and Deficiency Agreement, the partners of Cortez Pipeline Company (Kinder Morgan CO_2 Company, L.P. – 50% partner; a subsidiary of Exxon Mobil Corporation – 37% partner; and Cortez Vickers Pipeline Company – 13% partner) are required, on a several, proportional percentage ownership basis, to contribute capital to Cortez Pipeline Company in the event of a cash deficiency. Furthermore, due to our indirect ownership of Cortez Pipeline Company through Kinder Morgan CO_2 Company, L.P., we severally guarantee 50% of the debt of Cortez Capital Corporation, a wholly-owned subsidiary of Cortez Pipeline Company.

As of September 30, 2008, the debt facilities of Cortez Capital Corporation consisted of (i) $53.6 million of Series D notes due May 15, 2013; (ii) a $125 million short-term commercial paper program; and (iii) a $125 million

five-year committed revolving credit facility due December 22, 2009 (to support the above-mentioned $125 million commercial paper program). As of September 30, 2008, Cortez Capital Corporation had $40.0 million of commercial paper outstanding with an average interest rate of approximately 2.90%. The average interest rate on the Series D notes was 7.14%, and there were outstanding borrowings of $67.0 million under the five-year credit facility as of September 30, 2008.

In October 2008, Standard & Poor's Rating Services lowered Cortez Capital Corporation's short-term credit rating to A-3 from A-2. As a result of this revision and current commercial paper market conditions, Cortez is unable to access commercial paper borrowings; however, it expects that its financing and liquidity needs will continue to be met through borrowings made under its long-term bank credit facility.

With respect to Cortez's Series D notes, Shell Oil Company shares our several guaranty obligations jointly and severally; however, we are obligated to indemnify Shell for liabilities it incurs in connection with such guaranty. As of September 30, 2008, JP Morgan Chase has issued a letter of credit on our behalf in the amount of $26.8 million to secure our indemnification obligations to Shell for 50% of the $53.6 million in principal amount of Series D notes outstanding as of September 30, 2008.

Nassau County, Florida Ocean Highway and Port Authority Debt

We have posted a letter of credit as security for borrowings under Adjustable Demand Revenue Bonds issued by the Nassau County, Florida Ocean Highway and Port Authority. The bonds were issued for the purpose of constructing certain port improvements located in Fernandino Beach, Nassau County, Florida. Our subsidiary, Nassau Terminals LLC is the operator of the marine port facilities. The bond indenture is for 30 years and allows the bonds to remain outstanding until December 1, 2020. Principal payments on the bonds are made on the first of December each year and corresponding reductions are made to the letter of credit. As of September 30, 2008, this letter of credit had a face amount of $22.5 million.

In October 2008, pursuant to the standby purchase agreement provisions contained in the bond indenture—which require the sellers of those guarantees to buy the debt back—certain investors elected to put (sell) back their bonds at par plus accrued interest. A total principal and interest amount of $11.8 million was tendered and drawn against our letter of credit and accordingly, we paid this amount pursuant to the letter of credit reimbursement provisions. This payment reduced the face amount of our letter of credit from $22.5 million to $10.7 million. The remarketing agent is attempting to re-sell the bonds that were put back. If any of these bonds are re-sold, we will receive the proceeds and our letter of credit obligation will increase by the same amount.

Rockies Express Pipeline LLC Debt

Pursuant to certain guaranty agreements, all three member owners of West2East Pipeline LLC (which owns all of the member interests in Rockies Express Pipeline LLC) have agreed to guarantee, severally in the same proportion as their percentage ownership of the member interests in West2East Pipeline LLC, borrowings under Rockies Express'(i) $2.0 billion five-year, unsecured revolving credit facility due April 28, 2011; (ii) $2.0 billion commercial paper program; and (iii) $600 million in principal amount of floating rate senior notes due August 20, 2009. The three member owners and their respective ownership interests consist of the following: our subsidiary Kinder Morgan W2E Pipeline LLC – 51%, a subsidiary of Sempra Energy – 25%, and a subsidiary of ConocoPhillips – 24%.

Borrowings under the Rockies Express commercial paper program are primarily used to finance the construction of the Rockies Express interstate natural gas pipeline and to pay related expenses. The credit facility, which can be amended to allow for borrowings up to $2.5 billion, supports borrowings under the commercial paper program, and borrowings under the commercial paper program reduce the borrowings allowed under the credit facility. The $600 million in principal amount of senior notes were issued on September 20, 2007. The notes are unsecured and are not redeemable prior to maturity. Interest on the notes is paid and computed quarterly at an interest rate of three-month LIBOR (with a floor of 4.25%) plus a spread of 0.85%.

Upon issuance of the notes, Rockies Express entered into two floating-to-fixed interest rate swap agreements having a combined notional principal amount of $600 million and maturity dates of August 20, 2009. On September 24, 2008, Rockies Express terminated one of the aforementioned interest rate swaps that had Lehman Brothers as the counterparty. The notional principal amount of the terminated swap agreement was $300 million. The remaining

interest rate swap agreement effectively converts the interest expense associated with $300 million of these senior notes from its stated variable rate to a fixed rate of 5.47%.

As of September 30, 2008, in addition to the $600 million in floating rate senior notes, Rockies Express Pipeline LLC had $406.7 million of commercial paper outstanding (with a weighted average interest rate of approximately 3.58%), and outstanding borrowings of $447.5 million under its five-year credit facility. Accordingly, as of September 30, 2008, our contingent share of Rockies Express' debt was $741.6 million (51% of total guaranteed borrowings). In addition, there is a letter of credit outstanding to support the construction of the Rockies Express Pipeline. As of September 30, 2008, this letter of credit, issued by JPMorgan Chase, had a face amount of $31.4 million. Our contingent responsibility with regard to this outstanding letter of credit was $16.0 million (51% of total face amount).

No Lehman Brothers affiliate is an administrative agent for Rockies Express; however, one of the Lehman entities is a lending bank providing less than 5% of Rockies Express' $2.0 billion credit facility. Since Lehman Brothers declared bankruptcy, its affiliate which is a party to the Rockies Express credit facility has not met its obligations to lend under that agreement. Thus, it is likely that the available capacity of Rockies Express' facility will be reduced by the Lehman commitment. The commitments of the other banks remain unchanged and the facility is not defaulted.

In October 2008, Standard & Poor's Rating Services lowered Rockies Express Pipeline LLC's short-term credit rating to A-3 from A-2. As a result of this revision and current commercial paper market conditions, Rockies Express is unable to access commercial paper borrowings; however, it expects that its financing and liquidity needs will continue to be met through borrowings made under its long-term bank credit facility and contributions by its equity investors.

Midcontinent Express Pipeline LLC Debt

Pursuant to certain guaranty agreements, each of the two member owners of Midcontinent Express Pipeline LLC have agreed to guarantee, severally in the same proportion as their percentage ownership of the member interests in Midcontinent Express Pipeline LLC, borrowings under Midcontinent's $1.4 billion three-year, unsecured revolving credit facility, entered into on February 29, 2008 and due February 28, 2011. The facility is with a syndicate of financial institutions with The Royal Bank of Scotland plc as the administrative agent. Borrowings under the credit agreement will be used to finance the construction of the Midcontinent Express Pipeline system and to pay related expenses. No Lehman Brothers affiliate is an administrative agent for Midcontinent Express; however, one of the Lehman entities is a lending bank providing less than 10% of Midcontinent Express' $1.4 billion credit facility. Since Lehman Brothers declared bankruptcy, its affiliate which is a party to the Midcontinent Express credit facility has not met its obligations to lend under that agreement. Thus, it is likely that the available capacity of Midcontinent Express' facility will be reduced by the Lehman commitment. The commitments of the other banks remain unchanged and the facility is not defaulted.

Midcontinent Express Pipeline LLC is an equity method investee of ours, and the two member owners and their respective ownership interests consist of the following: our subsidiary Kinder Morgan Operating L.P. "A" – 50%, and Energy Transfer Partners, L.P. – 50%. As of September 30, 2008, Midcontinent Express Pipeline LLC had $525.0 million borrowed under its three-year credit facility. Accordingly, as of September 30, 2008, our contingent share of Midcontinent Express' debt was $262.5 million (50% of total borrowings). Furthermore, the revolving credit facility can be used for the issuance of letters of credit to support the construction of the Midcontinent Express Pipeline, and as of September 30, 2008, a letter of credit having a face amount of $33.3 million was issued under the credit facility. Accordingly, as of September 30, 2008, our contingent responsibility with regard to this outstanding letter of credit was $16.7 million (50% of total face amount).

In addition, on September 4, 2007, Midcontinent Express Pipeline LLC entered into a $197 million reimbursement agreement with JPMorgan Chase as the administrative agent. The agreement included covenants and required payments of fees that are common in such arrangements, and both we and Energy Transfer Partners, L.P. agreed to guarantee borrowings under the reimbursement agreement in the same proportion as the associated percentage ownership of Midcontinent Express' member interests. This reimbursement agreement expired on September 3, 2008.

For additional information regarding our debt facilities and our contingent debt agreements, see Note 9 to our consolidated financial statements included in our 2007 Form 10-K.

8. Partners' Capital

Limited Partner Units

As of September 30, 2008 and December 31, 2007, our partners' capital included the following limited partner units:

	September 30, 2008	December 31, 2007
Common units	179,069,427	170,220,396
Class B units	5,313,400	5,313,400
i-units	76,351,015	72,432,482
Total limited partner units	260,733,842	247,966,278

The total limited partner units represent our limited partners' interest and an effective 98% economic interest in us, exclusive of our general partner's incentive distribution rights. Our general partner has an effective 2% interest in us, excluding its incentive distribution rights.

As of September 30, 2008, our total common units consisted of 162,698,999 units held by third parties, 14,646,428 units held by Knight and its consolidated affiliates (excluding our general partner), and 1,724,000 units held by our general partner. As of December 31, 2007, our common unit total consisted of 155,864,661 units held by third parties, 12,631,735 units held by Knight and its consolidated affiliates (excluding our general partner) and 1,724,000 units held by our general partner.

On both September 30, 2008 and December 31, 2007, all of our 5,313,400 Class B units were held by a wholly-owned subsidiary of Knight. The Class B units are similar to our common units except that they are not eligible for trading on the New York Stock Exchange. All of our Class B units were issued to a wholly-owned subsidiary of Knight in December 2000.

On both September 30, 2008 and December 31, 2007, all of our i-units were held by KMR. Our i-units are a separate class of limited partner interests in us and are not publicly traded. The number of i-units we distribute to KMR is based upon the amount of cash we distribute to the owners of our common units. When cash is paid to the holders of our common units, we issue additional i-units to KMR. The fraction of an i-unit paid per i-unit owned by KMR will have a value based on the cash payment on the common unit. Based on the preceding, KMR received a distribution of 1,359,153 i-units from us on August 14, 2008, based on the $0.99 per unit distributed to our common unitholders on that date.

Equity Issuances

On February 12, 2008, we completed an offering of 1,080,000 of our common units at a price of $55.65 per unit in a privately negotiated transaction. We received net proceeds of $60.1 million for the issuance of these 1,080,000 common units, and we used the proceeds to reduce the borrowings under our commercial paper program.

On March 3, 2008, we issued, in a public offering, 5,000,000 of our common units at a price of $57.70 per unit, less commissions and underwriting expenses. At the time of the offering, we granted the underwriters a 30-day option to purchase up to an additional 750,000 common units from us on the same terms and conditions, and pursuant to this option, we issued an additional 750,000 common units on March 10, 2008 upon exercise of this option. After commissions and underwriting expenses, we received net proceeds of $324.2 million for the issuance of these 5,750,000 common units, and we used the proceeds to reduce the borrowings under our commercial paper program.

In connection with our August 28, 2008 acquisition of Knight's 33 1/3% ownership interest in the Express pipeline system and Knight's full ownership of the Jet Fuel pipeline system, we issued 2,014,693 of our common units to Knight. The units were issued August 28, 2008, and as agreed between Knight and us, were valued at $116.0 million. For more information on this acquisition, see Note 2.

Income Allocation and Declared Distributions

For the purposes of maintaining partner capital accounts, our partnership agreement specifies that items of income and loss shall be allocated among the partners, other than owners of i-units, in accordance with their percentage interests. Normal allocations according to percentage interests are made, however, only after giving effect to any priority income allocations in an amount equal to the incentive distributions that are allocated 100% to our general partner. Incentive distributions are generally defined as all cash distributions paid to our general partner that are in excess of 2% of the aggregate value of cash and i-units being distributed.

Incentive distributions allocated to our general partner are determined by the amount quarterly distributions to unitholders exceed certain specified target levels. Our distribution of $0.99 per unit paid on August 14, 2008 for the second quarter of 2008 required an incentive distribution to our general partner of $194.2 million. Our distribution of $0.85 per unit paid on August 14, 2007 for the second quarter of 2007 resulted in an incentive distribution payment to our general partner in the amount of $147.6 million. The increased incentive distribution to our general partner paid for the second quarter of 2008 over the incentive distribution paid for the second quarter of 2007 reflects the increase in the amount distributed per unit as well as the issuance of additional units.

Our declared distribution for the third quarter of 2008 of $1.02 per unit will result in an incentive distribution to our general partner of $204.3 million. This compares to our distribution of $0.88 per unit and incentive distribution to our general partner of $155.2 million for the third quarter of 2007.

9. Comprehensive Income

Comprehensive income is the change in our Partners' Capital that results from periodic revenues, expenses, gains and losses, as well as any other recognized changes that occur for reasons other than investments by and distributions to our partners. The difference between our comprehensive income and our net income represents our other comprehensive income.

For each of the three and nine month periods ended September 30, 2008 and 2007, the components of our other comprehensive income included (i) unrealized gains or losses on energy commodity derivative contracts utilized for hedging purposes; (ii) foreign currency translation adjustments; and (iii) unrealized gains or losses related to changes in pension and other post-retirement benefit plan liabilities.

Our total comprehensive income was as follows (in millions):

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007
Net Income:	$ 329.8	$ 213.8	$ 1,038.7	$ 297.0
Other comprehensive income (loss):				
Change in fair value of derivative contracts utilized for hedging purposes	1,291.0	(111.6)	(760.5)	(338.5)
Reclassification of change in fair value of derivative contracts to net income	201.7	94.5	624.3	258.6
Foreign currency translation adjustments	(69.6)	71.6	(113.0)	123.3
Adjustments to pension and other post-retirement benefit plan actuarial gains/losses; and reclassifications of pension and other post-retirement benefit plan actuarial gains/losses, transition obligations and prior service costs/credits to net income, net of tax	0.7	(1.0)	4.1	0.1
Total other comprehensive income (loss)	1,423.8	53.5	(245.1)	43.5
Comprehensive income	$ 1,753.6	$ 267.3	$ 793.6	$ 340.5

10. Risk Management

Energy Commodity Price Risk Management

We are exposed to risks associated with unfavorable changes in the market price of natural gas, natural gas liquids and crude oil as a result of our expected future purchase or sale of these products. Such changes are often caused by shifts in the supply and demand for these commodities, as well as their locations. Our energy commodity derivative contracts act as a hedging (offset) mechanism against the volatility of energy commodity prices by allowing us to transfer some of this price risk to counterparties who are able and willing to bear it.

Discontinuance of Hedge Accounting

Effective at the beginning of the second quarter of 2008, we determined that the derivative contracts of our Casper and Douglas natural gas processing operations that previously had been designated as cash flow hedges for accounting purposes no longer met the hedged item shared risk exposure requirement and hedge effectiveness assessment as required by SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities," as amended. Consequently, we discontinued hedge accounting treatment for these relationships (primarily crude oil hedges of heavy natural gas liquids sales) for financial reporting purposes at that time.

Pursuant to the provisions of SFAS No. 133, if a derivative contract accounted for as a cash flow hedge is discontinued because it is probable that the original forecasted transaction will not occur, any gains and losses on the derivative contracts that are included in accumulated other comprehensive income (an equity account) would be recognized immediately in net income; however, when the variability of future cash flows of the hedged item will occur as expected (as future transactions), gains and losses that are accumulated in other comprehensive income are not affected. The reason for continuing the deferral of the derivative gains and losses is that the risk of the variability of future cash flows of the hedged item is not eliminated when the cash flow hedge is discontinued.

Accordingly, since the forecasted sales of natural gas liquids volumes (the hedged item) are still expected to occur, all of our accumulated gains and losses through March 31, 2008 on the related derivative contracts remained in our accumulated other comprehensive income balance, and these gains and losses will not be reclassified into our earnings until the physical transaction occurs (similar to our accounting before our de-designation of these derivative contracts as hedge instruments). We did, however, recognize a combined expense of $0.9 million in the second and third quarters of 2008 related to our Casper and Douglas natural gas processing operations, because we had discontinued hedge accounting for these derivative contracts as of March 31, 2008 and accordingly were required to immediately recognize the unfavorable differential between (i) the delivery location, commodity and pricing specifications of the derivative contracts; and (ii) the delivery location, commodity and pricing specifications of our previously forecasted natural gas liquids sales.

Hedging effectiveness and ineffectiveness

Reflecting the portion of changes in the value of derivative contracts that were not effective in offsetting underlying changes in expected cash flows (the ineffective portion of hedges), we recognized a loss of $2.4 million during the first quarter of 2008, but no gains or losses from ineffective hedging during the second or third quarters of 2008. For the three and nine months ended September 30, 2007, we recognized a loss of $0.1 million and a gain of $0.8 million, respectively, from ineffective hedging. These recognized gains and losses resulting from hedge ineffectiveness are reported within the captions "Natural gas sales," "Gas purchases and other costs of sales," and "Product sales and other" in our accompanying consolidated statements of income, and for each of the first nine months of 2008 and 2007, we did not exclude any component of the derivative contracts' gain or loss from the assessment of hedge effectiveness.

Furthermore, during the three and nine month periods ended September 30, 2008, we reclassified $201.7 million and $624.3 million, respectively, of "Accumulated other comprehensive loss" into earnings, and for the same comparable periods last year, we reclassified $94.5 million and $258.6 million, respectively into earnings. Included in the first quarter of 2007 was approximately $0.1 million resulting from the discontinuance of cash flow hedges, due to a determination that the forecasted transactions would no longer occur by the end of the originally specified time period or within an additional two-month period of time thereafter. All remaining amounts reclassified into net income during the first nine months of both years resulted from the hedged forecasted transactions actually affecting earnings (for example, when the forecasted sales and purchases actually occurred). The proceeds or payments resulting from the settlement of cash flow hedges are reflected in the operating section of our statement of cash flows as changes to net income and working capital.

Our consolidated “Accumulated other comprehensive loss” balance was $1,521.7 million as of September 30, 2008, and $1,276.6 million as of December 31, 2007. These consolidated totals included “Accumulated other comprehensive loss” amounts associated with commodity price risk management activities of $1,515.2 million as of September 30, 2008 and $1,377.2 million as of December 31, 2007. Approximately $567.0 million of the total amount associated with our commodity price risk management activities as of September 30, 2008 is expected to be reclassified into earnings during the next twelve months (when the associated forecasted sales and purchases are also expected to occur).

Fair Value of Energy Commodity Derivative Contracts

Derivative contracts that are entered into for the purpose of mitigating commodity price risk include swaps, futures and options. Additionally, basis swaps may also be used in connection with another derivative contract to reduce hedge ineffectiveness by reducing a basis difference between a hedged exposure and a derivative contract. The fair values of these derivative contracts reflect the amounts that we would receive or pay to terminate the contracts at the reporting date, and are included in our accompanying consolidated balance sheets within “Other current assets,” “Deferred charges and other assets,” “Accrued other current liabilities,” and “Other long-term liabilities and deferred credits.”

The following table summarizes the fair values of our energy commodity derivative contracts associated with our commodity price risk management activities and included on our accompanying consolidated balance sheets as of September 30, 2008 and December 31, 2007 (in millions):

	September 30, 2008	December 31, 2007
Derivatives-net asset/(liability)		
Other current assets	$ 36.9	$ 37.0
Deferred charges and other assets	49.3	4.4
Accrued other current liabilities	(611.6)	(593.9)
Other long-term liabilities and deferred credits	$ (1,007.2)	$ (836.8)

Additional information on the fair value measurements of our energy commodity derivative contracts is included below in “—SFAS No. 157.”

Interest Rate Risk Management

In order to maintain a cost effective capital structure, it is our policy to borrow funds using a mix of fixed rate debt and variable rate debt. We use interest rate swap agreements to manage the interest rate risk associated with the fair value of our fixed rate borrowings and to effectively convert a portion of the underlying cash flows related to our long-term fixed rate debt securities into variable rate cash flows in order to achieve our desired mix of fixed and variable rate debt.

Since the fair value of fixed rate debt varies inversely with changes in the market rate of interest, we enter into swap agreements to receive a fixed and pay a variable rate of interest in order to convert the interest expense associated with certain of our senior notes from fixed rates to floating rates, resulting in future cash flows that vary with the market rate of interest. These swaps, therefore, hedge against changes in the fair value of our fixed rate debt that result from market interest rate changes.

As of December 31, 2007, we were a party to interest rate swap agreements with a total notional principal amount of $2.3 billion. On February 12, 2008, following our issuance of $600 million of 5.95% senior notes on that date, we entered into two additional fixed-to-floating interest rate swap agreements having a combined notional principal amount of $500 million; and on June 6, 2008, following our issuance of $700 million in principal amount

of senior notes in two separate series on that date (discussed in Note 7), we entered into two additional fixed-to-floating interest rate swap agreements having a combined notional principal amount of $700 million.

Therefore, as of September 30, 2008, we had a combined notional principal amount of $3.5 billion of fixed-to-floating interest rate swap agreements effectively converting the interest expense associated with certain series of our senior notes from fixed rates to variable rates based on an interest rate of LIBOR plus a spread. All of our swap agreements have termination dates that correspond to the maturity dates of the related series of senior notes and, as of September 30, 2008, the maximum length of time over which we have hedged a portion of our exposure to the variability in the value of this debt due to interest rate risk is through January 15, 2038.

Hedging effectiveness and ineffectiveness

Our interest rate swap contracts have been designated as fair value hedges and meet the conditions required to assume no ineffectiveness under SFAS No. 133, “Accounting for Derivative Instruments and Hedging Activities.” Therefore, we have accounted for them using the “shortcut” method prescribed by SFAS No. 133 and accordingly, we adjust the carrying value of each swap contract to its fair value each quarter, with an offsetting entry to adjust the carrying value of the debt securities whose fair value is being hedged. We record interest expense equal to the variable rate payments under the swap contracts.

Fair Value of Interest Rate Swap Agreements

The differences between the fair value and the original carrying value associated with our interest rate swap agreements, that is, the derivative contracts’ changes in fair value, are included within “Deferred charges and other assets” and “Other long-term liabilities and deferred credits” in our accompanying consolidated balance sheets. The offsetting entry to adjust the carrying value of the debt securities whose fair value was being hedged is included within “Value of interest rate swaps” on our accompanying consolidated balance sheets, which also includes any unamortized portion of proceeds received from the early termination of interest rate swap agreements. As of September 30, 2008, this unamortized premium totaled $13.8 million.

The following table summarizes the net fair value of our interest rate swap agreements associated with our interest rate risk management activities and included on our accompanying consolidated balance sheets as of September 30, 2008 and December 31, 2007 (in millions):

	September 30, 2008	**December 31, 2007**
Derivatives-net asset/(liability)		
Deferred charges and other assets	$ 210.7	$ 138.0
Other long-term liabilities and deferred credits	(11.5)	—
Net fair value of interest rate swaps	$ 199.2	$ 138.0

Additional information on the fair value measurements of our interest rate swap agreements is included below in “—SFAS No. 157.”

SFAS No. 157

On September 15, 2006, the FASB issued SFAS No. 157, “Fair Value Measurements.” In general, fair value measurements and disclosures are made in accordance with the provisions of this Statement and, while not requiring material new fair value measurements, SFAS No. 157 established a single definition of fair value in generally accepted accounting principles and expanded disclosures about fair value measurements. The provisions of this Statement apply to other accounting pronouncements that require or permit fair value measurements; the Financial Accounting Standards Board having previously concluded in those accounting pronouncements that fair value is the relevant measurement attribute. On February 12, 2008, the FASB issued FASB Staff Position FAS 157-2, “Effective Date of FASB Statement No. 157,” referred to as FAS 157-2 in this report. FAS 157-2 delayed the effective date of SFAS No. 157 for all nonfinancial assets and nonfinancial liabilities, except those that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually).

Accordingly, we have not applied the provisions of SFAS No. 157 to (i) nonfinancial assets and liabilities initially measured at fair value in business combinations; (ii) reporting units or nonfinancial assets and liabilities measured at fair value in conjunction with goodwill impairment testing; (iii) other nonfinancial assets measured at fair value in conjunction with impairment assessments; and (iv) asset retirement obligations initially measured at fair value, although the fair value measurements we have made in these circumstances are not necessarily different from those that would be made had the provisions of SFAS No. 157 been applied. We adopted the remainder of SFAS No. 157 effective January 1, 2008, and the adoption did not have a material impact on our balance sheet, statement of income, or statement of cash flows since we already apply its basic concepts in measuring fair values.

On October 10, 2008, the FASB issued FASB Staff Position FAS 157-3, “Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active,” referred to as FAS 157-3 in this report. FAS 157-3 provides clarification regarding the application of SFAS 157 in inactive markets. The provisions of FAS 157-3 are effective immediately. This Staff Position did not have any material effect on our consolidated financial statements.

The degree of judgment utilized in measuring the fair value of financial instruments generally correlates to the level of pricing observability. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and the characteristics specific to the transaction. Financial instruments with readily available active quoted prices or for which fair value can be measured from actively quoted prices generally will have a higher degree of pricing observability and a lesser degree of judgment utilized in measuring fair value. Conversely, financial instruments rarely traded or not quoted will generally have less (or no) pricing observability and a higher degree of judgment utilized in measuring fair value.

SFAS No. 157 established a hierarchal disclosure framework associated with the level of pricing observability utilized in measuring fair value. This framework defined three levels of inputs to the fair value measurement process, and requires that each fair value measurement be assigned to a level corresponding to the lowest level input that is significant to the fair value measurement in its entirety. The three broad levels of inputs defined by the SFAS No. 157 hierarchy are as follows:

- Level 1 Inputs—quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date;
- Level 2 Inputs—inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. If the asset or liability has a specified (contractual) term, a Level 2 input must be observable for substantially the full term of the asset or liability; and
- Level 3 Inputs—unobservable inputs for the asset or liability. These unobservable inputs reflect the entity’s own assumptions about the assumptions that market participants would use in pricing the asset or liability, and are developed based on the best information available in the circumstances (which might include the reporting entity’s own data).

Derivative contracts can be exchange-traded or over-the-counter, referred to in this report as OTC. Exchange-traded derivative contracts typically fall within Level 1 of the fair value hierarchy if they are traded in an active market. We value exchange-traded derivative contracts using quoted market prices for identical securities.

OTC derivative contracts are valued using models utilizing a variety of inputs including contractual terms; commodity, interest rate and foreign currency curves; and measures of volatility. The selection of a particular model and particular inputs to value an OTC derivative contract depends upon the contractual terms of the instrument as well as the availability of pricing information in the market. We use similar models to value similar instruments. For OTC derivative contracts that trade in liquid markets, such as generic forwards and swaps, model inputs can generally be verified and model selection does not involve significant management judgment. Such contracts are typically classified within Level 2 of the fair value hierarchy.

Certain OTC derivative contracts trade in less liquid markets with limited pricing information, and the determination of fair value for these derivative contracts is inherently more difficult. Such contracts are classified within Level 3 of the fair value hierarchy. The valuations of these less liquid OTC derivative contracts are typically

impacted by Level 1 and/or Level 2 inputs that can be observed in the market, as well as unobservable Level 3 inputs. Use of a different valuation model or different valuation input values could produce a significantly different estimate of fair value. However, derivative contracts valued using inputs unobservable in active markets are generally not material to our financial statements.

When appropriate, valuations are adjusted for various factors including credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used. Our fair value measurements of derivative contracts are adjusted for credit risk in accordance with SFAS No. 157, and as of September 30, 2008, our consolidated "Accumulated other comprehensive loss" balance includes a gain of $14.1 million related to discounting the value of our energy commodity derivative liabilities for the effect of credit risk.

The following tables summarize the fair value measurements of our (i) energy commodity derivative contracts; and (ii) interest rate swap agreements as of September 30, 2008, based on the three levels established by SFAS No. 157, and does not include cash margin deposits, which are reported as "Restricted deposits" in our accompanying consolidated balance sheets (in millions):

	Asset Fair Value Measurements as of September 30, 2008 Using			
	Total	**Quoted Prices in Active Markets for Identical Assets (Level 1)**	**Significant Other Observable Inputs (Level 2)**	**Significant Unobservable Inputs (Level 3)**
Energy commodity derivative contracts(a)	$ 86.2	$ 1.8	$ 31.8	$ 52.6
Interest rate swap agreements	210.7	—	210.7	—

	Liability Fair Value Measurements as of September 30, 2008 Using			
	Total	**Quoted Prices in Active Markets for Identical Liabilities (Level 1)**	**Significant Other Observable Inputs (Level 2)**	**Significant Unobservable Inputs (Level 3)**
Energy commodity derivative contracts(b)	$ (1,618.8)	$ (0.1)	$ (1,485.5)	$ (133.2)
Interest rate swap agreements	(11.5)	—	(11.5)	—

(a) Level 2 consists primarily of OTC West Texas Intermediate hedges. Level 3 consists primarily of West Texas Sour hedges and West Texas Intermediate options.

(b) Level 1 consists primarily of NYMEX Natural Gas futures. Level 2 consists primarily of OTC West Texas Intermediate hedges. Level 3 consists primarily of West Texas Sour hedges and West Texas Intermediate options.

The table below provides a summary of changes in the fair value of our Level 3 energy commodity derivative contracts for the three and nine months ended September 30, 2008 (in millions):

Significant Unobservable Inputs (Level 3)	**Three Months Ended September 30, 2008**	**Nine Months Ended September 30, 2008**
Derivatives-net asset/(liability)		
Beginning of Period	$ (233.0)	$ (100.3)
Realized and unrealized net losses	133.4	(52.9)
Purchases and settlements	19.0	72.6
Transfers in (out) of Level 3	—	—
End of Period	$ (80.6)	$ (80.6)

Change in unrealized net losses relating to contracts still held as of September 30, 2008	$ 138.5	$ (22.3)

Credit Risks

As discussed in our financial statements included in our 2007 Form 10-K, we have counterparty credit risk as a result of our use of financial derivative contracts. Our counterparties consist primarily of financial institutions, major energy companies and local distribution companies. This concentration of counterparties may impact our overall exposure to credit risk, either positively or negatively in that the counterparties may be similarly affected by changes in economic, regulatory or other conditions.

We maintain credit policies with regard to our counterparties that we believe minimize our overall credit risk. These policies include (i) an evaluation of potential counterparties' financial condition (including credit ratings); (ii) collateral requirements under certain circumstances; and (iii) the use of standardized agreements which allow for netting of positive and negative exposure associated with a single counterparty. Based on our policies, exposure, credit and other reserves, our management does not anticipate a material adverse effect on our financial position, results of operations, or cash flows as a result of counterparty performance.

Our over-the-counter swaps and options are entered into with counterparties outside central trading organizations such as a futures, options or stock exchange. These contracts are with a number of parties, all of which have investment grade credit ratings. While we enter into derivative transactions principally with investment grade counterparties and actively monitor their ratings, it is nevertheless possible that from time to time losses will result from counterparty credit risk in the future.

In addition, in conjunction with the purchase of exchange-traded derivative contracts or when the market value of our derivative contracts with specific counterparties exceeds established limits, we are required to provide collateral to our counterparties, which may include posting letters of credit or placing cash in margin accounts. As of September 30, 2008 and December 31, 2007, we had three outstanding letters of credit totaling $375.0 million and $298.0 million, respectively, in support of our hedging of commodity price risks associated with the sale of natural gas, natural gas liquids and crude oil. Additionally, as of September 30, 2008 and December 31, 2007, we had cash margin deposits associated with our commodity contract positions and over-the-counter swap partners totaling $27.6 million and $67.9 million, respectively, and we reported these amounts as "Restricted deposits" in our accompanying consolidated balance sheets.

We are also exposed to credit related losses in the event of nonperformance by counterparties to our interest rate swap agreements, and while we enter into these agreements primarily with investment grade counterparties and actively monitor their credit ratings, it is nevertheless possible that from time to time losses will result from counterparty credit risk in the future. As of September 30, 2008, all of our interest rate swap agreements were with counterparties with investment grade credit ratings. Of the $210.7 million interest rate swap derivative asset at September 30, 2008, $92.2 million and $70.1 million of this value related to open positions with Citigroup and Merrill Lynch, respectively.

Other

Additionally, certain of our business activities expose us to foreign currency fluctuations. However, due to the limited size of this exposure, we do not believe the risks associated with changes in foreign currency will have a material adverse effect on our business, financial position, results of operations or cash flows. As a result, we do not significantly hedge our exposure to fluctuations in foreign currency.

For a more complete discussion of our risk management activities, see Note 14 to our consolidated financial statements included in our 2007 Form 10-K.

11. Reportable Segments

We divide our operations into five reportable business segments:

- Products Pipelines;
- Natural Gas Pipelines;

- CO_2;
- Terminals; and
- Kinder Morgan Canada

We evaluate performance principally based on each segments' earnings before depreciation, depletion and amortization, which excludes general and administrative expenses, third-party debt costs and interest expense, unallocable interest income and income tax expense, and minority interest. Our reportable segments are strategic business units that offer different products and services. Each segment is managed separately because each segment involves different products and marketing strategies.

Our Products Pipelines segment derives its revenues primarily from the transportation and terminaling of refined petroleum products, including gasoline, diesel fuel, jet fuel and natural gas liquids. Our Natural Gas Pipelines segment derives its revenues primarily from the sale, transport, processing, treating, storage and gathering of natural gas. Our CO_2 segment derives its revenues primarily from the production and sale of crude oil from fields in the Permian Basin of West Texas and from the transportation and marketing of carbon dioxide used as a flooding medium for recovering crude oil from mature oil fields. Our Terminals segment derives its revenues primarily from the transloading and storing of refined petroleum products and dry and liquid bulk products, including coal, petroleum coke, cement, alumina, salt and other bulk chemicals. Our Kinder Morgan Canada business segment derives its revenues primarily from the transportation of crude oil and refined products from Edmonton, Alberta to marketing terminals and refineries in the Greater Vancouver area and Puget Sound in Washington State.

As discussed in Note 2, due to the October 2007 sale of our North System, an approximately 1,600-mile interstate common carrier pipeline system whose operating results were included as part of our Products Pipelines business segment, we accounted for the North System business as a discontinued operation. Consistent with the management approach of identifying and reporting discrete financial information on operating segments, we have included the North System's financial results within our Products Pipelines business segment disclosures presented in this report for the first nine months of 2007 and, as prescribed by SFAS No. 131, we have reconciled the total of our reportable segment's financial results to our consolidated financial results by separately identifying, in the following pages where applicable, the North System amounts as discontinued operations.

Financial information by segment follows (in millions):

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	**2007**	**2008**	**2007**

Corporate assets(f)		351.3		303.8
Total consolidated assets	$	17,038.9	$	15,177.8

(a) Includes natural gas purchases and other costs of sales, operations and maintenance expenses, fuel and power expenses and taxes, other than income taxes.

(b) Nine month 2007 amount represents an expense of $377.1 million attributable to a goodwill impairment charge recognized by Knight, as discussed in Notes 2 and 6.

(c) Includes revenues, earnings from equity investments, allocable interest income, and other, net, less operating expenses, allocable income taxes, and other expense (income).

(d) Includes unallocated interest income and income tax expense, interest and debt expense and minority interest expense.

(e) Sustaining capital expenditures, including our share of Rockies Express' sustaining capital expenditures, totaled $43.3 million for the third quarter of 2008, $31.8 million for the third quarter of 2007, $120.1 million for the first nine months of 2008 and $95.0 million for the first nine months of 2007. These listed amounts do not include sustaining capital expenditures for the Trans Mountain Pipeline (part of Kinder Morgan Canada) for any periods prior to our acquisition date of April 30, 2007. Sustaining capital expenditures are defined as capital expenditures which do not increase the capacity of an asset.

(f) Includes cash and cash equivalents, margin and restricted deposits, certain unallocable deferred charges, and risk management assets related to the fair value of interest rate swaps.

We do not attribute interest and debt expense to any of our reportable business segments. For the three months ended September 30, 2008 and 2007, we reported total consolidated interest expense of $100.5 million and $103.8 million, respectively. For the nine months ended September 30, 2008 and 2007, we reported total consolidated interest expense of $298.5 million and $294.4 million, respectively.

12. Pensions and Other Post-Retirement Benefits

Due to our acquisition of the Trans Mountain pipeline system (see Note 2), Kinder Morgan Canada Inc. and Trans Mountain Pipeline Inc. (as general partner of Trans Mountain Pipeline L.P.) are sponsors of pension and other post-retirement benefit plans for eligible Trans Mountain employees. The plans include registered defined benefit pension plans, supplemental unfunded arrangements, which provide pension benefits in excess of statutory limits, and defined contributory plans. We also provide post-retirement benefits other than pensions for retired employees. Our combined net periodic benefit costs for these Trans Mountain pension and post-retirement benefit plans for the first nine months of 2008 and 2007 were approximately $2.3 million and $3.2 million, respectively. As of September 30, 2008, we estimate our overall net periodic pension and post-retirement benefit costs for these plans for the year 2008 will be approximately $3.1 million, recognized ratably over the year, although this estimate could change if there is a significant event, such as a plan amendment or a plan curtailment, which would require a remeasurement of liabilities. We expect to contribute approximately $2.6 million to these benefit plans in 2008.

Additionally, in connection with our acquisition of SFPP, L.P. and Kinder Morgan Bulk Terminals, Inc. in 1998, we acquired certain liabilities for pension and post-retirement benefits. We provide medical and life insurance benefits to current employees, their covered dependents and beneficiaries of SFPP and Kinder Morgan Bulk Terminals. We also provide the same benefits to former salaried employees of SFPP. Additionally, we will continue to fund these costs for those employees currently in the plan during their retirement years. SFPP's post-retirement benefit plan is frozen and no additional participants may join the plan.

As of September 30, 2008, we estimate no overall net periodic post-retirement benefit cost for the SFPP post-retirement benefit plan for the year 2008; however, this estimate could change if a future significant event would require a remeasurement of liabilities. For the first nine months of 2007, our net periodic benefit cost for the SFPP post-retirement benefit plan was a credit of approximately $0.2 million. The credit resulted in increases to income, largely due to amortizations of an actuarial gain and a negative prior service cost. In addition, we expect to contribute approximately $0.4 million to this post-retirement benefit plan in 2008.

The noncontributory defined benefit pension plan covering the former employees of Kinder Morgan Bulk Terminals is the Knight Inc. Retirement Plan. The benefits under this plan are based primarily upon years of service and final average pensionable earnings; however, benefit accruals were frozen as of December 31, 1998.

13. Related Party Transactions

Plantation Pipe Line Company Note Receivable

We have a seven-year note receivable bearing interest at the rate of 4.72% per annum from Plantation Pipe Line Company, our 51.17%-owned equity investee. The outstanding note receivable balance was $88.5 million as of September 30, 2008, and $89.7 million as of December 31, 2007. Of these amounts, $2.5 million and $2.4 million were included within "Accounts, notes and interest receivable, net─Related parties," as of September 30, 2008 and

December 31, 2007, respectively, and the remainder was included within “Notes receivable─Related parties” at each reporting date.

Express US Holdings LP Note Receivable

In conjunction with the acquisition of our 33 1/3% equity ownership interest in the Express pipeline system (discussed in Note 2) from Knight on August 28, 2008, we acquired a long-term investment in a debt security issued by Express US Holdings LP (the obligor), the partnership that maintains ownership of the U.S. portion of the Express pipeline system. As of our acquisition date, the value of this unsecured debenture was equal to Knight’s carrying value of $107.0 million. The note is denominated in Canadian dollars, and the principal amount of the note is $113.6 million Canadian dollars, due in full on January 9, 2023. It bears interest at the rate of 12.0% per annum and provides for quarterly payments of interest in Canadian dollars on March 31, June 30, September 30 and December 31 each year.

As of September 30, 2008, the outstanding note receivable balance, representing the translated amount included in our consolidated financial statements in U.S. dollars, was$106.7 million, and we included this amount within “Notes receivable─Related parties” on our accompanying consolidated balance sheet.

Knight Note Receivable

As of December 31, 2007, an affiliate of Knight owed to us a long-term note with a principal amount of $0.6 million, and we included this balance within “Notes receivable─Related parties” on our consolidated balance sheet as of that date. The note had no fixed terms of repayment and was denominated in Canadian dollars. In each of the second and third quarters of 2008, we received payments of $0.3 million in principal amount under this note, and as of September 30, 2008, there was no outstanding balance due under this note. The above amounts represent translated amounts in U.S. dollars.

Knight Asset Contributions

In conjunction with our acquisition of (i) certain Natural Gas Pipelines assets and partnership interests from Knight in December 1999 and December 2000; and (ii) all of the partnership interest in TransColorado Gas Transmission Company from two wholly-owned subsidiaries of Knight on November 1, 2004, Knight agreed to indemnify us and Kinder Morgan G.P., Inc. with respect to approximately $733.5 million of our debt. Knight would be obligated to perform under this indemnity only if we are unable and/or our assets were insufficient to satisfy our obligations.

Fair Value of Energy Commodity Derivative Contracts

As a result of the May 2007 going-private transaction of Knight, as discussed in Note 1, a number of individuals and entities became significant investors in Knight. By virtue of the size of their ownership interest in Knight, two of those investors became “related parties” to us (as that term is defined in authoritative accounting literature): (i) American International Group, Inc., referred to in this report as AIG, and certain of its affiliates; and (ii) Goldman Sachs Capital Partners and certain of its affiliates.

We and/or our affiliates enter into transactions with certain AIG affiliates in the ordinary course of their conducting insurance and insurance-related activities, although no individual transaction is, and all such transactions collectively are not, material to our consolidated financial statements. We also conduct commodity risk management activities in the ordinary course of implementing our risk management strategies in which the counterparty to certain of our derivative transactions is an affiliate of Goldman Sachs. In conjunction with these activities, we are a party (through one of our subsidiaries engaged in the production of crude oil) to a hedging facility with J. Aron & Company/Goldman Sachs which requires us to provide certain periodic information, but does not require the posting of margin. As a result of changes in the market value of our derivative positions, we have created both amounts receivable from and payable to Goldman Sachs affiliates.

The following table summarizes the fair values of our energy commodity derivative contracts that are (i) associated with commodity price risk management activities with related parties; and (ii) included on our accompanying consolidated balance sheets as of September 30, 2008 and December 31, 2007 (in millions):

	September 30, 2008	December 31, 2007
Derivatives-net asset/(liability)		
Deferred charges and other assets	$ 13.6	$ —
Accrued other current liabilities	(256.3)	(239.8)
Other long-term liabilities and deferred credits	$ (594.2)	$ (386.5)

Other

Generally, KMR makes all decisions relating to the management and control of our business. Our general partner owns all of KMR's voting securities and is its sole managing member. Knight, through its wholly owned and controlled subsidiary Kinder Morgan (Delaware), Inc., owns all the common stock of our general partner. Certain conflicts of interest could arise as a result of the relationships among KMR, our general partner, Knight and us; however, the audit committee of KMR's board of directors will, at the request of KMR, review (and is one of the means for resolving) conflicts of interest that may arise between Knight or its subsidiaries, on the one hand, and us, on the other hand. For a more complete discussion of our related-party transactions, see Note 12 to our consolidated financial statements included in our 2007 Form 10-K.

14. Regulatory Matters

The following updates the disclosure in Note 17 to our audited financial statements that were filed with our 2007 Form 10-K with respect to developments that occurred during the nine months ended September 30, 2008.

FERC Order No. 2004/690/717

Since November 2003, the FERC issued Orders No. 2004, 2004-A, 2004-B, 2004-C, and 2004-D, adopting new Standards of Conduct as applied to natural gas pipelines. The primary change from existing regulation was to make such standards applicable to an interstate natural gas pipeline's interaction with many more affiliates (referred to as "energy affiliates"). The Standards of Conduct require, among other things, separate staffing of interstate pipelines and their energy affiliates (but support functions and senior management at the central corporate level may be shared) and strict limitations on communications from an interstate pipeline to an energy affiliate.

However, on November 17, 2006, the United States Court of Appeals for the District of Columbia Circuit, in Docket No. 04-1183, vacated FERC Orders 2004, 2004-A, 2004-B, 2004-C, and 2004-D as applied to natural gas pipelines, and remanded these same orders back to the FERC.

On January 9, 2007, the FERC issued an Interim Rule, effective January 9, 2007, in response to the court's action. In the Interim Rule, the FERC readopted the Standards of Conduct, but revised or clarified with respect to issues which had been appealed to the court. Specifically, the following changes were made:

- the Standards of Conduct apply only to the relationship between interstate gas transmission pipelines and their marketing affiliates, not their energy affiliates;
- all risk management personnel can be shared;
- the requirement to post discretionary tariff actions was eliminated (but interstate gas pipelines must still maintain a log of discretionary tariff waivers);
- lawyers providing legal advice may be shared employees; and
- new interstate gas transmission pipelines are not subject to the Standards of Conduct until they commence service.

The FERC clarified that all exemptions and waivers issued under Order No. 2004 remain in effect. On January 18, 2007, the FERC issued a notice of proposed rulemaking, referred to in this report as a NOPR, seeking comments regarding whether or not the Interim Rule should be made permanent for natural gas transmission providers. On March 21, 2007, the FERC issued an Order on Clarification and Rehearing of the Interim Rule that granted clarification that the Standards of Conduct only apply to natural gas transmission providers that are affiliated with a marketing or brokering entity that conducts transportation transactions on such gas transmission provider's pipeline.

On March 21, 2008, as part of an effort to undertake a broader review of the existing Standards of Conduct, the FERC issued a new notice of proposed rulemaking revamping the Standards of Conduct in order to make compliance and enforcement easier, rather than issuing a Final Rule on the January 18 NOPR. The intent of this action is to return to the core principles of the original Standards of Conduct, which established a functional separation between transmission and merchant personnel for natural gas and electric transmission providers. The new NOPR is made up of three rules: (i) independent functioning of transmission function employees from marketing function employees; (ii) the no-conduit rule prohibiting the passing and receipt of non-public transmission information; (iii) and the transparency rule to detect undue discrimination. On October 16, 2008, the FERC issued a Final Rule in Order 717 revising the FERC Standards of Conduct for natural gas and electric transmission providers by eliminating Order No. 2004's concept of Energy Affiliates and corporate separation in favor of an employee functional approach as used in Order No. 497. A transmission provider is prohibited from disclosing to a marketing function employee non-public information about the transmission system or a transmission customer. The final rule also retains the long-standing no-conduit rule, which prohibits a transmission function provider from disclosing non-public information to marketing function employees by using a third party conduit. Additionally, the final rule requires that a transmission provider provide annual training on the Standards of Conduct to all transmission function employees, marketing function employees, officers, directors, supervisory employees, and any other employees likely to become privy to transmission function information. This rule will become effective on November 26, 2008.

Notice of Inquiry – Financial Reporting

On February 15, 2007, the FERC issued a notice of inquiry seeking comment on the need for changes or revisions to the FERC's reporting requirements contained in the financial forms for gas and oil pipelines and electric utilities. Initial comments were filed by numerous parties on March 27, 2007, and reply comments were filed on April 27, 2007.

On September 20, 2007, the FERC issued for public comment in Docket No. RM07-9 a proposed rule which would revise its financial forms to require that additional information be reported by natural gas companies. The proposed rule would require, among other things, that natural gas companies: (i) submit additional revenue information, including revenue from shipper-supplied gas; (ii) identify the costs associated with affiliate transactions; and (iii) provide additional information on incremental facilities and on discounted and negotiated rates. The FERC proposed an effective date of January 1, 2008, which means that forms reflecting the new requirements for 2008 would be filed in early 2009. Comments on the proposed rule were filed by numerous parties on November 13, 2007.

On March 21, 2008 the FERC issued a Final Rule regarding changes to the Form 2, 2-A and 3Q. The revisions were designed to enhance the forms' usefulness by updating them to reflect current market and cost information relevant to interstate pipelines and their customers. The rule is effective January 1, 2008 with the filing of the revised Form 3-Q beginning with the first quarter of 2009. The revised Form 2 and 2-A for calendar year 2008 material would be filed by April 30, 2009. On June 20, 2008, the FERC issued an Order Granting in Part and Denying in Part Rehearing and Granting Request for Clarification. No substantive changes were made to the March 21, 2008 Final Rule.

Notice of Inquiry – Fuel Retention Practices

On September 20, 2007, the FERC issued a Notice of Inquiry seeking comment on whether it should change its current policy and prescribe a uniform method for all interstate gas pipelines to use in recovering fuel gas and gas lost and unaccounted for. The Notice of Inquiry included numerous questions regarding fuel recovery issues and the effects of fixed fuel percentages as compared with tracking provisions. Comments on the Notice of Inquiry were filed by numerous parties on November 30, 2007.

Notice of Proposed Rulemaking – Promotion of a More Efficient Capacity Release Market-Order 712

On November 15, 2007, the FERC issued a notice of proposed rulemaking in Docket No. RM 08-1-000 regarding proposed modifications to its Part 284 regulations concerning the release of firm capacity by shippers on interstate natural gas pipelines. The FERC proposes to remove, on a permanent basis, the rate ceiling on capacity release transactions of one year or less. Additionally, the FERC proposes to exempt capacity releases made as part of an asset management arrangement from the prohibition on tying and from the bidding requirements of section 284.8. Initial comments were filed by numerous parties on January 25, 2008. On June 19, 2008, the FERC issued a final rule in Order 712 regarding changes to the capacity release program. The FERC permitted market based pricing for short-term capacity releases of a year or less. Long-term capacity releases and the pipeline's sale of its own capacity remains subject to a price cap. The ruling would facilitate asset management arrangements by relaxing the FERC's prohibitions on tying and on bidding requirements for certain capacity releases. The FERC further clarified that its prohibition on tying does not apply to conditions associated with gas inventory held in storage for releases for firm storage capacity. Finally, the FERC waived the prohibition on tying and bidding requirements for capacity releases made as part of state-approved retail open access programs. The final rule became effective on July 30, 2008.

Notice of Proposed Rulemaking – Natural Gas Price Transparency

On April 19, 2007, the FERC issued a notice of proposed rulemaking in Docket Nos. RM07-10-000 and AD06-11-000 regarding price transparency provisions of Section 23 of the Natural Gas Act and the Energy Policy Act. In the notice, the FERC proposed to revise its regulations to (i) require that intrastate pipelines post daily the capacities of, and volumes flowing through, their major receipt and delivery points and mainline segments in order to make available the information to track daily flows of natural gas throughout the United States; and (ii) require that buyers and sellers of more than a de minimis volume of natural gas report annual numbers and volumes of relevant transactions to the FERC in order to make possible an estimate of the size of the physical U.S. natural gas market, assess the importance of the use of index pricing in that market, and determine the size of the fixed-price trading market that produces the information. The FERC believes these revisions to its regulations will facilitate price transparency in markets for the sale or transportation of physical natural gas in interstate commerce. Initial comments were filed on July 11, 2007 and reply comments were filed on August 23, 2007. In addition, the FERC conducted an informal workshop in this proceeding on July 24, 2007, to discuss implementation and other technical issues associated with the proposals set forth in the NOPR.

In addition, on December 21, 2007, the FERC issued a new notice of proposed rulemaking in Docket No. RM08-2-000 regarding the daily posting provisions that were contained in Docket Nos. RM07-10-000 and AD06-11-000. The new NOPR proposes to exempt from the daily posting requirements those non-interstate pipelines that (i) flow less than ten million MMBtus of natural gas per year; (ii) fall entirely upstream of a processing plant; and (iii) deliver more than ninety-five percent (95%) of the natural gas volumes they flow directly to end-users. However, the new NOPR expands the proposal to require that both interstate and non-exempt non-interstate pipelines post daily the capacities of, volumes scheduled at, and actual volumes flowing through, their major receipt and delivery points and mainline segments. Initial comments were filed by numerous parties on March 13, 2008. A Technical Conference was held on April 3, 2008. Numerous reply comments were received on April 14, 2008.

On December 26, 2007, the FERC issued Order No. 704 in this docket implementing only the annual reporting provisions of the NOPR with minimal changes to the original proposal. The order became effective February 4, 2008. The initial report is due May 1, 2009 for calendar year 2008. Subsequent reports are due by May 1 of each year for the previous calendar year. Order 704 will require most, if not all of our natural gas pipelines to report annual volumes of relevant transactions to the FERC. Technical workshops were held on April 22, 2008 and May 19, 2008. The FERC issued Order 704-A on September 18, 2008. This order generally affirmed the rule, while clarifying what information certain natural gas market participants must report in Form 552. The revisions pertain to the reporting of transactions occurring in calendar year 2008. The first report is due May 1, 2009 and each May 1st thereafter for subsequent calendar years. Order 704-A became effective October 27, 2008.

FERC Equity Return Allowance

On April 17, 2008, the FERC adopted a new policy under Docket No. PL07-2-000 that will allow master limited partnerships to be included in proxy groups for the purpose of determining rates of return for both interstate natural gas and oil pipelines. Additionally, the policy statement concluded that (i) there should be no cap on the level of distributions included in the FERC's current discounted cash flow methodology; (ii) the Institutional Brokers Estimated System forecasts should remain the basis for the short-term growth forecast used in the discounted cash flow calculation; (iii) there should be an adjustment to the long-term growth rate used to calculate the equity cost of capital for a master limited partnership, specifically the long term growth rate would be set at 50% of the gross domestic product; and (iv) there should be no modification to the current respective two-thirds and one-third weightings of the short-term and long-term growth factors. Additionally, the FERC decided not to explore other methods for determining a pipeline's equity cost of capital at this time. The policy statement will govern all future gas and oil rate proceedings involving the establishment of a return on equity, as well as those cases that are currently pending before either the FERC or an administrative law judge. On May 19, 2008, an application for rehearing was filed by The American Public Gas Association. On June 13, 2008, the FERC dismissed the request for rehearing.

Notice of Proposed Rulemaking - Rural Onshore Low Stress Hazardous Liquids Pipelines

On September 6, 2006, the U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration, referred to in this report as the PHMSA, published a notice of proposed rulemaking (PHMSA 71 FR 52504) that proposed to extend certain threat-focused pipeline safety regulations to rural onshore low-stress hazardous liquid pipelines within a prescribed buffer of previously defined U.S. states. Low-stress hazardous liquid pipelines, except those in populated areas or that cross commercially navigable waterways, have not been subject to the safety regulations in PHMSA 49 C.F.R. Part 195.1. According to the PHMSA, unusually sensitive areas are areas requiring extra protection because of the presence of sole-source drinking water resources, endangered species, or other ecological resources that could be adversely affected by accidents or leaks occurring on hazardous liquid pipelines.

The notice proposed to define a category of "regulated rural onshore low-stress lines" (rural lines operating at or below 20% of specified minimum yield strength, with a diameter of eight and five-eighths inches or greater, located in or within a quarter-mile of a U.S. state) and to require operators of these lines to comply with a threat-focused set of requirements in Part 195 that already apply to other hazardous liquid pipelines. The proposed safety requirements addressed the most common threats—corrosion and third party damage—to the integrity of these rural lines. The proposal is intended to provide additional integrity protection, to avoid significant adverse environmental consequences, and to improve public confidence in the safety of unregulated low-stress lines.

Since the new notice is a proposed rulemaking in which the PHMSA will consider initial and reply comments from industry participants, it is not clear what impact the final rule will have on the business of our intrastate and interstate pipeline companies.

Natural Gas Pipeline Expansion Filings

Rockies Express Pipeline-Currently Certificated Facilities

We own a 51% ownership interest in West2East Pipeline LLC, a limited liability company that is the sole owner of Rockies Express Pipeline LLC, and operate the Rockies Express Pipeline. ConocoPhillips owns a 24% ownership interest in West2East Pipeline LLC and Sempra Energy holds the remaining 25% interest. When construction of the entire Rockies Express Pipeline project is completed, our ownership interest will be reduced to 50% at which time the capital accounts of West2East Pipeline LLC will be trued up to reflect our 50% economics in the project. According to the provisions of current accounting standards, because we will receive 50% of the economics of the Rockies Express project on an ongoing basis, we are not considered the primary beneficiary of West2East Pipeline LLC and thus, we account for our investment under the equity method of accounting.

On August 9, 2005, the FERC approved the application of Rockies Express Pipeline LLC, formerly known as Entrega Gas Pipeline LLC, to construct 327 miles of pipeline facilities in two phases. For phase I (consisting of two pipeline segments), Rockies Express was granted authorization to construct and operate approximately 136 miles of pipeline extending northward from the Meeker Hub, located at the northern end of our TransColorado pipeline system in Rio Blanco County, Colorado, to the Wamsutter Hub in Sweetwater County, Wyoming (segment 1), and then construct approximately 191 miles of pipeline eastward to the Cheyenne Hub in Weld County, Colorado (segment 2). Construction of segments 1 and 2 has been completed, with interim service commencing on segment 1 on February 24, 2006, and full in-service of both segments on February 14, 2007. For phase II, Rockies Express was authorized to construct three compressor stations referred to as the Meeker, Big Hole and Wamsutter compressor stations. The Meeker and Wamsutter stations went into service in January 2008. Construction of the Big Hole compressor station commenced in the second quarter of 2008, and the expected in-service date for this compressor station is the second quarter of 2009.

Rockies Express Pipeline-West Project

On April 19, 2007, the FERC issued a final order approving the Rockies Express application for authorization to construct and operate certain facilities comprising its proposed “Rockies Express-West Project.” This project is the first planned segment extension of the Rockies Express’ facilities described above, and is comprised of approximately 713 miles of 42-inch diameter pipeline extending from the Cheyenne Hub to an interconnection with Panhandle Eastern Pipe Line located in Audrain County, Missouri. The project also includes certain improvements to existing Rockies Express facilities located to the west of the Cheyenne Hub. Construction on Rockies Express-West commenced on May 21, 2007, and interim service for up to 1.4 billion cubic feet per day of natural gas on the segment’s first 503 miles of pipe began on January 12, 2008. The project commenced deliveries to Panhandle Eastern Pipe Line at Audrain County, Missouri on the remaining 210 miles of pipe on May 20, 2008. The Rockies Express-West pipeline segment transports approximately 1.5 million cubic feet per day of natural gas across five states: Wyoming, Colorado, Nebraska, Kansas and Missouri.

Rockies Express replaced certain pipe to reflect a higher class location and conducted further hydrostatic testing of portions of its system during September 2008 to satisfy U.S. Department of Transportation testing requirements to operate at its targeted higher operating pressure. This pipe replacement and hydrostatic testing, conducted from September 3, 2008 through September 26, 2008, resulted in the temporary outage of pipeline delivery points and an overall reduction of firm capacity available to firm shippers. By the terms of the Rockies Express FERC Gas Tariff, firm shippers are entitled to daily reservation revenue credits for non-force majeure and planned maintenance outages. The estimated impact of these revenue credits is included in our third quarter results.

Rockies Express Pipeline-East Project

On April 30, 2007, Rockies Express filed an application with the FERC requesting a certificate of public convenience and necessity that would authorize construction and operation of the Rockies Express-East Project. The Rockies Express-East Project will be comprised of approximately 639 miles of 42-inch diameter pipeline commencing from the terminus of the Rockies Express-West pipeline to a terminus near the town of Clarington in Monroe County, Ohio and will be capable of transporting approximately 1.8 billion cubic feet per day of natural gas.

By order issued May 30, 2008, the FERC authorized the certificate to construct the Rockies Express Pipeline-East Project. Construction commenced on the Rockies Express-East pipeline segment on June 26, 2008. Delays in securing permits and regulatory approvals, as well as weather-related delays, have caused Rockies Express to set revised project completion dates. Rockies Express-East is currently projected to commence service on April 1, 2009 to interconnects upstream of Lebanon, followed by service to the Lebanon Hub in Warren County, Ohio beginning June 15, 2009, with final completion and deliveries to Clarington, Ohio commencing by November 1, 2009.

Current market conditions for consumables, labor and construction equipment along with certain provisions in the final regulatory orders have resulted in increased costs for the project and have impacted certain projected

completion dates. For example, our current estimate of total completed cost on the Rockies Express Pipeline is approximately $6.0 billion (consistent with our October 15, 2008 third quarter earnings press release).

Kinder Morgan Interstate Gas Transmission Pipeline

On August 6, 2007, Kinder Morgan Interstate Gas Transmission Pipeline, referred to in this report as KMIGT, filed, in FERC Docket CP07-430, for regulatory approval to construct and operate a 41-mile, $30 million natural gas pipeline, referred to in this report as the Colorado Lateral, from the Cheyenne Hub to markets in and around Greeley, Colorado. When completed, the Colorado Lateral will provide firm transportation of up to 55 million cubic feet per day to a local utility under long-term contract. The FERC issued a draft environmental assessment on the project on January 11, 2008, and comments on the project were received February 11, 2008. On February 21, 2008, the FERC granted the certificate application. On July 8, 2008, in response to a rehearing request by Public Service Company of Colorado, referred to in this report as PSCo, the FERC granted rehearing and denied KMIGT recovery in initial transportation rates $6.2 million in costs associated with non-jurisdictional laterals constructed by KMIGT to serve Atmos. The recourse rate adjustment is not expected to have any material effect on the negotiated rate paid by Atmos to KMIGT or the economics of the project. On July 25, 2008, KMIGT filed an amendment to its certificate application, seeking authorization to revise its initial rates for transportation service on the Colorado Lateral to reflect updated construction costs for jurisdictional mainline facilities. The FERC approved the revised initial recourse rates on August 22, 2008.

PSCo, a competitor serving markets off the Colorado Lateral, also filed a complaint before the State of Colorado Public Utilities Commission ("CoPUC") against Atmos, the anchor shipper on the project. The CoPUC conducted a hearing on April 14, 2008 on the complaint. On June 9, 2008, PSCo also filed before the CoPUC seeking a temporary cease and desist order to halt construction of the lateral facilities being constructed by KMIGT to serve Atmos. Atmos filed a response to that motion on June 24, 2008. By order dated June 27, 2008 an administrative law judge for the CoPUC denied PSCo's request for a cease and desist order. On September 4, 2008, an administrative law judge for the CoPUC issued an order wherein it denied PSCo's claim to exclusivity to serve Atmos and the Greeley market area but affirmed PSCo's claim that Atmos' acquisition of the delivery laterals is not in the ordinary course of business and requires separate approvals. Accordingly, Atmos may require a certificate of public convenience and necessity ("CPCN") to acquire the delivery lateral facilities from KMIGT. Atmos' application and approval for a CPCN is not expected to delay in-service of the facilities on or about November 7, 2008.

On December 21, 2007, KMIGT filed, in Docket CP 08-44, for approval to expand its system in Nebraska to serve incremental ethanol and industrial load. No protests to the application were filed and the project was approved by the FERC. Construction commenced on April 9, 2008. These facilities will be in service in November 2008.

Kinder Morgan Louisiana Pipeline

On September 8, 2006, in FERC Docket No. CP06-449-000, we filed an application with the FERC requesting approval to construct and operate our Kinder Morgan Louisiana Pipeline. The natural gas pipeline will extend approximately 135 miles from Cheniere's Sabine Pass liquefied natural gas terminal in Cameron Parish, Louisiana, to various delivery points in Louisiana and will provide interconnects with many other natural gas pipelines, including Natural Gas Pipeline Company of America LLC. The project is supported by fully subscribed capacity and long-term customer commitments with Chevron and Total. The entire estimated project cost is now expected to be approximately $1.0 billion (consistent with our October 15, 2008 third quarter earnings press release), and it is expected to be fully operational during the second quarter of 2009.

On March 15, 2007, the FERC issued a preliminary determination that the authorizations requested, subject to some minor modifications, will be in the public interest. This order does not consider or evaluate any of the environmental issues in this proceeding. On April 19, 2007, the FERC issued the final environmental impact statement, or EIS, which addressed the potential environmental effects of the construction and operation of the Kinder Morgan Louisiana Pipeline. The final EIS was prepared to satisfy the requirements of the National Environmental Policy Act. It concluded that approval of the Kinder Morgan Louisiana Pipeline project would have limited adverse environmental impacts. On June 22, 2007, the FERC issued an order granting construction and operation of the project. Kinder Morgan Louisiana Pipeline officially accepted the order on July 10, 2007.

On July 11, 2008, Kinder Morgan Louisiana Pipeline filed an amendment to its certificate application, seeking authorization to revise its initial rates for transportation service on the Kinder Morgan Louisiana Pipeline system to reflect updated construction costs for the project. The amendment was accepted by the FERC on August 14, 2008.

Midcontinent Express Pipeline

On October 9, 2007, in Docket No. CP08-6-000, Midcontinent Express Pipeline LLC filed an application with the FERC requesting a certificate of public convenience and necessity that would authorize construction and operation of the approximately 500-mile Midcontinent Express Pipeline natural gas transmission system.

The Midcontinent Express Pipeline will create long-haul, firm transportation takeaway capacity either directly or indirectly connected to natural gas producing regions located in Texas, Oklahoma and Arkansas. The pipeline will originate in southeastern Oklahoma and traverse east through Texas, Louisiana, Mississippi, and terminate at an interconnection with the Transco Pipeline near Butler, Alabama. The Midcontinent Express Pipeline is a 50/50 joint venture between us and Energy Transfer Partners, L.P., and it has a total capital cost of approximately $1.9 billion, including the expansion capacity (consistent with our October 15, 2008 third quarter earnings press release). Initial design capacity for the pipeline was 1.5 billion cubic feet of natural gas per day, which was fully subscribed with long-term binding commitments from creditworthy shippers. A successful binding open season was recently completed which will increase the main segment of the pipeline’s capacity to 1.8 billion cubic feet per day, subject to regulatory approval.

On July 25, 2008, the FERC approved the application made by Midcontinent Express Pipeline to construct and operate the 500-mile Midcontinent Express Pipeline natural gas transmission system along with the lease of 272 million cubic feet of capacity on the Oklahoma intrastate system of Enogex Inc. Midcontinent Express Pipeline accepted the FERC Certificate on July 30, 2008. Mobilization for construction of the pipeline began in the third quarter, and subject to the receipt of regulatory approvals, interim service on the first portion of the pipeline is expected to be available by the second quarter of 2009 with full in service in the third quarter of 2009.

Kinder Morgan Liquid Terminals

With regard to several of our liquids terminals, we are working with the U.S. Department of Transportation, referred to in this report as the DOT, to supplement our compliance program for certain of our tanks and internal piping. We anticipate the program will call for incremental capital spending over the next several years to improve and/or add to our facilities. These improvements will enhance the tanks and piping previously considered outside the jurisdiction of DOT to conduct DOT jurisdictional transfers of products. Our original estimate called for an incremental $3 million to $5 million of annual capital spending over the next six to ten years for this work; however, we continue to assess the amount of capital that will be required and the amount may exceed our original estimate.

Kinder Morgan Texas Pipeline LLC

On May 30, 2008, Kinder Morgan Texas Pipeline LLC filed in Docket No. PR08-25-000 a petition seeking market-based rate authority for firm and interruptible storage services performed under section 311 of the Natural Gas Policy Act of 1978 (NGPA) at the North Dayton Gas Storage Facility in Liberty County, Texas, and at the Markham Gas Storage Facility in Matagorda County, Texas. On October 3, 2008, FERC approved this petition effective May 30, 2008.

15. Recent Accounting Pronouncements

EITF 04-5

In June 2005, the Emerging Issues Task Force reached a consensus on Issue No. 04-5, or EITF 04-5, “Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights.” EITF 04-5 provides guidance for purposes of assessing whether certain limited partners rights might preclude a general partner from controlling a limited partnership.

For general partners of all new limited partnerships formed, and for existing limited partnerships for which the partnership agreements are modified, the guidance in EITF 04-5 is effective after June 29, 2005. For general partners in all other limited partnerships, the guidance is effective no later than the beginning of the first reporting period in fiscal years beginning after December 15, 2005 (January 1, 2006 for us). The adoption of EITF 04-5 did not have an effect on our consolidated financial statements.

Nonetheless, as a result of EITF 04-5, as of January 1, 2006, our financial statements are consolidated into the consolidated financial statements of Knight. Notwithstanding the consolidation of our financial statements into the consolidated financial statements of Knight pursuant to EITF 04-5, Knight is not liable for, and its assets are not available to satisfy, the obligations of us and/or our subsidiaries and vice versa. Responsibility for payments of obligations reflected in our or Knight's financial statements is a legal determination based on the entity that incurs the liability. The determination of responsibility for payment among entities in our consolidated group of subsidiaries was not impacted by the adoption of EITF 04-5.

FIN 48

In July 2006, the FASB issued Interpretation (FIN) No. 48, "Accounting for Uncertainty in Income Taxes—an Interpretation of FASB Statement No. 109," which became effective January 1, 2007. FIN 48 addressed the determination of how tax benefits claimed or expected to be claimed on a tax return should be recorded in the financial statements. Under FIN 48, we must recognize the tax benefit from an uncertain tax position only if it is more likely than not that the tax position will be sustained on examination by the taxing authorities, based not only on the technical merits of the tax position based on tax law, but also the past administrative practices and precedents of the taxing authority. The tax benefits recognized in the financial statements from such a position are measured based on the largest benefit that has a greater than fifty percent likelihood of being realized upon ultimate resolution.

Our adoption of FIN No. 48 on January 1, 2007 did not result in a cumulative effect adjustment to "Partners' Capital" on our consolidated balance sheet. Our continuing practice is to recognize interest and/or penalties related to income tax matters in income tax expense, and as of January 1, 2007, we had $1.1 million of accrued interest and no accrued penalties. As of December 31, 2007 (i) we had $0.6 million of accrued interest and no accrued penalties; (ii) we believe it is reasonably possible that our liability for unrecognized tax benefits will decrease by approximately $1.2 million during the next twelve months; and (iii) we believe approximately $5.4 million of the total $6.3 million of unrecognized tax benefits on our consolidated balance sheet as of December 31, 2007 would affect our effective income tax rate in future periods in the event those unrecognized tax benefits were recognized.

In addition, we have U.S. and state tax years open to examination for the periods 2003 through 2007. As of September 30, 2008, there have been no material changes to our December 31, 2007 liability for unrecognized tax benefits, interest, penalties or to our estimated change in the liability during 2008.

SFAS No. 157

For information on SFAS No. 157, see Note 10 "—SFAS No. 157."

SFAS No. 159

On February 15, 2007, the FASB issued SFAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities." This Statement provides companies with an option to report selected financial assets and liabilities at fair value. The Statement's objective is to reduce both complexity in accounting for financial instruments and the volatility in earnings caused by measuring related assets and liabilities differently. The Statement also establishes presentation and disclosure requirements designed to facilitate comparisons between companies that choose different measurement attributes for similar types of assets and liabilities.

SFAS No. 159 requires companies to provide additional information that will help investors and other users of financial statements to more easily understand the effect of the company's choice to use fair value on its earnings. It also requires entities to display the fair value of those assets and liabilities for which the company has chosen to use fair value on the face of the balance sheet. The Statement does not eliminate disclosure requirements included in other accounting standards, including requirements for disclosures about fair value measurements included in SFAS No. 157 (discussed in Note 10 "—SFAS No. 157") and in SFAS No. 107 "Disclosures about Fair Value of Financial Instruments."

This Statement was adopted by us effective January 1, 2008, at which time no financial assets or liabilities, not previously required to be recorded at fair value by other authoritative literature, were designated to be recorded at fair value. As such, the adoption of this Statement did not have any impact on our consolidated financial statements.

SFAS 141(R)

On December 4, 2007, the FASB issued SFAS No. 141R (revised 2007), "Business Combinations." Although this statement amends and replaces SFAS No. 141, it retains the fundamental requirements in SFAS No. 141 that (i) the purchase method of accounting be used for all business combinations; and (ii) an acquirer be identified for each business combination. SFAS No. 141R defines the acquirer as the entity that obtains control of one or more businesses in the business combination and establishes the acquisition date as the date that the acquirer achieves control. This Statement applies to all transactions or other events in which an entity (the acquirer) obtains control of one or more businesses (the acquiree), including combinations achieved without the transfer of consideration; however, this Statement does not apply to a combination between entities or businesses under common control.

Significant provisions of SFAS No. 141R concern principles and requirements for how an acquirer (i) recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, and any noncontrolling interest in the acquiree; (ii) recognizes and measures the goodwill acquired in the business combination or a gain from a bargain purchase; and (iii) determines what information to disclose to enable users of the financial statements to evaluate the nature and financial effects of the business combination.

This Statement applies prospectively to business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2008 (January 1, 2009 for us). Early adoption is not permitted. We are currently reviewing the effects of this Statement.

SFAS No. 160

On December 4, 2007, the FASB issued SFAS No. 160, "Noncontrolling Interests in Consolidated Financial Statements – an amendment of ARB No. 51." This Statement changes the accounting and reporting for noncontrolling interests in consolidated financial statements. A noncontrolling interest, sometimes referred to as a minority interest, is the portion of equity in a subsidiary not attributable, directly or indirectly, to a parent.

Specifically, SFAS No. 160 establishes accounting and reporting standards that require (i) the ownership interests in subsidiaries held by parties other than the parent to be clearly identified, labeled, and presented in the consolidated balance sheet within equity, but separate from the parent's equity; (ii) the equity amount of consolidated net income attributable to the parent and to the noncontrolling interest to be clearly identified and presented on the face of the consolidated income statement (consolidated net income and comprehensive income will be determined without deducting minority interest, however, earnings-per-share information will continue to be calculated on the basis of the net income attributable to the parent's shareholders); and (iii) changes in a parent's ownership interest while the parent retains its controlling financial interest in its subsidiary to be accounted for consistently and similarly—as equity transactions.

This Statement is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008 (January 1, 2009 for us). Early adoption is not permitted. SFAS No. 160 is to be applied prospectively as of the beginning of the fiscal year in which it is initially applied, except for its presentation and disclosure requirements, which are to be applied retrospectively for all periods presented. We do not anticipate that the adoption of this Statement will have a material effect on our consolidated financial statements.

SFAS No. 161

On March 19, 2008, the FASB issued SFAS No. 161, "Disclosures about Derivative Instruments and Hedging Activities." This Statement amends SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" and is intended to help investors better understand how derivative instruments and hedging activities affect an entity's financial position, financial performance and cash flows through enhanced disclosure requirements. The enhanced disclosures include, among other things, (i) a tabular summary of the fair value of derivative instruments and their gains and losses; (ii) disclosure of derivative features that are credit-risk–related to provide more information regarding an entity's liquidity; and (iii) cross-referencing within footnotes to make it easier for financial statement users to locate important information about derivative instruments.

This Statement is effective for financial statements issued for fiscal years and interim periods beginning after November 15, 2008 (January 1, 2009 for us). Early application is encouraged. We do not anticipate that the adoption of this Statement will have a material effect on our consolidated financial statements.

EITF 07-4

In March 2008, the Emerging Issues Task Force reached a consensus on Issue No. 07-4, or EITF 07-4, "Application of the Two-Class Method under FASB Statement No. 128, Earnings per Share, to Master Limited Partnerships." EITF 07-4 provides guidance for how current period earnings should be allocated between limited partners and a general partner when the partnership agreement contains incentive distribution rights.

This Issue is effective for fiscal years beginning after December 15, 2008 (January 1, 2009 for us), and interim periods within those fiscal years. Earlier application is not permitted, and the guidance in this Issue is to be applied retrospectively for all financial statements presented. We do not anticipate that the adoption of this Issue will have a material effect on our consolidated financial statements.

FASB Staff Position No. FAS 142-3

On April 25, 2008, the FASB issued FASB Staff Position FAS 142-3 "Determination of the Useful Life of Intangible Assets." This Staff Position amends the factors that should be considered in developing renewal or extension assumptions used to determine the useful life of a recognized intangible asset under SFAS No. 142, "Goodwill and Other Intangible Assets". This Staff Position is effective for financial statements issued for fiscal years beginning after December 15, 2008 (January 1, 2009 for us), and interim periods within those fiscal years. Early adoption is prohibited. We do not anticipate that the adoption of this Staff Position will have a material effect on our consolidated financial statements.

SFAS No. 162

On May 9, 2008, the FASB issued SFAS No. 162, "The Hierarchy of Generally Accepted Accounting Principles." This Statement is intended to improve financial reporting by identifying a consistent framework, or hierarchy, for selecting accounting principles to be used in preparing financial statements that are presented in conformity with U.S. generally accepted accounting principles, referred to in this note as GAAP, for nongovernmental entities.

Statement No. 162 establishes that the GAAP hierarchy should be directed to entities because it is the entity (not its auditor) that is responsible for selecting accounting principles for financial statements that are presented in conformity with GAAP. Statement No. 162 is effective 60 days following the U.S. Securities and Exchange Commission's approval of the Public Company Accounting Oversight Board Auditing amendments to AU Section 411, "The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles," and is only effective for nongovernmental entities. We do not expect the adoption of this Statement to have any effect on our consolidated financial statements.

FASB Staff Position No. FAS 157-3

On October 10, 2008, the FASB issued FASB Staff Position FAS 157-3 “Determining the Fair Value of a Financial Asset When the Market for that Asset is Not Active.” This Staff Position provides guidance clarifying how SFAS No. 157, “Fair Value Measurements” should be applied when valuing securities in markets that are not active. This Staff Position applies the objectives and framework of SFAS No. 157 to determine the fair value of a financial asset in a market that is not active, and it reaffirms the notion of fair value as an exit price as of the measurement date. Among other things, the guidance also states that significant judgment is required in valuing financial assets. This Staff Position became effective upon issuance, and did not have any material effect on our consolidated financial statements.

Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations.

General

The following information should be read in conjunction with (i) our accompanying interim consolidated financial statements and related notes (included elsewhere in this report); and (ii) our consolidated financial statements, related notes and management’s discussion and analysis of financial condition and results of operations included in our 2007 Form 10-K.

In addition, as discussed in Note 2 to our consolidated financial statements included elsewhere in this report, our financial statements reflect:

- the April 30, 2007 transfer of the Trans Mountain pipeline system net assets from Knight as if such transfer had taken place on January 1, 2006, the effective date of common control pursuant to generally accepted accounting principles. Accordingly, we have included the financial results of the Trans Mountain pipeline system within our Kinder Morgan Canada business segment disclosures presented in this report for all periods subsequent to January 1, 2006;

- the August 28, 2008 transfer of both the 33 1/3% interest in the Express pipeline system net assets and the Jet Fuel pipeline system net assets from Knight as of the date of transfer. Accordingly, we have included the financial results of the Express and Jet Fuel pipeline systems within our Kinder Morgan Canada business segment disclosures presented in this report for all periods subsequent to August 28, 2008; and

- the reclassifications necessary to reflect the results of our North System as discontinued operations. However, because the sale of our North System does not change the structure of our internal organization in a manner that causes a change to our reportable business segments pursuant to the provisions of SFAS No. 131, “Disclosures about Segments of an Enterprise and Related Information,” we have included the North System’s financial results within our Products Pipelines business segment disclosures presented in this report for the three and nine months ended September 30, 2007.

We are an energy infrastructure owner and operator. Our principal business segments are:

- Products Pipelines—the ownership and operation of refined petroleum products pipelines that deliver gasoline, diesel fuel, jet fuel and natural gas liquids to various markets, plus the ownership and/or operation of associated product terminals and petroleum pipeline transmix facilities;

- Natural Gas Pipelines—the ownership and operation of major interstate and intrastate natural gas pipeline and storage systems;

- CO_2—(i) the production, transportation and marketing of carbon dioxide, referred to as CO_2, to oil fields that use CO_2 to increase production of oil, (ii) ownership interests in and/or operation of oil fields in West Texas, and (iii) the ownership and operation of a crude oil pipeline system in West Texas;

- Terminals—the ownership and/or operation of liquids and bulk terminal facilities and rail transloading and materials handling facilities located throughout the United States; and

- Kinder Morgan Canada—the ownership and operation of a pipeline system that transports crude oil and refined petroleum products from Edmonton, Alberta, Canada to marketing terminals and refineries in British Columbia, Canada and the state of Washington. This segment also includes the recently completed first portion of the Anchor Loop expansion of the Trans Mountain Pipeline, and the 33 1/3% interest in the Express pipeline system net assets and the Jet Fuel pipeline system net assets we acquired from Knight effective August 28, 2008. Following the acquisition of these two businesses, the operations of our Trans Mountain, Express and Jet Fuel pipeline systems have been combined to represent our "Kinder Morgan Canada" segment.

As an energy infrastructure owner and operator in multiple facets of the United States' and Canada's various energy businesses and markets, we examine a number of variables and factors on a routine basis to evaluate our current performance and our prospects for the future. Many of our operations are regulated by various U.S. and Canadian regulatory bodies. The profitability of our products pipeline transportation business is generally driven by the utilization of our facilities in relation to their capacity, as well as the prices we receive for our services. Transportation volume levels are primarily driven by the demand for the petroleum products being shipped or stored, and the prices for shipping are generally based on regulated tariffs that are adjusted annually based on changes in the U.S. Producer Price Index. Because of the overall effect of utilization on our products pipeline transportation business, we seek to own refined products pipelines located in, or that transport to, stable or growing markets and population centers.

With respect to our interstate natural gas pipelines and related storage facilities, the revenues from these assets tend to be received under contracts with terms that are fixed for various periods of time. We monitor the contracts under which we provide interstate natural gas transportation services and, to the extent practicable and economically feasible in light of our strategic plans and other factors, we generally attempt to mitigate risk of reduced volumes and prices by negotiating contracts with longer terms, with higher per-unit pricing and for a greater percentage of our available capacity. However, changes, either positive or negative, in actual quantities transported on our interstate natural gas pipelines may not accurately measure or predict associated changes in profitability because many of the underlying transportation contracts, sometimes referred to as take-or-pay contracts, specify that we receive the majority of our fee for making the capacity available, whether or not the customer actually chooses to utilize the capacity.

Our CO_2 sales and transportation business, like our natural gas pipelines business, generally has take-or-pay contracts, although the contracts in our CO_2 business typically have minimum volume requirements. In the long term, our success in this business is driven by the demand for CO_2. However, short-term changes in the demand for CO_2 typically do not have a significant impact on us due to the required minimum transport volumes under many of our contracts. In the oil and gas producing activities within our CO_2 business segment, we monitor the amount of capital we expend in relation to the amount of production that is added or the amount of declines in production that are postponed. In that regard, our production during any period and the reserves that we add during that period are important measures. In addition, the revenues we receive from our crude oil, natural gas liquids and CO_2 sales are a function of, in addition to production quantity, the prices we realize from the sale of these products. Over the long term, we will tend to receive prices that are dictated by the demand and overall market price for these products. In the shorter term, however, published market prices are likely not indicative of the revenues we will receive due to our risk management, or hedging, program in which the prices to be realized for certain of our future sales quantities are fixed, capped or bracketed through the use of financial derivative contracts, particularly for crude oil.

As with our pipeline transportation businesses, the profitability of our terminals businesses is generally driven by the utilization of our terminals facilities in relation to their capacity, as well as the prices we receive for our services, which in turn are driven by the demand for the products being shipped or stored. The extent to which changes in these variables affect our terminals businesses in the near term is a function of the length of the underlying service contracts, the extent to which revenues under the contracts are a function of the amount of product stored or transported, and the extent to which such contracts expire during any given period of time. As with our pipeline transportation businesses, we monitor the contracts under which we provide services and, to the extent practicable and economically feasible in light of our strategic plans and other factors, we generally attempt to mitigate the risk

of reduced volumes and pricing by negotiating contracts with longer terms, with higher per-unit pricing and for a greater percentage of our available capacity. In addition, weather-related factors such as hurricanes, floods and droughts may impact our facilities and access to them and, thus, the profitability of certain terminals for limited periods of time or, in relatively rare cases of severe damage to facilities, for longer periods.

In our discussions of the operating results of individual businesses which follow, we generally identify the important fluctuations between periods that are attributable to acquisitions and dispositions separately from those that are attributable to businesses owned in both periods. We believe that we have a history of making accretive acquisitions and economically advantageous expansions of existing businesses. Our ability to increase earnings and increase distributions to our unitholders will, to some extent, be a function of completing successful acquisitions and expansions. We continue to have opportunities for expansion of our facilities in many markets, and we expect to continue to have such opportunities in the future, although the level of such opportunities is difficult to predict.

Our ability to make accretive acquisitions is a function of the availability of suitable acquisition candidates and, to some extent, our ability to raise necessary capital to fund such acquisitions, factors over which we have limited or no control. The availability of suitable acquisition candidates has lessened in recent periods, largely due to prices that are not attractive to us, but we have no way to determine the extent to which we will be able to identify accretive acquisition candidates, or the number or size of such candidates in the future, or whether we will complete the acquisition of any such candidates.

In addition to any uncertainties described in this discussion and analysis, we are subject to a variety of risks that could have a material adverse effect on our business, financial condition, cash flows and results of operations. Please see Part II, Item 1A "Risk Factors" of this report for a more detailed description of these and other factors that may affect our business portfolio.

Critical Accounting Policies and Estimates

Accounting standards require information in financial statements about the risks and uncertainties inherent in significant estimates, and the application of generally accepted accounting principles involves the exercise of varying degrees of judgment. Certain amounts included in or affecting our consolidated financial statements and related disclosures must be estimated, requiring us to make certain assumptions with respect to values or conditions that cannot be known with certainty at the time the financial statements are prepared. These estimates and assumptions affect the amounts we report for our assets and liabilities, our revenues and expenses during the reporting period, and our disclosure of contingent assets and liabilities at the date of our financial statements. We routinely evaluate these estimates, utilizing historical experience, consultation with experts and other methods we consider reasonable in the particular circumstances. Nevertheless, actual results may differ significantly from our estimates.

Further information about us and information regarding our accounting policies and estimates that we consider to be "critical" can be found in our 2007 Form 10-K. There have not been any significant changes in these policies and estimates during the nine months ended September 30, 2008; however, during the second quarter of 2008, we changed the date of our annual goodwill impairment test date to May 31 of each year. Although our change to a new testing date, when applied to prior periods, does not yield different financial statement results, this change constitutes a change in the method of applying an accounting principle, as discussed in paragraph 4 of SFAS No. 154, "Accounting Changes and Error Corrections." For more information on this change, see Note 6 to our consolidated financial statements included elsewhere in this report.

Results of Operations

Consolidated

	Three Months Ended September 30, 2008	Three Months Ended September 30, 2007	Earnings Increase/(decrease)

(a) Includes revenues, earnings from equity investments, allocable interest income and other, net, less operating expenses, allocable income taxes, and other expense (income). Operating expenses include natural gas purchases and other costs of sales, operations and maintenance expenses, fuel and power expenses, and taxes, other than income taxes.

(b) 2008 amount includes a $9.3 million decrease in income from the proposed settlement of certain litigation matters related to our Pacific operations' East Line pipeline, a $0.7 million decrease in income resulting from unrealized foreign currency losses on long-term debt transactions, and a $0.2 million decrease in income related to hurricane clean-up and repair activities. 2007 amount includes a $15.0 million increase in expense for a litigation settlement reached with Contra Costa County, California, a $3.2 million increase in expense from the settlement of certain litigation matters related to our West Coast refined products terminal operations, and a $0.9 million increase in income resulting from unrealized foreign currency gains on long-term debt transactions.

(c) 2008 amount includes a $12.2 million increase in income resulting from unrealized mark to market gains due to the discontinuance of hedge accounting at Casper Douglas, and a $4.4 million increase in expense related to hurricane clean-up and repair activities.

(d) 2008 amount includes a $6.8 million decrease in income related to fire damage and repair activities, a $4.0 million decrease in income related to hurricane clean-up and repair activities, and a combined $1.5 million increase in expense from the settlement of certain litigation matters related to our Elizabeth River bulk terminal and our Staten Island liquids terminal. 2007 amount includes a $25.0 million increase in expense from the settlement of certain litigation matters related to our Cora coal terminal.

(e) 2008 amount includes (i) a $1.4 million increase in non-cash compensation expense, allocated to us from Knight (we do not have any obligation, nor do we expect to pay any amounts related to this expense); (ii) a $0.1 million increase in expense related to hurricane clean-up and repair activities; and (iii) a $1.5 million decrease in expense due to the adjustment of certain insurance related liabilities. 2007 amount includes (i) a $1.5 million increase in non-cash compensation expense, allocated to us from Knight (we do not have any obligation, nor do we expect to pay any amounts related to this expense); (ii) a $0.8 million increase in expense related to the cancellation of certain commercial insurance policies; and (iii) a $0.4 million increase in expense for certain Trans Mountain acquisition costs.

(f) Includes unallocated interest income and income tax expense, interest and debt expense, and minority interest expense. 2008 and 2007 amounts each include increases in imputed interest expense of $0.5 million related to our January 1, 2007 Cochin Pipeline acquisition. 2008 amount also includes a $0.2 million increase in interest expense related to the proposed settlement of certain litigation matters related to our Pacific operations' East Line pipeline. 2008 and 2007 amounts also include decreases in expense of $0.2 million and $0.4 million, respectively, related to the minority interest effect from all of the three month 2008 and 2007 items previously disclosed in these footnotes.

(g) 2008 amount includes a $9.3 million decrease in income from the proposed settlement of certain litigation matters related to our Pacific operations' East Line pipeline, a $1.4 million decrease in income resulting from unrealized foreign currency losses on long-term debt transactions, a $0.2 million decrease in income related to hurricane clean-up and repair activities, and a $1.3 million gain from the 2007 sale of our North System. 2007 amount includes a $15.0 million increase in expense for a litigation settlement reached with Contra Costa County, California, a $3.2 million increase in expense from the settlement of certain litigation matters related to our West Coast refined products terminal operations, a $2.2 million increase in expense associated with environmental liability adjustments, and a $1.7 million increase in income resulting from unrealized foreign currency gains on long-term debt transactions.

(h) 2008 amount includes a $13.0 million gain from the sale of our 25% equity ownership interest in Thunder Creek Gas Services, LLC, a $4.4 million increase in expense related to hurricane clean-up and repair activities, and a $0.9 million decrease in income resulting from unrealized mark to market losses due to the discontinuance of hedge accounting at Casper Douglas. 2007 amount includes a decrease in income of $1.0 million reflecting our portion of a loss from the early extinguishment of debt by Red Cedar Gathering Company.

(i) 2008 amount includes a $6.8 million decrease in income related to fire damage and repair activities, a $4.0 million decrease in income related to hurricane clean-up and repair activities, and a combined $1.5 million increase in expense from the settlement of certain litigation matters related to our Elizabeth River bulk terminal and our Staten Island liquids terminal. 2007 amount includes a $25.0 million increase in expense from the settlement of certain litigation matters related to our Cora coal terminal, and an increase in income of $1.8 million from property casualty gains associated with the 2005 hurricane season.

(j) 2007 amount includes losses of $349.2 million for periods prior to our acquisition date of April 30, 2007. This amount includes a $377.1 million impairment expense, associated with a non-cash reduction in the carrying value of Trans Mountain's goodwill.

(k) 2007 amount includes Trans Mountain expenses of $6.3 million for periods prior to our acquisition date of April 30, 2007.

(l) 2008 amount includes (i) a $4.2 million increase in non-cash compensation expense, allocated to us from Knight (we do not have any obligation, nor do we expect to pay any amounts related to this expense); (ii) a $0.1 million increase in expense related to hurricane clean-up and repair activities; and (iii) a $1.5 million decrease in expense due to the adjustment of certain insurance related liabilities. 2007 amount includes (i) a $24.9 million increase in non-cash compensation expense, allocated to us from Knight (we do not have any obligation, nor do we expect to pay any amounts related to this expense); (ii) a $5.5 million increase in expense from the inclusion of Trans Mountain for periods prior to our acquisition date of April 30, 2007; (iii) a $1.7 million increase in insurance expense associated with the 2005 hurricane season; (iv) a $1.5 million increase in expense for certain Trans Mountain acquisition costs; and (v) a $0.8 million increase in expense related to the cancellation of certain commercial insurance policies.

(m) 2008 and 2007 amounts include increases in imputed interest expense of $1.5 million and $1.7 million, respectively, related to our January 1, 2007 Cochin Pipeline acquisition. 2008 amount also includes a $0.2 million increase in interest expense related to the proposed settlement of certain litigation matters related to our Pacific operations' East Line pipeline. 2007 amount also includes a $1.2 million increase in interest expense from the inclusion of Trans Mountain for periods prior to our acquisition date of April 30, 2007. 2008 and 2007 amounts also include decreases in expense of $0.2 million and $3.9 million, respectively, related to the minority interest effect from all of the nine month 2008 and 2007 items previously disclosed in these footnotes.

Benefitting from higher revenues from crude oil and carbon dioxide sales, improved margins from our Texas intrastate pipeline group, the start-up of the Rockies Express-West natural gas pipeline, and incremental earnings from expanded bulk and liquids terminal operations, our consolidated net income for the quarterly period ended September 30, 2008 was $329.8 million ($0.48 per diluted limited partner unit), compared to $213.8 million ($0.24 per diluted limited partner unit) for the quarterly period ended September 30, 2007. The increase in our quarterly net income was tempered by such factors as lower gasoline demand in 2008, due to higher prices and a slowing economy, and increases in construction and fuel costs, which negatively impacted both our capital expansion programs and our existing operations in the third quarter of 2008, when compared to the prior year third quarter.

For the nine months ended September 30, 2008 and 2007, we earned net income of $1,038.7 million and $297.0 million, respectively; however, our 2007 year-to-date net income included an impairment expense of $377.1 million associated with a non-cash reduction in the carrying value of Trans Mountain's goodwill. The goodwill impairment charge was recognized by Knight in March 2007, and following our purchase of Trans Mountain from Knight on April 30, 2007, the financial results of Trans Mountain since January 1, 2006, including the impact of the goodwill impairment, are reflected in our results. For more information on this acquisition and the goodwill impairment, see Notes 2 and 6 to our consolidated financial statements included elsewhere in this report.

Because our partnership agreement requires us to distribute 100% of our available cash to our partners on a quarterly basis (available cash as defined in our partnership agreement generally consists of all our cash receipts, less cash disbursements and changes in reserves), we consider each period's earnings before all non-cash depreciation, depletion and amortization expenses, including amortization of excess cost of equity investments, to be an important measure of our success in maximizing returns to our partners. We also use segment earnings before depreciation, depletion and amortization expenses (defined in the table above and sometimes referred to in this report as EBDA) internally as a measure of profit and loss used for evaluating segment performance and for deciding how to allocate resources to our five reportable business segments.

For the third quarter of 2008, total segment earnings before depreciation, depletion and amortization increased $154.0 million (29%), when compared to the third quarter of 2007. The overall quarterly increase in total segment earnings before depreciation, depletion and amortization expenses included incremental earnings of $27.6 million from the combined net effect of the certain items described in the footnotes to the tables above. The remaining $126.4 million (22%) increase was driven by better performance from our CO_2, Natural Gas Pipelines, Terminals and Kinder Morgan Canada business segments.

For the comparable nine month periods, our total segment earnings before depreciation, depletion and amortization increased $842.8 million (68%) in 2008, when compared to 2007. The certain items described in the footnotes to the table above (including the goodwill impairment expense) accounted for $377.9 million of the overall increase, and the remaining $464.9 million (29%) increase in period-to-period earnings before depreciation, depletion and amortization resulted from incremental earnings from our CO_2, Natural Gas Pipelines, Terminals and Kinder Morgan Canada business segments.

Third Quarter 2008 Casualties

Hurricanes

In the third quarter of 2008, Hurricanes Gustav and Ike struck the Gulf Coast communities of southern Texas and Louisiana causing wide-spread damage to residential and commercial property. Fortunately, our primary assets in those areas experienced only relatively minor damage. Plantation Pipe Line Company, which transports refined petroleum products to the southeastern United States and is owned approximately 51% by us, remained fully operational during Hurricane Ike but temporarily moved product at reduced volumes due to limited refinery supply in Louisiana as a result of both Hurricanes Gustav and Ike. Hurricane Ike limited supply flexibility by temporarily reducing Plantation's transportation volumes to approximately 75% of its typical volumes, although full capacity was available. Delivery volumes on Plantation returned to pre-hurricane levels in early October 2008.

In addition, several facilities included within our Southeast terminal operations experienced tight gasoline supplies as a result of reduced refinery output. In general, diesel and jet fuel inventory levels were not significantly impacted, and we continue to replenish inventories as we receive product from the refineries. Our large liquids terminal complex located on the Houston, Texas Ship Channel experienced no significant damage and resumed operations shortly after the passing of Hurricane Ike. Our Texas intrastate natural gas pipeline group also operated during Hurricane Ike but at reduced capacity. The intrastate group's throughput volumes are now back to normal levels. Our Texas petroleum coke terminal operations did not operate for approximately one week following the landing of Hurricane Ike, primarily because the refineries served by the terminals were shut-down. Our partnership in International Marine Terminals, located in Port Sulphur, Louisiana and owned 66 2/3% by us, incurred property damage due to flooding caused by the storms; however, the facility has resumed limited service and further damage assessments are in process.

In the third quarter of 2008, we realized a $4.0 million decrease in total segment earnings before depreciation, depletion and amortization due to incremental expenses associated with these storms (described in the footnotes to

the tables above, but excluding lost business and lost revenues from decreased volumes transported on our pipelines, which is disclosed below in “—Fires”), and we included this decrease in the certain items described in the footnotes to the table above.

Fires

In the third quarter of 2008, we experienced fire damage at three separate terminal locations. The largest was an explosion and fire at our Pasadena, Texas liquids terminal facility on September 23, 2008. The fire primarily damaged a manifold system used for liquids distribution. Our nearby liquids terminal facility located in Galena Park, Texas was not affected by the fire.

We intend to repair the damaged portions of each separate terminal facility. Combined, we recognized a $6.8 million decrease in total segment earnings before depreciation, depletion and amortization due to incremental expenses associated with these three fires (excluding lost business and lost revenues), and we included this decrease in the certain items described in the footnotes to the table above.

We estimate that our total segment earnings before depreciation, depletion and amortization in the third quarter of 2008 was negatively affected by an additional $21.5 million, due to lost business as a result of the hurricanes and fires. Although we continue to evaluate the full effect of these casualties on our operations, we do not believe that they will have a material adverse effect on our business, financial position, results of operations or cash flows.

Products Pipelines

	Three Months Ended September 30, 2008	Three Months Ended September 30, 2007	Nine Months Ended September 30, 2008	Nine Months Ended September 30, 2007
	(In millions, except operating statistics)

Natural gas liquids (MMBbl)	5.8	7.4	18.7	22.8
Total delivery volumes (MMBbl)(f)	176.5	192.6	527.6	571.0

(a) Three and nine month 2008 amounts include a $5.1 million decrease in revenues from the proposed settlement of certain litigation matters related to our Pacific operations’ East Line pipeline.

(b) Three and nine month 2008 amounts include a $4.2 million increase in expense from the proposed settlement of certain litigation matters related to our Pacific operations’ East Line pipeline, and a $0.1 million increase in expense related to hurricane clean-up and repair activities. Nine month 2008 amount includes a $3.0 million decrease in expense related to our Pacific operations and a $3.0 million increase in expense related to our Calnev Pipeline associated with legal liability adjustments. Three and nine month 2007 amounts include a $15.0 million increase in expense for a litigation settlement reached with Contra Costa County, California, and a $3.2 million increase in expense from the settlement of certain litigation matters related to our West Coast refined products terminal operations. Nine month 2007 amount also includes an increase in expense of $2.2 million associated with environmental liability adjustments.

(c) Nine month 2008 amount includes a gain of $1.3 million from the 2007 sale of our North System.

(d) Three and nine month 2008 amounts include an expense of $0.1 million reflecting our portion of Plantation Pipe Line Company's expenses related to hurricane clean-up and repair activities.

(e) Three and nine month 2008 amounts include decreases in income of $0.7 million and $1.4 million, respectively, resulting from unrealized foreign currency losses on long-term debt transactions. Three and nine month 2007 amounts include increases in income of $0.9 and $1.7 million, respectively, resulting from unrealized foreign currency gains on long-term debt transactions.

(f) Includes Pacific, Plantation, Calnev, Central Florida, Cochin and Cypress pipeline volumes.

Combined, the certain items described in the footnotes to the table above increased our Products Pipelines' segment earnings before depreciation, depletion and amortization expenses by $7.1 million and $9.1 million, respectively, when compared to the third quarter and first nine months of last year. The largest of these items includes (i) a combined $18.2 million increase in earnings in both the third quarter and first nine months of 2008 from incremental operating expenses recognized in the third quarter of 2007 and associated with settlements of certain litigation matters related to our Pacific and West Coast terminal operations; and (ii) a combined $9.3 million decrease in earnings in both the third quarter and first nine months of 2008 from decreases in revenues and increases in expenses recognized in the third quarter of 2008 and associated with proposed settlements of certain litigation matters involving shippers on our Pacific operations' East Line pipeline. For more information on our litigation matters, see Note 3 to our consolidated financial statements included elsewhere in this report.

Following is information related to the increases and decreases, in the third quarter and first nine months of 2008 compared to the same periods of 2007, of the segment's remaining changes in (i) earnings before depreciation, depletion and amortization expense (EBDA); and (ii) operating revenues:

Three months ended September 30, 2008 versus Three months ended September 30, 2007

	EBDA increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
North System	$ (11.0)	(100)%	$ (14.4)	(100)%
Pacific operations	(9.2)	(13)%	(2.3)	(2)%
Cochin Pipeline System	(1.0)	(10)%	(3.5)	(21)%
Southeast Terminals	3.9	34%	8.8	55%
West Coast Terminals	2.3	20%	2.7	15%
Central Florida Pipeline	1.1	11%	1.6	14%
All others (including eliminations)	(0.7)	(2)%	0.8	2%
Total Products Pipelines	$ (14.6)	(9)%	$ (6.3)	(3)%

Nine months ended September 30, 2008 versus Nine months ended September 30, 2007

	EBDA increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
North System	$ (28.1)	(100)%	$ (41.1)	(100)%
Pacific operations	(10.6)	(5)%	0.3	—
Cochin Pipeline System	(2.9)	(10)%	(16.0)	(29)%
Southeast Terminals	7.3	23%	10.8	21%
West Coast Terminals	—	—	3.8	7%
Central Florida Pipeline	4.0	14%	4.0	12%
All others (including eliminations)	1.2	1%	3.4	3%
Total Products Pipelines	$ (29.1)	(7)%	$ (34.8)	(5)%

The period-to-period decreases in both segment earnings before depreciation, depletion and amortization expenses and segment revenues attributable to our North System were due to our October 2007 divestiture of the approximately 1,600-mile interstate common carrier liquids pipeline system and our 50% ownership interest in the Heartland Pipeline Company (collectively referred to in this report as our North System) to ONEOK Partners, L.P. Following purchase price adjustments, we received approximately $295.7 million in cash for the sale of our North

System. We accounted for our North System business as a discontinued operation pursuant to generally accepted accounting principles which require that our income statement be formatted to separate the divested business from our continuing operations; however, as discussed above, because the sale of our North System does not change the structure of our internal organization in a manner that causes a change to our reportable business segments, we have included the North System's operating results within our Products Pipelines business segment disclosures presented in this report for all periods presented in this discussion and analysis. This decision was based on the way our management organizes segments internally to make operating decisions and assess performance.

We earned net income from our North System (discontinued operations) of $8.6 million and $21.1 million, respectively, for the three and nine months ended September 30, 2007, and we recognized a $152.8 million gain on disposal of the North System in the fourth quarter of 2007. We also recorded incremental gain adjustments of $1.3 million in the first nine months of 2008. For more information regarding this transaction, see Note 2 to our consolidated financial statements included elsewhere in this report. For information on our reconciliation of segment information with our consolidated general-purpose financial statements, see Note 11 to our consolidated financial statements included elsewhere in this report.

The decreases in earnings before depreciation, depletion and amortization from our Pacific operations were primarily due to increases in system-wide operating and maintenance expenses of $6.8 million (47%) and $14.1 million (32%), respectively, in the comparable three and nine month periods of 2008, relative to last year. The increases primarily reflect higher major maintenance and pipeline integrity expenses (resulting mainly from project timing), lower capitalized overhead credits, and incremental expenses associated with both legal and environmental liability adjustments.

Total revenues earned by our Pacific operations in the third quarter of 2008 decreased $2.3 million (2%) compared to the third quarter last year, mainly due to an 8% decrease in mainline delivery volumes (primarily gasoline volumes) as a result of reduced demand (primarily in the states of California and Arizona). For the comparable nine month periods, our Pacific operations' revenues were essentially flat across both years, as higher pipeline delivery revenues were largely offset by lower fee-based terminal revenues. The year-over-year increase in refined products delivery revenues resulted from both higher average tariff rates in 2008, and a more favorable delivery mix of higher-rate East Line volumes versus lower-rate West Line volumes.

The decreases in earnings before depreciation, depletion and amortization expenses from our Cochin Pipeline were largely revenue related, linked heavily to lower pipeline delivery volumes in 2008 versus 2007. The decreases in volumes were largely due to a continued decrease in demand for propane in Eastern Canadian and Midwestern U.S. petrochemical and fuel markets since the end of the third quarter last year.

When compared to the same quarter last year, we benefitted in the third quarter of 2008 from improved performances from our Southeast and West Coast liquids terminal operations, and from our Central Florida Pipeline. The increases in earnings before depreciation, depletion and amortization expenses from these operations primarily related to higher margins on liquids inventory sales, increased earnings from incremental terminal throughput and storage activity, increased demand for ethanol, and incremental returns from the completion of a number of capital expansion projects that modified and upgraded terminal infrastructure, enabling us to provide additional ethanol related services to our customers. The increase in earnings from our Central Florida Pipeline were also related to higher product delivery revenues, driven by an increase in the average tariff per barrel as a result of a mid-year 2007 tariff rate increase on product deliveries.

For all segment assets combined, revenues for the third quarter of 2008 from refined petroleum products deliveries were flat, but total volumes delivered fell 7.9%, when compared to the third quarter of 2007. Compared to the third quarter last year, the segment's volumes were negatively impacted by reductions in demand, driven primarily by higher crude oil and refined product prices and weaker economic conditions, and partly by lost business associated with two hurricanes in the third quarter of 2008. The decrease in delivery volumes included a 9% drop in gasoline volumes, a 5% drop in diesel fuel volumes, and a 7% decline in total jet fuel volumes. Through nine months, total refined products delivery revenues were up 1.8%, but volumes declined 7.2%, when compared to the first nine months last year. Excluding deliveries by Plantation Pipeline, total segment refined products delivery volumes decreased 7.3% and 5.8%, respectively, in the comparable three and nine month periods. Although Plantation sustained no hurricane damage in 2008, the pipeline system pumped reduced volumes in the third quarter of 2008 due to hurricane-induced refinery shut-downs and to extended delays in restarting certain refineries impacted by the hurricanes. Delivery volumes on Plantation returned to pre-hurricane levels in early October 2008.

(a) Three and nine month 2008 amounts include (i) a $12.2 million increase in income and a $0.9 million decrease in income, respectively, resulting from unrealized mark to market gains and losses due to the discontinuance of hedge accounting at Casper Douglas; and (ii) a $4.4 million increase in expense related to hurricane clean-up and repair activities. Beginning in the second quarter of 2008, our Casper and Douglas gas processing operations discontinued hedge accounting.

(b) Nine month 2007 amount includes an expense of $1.0 million reflecting our portion of a loss from the early extinguishment of debt by Red Cedar Gathering Company.

(c) Nine month 2008 amount includes a $13.0 million gain from the sale of our 25% equity ownership interest in Thunder Creek Gas Services, LLC.

(d) Includes Kinder Morgan Interstate Gas Transmission LLC, Trailblazer Pipeline Company LLC, TransColorado Gas Transmission Company LLC, Rockies Express Pipeline LLC, and Texas intrastate natural gas pipeline group pipeline volumes.

(e) Represents Texas intrastate natural gas pipeline group volumes.

For the three and nine months ended September 30, 2008, the certain items related to our Natural Gas Pipelines business segment described in the footnotes to the table above increased earnings before depreciation, depletion and amortization expenses by $7.8 million and $8.7 million, respectively, when compared to the same periods last year. The largest of these items include (i) an increase in earnings of $12.2 million in the comparable three month periods, and a decrease in earnings of $0.9 million in the comparable nine month periods, from unrealized mark to market gains and losses resulting from the removal of hedge designation, effective April 1, 2008, on certain derivative contracts used to mitigate the price risk associated with future sales of natural gas liquids by our Casper and Douglas natural gas processing operations; and (ii) an increase in earnings of $13.0 million in the comparable nine month periods, representing the gain realized from the sale of our 25% ownership interest in Thunder Creek Gas Services, LLC in the second quarter of 2008. For more information on our discontinuance of hedge accounting, see Note 10 to our consolidated financial statements included elsewhere in this report. For more information on the sale of our investment in Thunder Creek, see Note 2 to our consolidated financial statements included elsewhere in this report.

Following is information related to the increases and decreases, in the third quarter and first nine months of 2008 compared to the same periods of 2007, of the segment's (i) remaining changes in earnings before depreciation, depletion and amortization expense (EBDA); and (ii) changes in operating revenues:

The overall increases in segment earnings before depreciation, depletion and amortization expenses in both the three and nine months ended September 30, 2008, when compared to the same periods last year, were driven primarily by incremental contributions from our 51% equity ownership interest in the Rockies Express Pipeline, higher earnings from our Texas intrastate natural gas pipeline group, improved performance from our TransColorado Pipeline, and incremental earnings from our Kinder Morgan Louisiana Pipeline.

The incremental earnings from our investment in Rockies Express relates to higher net income earned by Rockies Express Pipeline LLC, primarily due to the start-up of service on the Rockies Express-West pipeline segment in January and May 2008. Rockies Express-West began interim service for up to 1.4 billion cubic feet per day of natural gas on the segment's first 503 miles of pipe on January 12, 2008, and service on the remaining 210 miles (to Audrain County, Missouri) began on May 20, 2008. Now fully operational, Rockies Express-West has the capacity to transport up to 1.5 billion cubic feet per day and can make deliveries to interconnects with our KMIGT pipeline system, Northern Natural Gas Company, Natural Gas Pipeline Company of America LLC, ANR and Panhandle Eastern Pipeline Company.

Rockies Express conducted further hydrostatic testing of portions of its pipeline system during September 2008 to satisfy U.S. Department of Transportation testing requirements to operate at its targeted higher operating pressure. This hydrostatic test resulted in a temporary outage of pipeline delivery points and an overall reduction of firm capacity available to firm shippers. By the terms of the Rockies Express FERC Gas Tariff, firm shippers are entitled to daily reservation revenue credits for non-force majeure and planned maintenance outages, and the estimated impact from any temporary outages were included in our third quarter results.

Our Texas intrastate natural gas pipeline group includes the operations of our (i) Kinder Morgan Tejas Pipeline (including Kinder Morgan Border Pipeline); (ii) Kinder Morgan Texas Pipeline; (iii) Kinder Morgan North

Texas Pipeline; and (iv) Mier-Monterrey Mexico Pipeline. Combined, the group's quarter-to-quarter increase in earnings in 2008 versus 2007 was mainly attributable to higher natural gas sales margins and greater natural gas processing volumes and margins. For the comparable nine month periods, the group also benefitted, in 2008, from incremental natural gas transport and fee-based storage revenues due to a long-term contract with one of its largest customers that became effective April 1, 2007.

The higher natural gas sales margins in both the third quarter and first nine months of 2008 were mainly driven by higher average sales prices, when compared to the same prior year periods. Primarily due to the temporary impact of Hurricane Ike, the Texas intrastate group’s natural gas transportation and sales volumes were down 9% and 2%, respectively, in the third quarter of 2008 compared to the third quarter last year; however, due to the start-up of Rockies Express-West, total segment transport volumes increased nearly 27%.

Because our intrastate group buys and sells significant quantities of natural gas, the variances from period to period in both segment revenues and segment operating expenses (which include natural gas costs of sales) are partly due to changes in our intrastate group’s average prices and volumes for natural gas purchased and sold. To the extent possible, we balance the pricing and timing of our natural gas purchases to our natural gas sales, and these contracts are frequently settled in terms of an index price for both purchases and sales. In order to minimize commodity price risk, we attempt to balance sales with purchases at the index price on the date of settlement.

The increases in earnings from our TransColorado Pipeline reflect contract improvements and expansions completed since the end of the third quarter of 2007, caused by an increase in natural gas production in the Piceance and San Juan basins of New Mexico and Colorado. Also, in December 2007, we completed the approximately $50 million Blanco-Meeker expansion project on our TransColorado Pipeline. The project was placed into service on January 1, 2008, and it boosted natural gas transportation capacity on the pipeline by approximately 250 million cubic feet per day from the Blanco Hub area in San Juan County, New Mexico through TransColorado’s existing pipeline for deliveries to the Rockies Express Pipeline at an existing point of interconnection located at the Meeker Hub in Rio Blanco County, Colorado. All of the incremental capacity is subscribed under a long-term contract with ConocoPhillips.

The incremental earnings before depreciation, depletion and amortization expenses from our Kinder Morgan Louisiana Pipeline reflects other non-operating income realized in the third quarter and first nine months of 2008 pursuant to FERC regulations governing allowances for capital funds that are used for pipeline construction costs (an equity cost of capital allowance). The equity cost of capital allowance provides for a reasonable return on construction costs that are funded by equity contributions, similar to the allowance for capital costs funded by borrowings.

The decreases in period-to-period earnings before depreciation, depletion and amortization from our Casper Douglas gas processing operations were primarily attributable to higher natural gas purchase costs, due to increases in both prices and volumes, relative to last year. The higher cost of sales expense more than offset period-to-period revenue increases resulting from both higher average prices on natural gas liquids sales and higher revenues from sales of excess natural gas.

The decreases in earnings before depreciation, depletion and amortization from our Trailblazer Pipeline were mainly due to lower revenues from natural gas transportation services in the third quarter of 2008, and to unfavorable timing differences on the settlement of pipeline transportation imbalances in both the three and nine month periods of 2008, relative to 2007.

(a) Includes Cortez, Central Basin, Canyon Reef Carriers, Centerline and Pecos pipeline volumes.

(b) Represents 100% of the production from the field. We own an approximately 97% working interest in the SACROC unit and an approximately 50% working interest in the Yates unit.

(c) Net to Kinder Morgan, after royalties and outside working interests.

(d) Includes all Kinder Morgan crude oil production properties.

(e) Hedge gains/losses for crude oil and natural gas liquids are included with crude oil.

(f) Includes production attributable to leasehold ownership and production attributable to our ownership in processing plants and third party processing agreements.

Our CO_2 segment consists of Kinder Morgan CO_2 Company, L.P. and its consolidated affiliates. The segment's primary businesses involve the production, marketing and transportation of both carbon dioxide (commonly called CO_2) and crude oil, and the production and marketing of natural gas and natural gas liquids. For each of the segment's two primary businesses, following is information related to the increases and decreases, in the comparable three and nine month periods of 2008 and 2007, of the segment's earnings before depreciation, depletion and amortization (EBDA), and operating revenues:

<u>Three months ended September 30, 2008 versus Three months ended September 30, 2007</u>

	EBDA increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
Sales and Transportation Activities	$ 39.6	94%	$ 47.8	105%
Oil and Gas Producing Activities	25.7	27%	56.9	32%

Total CO_2	$ 65.3	47%	$ 94.6	45%

Nine months ended September 30, 2008 versus Nine months ended September 30, 2007

	EBDA increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
Sales and Transportation Activities	$ 96.7	77%	$ 113.2	86%
Oil and Gas Producing Activities	130.7	49%	211.2	42%
Intrasegment Eliminations	—	—	(25.9)	(77)%
Total CO_2	$ 227.4	58%	$ 298.5	50%

The overall period-to-period increases in segment earnings before depreciation, depletion and amortization expenses resulted from higher earnings from both oil and gas producing activities and carbon dioxide sales and transportation activities. A quarter-over-quarter increase in carbon dioxide sales and transportation revenues was the main cause for the increase in segment earnings in the third quarter of 2008, when compared to the same period of 2007, and for the full nine month periods, the segment's increase in earnings in 2008 was driven by increased carbon dioxide, crude oil, and natural gas liquids sales revenues, largely due to increases in average crude oil (which also impacts the price of carbon dioxide) and natural gas plant product prices since the third quarter of 2007.

Generally, earnings for the segment's oil and gas producing activities, which include the operations associated with its ownership interests in oil-producing fields and natural gas processing plants, are closely aligned with our realized price levels for crude oil and natural gas liquids products. Revenues from crude oil sales and natural gas plant products sales increased $50.2 million (42%) and $5.0 million (10%), respectively, in the third quarter of 2008 compared to the third quarter of 2007, and increased $157.0 million (45%) and $44.4 million (34%), respectively, in the first nine months of 2008 compared to the first nine months of 2007.

With respect to crude oil, overall sales volumes were essentially flat across both three and nine month comparable periods, but we benefitted from increases of 40% and 45%, respectively, in our realized weighted average price per barrel. With respect to natural gas liquids, for the three and nine month periods, decreases in sales volumes of 24% and 11%, respectively, were more than offset by increases of 45% and 51%, respectively, in our realized weighted average price per barrel. The quarterly decrease in liquids sales volumes was largely related to the effects from Hurricane Ike, which temporarily shut-down third-party fractionation facilities. Volumes were also negatively affected, in the comparable nine month periods, by operational issues on a third party owned pipeline, which resulted in pro-rationing (production allocation).

Because prices of crude oil and natural gas liquids are subject to external factors over which we have no control, and because future price changes may be volatile, our CO_2 segment is exposed to commodity price risk related to the price volatility of crude oil and natural gas liquids. To some extent, we are able to mitigate this risk through a long-term hedging strategy that is intended to generate more stable realized prices by using derivative contracts as hedges to the exposure of fluctuating expected future cash flows produced by changes in commodity sales prices. Nonetheless, decreases in the prices of crude oil and natural gas liquids will have a negative impact on the results of our CO_2 business segment. All of our hedge gains and losses for crude oil and natural gas liquids are included in our realized average price for oil. Had we not used energy derivative contracts to transfer commodity price risk, our crude oil sales prices would have averaged $116.08 per barrel in the third quarter of 2008, and $73.12 per barrel in the third quarter of 2007. For more information on our hedging activities, see Note 10 to our consolidated financial statements included elsewhere in this report.

Average gross oil production for the third quarter of 2008 was 27.9 thousand barrels per day at the SACROC field unit, 2% higher when compared to the third quarter of 2007. At the Yates unit, average gross oil production in the third quarter of 2008 was identical to the production in the same quarter last year, but for the nine month period of 2008, Yates' gross oil production averaged 27.9 thousand barrels per day, up 1.2 thousand barrels per day over the same prior year period and offsetting a 0.8 thousand barrel per day decrease in production at SACROC.

The period-to-period increases in earnings before depreciation, depletion and amortization from the segment's sales and transportation activities were largely revenue related, reflecting both higher carbon dioxide sales revenues and higher carbon dioxide and crude oil pipeline transportation revenues. The increases from carbon dioxide sales revenues were related to increases in both price and volume. The increases from higher pipeline transportation revenues were due to higher volumes.

Overall, our CO_2 segment reported increases of $32.3 million (214%) and $66.3 million (153%), respectively, in carbon dioxide sales revenues in the third quarter and first nine months of 2008, relative to the same periods a year earlier. The increases in sales revenues were primarily driven by increases of 104% and 90%, respectively, in average sales prices in 2008, and partially driven by increases in sales volumes of 27% and 16%, respectively. Similarly, total pipeline transportation revenues increased $4.2 million (23%) and $15.4 million (30%), respectively, in the comparable three and nine month periods, chiefly due to increases in carbon dioxide delivery volumes of 14% and 12%, respectively.

The increases in average sales prices reflect continued customer demand for carbon dioxide for use in oil recovery projects throughout the Permian Basin area and, in addition, a portion of our carbon dioxide contracts are tied to crude oil prices, which as discussed above, have increased since the third quarter of 2007. We do not recognize profits on carbon dioxide sales to ourselves. The increases in sales and delivery volumes were largely due to the January 17, 2008 start-up of the Doe Canyon carbon dioxide source field located in Dolores County, Colorado. The new carbon dioxide source field is named the Doe Canyon Deep unit, and we hold an approximately 87% working interest in the field. Since January 2007, we have invested approximately $90 million to develop this source field. In addition, investments were also made to drill additional carbon dioxide wells at the McElmo Dome unit, increase transportation capacity on the Cortez Pipeline, and extend the Cortez Pipeline to the new Doe Canyon Deep unit.

Compared to the third quarter and first nine months of 2007, the segment's $29.6 million (39%) and $70.1 million (31%) increases in combined operating expenses in the three and nine months ended September 30, 2008, respectively, were largely due to higher severance and property tax expenses, field operating expenses, and fuel and power expenses. The increases in severance tax expenses were related to the period-to-period increases in crude oil revenues. The increases in property tax expenses were largely due to higher oil prices leading to higher tax assessments, and increased asset infrastructure resulting from the capital investments we have made since the end of the third quarter of 2007. The increases in operating expenses were driven by both higher well workover and repair expenses in 2008 and rising price levels since the end of the third quarter of 2007, which impacted rig costs and other materials and services. The increases in workover expenses were largely related to infrastructure expansion projects at the SACROC and Yates oil field units and at the McElmo Dome carbon dioxide unit. The increases in operating expenses from price level changes were largely due to increased demand driving up prices charged by the industry's material and service providers.

Terminals

	Three Months Ended September 30, 2008	Three Months Ended September 30, 2007	Nine Months Ended September 30, 2008	Nine Months Ended September 30, 2007

Liquids leaseable capacity (MMBbl)	54.2	46.3	54.2	46.3
Liquids utilization %	98.2%	96.5%	98.2%	96.5%

(a) Three and nine month 2008 amounts include $3.6 million increase in expense related to hurricane clean-up and repair activities, a $1.5 million increase in expense related to fire damage and repair activities, and a combined $1.5 million increase in expense from the settlement of certain litigation matters related to our Elizabeth River bulk terminal and our Staten Island liquids terminal. Three and nine month 2007 amounts include a $25.0 million increase in expense from the settlement of certain litigation matters related to our Cora coal terminal.

(b) Three and nine month 2008 amounts include losses of $5.3 million from asset write-offs related to fire damage, and losses of $0.8 million from asset write-offs related to hurricane damage. Nine month 2007 amount includes an increase in income of $1.8 million from property casualty gains associated with the 2005 hurricane season.

(c) Three and nine month 2008 amounts include a decrease in expense of $0.4 million related to hurricane clean-up and repair activities.

(d) Volumes for acquired terminals are included for all periods.

Our Terminals business segment includes the operations of our petroleum, chemical and other liquids terminal facilities (other than those included in our Products Pipelines segment), and all of our coal, petroleum coke, fertilizer, steel, ores and other dry-bulk material services facilities. The net effect of the certain items described in the footnotes to the table above increased earnings before depreciation, depletion and amortization by $12.7 million in the third quarter of 2008 and by $10.9 million in the first nine months of 2008, when compared to the same periods of 2007. The segment's remaining $23.0 million (21%) increase in earnings before depreciation, depletion and amortization in the third quarter of 2008 versus the third quarter of 2007, and its remaining $80.4 million (25%) increase in earnings in the first nine months of 2008 versus the first nine months of 2007 were due to a combination of internal asset expansions and strategic business acquisitions.

Beginning with our acquisition of the Vancouver Wharves bulk marine terminal on May 30, 2007 and including, among others, the terminal assets and operations we acquired from Marine Terminals, Inc. effective September 1, 2007, we have invested approximately $175.3 million in cash to acquire both terminal assets and equity interests in terminal operations, and combined, these acquired operations accounted for incremental amounts of earnings before depreciation, depletion and amortization of $5.6 million, revenues of $19.1 million, and operating expenses of $13.5 million in the third quarter of 2008, and incremental earnings before depreciation, depletion and amortization of $30.5 million, revenues of $84.6 million, equity earnings of $1.7 million, and operating expenses of $55.8 million in the first nine months of 2008.

All of the incremental amounts listed above represent the earnings, revenues and expenses from acquired terminals' operations during the additional months of ownership in 2008, and do not include increases or decreases during the same months we owned the assets in 2007. For more information on our acquisitions, see Note 2 to our consolidated financial statements included elsewhere in this report.

For the terminals owned during identical periods in both 2008 and 2007, earnings before depreciation, depletion and amortization expenses increased $17.4 million (17%) in the third quarter of 2008, and $49.9 million (17%) in the first nine months of 2008, when compared to the same prior year periods. The overall increases in earnings from terminals owned during identical periods in both years represent net changes in terminal results at various locations, and include incremental earnings before depreciation, depletion and amortization in the third quarter and first nine months of 2008 of:

- $5.9 million (22%) and $19.9 million (25%), respectively, from our Gulf Coast terminal facilities, primarily our two large liquids terminal facilities located along the Houston Ship Channel in Pasadena and Galena Park, Texas, primarily due to higher liquids throughput volumes and increased liquids storage capacity as a result of expansions completed since the third quarter of 2007;

- $5.7 million (59%) and $14.4 million (51%), respectively, from our Mid-Atlantic terminals, primarily our Pier IX bulk terminal located in Newport News, Virginia, due to higher period-over-period coal transfer volumes, and our Fairless Hills, Pennsylvania bulk terminal, largely due to incremental earnings from a new import fertilizer facility that began operations in the second quarter of 2008. The increases in coal throughput at Pier IX were largely due to an almost $70 million capital improvement project, completed in the first quarter of 2008, that involved the construction of a new ship dock and the installation of additional terminal equipment. The import fertilizer facility at Fairless Hills cost approximately $11.2 million to build, and included the construction of two storage domes, conveying equipment, and outbound loading facilities for both rail and truck;

- $5.2 million (70%) and $8.0 million (60%), respectively, from our West region terminals, primarily from our Kinder Morgan North 40 terminal, which began operations in the second quarter of 2008, and from our Vancouver Wharves bulk marine terminal, which we acquired on May 30, 2007. The increases were mainly due to higher terminal revenues from liquids throughput and handling services; and

- $3.2 million (23%) and $6.2 million (13%), respectively, from our Northeast terminals, primarily from our Perth Amboy, New Jersey liquids terminal, located in the New York Harbor area, driven by higher liquids throughput volumes as a result of an expansion completed at the end of the first quarter of 2008.

The overall quarter-to-quarter increase in segment earnings before depreciation, depletion and amortization in 2008 versus 2007 from terminals owned during both periods included a decrease of $2.6 million (18%) from our Texas Petcoke terminals, primarily due to lost petroleum coke business, a portion of which was sidelined because of refinery shut-downs following Hurricane Ike. Through nine months, our Texas Petcoke terminals reported an increase in earnings of $2.0 million (5%), when compared to the first nine months of 2007.

For the Terminals segment combined, expansion projects completed since the end of the third quarter of 2007 have increased our liquids terminals' leaseable capacity to 54.2 million barrels, up 17% from a capacity of 46.3 million barrels at the end of the third quarter of 2007. At the same time, we increased our overall liquids utilization capacity rate (the ratio of our actual leased capacity to our estimated potential capacity) to 98.2%, up almost 2% since the third quarter last year.

Kinder Morgan Canada

	Three Months Ended September 30, 2008	Three Months Ended September 30, 2007	Nine Months Ended September 30, 2008	Nine Months Ended September 30, 2007
	(In millions, except operating statistics)			
Revenues	$ 56.6	$ 43.7	$ 143.1	$ 119.8

Transport volumes (MMBbl)	22.6	25.3	63.5	70.1

(a) Nine month 2007 amount represents a goodwill impairment expense recorded by Knight in the first quarter of 2007.

(b) Nine month 2007 amount includes losses of $349.2 million for periods prior to our acquisition date of April 30, 2007.

Our Kinder Morgan Canada business segment includes the operations of the Trans Mountain, Express, and Jet Fuel pipeline systems. We acquired the net assets of the Trans Mountain pipeline system from Knight effective April 30, 2007, and we acquired both a 33 1/3% interest in the Express pipeline system net assets and the net assets of the Jet Fuel pipeline system from Knight effective August 28, 2008. For more information on these acquisitions, see Note 2 to our consolidated financial statements included elsewhere in this report.

According to the provisions of generally accepted accounting principles that prescribe the standards used to account for business combinations, because our acquisition of the Trans Mountain, Express, and Jet Fuel pipeline systems from Knight represented a transfer of assets between entities under common control, we initially recorded the assets and liabilities transferred to us from Knight at their carrying amounts in the accounts of Knight. Furthermore, based on these standards and on our management's consideration of all of the quantitative and qualitative aspects of these two separate transfers of assets between entities under common control, our accompanying financial statements included in this report, and the information in the table above, reflect the results of operations for the first nine months of 2007 as though (i) the transfer of the Trans Mountain pipeline system net assets from Knight had occurred at the date when both Trans Mountain and we met the accounting requirements for entities under common control (January 1, 2006); and (ii) the transfer of both the 33 1/3% interest in the Express pipeline system net assets and the Jet Fuel pipeline system net assets from Knight had occurred at the transfer date of August 28, 2008.

After taking into effect the items described in footnote (b) to the table above, the remaining increases in earnings before depreciation, depletion and amortization for the three and nine months ended September 30, 2008 totaled $17.5 million (79%) and $60.5 million (142%), respectively, when compared to the same prior year periods. The quarter-to-quarter increase consisted of (i) higher earnings of $17.2 million (78%) from our Trans Mountain pipeline operations; and (ii) incremental earnings of $0.3 million from the Express and Jet Fuel pipeline operations. For the comparable nine month periods, the increase in earnings consisted of (i) higher earnings of $20.0 million (47%) from the Trans Mountain pipeline assets we owned in the same periods in both years (May through September); and (ii) incremental earnings of $40.5 million from periods we owned assets in 2008 only.

The increases in earnings from assets owned during the same periods in both years were driven primarily by higher operating revenues, largely due to the April 2007 completion of an expansion project that included the commissioning of ten new pump stations that boosted capacity on Trans Mountain from 225,000 to approximately 260,000 barrels per day, and to the April 28, 2008 completion of the first portion of the Anchor Loop expansion project that boosted pipeline capacity from 260,000 to 285,000 barrels per day and resulted in higher period-to-period average toll rates. We completed construction on a final 15,000 barrel per day expansion on October 30, 2008, and total pipeline capacity is now approximately 300,000 barrels per day. The higher tariffs more than offset declines in mainline throughput volumes of 11% and 9%, respectively, for the comparable three and nine month periods. The decreases in volumes were primarily due to lower demand for water-borne exports out of Vancouver, British Columbia.

(a) 2008 amount includes (i) a $1.4 million increase in non-cash compensation expense, allocated to us from Knight (we do not have any obligation, nor do we expect to pay any amounts related to this expense); (ii) a $0.1 million increase in expense related to hurricane clean-up and repair activities; and (iii) a $1.5 million decrease in expense due to the adjustment of certain insurance related liabilities. 2007 amount includes (i) a $1.5 million increase in non-cash compensation expense, allocated to us from Knight (we do not have any obligation, nor do we expect to pay any amounts related to this expense); (ii) a $0.8 million increase in expense related to the cancellation of certain commercial insurance policies; and (iii) a $0.4 million increase in expense for certain Trans Mountain acquisition costs.

(b) 2008 and 2007 amounts each include increases in imputed interest expense of $0.5 million related to our January 1, 2007 Cochin Pipeline acquisition. 2008 amount also includes a $0.2 million increase in interest expense related to the proposed settlement of certain litigation matters related to our Pacific operations' East Line pipeline.

(c) 2008 and 2007 amounts include decreases in expense of $0.2 million and $0.4 million, respectively, related to the minority interest effect from all of the three month 2008 and 2007 items previously disclosed in the footnotes to the tables included in "—Results of Operations."

(d) 2008 amount includes (i) a $4.2 million increase in non-cash compensation expense, allocated to us from Knight (we do not have any obligation, nor do we expect to pay any amounts related to this expense); (ii) a $0.1 million increase in expense related to hurricane clean-up and repair activities; and (iii) a $1.5 million decrease in expense due to the adjustment of certain insurance related liabilities. 2007 amount includes (i) a $24.9 million increase in non-cash compensation expense, allocated to us from Knight (we do not have any obligation, nor do we expect to pay any amounts related to this expense); (ii) a $5.5 million increase in expense from the inclusion of Trans Mountain for periods prior to our acquisition date of April 30, 2007; (iii) a $1.7 million increase in insurance expense associated with the 2005 hurricane season; (iv) a $1.5 million increase in expense for certain Trans Mountain acquisition costs; and (v) a $0.8 million increase in expense related to the cancellation of certain commercial insurance policies.

(e) 2008 and 2007 amounts include increases in imputed interest expense of $1.5 million and $1.7 million, respectively, related to our January 1, 2007 Cochin Pipeline acquisition. 2008 amount also includes a $0.2 million increase in interest expense related to the proposed settlement of certain litigation matters related to our Pacific operations' East Line pipeline. 2007 amount also includes a $1.2 million increase in interest expense from the inclusion of Trans Mountain for periods prior to our acquisition date of April 30, 2007.

(f) 2008 and 2007 amounts include decreases in expense of $0.2 million and $3.9 million, respectively, related to the minority interest effect from all of the nine month 2008 and 2007 items previously disclosed in the footnotes to the tables included in "—Results of Operations."

Items not attributable to any segment include general and administrative expenses, unallocable interest income, unallocable income tax expense, interest expense, and minority interest. Our general and administrative expenses include such items as salaries and employee-related expenses, payroll taxes, insurance, office supplies and rentals, unallocated litigation and environmental expenses, and shared corporate services—including accounting, information technology, human resources and legal services.

Overall, our total general and administrative expenses increased $10.1 million (16%) in the third quarter of 2008, and the certain items described in footnote (a) to the tables above accounted for a decrease in expense of $2.7 million. For the comparable nine month periods, overall general and administrative expenses remained flat; however, the certain items described in footnote (d) to the tables above resulted in a combined $31.6 million decrease in overall expense in 2008, when compared to the first nine months of last year.

The remaining $12.8 million (21%) and $31.6 million (17%) increases in general and administrative expense, for the comparable three and nine month periods respectively, were primarily driven by increased costs of supporting continued customer and business growth, including (i) higher compensation-related expenses—comprising salary and benefit expenses, payroll taxes and other employee and contractor related expenses; and (ii) incremental expenses associated with the assets and businesses we acquired since the third quarter of 2007—including our Express and Jet Fuel pipeline systems acquired from Knight effective August 28, 2008, and our recently acquired bulk terminal operations described above in "—Terminals." We continue to manage our infrastructure expenses in order to allow for further investment in growth segments of our business portfolio.

The $31.6 million decrease in general and administrative expenses disclosed in the footnotes to the table above in the comparable nine month periods from certain items was largely due to the $21.2 million second quarter 2007 non-cash compensation expense allocated to us from Knight and associated with the activities required to complete the May 2007 going-private transaction of KMI (now Knight), largely associated with the acceleration of cashouts of grants of both KMI restricted stock and options to purchase KMI stock. In addition, beginning in the first quarter of 2007, for accounting purposes, Knight has been required to allocate to us, on a monthly basis, certain ongoing compensation expense related to the transaction and we have been required to recognize the amounts as expense on our income statements. However, we are not responsible for paying either the one-time or the ongoing expenses, and accordingly, we recognize the unpaid amounts as contributions to equity—primarily as increases in "Partners' Capital" on our consolidated balance sheets.

Interest expense, net of unallocable interest income, decreased $3.0 million (3%) and increased $4.5 million (2%), respectively, in the third quarter and first nine months of 2008, when compared to the same periods last year. For the comparable three month periods, the overall decrease included a $0.2 million increase in expense due to the certain items described in footnote (b) to the tables above. The remaining $3.2 million (3%) decrease in expense was driven by an 18% decrease in the weighted average interest rate on all of our borrowings, partially offset by a20% increase in average borrowings. For the comparable nine month periods, the overall $4.5 million increase in net interest expense in 2008 versus 2007 included a $1.2 million decrease in expense due to the certain items described in footnote (e) to the tables above. The remaining $5.7 million (2%) increase in expense was driven by a20% increase in average borrowings, partially offset by a 15% drop in our weighted average interest rates.

The period-to-period increase in our average borrowings was largely due to the capital spending (for asset expansion and improvement projects, including additional pipeline construction costs) and the external business acquisitions we have made since September 2007. The decreases in our average borrowing rates reflect a general decrease in variable interest rates since the third quarter last year. As of September 30, 2008, approximately 47% of our $8,340.9 million consolidated debt balance (excluding the value of interest rate swap agreements) was subject to variable interest rates—either as short-term or long-term variable rate debt obligations or as fixed-rate debt converted to variable rates through the use of interest rate swaps. As of September 30, 2007, approximately 42% of

our $7,053.8 million consolidated debt balance (excluding the value of interest rate swap agreements) was subject to variable interest rates.

The incremental unallocable income tax expense, in both the third quarter and first nine months of 2008, relates to higher corporate income tax accruals for the Texas margin tax, an entity-level tax initiated January 1, 2007 and imposed on the amount of our total revenue that is apportioned to the state of Texas. The decreases in earnings from incremental minority interest expense relates to higher overall partnership income in 2008 versus 2007.

Financial Condition

Capital Structure

We attempt to maintain a relatively conservative overall capital structure, with a long-term target mix of approximately 50% equity and 50% debt. In addition to our results of operations, our debt and capital balances are affected by our financing activities, as discussed below in "—Financing Activities."

The following table illustrates the sources of our invested capital (dollars in millions):

	September 30, 2008	December 31, 2007
Long-term debt, excluding value of interest rate swaps	$ 8,056.2	$ 6,455.9
Minority interest	57.9	54.2
Partners' capital, excluding accumulated other comprehensive loss	6,284.5	5,712.3
Total capitalization	14,398.6	12,222.4
Short-term debt, less cash and cash equivalents	231.9	551.3
Total invested capital	$ 14,630.5	$ 12,773.7
Capitalization:		
Long-term debt, excluding value of interest rate swaps	56.0%	52.8%
Minority interest	0.4%	0.5%
Partners' capital, excluding accumulated other comprehensive loss	43.6%	46.7%
	100.0%	100.0%
Invested Capital:		
Total debt, less cash and cash equivalents and excluding value of interest rate swaps	56.6%	54.9%
Partners' capital and minority interest, excluding accumulated other comprehensive loss	43.4%	45.1%
	100.0%	100.0%

Our primary cash requirements, in addition to normal operating expenses, are debt service, sustaining capital expenditures, expansion capital expenditures and quarterly distributions to our common unitholders, Class B unitholder and general partner. In addition to utilizing cash generated from operations, we could meet our cash requirements for expansion capital expenditures through borrowings under our credit facility, issuing short-term commercial paper, long-term notes or additional common units or the proceeds from purchases of additional i-units by KMR with the proceeds from issuances of additional KMR shares. Further information on our financing strategies and activities can be found in our 2007 Form 10-K.

As part of our financial strategy, we try to maintain an investment-grade credit rating, which involves, among other things, the issuance of additional limited partner units in connection with our acquisitions and internal growth activities in order to maintain acceptable financial ratios.

On May 30, 2006, Standard & Poor's Rating Services and Moody's Investors Service each placed our long-term credit ratings on credit watch pending the resolution of KMI's going-private transaction. On January 5, 2007, in anticipation of the going-private transaction closing, S&P downgraded us one level to BBB and removed our rating from credit watch with negative implications. As previously noted by Moody's in its credit opinion dated November 15, 2006, it downgraded our credit rating from Baa1 to Baa2 on May 30, 2007, following the closing of the going-private transaction. Additionally, our rating was downgraded by Fitch Ratings from BBB+ to BBB on April 11, 2007. Currently, our long-term corporate debt credit rating is BBB, Baa2 and BBB, respectively, at S&P, Moody's and Fitch.

On October 13, 2008, S&P revised its outlook on our long-term credit rating to negative from stable (but affirmed our long-term credit rating at BBB), due to our previously announced expected delay and cost increases associated with the completion of the Rockies Express Pipeline project. At the same time, S&P lowered our short-term credit rating to A-3 from A-2.

Short-term Liquidity

Our principal sources of short-term liquidity are (i) our $1.85 billion five-year senior unsecured revolving credit facility that matures August 18, 2010; (ii) our $1.85 billion short-term commercial paper program (which is supported by our bank credit facility, with the amount available for borrowing under our credit facility being reduced by our outstanding commercial paper borrowings); and (iii) cash from operations (discussed following).

Borrowings under our five-year credit facility can be used for general partnership purposes and as a backup for our commercial paper program. The facility can be amended to allow for borrowings up to $2.1 billion. As of September 30, 2008, the outstanding balance under our five-year credit facility was $295.0 million, and there were no borrowings under our commercial paper program. As of December 31, 2007, there were no borrowings under our credit facility, and we had $589.1 million of commercial paper outstanding. As of September 30, 2008, our outstanding short-term debt was $284.7 million, primarily consisting of a $250 million principal amount of 6.3% senior notes that matures on February 1, 2009.

We provide for additional liquidity by maintaining a sizable amount of excess borrowing capacity related to our commercial paper program and long-term revolving credit facility. As a result of the revision to our short-term credit rating and the current commercial paper market conditions, we are unable to access commercial paper borrowings; however, we expect that our financing and liquidity needs will continue to be met through borrowings made under our long-term bank credit facility. After reduction for our letters of credit and commercial paper outstanding (none at September 30, 2008), the remaining available borrowing capacity under our bank credit facility was $1,168.5 million as of September 30, 2008. Currently, we believe our liquidity to be adequate.

Some of our customers are experiencing, or may experience in the future, severe financial problems that have had or may have a significant impact on their creditworthiness. These financial problems may arise from the current financial crises, changes in commodity prices or otherwise. We are working to implement, to the extent allowable under applicable contracts, tariffs and regulations, prepayments and other security requirements, such as letters of credit, to enhance our credit position relating to amounts owed from these customers. We cannot provide assurance that one or more of our (current or future) financially distressed customers will not default on their obligations to us or that such a default or defaults will not have a material adverse effect on our business, financial position, future results of operations, or future cash flows; however, we believe we have provided adequate allowance for such customers.

On September 15, 2008, Lehman Brothers Holdings Inc. filed for bankruptcy protection under the provisions of Chapter 11 of the U.S. Bankruptcy Code. No Lehman Brothers affiliate is an administrative agent for us or any of our subsidiaries; however, one of the Lehman entities is a lending bank providing less than 5% of the commitments in our $1.85 billion five-year credit facility. It also provides less than 5% of the commitments in Rockies Express' $2.0 billion credit facility (we are a 51% owner in Rockies Express) and less than 10% of the commitments in Midcontinent Express' $1.4 billion credit facility (we are a 50% owner in Midcontinent Express). Since Lehman Brothers declared bankruptcy, its affiliate which is a party to our, the Rockies Express and the Midcontinent Express credit facilities has not met its obligations to lend under those agreements. Thus, it is likely that the available capacity of each of the three facilities (ours, Rockies Express, and Midcontinent Express) will be reduced by the Lehman commitment. The commitments of the other banks remain unchanged, and the facilities are not defaulted.

Also, on October 12, 2008, the U.S. Federal Reserve approved the application of Wells Fargo & Company to acquire Wachovia Corporation and its subsidiary banks. Earlier, on October 9, 2008, Wells Fargo had reaffirmed that it was proceeding with its merger with Wachovia as a whole company transaction with all of Wachovia's banking and other operations, requiring no financial assistance from the Federal Deposit Insurance Corporation or

any other U.S. government agency. Wells Fargo will acquire all of Wachovia Corporation and all its businesses and obligations, including its preferred equity and indebtedness, and all its banking deposits. Wachovia Bank, National Association is the administrative agent of our five-year unsecured credit facility, and we do not expect that this merger will adversely impact our access to capital.

Long-term Financing

In addition to our principal sources of short-term liquidity listed above, we could meet our cash requirements (other than distributions to our common unitholders, Class B unitholders and general partner) through issuing long-term notes or additional common units, or by utilizing the proceeds from purchases of additional i-units by KMR with the proceeds from issuances of KMR shares. Furthermore, at Knight's third quarter board meeting on October 15, 2008, Knight's board indicated its willingness to contribute up to $750 million of equity to us over the next 18 months, if necessary, in order to support our capital raising efforts.

On February 12, 2008, we completed both a public offering of senior notes and a privately negotiated offering of 1,080,000 of our common units. We issued a total of $900 million in principal amount of senior notes in the public offering, consisting of $600 million of 5.95% notes due February 15, 2018, and $300 million of 6.95% notes due January 15, 2038. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of approximately $894.1 million, and we used the proceeds to reduce the borrowings under our commercial paper program. We issued the 1,080,000 common units on February 12, 2008 at a price of $55.65 per unit in a privately negotiated transaction with two investors. We received net proceeds of $60.1 million for the issuance of these common units, and we used the proceeds to reduce the borrowings under our commercial paper program.

On March 3, 2008, we issued 5,000,000 of our common units in a public offering at a price of $57.70, less commissions and underwriting expenses. At the time of the offering, we granted the underwriters a 30-day option to purchase up to an additional 750,000 common units from us on the same terms and conditions, and we issued an additional 750,000 common units on March 10, 2008 upon exercise of this option. After commissions and underwriting expenses, we received net proceeds of $324.2 million for the issuance of these 5,750,000 common units, and we used the proceeds to reduce the borrowings under our commercial paper program.

On June 6, 2008, we completed an additional public offering of senior notes. We issued a total of $700 million in principal amount of senior notes, consisting of $375 million of 5.95% notes due February 15, 2018, and $325 million of 6.95% notes due January 15, 2038. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of approximately $687.7 million, and we used the proceeds to reduce the borrowings under our commercial paper program.

On September 19, 2008, we filed a registration statement with the Securities and Exchange Commission ("SEC") under The Securities Act of 1933 on Form S-3. This registration statement, commonly referred to as a shelf registration statement, will allow us to sell up to $5 billion of additional common units or debt securities. The shelf registration statement is intended to provide us with flexibility to raise funds from the offering of our securities in one or more offerings, in amounts, and at prices to be set forth in subsequent filings made with the SEC at the time of each separate offering. Our offerings would be subject to market conditions and our capital needs, and unless we specify otherwise in a prospectus supplement, we intend to use the net proceeds from the sale of offered securities for general partnership purposes. This may include, among other things, additions to working capital, repayment or refinancing of existing indebtedness or other partnership obligations, financing of capital expenditures and acquisitions, investment in existing and future projects, and repurchases and redemptions of securities. Pending any specific application, we may initially invest funds in short-term marketable securities or apply them to the reduction of other indebtedness. As of the date of the filing of this report, the Form S-3 had not yet been declared effective by the SEC.

As of September 30, 2008, our total liability balance due on the various series of our senior notes was $7,881.1 million, and the total liability balance due on the various borrowings of our operating partnerships and subsidiaries was $164.8 million. We are subject to changes in the equity and debt markets for our limited partner units and long-term notes, and there can be no assurance we will be able or willing to access the public or private markets for our limited partner units and/or long-term notes in the future. If we were unable or unwilling to issue additional limited partner units, we would be required to either restrict potential future acquisitions or pursue other debt financing alternatives, some of which could involve higher costs or negatively affect our credit ratings. Our ability to access the public and private debt markets is affected by our credit ratings. See "—Capital Structure" above for a discussion of our credit ratings. For additional information regarding our debt securities and credit facility, see Note 9 to our consolidated financial statements included in our 2007 Form 10-K.

Capital Expenditures

Our sustaining capital expenditures for the nine months ended September 30, 2008 were $120.1 million, and we expect to spend another $85.1 million during the final quarter of 2008 (including $11.3 million for hurricane and fire repair and replacement costs). Our sustaining capital expenditures are funded with cash flows from operations.

Our discretionary capital expenditures for the nine months ended September 30, 2008 were $1,794.3 million and we expect to spend another $545 million during the final quarter of 2008. In addition to our consolidated capital expenditures, we expect to spend approximately $1.4 billion for our share of expansion capital expenditures for both the Rockies Express and Midcontinent Express natural gas pipeline projects. Our share of the capital expenditures for these projects are being funded by borrowings under Rockies Express' and Midcontinent Express' own revolving credit facilities or by those entities issuing short-term commercial paper or long-term notes and a $306 million equity infusion by us. We have funded our discretionary capital expenditures and our $306 million equity infusion noted above through borrowings under our $1.85 billion revolving credit facility and by issuing short-term commercial paper. To the extent these sources are not sufficient, we will fund additional amounts through the issuance of long-term notes or common units for cash. During 2008, we have used sales of long-term notes and common units to refinance portions of our short-term borrowings.

Operating Activities

Net cash provided by operating activities was $1,433.1 million for the nine months ended September 30, 2008, versus $1,254.7 million for the comparable period of 2007. The period-to-period increase of $178.4 million (14%) in cash provided by operating activities consisted of:

- a $380.2 million increase in cash from overall higher partnership income—after adding back non-cash items including, among other things, a $377.1 million goodwill impairment charge recognized in the first quarter of 2007. The higher partnership income reflects the increase in cash earnings from our five reportable business segments in the first nine months of 2008, as discussed above in "—Results of Operations;"

- a $27.4 million increase related to higher distributions received from equity investments—chiefly due to $54.6 million of initial distributions received in 2008 from our investment in West2East Pipeline LLC, the sole owner of Rockies Express Pipeline LLC. Currently, we own a 51% equity interest in West2East Pipeline LLC, and when construction of the Rockies Express Pipeline is completed, our ownership interest will be reduced to 50% and the capital accounts of West2East Pipeline LLC will be trued-up to reflect our 50% economic interest in the project.

  The overall increase in period-to-period distributions from equity investments includes a $31.2 million decrease in distributions received from the Red Cedar Gathering Company. In the first quarter of 2007, Red Cedar distributed to us $32.6 million following a refinancing of its long-term debt obligations. Red Cedar used the proceeds received from the March 2007 sale of unsecured senior notes to refund and retire the outstanding balance on its then-existing senior notes, and to make a distribution to its two owners;

- a $186.7 million decrease in cash inflows relative to net changes in working capital items, mainly due to a $178.2 million decrease from the collection and payment of trade and related party receivables and payables. This decrease was largely due to timing differences from the collection of trade and related party receivables—reflecting both higher receivable balances in 2008 and higher collections of year-end accounts receivable balances in the first nine months of 2007, versus the first nine months of 2008;

- a $16.8 million decrease in cash inflows relative to changes in other non-current assets and liabilities, and other incremental non-cash expenses, including higher non-cash general and administrative expenses in 2007

related to the activities required to complete KMI's going-private transaction (with regard to the going-private transaction expenses, for accounting purposes, Knight was required to allocate to us a portion of these transaction-related amounts and we were required to recognize the amounts as expense on our income statements; however, we were not responsible for paying these buyout expenses, and accordingly, recognized the unpaid amount as both a contribution to "Partners' Capital" and an increase to "Minority interest" on our balance sheet);

- a $15.0 million decrease in cash from an interest rate swap termination payment we received in March 2007, when we terminated a fixed-to-floating interest rate swap agreement having a notional principal amount of $100 million and a maturity date of March 15, 2032; and

- a $10.7 million decrease in cash from FERC-mandated reparation payment and reserve adjustments. In March 2008, pursuant to FERC orders, we made reparation payments of $23.3 million to certain shippers on our Pacific operations' pipelines and we reduced our rate case liability. The payment primarily related to a FERC ruling in February 2008 that resolved certain challenges by complainants with regard to delivery tariffs and gathering enhancement fees at our Pacific operations' Watson Station, located in Carson, California. In September 2008, we increased our legal reserve by $12.6 million, an adjustment related to proposed legal settlements reached with certain shippers on our Pacific operations' East Line pipeline.

Investing Activities

Net cash used in investing activities was $2,065.9 million for the nine month period ended September 30, 2008, compared to $1,908.7 million for the comparable 2007 period. The $157.2 million (8%) increase in cash used in investing activities was primarily attributable to:

- a $771.5 million increase from higher capital expenditures—largely due to increased investment undertaken to construct our Kinder Morgan Louisiana Pipeline, expand our Trans Mountain crude oil and refined petroleum products pipeline system, and add infrastructure to our carbon dioxide producing and delivery operations.

  Since the end of 2007, rising construction costs, additional regulatory requirements, and certain weather delays have continued to create a challenging business environment, and our total forecasted capital expenditures on our major projects have increased by approximately 22% from the projection we made at the beginning of 2008. Most of this increase has been on our natural gas pipeline major projects—for example, market conditions for consumables, labor and construction equipment along with certain provisions in the final environmental impact statement have resulted in increased construction costs for the Rockies Express Pipeline. Our current estimate of total construction costs for the entire Rockies Express pipeline project is now approximately $6.0 billion (consistent with our October 15, 2008 third quarter earnings press release). We continue to be focused on managing these cost increases in order to complete our expansion projects as close to on-time and on-budget as possible, and we attempt to identify ancillary opportunities to increase our returns where possible.

  Our sustaining capital expenditures, defined as capital expenditures which do not increase the capacity of an asset, were $120.1 million for the first nine months of 2008, compared to $95.0 million for the first nine months of 2007. The above amounts include our proportionate share of Rockies Express' sustaining capital expenditures—less than $0.1 million in 2008 and none in 2007—but do not include the sustaining capital expenditures of our Trans Mountain pipeline system for periods prior to our acquisition date of April 30, 2007. Generally, we fund our sustaining capital expenditures with existing cash or from cash flows from operations. In addition to utilizing cash generated from its operations, Rockies Express can fund its cash requirements for capital expenditures through borrowings under its own credit facility, issuing its own short-term commercial paper or long-term notes, or with proceeds from contributions received from its member owners.

  Additionally, our forecasted expenditures for the remaining three months of 2008 for sustaining capital expenditures are approximately $85.1 million (including less than $0.1 million for our proportionate share of Rockies Express, but including $11.3 million for hurricane and fire repair and replacement costs). All of our capital expenditures, with the exception of sustaining capital expenditures, are discretionary, and our discretionary capital expenditures—including expenditures for internal expansion

projects—totaled $1,794.3 million for the first nine months of 2008 and $1,047.9 million for the first nine months of 2007;

- a $295.0 million increase in cash used from incremental contributions to equity investments in the first nine months of 2008, largely driven by a $306.0 million equity investment paid in February 2008 to West2East Pipeline LLC, and partially offset by a $10.6 million drop in contributions to Midcontinent Express Pipeline LLC, the sole owner of the Midcontinent Express Pipeline. In the first nine months of 2008 and 2007, we contributed $27.5 million and $38.1 million, respectively, for our share of Midcontinent Express Pipeline construction costs. We own a 50% equity interest in the approximately $1.9 billion, 500-mile interstate natural gas pipeline that will extend between Bennington, Oklahoma and Butler, Alabama;

- a $572.5 million decrease in cash used related to our acquisition of Trans Mountain from Knight. Through September 2007, we paid $549.1 million to Knight to acquire the net assets of Trans Mountain, and in April 2008, we received a cash contribution of $23.4 million from Knight as a result of certain true-up provisions in our acquisition agreement. For more information on our acquisition of Trans Mountain from Knight, see Note 2 to our consolidated financial statements included elsewhere in this report;

- a $152.7 million decrease in cash used due to lower expenditures made for strategic business acquisitions. In the first nine months of 2008, our cash outlays for additional net assets and investments totaled $9.0 million, consisting of $16.4 million paid for additional bulk and liquid terminal assets, less $7.4 million we received as the beginning cash balance of the Express and Jet Fuel pipeline systems, acquired from Knight on August 28, 2008 (also discussed in Note 2). Excluding amounts paid for Trans Mountain (discussed above), in the first nine months of 2007, our payments for acquired assets and investments totaled $161.7 million, including $100.3 million paid for our purchase of terminal assets from Marine Terminals, Inc. and $38.3 million paid for our purchase of the Vancouver Wharves bulk marine terminal from the British Columbia Railway Company;

- an $89.1 million decrease in cash used related to a return of capital received from Midcontinent Express Pipeline LLC in the first quarter of 2008. In February 2008, Midcontinent entered into and then made borrowings under a new $1.4 billion three-year, unsecured revolving credit facility due February 28, 2011. Midcontinent then made distributions (in excess of cumulative earnings) to its two member owners to reimburse them for prior contributions made to fund its pipeline construction costs;

- an $80.6 million decrease in cash used due to lower period-to-period payments for margin and restricted deposits in 2008 compared to 2007, associated largely with our utilization of derivative contracts to hedge (offset) against the volatility of energy commodity price risks; and

- a $37.2 million decrease in cash used, relative to 2007, due to higher net proceeds received from the sales of investments, property, plant and equipment, and other net assets (net of salvage and removal costs). The increase in cash sales proceeds was driven by the approximately $50.7 million we received in the second quarter of 2008 for the sale of our 25% equity ownership interest in Thunder Creek Gas Services, LLC (discussed in Note 2 to our consolidated financial statements included elsewhere in this report).

Financing Activities

Net cash provided by financing activities amounted to $629.7 million for the first nine months of 2008. For the same nine month period last year, our financing activities provided net cash of $703.2 million. The $73.5 million (10%) cash decrease from the comparable 2007 period was primarily due to:

- a $244.0 million decrease in cash from higher partnership distributions in the first nine months of 2008, when compared to the first nine months of 2007. Distributions to all partners, consisting of our common and Class B unitholders, our general partner and our minority interests, totaled $1,088.6 million in the first nine months of 2008, compared to $844.6 million in the same period a year earlier;

- an $86.4 million increase in cash inflows from partnership equity issuances. The increase relates to the combined $384.3 million we received from the two separate offerings of additional common units in the first

nine months of 2008 (discussed above in "—Long-term Financing"), versus the $297.9 million we received, after commissions and underwriting expenses, in May 2007 for our issuance of an additional 5,700,000 i-units to KMR;

- a $61.0 million increase in cash inflows from net changes in cash book overdrafts—resulting from timing differences on checks issued but not yet endorsed; and

- an $18.2 million increase in cash from overall debt financing activities—which include our issuances and payments of debt and our debt issuance costs. The period-to-period increase in cash from overall financing activities was primarily due to (i) a $295.0 million increase in cash inflows from incremental borrowings under our long-term revolving bank credit facility in the first nine months of 2008; (ii) a $202.7 million decrease in cash inflows due to lower net issuances and payments of senior notes in the first nine months of 2008; (iii) a $67.3 million decrease in cash inflows from lower overall net commercial paper borrowings in the first nine months of 2008; and (iv) a $5.2 million decrease in cash from our September 2008 principal payment of tax-exempt bonds issued by the Jackson-Union Counties Regional Port District (our subsidiary, Kinder Morgan Operating L.P. "B" is the obligor of these bonds and the remaining principal amount of $18.5 million is due April 1, 2024).

  The increase in cash from borrowings under our five-year unsecured bank credit facility was based in part, on period-to-period changes in interest rates, and in part to a general outflow of cash invested in the U.S. commercial paper market during the first nine months of 2008. In the third quarter of 2008, we elected to borrow funds under our credit facility (that remains due August 18, 2010), taking advantage of favorable changes between the variable interest rates obtainable pursuant to the provisions of the credit facility on the one hand, and the variable rates obtainable in the commercial paper market on the other hand.

The decrease in cash from changes in senior notes outstanding reflects the combined $1,581.8 million we received from our February and June 2008 public offerings of senior notes (discussed in Note 7 to our consolidated financial statements included elsewhere in this report), versus the $1,784.5 million increase in cash inflows from the issuances and payments of senior notes during the first nine months of 2007. During the nine month 2007 period, we both repaid $250 million of 5.35% senior notes that matured on August 15, 2007, and completed offerings for an aggregate $2.05 billion in principal amount of senior notes in four separate series: (i) $600 million of 6.00% notes due February 1, 2017; (ii) $400 million of 6.50% notes due February 1, 2037; (iii) $550 million of 6.95% notes due January 15, 2038; and (iv) $500 million of 5.85% notes due September 15, 2012. Combined, we received proceeds, net of underwriting discounts and commissions, of $2,034.5 million from these long-term debt offerings and we used the proceeds from each of these offerings, and the proceeds received from our 2008 debt offerings, to reduce the borrowings under our commercial paper program.

Partnership Distributions

Our partnership agreement requires that we distribute 100% of "Available Cash," as defined in our partnership agreement, to our partners within 45 days following the end of each calendar quarter in accordance with their respective percentage interests. Our 2007 Form 10-K contains additional information concerning our partnership distributions, including the definition of "Available Cash," the manner in which our total distributions are divided between our general partner and our limited partners, and the form of distributions to all of our partners, including minority interests.

As discussed in Note 2 to our consolidated financial statements included elsewhere in this report, the transactions, balances and results of operations of our Trans Mountain pipeline system were included in our consolidated financial information as if it had been transferred to us on January 1, 2006; however, the effective date of this acquisition was April 30, 2007, and the acquisition had no impact on the distributions we made (including incentive distributions paid to our general partner) prior to this date.

On August 14, 2008, we paid a quarterly distribution of $0.99 per unit for the second quarter of 2008. This distribution was 16% greater than the $0.85 distribution per unit we paid in August 2007 for the second quarter of 2007. We paid this distribution in cash to our general partner and to our common and Class B unitholders. KMR, our sole i-unitholder, received additional i-units based on the $0.99 cash distribution per common unit. We believe that future operating results will continue to support similar levels of quarterly cash and i-unit distributions; however, no assurance can be given that future distributions will continue at such levels.

On October 15, 2008, we declared a cash distribution of $1.02 per unit for the third quarter of 2008 (an annualized rate of $4.08 per unit). This distribution was 16% higher than the $0.88 per unit distribution we made for the third quarter of 2007. In November 2007, we announced that we expected to declare cash distributions of $4.02 per unit for 2008, an almost 16% increase over our cash distributions of $3.48 per unit for 2007. We currently expect to meet or exceed this distribution target for 2008; however, no assurance can be given that we will be able to meet or exceed this level of distribution, and our expectation does not take into account any capital costs associated with financing the payment of reparations sought by shippers on our Pacific operations' interstate pipelines.

The incentive distribution that we paid on August 14, 2008 to our general partner (for the second quarter of 2008) was $194.2 million. Our general partner's incentive distribution that we paid in August 2007 (for the second quarter of 2007) was $147.6 million. Our general partner's incentive distribution for the distribution that we declared for the third quarter of 2008 will be $204.3 million, and our general partner's incentive distribution for the distribution that we paid for the third quarter of 2007 was $155.2 million. The period-to-period increases in our general partner incentive distributions resulted from both increased cash distributions per unit and increases in the number of common units and i-units outstanding.

Litigation and Environmental

As of September 30, 2008, we have recorded a total reserve for environmental claims, without discounting and without regard to anticipated insurance recoveries, in the amount of $72.1 million. In addition, we have recorded a receivable of $24.5 million for expected cost recoveries that have been deemed probable. As of December 31, 2007, our environmental reserve totaled $92.0 million and our estimated receivable for environmental cost recoveries totaled $37.8 million, respectively. The reserve is primarily established to address and clean up soil and ground water impacts from former releases to the environment at facilities we have acquired or accidental spills or releases at facilities that we own. Reserves for each project are generally established by reviewing existing documents, conducting interviews and performing site inspections to determine the overall size and impact to the environment. Reviews are made on a quarterly basis to determine the status of the cleanup and the costs associated with the effort. In assessing environmental risks in conjunction with proposed acquisitions, we review records relating to environmental issues, conduct site inspections, interview employees, and, if appropriate, collect soil and groundwater samples.

Additionally, as of September 30, 2008, and December 31, 2007, we have recorded a total reserve for legal fees, transportation rate cases and other litigation liabilities in the amount of $232.5 million and $247.9 million, respectively. The reserve is primarily related to various claims from lawsuits arising from our Pacific operations, and the contingent amount is based on both the circumstances of probability and reasonability of dollar estimates. We regularly assess the likelihood of adverse outcomes resulting from these claims in order to determine the adequacy of our liability provision.

Though no assurance can be given, we believe we have established adequate environmental and legal reserves such that the resolution of pending environmental matters and litigation will not have a material adverse impact on our business, cash flows, financial position or results of operations. However, changing circumstances could cause these matters to have a material adverse impact.

Pursuant to our continuing commitment to operational excellence and our focus on safe, reliable operations, we have implemented, and intend to implement in the future, enhancements to certain of our operational practices in order to strengthen our environmental and asset integrity performance. These enhancements have resulted and may result in higher operating costs and sustaining capital expenditures; however, we believe these enhancements will provide us the greater long term benefits of improved environmental and asset integrity performance.

Please refer to Note 3 to our consolidated financial statements included elsewhere in this report for additional information regarding pending litigation, environmental and asset integrity matters.

Certain Contractual Obligations

Except as set forth under "—Midcontinent Express Pipeline LLC Debt" and under "—Senior Notes" in Note 7 to our consolidated financial statements included elsewhere in this report, there have been no material changes in our contractual obligations that would affect the disclosures presented as of December 31, 2007 in our 2007 Form 10-K.

Off Balance Sheet Arrangements

Except as set forth under "—Midcontinent Express Pipeline LLC Debt" in Note 7 to our consolidated financial statements included elsewhere in this report, there have been no material changes in our obligations with respect to other entities that are not consolidated in our financial statements that would affect the disclosures presented as of December 31, 2007 in our 2007 Form 10-K.

Fair Value Measurements

SFAS No. 157 established a hierarchal disclosure framework associated with the level of pricing observability utilized in measuring fair value. This framework defined three levels of inputs to the fair value measurement process, and requires that each fair value measurement be assigned to a level corresponding to the lowest level input that is significant to the fair value measurement in its entirety. We utilize energy commodity derivative contracts for the purpose of mitigating our risk resulting from fluctuations in the market price of natural gas, natural gas liquids and crude oil, and utilize interest rate swaps to mitigate our risk from fluctuations in interest rates. For more information on our risk management activities, see Note 10 to our consolidated financial statements included elsewhere in this report.

At September 30, 2008, the fair value of our derivative contracts classified as level 3 under the fair value hierarchy consisted primarily of West Texas Sour Hedges and West Texas Intermediate options (costless collars). Costless collars are designed to establish floor and ceiling prices on anticipated future oil production from the assets we own in the SACROC oil field. While the use of these derivative contracts limits the downside risk of adverse price movements, they may also limit future revenues from favorable price movements. In addition to these oil-commodity derivatives, level 3 derivative contracts consist of Natural Gas Basis swaps. Basis swaps are used in connection with another derivative contract to reduce hedge ineffectiveness by reducing a basis difference between a hedged exposure and a derivative contract. The following table summarizes the total fair value asset and liability measurements of our level 3 energy commodity derivative contracts in accordance with SFAS No. 157.

	Significant Unobservable Inputs (Level 3)					
	Assets			Liabilities		
	September 30, 2008	December 31, 2007	Change	September 30, 2008	December 31, 2007	Change
Natural Gas Basis Swaps	$ 4.9	$ 2.8	$ 2.1	$ (7.0)	$ (4.7)	$ (2.3)
WTS Oil Swaps	—	—	—	(90.1)	(94.5)	4.4
WTI Options	46.7	0.0	46.7	(28.7)	0.0	(28.7)
Other	1.0	1.0	—	(7.4)	(4.9)	(2.5)
Total	$ 52.6	$ 3.8	$ 48.8	$ (133.2)	$ (104.1)	$ (29.1)

The largest change in fair value of level 3 assets and liabilities between December 31, 2007 and September 30, 2008 is related to WTI Options, which amount to an increase of $46.7 million and $28.7 million in assets and liabilities, respectively. The majority of these contracts were entered into during 2008, which account for the change. There were no transfers into or out of level 3 during the period.

The valuation techniques used for the above Level 3 input derivatives are as follows:

- Natural Gas Basis Swaps: values obtained through a pricing service, derived by combining raw inputs from NYMEX with proprietary quantitative models and processes. Although the prices are originating from a liquid market (NYMEX), we believe the incremental effort to further validate these prices would take undue effort and would not materially alter the assumptions. As a result, we have classified the valuation of these derivatives as level 3;

- WTS Oil Swaps: prices obtained from a broker using their proprietary model for similar assets and liabilities, quotes are non-binding; and

- WTI Options: valued using internal model. Internal models incorporate the use of options pricing and estimates of the present value of cash flows based upon underlying contractual terms. The models reflect management's estimates, taking into account observable market prices, estimated market prices in the absence of quoted market prices, the risk-free market discount rate, volatility factors, estimated correlations of commodity prices and contractual volumes.

Commodity derivative contracts are recorded at their estimated fair values as of each reporting date. For commodity derivatives, the most observable inputs available are used to determine the fair value of each contract. In the absence of a quoted price for an identical contract in an active market, we use broker quotes for identical or similar contracts, or internally prepared valuation models as primary inputs to determine fair value. No adjustments were made to quotes or prices obtained from brokers and pricing services. Valuation methods have not changed during the quarter ended September 30, 2008.

When appropriate, valuations are adjusted for various factors including credit considerations. Such adjustments are generally based on available market evidence, including but not limited to our credit default swap quotes as of September 30, 2008. Collateral agreements with our counterparties serve to reduce our credit exposure and are considered in the adjustment. Our fair value measurements of derivative contracts are adjusted for credit risk in accordance with SFAS No. 157, and as of September 30, 2008, our consolidated “Accumulated other comprehensive loss” balance includes a gain of $14.1 million related to discounting the value of our energy commodity derivative liabilities for the effect of credit risk. Additionally, we considered the value of our derivative assets, and the associated counterparty credit risk, and determined that a reserve against these assets is not necessary.

With the exception of the Casper and Douglas hedges and the ineffective portion of our derivative contracts, our energy commodity derivative contracts are accounted for as cash flow hedges. In accordance with SFAS No. 133, gains and losses associated with cash flow hedges are reported in “Accumulated other comprehensive loss” in our accompanying consolidated balance sheets.

Information Regarding Forward-Looking Statements

This filing includes forward-looking statements. These forward-looking statements are identified as any statement that does not relate strictly to historical or current facts. They use words such as “anticipate,” “believe,” “intend,” “plan,” “projection,” “forecast,” “strategy,” “position,” “continue,” “estimate,” “expect,” “may,” or the negative of those terms or other variations of them or comparable terminology. In particular, statements, express or implied, concerning future actions, conditions or events, future operating results or the ability to generate sales, income or cash flow or to make distributions are forward-looking statements. Forward-looking statements are not guarantees of performance. They involve risks, uncertainties and assumptions. Future actions, conditions or events and future results of operations may differ materially from those expressed in these forward-looking statements. Many of the factors that will determine these results are beyond our ability to control or predict. Specific factors which could cause actual results to differ from those in the forward-looking statements include:

- price trends and overall demand for natural gas liquids, refined petroleum products, oil, carbon dioxide, natural gas, electricity, coal and other bulk materials and chemicals in North America;
- economic activity, weather, alternative energy sources, conservation and technological advances that may affect price trends and demand;
- changes in our tariff rates implemented by the Federal Energy Regulatory Commission or the California Public Utilities Commission;

- our ability to acquire new businesses and assets and integrate those operations into our existing operations, as well as our ability to expand our facilities;
- difficulties or delays experienced by railroads, barges, trucks, ships or pipelines in delivering products to or from our terminals or pipelines;
- our ability to successfully identify and close acquisitions and make cost-saving changes in operations;
- shut-downs or cutbacks at major refineries, petrochemical or chemical plants, ports, utilities, military bases or other businesses that use our services or provide services or products to us;
- crude oil and natural gas production from exploration and production areas that we serve, such as the Permian Basin area of West Texas, the U.S. Rocky Mountains and the Alberta oil sands;
- changes in laws or regulations, third-party relations and approvals, and decisions of courts, regulators and governmental bodies that may adversely affect our business or our ability to compete;
- changes in accounting pronouncements that impact the measurement of our results of operations, the timing of when such measurements are to be made and recorded, and the disclosures surrounding these activities;
- our ability to offer and sell equity securities and debt securities or obtain debt financing in sufficient amounts to implement that portion of our business plan that contemplates growth through acquisitions of operating businesses and assets and expansions of our facilities;
- our indebtedness, which could make us vulnerable to general adverse economic and industry conditions, limit our ability to borrow additional funds, and/or place us at competitive disadvantages compared to our competitors that have less debt or have other adverse consequences;
- interruptions of electric power supply to our facilities due to natural disasters, power shortages, strikes, riots, terrorism, war or other causes;
- our ability to obtain insurance coverage without significant levels of self-retention of risk;
- acts of nature, sabotage, terrorism or other similar acts causing damage greater than our insurance coverage limits;
- capital and credit markets conditions, inflation and interest rates;
- the political and economic stability of the oil producing nations of the world;
- national, international, regional and local economic, competitive and regulatory conditions and developments;
- our ability to achieve cost savings and revenue growth;
- foreign exchange fluctuations;
- the timing and extent of changes in commodity prices for oil, natural gas, electricity and certain agricultural products;
- the extent of our success in discovering, developing and producing oil and gas reserves, including the risks inherent in exploration and development drilling, well completion and other development activities;
- engineering and mechanical or technological difficulties that we may experience with operational equipment, in well completions and workovers, and in drilling new wells;

- the uncertainty inherent in estimating future oil and natural gas production or reserves;
- the ability to complete expansion projects on time and on budget;
- the timing and success of our business development efforts; and
- unfavorable results of litigation and the fruition of contingencies referred to in Note 3 to our consolidated financial statements included elsewhere in this report.

There is no assurance that any of the actions, events or results of the forward-looking statements will occur, or if any of them do, what impact they will have on our results of operations or financial condition. Because of these uncertainties, you should not put undue reliance on any forward-looking statements.

See Item 1A "Risk Factors" of our 2007 Form 10-K, and Part II, Item 1A "Risk Factors" of this report for a more detailed description of these and other factors that may affect the forward-looking statements. When considering forward-looking statements, one should keep in mind the risk factors described in both our 2007 Form 10-K and this report. The risk factors could cause our actual results to differ materially from those contained in any forward-looking statement. We disclaim any obligation, other than as required by applicable law, to update the above list or to announce publicly the result of any revisions to any of the forward-looking statements to reflect future events or developments.

Item 3. Quantitative and Qualitative Disclosures About Market Risk.

There have been no material changes in market risk exposures that would affect the quantitative and qualitative disclosures presented as of December 31, 2007, in Item 7A of our 2007 Form 10-K. However, the capital and credit markets have been experiencing extreme volatility and disruption for more than 12 months, and in recent weeks, the volatility and disruption have reached unprecedented levels. See Part II, Item 1A "Risk Factors" of this report for a more detailed description of this and other factors that may affect our overall business growth. For more information on our risk management activities, see Note 10 to our consolidated financial statements included elsewhere in this report.

Item 4. Controls and Procedures.

As of September 30, 2008, our management, including our Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of the design and operation of our disclosure controls and procedures pursuant to Rule 13a-15(b) under the Securities Exchange Act of 1934. There are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including the possibility of human error and the circumvention or overriding of the controls and procedures. Accordingly, even effective disclosure controls and procedures can only provide reasonable assurance of achieving their control objectives. Based upon and as of the date of the evaluation, our Chief Executive Officer and our Chief Financial Officer concluded that the design and operation of our disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in the reports we file and submit under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported as and when required, and is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure. There has been no change in our internal control over financial reporting during the quarter ended September 30, 2008 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION

Item 1. Legal Proceedings.

See Part I, Item 1, Note 3 to our consolidated financial statements entitled "Litigation, Environmental and Other Contingencies," which is incorporated in this item by reference.

Item 1A. Risk Factors.

Except as set forth below, there have been no material changes in or additions to the risk factors disclosed in Item 1A "Risk Factors" in our 2007 Form 10-K.

Current levels of market volatility are unprecedented.

The capital and credit markets have been experiencing extreme volatility and disruption for more than 12 months. In recent weeks, the volatility and disruption have reached unprecedented levels. In some cases, the markets have exerted downward pressure on stock prices and credit capacity for certain issuers. Our plans for growth require regular access to the capital and credit markets. If current levels of market disruption and volatility continue or worsen, access to capital and credit markets could be disrupted making growth through acquisitions and development projects difficult or impractical to pursue until such time as markets stabilize.

Our operating results may be adversely affected by unfavorable economic and market conditions.

Economic conditions worldwide have from time to time contributed to slowdowns in the oil and gas industry, as well as in the specific segments and markets in which we operate, resulting in reduced demand and increased price competition for our products and services. Our operating results in one or more geographic regions may also be affected by uncertain or changing economic conditions within that region, such as the challenges that are currently affecting economic conditions in the United States. Volatility in commodity prices might have an impact on many of our customers, which in turn could have a negative impact on their ability to meet their obligations to us. In addition, decreases in the prices of crude oil and natural gas liquids will have a negative impact on the results of our CO_2 business segment. If global economic and market conditions (including volatility in commodity markets), or economic conditions in the United States or other key markets, remain uncertain or persist, spread or deteriorate further, we may experience material impacts on our business, financial condition and results of operations.

The recent downturn in the credit markets has increased the cost of borrowing and has made financing difficult to obtain, each of which may have a material adverse effect on our results of operations and business.

Recent events in the financial markets have had an adverse impact on the credit markets and, as a result, the availability of credit has become more expensive and difficult to obtain. Some lenders are imposing more stringent restrictions on the terms of credit and there may be a general reduction in the amount of credit available in the markets in which we conduct business. In addition, as a result of the current credit market conditions and the recent downgrade of our short-term credit ratings by Standard & Poor's Rating Services, we are currently unable to access commercial paper borrowings and instead are meeting our financing and liquidity needs through borrowings under our bank credit facility. The negative impact on the tightening of the credit markets may have a material adverse effect on us resulting from, but not limited to, an inability to expand facilities or finance the acquisition of assets on favorable terms, if at all, increased financing costs or financing with increasingly restrictive covenants.

The failure of any bank in which we deposit our funds could reduce the amount of cash we have available for operations, to pay distributions and to make additional investments.

We have diversified our cash and cash equivalents between several banking institutions in an attempt to minimize exposure to any one of these entities. However, the Federal Deposit Insurance Corporation, or "FDIC," only insures amounts up to $250,000 per depositor per insured bank. We currently have cash and cash equivalents and restricted cash deposited in certain financial institutions in excess of federally insured levels. If any of the banking institutions in which we have deposited funds ultimately fails, we may lose our deposits over $250,000.

The loss of our deposits could reduce the amount of cash we have available to distribute or invest and could result in a decline in the value of your investment.

There can be no assurance as to the impact on the financial markets of the U.S. government's plan to purchase large amounts of illiquid, mortgage-backed and other securities from financial institutions.

In response to the financial crises affecting the banking system and financial markets and going concern threats to investment banks and other financial institutions, President Bush signed the Emergency Economic Stabilization Act of 2008, referred to as the EESA in this report, into law on October 3, 2008. Pursuant to the EESA, the U.S. Treasury has the authority to, among other things, purchase up to $700 billion of mortgage-backed and other securities from financial institutions for the purpose of stabilizing the financial markets. There can be no assurance what impact the EESA will have on the financial markets, including the extreme levels of volatility currently being experienced. Although we are not one of the institutions that will sell securities to the U.S. Treasury pursuant to the EESA, the ultimate effects of the EESA on the financial markets and the economy in general could materially and adversely affect our business, financial condition and results of operations, or the trading price of our common units.

Our business is subject to extensive regulation that affects our operations and costs.

Our assets and operations are subject to regulation by federal, state, provincial and local authorities, including regulation by the FERC, and by various authorities under federal, state and local environmental, human health and safety and pipeline safety laws. Regulation affects almost every aspect of our business, including, among other things, our ability to determine terms and rates for our interstate pipeline services, to make acquisitions or to build extensions of existing facilities. The costs of complying with such laws and regulations are already significant, and additional or more stringent regulation could have a material adverse impact on our business, financial condition and results of operations.

In addition, regulators have taken actions designed to enhance market forces in the gas pipeline industry, which have led to increased competition. In a number of U.S. markets, natural gas interstate pipelines face competitive pressure from a number of new industry participants, such as alternative suppliers, as well as traditional pipeline competitors. Increased competition driven by regulatory changes could have a material impact on business in our markets and therefore adversely affect our financial condition and results of operations.

Environmental laws and regulations could expose us to significant costs and liabilities.

Our operations are subject to federal, state, provincial and local laws, regulations and potential liabilities arising under or relating to the protection or preservation of the environment, natural resources and human health and safety. Such laws and regulations affect many aspects of our present and future operations, and generally require us to obtain and comply with various environmental registrations, licenses, permits, inspections and other approvals. Liability under such laws and regulations may be incurred without regard to fault under the Comprehensive Environmental Response, Compensation, and Liability Act, commonly known as CERCLA or Superfund, the Resource Conservation and Recovery Act, commonly known as RCRA, or analogous state laws for the remediation of contaminated areas. Private parties, including the owners of properties through which our pipelines pass may also have the right to pursue legal actions to enforce compliance as well as to seek damages for non-compliance with such laws and regulations or for personal injury or property damage. Our insurance may not cover all environmental risks and costs or may not provide sufficient coverage in the event an environmental claim is made against us.

Failure to comply with these laws and regulations may expose us to civil, criminal and administrative fines, penalties and/or interruptions in our operations that could influence our results of operations. For example, if an accidental leak, release or spill of liquid petroleum products, chemicals or other hazardous substances occurs at or from our pipelines or our storage or other facilities, we may experience significant operational disruptions and we may have to pay a significant amount to clean up the leak, release or spill, pay for government penalties, address natural resource damage, compensate for human exposure or property damage, install costly pollution control equipment or a combination of these and other measures. The resulting costs and liabilities could materially and negatively affect our level of earnings and cash flows. In addition, emission controls required under the Federal Clean Air Act and other similar federal, state and provincial laws could require significant capital expenditures at our facilities.

We own and/or operate numerous properties that have been used for many years in connection with our business activities. While we have utilized operating and disposal practices that were standard in the industry at the time, hydrocarbons or other hazardous substances may have been released at or from properties owned, operated or used by us or our predecessors, or at or from properties where our or our predecessors' wastes have been taken for disposal. In addition, many of these properties have been owned and/or operated by third parties whose management, handling and disposal of hydrocarbons or other hazardous substances were not under our control. These properties and the hazardous substances released and wastes disposed on them may be subject to laws in the United States such as CERCLA, which impose joint and several liability without regard to fault or the legality of the original conduct. Under the regulatory schemes of the various Canadian provinces, such as British Columbia's Environmental Management Act, Canada has similar laws with respect to properties owned, operated or used by us or our predecessors. Under such laws and implementing regulations, we could be required to remove or remediate previously disposed wastes or property contamination, including contamination caused by prior owners or operators. Imposition of such liability schemes could have a material adverse impact on our operations and financial position.

In addition, our oil and gas development and production activities are subject to numerous federal, state and local laws and regulations relating to environmental quality and pollution control. These laws and regulations increase the costs of these activities and may prevent or delay the commencement or continuance of a given operation. Specifically, these activities are subject to laws and regulations regarding the acquisition of permits before drilling, restrictions on drilling activities in restricted areas, emissions into the environment, water discharges, and storage and disposition of wastes. In addition, legislation has been enacted that requires well and facility sites to be abandoned and reclaimed to the satisfaction of state authorities.

Further, we cannot ensure that such existing laws and regulations will not be revised or that new laws or regulations will not be adopted or become applicable to us. The clear trend in environmental regulation is to place more restrictions and limitations on activities that may be perceived to affect the environment, and thus there can be no assurance as to the amount or timing of future expenditures for environmental compliance or remediation, and actual future expenditures may be different from the amounts we currently anticipate. Revised or additional regulations that result in increased compliance costs or additional operating restrictions, particularly if those costs are not fully recoverable from our customers, could have a material adverse effect on our business, financial position, results of operations and prospects.

Climate change regulation at the federal, state or regional levels and/or new regulations issued by the Department of Homeland Security could result in increased operating and capital costs for us.

Studies have suggested that emissions of certain gases, commonly referred to as "greenhouse gases," may be contributing to warming of the Earth's atmosphere. Methane, a primary component of natural gas, and carbon dioxide, a byproduct of the burning of natural gas, are examples of greenhouse gases. The U.S. Congress is actively considering legislation to reduce emissions of greenhouse gases. In addition, at least nine states in the Northeast and five states in the West have developed initiatives to regulate emissions of greenhouse gases, primarily through the planned development of greenhouse gas emission inventories and/or regional greenhouse gas cap and trade programs. The EPA is separately considering whether it will regulate greenhouse gases as "air pollutants" under the existing federal Clean Air Act. Passage of climate control legislation or other regulatory initiatives by Congress or various states of the U.S. or the adoption of regulations by the EPA or analogous state agencies that regulate or restrict emissions of greenhouse gases, including methane or carbon dioxide in areas in which we conduct business, could result in changes to the consumption and demand for natural gas and could have adverse effects on our business, financial position, results of operations and prospects.

Such changes could increase the costs of our operations, including costs to operate and maintain our facilities, install new emission controls on our facilities, acquire allowances to authorize our greenhouse gas emissions, pay any taxes related to our greenhouse gas emissions and administer and manage a greenhouse gas emissions program. While we may be able to include some or all of such increased costs in the rates charged by our pipeline, such recovery of costs is uncertain and may depend on events beyond our control including the outcome of future rate proceedings before the FERC and the provisions of any final legislation.

The Department of Homeland Security Appropriation Act of 2007 requires the Department of Homeland Security, referred to in this report as the DHS, to issue regulations establishing risk-based performance standards for the security of chemical and industrial facilities, including oil and gas facilities that are deemed to present "high levels of security risk." The DHS has issued rules that establish chemicals of interest and their respective threshold quantities that will trigger compliance with these standards. Covered facilities that are determined by the DHS to pose a high level of security risk will be required to prepare and submit Security Vulnerability Assessments and Site Security Plans as well as comply with other regulatory requirements, including those regarding inspections, audits, recordkeeping and protection of chemical-terrorism vulnerability information. We have not yet determined the extent to which our facilities are subject to coverage under the interim rules or the associated costs to comply, but it is possible that such costs could be substantial.

Our substantial debt could adversely affect our financial health and make us more vulnerable to adverse economic conditions.

As of September 30, 2008, we had outstanding $8,340.9 million of consolidated debt (excluding the value of interest rate swaps). This level of debt could have important consequences, such as:

- limiting our ability to obtain additional financing to fund our working capital, capital expenditures, debt service requirements or potential growth or for other purposes;
- limiting our ability to use operating cash flow in other areas of our business because we must dedicate a substantial portion of these funds to make payments on our debt;
- placing us at a competitive disadvantage compared to competitors with less debt; and
- increasing our vulnerability to adverse economic and industry conditions.

Each of these factors is to a large extent dependent on economic, financial, competitive and other factors beyond our control.

Our large amount of variable rate debt makes us vulnerable to increases in interest rates.

As of September 30, 2008, we had outstanding $8,340.9 million of consolidated debt (excluding the value of interest rate swaps). Of this amount, approximately 46.6% was subject to variable interest rates, either as short-term or long-term variable rate debt obligations or as long-term fixed-rate debt converted to variable rates through the use of interest rate swaps. Should interest rates increase significantly, the amount of cash required to service our debt would increase.

Terrorist attacks, or the threat of them, may adversely affect our business.

The U.S. government has issued public warnings that indicate that pipelines and other energy assets might be specific targets of terrorist organizations. These potential targets might include our pipeline systems or storage facilities. Our operations could become subject to increased governmental scrutiny that would require increased security measures. Recent federal legislation provides an insurance framework that should cause current insurers to continue to provide sabotage and terrorism coverage under standard property insurance policies. Nonetheless, there is no assurance that adequate sabotage and terrorism insurance will be available at rates we believe are reasonable in the near future. These developments may subject our operations to increased risks, as well as increased costs, and, depending on their ultimate magnitude, could have a material adverse effect on our business, results of operations and financial condition.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

Effective August 28, 2008, we issued 2,014,693 common units to Knight Inc. in connection with our acquisition of a 33 1/3% ownership interest in the Express pipeline system net assets and the Jet Fuel pipeline system net assets.

As agreed between Knight and us, the units were valued at $116.0 million. The units were issued to a single accredited investor in a transaction not involving a public offering and were therefore exempt from registration pursuant to Section 4(2) of the Securities Act of 1933.

Item 3. Defaults Upon Senior Securities.

None.

Item 4. Submission of Matters to a Vote of Security Holders.

None.

Item 5. Other Information.

Our management and the directors and management of our general partner and KMR are saddened by the passing of Mr. Edward O. Gaylord, who died on September 28, 2008 in Houston, Texas. He was 76 years old. In February 1997, following the change in control of our general partner, Mr. Gaylord was one of only two non-employees of our general partner elected to serve on its board of directors, and since that time, we and our general partner benefitted from his continuous advice and counsel. He was also elected as one of the founding directors of KMR upon its formation in February 2001, and at the time of his death, served as a member of each board’s Audit Committee, Compensation Committee, and Nominating and Governance Committee. Our Nominating and Governance Committee is in the process of identifying and meeting with potential replacements to fill the vacancy on KMR's Board of Directors. We hope to fill the vacancy by the end of the year.

Item 6. Exhibits.

*3.1 -- Third Amended and Restated Agreement of Limited Partnership of Kinder Morgan Energy Partners, L.P. (filed as Exhibit 3.1 to Kinder Morgan Energy Partners, L.P. Form 10-Q (File No. 1-11234) for the quarter ended June 30, 2001, filed on August 9, 2001).

*3.2 -- Amendment No. 1 dated November 19, 2004 to Third Amended and Restated Agreement of Limited Partnership of Kinder Morgan Energy Partners, L.P. (filed as Exhibit 99.1 to Kinder Morgan Energy Partners, L.P. Form 8-K, filed November 22, 2004).

*3.3 -- Amendment No. 2 to Third Amended and Restated Agreement of Limited Partnership of Kinder Morgan Energy Partners, L.P. (filed as Exhibit 99.1 to Kinder Morgan Energy Partners, L.P. Form 8-K, filed May 5, 2005).

*3.4 -- Amendment No. 3 to Third Amended and Restated Agreement of Limited Partnership of Kinder Morgan Energy Partners, L.P. (filed as Exhibit 3.1 to Kinder Morgan Energy Partners, L.P. Form 8-K, filed April 21, 2008).

*4.1 -- Certificate of the Vice President and Treasurer and the Vice President and Chief Financial Officer of Kinder Morgan Management, LLC and Kinder Morgan G.P., Inc., on behalf of Kinder Morgan Energy Partners, L.P., establishing the terms of the 6.95% Senior Notes due 2038 (filed as Exhibit 4.2 to Kinder Morgan Energy Partners, L.P. Form 10-Q for the quarter ended June 30, 2007 filed August 8, 2007).

*4.2 -- Certificate of the Vice President and Treasurer and the Vice President and Chief Financial Officer of Kinder Morgan Management, LLC and Kinder Morgan G.P., Inc., on behalf of Kinder Morgan Energy Partners, L.P., establishing the terms of the 5.95% Senior Notes due 2018 (filed as Exhibit 4.28 to Kinder Morgan Energy Partners, L.P. Form 10-K for the year ended December 31, 2007 filed February 26, 2008).

4.3 -- Certain instruments with respect to long-term debt of Kinder Morgan Energy Partners, L.P. and its consolidated subsidiaries which relate to debt that does not exceed 10% of the total assets of Kinder Morgan Energy Partners, L.P. and its consolidated subsidiaries are omitted pursuant to Item 601(b) (4) (iii) (A) of Regulation S-K, 17 C.F.R. sec.229.601. Kinder Morgan Energy Partners, L.P. hereby agrees to furnish supplementally to the Securities and Exchange Commission a copy of each such instrument upon request.

*10. 1 -- First Amendment to Retention and Relocation Agreement, dated as of July 16, 2008, between Knight Inc. and Scott E. Parker (filed as Exhibit 10.1 to Kinder Morgan Energy Partners, L.P. Form 8-K, filed July 25, 2008).

11 -- Statement re: computation of per share earnings.

12 -- Statement re: computation of ratio of earnings to fixed charges.

*18 -- Letter re: change in accounting principle (filed as Exhibit 18 to Kinder Morgan Energy Partners, L.P. Form 10-Q for the quarter ended June 30, 2008 filed August 7, 2008).

31.1 -- Certification by CEO pursuant to Rule 13a-14 or 15d-14 of the Securities Exchange Act of 1934, as adopted pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.

31.2 -- Certification by CFO pursuant to Rule 13a-14 or 15d-14 of the Securities Exchange Act of 1934, as adopted pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.

32.1 -- Certification by CEO pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.

32.2 -- Certification by CFO pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.

---

* Asterisk indicates exhibits incorporated by reference as indicated; all other exhibits are filed herewith, except as noted otherwise.

SIGNATURE

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

Section 2: EX-11 (EXHIBIT 11)

KINDER MORGAN ENERGY PARTNERS, L.P. AND SUBSIDIARIES
EXHIBIT 11 — STATEMENT RE: COMPUTATION OF PER SHARE EARNINGS
(Units in millions; Dollars in millions except per unit amounts)

	Three Months Ended September 30, 2008	Three Months Ended September 30, 2007
Weighted average number of limited partners' units on which limited partners' net income per unit is based:		
Basic	258.8	239.0
Add: Incremental units under contracts to issue units depending on the market price of the units at a future date	—	—
Assuming dilution	258.8	239.0
Calculation of Limited Partners' interest in Net Income:		
Income from Continuing Operations	$ 329.8	$ 205.2
Less: General Partner's interest in Income from Continuing Operations	(205.6)	(155.7)
Limited Partners' interest in Income from Continuing Operations	124.2	49.5
Add:Limited Partners' interest in Income from Discontinued Operations	—	8.5
Limited Partners' interest in Net Income	$ 124.2	$ 58.0
Basic and Diluted Limited Partners' Net Income per unit:		
Income from Continuing Operations	$ 0.48	$ 0.21
Income from Discontinued Operations	$ —	$ 0.03
Net Income	$ 0.48	$ 0.24

	Nine Months Ended September 30, 2008	Nine Months Ended September 30, 2007
Weighted average number of limited partners' units on which limited partners' net income per unit is based:		
Basic	255.5	235.0
Add: Incremental units under contracts to issue units depending on the market price of the units at a future date	—	0.1
Assuming dilution	255.5	235.1
Calculation of Limited Partners' interest in Net Income (Loss):		
Income from Continuing Operations	$ 1,037.4	$ 275.9
Less:General Partner's interest in Income from Continuing Operations	(588.9)	(439.9)
Limited Partners' interest in Income (Loss) from Continuing Operations	448.5	(164.0)
Add: Limited Partners' interest in Income from Discontinued Operations	1.3	20.9
Limited Partners' interest in Net Income (Loss)	$ 449.8	$ (143.1)
Basic and Diluted Limited Partners' Net Income (Loss) per unit:		
Income (Loss) from Continuing Operations	$ 1.76	$ (0.70)
Income from Discontinued Operations	$ —	$ 0.09
Net Income (Loss)	$ 1.76	$ (0.61)

Section 3: EX-12 (EXHIBIT 12)

KINDER MORGAN ENERGY PARTNERS, L.P. AND SUBSIDIARIES
EXHIBIT 12 — STATEMENT RE: COMPUTATION OF RATIO OF EARNINGS TO FIXED CHARGES
(Dollars In Millions Except Ratio Amounts)

	Nine Months Ended September 30, 2008	Nine Months Ended September 30, 2007
Earnings:		
Pre-tax income from continuing operations before adjustment for minority interest and equity earnings (including amortization of excess cost of equity investments) per statements of income	$ 970.2	$ 269.6
Add:		
Fixed charges		
Services	343.5	328.8
Amortization of capitalized interest	2.0	1.0
Distributed income of equity investees	114.9	87.9
Less:		
Interest capitalized from continuing operations	(29.7)	(21.8)
Minority interest in pre-tax income of subsidiaries with no fixed charges	(0.2)	(0.4)
Income as adjusted	$ 1,400.7	$ 665.1
Fixed charges:		
Interest and debt expense, net per statements of income (includes amortization of debt discount, premium, and debt issuance costs; excludes capitalized interest)	$ 328.2	$ 316.2
Add:		
Portion of rents representative of the interest factor		
Services	15.3	12.6
Fixed charges	$ 343.5	$ 328.8

Ratio of earnings to fixed charges	4.08	2.02

KINDER MORGAN ENERGY PARTNERS, L.P. AND SUBSIDIARIES
EXHIBIT 31.1 – CERTIFICATION PURSUANT TO RULE 13A-14(A) OR 15D-14(A) OF THE SECURITIES EXCHANGE ACT OF 1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002

I, Richard D. Kinder, certify that:

1. I have reviewed this quarterly report on Form 10-Q of Kinder Morgan Energy Partners, L.P.;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

   a) designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

   b) designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   c) evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

   d) disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

   a) all significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

   b) any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Aggregate market value of the voting and non-voting common equity held by non-affiliates of the registrant, based on closing prices in the daily composite list for transactions on the New York Stock Exchange on June 29, 2007 was approximately $8,185,538,074. As of January 31, 2008, the registrant had 170,224,734 Common Units outstanding.

KINDER MORGAN ENERGY PARTNERS, L.P.

TABLE OF CONTENTS

PART I

Items 1 and 2. *Business and Properties.*

In this report, unless the context requires otherwise, references to "we," "us," "our," "KMP" or the "Partnership" are intended to mean Kinder Morgan Energy Partners, L.P., a Delaware limited partnership formed in August 1992, our operating limited partnerships and their subsidiaries. Our common units, which represent limited partner interests in us, trade on the New York Stock Exchange under the symbol "KMP." The address of our principal executive offices is 500 Dallas, Suite 1000, Houston, Texas 77002, and our telephone number at this address is (713) 369-9000. You should read the following discussion and analysis in conjunction with our consolidated financial statements included elsewhere in this report. All dollars in this report are United States dollars, except where stated otherwise. Canadian dollars are designated as C$.

(a) General Development of Business

Organizational Structure

Kinder Morgan Energy Partners, L.P. is a leading pipeline transportation and energy storage company in North America. We own an interest in or operate more than 25,000 miles of pipelines and approximately 165 terminals. Our pipelines transport natural gas, gasoline, crude oil, carbon dioxide and other products, and our terminals store petroleum products and chemicals and handle bulk materials like coal and petroleum coke. We are also the leading provider of carbon dioxide, commonly called "CO_2," for enhanced oil recovery projects in North America. As one of the largest publicly traded pipeline limited partnerships in America, we have an enterprise value of approximately $20 billion.

Our general partner is Kinder Morgan G.P., Inc., a Delaware corporation. On July 27, 2007, our general partner issued and sold 100,000 shares of Series A fixed-to-floating rate term cumulative preferred stock due 2057. The consent of holders of a majority of these preferred shares is required with respect to a commencement of or a filing of a voluntary bankruptcy proceeding with respect to us, or two of our subsidiaries: SFPP, L.P. and Calnev Pipe Line LLC.

Knight Inc., a Kansas corporation and a private company formerly known as Kinder Morgan, Inc., indirectly is the sole owner of the common stock of our general partner. On August 28, 2006, Kinder Morgan, Inc., a Kansas corporation referred to as "KMI" in this report, entered into an agreement and plan of merger whereby generally each share of KMI common stock would be converted into the right to receive $107.50 in cash without interest. KMI in turn would merge with a wholly owned subsidiary of Knight Holdco LLC, a privately owned company in which Richard D. Kinder, Chairman and Chief Executive Officer of KMI, would be a major investor. On May 30, 2007, the merger closed, with KMI continuing as the surviving legal entity and subsequently renamed "Knight Inc.," referred to as "Knight" in this report. Additional investors in Knight Holdco LLC include the following: other senior members of Knight management, most of whom are also senior officers of Kinder Morgan G.P., Inc. (our general partner) and of Kinder Morgan Management, LLC (our general partner's delegate); KMI co-founder William V. Morgan; KMI board members Fayez Sarofim and Michael C. Morgan; and affiliates of (i) Goldman Sachs Capital Partners; (ii) American International Group, Inc.; (iii) The Carlyle Group; and (iv) Riverstone Holdings LLC. This transaction is referred to in this report as the "going-private transaction."

As of December 31, 2007, Knight and its consolidated subsidiaries owned, through its general and limited partner interests, an approximately 13.9% interest in us. In addition to the distributions it receives from its limited and general partner interests, Knight also receives an incentive distribution from us as a result of its ownership of our general partner. This incentive distribution is calculated in increments based on the amount by which quarterly distributions to our unitholders exceed specified target levels as set forth in our partnership agreement, reaching a maximum of 50% of distributions allocated to the general partner for distributions above $0.23375 per limited partner unit per quarter. Including both its general and limited partner interests in us, at the 2007 distribution level, Knight received approximately 49% of all quarterly "Available Cash" distributions (as defined in our partnership agreement) from us, with approximately 43% and 6% of all quarterly distributions from us attributable to Knight's general partner and limited partner interests, respectively. The actual level of distributions Knight will receive in the future will vary with the level of distributions to our limited partners determined in accordance with our partnership agreement.

Kinder Morgan Management, LLC, referred to as "KMR" in this report, is a Delaware limited liability company formed in February 2001. Our general partner owns all of KMR's voting securities and, pursuant to a delegation of control agreement, our general partner has delegated to KMR, to the fullest extent permitted under Delaware law and our partnership agreement, all of its power and authority to manage and control our business and affairs, except that KMR cannot take certain specified actions without the approval of our general partner. Under the delegation of control agreement, KMR, as the delegate of our general partner, manages and controls our business and affairs and the business and affairs of our operating limited partnerships and their subsidiaries. Furthermore, in accordance with its limited liability company agreement, KMR's activities are limited to being a limited partner in, and managing and controlling the business and affairs of us, our operating limited partnerships and their subsidiaries.

KMR's shares represent limited liability company interests and trade on the New York Stock Exchange under the symbol "KMR." Since its inception, KMR has used substantially all of the net proceeds received from the public offerings of its shares to purchase i-units from us. The i-units are a separate class of limited partner interests in us and are issued only to KMR. Under the terms of our partnership agreement, the holders of our i-units are entitled to vote on all matters on which the holders of our common units are entitled to vote.

In general, our limited partner units, consisting of i-units, common units and Class B units (the Class B units are similar to our common units except that they are not eligible for trading on the New York Stock Exchange), will vote together as a single class, with each i-unit, common unit and Class B unit having one vote. We pay our quarterly distributions from operations and interim capital transactions to our common and Class B unitholders in cash, and we pay our quarterly distributions to KMR in additional i-units rather than in cash. As of December 31, 2007, KMR, through its ownership of our i-units, owned approximately 29.2% of all of our outstanding limited partner units.

Recent Developments

The following is a brief listing of significant developments since December 31, 2006. Additional information regarding most of these items may be found elsewhere in this report.

- Effective January 1, 2007, we acquired the remaining approximate 50.2% interest in the Cochin pipeline system that we did not already own from affiliates of BP for an aggregate consideration of approximately $47.8 million, consisting of $5.5 million in cash and a note payable having a fair value of $42.3 million. As part of the transaction, the seller also agreed to reimburse us for certain pipeline integrity management costs over a five-year period in an aggregate amount not to exceed $50 million. Upon closing, we became the operator of the pipeline;

- On January 17, 2007, we announced that our CO_2 business segment will invest approximately $120 million to further expand its operations and enable it to meet the increased demand for carbon dioxide in the Permian Basin. The expansion activities will take place in southwest Colorado and include developing a new carbon dioxide source field (named the Doe Canyon Deep Unit that went in service during the first quarter of 2008) and adding infrastructure at both the McElmo Dome Unit and the Cortez Pipeline. The entire expansion is expected to be completed by the middle of 2008;

- On January 30, 2007, we completed a public offering of senior notes. We issued a total of $1.0 billion in principal amount of senior notes, consisting of $600 million of 6.00% notes due February 1, 2017, and $400 million of 6.50% notes due February 1, 2037. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of $992.8 million, and we used the proceeds to reduce the borrowings under our commercial paper program;

- On February 14, 2007, the first phase of the Rockies Express pipeline system, the 327-mile REX-Entrega Project, was placed in service at a cost of approximately $745 million and provided up to 500 million cubic feet of natural gas capacity from the Meeker Hub in Rio Blanco County, Colorado and Wamsutter Hub in Sweetwater County, Wyoming to the Cheyenne Hub in Weld County, Colorado.

  The Rockies Express pipeline project is an approximate $4.9 billion, 1,679-mile natural gas pipeline system which is owned and currently being developed by Rockies Express Pipeline LLC. The Rockies Express pipeline project is to be completed in three phases: (i) a 327-mile, $745 million pipeline running from the Meeker Hub to the Cheyenne Hub with a nominal capacity of 500 million cubic feet per day; (ii) a 713-mile, $1.6 billion pipeline from the Cheyenne Hub to an interconnect in Audrain County, Missouri, transporting up to 1.5 billion cubic feet per day; and (iii) a 639-mile, $2.6 billion pipeline from Audrain County, Missouri to Clarington, located in Monroe County, Ohio. When fully completed, the Rockies Express pipeline system will have the capability to transport 1.8 billion cubic feet per day of natural gas, and binding firm commitments have been secured for all of the pipeline capacity. On January 12, 2008, interim service on the REX-West Project (second phase) commenced. Full service on the REX-West system for 1.5 billion cubic feet per day of contracted capacity is expected to commence in mid-March 2008. See "—(c) Narrative Description of Business—Business Segments—Natural Gas Pipelines—Rockies Express Pipeline" for more information;

- On February 28, 2007, we announced plans to invest up to $100 million to expand our liquids terminal facilities in order to help serve the growing biodiesel market. We entered into long-term agreements as lessors with Green Earth Fuels, LLC to build tankage that will handle biodiesel at our Houston Ship Channel liquids facility. Green Earth Fuels completed construction of an 86 million gallon biodiesel production facility at our Galena Park, Texas liquids terminal in the fourth quarter of 2007;

- On April 30, 2007, we acquired the Trans Mountain pipeline system from Knight for $549.1 million. The Trans Mountain pipeline system, which transports crude oil and refined products from Edmonton, Alberta, Canada to marketing terminals and refineries in British Columbia and the state of Washington, currently transports approximately 260,000 barrels per day. An additional expansion that will increase capacity of the pipeline to 300,000 barrels per day is expected to be in service by November 2008. Current accounting principles require our consolidated financial statements and all other financial information included in this report to be stated to assume that the transfer of Trans Mountain net assets from Knight to us had occurred at the date when both Trans Mountain and we met the accounting requirements for entities under common control (January 1, 2006). As a result, financial statements and financial information presented for prior periods in this report have been restated to reflect our acquisition. In addition, due to the fact that Trans Mountain's operations are managed separately, involve different products and marketing strategies, and produce discrete financial information that is separately evaluated internally by our management, we have identified our Trans Mountain pipeline system as a separate reportable business segment. For additional information regarding this acquisition, see Note 3 to our consolidated financial statements;

- On May 14, 2007, we announced plans to construct a $72 million natural gas pipeline designed to bring new supplies out of East Texas to markets in the Houston and Beaumont, Texas areas. The new pipeline will consist of approximately 63 miles of 24-inch diameter pipe and multiple interconnections with other pipelines. It will connect our Kinder Morgan Tejas system in Harris County, Texas to our Kinder Morgan Texas Pipeline system in Polk County near Goodrich, Texas. In addition, we entered into a long-term binding agreement with CenterPoint Energy Services, Inc. to provide firm transportation for a significant portion of the initial project capacity, which will consist of approximately 225 million cubic feet per day of natural gas using existing compression and be expandable to over 400 million cubic feet per day with additional compression;

- On May 17, 2007, KMR closed the public offering of 5,700,000 of its shares at a price of $52.26 per share. The net proceeds from the offering were used by KMR to buy additional i-units from us. We used the proceeds of $297.9 million from our i-unit issuance to reduce the borrowings under our commercial paper program;

- On May 30, 2007, we purchased the Vancouver Wharves bulk marine terminal from British Columbia Railway Company, a crown corporation owned by the Province of British Columbia, for an aggregate consideration of $57.2 million, consisting of $38.8 million in cash and $18.4 million in assumed liabilities. The Vancouver Wharves facility is located on the north shore of the Port of Vancouver's main harbor, and includes five deep-sea vessel berths situated on a 139-acre site. The terminal assets include significant rail infrastructure, dry bulk and liquid storage, and material handling systems which allow the terminal to handle over 3.5 million tons of cargo annually;

- On June 21, 2007, we closed a public offering of $550 million in principal amount of 6.95% senior notes. The notes are due January 15, 2038. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of $543.9 million, and we used the proceeds to reduce our commercial paper debt;

- On June 22, 2007, the Federal Energy Regulatory Commission, referred to in this report as the FERC, issued an order granting construction and operation of our Kinder Morgan Louisiana Pipeline project, and we officially accepted the order on July 10, 2007. The Kinder Morgan Louisiana Pipeline is expected to cost approximately $510 million and will provide approximately 3.2 billion cubic feet per day of take-away natural gas capacity from the Cheniere Sabine Pass liquefied natural gas terminal, located in Cameron Parish, Louisiana, to various delivery points in Louisiana and will provide interconnects with many other natural gas pipelines, including Natural Gas Pipeline Company of America. The project is supported by fully subscribed capacity and long-term customer commitments with Chevron and Total and is expected to be in service by January 1, 2009;

- On July 10, 2007, we announced a combined $41 million investment for two terminal expansions to help meet the growing need for terminal services in key markets along the Gulf Coast. The investment consists of (i) the construction of a terminal that will include liquids storage, transfer and packaging facilities at the Rubicon Plant site in Geismar, Louisiana; and (ii) the purchase of liquids storage tanks from Royal Vopak in Westwego, Louisiana. The tanks have a storage capacity of approximately 750,000 barrels for vegetable oil, biodiesel, ethanol and other liquids products. The new terminal being built in Geismar will be capable of handling inbound and outbound material via pipeline, rail, truck and barge/vessel. Construction is expected to be complete by the fourth quarter of 2008;

- On July 23, 2007, following the FERC’s expedited approval of our CALNEV Pipeline’s proposed tariff rate structure, we announced our continuing development of the approximate $426 million expansion of the pipeline system into Las Vegas, Nevada. The expansion involves the construction of a new 16-inch diameter pipeline, which will parallel existing utility corridors between Colton, California and Las Vegas in order to minimize environmental impacts. System capacity would increase to approximately 200,000 barrels per day upon completion of the expansion, and could be increased as necessary to over 300,000 barrels per day with the addition of pump stations. The CALNEV expansion is expected to be complete in early 2011;

- On August 6, 2007, Kinder Morgan Interstate Gas Transmission LLC, referred to in this report as KMIGT, filed for regulatory approval to construct and operate a 41-mile, $29 million natural gas pipeline from the Cheyenne Hub to markets in and around Greeley, Colorado. When completed, the Colorado Lateral expansion project will provide firm transportation of up to 55 million cubic feet per day to a local utility under long-term contract. On February 21, 2008, the FERC granted the certification application;

- On August 23, 2007, we announced that we have begun construction on the approximately C$467 million Anchor Loop project, the second phase of the Trans Mountain pipeline system expansion that will increase pipeline capacity from approximately 260,000 to 300,000 barrels of crude oil per day. The project is expected to be complete in November 2008. In April 2007, we commissioned 10 new pump stations which boosted capacity on Trans Mountain from 225,000 to approximately 260,000 barrels per day. The pipeline is currently operating at full capacity;

- On August 28, 2007, we closed a public offering of $500 million in principal amount of 5.85% senior notes. The notes are due September 15, 2012. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of $497.8 million, and we used the proceeds to reduce our commercial paper debt;

- Effective September 1, 2007, we acquired five bulk terminal facilities from Marine Terminals, Inc. for an aggregate consideration of approximately $101.5 million, consisting of $100.3 million in cash and an assumed liability of $1.2 million. The acquired assets and operations are primarily involved in the handling and storage of steel and alloys, and also provide stevedoring and harbor services, scrap handling, and scrap processing services to customers in the steel and alloys industry. The operations are located in Blytheville, Arkansas; Decatur, Alabama; Hertford, North Carolina; and Berkley, South Carolina. Combined, the five facilities handled approximately 13.7 million tons of steel products in 2007. Under long-term contracts, the acquired terminal facilities will continue to provide handling, processing, harboring and warehousing services to Nucor Corporation, one of the nation's largest steel and steel products companies;

- Effective October 5, 2007, we sold our North System natural gas liquids and refined petroleum products pipeline system and our 50% ownership interest in the Heartland Pipeline Company to ONEOK Partners, L.P. for approximately $298.6 million in cash. Our investment in net assets, including all transaction related accruals, was approximately $145.8 million, most of which represented property, plant and equipment, and we recognized approximately $152.8 million of gain on the sale of these net assets. In accordance with generally accepted accounting principles, we accounted for the North System business as a discontinued operation for all periods presented in this report, and we reported the gain with the caption as "Gain on disposal of North System" on our accompanying consolidated statement of income;

- On October 9, 2007, Midcontinent Express Pipeline LLC filed an application with the FERC requesting a certificate of public convenience and necessity that would authorize construction and operation of the approximate 500-mile Midcontinent Express Pipeline natural gas transmission system. We own a 50% interest in Midcontinent Express Pipeline LLC and Energy Transfer Partners L.P. owns the remaining interest. The Midcontinent Express Pipeline will create long-haul, firm natural gas transportation takeaway capacity, either directly or indirectly, from natural gas producing regions located in Texas, Oklahoma and Arkansas. The total project is expected to cost approximately $1.3 billion, and will have an initial transportation capacity of approximately 1.4 billion cubic feet per day of natural gas.

  The Midcontinent Express Pipeline will originate near Bennington, Oklahoma and terminate at an interconnect with Williams' Transco natural gas pipeline system near Butler, Alabama. It will also connect to Natural Gas Pipeline Company of America's natural gas pipeline and to Energy Transfer Partners' 135-mile natural gas pipeline, which extends from the Barnett Shale natural gas producing area in North Texas to an interconnect with the Texoma Pipeline near Paris, Texas. The Midcontinent Express Pipeline now has long-term binding commitments from multiple shippers for approximately 1.2 billion cubic feet per day and, in order to provide a seamless transportation path from various locations in Oklahoma, the pipeline has also executed a firm capacity lease agreement with Enogex, Inc., an Oklahoma-based intrastate natural gas gathering and pipeline company that is wholly-owned by OGE Energy Corp. Subject to the receipt of regulatory approvals, construction of the pipeline is expected to commence in August 2008 and be in service during the first quarter of 2009.

  In January 2008, in conjunction with the signing of additional binding transportation commitments, Midcontinent Express and MarkWest entered into an option agreement which provides MarkWest a one-time right to purchase a 10% ownership interest in Midcontinent Express after the pipeline is fully constructed and placed into service. If the option is exercised, we and Energy Transfer Partners will each own 45% of Midcontinent Express, while MarkWest will own the remaining 10%;

- On October 17, 2007, we announced that we will invest approximately $23 million to expand our Kinder Morgan Interstate Gas Transmission pipeline system in order to serve five separate industrial plants (four of which produce ethanol) near Grand Island, Nebraska. The project is fully subscribed with long-term customer contracts, and subject to the receipt of regulatory approvals filed December 21, 2007, the expansion project is expected to be fully operational by the fall of 2008. Since 2000, our KMIGT system has connected to 17 new ethanol plants, 11 of which are located in the state of Nebraska;

- On November 26, 2007, we announced that we expect to declare cash distributions of $4.02 per unit for 2008, an almost 16% increase over our cash distributions of $3.48 per unit for 2007. This expectation includes contributions from assets owned by us as of the announcement date and does not include any potential benefits from unidentified acquisitions. Additionally, our expectation does not take into account any capital costs associated with financing the payment of reparations sought by shippers on our Pacific operations' interstate pipelines. Our expected growth in distributions in 2008 will be fueled by incremental earnings from Rockies Express-West (the western portion of the Rockies Express Pipeline), higher hedge prices on our

crude oil production (budgeted production volumes for the SACROC oil field unit in 2008 are approximately equal to the volumes realized in 2007), and an anticipated strong performance from our remaining business portfolio;

- In December 2007, we completed a public offering of 7,130,000 of our common units, including common units sold pursuant to the underwriters' over-allotment option, at a price of $48.09 per unit, less commissions and underwriting expenses. We received net proceeds of $342.9 million for the issuance of these 7,130,000 common units, and we used the proceeds to reduce the borrowings under our commercial paper program;
- In December 2007, we completed a second expansion of our Pacific operations' East Line pipeline segment. This expansion consisted of replacing approximately 130 miles of 12-inch diameter pipe between El Paso, Texas and Tucson, Arizona with new 16-inch diameter pipe, constructing additional pump stations, and adding new storage tanks at Tucson. The project, completed at a cost of approximately $154 million, will increase East Line capacity by 36% (to approximately 200,000 barrels per day) to meet the demand for refined petroleum products, and will provide the platform for further incremental expansions through horsepower additions to the system;
- On December 31, 2007, TransColorado Gas Transmission LLC completed an approximate $50 million expansion to provide up to 250 million cubic feet per day of natural gas transportation, starting January 1, 2008, from the Blanco Hub to an interconnect with the Rockies Express pipeline system at the Meeker Hub;
- During 2007, we spent $1,691.6 million for additions to our property, plant and equipment, including both expansion and maintenance projects. Our capital expenditures included the following:

    - $480.0 million in our Terminals segment, largely related to expanding the petroleum products storage capacity at our liquids terminal facilities, including the construction of additional liquids storage tanks at our facilities in Canada and at our facilities located on the Houston Ship Channel and the New York Harbor, and to various expansion projects and improvements undertaken at multiple terminal facilities;
    - $382.5 million in our CO_2 segment, mostly related to additional infrastructure, including wells and injection and compression facilities, to support the expanding carbon dioxide flooding operations at the SACROC and Yates oil field units in West Texas and to expand our capacity to produce and deliver CO_2 from our McElmo Dome and Doe Canyon Source Fields;
    - $305.7 million in our Trans Mountain segment, mostly related to pipeline expansion and improvement projects undertaken to increase crude oil and refined products delivery volumes;
    - $264.0 million in our Natural Gas Pipelines segment, mostly related to current construction of our Kinder Morgan Louisiana Pipeline and to various expansion and improvement projects on our Texas intrastate natural gas pipeline systems, including the development of additional natural gas storage capacity at our natural gas storage facilities located at Markham and Dayton, Texas; and
    - $259.4 million in our Products Pipelines segment, mostly related to the continued expansion work on our Pacific operations' East Line products pipeline, completion of construction projects resulting in additional capacity, and an additional refined products line on our CALNEV Pipeline in order to increase delivery service to the growing Las Vegas, Nevada market;

    Our capital expansion program in 2007 was approximately $2.6 billion (including our share of capital expenditures for both the Rockies Express and Midcontinent Express natural gas pipeline projects). Including all of our business acquisition expenditures, total spending was $3.3 billion. Our capital expansion program will continue to be significant in 2008, as we expect to invest approximately $3.3 billion in expansion capital expenditures (including our share of capital expenditures for both the Rockies Express and Midcontinent Express natural gas pipeline projects), which will help drive earnings and cash flow growth in 2009 and beyond;

- On January 16, 2008, we announced that we plan to invest approximately $56 million to construct a petroleum coke terminal at the BP refinery located in Whiting, Indiana. We have entered into a long-term contract to build and operate the facility, which will handle approximately 2.2 million tons of petroleum coke per year from a coker unit BP plans to construct to process heavy crude oil from Canada. The facility is expected to be in service in mid-year 2011;
- On February 12, 2008, we completed an additional public offering of senior notes. We issued a total of $900 million in principal amount of senior notes, consisting of $600 million of 5.95% notes due February 15, 2018, and $300 million of 6.95% notes due January 15, 2038. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of approximately $894.1 million, and we used the proceeds to reduce the borrowings under our commercial paper program; and
- On February 12, 2008, we completed an additional offering of 1,080,000 of our common units at a price of $55.65 per unit in a privately negotiated transaction. We received net proceeds of $60.1 million for the issuance of these 1,080,000 common units, and we used the proceeds to reduce the borrowings under our commercial paper program.

(b) Financial Information about Segments

For financial information on our five reportable business segments, see Note 15 to our consolidated financial statements.

(c) Narrative Description of Business

Business Strategy

The objective of our business strategy is to grow our portfolio of businesses by:

- focusing on stable, fee-based energy transportation and storage assets that are core to the energy infrastructure of growing markets within North America;
- increasing utilization of our existing assets while controlling costs, operating safely, and employing environmentally sound operating practices;
- leveraging economies of scale from incremental acquisitions and expansions of assets that fit within our strategy and are accretive to cash flow and earnings; and
- maximizing the benefits of our financial structure to create and return value to our unitholders.

Business Segments

We own and manage a diversified portfolio of energy transportation and storage assets. Our operations are conducted through our five operating limited partnerships and their subsidiaries and are grouped into five reportable business segments. These segments are as follows:

- Products Pipelines—which consists of approximately 8,300 miles of refined petroleum products pipelines that deliver gasoline, diesel fuel, jet fuel and natural gas liquids to various markets; plus approximately 60 associated product terminals and petroleum pipeline transmix processing facilities serving customers across the United States;
- Natural Gas Pipelines—which consists of approximately 14,700 miles of natural gas transmission pipelines and gathering lines, plus natural gas storage, treating and processing facilities, through which natural gas is gathered, transported, stored, treated, processed and sold;

- CO_2— which produces, markets and transports, through approximately 1,300 miles of pipelines, carbon dioxide to oil fields that use carbon dioxide to increase production of oil; owns interests in and/or operates ten oil fields in West Texas; and owns and operates a 450 mile crude oil pipeline system in West Texas;

- Terminals—which consists of approximately 108 owned or operated liquids and bulk terminal facilities and more than 45 rail transloading and materials handling facilities located throughout the United States and portions of Canada, which together transload, store and deliver a wide variety of bulk, petroleum, petrochemical and other liquids products for customers across the United States and Canada; and

- Trans Mountain—which consists of over 700 miles of common carrier pipelines, originating at Edmonton, Alberta, for the transportation of crude oil and refined petroleum to the interior of British Columbia and to marketing terminals and refineries located in the greater Vancouver, British Columbia area and Puget Sound in Washington State; plus five associated product terminals.

Generally, as utilization of our pipelines and terminals increases, our fee-based revenues increase. We do not face significant risks relating directly to short-term movements in commodity prices for two principal reasons. First, we primarily transport and/or handle products for a fee and are not engaged in significant unmatched purchases and resales of commodity products. Second, in those areas of our business where we do face exposure to fluctuations in commodity prices, primarily oil production in our CO_2 business segment, we engage in a hedging program to mitigate this exposure.

We regularly consider and enter into discussions regarding potential acquisitions, including those from Knight or its affiliates, and are currently contemplating potential acquisitions. Any such transaction would be subject to negotiation of mutually agreeable terms and conditions, receipt of fairness opinions and approval of the parties' respective boards of directors. While there are currently no unannounced purchase agreements for the acquisition of any material business or assets, such transactions can be effected quickly, may occur at any time and may be significant in size relative to our existing assets or operations.

It is our intention to carry out the above business strategy, modified as necessary to reflect changing economic conditions and other circumstances. However, as discussed under Item 1A "Risk Factors" below, there are factors that could affect our ability to carry out our strategy or affect its level of success even if carried out.

Products Pipelines

Our Products Pipelines segment consists of our refined petroleum products and natural gas liquids pipelines and their associated terminals, our Southeast terminals and our transmix processing facilities.

Pacific Operations

Our Pacific operations include our SFPP, L.P. operations, our CALNEV Pipeline operations and our West Coast Liquid Terminals operations. The assets include interstate common carrier pipelines regulated by the FERC, intrastate pipelines in the state of California regulated by the California Public Utilities Commission, and certain non rate-regulated operations and terminal facilities.

Our Pacific operations serve seven western states with approximately 3,000 miles of refined petroleum products pipelines and related terminal facilities that provide refined products to some of the fastest growing population centers in the United States, including California; Las Vegas and Reno, Nevada; and the Phoenix-Tucson, Arizona corridor. For 2007, the three main product types transported were gasoline (59%), diesel fuel (23%) and jet fuel (18%).

Our Pacific operations also includes CALNEV Pipeline which consists of two parallel 248-mile, 14-inch and 8-inch diameter pipelines that run from our facilities at Colton, California to Las Vegas, Nevada, and which also serves Nellis Air Force Base located in Las Vegas. It also includes approximately 55 miles of pipeline serving Edwards Air Force Base.

Our Pacific operations include 15 truck-loading terminals (13 on SFPP, L.P. and two on CALNEV) with an aggregate usable tankage capacity of approximately 13.7 million barrels. The truck terminals provide services including short-term product storage, truck loading, vapor handling, additive injection, dye injection and oxygenate blending.

Our Pacific operation's West Coast Liquid Terminals are fee-based terminals located in the Seattle, Portland, San Francisco and Los Angeles areas along the west coast of the United States with a combined total capacity of approximately 8.3 million barrels of storage for both petroleum products and chemicals.

Markets. Combined, our Pacific operations' pipelines transport approximately 1.3 million barrels per day of refined petroleum products, providing pipeline service to approximately 31 customer-owned terminals, 11 commercial airports and 14 military bases. Currently, our Pacific operations' pipelines serve approximately 100 shippers in the refined petroleum products market; the largest customers being major petroleum companies, independent refiners, and the United States military.

A substantial portion of the product volume transported is gasoline. Demand for gasoline depends on such factors as prevailing economic conditions, vehicular use patterns and demographic changes in the markets served. If current trends continue, we expect the majority of our Pacific operations' markets to maintain growth rates that will exceed the national average for the foreseeable future. The volume of products transported is affected by various factors, principally demographic growth, economic conditions, product pricing, vehicle miles traveled, population and fleet mileage. Certain product volumes can experience seasonal variations and, consequently, overall volumes may be lower during the first and fourth quarters of each year.

Supply. The majority of refined products supplied to our Pacific operations' pipeline system come from the major refining centers around Los Angeles, San Francisco, El Paso and Puget Sound, as well as from waterborne terminals and connecting pipelines located near these refining centers.

Competition. The two most significant competitors of our Pacific operations' pipeline system are proprietary pipelines owned and operated by major oil companies in the area where our pipeline system delivers products and also refineries with terminals that have trucking arrangements within our market areas. We believe that high capital costs, tariff regulation, and environmental and right-of-way permitting considerations make it unlikely that a competing pipeline system comparable in size and scope to our Pacific operations will be built in the foreseeable future. However, the possibility of individual pipelines being constructed or expanded to serve specific markets is a continuing competitive factor.

The use of trucks for product distribution from either shipper-owned proprietary terminals or from their refining centers continues to compete for short haul movements by pipeline. Our Pacific terminal operations compete with terminals owned by our shippers and by third party terminal operators in California, Arizona and Nevada. Competitors include Shell Oil Products U.S., BP (formerly Arco Terminal Services Company), Wilmington Liquid Bulk Terminals (Vopak), NuStar, and Chevron. We cannot predict with any certainty whether the use of short haul trucking will decrease or increase in the future.

Plantation Pipe Line Company

We own approximately 51% of Plantation Pipe Line Company, referred to in this report as Plantation, a 3,100-mile refined petroleum products pipeline system serving the southeastern United States. An affiliate of ExxonMobil owns the remaining 49% ownership interest. ExxonMobil is the largest shipper on the Plantation system both in terms of volumes and revenues. We operate the system pursuant to agreements with Plantation Services LLC and Plantation. Plantation serves as a common carrier of refined petroleum products to various metropolitan areas, including Birmingham, Alabama; Atlanta, Georgia; Charlotte, North Carolina; and the Washington, D.C. area.

For the year 2007, Plantation delivered an average of 535,672 barrels per day of refined petroleum products. These delivered volumes were comprised of gasoline (63%), diesel/heating oil (23%) and jet fuel (14%). Average delivery volumes for 2007 were 3.5% lower than the 555,063 barrels per day delivered during 2006. The decrease was predominantly driven by (i) the full year impact of alternative pipeline service (initial startup mid-2006) into Southeast markets, and (ii) changes in production patterns from Louisiana refineries related to refiners directing higher margin products (such as reformulated gasoline blendstock for oxygenate blending) into markets not directly served by Plantation.

Markets. Plantation ships products for approximately 30 companies to terminals throughout the southeastern United States. Plantation's principal customers are Gulf Coast refining and marketing companies, fuel wholesalers, and the United States Department of Defense. Plantation's top five shippers represent approximately 80% of total system volumes.

The eight states in which Plantation operates represent a collective pipeline demand of approximately two million barrels per day of refined petroleum products. Plantation currently has direct access to about 1.5 million barrels per day of this overall market. The remaining 0.5 million barrels per day of demand lies in markets (e.g., Nashville, Tennessee; North Augusta, South Carolina; Bainbridge, Georgia; and Selma, North Carolina) currently served by another pipeline company. Plantation also delivers jet fuel to the Atlanta, Georgia; Charlotte, North Carolina; and Washington, D.C. airports (Ronald Reagan National and Dulles). Combined jet fuel shipments to these four major airports increased 3% in 2007 compared to 2006, with the majority of this growth occurring at Dulles Airport.

Supply. Products shipped on Plantation originate at various Gulf Coast refineries from which major integrated oil companies and independent refineries and wholesalers ship refined petroleum products. Plantation is directly connected to and supplied by a total of ten major refineries representing approximately 2.3 million barrels per day of refining capacity.

Competition. Plantation competes primarily with the Colonial pipeline system, which also runs from Gulf Coast refineries throughout the southeastern United States and extends into the northeastern states.

Central Florida Pipeline

Our Central Florida pipeline system consists of a 110-mile, 16-inch diameter pipeline that transports gasoline and an 85-mile, 10-inch diameter pipeline that transports diesel fuel and jet fuel from Tampa to Orlando, with an intermediate delivery point on the 10-inch pipeline at Intercession City, Florida. In addition to being connected to our Tampa terminal, the pipeline system is connected to terminals owned and operated by TransMontaigne, Citgo, BP, and Marathon Petroleum. The 10-inch diameter pipeline is connected to our Taft, Florida terminal (located near Orlando) and is also the sole pipeline supplying jet fuel to the Orlando International Airport in Orlando, Florida. In 2007, the pipeline system transported approximately 113,800 barrels per day of refined products, with the product mix being approximately 69% gasoline, 12% diesel fuel, and 19% jet fuel.

We also own and operate liquids terminals in Tampa and Taft, Florida. The Tampa terminal contains approximately 1.5 million barrels of storage capacity and is connected to two ship dock facilities in the Port of Tampa. The Tampa terminal provides storage for gasoline, diesel fuel and jet fuel for further movement into either trucks or into the Central Florida pipeline system. The Tampa terminal also provides storage and truck rack blending services for ethanol and bio-diesel. The Taft terminal contains approximately 0.7 million barrels of storage capacity, for gasoline and diesel fuel for further movement into trucks.

Markets. The estimated total refined petroleum products demand in the state of Florida is approximately 800,000 barrels per day. Gasoline is, by far, the largest component of that demand at approximately 545,000 barrels per day. The total refined petroleum products demand for the Central Florida region of the state, which includes the Tampa and Orlando markets, is estimated to be approximately 360,000 barrels per day, or 45% of the consumption of refined products in the state. We distribute approximately 150,000 barrels of refined petroleum products per day, including the Tampa terminal truck loadings. The balance of the market is supplied primarily by trucking firms and marine transportation firms. Most of the jet fuel used at Orlando International Airport is moved through our Tampa terminal and the Central Florida pipeline system. The market in Central Florida is seasonal, with demand peaks in March and April during spring break and again in the summer vacation season, and is also heavily influenced by tourism, with Disney World and other attractions located near Orlando.

Supply. The vast majority of refined petroleum products consumed in Florida is supplied via marine vessels from major refining centers in the Gulf Coast of Louisiana and Mississippi and refineries in the Caribbean basin. A lesser amount of refined petroleum products is being supplied by refineries in Alabama and by Texas Gulf Coast refineries via marine vessels and through pipeline networks that extend to Bainbridge, Georgia. The supply into Florida is generally transported by ocean-going vessels to the larger metropolitan ports, such as Tampa, Port Everglades near Miami, and Jacksonville. Individual markets are then supplied from terminals at these ports and other smaller ports, predominately by trucks, except the Central Florida region, which is served by a combination of trucks and pipelines.

Competition. With respect to the Central Florida pipeline system, the most significant competitors are trucking firms and marine transportation firms. Trucking transportation is more competitive in serving markets close to the marine terminals on the east and west coasts of Florida. We are utilizing tariff incentives to attract volumes to the pipeline that might otherwise enter the Orlando market area by truck from Tampa or by marine vessel into Cape Canaveral. We believe it is unlikely that a new pipeline system comparable in size and scope to our Central Florida Pipeline system will be constructed, due to the high cost of pipeline construction, tariff regulation and environmental and right-of-way permitting in Florida. However, the possibility of such a pipeline or a smaller capacity pipeline being built is a continuing competitive factor.

With respect to the terminal operations at Tampa, the most significant competitors are proprietary terminals owned and operated by major oil companies, such as Marathon Petroleum, BP and Citgo, located along the Port of Tampa, and the Chevron and Motiva terminals in Port Tampa. These terminals generally support the storage requirements of their parent or affiliated companies' refining and marketing operations and provide a mechanism for an oil company to enter into exchange contracts with third parties to serve its storage needs in markets where the oil company may not have terminal assets.

Federal regulation of marine vessels, including the requirement under the Jones Act that United States-flagged vessels contain double-hulls, is a significant factor influencing the availability of vessels that transport refined petroleum products. Marine vessel owners are phasing in the requirement based on the age of the vessel and some older vessels are being redeployed into use in other jurisdictions rather than being retrofitted with a double-hull for use in the United States.

Cochin Pipeline System

Our Cochin pipeline system consists of an approximate 1,900-mile, 12-inch diameter multi-product pipeline operating between Fort Saskatchewan, Alberta and Windsor, Ontario, including five terminals.

The pipeline operates on a batched basis and has an estimated system capacity of approximately 70,000 barrels per day. It includes 31 pump stations spaced at 60 mile intervals and five United States propane terminals. Underground storage is available at Fort Saskatchewan, Alberta and Windsor, Ontario through third parties. In 2007, the pipeline system transported approximately 40,600 barrels per day of natural gas liquids.

Markets. The pipeline traverses three provinces in Canada and seven states in the United States transporting high vapor pressure ethane, propane, butane and natural gas liquids to the Midwestern United States and eastern Canadian petrochemical and fuel markets. Current operations involve only the transportation of propane on Cochin.

Supply. Injection into the system can occur from BP, Provident, Keyera or Dow facilities with connections at Fort Saskatchewan, Alberta and from Spectra at interconnects at Regina and Richardson, Saskatchewan.

Competition. The pipeline competes with railcars and Enbridge Energy Partners for natural gas liquids long-haul business from Fort Saskatchewan, Alberta and Windsor, Ontario. The pipeline's primary competition in the Chicago natural gas liquids market comes from the combination of the Alliance pipeline system, which brings unprocessed gas into the United States from Canada, and from Aux Sable, which processes and markets the natural gas liquids in the Chicago market.

Cypress Pipeline

Our Cypress pipeline is an interstate common carrier natural gas liquids pipeline originating at storage facilities in Mont Belvieu, Texas and extending 104 miles east to a major petrochemical producer in the Lake Charles, Louisiana area. Mont Belvieu, located approximately 20 miles east of Houston, is the largest hub for natural gas liquids gathering, transportation, fractionation and storage in the United States.

Markets. The pipeline was built to service Westlake Petrochemicals Corporation in the Lake Charles, Louisiana area under a 20-year ship-or-pay agreement that expires in 2011. The contract requires a minimum volume of 30,000 barrels per day.

Supply. The Cypress pipeline originates in Mont Belvieu where it is able to receive ethane and ethane/propane mix from local storage facilities. Mont Belvieu has facilities to fractionate natural gas liquids received from several pipelines into ethane and other components. Additionally, pipeline systems that transport natural gas liquids from major producing areas in Texas, New Mexico, Louisiana, Oklahoma and the Mid-Continent Region supply ethane and ethane/propane mix to Mont Belvieu.

Competition. The pipeline's primary competition into the Lake Charles market comes from Louisiana onshore and offshore natural gas liquids.

Southeast Terminals

Our Southeast terminal operations consist of Kinder Morgan Southeast Terminals LLC and its consolidated affiliate, Guilford County Terminal Company, LLC. Kinder Morgan Southeast Terminals LLC, a wholly-owned subsidiary referred to in this report as KMST, was formed for the purpose of acquiring and operating high-quality liquid petroleum products terminals located primarily along the Plantation/Colonial pipeline corridor in the Southeastern United States.

Combined, our Southeast terminal operations consist of 24 petroleum products terminals with a total storage capacity of approximately 8.0 million barrels. These terminals transferred approximately 361,000 barrels of refined products per day during 2007 and approximately 347,000 barrels of refined products per day during 2006.

Markets. KMST's acquisition and marketing activities are focused on the Southeastern United States from Mississippi through Virginia, including Tennessee. The primary function involves the receipt of petroleum products from common carrier pipelines, short-term storage in terminal tankage, and subsequent loading onto tank trucks. KMST also offered ethanol blending and storage services in northern Virginia during 2007. Longer term storage is available at many of the terminals. KMST has a physical presence in markets representing almost 80% of the pipeline-supplied demand in the Southeast and offers a competitive alternative to marketers seeking a relationship with a truly independent truck terminal service provider.

Supply. Product supply is predominately from Plantation and/or Colonial pipelines. To the maximum extent practicable, we endeavor to connect KMST terminals to both Plantation and Colonial.

Competition. There are relatively few independent terminal operators in the Southeast. Most of the refined petroleum products terminals in this region are owned by large oil companies (BP, Motiva, Citgo, Marathon, and Chevron) who use these assets to support their own proprietary market demands as well as product exchange activity. These oil companies are not generally seeking third party throughput customers. Magellan Midstream Partners and TransMontaigne Product Services represent the other significant independent terminal operators in this region.

Transmix Operations

Our Transmix operations include the processing of petroleum pipeline transmix, a blend of dissimilar refined petroleum products that have become co-mingled in the pipeline transportation process. During pipeline transportation, different products are transported through the pipelines abutting each other, and generate a volume of different mixed products called transmix. At our transmix processing facilities, we process and separate pipeline transmix into pipeline-quality gasoline and light distillate products. We process transmix at six separate processing facilities located in Colton, California; Richmond, Virginia; Dorsey Junction, Maryland; Indianola, Pennsylvania; Wood River, Illinois; and Greensboro, North Carolina. Combined, our transmix facilities processed approximately 10.4 million barrels of transmix in 2007 and approximately 9.1 million barrels in 2006.

In 2007, we increased the processing capacity of the recently constructed Greensboro, North Carolina transmix facility to better serve the needs of Plantation. The facility, which is located within KMST's refined products tank farm, now has the capability to process approximately 8,500 barrels of transmix per day. In addition to providing additional processing business, the facility continues to provide Plantation a lower cost alternative compared to other transmix processing arrangements that recover ultra low sulfur diesel, and also more fully utilizes current KMST tankage at the Greensboro, North Carolina tank farm.

Markets. The Gulf and East Coast refined petroleum products distribution system, particularly the Mid-Atlantic region, is the target market for our East Coast transmix processing operations. The Mid-Continent area and the New York Harbor are the target markets for our Illinois and Pennsylvania assets, respectively. Our West Coast transmix processing operations support the markets served by our Pacific operations in Southern California.

Supply. Transmix generated by Plantation, Colonial, Explorer, Sun, Teppco, and our Pacific operations provide the vast majority of the supply. These suppliers are committed to the use of our transmix facilities under long-term contracts. Individual shippers and terminal operators provide additional supply. Shell acquires transmix for processing at Indianola, Richmond and Wood River; Colton is supplied by pipeline shippers of our Pacific operations; Dorsey Junction is supplied by Colonial Pipeline Company and Greensboro is supplied by Plantation.

Competition. Placid Refining is our main competitor in the Gulf Coast area. There are various processors in the Mid-Continent area, primarily ConocoPhillips, Gladieux Refining and Williams Energy Services, who compete with our transmix facilities. Motiva Enterprises's transmix facility located near Linden, New Jersey is the principal competition for New York Harbor transmix supply and for our Indianola facility. A number of smaller organizations operate transmix processing facilities in the West and Southwest. These operations compete for supply that we envision as the basis for growth in the West and Southwest. Our Colton processing facility also competes with major oil company refineries in California.

Natural Gas Pipelines

Our Natural Gas Pipelines segment contains both interstate and intrastate pipelines. Its primary businesses consist of natural gas sales, transportation, storage, gathering, processing and treating. Within this segment, we own approximately 14,700 miles of natural gas pipelines and associated storage and supply lines that are strategically located at the center of the North American pipeline grid. Our transportation network provides access to the major gas supply areas in the western United States, Texas and the Midwest, as well as major consumer markets.

Texas Intrastate Natural Gas Pipeline Group

The group, which operates primarily along the Texas Gulf Coast, consists of the following four natural gas pipeline systems:

- our Kinder Morgan Texas Pipeline;
- our Kinder Morgan Tejas Pipeline;
- our Mier-Monterrey Mexico Pipeline; and
- our Kinder Morgan North Texas Pipeline.

The two largest systems in the group are our Kinder Morgan Texas Pipeline and our Kinder Morgan Tejas Pipeline. These pipelines essentially operate as a single pipeline system, providing customers and suppliers with improved flexibility and reliability. The combined system includes approximately 6,000 miles of intrastate natural gas pipelines with a peak transport and sales capacity of approximately 5.2 billion cubic feet per day of natural gas and approximately 120 billion cubic feet of system natural gas storage capacity. In addition, the combined system, through owned assets and contractual arrangements with third parties, has the capability to process 915 million cubic feet per day of natural gas for liquids extraction and to treat approximately 250 million cubic feet per day of natural gas for carbon dioxide removal.

Collectively, the combined system primarily serves the Texas Gulf Coast by selling, transporting, processing and treating gas from multiple onshore and offshore supply sources to serve the Houston/Beaumont/Port Arthur industrial markets, local gas distribution utilities, electric utilities and merchant power generation markets. It serves as a buyer and seller of natural gas, as well as a transporter of natural gas. The purchases and sales of natural gas are primarily priced with reference to market prices in the consuming region of its system. The difference between the purchase and sale prices is the rough equivalent of a transportation fee and fuel costs.

Included in the operations of our Kinder Morgan Tejas system is our Kinder Morgan Border Pipeline system. Kinder Morgan Border owns and operates an approximately 97-mile, 24-inch diameter pipeline that extends from a point of interconnection with the pipeline facilities of Pemex Gas Y Petroquimica Basica at the International Border between the United States and Mexico, to a point of interconnection with other intrastate pipeline facilities of Kinder Morgan Tejas located at King Ranch, Kleburg County, Texas. The 97-mile pipeline, referred to as the import/export facility, is capable of importing Mexican gas into the United States, and exporting domestic gas to Mexico. The imported Mexican gas is received from, and the exported domestic gas is delivered to, Pemex. The capacity of the import/export facility is approximately 300 million cubic feet of natural gas per day.

Our Mier-Monterrey Pipeline consists of a 95-mile, 30-inch diameter natural gas pipeline that stretches from south Texas to Monterrey, Mexico and can transport up to 375 million cubic feet per day. The pipeline connects to a 1,000-megawatt power plant complex and to the PEMEX natural gas transportation system. We have entered into a long-term contract (expiring in 2018) with Pemex, which has subscribed for all of the pipeline’s capacity.

Our Kinder Morgan North Texas Pipeline consists of an 86-mile, 30-inch diameter pipeline that transports natural gas from an interconnect with the facilities of Natural Gas Pipeline Company of America LLC, referred to in this report as NGPL, in Lamar County, Texas to a 1,750-megawatt electric generating facility located in Forney, Texas, 15 miles east of Dallas, Texas. It has the capacity to transport 325 million cubic feet per day of natural gas and is fully subscribed under a long-term contract that expires in 2032. In 2006, the existing system was enhanced to be bi-directional, so that deliveries of additional supply coming out of the Barnett Shale area can be delivered into NGPL’s pipeline as well as power plants in the area.

We also own and operate various gathering systems in South and East Texas. These systems aggregate natural gas supplies into our main transmission pipelines, and in certain cases, aggregate natural gas that must be processed or treated at its own or third-party facilities. We own plants that can process up to 115 million cubic feet per day of natural gas for liquids extraction. In addition, we have contractual rights to process approximately 800 million cubic feet per day of natural gas at various third-party owned facilities. We also own and operate three natural gas treating plants that provide carbon dioxide and/or hydrogen sulfide removal. We can treat up to 155 million cubic feet per day of natural gas for carbon dioxide removal at our Fandango Complex in Zapata County, Texas, 50 million cubic feet per day of natural gas at our Indian Rock Plant in Upshur County, Texas and approximately 45 million cubic feet per day of natural gas at our Thompsonville Facility located in Jim Hogg County, Texas.

Our North Dayton natural gas storage facility, located in Liberty County, Texas, has two existing storage caverns providing approximately 6.3 billion cubic feet of total capacity, consisting of 4.2 billion cubic feet of working capacity and 2.1 billion cubic feet of cushion gas. We have entered into a long-term storage capacity and transportation agreement with NRG covering two billion cubic feet of natural gas working capacity that expires in March 2017. In June 2006, we announced an expansion project that will significantly increase natural gas storage capacity at our North Dayton facility. The project is now expected to cost between $105 million and $115 million and involves the development of a new underground storage cavern that will add an estimated 6.5 billion cubic feet of incremental working natural gas storage capacity. The additional capacity is expected to be available in mid-2010.

We also own the West Clear Lake natural gas storage facility located in Harris County, Texas. Under a long term contract that expires in 2012, Coral Energy Resources, L.P. operates the facility and controls the 96 billion cubic feet of natural gas working capacity, and we provide transportation service into and out of the facility.

Additionally, we lease a salt dome storage facility located near Markham, Texas according to the provisions of an operating lease that expires in March 2013. We can, at our sole option, extend the term of this lease for two additional ten-year periods. The facility was expanded in 2007 and now consists of four salt dome caverns with approximately 17.3 billion cubic feet of working natural gas capacity and up to 1.1 billion cubic feet per day of peak deliverability. We also lease two salt dome caverns, known as the Stratton Ridge Facilities, from BP America Production Company in Brazoria County, Texas. The Stratton Ridge Facilities have a combined working natural gas capacity of 1.4 billion cubic feet and a peak day deliverability of 100 million cubic feet per day. A lease with Dow Hydrocarbon & Resources, Inc. for a salt dome cavern containing approximately 5.0 billion cubic feet of working capacity expired during the third quarter of 2007.

Markets. Texas is one of the largest natural gas consuming states in the country. The natural gas demand profile in our Texas intrastate pipeline group's market area is primarily composed of industrial (including on-site cogeneration facilities), merchant and utility power, and local natural gas distribution consumption. The industrial demand is primarily year-round load. Merchant and utility power demand peaks in the summer months and is complemented by local natural gas distribution demand that peaks in the winter months. As new merchant gas fired generation has come online and displaced traditional utility generation, we have successfully attached many of these new generation facilities to our pipeline systems in order to maintain and grow our share of natural gas supply for power generation. Additionally, in 2007, we have increased our capability and commitment to serve the growing local natural gas distribution market in the greater Houston metropolitan area.

We serve the Mexico market through interconnection with the facilities of Pemex at the United States-Mexico border near Arguellas, Mexico and our Mier-Monterrey Mexico pipeline. In 2007, deliveries through the existing interconnection near Arguellas fluctuated from zero to approximately 206 million cubic feet per day of natural gas, and there were several days of exports to the United States which ranged up to 250 million cubic feet per day. Deliveries to Monterrey also generally ranged from zero to 312 million cubic feet per day. We primarily provide transport service to these markets on a fee for service basis, including a significant demand component, which is paid regardless of actual throughput. Revenues earned from our activities in Mexico are paid in U.S. dollar equivalent.

Supply. We purchase our natural gas directly from producers attached to our system in South Texas, East Texas, West Texas and along the Texas Gulf Coast. In addition, we also purchase gas at interconnects with third-party interstate and intrastate pipelines. While our intrastate group does not produce gas, it does maintain an active well connection program in order to offset natural declines in production along its system and to secure supplies for additional demand in its market area. Our intrastate system has access to both onshore and offshore sources of supply, and is well positioned to interconnect with liquefied natural gas projects currently under development by others along the Texas Gulf Coast.

Competition. The Texas intrastate natural gas market is highly competitive, with many markets connected to multiple pipeline companies. We compete with interstate and intrastate pipelines, and their shippers, for attachments to new markets and supplies and for transportation, processing and treating services.

Rocky Mountain Natural Gas Pipeline Group

The group, which operates primarily along the Rocky Mountain region of the Western portion of the United States, consists of the following four natural gas pipeline systems:

- our Kinder Morgan Interstate Gas Transmission Pipeline;
- our Trailblazer Pipeline;
- our Trans-Colorado Pipeline; and
- our 51% ownership interest in the Rockies Express Pipeline.

Kinder Morgan Interstate Gas Transmission LLC

Kinder Morgan Interstate Gas Transmission LLC, referred to in this report as KMIGT, owns approximately 5,100 miles of transmission lines in Wyoming, Colorado, Kansas, Missouri and Nebraska. The pipeline system is powered by 28 transmission and storage compressor stations with approximately 160,000 horsepower. KMIGT also owns the Huntsman natural gas storage facility, located in Cheyenne County, Nebraska, which has approximately 10 billion cubic feet of firm capacity commitments and provides for withdrawal of up to 169 million cubic feet of natural gas per day.

Under transportation agreements and FERC tariff provisions, KMIGT offers its customers firm and interruptible transportation and storage services, including no-notice service and park and loan services. For these services, KMIGT charges rates which include the retention of fuel and gas lost and unaccounted for in-kind. Under KMIGT's tariffs, firm transportation and storage customers pay reservation charges each month plus a commodity charge based on the actual transported or stored volumes. In contrast, interruptible transportation and storage customers pay a commodity charge based upon actual transported and/or stored volumes. Under the no-notice service, customers pay a fee for the right to use a combination of firm storage and firm transportation to effect deliveries of natural gas up to a specified volume without making specific nominations. KMIGT also has the authority to make gas purchases and sales, as needed for system operations, pursuant to its currently effective FERC gas tariff.

KMIGT also offers its Cheyenne Market Center service, which provides nominated storage and transportation service between its Huntsman storage field and multiple interconnecting pipelines at the Cheyenne Hub, located in Weld County, Colorado. This service is fully subscribed through May 2014.

Markets. Markets served by KMIGT provide a stable customer base with expansion opportunities due to the system's access to growing Rocky Mountain supply sources. Markets served by KMIGT are comprised mainly of local natural gas distribution companies and interconnecting interstate pipelines in the mid-continent area. End-users of the local natural gas distribution companies typically include residential, commercial, industrial and agricultural customers. The pipelines interconnecting with KMIGT in turn deliver gas into multiple markets including some of the largest population centers in the Midwest. Natural gas demand to power pumps for crop irrigation during the summer from time-to-time exceeds heating season demand and provides KMIGT relatively consistent volumes throughout the year. In addition, KMIGT has seen a significant increase in demand from ethanol producers, and is actively seeking ways to meet the demands from the ethanol producing community.

Supply. Approximately 7%, by volume, of KMIGT's firm contracts expire within one year and 51% expire within one to five years. Over 99% of the system's total firm transport capacity is currently subscribed, with 78% of the total contracted capacity held by KMIGT's top nine shippers.

Competition. KMIGT competes with other interstate and intrastate gas pipelines transporting gas from the supply sources in the Rocky Mountain and Hugoton Basins to mid-continent pipelines and market centers.

Trailblazer Pipeline Company LLC

Our subsidiary, Trailblazer Pipeline Company LLC, owns a 436-mile natural gas pipeline system. Trailblazer's pipeline originates at an interconnection with Wyoming Interstate Company Ltd.'s pipeline system near Rockport, Colorado and runs through southeastern Wyoming to a terminus near Beatrice, Nebraska where it interconnects with NGPL and Northern Natural Gas Company's pipeline systems. NGPL, an investee of Knight, manages, maintains and operates Trailblazer, for which it is reimbursed at cost.

Trailblazer provides transportation services to third-party natural gas producers, marketers, local distribution companies and other shippers. Pursuant to transportation agreements and FERC tariff provisions, Trailblazer offers its customers firm and interruptible transportation. Under Trailblazer's tariffs, firm transportation customers pay reservation charges each month plus a commodity charge based on actual volumes transported. Interruptible transportation customers pay a commodity charge based upon actual volumes transported.

Markets. Significant growth in Rocky Mountain natural gas supplies has prompted a need for additional pipeline transportation service. Trailblazer has a certificated capacity of 846 million cubic feet per day of natural gas.

Supply. As of December 31, 2007, none of Trailblazer's firm contracts, by volume, expire before one year and 54%, by volume, expire within one to five years. Affiliated entities have contracted for less than 1% of the total firm transportation capacity. All of the system's firm transport capacity is currently subscribed.

Competition. The main competition that Trailblazer currently faces is that the gas supply in the Rocky Mountain area either stays in the area or is moved west and therefore is not transported on Trailblazer's pipeline. In addition, El Paso's Cheyenne Plains Pipeline can transport approximately 730 million cubic feet per day of natural gas from Weld County, Colorado to Greensburg, Kansas and competes with Trailblazer for natural gas pipeline transportation demand from the Rocky Mountain area. Additional competition could come from the Rockies Express pipeline system or from proposed pipeline projects. No assurance can be given that additional competing pipelines will not be developed in the future.

TransColorado Gas Transmission Company LLC

Our subsidiary, TransColorado Gas Transmission Company LLC, owns a 300-mile interstate natural gas pipeline that extends from approximately 20 miles southwest of Meeker, Colorado to Bloomfield, New Mexico. It has multiple points of interconnection with various interstate and intrastate pipelines, gathering systems, and local distribution companies. The pipeline system is powered by eight compressor stations having an aggregate of approximately 39,000 horsepower. Knight manages, maintains and operates TransColorado, for which it is reimbursed at cost.

TransColorado has the ability to flow gas south or north. TransColorado receives gas from one coal seam natural gas treating plant located in the San Juan Basin of Colorado and from pipeline, processing plant and gathering system interconnections within the Paradox and Piceance Basins of western Colorado. Gas flowing south through the pipeline moves onto the El Paso, Transwestern and Questar Southern Trail pipeline systems. Gas moving north flows into the Colorado Interstate, Wyoming Interstate and Questar pipeline systems at the Greasewood Hub and the Rockies Express pipeline system at the Meeker Hub. TransColorado provides transportation services to third-party natural gas producers, marketers, gathering companies, local distribution companies and other shippers.

Pursuant to transportation agreements and FERC tariff provisions, TransColorado offers its customers firm and interruptible transportation and interruptible park and loan services. For these services, TransColorado charges rates which include the retention of fuel and gas lost and unaccounted for in-kind. Under TransColorado's tariffs, firm transportation customers pay reservation charges each month plus a commodity charge based on actual volumes transported. Interruptible transportation customers pay a commodity charge based upon actual volumes transported. The underlying reservation and commodity charges are assessed pursuant to a maximum recourse rate structure, which does not vary based on the distance gas is transported. TransColorado has the authority to negotiate rates with customers if it has first offered service to those customers under its reservation and commodity charge rate structure.

TransColorado's approximately $50 million Blanco-Meeker Expansion Project was completed in the fourth quarter of 2007 and placed into service on January 1, 2008. The project boosted capacity on the pipeline by approximately 250 million cubic feet per day of natural gas from the Blanco Hub area in San Juan County, New Mexico through TransColorado's existing pipeline for deliveries to the Rockies Express Pipeline at an existing point of interconnection located at the Meeker Hub in Rio Blanco County, Colorado. All of the incremental capacity is subscribed under a long-term contract with ConocoPhillips.

Markets. TransColorado acts principally as a feeder pipeline system from the developing natural gas supply basins on the Western Slope of Colorado into the interstate natural gas pipelines that lead away from the Blanco Hub area of New Mexico and the interstate natural gas pipelines that lead away eastward from northwestern Colorado and southwestern Wyoming. TransColorado is one of the largest transporters of natural gas from the Western Slope supply basins of Colorado and provides a competitively attractive outlet for that developing natural gas resource. In 2007, TransColorado transported an average of approximately 734 million cubic feet per day of natural gas from these supply basins.

Supply. During 2007, 94% of TransColorado's transport business was with producers or their own marketing affiliates, and 6% was with marketing companies and various gas marketers. Approximately 64% of TransColorado's transport business in 2007 was conducted with its two largest customers. All of TransColorado's southbound pipeline capacity is committed under firm transportation contracts that extend at least through year-end 2008. TransColorado's pipeline capacity is 62% subscribed during 2009 through 2012, and TransColorado is actively pursuing contract extensions and or replacement contracts to increase firm subscription levels beyond 2008.

Competition. TransColorado competes with other transporters of natural gas in each of the natural gas supply basins it serves. These competitors include both interstate and intrastate natural gas pipelines and natural gas gathering systems. TransColorado's shippers compete for market share with shippers drawing upon gas production facilities within the New Mexico portion of the San Juan Basin. TransColorado has phased its past construction and expansion efforts to coincide with the ability of the interstate pipeline grid at Blanco, New Mexico to accommodate greater natural gas volumes. TransColorado's transport concurrently ramped up over that period such that TransColorado now enjoys a growing share of the outlet from the San Juan Basin to the southwestern United States marketplace.

Historically, the competition faced by TransColorado with respect to its natural gas transportation services has generally been based upon the price differential between the San Juan and Rocky Mountain basins. New pipelines servicing these producing basins have had the effect of reducing that price differential; however, given the growth in the Piceance and Paradox basins and the direct accessibility of the TransColorado system to these basins, we believe that TransColorado's transport business to be sustainable and not significantly impacted by any new entry of competition.

Rockies Express Pipeline

We operate and currently own 51% of the 1,679-mile Rockies Express Pipeline system, which when fully completed, will be one of the largest natural gas pipelines ever constructed in North America. The approximately $4.9 billion project will have the capability to transport 1.8 billion cubic feet per day of natural gas, and binding firm commitments have been secured for virtually all of the pipeline capacity.

Our ownership is through our 51% interest in West2East Pipeline LLC. the sole owner of Rockies Express Pipeline LLC. Sempra Pipelines & Storage, a unit of Sempra Energy, and ConocoPhillips hold the remaining ownership interests in the Rockies Express project. We account for our investment under the equity method of accounting due to the fact that our ownership interest will be reduced to 50% when construction of the entire project is completed. At that time, the capital accounts of West2East Pipeline LLC will be trued up to reflect our 50% economics in the project. We do not anticipate any additional changes in the ownership structure of the project.

On August 9, 2005, the FERC approved Rockies Express Pipeline LLC's application to construct 327 miles of pipeline facilities in two phases. Phase I consisted of the following two pipeline segments: (i) a 136-mile, 36-inch diameter pipeline that extends from the Meeker Hub in Rio Blanco County, Colorado to the Wamsutter Hub in Sweetwater County, Wyoming; and (ii) a 191-mile, 42-inch diameter pipeline that extends from the Wamsutter Hub to the Cheyenne Hub in Weld County, Colorado. Phase II of the project includes the construction of three compressor stations referred to as the Meeker, Big Hole and Wamsutter compressor stations. The Meeker and Wamsutter stations were completed and placed in-service in January 2008. Construction of the Big Hole compressor station is planned to commence in the second quarter of 2008, in order to meet an expected in-service date of June 30, 2009.

On April 19, 2007 the FERC issued a final order approving Rockies Express Pipeline LLC's application for authorization to construct and operate certain facilities comprising its proposed Rockies Express-West Project. This project is the first planned segment extension of the Rockies Express Pipeline LLC's original certificated facilities, and is comprised of approximately 713 miles of 42-inch diameter pipeline extending eastward from the Cheyenne Hub to an interconnection with Panhandle Eastern Pipe Line located in Audrain County, Missouri. The segment extension transports approximately 1.5 billion cubic feet per day of natural gas across the following five states: Wyoming, Colorado, Nebraska, Kansas and Missouri and includes certain improvements to pre-existing Rockies Express facilities located to the west of the Cheyenne Hub. Construction of the Rockies Express-West project commenced on May 21, 2007, and interim firm transportation service with capacity of approximately 1.4 billion cubic feet per day began January 12, 2008. The entire project (Rockies Express-West pipeline segment) is expected to become fully operational in mid-March 2008.

On April 30, 2007, Rockies Express Pipeline LLC filed an application with the FERC requesting approval to construct and operate the REX-East Project, the third segment of the Rockies Express pipeline system. The REX-East Project will be comprised of approximately 639 miles of 42-inch diameter pipeline commencing from the terminus of the Rockies Express-West pipeline in Audrain County, Missouri to a terminus near the town of

Clarington in Monroe County, Ohio. The pipeline segment will be capable of transporting approximately 1.8 billion cubic feet per day of natural gas. The FERC issued a draft environmental report in late November 2007 for the REX-East Project, and subject to receipt of regulatory approvals, the REX-East Project is expected to begin partial service on December 31, 2008, and to be in full service in June 2009.

In December 2007, Rockies Express Pipeline LLC completed a non-binding open season undertaken to solicit market interest for the "Northeast Express Project," a 375-mile extension and expansion of the Rockies Express pipeline system from Clarington, Ohio, to Princeton, New Jersey. Significant expressions of interest were received on the Northeast Express Project and negotiations with prospective shippers to enter into binding commitments are currently underway. Subject to receipt of sufficient binding commitments and regulatory approvals, the Northeast Express Project would go into service in late 2010. When complete, the Northeast Express Project would provide up to 1.8 billion cubic feet of transportation capacity to northeast markets from the Lebanon Hub and other pipeline receipt points between Lebanon, Ohio and Clarington, Ohio.

Markets. The Rockies Express Pipeline is capable of delivering gas to multiple markets along its pipeline system, primarily through interconnects with other interstate pipeline companies and direct connects to local distribution companies. Rockies Express Pipeline’s Zone 1 encompasses receipts and deliveries of natural gas west of the Cheyenne Hub, located in Northern Colorado near Cheyenne, Wyoming. Through the Zone 1 facilities, Rockies Express can deliver gas to TransColorado Gas Transmission Company LLC in northwestern Colorado, which can in turn transport the gas further south for delivery into the San Juan Basin area. In Zone 1, Rockies Express Pipeline can also deliver gas into western Wyoming through leased capacity on the Overthrust Pipeline Company system, or through its interconnections with Colorado Interstate Gas Company and Wyoming Interstate Company in southern Wyoming. REX-West has the ability to deliver natural gas to points at the Cheyenne Hub, which could be used in markets along the Front Range of Colorado, or could be transported further east through either Rockies Express Pipeline’s Zone 2 facilities or other pipeline systems.

Rockies Express Pipeline’s Zone 2 extends from the Cheyenne Hub to an interconnect with the Panhandle Eastern Pipeline in Audrain County, Missouri. Through the Zone 2 facilities, Rockies Express facilitates the delivery of natural gas into the Midcontinent area of the Unites States through various interconnects with other major interstate pipelines in Nebraska (Northern Natural Gas Pipeline and NGPL), Kansas (ANR Pipeline), and Missouri (Panhandle Eastern Pipeline). Rockies Express Pipeline’s transportation capacity under interim service is currently 1.4 billion cubic feet per day, and when this system is placed into full service it will be capable of delivering 1.5 billion cubic feet per day through these interconnects to the Midcontinent market.

Supply. Rockies Express Pipeline directly accesses major gas supply basins in western Colorado and western Wyoming. In western Colorado, Rockies Express Pipeline has access to gas supply from the Uinta and Piceance basins in eastern Utah and western Colorado. In western Wyoming, Rockies Express Pipeline accesses the Green River Basin through its facilities that are leased from Overthrust. With its connections to numerous other pipeline systems along its route, Rockies Express Pipeline has access to almost all of the major gas supply basins in Wyoming, Colorado and eastern Utah.

Competition. Although there are some competitors to the Rockies Express Pipeline system that provide a similar service, there are none that can compete with the economy-of-scale that Rockies Express Pipeline provides to its shippers to transport gas from the Rocky Mountain region to the Midcontinent markets. The REX-East Project, noted above, will put the Rockies Express Pipeline system in a very unique position of being the only pipeline capable of offering a large volume of transportation service from Rocky Mountain gas supply directly to customers in Ohio.

Rockies Express Pipeline could also experience competition for its Rocky Mountain gas supply from both existing and proposed systems. Questar Pipeline Company accesses many of the same basins as Rockies Express Pipeline and transports gas to its markets in Utah and to other interconnects, which have access to the California market. In addition, there are pipelines that are proposed to use Rocky Mountain gas to supply markets on the West Coast.

Kinder Morgan Louisiana Pipeline

In September 2006, we filed an application with the FERC requesting approval to construct and operate our Kinder Morgan Louisiana Pipeline. The natural gas pipeline project is expected to cost approximately $510 million and will provide approximately 3.2 billion cubic feet per day of take-away natural gas capacity from the Cheniere Sabine Pass liquefied natural gas terminal located in Cameron Parish, Louisiana. The project is supported by fully subscribed capacity and long-term customer commitments with Chevron and Total.

The Kinder Morgan Louisiana Pipeline will consist of two segments:

- a 132-mile, 42-inch diameter pipeline with firm capacity of approximately 2.0 billion cubic feet per day of natural gas that will extend from the Sabine Pass terminal to a point of interconnection with an existing Columbia Gulf Transmission line in Evangeline Parish, Louisiana (an offshoot will consist of approximately 2.3 miles of 24-inch diameter pipeline with firm peak day capacity of approximately 300 million cubic feet per day extending away from the 42-inch diameter line to the existing Florida Gas Transmission Company compressor station in Acadia Parish, Louisiana). This segment is expected to be in service by January 1, 2009; and

- a 1-mile, 36-inch diameter pipeline with firm capacity of approximately 1.2 billion cubic feet per day that will extend from the Sabine Pass terminal and connect to NGPL's natural gas pipeline. This portion of the project is expected to be in service in the third quarter of 2008.

We have designed and will construct the Kinder Morgan Louisiana Pipeline in a manner that will minimize environmental impacts, and where possible, existing pipeline corridors will be used to minimize impacts to communities and to the environment. As of December 31, 2007, there were no major pipeline re-routes as a result of any landowner requests.

Midcontinent Express Pipeline LLC

On October 9, 2007, Midcontinent Express Pipeline LLC filed an application with the FERC requesting a certificate of public convenience and necessity that would authorize construction and operation of the approximate 500-mile Midcontinent Express Pipeline natural gas transmission system. We currently own a 50% interest in Midcontinent Express Pipeline LLC and we account for our investment under the equity method of accounting. Energy Transfer Partners, L.P. owns the remaining 50% interest. The Midcontinent Express Pipeline will create long-haul, firm natural gas transportation takeaway capacity, either directly or indirectly, from natural gas producing regions located in Texas, Oklahoma and Arkansas. The total project is expected to cost approximately $1.3 billion, and will have an initial transportation capacity of approximately 1.4 billion cubic feet per day of natural gas.

For additional information regarding the Midcontinent Express Pipeline, see "(a) General Development of Business—Recent Developments."

Casper and Douglas Natural Gas Processing Systems

We own and operate our Casper and Douglas, Wyoming natural gas processing plants, which have the capacity to process up to 185 million cubic feet per day of natural gas depending on raw gas quality.

Markets. Casper and Douglas are processing plants servicing gas streams flowing into KMIGT. Natural gas liquids processed by our Casper plant are sold into local markets consisting primarily of retail propane dealers and oil refiners. Natural gas liquids processed by our Douglas plant are sold to ConocoPhillips via their Powder River natural gas liquids pipeline for either ultimate consumption at the Borger refinery or for further disposition to the natural gas liquids trading hubs located in Conway, Kansas and Mont Belvieu, Texas.

Competition. Other regional facilities in the Greater Powder River Basin include the Hilight plant (80 million cubic feet per day) owned and operated by Anadarko, the Sage Creek plant (50 million cubic feet per day) owned and operated by Merit Energy, and the Rawlins plant (230 million cubic feet per day) owned and operated by El

Paso. Casper and Douglas, however, are the only plants which provide straddle processing of natural gas flowing into KMIGT.

Red Cedar Gathering Company

We own a 49% equity interest in the Red Cedar Gathering Company, a joint venture organized in August 1994 and referred to in this report as Red Cedar. The remaining 51% interest in Red Cedar is owned by the Southern Ute Indian Tribe. Red Cedar owns and operates natural gas gathering, compression and treating facilities in the Ignacio Blanco Field in La Plata County, Colorado. The Ignacio Blanco Field lies within the Colorado portion of the San Juan Basin, most of which is located within the exterior boundaries of the Southern Ute Indian Tribe Reservation. Red Cedar gathers coal seam and conventional natural gas at wellheads and several central delivery points, for treating, compression and delivery into any one of four major interstate natural gas pipeline systems and an intrastate pipeline.

Red Cedar also owns Coyote Gas Treating, LLC, referred to in this report as Coyote Gulch. The sole asset owned by Coyote Gulch is a 250 million cubic feet per day natural gas treating facility located in La Plata County, Colorado. The inlet gas stream treated by Coyote Gulch contains an average carbon dioxide content of between 12% and 13%. The plant treats the gas down to a carbon dioxide concentration of 2% in order to meet interstate natural gas pipeline quality specifications, and then compresses the natural gas into the TransColorado Gas Transmission pipeline for transport to the Blanco, New Mexico-San Juan Basin Hub.

Red Cedar’s gas gathering system currently consists of over 1,100 miles of gathering pipeline connecting more than 920 producing wells, 85,000 horsepower of compression at 24 field compressor stations and two carbon dioxide treating plants. The capacity and throughput of the Red Cedar system as currently configured is approximately 750 million cubic feet per day of natural gas.

Thunder Creek Gas Services, LLC

We own a 25% equity interest in Thunder Creek Gas Services, LLC, referred to in this report as Thunder Creek. Devon Energy owns the remaining 75%. Thunder Creek provides gathering, compression and treating services to a number of coal seam gas producers in the Powder River Basin of Wyoming. Throughput volumes include both coal seam and conventional plant residue gas.

Thunder Creek’s operations are a combination of mainline and low pressure gathering assets. The mainline assets include 125 miles of mainline pipeline, 230 miles of high and low pressure laterals, 26,635 horsepower of mainline compression and carbon dioxide removal facilities consisting of a 220 million cubic feet per day carbon dioxide treating plant complete with dehydration. The mainline assets receive gas from 53 receipt points and can deliver treated gas to seven delivery points including Colorado Interstate Gas, Wyoming Interstate Gas Company, KMIGT and three power plants. The low pressure gathering assets include five systems consisting of 194 miles of gathering pipeline and 35,329 horsepower of field compression.

CO_2

Our CO_2 segment consists of Kinder Morgan CO_2 Company, L.P. and its consolidated affiliates, referred to in this report as KMCO_2. Carbon dioxide is used in enhanced oil recovery projects as a flooding medium for recovering crude oil from mature oil fields. Our carbon dioxide pipelines and related assets allow us to market a complete package of carbon dioxide supply, transportation and technical expertise to the customer. Together, our CO_2 business segment produces, transports and markets carbon dioxide for use in enhanced oil recovery operations. We also hold ownership interests in several oil-producing fields and own a 450-mile crude oil pipeline, all located in the Permian Basin region of West Texas.

Carbon Dioxide Reserves

We own approximately 45% of, and operate, the McElmo Dome unit in Colorado, which contains more than nine trillion cubic feet of recoverable carbon dioxide. Deliverability and compression capacity exceeds one billion cubic feet per day. We are currently installing facilities and drilling 8 wells to increase the production capacity from

McElmo Dome by approximately 200 million cubic feet per day. We also own approximately 11% of the Bravo Dome unit in New Mexico, which contains more than one trillion cubic feet of recoverable carbon dioxide and produces approximately 290 million cubic feet per day.

We also own approximately 88% of the Doe Canyon Deep unit in Colorado, which contains more than 1.5 trillion cubic feet of carbon dioxide. We have installed facilities and drilled six wells to produce approximately 100 million cubic feet per day of carbon dioxide beginning in January 2008.

Markets. Our principal market for carbon dioxide is for injection into mature oil fields in the Permian Basin, where industry demand is expected to grow modestly for the next several years. We are exploring additional potential markets, including enhanced oil recovery targets in California, Wyoming, the Gulf Coast, Mexico, and Canada, and coal bed methane production in the San Juan Basin of New Mexico.

Competition. Our primary competitors for the sale of carbon dioxide include suppliers that have an ownership interest in McElmo Dome, Bravo Dome and Sheep Mountain carbon dioxide reserves, and Petro-Source Carbon Company, which gathers waste carbon dioxide from natural gas production in the Val Verde Basin of West Texas. There is no assurance that new carbon dioxide sources will not be discovered or developed, which could compete with us or that new methodologies for enhanced oil recovery will not replace carbon dioxide flooding.

Carbon Dioxide Pipelines

As a result of our 50% ownership interest in Cortez Pipeline Company, we own a 50% equity interest in and operate the approximate 500-mile, Cortez pipeline. The pipeline carries carbon dioxide from the McElmo Dome and Doe Canyon source fields near Cortez, Colorado to the Denver City, Texas hub. The Cortez pipeline currently transports over one billion cubic feet of carbon dioxide per day, including approximately 99% of the carbon dioxide transported downstream on our Central Basin pipeline and our Centerline pipeline. The tariffs charged by Cortez Pipeline are not regulated.

Our Central Basin pipeline consists of approximately 143 miles of pipe and 177 miles of lateral supply lines located in the Permian Basin between Denver City, Texas and McCamey, Texas with a throughput capacity of 600 million cubic feet per day. At its origination point in Denver City, our Central Basin pipeline interconnects with all three major carbon dioxide supply pipelines from Colorado and New Mexico, namely the Cortez pipeline (operated by $KMCO_2$) and the Bravo and Sheep Mountain pipelines (operated by Oxy Permian). Central Basin's mainline terminates near McCamey where it interconnects with the Canyon Reef Carriers pipeline and the Pecos pipeline. The tariffs charged by the Central Basin pipeline are not regulated.

Our Centerline pipeline consists of approximately 113 miles of pipe located in the Permian Basin between Denver City, Texas and Snyder, Texas. The pipeline has a capacity of 300 million cubic feet per day. The tariffs charged by the Centerline pipeline are not regulated.

We own a 13% undivided interest in the 218-mile, Bravo pipeline, which delivers CO2 from the Bravo Dome source field in northeast New Mexico to the Denver City hub and has a capacity of more than 350 million cubic feet per day. Tariffs on the Bravo pipeline are not regulated.

In addition, we own approximately 98% of the Canyon Reef Carriers pipeline and approximately 69% of the Pecos pipeline. The Canyon Reef Carriers pipeline extends 139 miles from McCamey, Texas, to the SACROC unit. The pipeline has a capacity of approximately 290 million cubic feet per day and makes deliveries to the SACROC, Sharon Ridge, Cogdell and Reinecke units. The Pecos pipeline is a 25-mile pipeline that runs from McCamey to Iraan, Texas. It has a capacity of approximately 120 million cubic feet per day of carbon dioxide and makes deliveries to the Yates unit. The tariffs charged on the Canyon Reef Carriers and Pecos pipelines are not regulated.

Markets. The principal market for transportation on our carbon dioxide pipelines is to customers, including ourselves, using carbon dioxide for enhanced recovery operations in mature oil fields in the Permian Basin, where industry demand is expected to grow modestly for the next several years.

Competition. Our ownership interests in the Central Basin, Cortez and Bravo pipelines are in direct competition with other carbon dioxide pipelines. We also compete with other interest owners in McElmo Dome and Bravo Dome for transportation of carbon dioxide to the Denver City, Texas market area.

Oil Acreage and Wells

$KMCO_2$ also holds ownership interests in oil-producing fields, including an approximate 97% working interest in the SACROC unit, an approximate 50% working interest in the Yates unit, a 21% net profits interest in the H.T. Boyd unit, an approximate 65% working interest in the Claytonville unit, an approximate 95% working interest in the Katz CB Long unit, an approximate 64% working interest in the Katz SW River unit, a 100% working interest in the Katz East River unit, and lesser interests in the Sharon Ridge unit, the Reinecke unit and the MidCross unit, all of which are located in the Permian Basin of West Texas.

The SACROC unit is one of the largest and oldest oil fields in the United States using carbon dioxide flooding technology. The field is comprised of approximately 56,000 acres located in the Permian Basin in Scurry County, Texas. SACROC was discovered in 1948 and has produced over 1.29 billion barrels of oil since inception. It is estimated that SACROC originally held approximately 2.7 billion barrels of oil. We have expanded the development of the carbon dioxide project initiated by the previous owners and increased production over the last several years. The Yates unit is also one of the largest oil fields ever discovered in the United States. It is estimated that it originally held more than five billion barrels of oil, of which about 29% has been produced. The field, discovered in 1926, is comprised of approximately 26,000 acres located about 90 miles south of Midland, Texas.

As of December 2007, the SACROC unit had 391 producing wells, and the purchased carbon dioxide injection rate was 211 million cubic feet per day, down from an average of 247 million cubic feet per day as of December 2006. The average oil production rate for 2007 was approximately 27,600 barrels of oil per day, down from an average of approximately 30,800 barrels of oil per day during 2006. The average natural gas liquids production rate (net of the processing plant share) for 2007 was approximately 6,300 barrels per day, an increase from an average of approximately 5,700 barrels per day during 2006.

Our plan has been to increase the production rate and ultimate oil recovery from Yates by combining horizontal drilling with carbon dioxide injection to ensure a relatively steady production profile over the next several years. We are implementing our plan and as of December 2007, the Yates unit was producing about 27,600 barrels of oil per day. As of December 2006, the Yates unit was producing approximately 27,200 barrels of oil per day. Unlike our operations at SACROC, where we use carbon dioxide and water to drive oil to the producing wells, we are using carbon dioxide injection to replace nitrogen injection at Yates in order to enhance the gravity drainage process, as well as to maintain reservoir pressure. The differences in geology and reservoir mechanics between the two fields mean that substantially less capital will be needed to develop the reserves at Yates than is required at SACROC.

We also operate and own an approximate 65% gross working interest in the Claytonville oil field unit located in Fisher County, Texas. The Claytonville unit is located nearly 30 miles east of the SACROC unit in the Permian Basin of West Texas and is currently producing approximately 230 barrels of oil per day. We are presently evaluating operating and subsurface technical data from the Claytonville unit to further assess redevelopment opportunities including carbon dioxide flood operations.

We also operate and own working interests in the Katz CB Long unit, the Katz Southwest River unit and Katz East River unit. The Katz field is located in the Permian Basin area of West Texas and, as of December 2007, was producing approximately 400 barrels of oil equivalent per day. We are presently evaluating operating and subsurface technical data to further assess redevelopment opportunities for the Katz field including the potential for carbon dioxide flood operations.

The following table sets forth productive wells, service wells and drilling wells in the oil and gas fields in which we own interests as of December 31, 2007. When used with respect to acres or wells, gross refers to the total acres or wells in which we have a working interest; net refers to gross acres or wells multiplied, in each case, by the percentage working interest owned by us:

	Productive Wells (a)		Service Wells (b)		Drilling Wells (c)	
	Gross	Net	Gross	Net	Gross	Net
Crude Oil	2,463	1,587	1,066	789	2	2
Natural Gas	8	4	—	—	—	—
Total Wells	2,471	1,591	1,066	789	2	2

(a) Includes active wells and wells temporarily shut-in. As of December 31, 2007, we did not operate any productive wells with multiple completions.

(b) Consists of injection, water supply, disposal wells and service wells temporarily shut-in. A disposal well is used for disposal of saltwater into an underground formation; a service well is a well drilled in a known oil field in order to inject liquids that enhance recovery or dispose of salt water.

(c) Consists of development wells in the process of being drilled as of December 31, 2007.A development well is a well drilled in an already discovered oil field.

The oil and gas producing fields in which we own interests are located in the Permian Basin area of West Texas. The following table reflects our net productive and dry wells that were completed in each of the three years ended December 31, 2007, 2006 and 2005:

	2007	2006	2005
Productive			
Development	31	37	42
Exploratory	—	—	—
Dry			
Development	—	—	—
Exploratory	—	—	—
Total Wells	31	37	42

Notes: The above table includes wells that were completed during each year regardless of the year in which drilling was initiated, and does not include any wells where drilling operations were not completed as of the end of the applicable year. Development wells include wells drilled in the proved area of an oil or gas resevoir.

The following table reflects the developed and undeveloped oil and gas acreage that we held as of December 31, 2007:

	Gross	Net
Developed Acres	72,435	67,731
Undeveloped Acres	8,788	8,129
Total	81,223	75,860

Operating Statistics

Operating statistics from our oil and gas producing activities for each of the years 2007, 2006 and 2005 are shown in the following table:

Results of Operations for Oil and Gas Producing Activities – Unit Prices and Costs

	Year Ended December 31,		
	2007	**2006**	**2005**
Consolidated Companies(a)			
Production costs per barrel of oil equivalent(b)(c)(d)	$ 16.22	$ 13.30	$ 10.00
Crude oil production (MBbl/d)	35.6	37.8	37.9
Natural gas liquids production (MBbl/d)(d)	5.5	5.0	5.3
Natural gas liquids production from gas plants(MBbl/d)(e)	4.1	3.9	4.1
Total natural gas liquids production(MBbl/d)	9.6	8.9	9.4
Natural gas production (MMcf/d)(d)(f)	0.8	1.3	3.7
Natural gas production from gas plants(MMcf/d)(e)(f)	0.3	0.3	3.1
Total natural gas production(MMcf/d)(f)	1.1	1.6	6.8
Average sales prices including hedge gains/losses:			
Crude oil price per Bbl(g)	$ 36.05	$ 31.42	$ 27.36
Natural gas liquids price per Bbl(g)	$ 52.22	$ 43.52	$ 38.79
Natural gas price per Mcf(h)	$ 6.08	$ 6.36	$ 5.84
Total natural gas liquids price per Bbl(e)	$ 52.91	$ 43.90	$ 38.98
Total natural gas price per Mcf(e)	$ 5.89	$ 7.02	$ 5.80
Average sales prices excluding hedge gains/losses:			
Crude oil price per Bbl(g)	$ 69.63	$ 63.27	$ 54.45
Natural gas liquids price per Bbl(g)	$ 52.22	$ 43.52	$ 38.79
Natural gas price per Mcf(h)	$ 6.08	$ 6.36	$ 5.84

(a) Amounts relate to Kinder Morgan CO2 Company, L.P. and its consolidated subsidaries.

(b) Computed using production costs, excluding transportation costs, as defined by the United States Securities and Exchange Commisson. Natural gas volumes were converted to barrels of oil equivalent (BOE) using a conversion factor of six mcf of natural gas to one barrel of oil.

(c) Production costs include labor, repairs and maintenance, materials, supplies, fuel and power, property taxes, severance taxes, and general and administrative expenses directly related to oil and gas producing activities.

(d) Includes only production attributable to leasehold ownership.

(e) Includes production attributable to our ownership in processing plants and third party processing agreements.

(f) Excludes natural gas production used as fuel.

(g) Hedge gains/losses for crude oil and natural gas liquids are included with crude oil.

(h) Natural gas sales were not hedged.

See Note 20 to our consolidated financial statements included in this report for additional information with respect to operating statistics and supplemental information on our oil and gas producing activities.

Gas and Gasoline Plant Interests

We operate and own an approximate 22% working interest plus an additional 28% net profits interest in the Snyder gasoline plant. We also operate and own a 51% ownership interest in the Diamond M gas plant and a 100% ownership interest in the North Snyder plant, all of which are located in the Permian Basin of West Texas. The Snyder gasoline plant processes gas produced from the SACROC unit and neighboring carbon dioxide projects, specifically the Sharon Ridge and Cogdell units, all of which are located in the Permian Basin area of West Texas. The Diamond M and the North Snyder plants contract with the Snyder plant to process gas. Production of natural gas liquids at the Snyder gasoline plant as of December 2007 was approximately 15,500 barrels per day as compared to 15,000 barrels per day as of December 2006.

Crude Oil Pipeline

We own our Kinder Morgan Wink Pipeline, a 450-mile Texas intrastate crude oil pipeline system consisting of three mainline sections, two gathering systems and numerous truck delivery stations. The segment that runs from Wink to El Paso has a total capacity of 130,000 barrels of crude oil per day. The pipeline allows us to better manage crude oil deliveries from our oil field interests in West Texas, and we have entered into a long-term throughput agreement with Western Refining Company, L.P. to transport crude oil into Western's 120,000 barrel per day refinery in El Paso. The 20-inch pipeline segment transported approximately119,000 barrels of oil per day in 2007. The Kinder Morgan Wink Pipeline is regulated by both the FERC and the Texas Railroad Commission.

Terminals

Our Terminals segment includes the operations of our petroleum, chemical and other liquids terminal facilities (other than those included in our Products Pipelines segment) and all of our coal, petroleum coke, fertilizer, steel, ores and dry-bulk material services, including all transload, engineering, conveying and other in-plant services. Combined, the segment is composed of approximately100 owned or operated liquids and bulk terminal facilities, and more than 45 rail transloading and materials handling facilities located throughout the United States, Canada and the Netherlands. In 2007, the number of customers from whom our Terminals segment received more than $0.1 million of revenue was approximately 650.

Liquids Terminals

Our liquids terminals operations primarily store refined petroleum products, petrochemicals, industrial chemicals and vegetable oil products in aboveground storage tanks and transfer products to and from pipelines, vessels, tank trucks, tank barges, and tank railcars. Combined, our liquids terminals facilities possess liquids storage capacity of approximately 47.5 million barrels, and in 2007, these terminals handled approximately 557 million barrels of petroleum, chemicals and vegetable oil products.

In September 2006, we announced major expansions at our Pasadena and Galena Park, Texas terminal facilities. The expansions will provide additional infrastructure to help meet the growing need for refined petroleum products storage capacity along the Gulf Coast. The investment of approximately $195 million includes the construction of the following: (i) new storage tanks at both our Pasadena and Galena Park terminals; (ii) an additional cross-channel pipeline to increase the connectivity between the two terminals; (iii) a new ship dock at Galena Park; and (iv) an additional loading bay at our fully automated truck loading rack located at our Pasadena terminal. The expansions are supported by long-term customer commitments and will result in approximately 3.4 million barrels of additional tank storage capacity at the two terminals. Construction began in October 2006, and all of the projects are expected to be completed by the spring of 2008, with the exception of the of the Galena Park ship dock which is now scheduled to be in-service by the third quarter of 2008.

At Perth Amboy, New Jersey, we completed construction and placed into service nine new storage tanks with a capacity of 1.4 million barrels for gasoline, diesel and jet fuel. These tanks have been leased on a long-term basis to two customers. Our total investment in these facilities was approximately $69 million.

In June 2006, we announced the construction of a new crude oil tank farm located in Edmonton, Alberta, Canada, and long-term contracts with customers for all of the available capacity at the facility. Situated on approximately 24 acres, the new storage facility will have nine tanks with a combined storage capacity of approximately 2.2 million barrels for crude oil. Service is expected to begin in the first quarter of 2008, and when completed, the tank farm will serve as a premier blending and storage hub for Canadian crude oil. Originally estimated at $115 million, due primarily to additional labor costs, total investment in this tank farm is projected to be $162 million on a constant U.S. dollar basis. The tank farm will have access to more than 20 incoming pipelines and several major outbound systems, including a connection with our Trans Mountain pipeline system, which currently transports up to 260,000 barrels per day of heavy crude oil and refined products from Edmonton to marketing terminals and refineries located in the greater Vancouver, British Columbia area and Puget Sound in Washington state.

Competition. We are one of the largest independent operators of liquids terminals in North America. Our primary competitors are IMTT, Magellan, Morgan Stanley, NuStar, Oil Tanking, Teppco, and Vopak.

Bulk Terminals

Our bulk terminal operations primarily involve dry-bulk material handling services; however, we also provide conveyor manufacturing and installation, engineering and design services and in-plant services covering material handling, conveying, maintenance and repair, railcar switching and miscellaneous marine services. Combined, our dry-bulk and material transloading facilities handled approximately 87.1 million tons of coal, petroleum coke, fertilizers, steel, ores and other dry-bulk materials in 2007. We own or operate approximately 93 dry-bulk terminals in the United States, Canada and the Netherlands.

In May 2007, we purchased certain buildings and equipment and completed a 40 year agreement to operate Vancouver Wharves, a bulk marine terminal located at the entrance to the Port of Vancouver, British Columbia. The facility consists of five vessel berths situated on a 139-acre site, extensive rail infrastructure, dry-bulk and liquid storage, and material handling systems, which allow the terminal to handle over 3.5 million tons of cargo annually. Vancouver Wharves has access to three major rail carriers connecting to shippers in western and central Canada and the U.S. Pacific Northwest. Vancouver Wharves offers a variety of inbound, outbound and value-added services for mineral concentrates, wood products, agri-products and sulfur. In addition to the aggregate consideration of approximately $57.2 million ($38.8 million in cash and the assumption of $18.4 million of assumed liabilities) paid for this facility, we plan to invest an additional $46 million at Vancouver Wharves over the next two years to upgrade and relocate certain rail track and transloading systems, buildings and a shiploader.

Effective September 1, 2007, we purchased the assets of Marine Terminals, Inc. for an aggregate consideration of approximately $101.5 million. Combined, the assets handle approximately 13.5 million tons of alloys and steel products annually from five facilities located in the southeast United States. These strategically located terminals provide handling, processing, harboring and warehousing services primarily to Nucor Corporation, one of the largest steel and steel products companies in the world, under long-term contracts.

Competition. Our bulk terminals compete with numerous independent terminal operators, other terminals owned by oil companies, stevedoring companies, and other industrials opting not to outsource terminal services. Many of our bulk terminals were constructed pursuant to long-term contracts for specific customers. As a result, we believe other terminal operators would face a significant disadvantage in competing for this business.

Materials Services (rail transloading)

Our materials services operations include rail or truck transloading operations conducted at 45 owned and non-owned facilities. The Burlington Northern Santa Fe, CSX, Norfolk Southern, Union Pacific, Kansas City Southern and A&W railroads provide rail service for these terminal facilities. Approximately 50% of the products handled are liquids, including an entire spectrum of liquid chemicals, and 50% are dry-bulk products. Many of the facilities are equipped for bi-modal operation (rail-to-truck, and truck-to-rail) or connect via pipeline to storage facilities. Several facilities provide railcar storage services. We also design and build transloading facilities, perform inventory management services, and provide value-added services such as blending, heating and sparging. In 2007, our materials services operations handled approximately 347,000 railcars.

Competition Our material services operations compete with a variety of national transload and terminal operators across the United States, including Savage Services, Watco and Bulk Plus Logistics. Additionally, single or multi-site terminal operators are often entrenched in the network of Class 1 rail carriers.

Trans Mountain

Our Trans Mountain common carrier pipeline system originates at Edmonton, Alberta and transports crude oil and refined petroleum to destinations in the interior and on the west coast of British Columbia. A connecting pipeline owned by us delivers petroleum to refineries in the state of Washington.

Trans Mountain’s pipeline is 715 miles. The capacity of the line out of Edmonton ranges from 260,000 barrels per day when heavy crude represents 20% of the total throughput to 300,000 barrels per day with no heavy crude. The pipeline system utilizes 21 pump stations controlled by a centralized computer control system.

Trans Mountain also operates a 5.3 mile spur line from its Sumas Pump Station to the U.S. – Canada international border where it connects with a 63 mile pipeline system owned and operated by us. The pipeline system in Washington State has a sustainable throughput capacity of approximately 135,000 barrels per day when heavy crude represents approximately 25% of throughput and connects to four refineries located in northwestern Washington State. The volumes of petroleum shipped to Washington State fluctuate in response to the price levels of Canadian crude oil in relation to petroleum produced in Alaska and other offshore sources.

In 2007, deliveries on Trans Mountain averaged 258,540 barrels per day. This was an increase of 13% from average 2006 deliveries of 229,369 barrels per day. In April 2007, we commissioned ten new pump stations that boosted capacity on Trans Mountain from 225,000 to approximately 260,000 barrels per day. The crude oil and refined petroleum transported through Trans Mountain's pipeline system originates in Alberta and British Columbia. The refined and partially refined petroleum transported to Kamloops, British Columbia and Vancouver originates from oil refineries located in Edmonton. Petroleum products delivered through Trans Mountain's pipeline system are used in markets in British Columbia, Washington State and elsewhere.

Overall Alberta crude oil supply has been increasing steadily over the past few years as a result of significant oilsands development with projects led by Shell Canada, Suncor Energy and Syncrude Canada. Further development is expected to continue into the future with expansions to existing oilsands production facilities as well as with new projects. In its moderate growth case, the Canadian Association of Petroleum Producers ("CAPP") forecasts Western Canadian crude oil production to increase by over 1.6 million barrels per day by 2015. This increasing supply will likely result in constrained export pipeline capacity from Western Canada, which supports Trans Mountain's view that both the demand for transportation services provided by Trans Mountain's pipeline and the supply of crude oil will remain strong for the foreseeable future.

Shipments of refined petroleum represent a significant portion of Trans Mountain's throughput. In 2007, shipments of refined petroleum and iso-octane represented 25% of throughput, as compared with 28% in 2006.

Major Customers

Our total operating revenues are derived from a wide customer base.For each of the years ended December 31, 2007, 2006 and 2005, no revenues from transactions with a single external customer accounted for 10% or more of our total consolidated revenues. Our Texas intrastate natural gas pipeline group buys and sells significant volumes of natural gas within the state of Texas and, to a far lesser extent, our CO2 business segment also sells natural gas. Combined, total revenues from the sales of natural gas from our Natural Gas Pipelines and CO2 business segments in 2007, 2006 and 2005 accounted for 63.3%, 66.8% and 73.9%, respectively, of our total consolidated revenues.

As a result of our Texas intrastate group selling natural gas in the same price environment in which it is purchased, both our total consolidated revenues and our total consolidated purchases (cost of sales) increase considerably due to the inclusion of the cost of gas in both financial statement line items. However, these higher revenues and higher purchased gas costs do not necessarily translate into increased margins in comparison to those situations in which we charge a fee to transport gas owned by others as we seek to match the purchase and sales indexes and lock in a transport fee. We do not believe that a loss of revenues from any single customer would have a material adverse effect on our business, financial position, results of operations or cash flows.

Regulation

Interstate Common Carrier Pipeline Rate Regulation – U.S. Operations

Some of our pipelines are interstate common carrier pipelines, subject to regulation by the FERC under the Interstate Commerce Act, or ICA. The ICA requires that we maintain our tariffs on file with the FERC, which tariffs set forth the rates we charge for providing transportation services on our interstate common carrier pipelines as well as the rules and regulations governing these services. The ICA requires, among other things, that such rates on interstate common carrier pipelines be "just and reasonable" and nondiscriminatory. The ICA permits interested persons to challenge newly proposed or changed rates and authorizes the FERC to suspend the effectiveness of such rates for a period of up to seven months and to investigate such rates. If, upon completion of an investigation, the

FERC finds that the new or changed rate is unlawful, it is authorized to require the carrier to refund the revenues in excess of the prior tariff collected during the pendency of the investigation. The FERC may also investigate, upon complaint or on its own motion, rates that are already in effect and may order a carrier to change its rates prospectively. Upon an appropriate showing, a shipper may obtain reparations for damages sustained during the two years prior to the filing of a complaint.

On October 24, 1992, Congress passed the Energy Policy Act of 1992. The Energy Policy Act deemed petroleum products pipeline tariff rates that were in effect for the 365-day period ending on the date of enactment or that were in effect on the 365th day preceding enactment and had not been subject to complaint, protest or investigation during the 365-day period to be just and reasonable or "grandfathered" under the ICA. The Energy Policy Act also limited the circumstances under which a complaint can be made against such grandfathered rates. The rates we charged for transportation service on our Cypress Pipeline were not suspended or subject to protest or complaint during the relevant 365-day period established by the Energy Policy Act. For this reason, we believe these rates should be grandfathered under the Energy Policy Act. Certain rates on our Pacific operations' pipeline system were subject to protest during the 365-day period established by the Energy Policy Act. Accordingly, certain of the Pacific pipelines' rates have been, and continue to be, subject to complaints with the FERC, as is more fully described in Note 16 to our consolidated financial statements included elsewhere in this report.

Petroleum products pipelines may change their rates within prescribed ceiling levels that are tied to an inflation index. Shippers may protest rate increases made within the ceiling levels, but such protests must show that the portion of the rate increase resulting from application of the index is substantially in excess of the pipeline's increase in costs from the previous year. A pipeline must, as a general rule, utilize the indexing methodology to change its rates. The FERC, however, uses cost-of-service ratemaking, market-based rates and settlement rates as alternatives to the indexing approach in certain specified circumstances.

Common Carrier Pipeline Rate Regulation – Canadian Operations

The Canadian portion of our crude oil and refined petroleum products pipeline system is under the regulatory jurisdiction of Canada's National Energy Board, referred to in this report as the NEB. The National Energy Board Act gives the NEB power to authorize pipeline construction and to establish tolls and conditions of service. In November 2004, Trans Mountain entered into negotiations with the Canadian Association of Petroleum Producers and principal shippers for a new incentive toll settlement to be effective for the period starting January 1, 2006 and ending December 31, 2010. In January 2006, Trans Mountain reached agreement in principle, which was reduced to a memorandum of understanding for the 2006 toll settlement. A final agreement was reached with the Canadian Association of Petroleum Producers in October 2006 and NEB approval was received in November 2006.

The 2006 toll settlement incorporates an incentive toll mechanism that is intended to provide Trans Mountain with the opportunity to earn a return on equity greater than that calculated using the formula established by the NEB. In return for this opportunity, Trans Mountain has agreed to assume certain risks and provide cost certainty in certain areas. Part of the incentive toll mechanism specifies that Trans Mountain is allowed to keep 75% of the net revenue generated by throughput in excess of 92.5% of the capacity of the pipeline. The 2006 incentive toll settlement provides for base tolls which will, other than recalculation or adjustment in certain specified circumstances, remain in effect for the five-year period. The toll settlement also governs the financial arrangements for the approximately C$638 million expansions to Trans Mountain that will add 75,000 barrels per day of incremental capacity to the system by November 2008. The toll charged for the portion of Trans Mountain's pipeline system located in the United States falls under the jurisdiction of the FERC. See "Interstate Common Carrier Pipeline Rate Regulation – U.S. Operations."

Interstate Natural Gas Transportation and Storage Regulation

Both the performance of and rates charged by companies performing interstate natural gas transportation and storage services are regulated by the FERC under the Natural Gas Act of 1938 and, to a lesser extent, the Natural Gas Policy Act of 1978. Beginning in the mid-1980's, the FERC initiated a number of regulatory changes intended to create a more competitive environment in the natural gas marketplace. Among the most important of these changes were:

- Order No. 436 (1985) requiring open-access, nondiscriminatory transportation of natural gas;
- Order No. 497 (1988) which set forth new standards and guidelines imposing certain constraints on the interaction between interstate natural gas pipelines and their marketing affiliates and imposing certain disclosure requirements regarding that interaction; and
- Order No. 636 (1992) which required interstate natural gas pipelines that perform open-access transportation under blanket certificates to "unbundle" or separate their traditional merchant sales services from their transportation and storage services and to provide comparable transportation and storage services with respect to all natural gas supplies whether purchased from the pipeline or from other merchants such as marketers or producers.

Natural gas pipelines must now separately state the applicable rates for each unbundled service they provide (i.e., for the natural gas commodity, transportation and storage). Order 636 contains a number of procedures designed to increase competition in the interstate natural gas industry, including: (i) requiring the unbundling of sales services from other services; (ii) permitting holders of firm capacity on interstate natural gas pipelines to release all or a part of their capacity for resale by the pipeline; and (iii) the issuance of blanket sales certificates to interstate pipelines for unbundled services. Order 636 has been affirmed in all material respects upon judicial review, and our own FERC orders approving our unbundling plans are final and not subject to any pending judicial review.

On November 25, 2003, the FERC issued Order No. 2004, adopting revised Standards of Conduct that apply uniformly to interstate natural gas pipelines and public utilities. In light of the changing structure of the energy industry, these Standards of Conduct govern relationships between regulated interstate natural gas pipelines and all of their energy affiliates. These new Standards of Conduct were designed to eliminate the loophole in the previous regulations that did not cover an interstate natural gas pipeline’s relationship with energy affiliates that are not marketers. The rule is designed to prevent interstate natural gas pipelines from giving an undue preference to any of their energy affiliates and to ensure that transmission is provided on a nondiscriminatory basis. In addition, unlike the prior regulations, these requirements apply even if the energy affiliate is not a customer of its affiliated interstate pipeline. Our interstate natural gas pipelines are in compliance with these Standards of Conduct.

On November 17, 2006, the United States Court of Appeals for the District of Columbia Circuit vacated Order No. 2004, as applied to natural gas pipelines, and remanded the Order back to the FERC. On January 9, 2007, the FERC issued an interim rule regarding standards of conduct in Order 690 to be effective immediately. The interim rule repromulgated the standards of conduct that were not challenged before the court. On January 18, 2007, the FERC issued a notice of proposed rulemaking soliciting comments on whether or not the interim rule should be made permanent for natural gas transmission providers.

Please refer to Note 17 to our consolidated financial statements included elsewhere in this report for additional information regarding FERC Order No. 2004 and other Standards of Conduct rulemaking.

On August 8, 2005, Congress enacted the Energy Policy Act of 2005. The Energy Policy Act, among other things, amended the Natural Gas Act to prohibit market manipulation by any entity, directed the FERC to facilitate market transparency in the market for sale or transportation of physical natural gas in interstate commerce, and significantly increased the penalties for violations of the Natural Gas Act, the Natural Gas Policy Act of 1978, or FERC rules, regulations or orders thereunder.

California Public Utilities Commission Rate Regulation

The intrastate common carrier operations of our Pacific operations’ pipelines in California are subject to regulation by the California Public Utilities Commission, referred to in this report as the CPUC, under a "depreciated book plant" methodology, which is based on an original cost measure of investment. Intrastate tariffs filed by us with the CPUC have been established on the basis of revenues, expenses and investments allocated as applicable to the California intrastate portion of our Pacific operations’ business. Tariff rates with respect to intrastate pipeline service in California are subject to challenge by complaint by interested parties or by independent action of the CPUC. A variety of factors can affect the rates of return permitted by the CPUC, and certain other issues similar to those which have arisen with respect to our FERC regulated rates could also arise with respect to our intrastate rates. Certain of our Pacific operations' pipeline rates have been, and continue to be, subject to complaints with the CPUC, as is more fully described in Note 16 to our consolidated financial statements included elsewhere in this report.

Texas Railroad Commission Rate Regulation

The intrastate common carrier operations of our natural gas and crude oil pipelines in Texas are subject to certain regulation with respect to such intrastate transportation by the Texas Railroad Commission. Although the Texas Railroad Commission has the authority to regulate our rates, the Commission has generally not investigated the rates or practices of our intrastate pipelines in the absence of shipper complaints.

Safety Regulation

Our interstate pipelines are subject to regulation by the United States Department of Transportation, referred to in this report as U.S. DOT, and our intrastate pipelines and other operations are subject to comparable state regulations with respect to their design, installation, testing, construction, operation, replacement and management. Comparable regulation exists in some states in which we conduct pipeline operations. In addition, our truck and terminal loading facilities are subject to U.S. DOT regulations dealing with the transportation of hazardous materials by motor vehicles and railcars. We believe that we are in substantial compliance with U.S. DOT and comparable state regulations.

The Pipeline Safety Improvement Act of 2002 provides guidelines in the areas of testing, education, training and communication. The Pipeline Safety Act requires pipeline companies to perform integrity tests on natural gas transmission pipelines that exist in high population density areas that are designated as High Consequence Areas. Testing consists of hydrostatic testing, internal magnetic flux or ultrasonic testing, or direct assessment of the piping. In addition to the pipeline integrity tests, pipeline companies must implement a qualification program to make certain that employees are properly trained. The U.S. DOT has approved our qualification program. We believe that we are in substantial compliance with this law's requirements and have integrated appropriate aspects of this pipeline safety law into our internal Operator Qualification Program. A similar integrity management rule for refined petroleum products pipelines became effective May 29, 2001.

We are also subject to the requirements of the Federal Occupational Safety and Health Act and other comparable federal and state statutes. We believe that we are in substantial compliance with Federal OSHA requirements, including general industry standards, recordkeeping requirements and monitoring of occupational exposure to hazardous substances.

In general, we expect to increase expenditures in the future to comply with higher industry and regulatory safety standards. Some of these changes, such as U.S. DOT implementation of additional hydrostatic testing requirements, could significantly increase the amount of these expenditures. Such increases in our expenditures cannot be accurately estimated at this time.

State and Local Regulation

Our activities are subject to various state and local laws and regulations, as well as orders of regulatory bodies, governing a wide variety of matters, including marketing, production, pricing, pollution, protection of the environment, and safety.

Environmental Matters

Our operations are subject to federal, state and local, and some foreign laws and regulations governing the release of regulated materials into the environment or otherwise relating to environmental protection or human health or safety. We believe that our operations are in substantial compliance with applicable environmental laws and regulations.

We accrue liabilities for environmental matters when it is probable that obligations have been incurred and the amounts can be reasonably estimated. This policy applies to assets or businesses currently owned or previously disposed. We have accrued liabilities for probable environmental remediation obligations at various sites, including multiparty sites where the U.S. Environmental Protection Agency has identified us as one of the potentially responsible parties. The involvement of other financially responsible companies at these multiparty sites could mitigate our actual joint and several liability exposures. Although no assurance can be given, we believe that the ultimate resolution of all these environmental matters will not have a material adverse effect on our business, financial position or results of operations. We have accrued an environmental reserve in the amount of $92.0 million as of December 31, 2007. Our reserve estimates range in value from approximately $92.0 million to approximately $142.7 million, and we recorded our liability equal to the low end of the range, as we did not identify any amounts within the range as a better estimate of the liability. For additional information related to environmental matters, see Note 16 to our consolidated financial statements included elsewhere in this report.

Solid Waste

We generate both hazardous and non-hazardous solid wastes that are subject to the requirements of the Federal Resource Conservation and Recovery Act and comparable state statutes. From time to time, state regulators and the United States Environmental Protection Agency consider the adoption of stricter disposal standards for non-hazardous waste. Furthermore, it is possible that some wastes that are currently classified as non-hazardous, which could include wastes currently generated during pipeline or liquids or bulk terminal operations, may in the future be designated as "hazardous wastes." Hazardous wastes are subject to more rigorous and costly disposal requirements than non-hazardous wastes. Such changes in the regulations may result in additional capital expenditures or operating expenses for us.

Superfund

The Comprehensive Environmental Response, Compensation and Liability Act, also known as the "Superfund" law or "CERCLA," and analogous state laws, impose joint and several liability, without regard to fault or the legality of the original conduct, on certain classes of "potentially responsible persons" for releases of "hazardous substances" into the environment. These persons include the owner or operator of a site and companies that disposed or arranged for the disposal of the hazardous substances found at the site. CERCLA authorizes the U.S. EPA and, in some cases, third parties to take actions in response to threats to the public health or the environment and to seek to recover from the responsible classes of persons the costs they incur, in addition to compensation for natural resource damages, if any. Although "petroleum" is excluded from CERCLA’s definition of a "hazardous substance," in the course of our ordinary operations, we have and will generate materials that may fall within the definition of "hazardous substance." By operation of law, if we are determined to be a potentially responsible person, we may be responsible under CERCLA for all or part of the costs required to clean up sites at which such materials are present, in addition to compensation for natural resource damages, if any.

Clean Air Act

Our operations are subject to the Clean Air Act, as amended, and analogous state statutes. We believe that the operations of our pipelines, storage facilities and terminals are in substantial compliance with such statutes. The Clean Air Act, as amended, contains lengthy, complex provisions that may result in the imposition over the next several years of certain pollution control requirements with respect to air emissions from the operations of our pipelines, treating facilities, storage facilities and terminals. Depending on the nature of those requirements and any additional requirements that may be imposed by state and local regulatory authorities, we may be required to incur certain capital and operating expenditures over the next several years for air pollution control equipment in connection with maintaining or obtaining operating permits and approvals and addressing other air emission-related issues.

Due to the broad scope and complexity of the issues involved and the resultant complexity and nature of the regulations, full development and implementation of many Clean Air Act regulations by the U.S. EPA and/or various state and local regulators have been delayed. Therefore, until such time as the new Clean Air Act requirements are implemented, we are unable to fully estimate the effect on earnings or operations or the amount and timing of such required capital expenditures. At this time, however, we do not believe that we will be materially adversely affected by any such requirements.

Clean Water Act

Our operations can result in the discharge of pollutants. The Federal Water Pollution Control Act of 1972, as amended, also known as the Clean Water Act, and analogous state laws impose restrictions and controls regarding the discharge of pollutants into state waters or waters of the United States. The discharge of pollutants into regulated waters is prohibited, except in accordance with the terms of a permit issued by applicable federal or state authorities. The Oil Pollution Act was enacted in 1990 and amends provisions of the Clean Water Act as they pertain to prevention and response to oil spills. Spill prevention control and countermeasure requirements of the Clean Water Act and some state laws require containment and similar structures to help prevent contamination of navigable waters in the event of an overflow or release. We believe we are in substantial compliance with these laws.

Other

KMGP Services Company, Inc., Knight and Kinder Morgan Canada Inc. employ all persons necessary for the operation of our business. Generally, we reimburse these entities for the services of their employees. As of December 31, 2007, KMGP Services Company, Inc., Knight and Kinder Morgan Canada Inc. had, in the aggregate, approximately 7,600 full-time employees. Approximately 920 full-time hourly personnel at certain terminals and pipelines are represented by labor unions under collective bargaining agreements that expire between 2008 and 2012. KMGP Services Company, Inc., Knight and Kinder Morgan Canada Inc. each consider relations with their employees to be good. For more information on our related party transactions, see Note 12 of the notes to our consolidated financial statements included elsewhere in this report.

We believe that we have generally satisfactory title to the properties we own and use in our businesses, subject to liens for current taxes, liens incident to minor encumbrances, and easements and restrictions, which do not materially detract from the value of such property or the interests in those properties or the use of such properties in our businesses. We generally do not own the land on which our pipelines are constructed. Instead, we obtain the right to construct and operate the pipelines on other people’s land for a period of time. Substantially all of our pipelines are constructed on rights-of-way granted by the apparent record owners of such property. In many instances, lands over which rights-of-way have been obtained are subject to prior liens, which have not been subordinated to the right-of-way grants. In some cases, not all of the apparent record owners have joined in the right-of-way grants, but in substantially all such cases, signatures of the owners of majority interests have been obtained. Permits have been obtained from public authorities to cross over or under, or to lay facilities in or along, water courses, county roads, municipal streets and state highways, and in some instances, such permits are revocable at the election of the grantor, or, the pipeline may be required to move its facilities at its own expense. Permits have also been obtained from railroad companies to cross over or under lands or rights-of-way, many of which are also revocable at the grantor's election. Some such permits require annual or other periodic payments. In a few minor cases, property for pipeline purposes was purchased in fee.

(d) Financial Information about Geographic Areas

For geographic information concerning our assets and operations, see Note 15 to our consolidated financial statements.

(e) Available Information

We make available free of charge on or through our Internet website, at www.kindermorgan.com, our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 as soon as reasonably practicable after we electronically file such material with, or furnish it to, the Securities and Exchange Commission.

Item 1A. *Risk Factors*.

You should carefully consider the risks described below, in addition to the other information contained in this document. Realization of any of the following risks could have a material adverse effect on our business, financial condition, cash flows and results of operations. There are also risks associated with being an owner of common units in a partnership that are different than being an owner of common stock in a corporation. Investors in our common units must be aware that the realization of any of those risks could result in a decline in the trading price of our common units, and they might lose all or part of their investment.

Risks Related to Our Business

Pending Federal Energy Regulatory Commission and California Public Utilities Commission proceedings seek substantial refunds and reductions in tariff rates on some of our pipelines. If the proceedings are determined adversely to us, they could have a material adverse impact on us.

Regulators and shippers on our pipelines have rights to challenge the rates we charge under certain circumstances prescribed by applicable regulations. Some shippers on our pipelines have filed complaints with the Federal Energy Regulatory Commission and California Public Utilities Commission that seek substantial refunds for alleged overcharges during the years in question and prospective reductions in the tariff rates on our Pacific operations' pipeline system. We may face challenges, similar to those described in Note 16 to our consolidated financial statements included elsewhere in this report, to the rates we receive on our pipelines in the future. Any successful challenge could adversely and materially affect our future earnings and cash flows.

Rulemaking and oversight, as well as changes in regulations, by the Federal Energy Regulatory Commission or other regulatory agencies having jurisdiction over our operations could adversely impact our income and operations.

The rates (which include reservation, commodity, surcharges, fuel and gas lost and unaccounted for) we charge shippers on our natural gas pipeline systems are subject to regulatory approval and oversight. Furthermore, regulators and shippers on our natural gas pipelines have rights to challenge the rates shippers are charged under certain circumstances prescribed by applicable regulations. We can provide no assurance that we will not face challenges to the rates we receive on our pipeline systems in the future. Any successful challenge could materially adversely affect our future earnings and cash flows. New laws or regulations or different interpretations of existing laws or regulations applicable to our assets could have a material adverse impact on our business, financial condition and results of operations.

Increased regulatory requirements relating to the integrity of our pipelines will require us to spend additional money to comply with these requirements.

Through our regulated pipeline subsidiaries, we are subject to extensive laws and regulations related to pipeline integrity. There are, for example, federal guidelines for the U.S. Department of Transportation and pipeline companies in the areas of testing, education, training and communication. Compliance with laws and regulations requires significant expenditures. We have increased our capital expenditures to address these matters and expect to significantly increase these expenditures in the foreseeable future. Additional laws and regulations that may be enacted in the future or a new interpretation of existing laws and regulations could significantly increase the amount of these expenditures.

Cost overruns and delays on our expansion and new build projects could adversely affect our business.

We currently have several major expansion and new build projects planned or underway, including the approximate $4.9 billion Rockies Express Pipeline and the approximate $1.3 billion Midcontinent Express Pipeline. A variety of factors outside our control, such as weather, natural disasters and difficulties in obtaining permits and rights-of-way or other regulatory approvals, as well as the performance by third party contractors has resulted in, and may continue to result in, increased costs or delays in construction. Cost overruns or delays in completing a project could have a material adverse effect on our results of operations and cash flows.

Our rapid growth may cause difficulties integrating and constructing new operations, and we may not be able to achieve the expected benefits from any future acquisitions.

Part of our business strategy includes acquiring additional businesses, expanding existing assets, or constructing new facilities that will allow us to increase distributions to our unitholders. If we do not successfully integrate acquisitions, expansions, or newly constructed facilities, we may not realize anticipated operating advantages and cost savings. The integration of companies that have previously operated separately involves a number of risks, including:

- demands on management related to the increase in our size after an acquisition, an expansion, or a completed construction project;
- the diversion of our management's attention from the management of daily operations;
- difficulties in implementing or unanticipated costs of accounting, estimating, reporting and other systems;
- difficulties in the assimilation and retention of necessary employees; and
- potential adverse effects on operating results.

We may not be able to maintain the levels of operating efficiency that acquired companies have achieved or might achieve separately. Successful integration of each acquisition, expansion, or construction project will depend upon our ability to manage those operations and to eliminate redundant and excess costs. Because of difficulties in combining and expanding operations, we may not be able to achieve the cost savings and other size-related benefits that we hoped to achieve after these acquisitions, which would harm our financial condition and results of operations.

Our acquisition strategy and expansion programs require access to new capital. Tightened credit markets or more expensive capital would impair our ability to grow.

Part of our business strategy includes acquiring additional businesses. We may need new capital to finance these acquisitions. Limitations on our access to capital will impair our ability to execute this strategy. We normally fund acquisitions with short-term debt and repay such debt through the issuance of equity and long-term debt. An inability to access the capital markets may result in a substantial increase in our leverage and have a detrimental impact on our credit profile.

Environmental regulation and liabilities could result in increased operating and capital costs.

Our business operations are subject to federal, state, provincial and local laws and regulations relating to environmental protection, pollution and human health and safety in the United States and Canada. For example, if an accidental leak, release or spill of liquid petroleum products, chemicals or other products occurs at or from our pipelines or at or from our storage or other facilities, we may experience significant operational disruptions and we may have to pay a significant amount to clean up the leak, release or spill, pay for government penalties, address natural resource damage, compensate for human exposure or property damage, install costly pollution control equipment or a combination of these and other measures. The resulting costs and liabilities could materially and negatively affect our level of earnings and cash flows. In addition, emission controls required under federal, state and provincial environmental laws could require significant capital expenditures at our facilities. The costs of environmental regulation are already significant, and additional or more stringent regulation could increase these costs or could otherwise negatively affect our business.

In addition, our oil and gas development and production activities are subject to certain federal, state and local laws and regulations relating to environmental quality and pollution control. These laws and regulations increase the costs of these activities and may prevent or delay the commencement or continuance of a given operation. Specifically, we are subject to laws and regulations regarding the acquisition of permits before drilling, restrictions on drilling activities in restricted areas, emissions into the environment, water discharges, and storage and disposition of hazardous wastes. In addition, legislation has been enacted which requires well and facility sites to be abandoned and reclaimed to the satisfaction of state authorities. The costs of environmental regulation are already significant, and additional or more stringent regulation could increase these costs or could otherwise negatively affect our business.

Energy commodity transportation and storage activities involve numerous risks that may result in accidents or otherwise adversely affect operations.

There are a variety of hazards and operating risks inherent to natural gas transmission and storage activities, and refined petroleum products and carbon dioxide transportation activities—such as leaks, explosions and mechanical problems that could result in substantial financial losses. In addition, these risks could result in loss of human life, significant damage to property, environmental pollution and impairment of operations, any of which also could result in substantial losses. For pipeline and storage assets located near populated areas, including residential areas, commercial business centers, industrial sites and other public gathering areas, the level of damage resulting from these risks could be greater. If losses in excess of our insurance coverage were to occur, they could have a material adverse effect on our business, financial condition and results of operations.

The future success of our oil and gas development and production operations depends in part upon our ability to develop additional oil and gas reserves that are economically recoverable.

The rate of production from oil and natural gas properties declines as reserves are depleted. Without successful development activities, the reserves and revenues of our oil producing assets within our CO_2 business segment will decline. We may not be able to develop or acquire additional reserves at an acceptable cost or have necessary financing for these activities in the future. Additionally, if we do not realize production volumes greater than, or equal to, our hedged volumes, we will be liable to perform on hedges currently valued at greater than $1.3 billion in favor of our counter-parties.

The development of oil and gas properties involves risks that may result in a total loss of investment.

The business of developing and operating oil and gas properties involves a high degree of business and financial risk that even a combination of experience, knowledge and careful evaluation may not be able to overcome. Acquisition and development decisions generally are based on subjective judgments and assumptions that, while they may be reasonable, are by their nature speculative. It is impossible to predict with certainty the production potential of a particular property or well. Furthermore, a successful completion of a well does not ensure a profitable return on the investment. A variety of geological, operational, or market-related factors, including, but not limited to, unusual or unexpected geological formations, pressures, equipment failures or accidents, fires, explosions, blowouts, cratering, pollution and other environmental risks, shortages or delays in the availability of drilling rigs and the delivery of equipment, loss of circulation of drilling fluids or other conditions may substantially delay or prevent completion of any well, or otherwise prevent a property or well from being profitable. A productive well may become uneconomic in the event water or other deleterious substances are encountered, which impair or prevent the production of oil and/or gas from the well. In addition, production from any well may be unmarketable if it is contaminated with water or other deleterious substances.

The volatility of natural gas and oil prices could have a material adverse effect on our business.

The revenues, profitability and future growth of our CO_2 business segment and the carrying value of our oil and natural gas properties depend to a large degree on prevailing oil and gas prices. Prices for oil and natural gas are subject to large fluctuations in response to relatively minor changes in the supply and demand for oil and natural gas, uncertainties within the market and a variety of other factors beyond our control. These factors include, among other things, weather conditions and events such as hurricanes in the United States; the condition of the United States economy; the activities of the Organization of Petroleum Exporting Countries; governmental regulation; political stability in the Middle East and elsewhere; the foreign supply of oil and natural gas; the price of foreign imports; and the availability of alternative fuel sources.

A sharp decline in the price of natural gas or oil prices would result in a commensurate reduction in our revenues, income and cash flows from the production of oil and natural gas and could have a material adverse effect on the carrying value of our proved reserves. In the event prices fall substantially, we may not be able to realize a profit from our production and would operate at a loss. In recent decades, there have been periods of both worldwide overproduction and underproduction of hydrocarbons and periods of both increased and relaxed energy conservation efforts. Such conditions have resulted in periods of excess supply of, and reduced demand for, crude oil on a worldwide basis and for natural gas on a domestic basis. These periods have been followed by periods of short supply of, and increased demand for, crude oil and natural gas. The excess or short supply of crude oil or natural gas has placed pressures on prices and has resulted in dramatic price fluctuations even during relatively short periods of seasonal market demand.

Our use of hedging arrangements could result in financial losses or reduce our income.

We currently engage in hedging arrangements to reduce our exposure to fluctuations in the prices of oil and natural gas. These hedging arrangements expose us to risk of financial loss in some circumstances, including when production is less than expected, when the counterparty to the hedging contract defaults on its contract obligations, or when there is a change in the expected differential between the underlying price in the hedging agreement and the actual prices received. In addition, these hedging arrangements may limit the benefit we would otherwise receive from increases in prices for oil and natural gas.

The accounting standards regarding hedge accounting are complex, and even when we engage in hedging transactions (for example, to mitigate our exposure to fluctuations in commodity prices or to balance our exposure to fixed and floating interest rates) that are effective economically, these transactions may not be considered effective for accounting purposes. Accordingly, our financial statements may reflect some volatility due to these hedges, even when there is no underlying economic impact at that point. In addition, it is not always possible for us to engage in a hedging transaction that completely mitigates our exposure to commodity prices. Our financial statements may reflect a gain or loss arising from an exposure to commodity prices for which we are unable to enter into a completely effective hedge.

We do not own approximately 97.5% of the land on which our pipelines are constructed, and we are subject to the possibility of increased costs to retain necessary land use.

We obtain the right to construct and operate pipelines on other owners' land for a period of time. If we were to lose these rights or be required to relocate our pipelines, our business could be affected negatively.

Whether we have the power of eminent domain for our pipelines varies from state to state depending upon the type of pipeline—petroleum liquids, natural gas or carbon dioxide—and the laws of the particular state. Our inability to exercise the power of eminent domain could negatively affect our business if we were to lose the right to use or occupy the property on which our pipelines are located. For the year ended December 31, 2007, all of our right-of-way related expenses totaled $14.6 million.

Our debt instruments may limit our financial flexibility and increase our financing costs.

The instruments governing our debt contain restrictive covenants that may prevent us from engaging in certain transactions that we deem beneficial and that may be beneficial to us. The agreements governing our debt generally require us to comply with various affirmative and negative covenants, including the maintenance of certain financial ratios and restrictions on (i) incurring additional debt; (ii) entering into mergers, consolidations and sales of assets; (iii) granting liens; and (iv) entering into sale-leaseback transactions. The instruments governing any future debt may contain similar or more restrictive restrictions. Our ability to respond to changes in business and economic conditions and to obtain additional financing, if needed, may be restricted.

Because a portion of our debt is subject to variable interest rates, if interest rates increase, our earnings could be adversely affected.

As of December 31, 2007, we had approximately $3.0 billion of debt, excluding the value of interest rate swaps, subject to variable interest rates. This amount included $2.3 billion of long-term fixed rate debt effectively converted to variable rate debt through the use of interest rate swaps. Should interest rates increase significantly, our earnings could be adversely affected. For information on our interest rate risk, see Item 7A "Quantitative and Qualitative Disclosures About Market Risk—Interest Rate Risk."

Current or future distressed financial conditions of customers could have an adverse impact on us in the event these customers are unable to pay us for the services we provide.

Some of our customers are experiencing, or may experience in the future, severe financial problems that have had or may have a significant impact on their creditworthiness. We cannot provide assurance that one or more of our financially distressed customers will not default on their obligations to us or that such a default or defaults will not have a material adverse effect on our business, financial position, future results of operations, or future cash flows. Furthermore, the bankruptcy of one or more of our customers, or some other similar proceeding or liquidity constraint, might make it unlikely that we would be able to collect all or a significant portion of amounts owed by the distressed entity or entities. In addition, such events might force such customers to reduce or curtail their future use of our products and services, which could have a material adverse effect on our results of operations and financial condition.

The general uncertainty associated with the current world economic and political environments in which we exist may adversely impact our financial performance.

Our financial performance is impacted by overall marketplace spending and demand. We are continuing to assess the effect that terrorism would have on our businesses and in response, we have increased security with respect to our assets. Recent federal legislation provides an insurance framework that should cause current insurers to continue to provide sabotage and terrorism coverage under standard property insurance policies. Nonetheless, there is no assurance that adequate sabotage and terrorism insurance will be available at rates we believe are reasonable throughout 2008.

Knight’s recently completed going-private transaction resulted in substantially more debt at Knight and could have an adverse effect on us, such as a downgrade in the ratings of our debt securities.

On May 30, 2007, Knight completed its going-private transaction. In connection with the transaction, Knight incurred substantially more debt. In conjunction with the going-private transaction, Moody’s Investor Service, Inc. and Standard & Poor’s Rating Services reviewed and adjusted the credit ratings of both Knight and us. Following these adjustments, our senior unsecured debt is rated BBB and Baa2 by Standard & Poor’s and Moody’s, respectively. Though steps have been taken which are intended to allow our senior unsecured indebtedness to continue to be rated investment grade, we can provide no assurance that that will be the case. Additionally, our rating was downgraded by Fitch Ratings from BBB+ to BBB on April 11, 2007.

Our senior management’s attention may be diverted from our daily operations because of recent significant transactions by Knight following the completion of the going-private transaction.

The investors in Knight Holdco LLC include members of Knight’s senior management, most of whom are also senior officers of our general partner and of KMR. Prior to consummation of the going-private transaction, KMI had publicly disclosed that several significant transactions were being considered that, if pursued, would require substantial management time and attention. As a result, our senior management’s attention may be diverted from the management of our daily operations.

Competition could ultimately lead to lower levels of profits and adversely impact our ability to recontract for expiring transportation capacity at favorable rates.

Trans Mountain’s pipeline to the West Coast of North America is one of several pipeline alternatives for Western Canadian petroleum production. This pipeline, like all our petroleum pipelines, competes against other pipeline companies who could be in a position to offer different tolling structures, which may provide them with a competitive advantage in new pipeline development. Throughput on our pipelines may decline if tolls become uncompetitive compared to alternatives.

Future business development of our products pipelines is dependent on the supply of, and demand for, crude oil and other liquid hydrocarbons, particularly from the Alberta oilsands.

Our pipelines depend on production of natural gas, oil and other products in the areas serviced by our pipelines. Without reserve additions, production will decline over time as reserves are depleted and production costs may rise. Producers may shut down production at lower product prices or higher production costs, especially where the existing cost of production exceeds other extraction methodologies, such as at the Alberta oilsands. Producers in areas serviced by us may not be successful in exploring for and developing additional reserves, and the gas plants and the pipelines may not be able to maintain existing volumes of throughput. Commodity prices and tax incentives may not remain at a level which encourages producers to explore for and develop additional reserves, produce existing marginal reserves or renew transportation contracts as they expire.

Changes in the business environment, such as a decline in crude oil prices, an increase in production costs from higher feedstock prices, supply disruptions, or higher development costs, could result in a slowing of supply from the Alberta oilsands. In addition, changes in the regulatory environment or governmental policies may have an impact on the supply of crude oil. Each of these factors impact our customers shipping through our pipelines, which in turn could impact the prospects of new transportation contracts or renewals of existing contracts.

Throughput on our products pipelines may also decline as a result of changes in business conditions. Over the long term, business will depend, in part, on the level of demand for oil and natural gas in the geographic areas in which deliveries are made by pipelines and the ability and willingness of shippers having access or rights to utilize the pipelines to supply such demand. The implementation of new regulations or the modification of existing regulations affecting the oil and gas industry could reduce demand for natural gas and crude oil, increase our costs and may have a material adverse effect on our results of operations and financial condition. We cannot predict the impact of future economic conditions, fuel conservation measures, alternative fuel requirements, governmental regulation or technological advances in fuel economy and energy generation devices, all of which could reduce the demand for natural gas and oil.

We are subject to U.S. dollar/Canadian dollar exchange rate fluctuations.

As a result of our acquisition of the Trans Mountain pipeline system, the Vancouver Wharves terminal, the Cochin pipeline system, and our terminal expansion projects located in Edmonton, Alberta, Canada, a portion of our assets, liabilities, revenues and expenses are denominated in Canadian dollars. We are a U.S. dollar reporting company. Fluctuations in the exchange rate between United States and Canadian dollars could expose us to reductions in the U.S. dollar value of our earnings and cash flows and a reduction in our partners' capital under applicable accounting rules.

Risks Related to Our Common Units

The interests of Knight may differ from our interests and the interests of our unitholders.

Knight indirectly owns all of the stock of our general partner and elects all of its directors. Our general partner owns all of KMR's voting shares and elects all of its directors. Furthermore, some of KMR's directors and officers are also directors and officers of Knight and our general partner and have fiduciary duties to manage the businesses of Knight in a manner that may not be in the best interests of our unitholders. Knight has a number of interests that differ from the interests of our unitholders. As a result, there is a risk that important business decisions will not be made in the best interests of our unitholders.

Common unitholders have limited voting rights and limited control.

Holders of common units have only limited voting rights on matters affecting us. Our general partner manages partnership activities. Under a delegation of control agreement, our general partner has delegated the management and control of our and our subsidiaries' business and affairs to KMR. Holders of common units have no right to elect the general partner on an annual or other ongoing basis. If the general partner withdraws, however, its successor may be elected by the holders of a majority of the outstanding common units (excluding units owned by the departing general partner and its affiliates).

The limited partners may remove the general partner only if (i) the holders of at least 66 2/3% of the outstanding common units, excluding common units owned by the departing general partner and its affiliates, vote to remove the general partner; (ii) a successor general partner is approved by at least 66 2/3% of the outstanding common units, excluding common units owned by the departing general partner and its affiliates; and (iii) we receive an opinion of counsel opining that the removal would not result in the loss of limited liability to any limited partner, or the limited partner of an operating partnership, or cause us or the operating partnership to be taxed other than as a partnership for federal income tax purposes.

A person or group owning 20% or more of the common units cannot vote.

Any common units held by a person or group that owns 20% or more of the common units cannot be voted. This limitation does not apply to the general partner and its affiliates. This provision may (i) discourage a person or group from attempting to remove the general partner or otherwise change management; and (ii) reduce the price at which the common units will trade under certain circumstances. For example, a third party will probably not attempt to take over our management by making a tender offer for the common units at a price above their trading market price without removing the general partner and substituting an affiliate of its own.

The general partner's liability to us and our unitholders may be limited.

Our partnership agreement contains language limiting the liability of the general partner to us or the holders of common units. For example, our partnership agreement provides that (i) the general partner does not breach any duty to us or the holders of common units by borrowing funds or approving any borrowing (the general partner is protected even if the purpose or effect of the borrowing is to increase incentive distributions to the general partner); (ii) the general partner does not breach any duty to us or the holders of common units by taking any actions consistent with the standards of reasonable discretion outlined in the definitions of available cash and cash from operations contained in our partnership agreement; and (iii) the general partner does not breach any standard of care or duty by resolving conflicts of interest unless the general partner acts in bad faith.

Unitholders may have liability to repay distributions.

Unitholders will not be liable for assessments in addition to their initial capital investment in the common units. Under certain circumstances, however, holders of common units may have to repay us amounts wrongfully returned or distributed to them. Under Delaware law, we may not make a distribution to unitholders if the distribution causes our liabilities to exceed the fair value of our assets. Liabilities to partners on account of their partnership interests and non-recourse liabilities are not counted for purposes of determining whether a distribution is permitted. Delaware law provides that for a period of three years from the date of such a distribution, a limited partner who receives the distribution and knew at the time of the distribution that the distribution violated Delaware law will be liable to the limited partnership for the distribution amount. Under Delaware law, an assignee who becomes a substituted limited partner of a limited partnership is liable for the obligations of the assignor to make contributions to the partnership. However, such an assignee is not obligated for liabilities unknown to the assignee at the time the assignee became a limited partner if the liabilities could not be determined from the partnership agreement.

Unitholders may be liable if we have not complied with state partnership law.

We conduct our business in a number of states. In some of those states the limitations on the liability of limited partners for the obligations of a limited partnership have not been clearly established. The unitholders might be held liable for the partnership's obligations as if they were a general partner if (i) a court or government agency determined that we were conducting business in the state but had not complied with the state's partnership statute; or (ii) unitholders' rights to act together to remove or replace the general partner or take other actions under our partnership agreement constitute "control" of our business.

The general partner may buy out minority unitholders if it owns 80% of the units.

If at any time the general partner and its affiliates own 80% or more of the issued and outstanding common units, the general partner will have the right to purchase all, and only all, of the remaining common units. Because of this right, a unitholder could have to sell its common units at a time or price that may be undesirable. The purchase price for such a purchase will be the greater of (i) the 20-day average trading price for the common units as of the date five days prior to the date the notice of purchase is mailed; or (ii) the highest purchase price paid by the general partner or its affiliates to acquire common units during the prior 90 days. The general partner can assign this right to its affiliates or to us.

We may sell additional limited partner interests, diluting existing interests of unitholders.

Our partnership agreement allows the general partner to cause us to issue additional common units and other equity securities. When we issue additional equity securities, including additional i-units to KMR when it issues additional shares, unitholders' proportionate partnership interest in us will decrease. Such an issuance could negatively affect the amount of cash distributed to unitholders and the market price of common units. Issuance of additional common units will also diminish the relative voting strength of the previously outstanding common units. Our partnership agreement does not limit the total number of common units or other equity securities we may issue.

The general partner can protect itself against dilution.

Whenever we issue equity securities to any person other than the general partner and its affiliates, the general partner has the right to purchase additional limited partnership interests on the same terms. This allows the general partner to maintain its proportionate partnership interest in us. No other unitholder has a similar right. Therefore, only the general partner may protect itself against dilution caused by issuance of additional equity securities.

Our partnership agreement and the KMR limited liability company agreement restrict or eliminate a number of the fiduciary duties that would otherwise be owed by our general partner and/or its delegate to our unitholders.

Modifications of state law standards of fiduciary duties may significantly limit the ability of our unitholders to successfully challenge the actions of our general partner in the event of a breach of fiduciary duties. These state law standards include the duties of care and loyalty. The duty of loyalty, in the absence of a provision in the limited partnership agreement to the contrary, would generally prohibit our general partner from taking any action or engaging in any transaction as to which it has a conflict of interest. Our limited partnership agreement contains provisions that prohibit limited partners from advancing claims that otherwise might raise issues as to compliance with fiduciary duties or applicable law. For example, that agreement provides that the general partner may take into account the interests of parties other than us in resolving conflicts of interest. It also provides that in the absence of bad faith by the general partner, the resolution of a conflict by the general partner will not be a breach of any duty. The provisions relating to the general partner apply equally to KMR as its delegate. It is not necessary for a limited partner to sign our limited partnership agreement in order for the limited partnership agreement to be enforceable against that person.

We adopted certain valuation methodologies that may result in a shift of income, gain, loss and deduction between our general partner and our unitholders. The IRS may challenge this treatment, which could adversely affect the value of the common units.

When we issue additional units or engage in certain other transactions, we determine the fair market value of our assets and allocate any unrealized gain or loss attributable to our assets to the capital accounts of our unitholders and our general partner. This methodology may be viewed as understating the value of our assets. In that case, there may be a shift of income, gain, loss and deduction between certain unitholders and our general partner, which may be unfavorable to such unitholders. Moreover, under our current valuation methods, subsequent purchasers of common units may have a greater portion of their Internal Revenue Code Section 743(b) adjustment allocated to our tangible assets and a lesser portion allocated to our intangible assets. The IRS may challenge these valuation methods, or our allocation of the Section 743(b) adjustment attributable to our tangible and intangible assets, and allocations of income, gain, loss and deduction between our general partner and certain of our unitholders.

A successful IRS challenge to these methods or allocations could adversely affect the amount of taxable income or loss being allocated to our partners. It also could affect the amount of gain from our unitholders' sale of common units and could have a negative impact on the value of the common units or result in audit adjustments to our unitholders' tax returns without the benefit of additional deductions.

Our treatment of a purchaser of common units as having the same tax benefits as the seller could be challenged, resulting in a reduction in value of the common units.

Because we cannot match transferors and transferees of common units, we are required to maintain the uniformity of the economic and tax characteristics of these units in the hands of the purchasers and sellers of these units. We do so by adopting certain depreciation conventions that do not conform to all aspects of the United States Treasury regulations. A successful IRS challenge to these conventions could adversely affect the tax benefits to a unitholder of ownership of the common units and could have a negative impact on their value or result in audit adjustments to unitholders' tax returns.

Our tax treatment depends on our status as a partnership for federal income tax purposes, as well as our not being subject to a material amount of entity-level taxation by individual states. If the Internal Revenue Service treats us as a corporation or if we become subject to a material amount of entity-level taxation for state tax purposes, it would substantially reduce the amount of cash available for distribution to our partners.

The anticipated after-tax economic benefit of an investment in us depends largely on our being treated as a partnership for federal income tax purposes. In order for us to be treated as a partnership for federal income tax purposes, current law requires that 90% or more of our gross income for every taxable year consist of "qualifying income," as defined in Section 7704 of the Internal Revenue Code. We may not meet this requirement or current law may change so as to cause, in either event, us to be treated as a corporation for federal income tax purposes or otherwise subject to federal income tax. We have not requested, and do not plan to request, a ruling from the Internal Revenue Service on this or any other matter affecting us.

If we were to be treated as a corporation for federal income tax purposes, we would pay federal income tax on our income at the corporate tax rate, which is currently a maximum of 35%, and would pay state income taxes at varying rates. Under current law, distributions to our partners would generally be taxed again as corporate distributions, and no income, gain, losses or deductions would flow through to our partners. Because a tax would be imposed on us as a corporation, our cash available for distribution would be substantially reduced. Therefore, treatment of us as a corporation would result in a material reduction in the anticipated cash flow and after-tax return to our partners, likely causing substantial reduction in the value of our units.

Current law or our business may change so as to cause us to be treated as a corporation for federal income tax purposes or otherwise subject us to entity-level taxation. Members of Congress are considering substantive changes to the existing federal income tax laws that affect certain publicly-traded partnerships. For example, federal income tax legislation has been proposed that would eliminate partnership tax treatment for certain publicly-traded partnerships. Although the currently proposed legislation would not appear to affect our tax treatment as a partnership, we are unable to predict whether any of these changes, or other proposals, will ultimately be enacted. Any such changes could negatively impact the value of an investment in our common units.

In addition, because of widespread state budget deficits and other reasons, several states are evaluating ways to subject partnerships to entity-level taxation through the imposition of state income, franchise or other forms of taxation. For example, we are now subject to a new entity-level tax on the portion of our total revenue that is generated in Texas. Specifically, the Texas margin tax is imposed at a maximum effective rate of 0.7% of our total revenue that is apportioned to Texas. Imposition of such a tax on us by Texas, or any other state, will reduce our cash available for distribution to our partners.

Our partnership agreement provides that if a law is enacted that subjects us to taxation as a corporation or otherwise subjects us to entity-level taxation for federal income tax purposes, the minimum quarterly distribution and the target distribution levels will be adjusted to reflect the impact on us of that law.

The issuance of additional i-units may cause more taxable income to be allocated to the common units.

The i-units we issue to KMR generally are not allocated income, gain, loss or deduction for federal income tax purposes until such time as we are liquidated. Therefore, the issuance of additional i-units may cause more taxable income and gain to be allocated to the common unitholders.

Risks Related to Ownership of Our Common Units if We or Knight Defaults on Debt

Unitholders may have negative tax consequences if we default on our debt or sell assets.

If we default on any of our debt, the lenders will have the right to sue us for non-payment. Such an action could cause an investment loss and cause negative tax consequences for unitholders through the realization of taxable income by unitholders without a corresponding cash distribution. Likewise, if we were to dispose of assets and realize a taxable gain while there is substantial debt outstanding and proceeds of the sale were applied to the debt, unitholders could have increased taxable income without a corresponding cash distribution.

There is the potential for a change of control if Knight defaults on debt.

Knight owns all of the outstanding capital stock of our general partner. Knight has operations which provide cash independent of dividends that Knight receives from our general partner. Nevertheless, if Knight defaults on its debt, in exercising their rights as lenders, Knight's lenders could acquire control of our general partner or otherwise influence our general partner through control of Knight.

Item 1B. ***Unresolved Staff Comments.***

None.

Item 3. ***Legal Proceedings.***

See Note 16 of the notes to our consolidated financial statements included elsewhere in this report.

Item 4. ***Submission of Matters to a Vote of Security Holders.***

There were no matters submitted to a vote of our unitholders during the fourth quarter of 2007.

PART II

Item 5. ***Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.***

The following table sets forth, for the periods indicated, the high and low sale prices per common unit, as reported on the New York Stock Exchange, the principal market in which our common units are traded, the amount of cash distributions declared per common and Class B unit, and the fractional i-unit distribution declared per i-unit.

	Price Range			
	High	**Low**	**Cash Distributions**	**i-unit Distributions**
2007				
First Quarter	$ 53.50	$ 47.28	$ 0.8300	0.015378
Second Quarter	57.35	52.11	0.8500	0.016331
Third Quarter	56.70	46.61	0.8800	0.017686
Fourth Quarter	54.71	48.51	0.9200	0.017312
2006				
First Quarter	$ 56.22	$ 44.70	$ 0.8100	0.018566
Second Quarter	48.80	43.62	0.8100	0.018860
Third Quarter	46.53	42.80	0.8100	0.018981
Fourth Quarter	48.98	43.01	0.8300	0.016919

Distribution information is for distributions declared with respect to that quarter. The declared distributions were paid within 45 days after the end of the quarter. We currently expect to declare cash distributions of at least $4.02 per unit for 2008; however, no assurance can be given that we will be able to achieve this level of distribution, and our expectation does not take into account any capital costs associated with financing the payment of reparations sought by shippers on our Pacific operations' interstate pipelines.

As of January 31, 2008, there were approximately 190,660 holders of our common units (based on the number of record holders and individual participants in security position listings), one holder of our Class B units and one holder of our i-units.

For information on our equity compensation plans, see Item 12 "Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters—Equity Compensation Plan Information".

We did not repurchase any units during 2007 or sell any unregistered units in the fourth quarter of 2007.

Item 6. ***Selected Financial Data***

The following tables set forth, for the periods and at the dates indicated, our summary historical financial and operating data. The table is derived from our consolidated financial statements and notes thereto, and should be read in conjunction with those audited financial statements. See also Item 7 "Management's Discussion and Analysis of Financial Condition and Results of Operations" in this report for more information.

	Year Ended December 31,				
	2007(6)	2006(7)	2005(8)	2004(9)	2003(10)
	(In millions, except per unit and ratio data)				
Income and Cash Flow Data:					
Revenues	$ 9,217.7	$ 9,048.7	$ 9,745.9	$ 7,893.0	$ 6,583.6
Costs, Expenses and Other:					
Gas purchases and other costs of sales	5,809.8	5,990.9	7,167.3	5,767.0	4,880.0
Operations and maintenance	1,024.6	777.0	719.5	488.6	388.6
Fuel and power	237.5	223.7	178.5	146.4	102.2

Total assets	$	15,177.8	$	13,542.2	$	11,923.5	$	10,552.9	$	9,139.2
Long-term debt(5)	$	6,455.9	$	4,384.3	$	5,220.9	$	4,722.4	$	4,316.7

(1) Represents income or loss from the operations of our North System natural gas liquids pipeline system. For 2007 only, also includes a gain of $152.8 million on disposal of our North System. For more information on our discontinued operations, see Note 3 to our consolidated financial statements included elsewhere in this report.

(2) Represents income from continuing operations before cumulative effect of a change in accounting principle per unit. Basic Limited Partners' income per unit from continuing operations before cumulative effect of a change in accounting principle was computed by dividing the interest of our unitholders in income from continuing operations before cumulative effect of a change in accounting principle by the weighted average number of units outstanding during the period. Diluted Limited Partners' net income per unit reflects the maximum potential dilution that could occur if units whose issuance depends on the market price of the units at a future date were considered outstanding, or if, by application of the treasury stock method, options to issue units were exercised, both of which would result in the issuance of additional units that would then share in our net income.

(3) Represents the amount of cash distributions declared with respect to that year.

(4) For the purpose of computing the ratio of earnings to fixed charges, earnings are defined as income from continuing operations before income taxes and cumulative effect of a change in accounting principle, and before minority interest in consolidated subsidiaries, equity earnings (including amortization of excess cost of equity investments) and unamortized capitalized interest, plus fixed charges and distributed income of equity investees. Fixed charges are defined as the sum of interest on all indebtedness (excluding capitalized interest), amortization of debt issuance costs and that portion of rental expense which we believe to be representative of an interest factor.

(5) Excludes value of interest rate swaps. Increases to long-term debt for value of interest rate swaps totaled $152.2 million as of December 31, 2007, $42.6 million as of December 31, 2006, $98.5 million as of December 31, 2005, $130.2 million as of December 31, 2004, and $121.5 million as of December 31, 2003.

(6) Includes results of operations for an approximate 50.2% interest in the Cochin pipeline system, the Vancouver Wharves marine terminal, and terminal assets acquired from Marine Terminals, Inc. since effective dates of acquisition. We acquired the remaining 50.2% interest in Cochin that we did not already own from affiliates of BP effective January 1, 2007. We acquired the Vancouver Wharves bulk marine terminal operations from British Columbia Railway Company effective May 30, 2007, and we acquired certain bulk terminal assets from Marine Terminals, Inc. effective September 1, 2007. Also includes Trans Mountain since January 1, 2007 as discussed below.

(7) Includes results of operations for the net assets of Trans Mountain acquired on April 30, 2007 from Knight Inc. (formerly Kinder Morgan, Inc.) since January 1, 2006. Also includes results of operations for the oil and gas properties acquired from Journey Acquisition-I, L.P. and Journey 2000, L.P., the terminal assets and operations acquired from A&L Trucking, L.P. and U.S. Development Group, Transload Services, LLC, and Devco USA L.L.C. since effective dates of acquisition. The April 5, 2006 acquisition of the Journey oil and gas properties were made effective March 1, 2006. The assets and operations acquired from A&L Trucking and U.S. Development Group were acquired in three separate transactions in April 2006. We acquired all of the membership interests in Transload Services, LLC effective November 20, 2006, and we acquired all of the membership interests in Devco USA L.L.C. effective December 1, 2006. We also acquired a 66 2/3% ownership interest in Entrega Pipeline LLC effective February 23, 2006, however, our earnings were not materially impacted during 2006 due to the fact that regulatory accounting provisions required capitalization of revenues and expenses until the second segment of the Entrega Pipeline was complete and in-service.

(8) Includes results of operations for the 64.5% interest in the Claytonville unit, the seven bulk terminal operations acquired from Trans-Global Solutions, Inc., the Kinder Morgan Staten Island terminal, the terminal facilities located in Hawesville, Kentucky and Blytheville, Arkansas, General Stevedores, L.P., the North Dayton natural gas storage facility, the Kinder Morgan Blackhawk terminal, the terminal repair shop acquired from Trans-Global Solutions, Inc., and the terminal assets acquired from Allied Terminals, Inc. since effective dates of acquisition. We acquired the 64.5% interest in the Claytonville unit effective January 31, 2005. We acquired the seven bulk terminal operations from Trans-Global Solutions, Inc. effective April 29, 2005. The Kinder Morgan Staten Island terminal, the Hawesville, Kentucky terminal and the Blytheville, Arkansas terminal were each acquired separately in July 2005. We acquired all of the partnership interests in General Stevedores, L.P. effective July 31, 2005. We acquired the North Dayton natural gas storage facility effective August 1, 2005. We acquired the Kinder Morgan Blackhawk terminal in August 2005 and the terminal repair shop in September 2005. We acquired the terminal assets from Allied Terminals, Inc. effective November 4, 2005.

(9) Includes results of operations for the seven refined petroleum products terminals acquired from ExxonMobil, Kinder Morgan Wink Pipeline, L.P., an additional 5% interest in the Cochin Pipeline System, Kinder Morgan River Terminals LLC and its consolidated subsidiaries, TransColorado Gas Transmission Company LLC, interests in nine refined petroleum products terminals acquired from Charter Terminal Company and Charter-Triad Terminals, LLC, and the Kinder Morgan

Fairless Hills terminal since effective dates of acquisition. We acquired the seven refined petroleum products terminals from ExxonMobil effective March 9, 2004. We acquired Kinder Morgan Wink Pipeline, L.P. effective August 31, 2004. The additional interest in Cochin was acquired effective October 1, 2004. We acquired Kinder Morgan River Terminals LLC and its consolidated subsidiaries effective October 6, 2004. We acquired TransColorado effective November 1, 2004, the interests in the nine Charter Terminal Company and Charter-Triad Terminals, LLC refined petroleum products terminals effective November 5, 2004, and the Kinder Morgan Fairless Hills terminal effective December 1, 2004.

(10) Includes results of operations for the bulk terminal operations acquired from M.J. Rudolph Corporation, the additional 12.75% interest in the SACROC unit, the five refined petroleum products terminals acquired from Shell, the additional 42.5% interest in the Yates field unit, the crude oil gathering operations surrounding the Yates field unit, an additional 65% interest in the Pecos Carbon Dioxide Company, the remaining approximate 32% interest in MidTex Gas Storage Company, LLP, the seven refined petroleum products terminals acquired from ConocoPhillips and two bulk terminal facilities located in Tampa, Florida since dates of acquisition. We acquired certain bulk terminal operations from M.J. Rudolph effective January 1, 2003. The additional 12.75% interest in SACROC was acquired effective June 1, 2003. The five refined petroleum products terminals were acquired effective October 1, 2003. The additional 42.5% interest in the Yates field unit, the Yates gathering system and the additional 65% interest in Pecos Carbon Dioxide Company were acquired effective November 1, 2003. The additional 32% ownership interest in MidTex was acquired November 1, 2003. The seven refined petroleum products terminals were acquired December 11, 2003, and the two bulk terminal facilities located in Tampa, Florida were acquired effective December 10 and 23, 2003.

Item 7. ***Management’s Discussion and Analysis of Financial Condition and Results of Operations.***

The following discussion and analysis of our financial condition and results of operations provides a narrative of our financial results. It contains a discussion and analysis of the results of operations for each segment of our business, followed by a discussion and analysis of our financial condition. The following discussion and analysis is based on our consolidated financial statements, which are included elsewhere in this report and were prepared in accordance with accounting principles generally accepted in the United States of America.

The following discussion and analysis should be read in conjunction with our consolidated financial statements included elsewhere in this report. Additional sections in this report which should be helpful to the reading of our discussion and analysis include the following: (i) a description of our business strategy found in Items 1 and 2 "Business and Properties—(c) Narrative Description of Business—Business Strategy;" (ii) a description of developments during 2007, found in Items 1 and 2 "Business and Properties—(a) General Development of Business—Recent Developments;" and (iii) a description of risk factors affecting us and our business, found in Item 1A "Risk Factors."

In addition, as discussed in Note 3 of the accompanying notes to our consolidated financial statements, our financial statements reflect:

- the April 30, 2007 transfer of Trans Mountain as if such transfer had taken place on January 1, 2006, the effective date of common control pursuant to generally accepted accounting principles. The financial information contained in this Management’s Discussion and Analysis of Financial Condition and Results of Operations includes the financial results of Trans Mountain for all periods subsequent to January 1, 2006; and
- the reclassifications necessary to reflect the results of our North System as discontinued operations. However, due to the fact that the sale of our North System does not change the structure of our internal organization in a manner that causes a change to our reportable business segments pursuant to the provisions of SFAS No. 131, "Disclosures about Segments of an Enterprise and Related Information," we have included the North System’s financial results within our Products Pipelines business segment disclosures for all periods presented in this report.

We begin with a discussion of our Critical Accounting Polices and Estimates, those areas that are both very important to the portrayal of our financial condition and results and which require our management’s most difficult, subjective or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain.

Critical Accounting Policies and Estimates

Accounting standards require information in financial statements about the risks and uncertainties inherent in significant estimates, and the application of generally accepted accounting principles involves the exercise of varying degrees of judgment. Certain amounts included in or affecting our consolidated financial statements and related disclosures must be estimated, requiring us to make certain assumptions with respect to values or conditions that cannot be known with certainty at the time the financial statements are prepared. These estimates and assumptions affect the amounts we report for our assets and liabilities, our revenues and expenses during the reporting period, and our disclosure of contingent assets and liabilities at the date of our financial statements.

We routinely evaluate these estimates, utilizing historical experience, consultation with experts and other methods we consider reasonable in the particular circumstances. Nevertheless, actual results may differ significantly from our estimates. Any effects on our business, financial position or results of operations resulting from revisions to these estimates are recorded in the period in which the facts that give rise to the revision become known.

In preparing our consolidated financial statements and related disclosures, examples of certain areas that require more judgment relative to others include our use of estimates in determining:

- the economic useful lives of our assets;
- the fair values used to allocate purchase price and to determine possible asset impairment charges;
- reserves for environmental claims, legal fees, transportation rate cases and other litigation liabilities;
- provisions for uncollectible accounts receivables;
- exposures under contractual indemnifications; and
- unbilled revenues.

For a summary of our significant accounting policies, see Note 2 to our consolidated financial statements included elsewhere in this report. We believe that certain accounting policies are of more significance in our consolidated financial statement preparation process than others, which policies are discussed as follows.

Environmental Matters

With respect to our environmental exposure, we utilize both internal staff and external experts to assist us in identifying environmental issues and in estimating the costs and timing of remediation efforts. We expense or capitalize, as appropriate, environmental expenditures that relate to current operations, and we record environmental liabilities when environmental assessments and/or remedial efforts are probable and we can reasonably estimate the costs. We do not discount environmental liabilities to a net present value, and we recognize receivables for anticipated associated insurance recoveries when such recoveries are deemed to be probable.

Our recording of our environmental accruals often coincides with our completion of a feasibility study or our commitment to a formal plan of action, but generally, we recognize and/or adjust our environmental liabilities following routine reviews of potential environmental issues and claims that could impact our assets or operations. These adjustments may result in increases in environmental expenses and are primarily related to quarterly reviews of potential environmental issues and resulting environmental liability estimates.

These environmental liability adjustments are recorded pursuant to our management's requirement to recognize contingent environmental liabilities whenever the associated environmental issue is likely to occur and the amount of our liability can be reasonably estimated. In making these liability estimations, we consider the effect of environmental compliance, pending legal actions against us, and potential third-party liability claims. For more information on our environmental disclosures, see Note 16 to our consolidated financial statements included elsewhere in this report.

Legal Matters

We are subject to litigation and regulatory proceedings as a result of our business operations and transactions. We utilize both internal and external counsel in evaluating our potential exposure to adverse outcomes from orders, judgments or settlements. To the extent that actual outcomes differ from our estimates, or additional facts and circumstances cause us to revise our estimates, our earnings will be affected. In general, we expense legal costs as incurred. When we identify specific litigation that is expected to continue for a significant period of time and require substantial expenditures, we identify a range of possible costs expected to be required to litigate the matter to a conclusion or reach an acceptable settlement. If no amount within this range is a better estimate than any other amount, we record a liability equal to the low end of the range. Any such liability recorded is revised as better information becomes available.

As of December 31, 2007, our most significant ongoing litigation proceedings involve our SFPP, L.P, subsidiary, which is the limited partnership that owns our Pacific operations' pipelines, excluding CALNEV Pipe Line LLC. Tariffs charged by our Pacific operations' pipeline systems are subject to certain proceedings at the FERC involving shippers' complaints regarding the interstate rates, as well as practices and the jurisdictional nature of certain facilities and services. Generally, the interstate rates on our Pacific operations' pipeline systems are "grandfathered" under the Energy Policy Act of 1992 unless "substantially changed circumstances" are found to exist. To the extent "substantially changed circumstances" are found to exist, our Pacific operations may be subject to substantial exposure under these FERC complaints and could, therefore, owe reparations and/or refunds to complainants as mandated by the FERC or the United States' judicial system. For more information on our Pacific operations' regulatory proceedings, see Note 16 to our consolidated financial statements included elsewhere in this report.

Intangible Assets

Intangible assets are those assets which provide future economic benefit but have no physical substance. We account for our intangible assets according to the provisions of Statement of Financial Accounting Standards No. 141, "Business Combinations" and Statement of Financial Accounting Standards No. 142, "Goodwill and Other Intangible Assets." These accounting pronouncements introduced the concept of indefinite life intangible assets and provided that all identifiable intangible assets having indefinite useful economic lives, including goodwill, will not be subject to regular periodic amortization. Such assets are not to be amortized until their lives are determined to be finite. Instead, the carrying amount of a recognized intangible asset with an indefinite useful life must be tested for impairment annually or on an interim basis if events or circumstances indicate that the fair value of the asset has decreased below its carrying value. We have selected an impairment measurement test date of January 1 of each year, and we have determined that our goodwill was not impaired as of January 1, 2008.

As of December 31, 2007, our goodwill was $1,077.8 million. Included in this goodwill balance is $251.0 million related to our Trans Mountain business segment, which we acquired from Knight on April 30, 2007. Following the provisions of generally accepted accounting principles, this transaction caused Knight to consider the fair value of the Trans Mountain pipeline system, and to determine whether goodwill related to these assets was impaired. Knight recorded a goodwill impairment charge of $377.1 million in the first quarter of 2007. This impairment is also reflected on our books due to the accounting principles for transfers of assets between entities under common control, which require us to account for Trans Mountain as if the transfer had taken place on January 1, 2006.

Our remaining intangible assets, excluding goodwill, include customer relationships, contracts and agreements, technology-based assets and lease value. These intangible assets have definite lives, are being amortized on a straight-line basis over their estimated useful lives, and are reported separately as "Other intangibles, net" in our accompanying consolidated balance sheets. As of December 31, 2007 and 2006, these intangibles totaled $238.6 million and $213.2 million, respectively.

Estimated Net Recoverable Quantities of Oil and Gas

We use the successful efforts method of accounting for our oil and gas producing activities. The successful efforts method inherently relies on the estimation of proved reserves, both developed and undeveloped. The existence and the estimated amount of proved reserves affect, among other things, whether certain costs are capitalized or expensed, the amount and timing of costs depleted or amortized into income and the presentation of supplemental information on oil and gas producing activities. The expected future cash flows to be generated by oil and gas producing properties used in testing for impairment of such properties also rely in part on estimates of net recoverable quantities of oil and gas.

Proved reserves are the estimated quantities of oil and gas that geologic and engineering data demonstrates with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions. Estimates of proved reserves may change, either positively or negatively, as additional information becomes available and as contractual, economic and political conditions change.

Hedging Activities

We engage in a hedging program that utilizes derivative contracts to mitigate (offset) our exposure to fluctuations in energy commodity prices and to balance our exposure to fixed and floating interest rates, and we believe that these hedges are generally effective in realizing these objectives. However, the accounting standards regarding hedge accounting are complex, and even when we engage in hedging transactions that are effective economically, these transactions may not be considered effective for accounting purposes.

According to the provisions of current accounting standards, to be considered effective, changes in the value of a derivative contract or its resulting cash flows must substantially offset changes in the value or cash flows of the item being hedged. A perfectly effective hedge is one in which changes in the value of the derivative contract exactly offset changes in the value of the hedged item or expected cash flow of the future transactions in reporting periods covered by the derivative contract. The ineffective portion of the gain or loss and any component excluded from the computation of the effectiveness of the derivative contract must be reported in earnings immediately; accordingly, our financial statements may reflect some volatility due to these hedges.

In addition, it is not always possible for us to engage in a hedging transaction that completely mitigates our exposure to unfavorable changes in commodity prices. For example, when we purchase a commodity at one location and sell it at another, we may be unable to hedge completely our exposure to a differential in the price of the product between these two locations. Even when we cannot enter into a completely effective hedge, we often enter into hedges that are not completely effective in those instances where we believe to do so would be better than not hedging at all, but due to the fact that the part of the hedging transaction that is not effective in offsetting undesired changes in commodity prices (the ineffective portion) is required to be recognized currently in earnings, our financial statements may reflect a gain or loss arising from an exposure to commodity prices for which we are unable to enter into a completely effective hedge.

Results of Operations

Our business model is built to support two principal components:

- helping customers by providing energy, bulk commodity and liquids products transportation, storage and distribution; and
- creating long-term value for our unitholders.

To achieve these objectives, we focus on providing fee-based services to customers from a business portfolio consisting of energy-related pipelines, bulk and liquids terminal facilities, and carbon dioxide and petroleum reserves. Our reportable business segments are based on the way our management organizes our enterprise, and each of our five segments represents a component of our enterprise that engages in a separate business activity and for which discrete financial information is available.

Consolidated

	Year Ended December 31,		
	2007	2006	2005
		(In millions)	
Earnings before depreciation, depletion and amortization expense and amortization of excess cost of equity investments(a)			
Products Pipelines(b)	$ 569.6	$ 491.2	$ 370.1
Natural Gas Pipelines(c)	600.2	574.8	500.3
CO_2 (d)	537.0	488.2	470.9
Terminals(e)	416.0	408.1	314.6
Trans Mountain(f)	(293.6)	76.5	—
Segment earnings before depreciation, depletion and amortization expense and amortization of excess cost of equity investments	1,829.2	2,038.8	1,655.9
Depreciation, depletion and amortization expense(g)	(547.0)	(432.8)	(349.8)
Amortization of excess cost of equity investments	(5.8)	(5.7)	(5.6)
Interest and corporate administrative expenses(h)	(686.1)	(596.2)	(488.3)
Net income	$ 590.3	$ 1,004.1	$ 812.2

(a) Includes revenues, earnings from equity investments, allocable interest income and other, net, less operating expenses, allocable income taxes, and other expense (income). Operating expenses include natural gas purchases and other costs of sales, operations and maintenance expenses, fuel and power expenses, and taxes, other than income taxes.

(b) 2007 amount includes (i) a $152.8 million gain from the sale of our North System; (ii) a $136.8 million increase in expense associated with rate case and other legal liability adjustments; (iii) a $15.9 million increase in expense associated with environmental liability adjustments; (iv) a $15.0 million expense for a litigation settlement reached with Contra Costa County, California; (v) a $3.2 million increase in expense from the settlement of certain litigation matters related to our West Coast refined products terminal operations; and (vi) a $1.8 million increase in income resulting from unrealized foreign currency gains on long-term debt transactions. 2006 amount includes a $16.5 million increase in expense associated with environmental liability adjustments, and a $5.7 million increase in income resulting from certain transmix contract settlements. 2005 amount includes a $105.0 million increase in expense resulting from a rate case liability adjustment, a $13.7 million increase in expense resulting from a North System liquids inventory reconciliation adjustment, and a $19.6 million increase in expense associated with environmental liability adjustments.

(c) 2007 amount includes an expense of $1.0 million, reflecting our portion of a loss from the early extinguishment of debt by Red Cedar Gathering Company, and a $0.4 million decrease in expense associated with environmental liability adjustments. 2006 amount includes a $1.5 million increase in expense associated with environmental liability adjustments, a $15.1 million gain from the combined sale of our Douglas natural gas gathering system and Painter Unit fractionation facility, and a $6.3 million reduction in expense due to the release of a reserve related to a natural gas purchase/sales contract. 2005 amount includes a $0.1 million reduction in expense associated with environmental liability adjustments.

(d) 2007 amount includes a $0.2 million increase in expense associated with environmental liability adjustments. 2006 amount includes a $1.8 million loss on derivative contracts used to hedge forecasted crude oil sales. 2005 amount includes a $0.3 million increase in expense associated with environmental liability adjustments.

(e) 2007 amount includes (i) a $25.0 million increase in expense from the settlement of certain litigation matters related to our Cora coal terminal; (ii) a $2.0 million increase in expense associated with environmental liability adjustments; (iii) an increase in income of $1.8 million from property casualty gains associated with the 2005 hurricane season; and (iv) a $1.2 million increase in expense associated with legal liability adjustments. 2006 amount includes an $11.3 million net increase in income from the net effect of a property casualty insurance gain and incremental repair and clean-up expenses (both associated with the 2005 hurricane season). 2005 amount includes a $3.5 million increase in expense associated with environmental liability adjustments.

(f) As discussed in Note 3 to our consolidated financial statements included elsewhere in this report, our consolidated financial statements, and all other financial information included in this report, are presented as though the April 30, 2007 transfer of Trans Mountain net assets had occurred on the date when both Trans Mountain and we met the accounting requirements for entities under common control (January 1, 2006). 2007 amount includes losses of $349.2 million for periods prior to our acquisition date of April 30, 2007 (including a goodwill impairment expense of $377.1 million), and a $1.3 million decrease in income from an oil loss allowance. 2006 amount represents earnings for a period prior to our acquisition date of April 30, 2007.

(g) 2007 and 2006 amounts include Trans Mountain expenses of $6.3 million and $19.0 million, respectively, for periods prior to our acquisition date of April 30, 2007.

(h) Includes unallocated interest income and income tax expense, interest and debt expense, general and administrative expenses (including unallocated litigation and environmental expenses), and minority interest expense. 2007 amount includes the following: (i) a $26.2 million increase in expense, allocated to us from Knight, associated with closing the going-private transaction. Knight Inc. was responsible for the payment of the costs resulting from this transaction; (ii) a combined $6.7 million increase in expense, related to Trans Mountain interest and general and administrative expenses for periods prior to our acquisition date of April 30, 2007; (iii) a $2.4 million increase in interest expense related to our Cochin Pipeline acquisition; (iv) a $2.1 million expense due to the adjustment of certain insurance related liabilities; (v) a $1.7 million increase in expense associated with the 2005 hurricane season; (vi) a $1.5 million expense for certain Trans Mountain acquisition costs; (vii) a $0.8 million expense related to the cancellation of certain commercial insurance policies; and (viii) a total $3.9 million decrease in minority interest expense, related to the minority interest effect from all of the previously listed items. 2006 amount includes a combined $25.1 million expense related to Trans Mountain interest and general and administrative expenses, a $2.0 million increase in expense, primarily related to the cancellation of certain commercial insurance policies and a $3.5 million increase in minority interest expense, primarily related to the minority interest effect from the property casualty insurance gain described in footnote (e). 2005 amount includes a $25.0 million expense for a litigation settlement reached between us and a former joint venture partner on our Kinder Morgan Tejas natural gas pipeline system, a cumulative $8.4 million expense related to settlements of environmental matters at certain of our operating sites located in the state of California, and a $3.0 million decrease in expense related to proceeds received in connection with the settlement of claims in the Enron Corp. bankruptcy proceeding.

For the year 2007, our net income was $590.3 million on revenues of $9,217.7 million. This compares with net income of $1,004.1 million on revenues of $9,048.7 million in 2006, and net income of $812.2 million on revenues of $9,745.9 million in 2005. The certain items described in the footnotes to the table above account for $483.3 million of the year-to-year decrease of $413.8 million. The remaining increase in net income is associated with better performance from our operating segments.

The primary reason for the decrease in our 2007 net income, when compared to last year, was related to an impairment expense of $377.1 million associated with a non-cash reduction in the carrying value of Trans Mountain's goodwill. Included within the certain items footnoted in the table above, and discussed above in " — Intangibles," the goodwill impairment charge was recognized by Knight in March 2007. Following our purchase of Trans Mountain from Knight on April 30, 2007, the financial results of Trans Mountain since January 1, 2006, including the impact of the goodwill impairment, are reflected in our results. Also, our overall carrying value for the net assets of Trans Mountain reflects Knight's carrying value, which is considerably higher than the cash price we paid. For more information on this acquisition and the goodwill impairment, see Notes 3 and 8 to our consolidated financial statements included elsewhere in this report.

Segment earnings before depreciation, depletion and amortization expenses

Because our partnership agreement requires us to distribute 100% of our available cash to our partners on a quarterly basis (available cash consists primarily of all our cash receipts, less cash disbursements and changes in reserves), we consider each period's earnings before all non-cash depreciation, depletion and amortization expenses, including amortization of excess cost of equity investments, to be an important measure of our success in maximizing returns to our partners. We also use segment earnings before depreciation, depletion and amortization expenses (defined in the table above and sometimes referred to in this report as EBDA) internally as a measure of profit and loss used for evaluating segment performance and for deciding how to allocate resources to our five reportable business segments.

Combined, the certain items described in the footnotes to the table above decreased total segment earnings before depreciation, depletion and amortization by $489.1 million in 2007, relative to 2006 (combining to decrease total segment EBDA by $394.0 million in 2007 and to increase segment EBDA by $95.1 million in 2006). The remaining $279.5 million (14%) increase in segment earnings before depreciation, depletion and amortization in 2007 versus 2006 was driven by strong financial results from increased margins on natural gas transport, storage and processing activities, incremental earnings from dry-bulk product and petroleum liquids terminal operations, higher crude oil and natural gas liquids revenues, incremental earnings from completed expansion projects, and our acquisition of the Trans Mountain pipeline system and the remaining interest in the Cochin pipeline system that we did not already own.

In 2006, the certain items described above combined to increase total segment earnings before depreciation, depletion and amortization by$237.1 million, compared to the previous year (combining to increase total segment EBDA by $95.1 million in 2006 and to decrease segment EBDA by $142.0 million in 2005). The remaining $145.8 million (8%) increase in segment earnings before depreciation, depletion and amortization in 2006 versus 2005 was primarily attributable to internal growth and expansion across our business portfolio and to incremental contributions from assets and operations acquired since the end of 2005.

Products Pipelines

	Year Ended December 31,		
	2007	**2006**	**2005**
	(In millions, except operating statistics)		
Revenues	$ 844.4	$ 776.3	$ 711.8
Operating expenses(a)	(451.8)	(308.3)	(366.0)
Other income(b)	154.8	—	—
Earnings from equity investments(c)	32.5	16.3	28.5
Interest income and Other, net-income (expense)(d)	9.4	12.1	6.1
Income tax benefit (expense)(e)	(19.7)	(5.2)	(10.3)
Earnings before depreciation, depletion and amortization expense and amortization of excess cost of equity investments	$ 569.6	$ 491.2	$ 370.1
Gasoline (MMBbl)	435.5	449.8	452.1
Diesel fuel (MMBbl)	164.1	158.2	163.1
Jet fuel (MMBbl)	125.1	119.5	118.1
Total refined product volumes (MMBbl)	724.7	727.5	733.3
Natural gas liquids (MMBbl)	30.4	34.0	33.5
Total delivery volumes (MMBbl)(f)	755.1	761.5	766.8

(a) 2007, 2006 and 2005 amounts include increases in expense of $15.9 million, $13.5 million and $19.6 million, respectively, associated with environmental liability adjustments. 2007 amount also includes a $136.7 million increase in expense associated with rate case and other legal liability adjustments, a $15.0 million expense for a litigation settlement reached with Contra Costa County, California, and a $3.2 million increase in expense from the settlement of certain litigation matters related to our West Coast refined products terminal operations. 2005 amount also includes a $105.0 million increase in expense associated with a rate case liability adjustment, and a $13.7 million increase in expense associated with a North System liquids inventory reconciliation adjustment.

(b) 2007 amount includes a $152.8 million gain from the sale of our North System.

(c) 2007 amount includes a $0.1 million increase in expense associated with our proportional share of legal liability adjustments on Plantation Pipe Line Company. 2006 amount includes a $4.9 million increase in expense associated with our proportional share of environmental liability adjustments on Plantation Pipe Line Company.

(d) 2007 amount includes a $1.8 million increase in income resulting from unrealized foreign currency gains on long-term debt transactions. 2006 amount includes a $5.7 million increase in income resulting from transmix contract settlements.

(e) 2006 amount includes a $1.9 million decrease in expense associated with our proportional share of the tax effect on our share of environmental expenses incurred by Plantation Pipe Line Company and described in footnote (c).

(f) Includes Pacific, Plantation, CALNEV, Central Florida, Cochin, and Cypress pipeline volumes.

Our Products Pipelines segment’s primary businesses include transporting refined petroleum products and natural gas liquids through pipelines and operating liquid petroleum products terminals and petroleum pipeline transmix processing facilities. Combined, the certain items described in the footnotes to the table above decreased earnings before depreciation, depletion and amortization by $5.5 million in 2007 compared to 2006, and increased earnings before depreciation, depletion and amortization by $127.5 million in 2006 compared to 2005.

Following is information related to the remaining increases and decreases in the segment’s (i) earnings before depreciation, depletion and amortization expenses (EBDA); and (ii) operating revenues in both 2007 and 2006, when compared to the respective prior year:

Year Ended December 31, 2007 versus Year Ended December 31, 2006

	EBDA increase/(decrease)		Revenues Increase/(decrease)	
	(In millions, except percentages)			
Cochin Pipeline System	$ 30.0	212%	$ 39.2	110%
West Coast Terminals	12.3	34%	7.5	12%
Plantation Pipeline	8.6	27%	1.0	2%
Transmix operations	8.0	36%	10.6	32%
Pacific operations	5.8	2%	18.4	5%
CALNEV Pipeline	5.1	11%	3.4	5%
Southeast Terminals	5.0	13%	(12.9)	(16)%
North System	4.9	21%	(2.6)	(6)%
All other (including eliminations)	4.2	11%	3.5	7%
Total Products Pipelines	$ 83.9	17%	$ 68.1	9%

Year Ended December 31, 2006 versus Year Ended December 31, 2005

	EBDA Increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
Cochin Pipeline System	$ (5.2)	(27)%	$ (0.5)	(1)%
Southeast Terminals	4.9	15%	24.5	43%
Plantation Pipeline	(4.2)	(12)%	1.5	4%
Pacific operations	(5.4)	(2)%	16.2	5%
West Coast Terminals	(2.6)	(7)%	6.5	11%
Transmix operations	2.6	13%	3.9	13%
All other (including eliminations)	3.5	3%	12.4	8%
Total Products Pipelines	$ (6.4)	(1)%	$ 64.5	9%

All of the assets in our Products Pipelines business segment produced higher earnings before depreciation, depletion and amortization expenses in 2007 than in the previous year. The overall increase in segment earnings before depreciation, depletion and amortization in 2007 compared to 2006 was driven largely by incremental earnings from our Cochin pipeline system. The higher earnings and revenues from Cochin were largely attributable to our January 1, 2007 acquisition of the remaining approximate 50.2% ownership interest that we did not already own. Upon closing of the transaction, we became the operator of the pipeline. For more information on this acquisition, see Note 3 to our consolidated financial statements included elsewhere in this report.

The year-to-year earnings increase from our West Coast terminal operations in 2007 was due to higher operating revenues, lower operating expenses and incremental gains from asset sales. The increases in terminal revenues were driven by higher throughput volumes from our combined Carson/Los Angeles Harbor terminal system, partly due to completed storage expansion projects since the end of 2006, and from our Linnton and Willbridge terminals located in Portland, Oregon. The decrease in operating expenses in 2007 versus 2006 was largely related to higher environmental expenses recognized in 2006, due to adjustments to accrued environmental liabilities (these incremental environmental expenses were not associated with the expenses described in footnote (a) to the table above).

The increase in earnings in 2007 from our approximate 51% equity investment in Plantation Pipe Line Company was due to higher overall net income earned by Plantation, largely resulting from both higher pipeline revenues and lower period-to-period operating expenses. The increase in revenues was largely due to a higher oil loss allowance percentage in 2007, relative to last year, and the drop in operating expenses—including fuel, power and pipeline maintenance expenses, was due to decreases in both refined products delivery volumes and pipeline integrity expenses in 2007 versus 2006 (pipeline integrity expenses are discussed more fully below).

The year-to-year increase in earnings before depreciation, depletion and amortization from our petroleum pipeline transmix operations was directly related to higher revenues, reflecting incremental revenues from our Greensboro, North Carolina facility and higher processing revenues from our Colton, California facility. In May 2006, we completed construction and placed into service the Greensboro facility, and during 2007, the plant

processed greater volumes than in 2006. In 2007, our Greensboro facility contributed incremental earnings before depreciation, depletion and amortization of $4.5 million and incremental revenues of $5.4 million in 2007 compared to 2006. The increases in earnings and revenues from our Colton facility, which processes transmix generated from volumes transported to the Southern California and Arizona markets by our Pacific operations' pipelines, were primarily due to year-to-year increases in average processing contract rates.

We also benefited from higher earnings before depreciation, depletion and amortization from our Pacific operations, our CALNEV Pipeline and our North System in 2007, when compared to last year. The increase in our Pacific operations' earnings was largely revenue related, attributable to increases in both transportation volumes and average tariff rates. Combined mainline delivery and terminal revenues increased 5% in 2007, compared to 2006, due largely to higher delivery volumes to Arizona, the completed expansion of our East Line pipeline during the summer of 2006, and higher deliveries to various West Coast military bases. The increase from CALNEV was also driven by higher year-over-year revenues, due to increased military and commercial tariff rates in 2007, and higher terminal revenues associated with ethanol blending at our Las Vegas terminal that more than offset a 2% drop in refined products delivery volumes. The increase from our North System was mainly due to lower combined operating expense, due to its sale in the fourth quarter of 2007 (the decline in expense was greater than the associated decline in revenue).

Effective October 5, 2007, we sold our North System common carrier natural gas liquids pipeline and our 50% ownership interest in the Heartland Pipeline Company to ONEOK Partners, L.P. for approximately $298.6 million, and we used the proceeds we received to pay down short-term debt borrowings. We accounted for our North System business as a discontinued operation pursuant to generally accepted accounting principles which require that the income statement be formatted to separate the divested business from our continuing operations; however, consistent with the management approach of identifying and reporting financial information on operating segments, we have included the North System's financial results within our Products Pipelines business segment disclosures for all periods presented in this discussion and analysis. This decision was based on the way our management organizes segments internally to make operating decisions and assess performance. We do not expect the impact of the discontinued operations to materially affect our overall business, financial position, results of operations or cash flows. For information on our reconciliation of segment information with our consolidated general-purpose financial statements, see Note 15 to our consolidated financial statements included elsewhere in this report.

Combining all of the segment's operations, while revenues from refined petroleum products deliveries increased 6.2% in 2007, compared to last year, total refined products delivery volumes decreased 0.4%. Compared to last year, gasoline delivery volumes decreased 3.2% (primarily due to Plantation), while diesel and jet fuel volumes were up 3.7% and 4.7%, respectively. Excluding Plantation, which continued to be impacted by a competing pipeline that began service in mid-2006, total refined products delivery volumes increased by 0.8% in 2007, when compared to 2006. Volumes on our Pacific operations and our Central Florida pipelines were up 1% and 2%, respectively, in 2007, and while natural gas liquids delivery volumes were down in 2007 versus 2006, revenues were up substantially due to our increased ownership in the Cochin pipeline system.

The $6.4 million (1%) decrease in earnings before depreciation, depletion and amortization expenses in 2006, when compared to 2005, was largely due to a combined decrease in earnings of $24.2 million in 2006—due to incremental pipeline maintenance expenses recognized in the last half of the year. Beginning in the third quarter of 2006, the refined petroleum products pipelines and associated terminal operations included within our Products Pipelines segment (including Plantation Pipe Line Company, our 51%-owned equity investee) began recognizing certain costs incurred as part of their pipeline integrity management program as maintenance expense in the period incurred, and in addition, recorded an expense for costs previously capitalized during the first six months of 2006. Combined, this change reduced the segment's earnings before depreciation, depletion and amortization expenses by $24.2 million in 2006—increasing maintenance expenses by $20.1 million, decreasing earnings from equity investments by $6.6 million, and decreasing income tax expenses by $2.5 million.

Pipeline integrity costs encompass those costs incurred as part of an overall pipeline integrity management program, which is a process for assessing and mitigating pipeline risks in order to reduce both the likelihood and consequences of incidents. Our pipeline integrity program is designed to provide our management the information needed to effectively allocate resources for appropriate prevention, detection and mitigation activities.

The remaining $17.8 million (4%) increase in earnings before depreciation, depletion and amortization expenses in 2006 compared with 2005, primarily consisted of the following items:

- a $4.9 million (15%) increase from our Southeast refined products terminal operations, driven by higher liquids throughput volumes at higher rates, relative to 2005, and higher margins from ethanol blending and sales activities;
- a $4.1 million (1%) increase from our combined Pacific and CALNEV Pipeline operations, primarily due to a $22.6 million (6%) increase in operating revenues, which more than offset an $18.3 million (18%) increase in combined operating expenses. The increase in operating revenues consisted of a $14.7 million (5%) increase from refined products deliveries and a $7.9 million (8%) increase from terminal and other fee revenue. The increase in operating expenses was primarily due to higher fuel and power expenses; and
- a $3.7 million (12%) increase from our Central Florida Pipeline, mainly due to higher product delivery revenues in 2006 driven by higher average tariff and terminal rates.

Combining all of the segment's operations, while total delivery volumes of refined petroleum products decreased 0.8% in 2006 compared to 2005, total delivery volumes from our Pacific operations were up 1.7% compared to 2005, due in part to the East Line expansion which was in service for the last seven months of 2006. The expansion project substantially increased pipeline capacity from El Paso, Texas to Tucson and Phoenix, Arizona. In addition, our CALNEV Pipeline delivery volumes were up 4.2% in 2006 versus 2005, due primarily to strong demand from the Southern California and Las Vegas, Nevada markets. The overall decrease in year-to-year segment deliveries of refined petroleum products was largely related to a 6.8% drop in volumes from the Plantation Pipeline in 2006, as described above.

Natural Gas Pipelines

	Year Ended December 31,		
	2007	**2006**	**2005**
	(In millions, except operating statistics)		
Revenues	$ 6,466.5	$ 6,577.7	$ 7,718.4
Operating expenses(a)	(5,882.9)	(6,057.8)	(7,255.0)
Other income(b)	3.2	15.1	—
Earnings from equity investments(c)	19.2	40.5	36.8
Interest income and Other, net-income (expense)	0.2	0.7	2.7
Income tax benefit (expense)	(6.0)	(1.4)	(2.6)
Earnings before depreciation, depletion and amortization expense and amortization of excess cost of equity investments	$ 600.2	$ 574.8	$ 500.3
Natural gas transport volumes (Trillion Btus)(d)	1,577.3	1,440.9	1,317.9
Natural gas sales volumes (Trillion Btus)(e)	865.5	909.3	924.6

(a) 2007, 2006 and 2005 amounts include a $0.4 million decrease in expense, a $1.5 million increase in expense and a $0.1 million decrease in expense, respectively, associated with environmental liability adjustments. 2006 amount also includes a $6.3 million reduction in expense due to the release of a reserve related to a natural gas purchase/sales contract.

(b) 2006 amount represents a $15.1 million gain from the combined sale of our Douglas natural gas gathering system and Painter Unit fractionation facility.

(c) 2007 amount includes an expense of $1.0 million reflecting our portion of a loss from the early extinguishment of debt by Red Cedar Gathering Company.

(d) Includes Rocky Mountain pipeline group and Texas intrastate natural gas pipeline group pipeline volumes.

(e) Represents Texas intrastate natural gas pipeline group.

Our Natural Gas Pipelines segment's primary businesses involve marketing, transporting, storing, gathering, treating and processing natural gas through both intrastate and interstate pipeline systems and related facilities. Combined, the certain items described in the footnotes to the table above decreased earnings before depreciation, depletion and amortization by $20.5 million in 2007, relative to 2006, and increased earnings before depreciation, depletion and amortization by $19.8 million in 2006, relative to 2005.

Following is information related to the remaining increases and decreases in the segment's (i) earnings before depreciation, depletion and amortization expenses (EBDA); and (ii) operating revenues in both 2007 and 2006, when compared to the respective prior year:

Year Ended December 31, 2007 versus Year Ended December 31, 2006

	EBDA increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
Texas Intrastate Natural Gas Pipeline Group	$ 57.0	19%	$ (142.2)	(2)%
Casper and Douglas gas processing	8.6	67%	5.6	6%
Rocky Mountain Pipeline Group	(11.6)	(6)%	29.0	10%
Red Cedar Gathering Company	(7.4)	(20)%	—	—
All others	(0.7)	(15)%	(3.8)	(94)%
Intrasegment Eliminations	—	—	0.2	11%
Total Natural Gas Pipelines	$ 45.9	8%	$ (111.2)	(2)%

Year Ended December 31, 2006 versus Year Ended December 31, 2005

	EBDA Increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
Texas Intrastate Natural Gas Pipeline Group	$ 34.6	13%	$ (1,165.7)	(16)%
Rocky Mountain Pipeline Group	14.3	8%	27.9	11%
Red Cedar Gathering Company	4.3	13%	—	—
Casper and Douglas gas processing	2.9	30%	(6.4)	(6)%
All others	(1.4)	(21)%	2.5	167%
Intrasegment Eliminations	—	—	1.0	39%
Total Natural Gas Pipelines	$ 54.7	11%	$ (1,140.7)	(15)%

The segment's overall increases in earnings before depreciation, depletion and amortization expenses in both 2007 and 2006 were driven by strong year-over-year performances from our Texas intrastate natural gas pipeline group, which includes the operations of the following four natural gas pipeline systems: Kinder Morgan Tejas (including Kinder Morgan Border Pipeline), Kinder Morgan Texas Pipeline, Kinder Morgan North Texas Pipeline and our Mier-Monterrey Mexico Pipeline. Collectively, our Texas intrastate group serves the Texas Gulf Coast region by transporting, buying, selling, processing, treating and storing natural gas from multiple onshore and offshore supply sources.

The higher earnings in both 2007 and 2006, when compared to the respective prior years, were primarily due to higher sales margins on renewal and incremental contracts, increased transportation revenue from higher volumes and rates, greater value from natural gas storage activities, and higher natural gas processing margins. Our Texas intrastate natural gas pipeline group also benefited, in 2007, from higher sales of cushion gas, due to the termination of a storage facility lease, and from incremental natural gas storage revenues, due to a long-term contract with one of its largest customers that became effective April 1, 2007. Although natural gas sales volumes were down almost 5% in 2007 compared to 2006, natural gas transport volumes on our Texas intrastate systems increased 21% in 2007 and 5% in 2006, resulting in higher year-over-year transportation revenues. Because the group also buys and sells natural gas, the variances from period to period in both segment revenues and segment operating expenses (which include natural gas costs of sales) are due to changes in our intrastate group's average prices and volumes for natural gas purchased and sold.

The increase in earnings from our Casper and Douglas natural gas processing operations in 2007, when compared to 2006, was driven by an overall 6% increase in operating revenues. The increase was primarily attributable to higher natural gas liquids sales revenues, due to increases in both prices and volume. The 2006 increase in earnings was primarily related to incremental earnings associated with favorable hedge settlements from our natural gas gathering and processing operations. We benefited from comparative differences in hedge settlements associated with the rolling-off of older low price crude oil and propane positions at December 31, 2005.

The decrease in earnings in 2007 from our Rocky Mountain interstate natural gas pipeline group, which is comprised of Kinder Morgan Interstate Gas Transmission LLC, Trailblazer Pipeline Company LLC, TransColorado Gas Transmission Company LLC, and our current 51% equity investment in Rockies Express Pipeline LLC, resulted primarily from a $12.6 million decrease in equity earnings from our investment in Rockies Express. The decrease in earnings from Rockies Express, which began interim service in February 2006, reflected lower net income due primarily to incremental depreciation and interest expense allocable to a segment of the project that was placed in service in February 2007 and, until the completion of the Rockies Express-West project, had limited natural gas reservation revenues and volumes. Rockies Express-West is a 713-mile, 42-inch diameter natural gas pipeline that extends eastward from the Cheyenne Hub in Weld County, Colorado to Audrain County, Missouri. It has the capacity to transport up to 1.5 billion cubic feet of natural gas per day and it began interim service for up to 1.4 billion cubic feet per day on approximately 500 miles of line on January 12, 2008. Rockies Express-West is expected to become fully operational in mid-March 2008.

The $14.3 million (8%) increase in earnings in 2006, relative to 2005, from our Rocky Mountain interstate natural gas pipeline group was driven by a $10.2 million (10%) increase in earnings from our Kinder Morgan Interstate Gas Transmission system and a $3.8 million (10%) increase from TransColorado Pipeline. The increase from KMIGT was due largely to higher revenues earned in 2006 from both operational sales of natural gas and natural gas park and loan services. KMIGT's operational gas sales are primarily made possible by its collection of fuel in-kind pursuant to its transportation tariffs and recovery of storage cushion gas volumes. The increase from TransColorado was largely due to higher natural gas transmission revenues earned in 2006 compared to 2005, chiefly related to higher natural gas delivery volumes resulting from both system improvements and the successful negotiation of incremental firm transportation contracts. The pipeline system improvements were associated with an expansion, completed since the end of the first quarter of 2005, on the northern portion of the pipeline.

Both the drop, in 2007, and the increase, in 2006, in earnings before depreciation, depletion and amortization from our 49% equity investment in the Red Cedar Gathering Company were mainly due to higher prices on incremental sales of excess fuel gas and to higher natural gas gathering revenues in 2006, relative to both 2007 and 2005.

CO_2

	Year Ended December 31,		
	2007	**2006**	**2005**
	(In millions, except operating statistics)		
Revenues(a)	$ 824.1	$ 736.5	$ 657.6
Operating expenses(b)	(304.2)	(268.1)	(212.6)
Other income	—	—	—
Earnings from equity investments	19.2	19.2	26.3
Other, net-income (expense)	—	0.8	—
Income tax benefit (expense)	(2.1)	(0.2)	(0.4)
Earnings before depreciation, depletion and amortization expense and amortization of excess cost of equity investments	$ 537.0	$ 488.2	$ 470.9
Carbon dioxide delivery volumes (Bcf)(c)	637.3	669.2	649.3
SACROC oil production (gross)(MBbl/d)(d)	27.6	30.8	32.1
SACROC oil production (net)(MBbl/d)(e)	23.0	25.7	26.7
Yates oil production (gross)(MBbl/d)(d)	27.0	26.1	24.2
Yates oil production (net)(MBbl/d)(e)	12.0	11.6	10.8
Natural gas liquids sales volumes (net)(MBbl/d)(e)	9.6	8.9	9.4
Realized weighted average oil price per Bbl(f)(g)	$ 36.05	$ 31.42	$ 27.36
Realized weighted average natural gas liquids price per Bbl(g)(h)	$ 52.91	$ 43.90	$ 38.98

(a) 2006 amount includes a $1.8 million loss (from a decrease in revenues) on derivative contracts used to hedge forecasted crude oil sales.

(b) 2007 and 2005 amounts include increases in expense associated with environmental liability adjustments of $0.2 million and $0.3 million, respectively.

(c) Includes Cortez, Central Basin, Canyon Reef Carriers, Centerline and Pecos pipeline volumes.

(d) Represents 100% of the production from the field. We own an approximate 97% working interest in the SACROC unit and an approximate 50% working interest in the Yates unit.

(e) Net to Kinder Morgan, after royalties and outside working interests.

(f) Includes all Kinder Morgan crude oil production properties.

(g) Hedge gains/losses for crude oil and natural gas liquids are included with crude oil.

(h) Includes production attributable to leasehold ownership and production attributable to our ownership in processing plants and third party processing agreements.

Our CO_2 segment consists of Kinder Morgan CO_2 Company, L.P. and its consolidated affiliates. The segment's primary businesses involve the production, marketing and transportation of both carbon dioxide (commonly called CO_2) and crude oil, and the production and marketing of natural gas and natural gas liquids.

Combined, the certain items described in the footnotes to the table above increased earnings before depreciation, depletion and amortization by $1.6 million in 2007, relative to 2006, and decreased earnings before depreciation, depletion and amortization by $1.5 million in 2006, relative to 2005. For each of the segment's two primary businesses, the following is information related to the remaining year-to-year increases and decreases in the segment's (i) earnings before depreciation, depletion and amortization (EBDA); and (ii) operating revenues:

Year Ended December 31, 2007 versus Year Ended December 31, 2006

	EBDA increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
Sales and Transportation Activities	$ (9.3)	(5)%	$ (8.8)	(4)%
Oil and Gas Producing Activities	56.5	19%	81.6	14%
Intrasegment Eliminations	—	—	13.0	21%
Total CO_2	$ 47.2	10%	$ 85.8	12%

Year Ended December 31, 2006 versus Year Ended December 31, 2005

	EBDA increase/(decrease)		Revenues increase/(decrease)	
	(In millions, except percentages)			
Sales and Transportation Activities	$ 24.4	15%	$ 35.78	22%
Oil and Gas Producing Activities	(5.6)	(2)%	57.1	10%
Intrasegment Eliminations	—	—	(12.1)	(25)%
Total CO_2	$ 18.8	4%	$ 80.7	12%

The overall $47.2 million (10%) increase in segment earnings before depreciation, depletion and amortization expenses in 2007 versus 2006 was driven by higher earnings from the segment's oil and gas producing activities, which include its ownership interests in oil-producing fields and natural gas processing plants. The increase was largely due to higher oil production at the Yates oil field unit, higher realized average oil prices in 2007 relative to 2006, and higher earnings from natural gas liquids sales—due largely to increased recoveries at the Snyder, Texas gas plant and to an increase in our realized weighted average price per barrel.

The year-to-year decrease in earnings before depreciation, depletion and amortization from the segment's sales and transportation activities was primarily due to a decrease in carbon dioxide sales revenues, resulting mainly from lower average prices for carbon dioxide in 2007, and partly from a 3% drop in average carbon dioxide delivery volumes. The segment's average price received for all carbon dioxide sales decreased 9% in 2007, when compared to 2006. The decrease was mainly attributable to the expiration of a significantly high-priced sales contract in December 2006.

The segment's $18.8 million (4%) increase in earnings before depreciation, depletion and amortization in 2006 compared with 2005 was driven by higher earnings from the segment's carbon dioxide sales and transportation activities, largely due to higher revenues—from both carbon dioxide sales and deliveries, and from crude oil pipeline transportation. The overall increase in segment earnings before depreciation, depletion and amortization was partly offset by lower earnings from oil and gas producing activities and by lower equity earnings from the segment's 50% ownership interest in Cortez Pipeline Company.

The decrease in earnings from oil and gas producing activities in 2006 compared with 2005 was primarily due to higher combined operating expenses and to the previously disclosed drop in crude oil production at the SACROC oil field unit, discussed below. The higher operating expenses included higher field operating and maintenance expenses (including well workover expenses), higher property and severance taxes, and higher fuel and power expenses. The increases in expenses more than offset higher overall crude oil and natural gas plant product sales revenues, which increased primarily from higher realized sales prices and partly from higher crude oil production at the Yates field unit.

The overall increases in segment revenues in 2007 and 2006, when compared to respective prior years, were mainly due to higher revenues from the segment's oil and gas producing activities' crude oil sales and natural gas liquids sales. Combined, crude oil and plant product sales revenues increased $77.9 million (14%) in 2007 compared to 2006, and $63.9 million (12%) in 2006 compared to 2005.

The year-over-year increases in revenues from the sales of natural gas liquids were driven by favorable sales price variances—our realized weighted average price per barrel increased 21% in 2007 and 13% in 2006, when compared to the respective prior year. The year-over-year increases in revenues from the sales of crude oil reflected annual increases in our realized weighted average price per barrel of 15% in both 2007 and 2006, and although total crude oil sales volumes were relatively flat in 2006 compared to 2005, sales volumes decreased 6% in 2007 compared to 2006. Average gross oil production for 2007 was 27.0 thousand barrels per day at the Yates unit, up 3% from 2006, and 27.6 thousand barrels per day at SACROC, a decline of 10% versus 2006.

The year-to-year decline in crude oil production at the SACROC field unit is attributable to lower observed recoveries from recent project areas and due to an intentional slow down in development pace given this reduction in recoveries. For more information on our ownership interests in the net quantities of proved oil and gas reserves and our measures of discounted future net cash flows from oil and gas reserves, please see Note 20 to our consolidated financial statements included elsewhere in this report.

In addition, because our CO_2 segment is exposed to commodity price risk related to the price volatility of crude oil and natural gas liquids, we mitigate this risk through a long-term hedging strategy that is intended to generate more stable realized prices by using derivative contracts as hedges to the exposure of fluctuating expected future cash flows produced by changes in commodity sales prices. All of our hedge gains and losses for crude oil and natural gas liquids are included in our realized average price for oil. Had we not used energy derivative contracts to transfer commodity price risk, our crude oil sales prices would have averaged $69.63 per barrel in 2007, $63.27 per barrel in 2006 and $54.45 per barrel in 2005. For more information on our hedging activities, see Note 14 to our consolidated financial statements included elsewhere in this report.

Terminals

	Year Ended December 31,		
	2007	**2006**	**2005**
	(In millions, except operating statistics)		
Revenues	$ 963.7	$ 864.8	$ 699.3
Operating expenses(a)	(536.4)	(461.9)	(373.4)
Other income(b)	6.3	15.2	—
Earnings from equity investments	0.6	0.2	0.1
Other, net-income (expense)	1.0	2.1	(0.2)
Income tax benefit (expense)(c)	(19.2)	(12.3)	(11.2)
Earnings before depreciation, depletion and amortization expense and amortization of excess cost of equity investments	$ 416.0	$ 408.1	$ 314.6
Bulk transload tonnage (MMtons)(d)	87.1	95.1	85.5
Liquids leaseable capacity (MMBbl)	47.5	43.5	42.4
Liquids utilization %	95.9%	96.3%	95.4%

(a) 2007 and 2005 amounts include increases in expense associated with environmental liability adjustments of $2.0 million and $3.5 million, respectively.2007 amount also includes a $25.0 million increase in expense from the settlement of certain litigation matters related to our Cora coal terminal, and a $1.2 million increase in expense associated with legal liability adjustments. 2006 amount includes a $2.8 million increase in expense related to hurricane clean-up and repair activities.

(b) 2007 and 2006 amounts include increases in income of $1.8 million and $15.2 million, respectively, from property casualty gains associated with the 2005 hurricane season.

(c) 2006 amount includes a $1.1 million increase in expense associated with hurricane expenses and casualty gain.

(d) Volumes for acquired terminals are included for 2007 and 2006.

Our Terminals segment includes the operations of our petroleum, chemical and other liquids terminal facilities (other than those included in our Products Pipelines segment), and all of our coal, petroleum coke, fertilizer, steel, ores and other dry-bulk material services facilities.

Combined, the certain items described in the footnotes to the table above decreased earnings before depreciation, depletion and amortization by $37.7 million in 2007, relative to 2006, and increased earnings before depreciation, depletion and amortization by $14.8 million in 2006, relative to 2005. The segment's remaining $45.6 million (11%) increase in earnings before depreciation, depletion and amortization expenses in 2007 compared with 2006, and its remaining $78.7 million (25%) increase in 2006 compared to 2005, were driven by a combination of internal expansions and strategic acquisitions completed since the end of 2005. We have made and continue to seek terminal acquisitions in order to gain access to new markets, to complement and/or enlarge our existing terminal operations, and to benefit from the economies of scale resulting from increases in storage, handling and throughput capacity.

In 2007, we invested approximately $158.9 million to acquire terminal assets and equity investments, and our significant terminal acquisitions since the fourth quarter of 2006 included the following:

- all of the membership interests of Transload Services, LLC, which provides material handling and steel processing services at 14 steel-related terminal facilities located in the Chicago metropolitan area and various cities in the United States, acquired November 20, 2006;
- all of the membership interests of Devco USA L.L.C., which includes a proprietary technology that transforms molten sulfur into solid pellets that are environmentally friendly and easier to transport, acquired December 1, 2006;
- the Vancouver Wharves bulk marine terminal, which includes five deep-sea vessel berths and terminal assets located on the north shore of the Port of Vancouver's main harbor. The assets include significant rail infrastructure, dry bulk and liquid storage, and material handling systems, and were acquired May 30, 2007; and
- the terminal assets and operations acquired from Marine Terminals, Inc., which are primarily involved in the handling and storage of steel and alloys and consist of two separate facilities located in Blytheville, Arkansas, and individual terminal facilities located in Decatur, Alabama, Hertford, North Carolina, and Berkley, South Carolina. The assets were acquired effective September 1, 2007.

Combined, these operations accounted for incremental amounts of earnings before depreciation, depletion and amortization of $31.2 million, revenues of $83.9 million, operating expenses of $53.2 million and equity earnings of $0.5 million, respectively, in 2007. All of the incremental amounts represent the earnings, revenues and expenses from the acquired terminals' operations during the additional months of ownership in 2007, and do not include increases or decreases during the same months we owned the assets in 2006.

In 2006, we also benefited significantly from the incremental contributions attributable to the bulk and liquids terminal businesses we acquired during 2005 and 2006. In addition to the two acquisitions acquired in the fourth quarter of 2006 and referred to above, these acquisitions included the following significant businesses:

- our Texas Petcoke terminals, located in and around the Ports of Houston and Beaumont, Texas, acquired effective April 29, 2005;

- three terminals acquired separately in July 2005: our Kinder Morgan Staten Island terminal, a dry-bulk terminal located in Hawesville, Kentucky and a liquids/dry-bulk facility located in Blytheville, Arkansas; and
- all of the ownership interests in General Stevedores, L.P., which operates a break-bulk terminal facility located along the Houston Ship Channel, acquired effective July 31, 2005.

Combined, these terminal acquisitions accounted for incremental amounts of earnings before depreciation, depletion and amortization of $33.5 million, revenues of $68.8 million and operating expenses of $35.3 million, respectively, in 2006. A majority of these increases in earnings, revenues and expenses were attributable to the inclusion of our Texas petroleum coke terminals, which we acquired from Trans-Global Solutions, Inc. on April 29, 2005 for an aggregate consideration of approximately $247.2 million. The primary assets acquired included facilities and railway equipment located at the Port of Houston, the Port of Beaumont and the TGS Deepwater terminal located on the Houston Ship Channel.

For all other terminal operations (those owned during identical periods in both 2007 and 2006), earnings before depreciation, depletion and amortization expenses increased $14.4 million (4%) in 2007, and $45.2 million (14%) in 2006, when compared to the respective prior years. The increases in earnings represent net changes in terminal results at various locations, but the year-over-year increase in 2007 compared to 2006 was largely due to higher earnings in 2007 from our two large Gulf Coast liquids terminal facilities located along the Houston Ship Channel in Pasadena and Galena Park, Texas. The two terminals continued to benefit from both recent expansions that have added new liquids tank and truck loading rack capacity since 2006, and incremental business from ethanol and biodiesel storage and transfer activity (for the entire segment, our expansion projects and acquisitions completed since the end of 2006 have increased our liquids terminals' leaseable capacity by 9%, more than offsetting a less than 1% drop in our overall utilization percentage). Higher earnings in 2007 also resulted from (i) the combined operations of our Argo and Chicago, Illinois liquids terminals, due to increased ethanol throughput and incremental liquids storage and handling business; (ii) our Texas Petcoke terminals, due largely to higher petroleum coke throughput volumes at our Port of Houston facility; and (iii) our Pier IX bulk terminal, located in Newport News, Virginia, largely due to a 19% year-to-year increase in coal transfer volumes and higher rail incentives.

The increase in earnings in 2006 compared to 2005 from terminals owned during both years included higher earnings in 2006 from (i) our Pasadena and Galena Park Gulf Coast liquids terminals, driven by higher revenues, in 2006, from new and incremental customer agreements, additional liquids tank capacity from capital expansions completed at our Pasadena terminal since the end of 2005, higher truck loading rack service fees, higher ethanol throughput, and incremental revenues from customer deficiency charges; (ii) our Shipyard River terminal, located in Charleston, South Carolina, due to higher revenues from liquids warehousing and coal and cement handling; (iii) our Texas Petcoke terminals, mainly resulting from an increase in petroleum coke handling volumes; and (iv) our Lower Mississippi River (Louisiana) terminals, primarily due to incremental earnings from our Amory and DeLisle Mississippi bulk terminals. Our Amory terminal began operations in July 2005. The higher earnings from our DeLisle terminal, which was negatively impacted by hurricane damage in 2005, was primarily due to higher bulk transfer revenues in 2006.

Trans Mountain

	Year Ended December 31,		
	2007	**2006(c)**	**2005**
	(In millions, except operating statistics)		
Revenues	$ 160.8	$ 137.8	$ —
Operating expenses	(65.9)	(53.3)	—
Other income (expense)(a)	(377.1)	0.9	—
Earnings from equity investments	—	—	—
Other, net-income (expense)	8.0	1.0	—
Income tax benefit (expense)	(19.4)	(9.9)	—
Earnings before depreciation, depletion and amortization expense and amortization of excess cost of equity investments(b)	$ (293.6)	$ 76.5	$ —
Transport volumes (MMBbl)	94.4	83.7	—

(a) 2007 amount represents a goodwill impairment expense recorded by Knight in the first quarter of 2007.

(b) 2007 amount includes losses of $349.2 million for periods prior to our acquisition date of April 30, 2007, and a $1.3 million decrease in income from an oil loss allowance.

(c) 2006 amounts relate to periods prior to our acquisition date of April 30, 2007. See discussion below.

Our Trans Mountain segment includes the operations of the Trans Mountain Pipeline, which we acquired from Knight effective April 30, 2007. Trans Mountain transports crude oil and refined products from Edmonton, Alberta to marketing terminals and refineries in British Columbia and the state of Washington. An additional 35,000 barrel per day expansion that will increase capacity on the pipeline to approximately 300,000 barrels per day is currently under construction and is expected to be in service by late 2008.

According to the provisions of generally accepted accounting principles that prescribe the standards used to account for business combinations, due to the fact that our acquisition of Trans Mountain from Knight represented a transfer of assets between entities under common control, we initially recorded the assets and liabilities of Trans Mountain transferred to us from Knight at their carrying amounts in the accounts of Knight. Furthermore, our accompanying financial statements included in this report, and the information in the table above, reflect the results of operations for both 2007 and 2006 as though the transfer of Trans Mountain from Knight had occurred at the beginning of the period (January 1, 2006 for us).

After taking into effect the certain items described in the footnotes to the table above, the remaining increase in earnings before depreciation, depletion and amortization in 2007 versus 2006 totaled $56.9 million, and related entirely to our acquisition of Trans Mountain effective April 30, 2007.

Other

	Year Ended December 31, 2007	Year Ended December 31, 2006	Earnings increase/(decrease)	
	(In millions-income (expense), except percentages)			
General and administrative expenses(a)	$ (278.7)	$ (238.4)	$ (40.3)	(17)%

Minority interest(c)	(7.0)	(15.4)	8.4	55%
Total interest and corporate administrative expenses	$ (686.1)	$ (596.2)	$ (89.9)	(15)%

	Year Ended December 31, 2006	Year Ended December 31, 2005	Earnings increase/(decrease)	
	(In millions-income (expense), except percentages)			
General and administrative expenses(a)	$ (238.4)	$ (216.7)	$ (21.7)	(10)%
Interest expense, net of unallocable interest income(b)	(342.4)	(264.3)	(78.1)	(30)%
Minority interest(c)	(15.4)	(7.3)	(8.1)	(111)%
Total interest and corporate administrative expenses	$ (596.2)	$ (488.3)	$ (107.9)	(22)%

(a) 2007 amount includes (i) a $26.2 million increase in expense, allocated to us from Knight, associated with closing the going-private transaction. Knight Inc. was responsible for the payment of the costs resulting from this transaction; (ii) a $5.5 million expense related to Trans Mountain expenses for periods prior to our acquisition date of April 30, 2007; (iii) a $2.1 million expense due to the adjustment of certain insurance related liabilities; (iv) a $1.7 million increase in expense associated with the 2005 hurricane season; (v) a $1.5 million expense for certain Trans Mountain acquisition costs; and (vi) a $0.8 million expense related to the cancellation of certain commercial insurance policies. 2006 amount includes Trans Mountain expenses of $18.8 million, a $2.4 million increase in expense related to the cancellation of certain commercial insurance policies, and a $0.4 million decrease in expense related to the allocation of general and administrative expenses on hurricane related capital expenditures for the replacement and repair of assets. 2005 amount includes a $25.0 million expense for a litigation settlement reached between us and a former joint venture partner on our Kinder Morgan Tejas natural gas pipeline system, a cumulative $8.4 million expense related to settlements of environmental matters at certain of our operating sites located in the state of California, and a $3.0 million decrease in expense related to proceeds received in connection with the settlement of claims in the Enron Corp. bankruptcy proceeding.

(b) 2007 amount includes a $2.4 million increase in expense related to imputed interest on our Cochin Pipeline acquisition, and Trans Mountain expenses of $1.2 million for periods prior to our acquisition date of April 30, 2007. 2006 amount includes Trans Mountain expenses of $6.3 million.

(c) 2007 amount includes a $3.9 million decrease in expense, related to the minority interest effect from all of the 2007 items listed in footnotes (a) and (b). 2006 amount includes a $3.5 million increase in expense, primarily related to the minority interest effect from the property casualty insurance gain associated with the 2005 hurricane season.

Items not attributable to any segment include general and administrative expenses, unallocable interest income and income tax expense, interest expense and minority interest. Our general and administrative expenses include such items as salaries and employee-related expenses, payroll taxes, insurance, office supplies and rentals, unallocated litigation and environmental expenses, and shared corporate services—including accounting, information technology, human resources and legal services.

Compared to 2006, the certain items described in footnote (a) to the tables above increased our 2007 general and administrative expenses by $17.0 million. The remaining $23.3 million (11%) increase in expenses was largely due to (i) higher shared services expenses, which include legal, corporate secretary, tax, information technology and other shared services; and (ii) higher payroll-related expenses resulting from the acquisitions and incremental expansions we have made since the end of 2006.

Compared to 2005, the certain items described in footnote (a) decreased our 2006 general and administrative expenses by $9.6 million. The remaining $31.3 million (17%) increase in overall general and administrative expenses in 2006 compared to 2005 was primarily due to higher corporate service charges and higher corporate and employee-related insurance expenses in 2006. The increase in corporate services was largely due to higher corporate overhead expenses associated with the business operations we acquired since the end of 2005. The increase in insurance expenses was partly due to incremental expenses related to the cancellation of certain commercial insurance polices, as well as to the overall variability in year-to-year commercial property and medical insurance costs. Pursuant to certain provisions that gave us the right to cancel certain commercial policies prior to maturity, we took advantage of the opportunity to reinsure at lower rates.

Interest expense, net of unallocable interest income, totaled $395.8 million in 2007, $342.4 million in 2006 and $264.3 million in 2005. Compared to 2006, net interest expense decreased $2.7 million in 2007 due to the items described in footnote (b) to the tables above. The remaining $56.1 million (17%) increase in expense in 2007 compared to 2006 was due to both a 4% increase in average borrowing rates (the weighted average interest rate on all of our borrowings was approximately 6.40% during 2007 and 6.18% during 2006) and a 17% increase in average borrowings (excluding the market value of interest rate swaps). The increase in average borrowings was mainly due to capital spending in 2007, and the acquisition of external assets and businesses since the end of 2006.

We incurred incremental net interest expense of $6.3 million in 2006 due to the inclusion of Trans Mountain, and the remaining $71.8 million (27%) increase in expense in 2006 compared to 2005 was due to both higher average debt levels and higher effective interest rates. In 2006, average borrowings increased 10% and the weighted average interest rate on all of our borrowings increased 17%, when compared to 2005 (the weighted average interest rate on all of our borrowings was approximately6.18% during 2006 and 5.30% during 2005).

Generally, we initially fund both our capital spending (including payments for pipeline project construction costs) and our acquisition outlays from borrowings under our commercial paper program. From time to time, we issue senior notes in order to refinance our commercial paper borrowings. For more information on our capital expansion and acquisition expenditures, see "—Liquidity and Capital Resources—Investing Activities."

The year-to-year increases in our average borrowing rates in 2007 and 2006 reflect a general rise in variable interest rates since the end of 2005. We use interest rate swap agreements to help manage our interest rate risk. The swaps are contractual agreements we enter into in order to transform a portion of the underlying cash flows related to our long-term fixed rate debt securities into variable rate debt in order to achieve our desired mix of fixed and variable rate debt. However, in a period of rising interest rates, these swaps will result in period-to-period increases in our interest expense. For more information on our interest rate swaps, see Note 14 to our consolidated financial statements, included elsewhere in this report.

Liquidity and Capital Resources

Capital Structure

We attempt to maintain a conservative overall capital structure, with a long-term target mix of approximately 50% equity and 50% debt. In addition to our results of operations, our debt and capital balances are affected by our financing activities, as discussed below in "—Financing Activities." The following table illustrates the sources of our invested capital (dollars in millions):

	December 31,		
	2007	2006	2005
Long-term debt, excluding market value of interest rate swaps	$ 6,455.9	$ 4,384.3	$ 5,220.9
Minority interest	54.2	60.2	42.3
Partners' capital, excluding accumulated other comprehensive loss	5,712.3	5,814.4	4,693.5
Total capitalization	12,222.4	10,258.9	9,956.7
Short-term debt, less cash and cash equivalents	551.3	1,352.4	(12.1)
Total invested capital	$ 12,773.7	$ 11,611.3	$ 9,944.6
Capitalization:			
Long-term debt, excluding market value of interest rate swaps	52.8%	42.7%	52.4%
Minority interest	0.5%	0.6%	0.4%
Partners' capital, excluding accumulated other comprehensive loss	46.7%	56.7%	47.2%
	100.0%	100.0%	100.0%
Invested Capital:			
Total debt, less cash and cash equivalents and excluding market value of interest rate swaps	54.9%	49.4%	52.4%
Partners' capital and minority interest, excluding accumulated other comprehensive loss	45.1%	50.6%	47.6%
	100.0%	100.0%	100.0%

Our primary cash requirements, in addition to normal operating expenses, are debt service, sustaining capital expenditures, expansion capital expenditures and quarterly distributions to our common unitholders, Class B unitholders and general partner. In addition to utilizing cash generated from operations, we could meet our cash requirements for expansion capital expenditures through borrowings under our credit facility, issuing short-term commercial paper, long-term notes or additional common units or the proceeds from purchases of additional i-units by KMR with the proceeds from issuances of KMR shares.

In general, we expect to fund:

- cash distributions and sustaining capital expenditures with existing cash and cash flows from operating activities;
- expansion capital expenditures and working capital deficits with retained cash (resulting from including i-units in the determination of cash distributions per unit but paying quarterly distributions on i-units in additional i-units rather than cash), additional borrowings, the issuance of additional common units or the proceeds from purchases of additional i-units by KMR;
- interest payments with cash flows from operating activities; and
- debt principal payments with additional borrowings, as such debt principal payments become due, or by the issuance of additional common units or the proceeds from purchases of additional i-units by KMR.

As a publicly traded limited partnership, our common units are attractive primarily to individual investors, although such investors represent a small segment of the total equity capital market. We believe that some institutional investors prefer shares of KMR over our common units due to tax and other regulatory considerations. We are able to access this segment of the capital market through KMR's purchases of i-units issued by us with the proceeds from the sale of KMR shares to institutional investors.

As part of our financial strategy, we try to maintain an investment-grade credit rating, which involves, among other things, the issuance of additional limited partner units in connection with our acquisitions and internal growth activities in order to maintain acceptable financial ratios.

On May 30, 2006, Standard & Poor's Rating Services and Moody's Investors Service each placed our ratings on credit watch pending the resolution of KMI's going-private transaction. On January 5, 2007, in anticipation of the buyout closing, S&P downgraded us one level to BBB and removed our rating from credit watch with negative implications. Currently, our debt credit rating is still rated BBB by S&P. As previously noted by Moody's in its credit opinion dated November 15, 2006, it downgraded our credit rating from Baa1 to Baa2 on May 30, 2007, following the closing of the going-private transaction. Additionally, our rating was downgraded by Fitch Ratings from BBB+ to BBB on April 11, 2007.

Short-term Liquidity

We employ a centralized cash management program that essentially concentrates the cash assets of our operating partnerships and their subsidiaries in joint accounts for the purpose of providing financial flexibility and lowering the cost of borrowing. Our centralized cash management program provides that funds in excess of the daily needs of our operating partnerships and their subsidiaries are concentrated, consolidated, or otherwise made available for use by other entities within our consolidated group. We place no restrictions on the ability to move cash between entities, payment of inter-company balances or the ability to upstream dividends to parent companies other than restrictions that may be contained in agreements governing the indebtedness of those entities. However, our cash and the cash of our subsidiaries is not concentrated into accounts of Knight or any company not in our consolidated group of companies, and Knight has no rights with respect to our cash except as permitted pursuant to our partnership agreement.

Furthermore, certain of our operating subsidiaries are subject to FERC enacted reporting requirements for oil and natural gas pipeline companies that participate in cash management programs. FERC-regulated entities subject to these rules must, among other things, place their cash management agreements in writing, maintain current copies of the documents authorizing and supporting their cash management agreements, and file documentation establishing the cash management program with the FERC.

Our principal sources of short-term liquidity are (i) our $1.85 billion five-year senior unsecured revolving credit facility that matures August 18, 2010; (ii) our $1.85 billion short-term commercial paper program (which is supported by our bank credit facility, with the amount available for borrowing under our credit facility being reduced by our outstanding commercial paper borrowings); and (iii) cash from operations (discussed following).

Borrowings under our five-year credit facility can be used for general partnership purposes and as a backup for our commercial paper program. The facility can be amended to allow for borrowings up to $2.1 billion. There were no borrowings under our credit facility as of December 31, 2007. As of December 31, 2007, we had $589.1 million of commercial paper outstanding.

We provide for additional liquidity by maintaining a sizable amount of excess borrowing capacity related to our commercial paper program and long-term revolving credit facility. After reduction for our outstanding commercial paper borrowings and letters of credit, the remaining available borrowing capacity under our bank credit facility was $723.1 million as of December 31, 2007. As of December 31, 2007, our outstanding short-term debt was $610.2 million. Currently, we believe our liquidity to be adequate. For more information on our commercial paper program and our credit facility, see Note 9 to our consolidated financial statements included elsewhere in this report.

Long-term Financing

In addition to our principal sources of short-term liquidity listed above, we could meet our cash requirements (other than distributions to our common unitholders, Class B unitholders and general partner) through issuing long-term notes or additional common units, or the proceeds from purchases of additional i-units by KMR with the proceeds from issuances of KMR shares.

We are subject, however, to changes in the equity and debt markets for our limited partner units and long-term notes, and there can be no assurance we will be able or willing to access the public or private markets for our limited partner units and/or long-term notes in the future. If we were unable or unwilling to issue additional limited partner units, we would be required to either restrict potential future acquisitions or pursue other debt financing alternatives, some of which could involve higher costs or negatively affect our credit ratings. Our ability to access the public and private debt markets is affected by our credit ratings. See "—Capital Structure" above for a discussion of our credit ratings.

Equity Issuances

On May 17, 2007, KMR issued 5,700,000 of its shares in a public offering at a price of $52.26 per share. The net proceeds from the offering were used by KMR to buy additional i-units from us, and we received net proceeds of $297.9 million for the issuance of 5,700,000 i-units.

On December 5, 2007, we completed a public offering of 7,130,000 of our common units, including common units sold pursuant to the underwriters' over-allotment option, at a price of $48.09 per unit, less commissions and underwriting expenses. We received net proceeds of $342.9 million for the issuance of these 7,130,000 common units.

We used the proceeds from each of these two equity issuances to reduce the borrowings under our commercial paper program. In addition, pursuant to our purchase and sale agreement with Trans-Global Solutions, Inc., we issued 266,813 common units in May 2007 to TGS to settle a purchase price liability related to our acquisition of bulk terminal operations from TGS in April 2005. As agreed between TGS and us, the units were valued at $15.0 million.

On February 12, 2008, we completed an additional offering of 1,080,000 of our common units at a price of $55.65 per unit in a privately negotiated transaction with two investors. We received net proceeds of $60.1 million for the issuance of these 1,080,000 common units, and we used the proceeds to reduce the borrowings under our commercial paper program.

Debt Issuances

From time to time we issue long-term debt securities. All of our long-term debt securities issued to date, other than those issued under our long-term revolving credit facility or those issued by our subsidiaries and operating partnerships, generally have the same terms except for interest rates, maturity dates and prepayment premiums. All of our outstanding debt securities are unsecured obligations that rank equally with all of our other senior debt obligations; however, a modest amount of secured debt has been incurred by some of our operating partnerships and subsidiaries. Our fixed rate notes provide that we may redeem the notes at any time at a price equal to 100% of the principal amount of the notes plus accrued interest to the redemption date plus a make-whole premium.

During 2007, we completed three separate public offerings of senior notes. We received proceeds, net of underwriting discounts and commissions, as follows:

- $992.8 million from a January 30, 2007 public offering of a total of $1.0 billion in principal amount of senior notes, consisting of $600 million of 6.00% notes due February 1, 2017, and $400 million of 6.50% notes due February 1, 2037;
- $543.9 million from a June 21, 2007 public offering of $550 million in principal amount of 6.95% senior notes due January 15, 2038; and
- $497.8 million from an August 28, 2007 public offering of $500 million in principal amount of 5.85% senior notes due September 15, 2012.

We used the proceeds from each of these three debt offerings to reduce the borrowings under our commercial paper program. In addition, on August 15, 2007, we repaid $250 million of 5.35% senior notes that matured on that date. As of December 31, 2007, our total liability balance due on the various series of our senior notes was $6,288.8 million, and the total liability balance due on the various borrowings of our operating partnerships and subsidiaries was $188.2 million. For additional information regarding our debt securities, see Note 9 to our consolidated financial statements included elsewhere in this report.

On February 12, 2008, we completed a public offering of senior notes. We issued a total of $900 million in principal amount of senior notes, consisting of $600 million of 5.95% notes due February 15, 2018, and $300 million of 6.95% notes due January 15, 2038. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of approximately $894.1 million, and we used the proceeds to reduce the borrowings under our commercial paper program.

Capital Requirements for Recent Transactions

During 2007, our cash outlays for the acquisition of assets and investments totaled $713.3 million. We utilized our commercial paper program to fund our 2007 acquisitions. We then reduced our short-term borrowings with the proceeds from our issuances of additional limited partnership units and senior notes, as described above. We intend to refinance the remainder of our current short-term debt and any additional short-term debt incurred during 2008 through a combination of long-term debt, equity and the issuance of additional commercial paper to replace maturing commercial paper borrowings.

We are committed to maintaining a cost effective capital structure and we intend to finance new acquisitions using a mix of approximately 50% equity financing and 50% debt financing. For more information on our capital requirements during 2007 in regard to our acquisition expenditures, see Note 3 to our consolidated financial statements included elsewhere in this report.

Off Balance Sheet Arrangements

We have invested in entities that are not consolidated in our financial statements. As of December 31, 2007, our obligations with respect to these investments, as well as our obligations with respect to a letter of credit, are summarized below (dollars in millions):

Entity	**Investment Type**	**Our Ownership Interest**	**Remaining Interest(s) Ownership**	**Total Entity Assets(5)**	**Total Entity Debt**	**Our Contingent Share of Entity Debt(6)**
Cortez Pipeline Company	General Partner	50%	(1)	$ 79.9	$ 157.3	$ 78.7(2)
West2East Pipeline LLC(3)	Limited Liability	51%	ConocoPhillips and Sempra Energy	$ 2,730.2	$ 2,225.4	$ 1,135.0
Nassau County, Florida Ocean Highway And Port Authority (4)	N/A	N/A	Nassau County, Florida Ocean Highway and Port Authority	N/A	N/A	$ 22.5

(1) The remaining general partner interests are owned by ExxonMobil Cortez Pipeline, Inc., an indirect wholly-owned subsidiary of Exxon Mobil Corporation and Cortez Vickers Pipeline Company, an indirect subsidiary of M.E. Zuckerman Energy Investors Incorporated.

(2) We are severally liable for our percentage ownership share (50%) of the Cortez Pipeline Company debt. As of December 31, 2007, Shell Oil Company shares our several guaranty obligations jointly and severally for $64.3 million of Cortez's debt balance; however, we are obligated to indemnify Shell for the liabilities it incurs in connection with such guaranty. Accordingly, as of December 31, 2007 we have a letter of credit in the amount of $37.5 million issued by JP Morgan Chase, in order to secure our indemnification obligations to Shell for 50% of the Cortez debt balance of $64.3 million.

Further, pursuant to a Throughput and Deficiency Agreement, the partners of Cortez Pipeline Company are required to contribute capital to Cortez in the event of a cash deficiency. The agreement contractually supports the financings of Cortez Capital Corporation, a wholly-owned subsidiary of Cortez Pipeline Company, by obligating the partners of Cortez Pipeline to fund cash deficiencies at Cortez Pipeline, including anticipated deficiencies and cash deficiencies relating to the repayment of principal and interest on the debt of Cortez Capital Corporation. The partners' respective parent or other companies further severally guarantee the obligations of the Cortez Pipeline owners under this agreement.

(3) West2East Pipeline LLC is a limited liability company and is the sole owner of Rockies Express Pipeline LLC. As of December 31, 2007, the remaining limited liability member interests in West2East Pipeline LLC are owned by ConocoPhillips (24%) and Sempra Energy (25%). We owned a 66 2/3% ownership interest in West2East Pipeline LLC from October 21, 2005 until June 30, 2006, and we included its results in our consolidated financial statements until June 30, 2006. On June 30, 2006, our ownership interest was reduced to 51%, West2East Pipeline LLC was deconsolidated, and we subsequently accounted for our investment under the equity method of accounting. Upon completion of the pipeline, our ownership percentage is expected to be reduced to 50%.

(4) Arose from our Vopak terminal acquisition in July 2001. Nassau County, Florida Ocean Highway and Port Authority is a political subdivision of the state of Florida. During 1990, Ocean Highway and Port Authority issued its Adjustable Demand Revenue Bonds in the aggregate principal amount of $38.5 million for the purpose of constructing certain port improvements located in Fernandino Beach, Nassau County, Florida. A letter of credit was issued as security for the Adjustable Demand Revenue Bonds and was guaranteed by the parent company of Nassau Terminals LLC, the operator of the port facilities. In July 2002, we acquired Nassau Terminals LLC and became guarantor under the letter of credit agreement. In December 2002, we issued a $28 million letter of credit under our credit facilities and the former letter of credit guarantee was terminated. As of December 31, 2007, the face amount of this letter of credit outstanding under our credit facility was $22.5 million. Principal payments on the bonds are made on the first of December each year and reductions are made to the letter of credit.

(5) Principally property, plant and equipment.

(6) Represents the portion of the entity's debt that we may be responsible for if the entity cannot satisfy the obligation.

We account for our investments in Cortez Pipeline Company and West2East Pipeline LLC under the equity method of accounting. For the year ended December 31, 2007, our share of earnings, based on our ownership percentage and before amortization of excess investment cost was $19.2 million from Cortez Pipeline Company and a loss of $12.4 million from West2East Pipeline LLC. Additional information regarding the nature and business purpose of these investments is included in Notes 7 and 9 to our consolidated financial statements included elsewhere in this report.

Summary of Certain Contractual Obligations

	Amount of Commitment Expiration per Period				
	Total	**1 Year or Less**	**2-3 Years**	**4-5 Years**	**After 5 Years**
			(In millions)		
Contractual Obligations:					
Commercial paper outstanding	$ 589.1	$ 589.1	$ —	$ —	$ —
Other debt borrowings-principal payments	6,488.2	21.1	537.0	1,681.4	4,248.7
Interest payments(a)	5,947.2	443.7	788.0	633.9	4,081.6
Lease obligations(b)	130.7	31.7	42.7	28.1	28.2
Pension and post-retirement welfare plans(c)	62.1	4.6	9.7	10.9	36.9
Other obligations(d)	146.1	44.9	84.1	17.1	—
Total	$ 13,363.4	$ 1,135.1	$ 1,461.5	$ 2,371.4	$ 8,395.4
Other commercial commitments:					
Standby letters of credit(e)	$ 672.4	$ 634.9	$ —	$ —	$ 37.5
Capital expenditures(f)	$ 250.5	$ 250.5	—	—	—

(a) Interest payment obligations exclude adjustments for interest rate swap agreements.

(b) Represents commitments for capital leases, including interest, and operating leases.

(c) Represents expected benefit payments from pension and post-retirement welfare plans as of December 31, 2007.

(d) Consist of payments due under carbon dioxide take-or-pay contracts.

(e) The $672.4 million in letters of credit outstanding as of December 31 2007 consisted of the following: (i) a combined $298.0 million in three letters of credit supporting our hedging of energy commodity price risks; (ii) a $100 million letter of credit that supports certain proceedings with the California Public Utilities Commission involving refined products tariff charges

on the intrastate common carrier operations of our Pacific operations' pipelines in the state of California; (iii) a combined $58.3 million in ten letters of credit supporting our Trans Mountain pipeline system operations; (iv) a $37.5 million letter of credit supporting our indemnification obligations on the Series D note borrowings of Cortez Capital Corporation; (v) our $30.3 million guarantee under letters of credit totaling $45.5 million supporting our International Marine Terminals Partnership Plaquemines, Louisiana Port, Harbor, and Terminal Revenue Bonds; (vi) a $25.3 million letter of credit supporting our Kinder Morgan Liquids Terminals LLC New Jersey Economic Development Revenue Bonds; (vii) a $24.1 million letter of credit supporting our Kinder Morgan Operating L.P. "B" tax-exempt bonds; (viii) a $22.5 million letter of credit supporting Nassau County, Florida Ocean Highway and Port Authority tax-exempt bonds; (ix) a $19.9 million letter of credit supporting the construction of our Kinder Morgan Louisiana Pipeline; (x) a $15.5 million letter of credit supporting our pipeline and terminal operations in Canada; (xi) a $5.4 million letter of credit supporting our Arrow Terminals, L.P. Illinois Development Revenue Bonds; and (xii) a combined $20.4 million in eight letters of credit supporting environmental and other obligations of us and our subsidiaries.

(f) Represents commitments for the purchase of plant, property and equipment as of December 31, 2007.

Operating Activities

Net cash provided by operating activities was $1,741.8 million in 2007, versus $1,363.9 million in 2006. The overall year-to-year increase of $377.9 million (28%) in cash flow from operations principally consisted of:

- a $159.1 million increase in cash attributable to changes in the reserves related to the legal fees, transportation rate cases and other litigation liabilities of our pipeline and terminal operations (consisting of an incremental $140.0 million non-cash operating expense accrued in 2007, and payments of $19.1 million made in June 2006 to certain shippers on our Pacific operations' pipelines). The expense was associated with a liability adjustment made in December 2007, and the payments related to a settlement agreement reached in May 2006 that resolved certain challenges by complainants with regard to delivery tariffs and gathering enhancement fees at our Pacific operations' Watson Station, located in Carson, California;

- a $139.1 million increase in cash inflows relative to changes in (i) other non-current assets and liabilities, including, among other things, incremental transportation and dock prepayments received from pipeline customers (due primarily to timing differences); and (ii) other incremental non-cash expenses, including higher non-cash operating expenses in 2007 associated with environmental liability adjustments, and higher non-cash general and administrative expenses related to the activities required to complete KMI's going-private transaction (with regard to the going-private transaction expenses, we were required to recognize the full amounts allocated to us from Knight as expense on our income statement; however, due to the fact that almost all of the allocated expenses were associated with the acceleration of cashouts of grants of both KMI restricted stock and options on KMI stock, we were not responsible for paying these buyout expenses, and accordingly, recognized the unpaid amount as both a contribution to "Partners' Capital" and an increase to "Minority interest" on our balance sheet);

- a $95.1 million increase in cash inflows relative to net changes in working capital items, mainly due to timing differences that resulted in higher 2007 net cash inflows from the collection and payment of trade and related party receivables and payables, and from lower payments on accrued tax and interest liabilities; and

- a $51.6 million decrease in cash from overall lower partnership income—net of the following non-cash items: (i) depreciation, depletion and amortization expenses; (ii) gains and losses on property sales and casualty indemnifications; (iii) earnings from equity investees; and (iv) a $377.1 million goodwill impairment charge recognized in the first quarter of 2007. The increases and decreases in our partnership income in 2007 compared to 2006 are discussed above in "—Results of Operations."

Investing Activities

Net cash used in investing activities was $2,428.5 million for the year ended December 31, 2007, compared to $1,501.9 million for the prior year. The $926.6 million (62%) overall increase in funds utilized in investing activities was primarily attributable to the following:

- a $326.1 million increase due to higher expenditures made for strategic business acquisitions. In 2007, our acquisition outlays for assets and investments totaled $713.3 million, primarily consisting of $549.1 million for net payments made to Knight for our acquisition of the Trans Mountain pipeline system, $100.3 million for the acquisition of bulk terminal assets from Marine Terminals, Inc., and $38.8 million for the purchase of the Vancouver Wharves bulk marine terminal. In 2006, our acquisition outlays totaled $387.2 million, primarily consisting of $244.6 million for the acquisition of Entrega Gas Pipeline LLC and $89.1 million for the acquisition of bulk, liquids and refined products terminal operations and related assets. Both our 2007 and 2006 acquisition expenditures are discussed more fully in Note 3 to our consolidated financial statements included elsewhere in this report;

- a $509.5 million increase from higher capital expenditures—largely due to increased investments undertaken to expand and improve our bulk and liquids terminalling operations, and our Trans Mountain pipeline system. Our sustaining capital expenditures, defined as capital expenditures that do not increase the capacity of an asset, totaled $152.6 million in 2007 and $125.5 million in 2006. The above amounts do not include the sustaining capital expenditures of our Trans Mountain business segment for periods prior to our acquisition date of April 30, 2007. Additionally, our forecasted expenditures for sustaining capital expenditures for 2008 are approximately $196.2 million. All of our capital expenditures, with the exception of sustaining capital expenditures, are discretionary;

- a $273.6 million increase from incremental contributions to equity investments in 2007, largely driven by incremental investments of $202.7 million and $61.6 million, respectively, for our proportionate share of construction costs of the Rockies Express and Midcontinent Express pipelines; and

- a $231.8 million decrease in cash used due to higher net proceeds received from the sales of property, plant and equipment and other net assets (net of salvage and removal costs). The increase from sales proceeds in 2007 versus 2006 was driven by the approximately $298.6 million we received for the sale of our North System operations in October 2007. In April 2006, we received $42.5 million from Momentum Energy Group, LLC for the combined sale of our Douglas natural gas gathering system and Painter Unit fractionation facility, and in the first half of 2006, we received $27.1 million from the sale of certain oil and gas properties originally acquired from Journey Acquisition – I, L.P. and Journey 2000, L.P.

Financing Activities

Net cash provided by financing activities amounted to $735.7 million in 2007; while in the prior year, our financing activities provided net cash of $132.4 million. The $603.3 million (456%) overall increase in cash inflows provided by financing activities was primarily due to:

- a $334.5 million increase from overall debt financing activities—which include our issuances and payments of debt and our debt issuance costs. The year-to-year increase in cash from financing activities was primarily due to (i) a $1,784.5 million net increase in cash inflows from the issuances and payments of senior notes in 2007; and (ii) a $1,453.6 million decrease in cash from lower overall net commercial paper borrowings in 2007, relative to 2006.

  The decrease in commercial paper borrowings includes a decrease of $412.5 million from borrowings under the commercial paper program of Rockies Express Pipeline LLC in the first half of 2006. We held and consolidated a 66 2/3% ownership interest in Rockies Express Pipeline LLC until June 30, 2006. Effective June 30, 2006, ConocoPhillips exercised its option to acquire a 25% ownership interest in West2East Pipeline LLC (and its subsidiary Rockies Express Pipeline LLC), and West2East Pipeline LLC was then deconsolidated and accounted for under the equity method of accounting. Generally accepted accounting principles required us to include its cash inflows and outflows in our consolidated statement of cash flows for the six months ended June 30, 2006; however, following the change from full consolidation to the equity method, Rockies Express' debt balances were not included in our consolidated balance sheet as of or subsequent to June 30, 2006.

  The $1,784.5 million increase in cash inflows from changes in senior notes outstanding was associated with public debt offerings completed on January 30, 2007, June 21, 2007 and August 28, 2007. On these dates, we completed offerings of $1.0 billion, $550 million and $500 million, respectively, in principal amount of senior notes in four separate series: (i) $600 million of 6.00% notes due February 1, 2017; (ii) $400 million of 6.50% notes due February 1, 2037; (iii) $550 million of 6.95% notes due January 15, 2038; and (iv) $500 million of 5.85% notes due September 15, 2012. Combined, we received proceeds, net of underwriting discounts and commissions, of $2,034.5 million from these long-term debt offerings and we used the proceeds from each of these offerings to reduce the borrowings under our commercial paper program. In addition, on August 15, 2007, we repaid $250 million of 5.35% senior notes that matured on that date;

- a $392.4 million increase from overall equity financing activities—which include our issuances of limited partner units. In May 2007, we received proceeds of $297.9 million, after commissions and underwriting expenses, for our issuance of 5,700,000 i-units to KMR, and in December 2007, we received net proceeds of $342.9 million from a public offering of 7,130,000 common units. In 2006, we received proceeds of $248.4 million from the issuance of additional common units, primarily related to our August 2006 public offering of 5,750,000 of our common units at a price of $44.80, less commissions and underwriting expenses. We used the proceeds from each of these equity issuances to reduce the borrowings under our commercial paper program; and

- a $100.9 million decrease from lower contributions from minority interests—principally due to contributions of $104.2 million received in 2006 from Sempra Energy with regard to their ownership interest in Rockies Express. The contributions from Sempra included an $80.0 million contribution for its 33 1/3% share of the purchase price of Entrega Gas Pipeline LLC, discussed above in "—Investing Activities."

Partnership Distributions

Our partnership agreement requires that we distribute 100% of "Available Cash," as defined in our partnership agreement, to our partners within 45 days following the end of each calendar quarter in accordance with their respective percentage interests. Available Cash consists generally of all of our cash receipts, including cash received by our operating partnerships and net reductions in reserves, less cash disbursements and net additions to reserves and amounts payable to the former general partner of SFPP, L.P. in respect of its remaining 0.5% interest in SFPP.

Our general partner is granted discretion by our partnership agreement, which discretion has been delegated to KMR, subject to the approval of our general partner in certain cases, to establish, maintain and adjust reserves for future operating expenses, debt service, maintenance capital expenditures, rate refunds and distributions for the next four quarters. These reserves are not restricted by magnitude, but only by type of future cash requirements with which they can be associated. When KMR determines our quarterly distributions, it considers current and expected reserve needs along with current and expected cash flows to identify the appropriate sustainable distribution level. For 2007, 2006 and 2005, we distributed approximately 100%, 103% and 101%, respectively, of the total of cash receipts less cash disbursements (calculations assume that KMR unitholders received cash). The difference between these numbers and 100% of distributable cash flow reflects net changes in reserves.

Our general partner and owners of our common units and Class B units receive distributions in cash, while KMR, the sole owner of our i-units, receives distributions in additional i-units. We do not distribute cash to i-unit owners but instead retain the cash for use in our business. However, the cash equivalent of distributions of i-units is treated as if it had actually been distributed for purposes of determining the distributions to our general partner. Each time we make a distribution, the number of i-units owned by KMR and the percentage of our total units owned by KMR increase automatically under the provisions of our partnership agreement.

Available cash is initially distributed 98% to our limited partners and 2% to our general partner. These distribution percentages are modified to provide for incentive distributions to be paid to our general partner in the event that quarterly distributions to unitholders exceed certain specified targets.

Available cash for each quarter is distributed:

- first, 98% to the owners of all classes of units pro rata and 2% to our general partner until the owners of all classes of units have received a total of $0.15125 per unit in cash or equivalent i-units for such quarter;

- second, 85% of any available cash then remaining to the owners of all classes of units pro rata and 15% to our general partner until the owners of all classes of units have received a total of $0.17875 per unit in cash or equivalent i-units for such quarter;

- third, 75% of any available cash then remaining to the owners of all classes of units pro rata and 25% to our general partner until the owners of all classes of units have received a total of $0.23375 per unit in cash or equivalent i-units for such quarter; and

- fourth, 50% of any available cash then remaining to the owners of all classes of units pro rata, to owners of common units and Class B units in cash and to owners of i-units in the equivalent number of i-units, and 50% to our general partner.

Incentive distributions are generally defined as all cash distributions paid to our general partner that are in excess of 2% of the aggregate value of cash and i-units being distributed. Our general partner's incentive distribution that we declared for 2007 was $611.9 million, while the incentive distribution paid to our general partner during 2007 was $559.6 million. The difference between declared and paid distributions is due to the fact that our distributions for the fourth quarter of each year are declared and paid in the first quarter of the following year. In addition, our general partner waived $20.1 million of its 2006 incentive distribution for the fourth quarter of 2006, which was paid in the first quarter of 2007, in order to fund the annual bonus for employees.

On February 14, 2008, we paid a quarterly distribution of $0.92 per unit for the fourth quarter of 2007. This distribution was 11% greater than the $0.83 distribution per unit we paid for both the fourth quarter of 2006 and the first quarter of 2007. We paid this distribution in cash to our common unitholders and to our Class B unitholders. KMR, our sole i-unitholder, received additional i-units based on the $0.92 cash distribution per common unit. We believe that future operating results will continue to support similar levels of quarterly cash and i-unit distributions; however, no assurance can be given that future distributions will continue at such levels.

Litigation and Environmental

As of December 31, 2007, we have recorded a total reserve for environmental claims, without discounting and without regard to anticipated insurance recoveries, in the amount of $92.0 million. In addition, we have recorded a receivable of $37.8 million for expected cost recoveries that have been deemed probable. The reserve is primarily established to address and clean up soil and ground water impacts from former releases to the environment at facilities we have acquired or accidental spills or releases at facilities that we own. Reserves for each project are generally established by reviewing existing documents, conducting interviews and performing site inspections to determine the overall size and impact to the environment. Reviews are made on a quarterly basis to determine the status of the cleanup and the costs associated with the effort. In assessing environmental risks in conjunction with proposed acquisitions, we review records relating to environmental issues, conduct site inspections, interview employees, and, if appropriate, collect soil and groundwater samples. As of December 31, 2006, our total reserve for environmental claims, without discounting and without regard to anticipated insurance recoveries, amounted to $64.2 million.

Additionally, as of December 31, 2007, we have recorded a total reserve for legal fees, transportation rate cases and other litigation liabilities in the amount of $247.9 million. The reserve is primarily related to various claims from lawsuits arising from our Pacific operations, and the contingent amount is based on both the circumstances of probability and reasonability of dollar estimates. We regularly assess the likelihood of adverse outcomes resulting from these claims in order to determine the adequacy of our liability provision, and in December 2007, we recorded a non-cash increase in operating expense of $140.0 million related to our litigation matters. As of December 31, 2006, our total reserve for legal fees, transportation rate cases and other litigation liabilities amounted to $112.0 million.

Though no assurance can be given, we believe we have established adequate environmental and legal reserves such that the resolution of pending environmental matters and litigation will not have a material adverse impact on our business, cash flows, financial position or results of operations.

Pursuant to our continuing commitment to operational excellence and our focus on safe, reliable operations, we have implemented, and intend to implement in the future, enhancements to certain of our operational practices in order to strengthen our environmental and asset integrity performance. These enhancements have resulted and may result in higher operating costs and sustaining capital expenditures; however, we believe these enhancements will provide us the greater long term benefits of improved environmental and asset integrity performance.

Please refer to Notes 16 and 17 of our consolidated financial statements included elsewhere in this report for additional information regarding pending litigation and environmental matters, respectively.

Regulation

The Pipeline Safety Improvement Act of 2002 requires pipeline companies to perform integrity tests on natural gas transmission pipelines that exist in high population density areas that are designated as High Consequence Areas. Pipeline companies are required to perform the integrity tests within ten years of December 17, 2002, the date of enactment, and must perform subsequent integrity tests on a seven year cycle. At least 50% of the highest risk segments must be tested within five years of the enactment date. The risk ratings are based on numerous factors, including the population density in the geographic regions served by a particular pipeline, as well as the age and condition of the pipeline and its protective coating. Testing will consist of hydrostatic testing, internal electronic testing, or direct assessment of the piping. A similar integrity management rule for refined petroleum products pipelines became effective May 29, 2001. All baseline assessments for products pipelines must be completed by March 31, 2008 and we expect to meet this deadline. We have included all incremental expenditures estimated to occur during 2008 associated with the Pipeline Safety Improvement Act of 2002 and the integrity management of our products pipelines in our 2008 budget and capital expenditure plan.

Please refer to Note 17 to our consolidated financial statements included elsewhere in this report for additional information regarding regulatory matters.

Recent Accounting Pronouncements

Please refer to Note 18 to our consolidated financial statements included elsewhere in this report for information concerning recent accounting pronouncements.

Information Regarding Forward-Looking Statements

This filing includes forward-looking statements. These forward-looking statements are identified as any statement that does not relate strictly to historical or current facts. They use words such as "anticipate," "believe," "intend," "plan," "projection," "forecast," "strategy," "position," "continue," "estimate," "expect," "may," or the negative of those terms or other variations of them or comparable terminology. In particular, statements, express or implied, concerning future actions, conditions or events, future operating results or the ability to generate sales, income or cash flow or to make distributions are forward-looking statements. Forward-looking statements are not guarantees of performance. They involve risks, uncertainties and assumptions. Future actions, conditions or events and future results of operations may differ materially from those expressed in these forward-looking statements. Many of the factors that will determine these results are beyond our ability to control or predict. Specific factors which could cause actual results to differ from those in the forward-looking statements include:

- price trends and overall demand for natural gas liquids, refined petroleum products, oil, carbon dioxide, natural gas, coal and other bulk materials and chemicals in North America;
- economic activity, weather, alternative energy sources, conservation and technological advances that may affect price trends and demand;
- changes in our tariff rates implemented by the Federal Energy Regulatory Commission or the California Public Utilities Commission;
- our ability to acquire new businesses and assets and integrate those operations into our existing operations, as well as our ability to make expansions to our facilities;

- difficulties or delays experienced by railroads, barges, trucks, ships or pipelines in delivering products to or from our terminals or pipelines;
- our ability to successfully identify and close acquisitions and make cost-saving changes in operations;
- shut-downs or cutbacks at major refineries, petrochemical or chemical plants, ports, utilities, military bases or other businesses that use our services or provide services or products to us;
- crude oil and natural gas production from exploration and production areas that we serve, including, among others, the Permian Basin area of West Texas;
- changes in laws or regulations, third-party relations and approvals, decisions of courts, regulators and governmental bodies that may adversely affect our business or our ability to compete;
- changes in accounting pronouncements that impact the measurement of our results of operations, the timing of when such measurements are to be made and recorded, and the disclosures surrounding these activities;
- our ability to offer and sell equity securities and debt securities or obtain debt financing in sufficient amounts to implement that portion of our business plan that contemplates growth through acquisitions of operating businesses and assets and expansions of our facilities;
- our indebtedness could make us vulnerable to general adverse economic and industry conditions, limit our ability to borrow additional funds, and/or place us at competitive disadvantages compared to our competitors that have less debt or have other adverse consequences;
- interruptions of electric power supply to our facilities due to natural disasters, power shortages, strikes, riots, terrorism, war or other causes;
- our ability to obtain insurance coverage without significant levels of self-retention of risk;
- acts of nature, sabotage, terrorism or other similar acts causing damage greater than our insurance coverage limits;
- capital markets conditions;
- the political and economic stability of the oil producing nations of the world;
- national, international, regional and local economic, competitive and regulatory conditions and developments;
- the ability to achieve cost savings and revenue growth;
- inflation;
- interest rates;
- the pace of deregulation of retail natural gas and electricity;
- foreign exchange fluctuations;
- the timing and extent of changes in commodity prices for oil, natural gas, electricity and certain agricultural products;
- the extent of our success in discovering, developing and producing oil and gas reserves, including the risks inherent in exploration and development drilling, well completion and other development activities;

- engineering and mechanical or technological difficulties with operational equipment, in well completions and workovers, and in drilling new wells;
- the uncertainty inherent in estimating future oil and natural gas production or reserves;
- the ability to complete expansion projects on time and on budget;
- the timing and success of business development efforts; and
- unfavorable results of litigation and the fruition of contingencies referred to in Note 16 to our consolidated financial statements included elsewhere in this report.

There is no assurance that any of the actions, events or results of the forward-looking statements will occur, or if any of them do, what impact they will have on our results of operations or financial condition. Because of these uncertainties, you should not put undue reliance on any forward-looking statements.

See Item 1A "Risk Factors" for a more detailed description of these and other factors that may affect the forward-looking statements. When considering forward-looking statements, one should keep in mind the risk factors described in "Risk Factors" above. The risk factors could cause our actual results to differ materially from those contained in any forward-looking statement. We disclaim any obligation, other than as required by applicable law, to update the above list or to announce publicly the result of any revisions to any of the forward-looking statements to reflect future events or developments.

Item 7A. ***Quantitative and Qualitative Disclosures About Market Risk.***

Generally, our market risk sensitive instruments and positions have been determined to be "other than trading." Our exposure to market risk as discussed below includes forward-looking statements and represents an estimate of possible changes in fair value or future earnings that would occur assuming hypothetical future movements in interest rates or commodity prices. Our views on market risk are not necessarily indicative of actual results that may occur and do not represent the maximum possible gains and losses that may occur, since actual gains and losses will differ from those estimated based on actual fluctuations in commodity prices or interest rates and the timing of transactions.

Energy Commodity Market Risk

We are exposed to commodity market risk and other external risks, such as weather-related risk, in the ordinary course of business. However, we take steps to hedge, or limit our exposure to, these risks in order to maintain a more stable and predictable earnings stream. Stated another way, we execute a hedging strategy that seeks to protect our financial position against adverse price movements and serves to minimize potential losses. Our strategy involves the use of certain energy commodity derivative contracts to reduce and minimize the risks associated with unfavorable changes in the market price of natural gas, natural gas liquids and crude oil. The derivative contracts we use include energy products traded on the New York Mercantile Exchange and over-the-counter markets, including, but not limited to, futures and options contracts, fixed price swaps and basis swaps.

Fundamentally, our hedging strategy involves taking a simultaneous position in the futures market that is equal and opposite to our position in the cash market (or physical product) in order to minimize the risk of financial loss from an adverse price change. For example, as sellers of crude oil and natural gas, we often enter into fixed price swaps and/or futures contracts to guarantee or lock-in the sale price of our oil or the margin from the sale and purchase of our natural gas at the time of market delivery, thereby directly offsetting any change in prices, either positive or negative. A hedge is successful when gains or losses in the cash market are neutralized by losses or gains in the futures transaction.

Our risk management policies prohibit us from engaging in speculative trading and we are not a party to leveraged derivatives. Furthermore, our policies require that we only enter into derivative contracts with carefully selected major financial institutions or similar counterparties based upon their credit ratings and other factors, and we maintain strict dollar and term limits that correspond to our counterparties' credit ratings. While we enter into derivative transactions only with investment grade counterparties and actively monitor their credit ratings, it is nevertheless possible that losses will result from counterparty credit risk in the future. The credit ratings of the primary parties from whom we purchase energy commodity derivative contracts are as follows (credit ratings per Standard & Poor's Rating Services):

	Credit Rating
BNP Paribas	AA+
J. Aron & Company / Goldman Sachs	AA–
Morgan Stanley	AA–

We account for our energy commodity risk management derivative contracts according to the provisions of Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" (after amendment by SFAS No. 137, SFAS No. 138, and SFAS No. 149). According to the provisions of SFAS No. 133, derivatives are measured at fair value and recognized on the balance sheet as either assets or liabilities, and in general, gains and losses on derivatives are reported on the income statement.

However, as discussed above, our principal use of energy commodity derivative contracts is to mitigate the market price risk associated with anticipated transactions for the purchase and sale of natural gas, natural gas liquids and crude oil. Using derivative contracts for this purpose helps provide us increased certainty with regard to our operating cash flows and helps us undertake further capital improvement projects, attain budget results and meet distribution targets to our partners. SFAS No. 133 categorizes such use of energy commodity derivative contracts as cash flow hedges, because the derivative contract is used to hedge the anticipated future cash flow of a transaction that is expected to occur but whose value is uncertain. Cash flow hedges are defined as hedges made with the intention of decreasing the variability in cash flows related to future transactions, as opposed to the value of an asset, liability or firm commitment, and SFAS No. 133 prescribes special hedge accounting treatment for such derivatives.

In accounting for cash flow hedges, gains and losses on the derivative contracts are reported in other comprehensive income, outside "Net Income" reported in our consolidated statements of income, but only to the extent that the gains and losses from the change in value of the derivative contracts can later offset the loss or gain from the change in value of the hedged future cash flows during the period in which the hedged cash flows affect net income. That is, for cash flow hedges, all effective components of the derivative contracts' gains and losses are recorded in other comprehensive income, pending occurrence of the expected transaction. Other comprehensive income consists of those financial items that are included in "Accumulated other comprehensive loss" in our accompanying consolidated balance sheets but not included in our net income. Thus, in highly effective cash flow hedges, where there is no ineffectiveness, other comprehensive income changes by exactly as much as the derivative contracts and there is no impact on earnings.

All remaining gains and losses on the derivative contracts (the ineffective portion) are included in current net income. The ineffective portion of the gain or loss on the derivative contracts is the difference between the gain or loss from the change in value of the derivative contract and the effective portion of that gain or loss. In addition, when the hedged forecasted transaction does take place and affects earnings, the effective part of the hedge is also recognized in the income statement, and the earlier recognized effective amounts are removed from "Accumulated other comprehensive loss." If the forecasted transaction results in an asset or liability, amounts in "Accumulated other comprehensive loss" should be reclassified into earnings when the asset or liability affects earnings through cost of sales, depreciation, interest expense, etc.

Under current accounting rules, the accumulated components of other comprehensive income are to be reported separately as accumulated other comprehensive income or loss in the stockholders' equity section of the balance sheet. For us, the gains and losses that are included in "Accumulated other comprehensive loss" in our accompanying consolidated balance sheets are primarily related to the derivative contracts associated with our hedging of anticipated future cash flows from the sales and purchases of natural gas, natural gas liquids and crude oil and represent the effective portion of the gain or loss on these derivative contacts. Accordingly, the total "Accumulated other comprehensive loss" included within the Partners' Capital section of our accompanying balance sheets as of December 31, 2007 and December 31, 2006, included amounts associated with the commodity price risk management activities of $1,377.2 million and $838.7 million, respectively.

In future periods, as the hedged cash flows from our actual purchases and sales of energy commodities affect our net income, the related gains and losses included in our accumulated other comprehensive loss as a result of our hedging are transferred to the income statement as well, effectively offsetting the changes in cash flows stemming from the hedged risk.

We measure the risk of price changes in the natural gas, natural gas liquids and crude oil markets utilizing a value-at-risk model. Value-at-risk is a statistical measure of how much the mark-to-market value of a portfolio could change during a period of time, within a certain level of statistical confidence. We utilize a closed form model to evaluate risk on a daily basis. The value-at-risk computations utilize a confidence level of 97.7% for the resultant price movement and a holding period of one day is chosen for the calculation. The confidence level used means that there is a 97.7% probability that the mark-to-market losses for a single day will not exceed the value-at-risk number presented. Derivative contracts evaluated by the model include commodity futures and options contracts, fixed price swaps, basis swaps and over-the-counter options.

For each of the years ended December 31, 2007 and 2006, our value-at-risk reached a high of $1.6 million and $2.6 million, respectively, and a low of $0.7 million and $0.5 million, respectively. Value-at-risk as of December 31, 2007, was $1.6 million and averaged $1.2 million for 2007. Value-at-risk as of December 31, 2006, was $0.6 million and averaged $1.1 million for 2006.

Our calculated value-at-risk exposure represents an estimate of the reasonably possible net losses that would be recognized on our portfolio of derivative contracts assuming hypothetical movements in future market rates, and is not necessarily indicative of actual results that may occur. It does not represent the maximum possible loss or any expected loss that may occur, since actual future gains and losses will differ from those estimated. Actual gains and losses may differ from estimates due to actual fluctuations in market rates, operating exposures and the timing thereof, as well as changes in our portfolio of derivatives during the year. In addition, as discussed above, we enter into these derivative contracts solely for the purpose of mitigating the risks that accompany certain of our business activities and, therefore, the change in the market value of our portfolio of derivative contracts, with the exception of a minor amount of hedging inefficiency, is offset by changes in the value of the underlying physical transactions. For more information on our risk management activities, see Note 14 to our consolidated financial statements included elsewhere in this report.

Interest Rate Risk

In order to maintain a cost effective capital structure, it is our policy to borrow funds using a mix of fixed rate debt and variable rate debt. The market risk inherent in our debt instruments and positions is the potential change arising from increases or decreases in interest rates as discussed below.

For fixed rate debt, changes in interest rates generally affect the fair value of the debt instrument, but not our earnings or cash flows. Conversely, for variable rate debt, changes in interest rates generally do not impact the fair value of the debt instrument, but may affect our future earnings and cash flows. We do not have an obligation to prepay fixed rate debt prior to maturity and, as a result, interest rate risk and changes in fair value should not have a significant impact on our fixed rate debt until we would be required to refinance such debt.

As of December 31, 2007 and 2006, the carrying values of our fixed rate debt were approximately $6,382.9 million and $4,551.2 million, respectively. These amounts compare to, as of December 31, 2007 and 2006, fair values of $6,518.7 million and $4,672.7 million, respectively. Fair values were determined using quoted market prices, where applicable, or future cash flow discounted at market rates for similar types of borrowing arrangements. A hypothetical 10% change (approximately 64 basis points) in the average interest rates applicable to such debt for 2007 and 2006, would result in changes of approximately $259.9 million and $183.4 million, respectively, in the fair values of these instruments.

The carrying value and fair value of our variable rate debt, including associated accrued interest and excluding the value of interest rate swap agreements (discussed below), was $684.5 million as of December 31, 2007 and $1,195.6 million as of December 31, 2006. A hypothetical 10% change in the weighted average interest rate on all of our borrowings, when applied to our outstanding balance of variable rate debt as of December 31, 2007 and 2006, including adjustments for notional swap amounts, would result in changes of approximately $19.1 million and $20.3 million, respectively, in our 2007 and 2006 annual pre-tax earnings.

As of December 31, 2007 and 2006, we were a party to interest rate swap agreements with notional principal amounts of $2.3 billion and $2.1 billion, respectively. An interest rate swap agreement is a contractual agreement entered into between two counterparties under which each agrees to make periodic interest payments to the other for an agreed period of time based upon a predetermined amount of principal, which is called the notional principal amount. Normally at each payment or settlement date, the party who owes more pays the net amount; so at any given settlement date only one party actually makes a payment. The principal amount is notional because there is no need to exchange actual amounts of principal.

We entered into our interest rate swap agreements for the purposes of (i) hedging the interest rate risk associated with our fixed rate debt obligations and (ii) transforming a portion of the underlying cash flows related to our long-term fixed rate debt securities into variable rate debt in order to achieve our desired mix of fixed and variable rate debt. Since the fair value of our fixed rate debt varies with changes in the market rate of interest, we enter into swap agreements to receive a fixed and pay a variable rate of interest. Such swap agreements result in future cash flows that vary with the market rate of interest, and therefore hedge against changes in the fair value of our fixed rate debt due to market rate changes.

As of both December 31, 2007 and 2006, all of our interest rate swap agreements represented fixed-for-variable rate swaps, where we agreed to pay our counterparties a variable rate of interest on a notional principal amount, comprised of principal amounts from various series of our long-term fixed rate senior notes. In exchange, our counterparties agreed to pay us a fixed rate of interest, thereby allowing us to transform our fixed rate liabilities into variable rate obligations without the incurrence of additional loan origination or conversion costs.

We monitor our mix of fixed rate and variable rate debt obligations in light of changing market conditions and from time to time may alter that mix by, for example, refinancing balances outstanding under our variable rate debt with fixed rate debt (or vice versa) or by entering into interest rate swap agreements or other interest rate hedging agreements. In general, we attempt to maintain an overall target mix of approximately 50% fixed rate debt and 50% variable rate debt.

As of December 31, 2007, our cash and investment portfolio did not include fixed-income securities. Due to the short-term nature of our investment portfolio, a hypothetical 10% increase in interest rates would not have a material effect on the fair market value of our portfolio. Since we have the ability to liquidate this portfolio, we do not expect our operating results or cash flows to be materially affected to any significant degree by the effect of a sudden change in market interest rates on our investment portfolio.

See Note 9 to our consolidated financial statements included elsewhere in this report for additional information related to our debt instruments; for more information on our interest rate swap agreements, see Note 14.

Item 8. ***Financial Statements and Supplementary Data.***

The information required in this Item 8 is included in this report as set forth in the "Index to Financial Statements" on page 114.

Item 9. ***Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.***

None.

Item 9A. ***Controls and Procedures.***

Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures

As of December 31, 2007, our management, including our Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of the design and operation of our disclosure controls and procedures pursuant to Rule 13a-15(b) under the Securities Exchange Act of 1934. There are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including the possibility of human error and the circumvention or overriding of the controls and procedures. Accordingly, even effective disclosure controls and procedures can only provide reasonable assurance of achieving their control objectives. Based upon and as of the date of the evaluation, our Chief Executive Officer and our Chief Financial Officer concluded that the design and operation of our disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in the reports we file and submit under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported as and when required, and is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

Management's Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the framework in *Internal Control – Integrated Framework*, our management concluded that our internal control over financial reporting was effective as of December 31, 2007.

The effectiveness of our internal control over financial reporting as of December 31, 2007, has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears herein.

Certain businesses we acquired during 2007 were excluded from the scope of our management's assessment of the effectiveness of our internal control over financial reporting as of December 31, 2007. The excluded businesses consisted of the following:

- the Vancouver Wharves bulk marine terminal, acquired May 30, 2007; and
- the terminal assets and operations acquired from Marine Terminals, Inc., effective September 1, 2007.

These businesses, in the aggregate, constituted 0.6% of our total operating revenues for 2007 and 1.2% of our total assets as of December 31, 2007.

Changes in Internal Control Over Financial Reporting

There has been no change in our internal control over financial reporting during the fourth quarter of 2007 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Item 9B. ***Other Information.***

None.

PART III

Item 10. *Directors, Executive Officers and Corporate Governance*

Directors and Executive Officers of our General Partner and its Delegate

Set forth below is certain information concerning the directors and executive officers of our general partner and KMR, the delegate of our general partner. All directors of our general partner are elected annually by, and may be removed by, Kinder Morgan (Delaware), Inc. as its sole shareholder, and all directors of KMR are elected annually by, and may be removed by, our general partner as the sole holder of KMR's voting shares. Kinder Morgan (Delaware), Inc. is a wholly owned subsidiary of Knight. All officers of our general partner and all officers of KMR serve at the discretion of the board of directors of our general partner.

Name	Age	Position with our General Partner and KMR
Richard D. Kinder	63	Director, Chairman and Chief Executive Officer
C. Park Shaper	39	Director and President
Steven J. Kean	46	Executive Vice President and Chief Operating Officer
Edward O. Gaylord	76	Director
Gary L. Hultquist	64	Director
Perry M. Waughtal	72	Director
Kimberly A. Dang	38	Vice President, Investor Relations and Chief Financial Officer
Jeffrey R. Armstrong	39	Vice President (President, Terminals)
Thomas A. Bannigan	54	Vice President (President, Products Pipelines)
Richard T. Bradley	52	Vice President (President, CO_2)
David D. Kinder	33	Vice President, Corporate Development and Treasurer
Joseph Listengart	39	Vice President, General Counsel and Secretary
Scott E. Parker	47	Vice President (President, Natural Gas Pipelines)
James E. Street	51	Vice President, Human Resources and Administration

Richard D. Kinder is Director, Chairman and Chief Executive Officer of KMR, Kinder Morgan G.P., Inc. and Knight. Mr. Kinder has served as Director, Chairman and Chief Executive Officer of KMR since its formation in February 2001. He was elected Director, Chairman and Chief Executive Officer of Knight in October 1999. He was elected Director, Chairman and Chief Executive Officer of Kinder Morgan G.P., Inc. in February 1997. Mr. Kinder was elected President of KMR, Kinder Morgan G.P., Inc. and Knight in July 2004 and served as President until May 2005. He has also served as Chief Manager, and as a member of the Board of Managers of Knight Holdco LLC since May 2007. Mr. Kinder is the uncle of David Kinder, Vice President, Corporate Development and Treasurer of KMR, Kinder Morgan G.P., Inc. and Knight.

C. Park Shaper is Director and President of KMR, Kinder Morgan G.P., Inc. and Knight. Mr. Shaper was elected President of KMR, Kinder Morgan G.P., Inc. and Knight in May 2005. He served as Executive Vice President of KMR, Kinder Morgan G.P., Inc. and Knight from July 2004 until May 2005. Mr. Shaper was elected Director of KMR and Kinder Morgan G.P., Inc. in January 2003 and of Knight in May of 2007. He was elected Vice President, Treasurer and Chief Financial Officer of KMR upon its formation in February 2001, and served as its Treasurer until January 2004, and its Chief Financial Officer until May 2005. He was elected Vice President, Treasurer and Chief Financial Officer of Knight in January 2000, and served as its Treasurer until January 2004, and its Chief Financial Officer until May 2005. Mr. Shaper was elected Vice President, Treasurer and Chief Financial Officer of Kinder Morgan G.P., Inc. in January 2000, and served as its Treasurer until January 2004 and its Chief Financial Officer until May 2005. He has also served as President, and as a member of the Board of Managers, of Knight Holdco LLC since May 2007. He received a Masters of Business Administration degree from the J.L. Kellogg Graduate School of Management at Northwestern University. Mr. Shaper also has a Bachelor of Science degree in Industrial Engineering and a Bachelor of Arts degree in Quantitative Economics from Stanford University. Mr. Shaper is also a trust manager of Weingarten Realty Investors.

Steven J. Kean is Executive Vice President and Chief Operating Officer of KMR, Kinder Morgan G.P., Inc. and Knight. Mr. Kean was elected Executive Vice President and Chief Operating Officer of KMR, Kinder Morgan G.P., Inc. and Knight in January 2006. He served as Executive Vice President, Operations of KMR, Kinder Morgan G.P., Inc. and Knight from May 2005 to January 2006. He served as President, Texas Intrastate Pipeline Group from June

2002 until May 2005. He served as Vice President of Strategic Planning for the Kinder Morgan Gas Pipeline Group from January 2002 until June 2002. He has also served as Chief Operating Officer, and as a member of the Board of Managers, of Knight Holdco LLC since May 2007. Mr. Kean received his Juris Doctor from the University of Iowa in May 1985 and received a Bachelor of Arts degree from Iowa State University in May 1982.

Edward O. Gaylord is a Director of KMR and Kinder Morgan G.P., Inc. Mr. Gaylord was elected Director of KMR upon its formation in February 2001. Mr. Gaylord was elected Director of Kinder Morgan G.P., Inc. in February 1997. Since 1989, Mr. Gaylord has been the Chairman of the board of directors of Jacintoport Terminal Company, a liquid bulk storage terminal on the Houston, Texas ship channel.

Gary L. Hultquist is a Director of KMR and Kinder Morgan G.P., Inc. Mr. Hultquist was elected Director of KMR upon its formation in February 2001. He was elected Director of Kinder Morgan G.P., Inc. in October 1999. Since 1995, Mr. Hultquist has been the Managing Director of Hultquist Capital, LLC, a San Francisco-based strategic and merger advisory firm.

Perry M. Waughtal is a Director of KMR and Kinder Morgan G.P., Inc. Mr. Waughtal was elected Director of KMR upon its formation in February 2001. Mr. Waughtal was elected Director of Kinder Morgan G.P., Inc. in April 2000. Since 1994, Mr. Waughtal has been the Chairman of Songy Partners Limited, an Atlanta, Georgia based real estate investment company. Mr. Waughtal is also a director of HealthTronics, Inc.

Kimberly A. Dang is Vice President, Investor Relations and Chief Financial Officer of KMR, Kinder Morgan G.P., Inc. and Knight. Mrs. Dang was elected Chief Financial Officer of KMR, Kinder Morgan G.P., Inc. and Knight in May 2005. She served as Treasurer of KMR, Kinder Morgan G.P., Inc. and Knight from January 2004 to May 2005. She was elected Vice President, Investor Relations of KMR, Kinder Morgan G.P., Inc. and Knight in July 2002. From November 2001 to July 2002, she served as Director, Investor Relations of KMR, Kinder Morgan G.P., and Knight. From May 2001 until November 2001, Mrs. Dang was an independent financial consultant. From September 2000 until May 2001, she served as an associate and later a principal at Murphree Venture Partners, a venture capital firm. She has also served as Chief Financial Officer of Knight Holdco LLC since May 2007. Mrs. Dang has received a Masters in Business Administration degree from the J.L. Kellogg Graduate School of Management at Northwestern University and a Bachelor of Business Administration degree in accounting from Texas A&M University.

Jeffrey R. Armstrong is Vice President (President, Terminals) of KMR and Kinder Morgan G.P., Inc. Mr. Armstrong became Vice President (President, Terminals) in July 2003. He served as President, Kinder Morgan Liquids Terminals LLC from March 1, 2001, when the company was formed via the acquisition of GATX Terminals, through July 2003. From 1994 to 2001, Mr. Armstrong worked for GATX Terminals, where he was General Manager of their East Coast operations. He received his Bachelor’s degree from the United States Merchant Marine Academy and an MBA from the University of Notre Dame.

Thomas A. Bannigan is Vice President (President, Products Pipelines) of KMR and Kinder Morgan G.P., Inc. and President and Chief Executive Officer of Plantation Pipe Line Company. Mr. Bannigan was elected Vice President (President, Products Pipelines) of KMR upon its formation in February 2001. He was elected Vice President (President, Products Pipelines) of Kinder Morgan G.P., Inc. in October 1999. Mr. Bannigan has served as President and Chief Executive Officer of Plantation Pipe Line Company since May 1998. Mr. Bannigan received his Juris Doctor, cum laude, from Loyola University in 1980 and received a Bachelors degree from the State University of New York in Buffalo.

Richard T. Bradley is Vice President (President, CO_2) of KMR and of Kinder Morgan G.P., Inc. and President of Kinder Morgan CO_2 Company, L.P. Mr. Bradley was elected Vice President (President, CO_2) of KMR upon its formation in February 2001 and Vice President (President, CO_2) of Kinder Morgan G.P., Inc. in April 2000. Mr. Bradley has been President of Kinder Morgan CO_2 Company, L.P. (formerly known as Shell CO_2 Company, Ltd.) since March 1998. Mr. Bradley received a Bachelor of Science in Petroleum Engineering from the University of Missouri at Rolla.

David D. Kinder is Vice President, Corporate Development and Treasurer of KMR, Kinder Morgan G.P., Inc. and Knight. Mr. Kinder was elected Treasurer of KMR, Kinder Morgan G.P., Inc. and Knight in May 2005. He was elected Vice President, Corporate Development of KMR, Kinder Morgan G.P., Inc. and Knight in October 2002. He served as manager of corporate development for Knight and Kinder Morgan G.P., Inc. from January 2000 to October 2002. He has also served as Treasurer of Knight Holdco LLC since May 2007. Mr. Kinder graduated cum laude with a Bachelors degree in Finance from Texas Christian University in 1996. Mr. Kinder is the nephew of Richard D. Kinder.

Joseph Listengart is Vice President, General Counsel and Secretary of KMR, Kinder Morgan G.P., Inc. and Knight. Mr. Listengart was elected Vice President, General Counsel and Secretary of KMR upon its formation in February 2001. He was elected Vice President and General Counsel of Kinder Morgan G.P., Inc. and Vice President, General Counsel and Secretary of Knight in October 1999. Mr. Listengart was elected Secretary of Kinder Morgan G.P., Inc. in November 1998 and has been an employee of Kinder Morgan G.P., Inc. since March 1998. He has also served as General Counsel and Secretary of Knight Holdco LLC since May 2007. Mr. Listengart received his Masters in Business Administration from Boston University in January 1995, his Juris Doctor, magna cum laude, from Boston University in May 1994, and his Bachelor of Arts degree in Economics from Stanford University in June 1990.

Scott E. Parker is Vice President (President, Natural Gas Pipelines) of KMR, Kinder Morgan G.P., Inc. and Knight. He was elected Vice President (President, Natural Gas Pipelines) of KMR, Kinder Morgan G.P., Inc. and Knight in May 2005. Mr. Parker served as President of NGPL from March 2003 to May 2005. Mr. Parker served as Vice President, Business Development of NGPL from January 2001 to March 2003. He held various positions at NGPL from January 1984 to January 2001. Mr. Parker holds a Bachelor’s degree in accounting from Governors State University.

James E. Street is Vice President, Human Resources and Administration of KMR, Kinder Morgan G.P., Inc. and Knight. Mr. Street was elected Vice President, Human Resources and Administration of KMR upon its formation in February 2001. He was elected Vice President, Human Resources and Administration of Kinder Morgan G.P., Inc. and Knight in August 1999. Mr. Street received a Masters of Business Administration degree from the University of Nebraska at Omaha and a Bachelor of Science degree from the University of Nebraska at Kearney.

Corporate Governance

We have a separately designated standing audit committee established in accordance with Section 3(a)(58)(A) of the Securities Exchange Act of 1934 comprised of Messrs. Gaylord, Hultquist and Waughtal. Mr. Gaylord is the chairman of the audit committee and has been determined by the board to be an "audit committee financial expert." The board has determined that all of the members of the audit committee are independent as described under the relevant standards.

We have not, nor has our general partner nor KMR, made, within the preceding three years, contributions to any tax-exempt organization in which any of our or KMR’s independent directors serves as an executive officer that in any single fiscal year exceeded the greater of $1.0 million or 2% of such tax-exempt organization’s consolidated gross revenues.

On April 11, 2007, our chief executive officer certified to the New York Stock Exchange, as required by Section 303A.12(a) of the New York Stock Exchange Listed Company Manual, that as of April 11, 2007, he was not aware of any violation by us of the New York Stock Exchange’s Corporate Governance listing standards. We have also filed as an exhibit to this report the Sarbanes-Oxley Act Section 302 certifications regarding the quality of our public disclosure.

We make available free of charge within the "Investors" information section of our Internet website, at www.kindermorgan.com, and in print to any unitholder who requests, the governance guidelines, the charters of the audit committee, compensation committee and nominating and governance committee, and our code of business conduct and ethics (which applies to senior financial and accounting officers and the chief executive officer, among others). Requests for copies may be directed to Investor Relations, Kinder Morgan Energy Partners, L.P., 500 Dallas Street, Suite 1000, Houston, Texas 77002, or telephone (713) 369-9490. We intend to disclose any amendments to our code of business conduct and ethics that would otherwise be disclosed on Form 8-K and any waiver from a provision of that code granted to our executive officers or directors that would otherwise be disclosed on Form 8-K on our Internet website within four business days following such amendment or waiver. The information contained on or connected to our Internet website is not incorporated by reference into this Form 10-K and should not be considered part of this or any other report that we file with or furnish to the SEC.

Interested parties may contact our lead director, the chairpersons of any of the board’s committees, the independent directors as a group or the full board by mail to Kinder Morgan Management, LLC, 500 Dallas Street, Suite 1000, Houston, Texas 77002, Attention: General Counsel, or by e-mail within the "Contact Us" section of our Internet website, at www.kindermorgan.com. Any communication should specify the intended recipient.

Section 16(a) Beneficial Ownership Reporting Compliance

Section 16 of the Securities Exchange Act of 1934 requires our directors and officers, and persons who own more than 10% of a registered class of our equity securities, to file initial reports of ownership and reports of changes in ownership with the Securities and Exchange Commission. Such persons are required by SEC regulation to furnish us with copies of all Section 16(a) forms they file.

Based solely on our review of the copies of such forms furnished to us and written representations from our executive officers and directors, we believe that all Section 16(a) filing requirements were met during 2007.

Item 11. ***Executive Compensation.***

As is commonly the case for publicly traded limited partnerships, we have no officers. Under our limited partnership agreement, Kinder Morgan G.P., Inc., as our general partner, is to direct, control and manage all of our activities. Pursuant to a delegation of control agreement, Kinder Morgan G.P., Inc. has delegated to KMR the management and control of our business and affairs to the maximum extent permitted by our partnership agreement and Delaware law, subject to our general partner's right to approve certain actions by KMR. The executive officers and directors of Kinder Morgan G.P., Inc. serve in the same capacities for KMR. Certain of those executive officers also serve as executive officers of Knight, formerly KMI, and of Knight Holdco LLC, Knight's privately owned parent company. Except as indicated otherwise, all information in this report with respect to compensation of executive officers describes the total compensation received by those persons in all capacities for services rendered to us, our subsidiaries and our affiliates, including Knight and Knight Holdco LLC. In this Item 11, "we," "our" or "us" refers to Kinder Morgan Energy Partners, L.P. and, where appropriate, Kinder Morgan G.P., Inc., KMR and Knight.

Compensation Discussion and Analysis

Program Objectives

We are a publicly traded master limited partnership, and our businesses consist of a diversified portfolio of energy transportation, storage and production assets. We seek to attract and retain executives who will help us achieve our primary business strategy objective of growing the value of our portfolio of businesses for the benefit of our unitholders. To help accomplish this goal, we have designed an executive compensation program that rewards individuals with competitive compensation that consists of a mix of cash, benefit plans and long-term compensation, with a majority of executive compensation tied to the "at risk" portions of the annual cash bonus.

The key objectives of our executive compensation program are to attract, motivate and retain executives who will advance our overall business strategies and objectives to create and return value to our unitholders. We believe that an effective executive compensation program should link total compensation to financial performance and to the attainment of short- and long-term strategic, operational, and financial objectives. We also believe it should provide competitive total compensation opportunities at a reasonable cost. In designing our executive compensation program, we have recognized that our executives have a much greater portion of their overall compensation at-risk than do our other employees; consequently, we have tried to establish the at-risk portions of our executive total compensation at levels that recognize their much increased level of responsibility and their ability to influence business results.

Currently, our executive compensation program is principally comprised of the following two elements: (i) base cash salary; and (ii) possible annual cash bonus (reflected in the Summary Compensation Table below as Non-Equity Incentive Plan Compensation). It has been our philosophy to pay our executive officers a base salary not to exceed $200,000, which we believe is below annual base salaries for comparable positions in the marketplace. At its January 2008 meeting, KMR's compensation committee (discussed more fully below) agreed to raise the cap for our executive officers' base salaries to an annual amount not to exceed $300,000. No increases above $200,000 have been implemented at this time. If this increase was implemented, we believe the base salaries paid to our executive officers would continue to be below the industry average for similarly positioned executives. While not awarded by us, KMR' compensation committee was aware of the units awarded by Knight Holdco LLC (as discussed more fully below) and took these awards into account as components of the total compensation received by our executive officers.

In addition, we believe that the compensation of our Chief Executive Officer, Chief Financial Officer and the executives named below, collectively referred to in this Item 11 as our named executive officers, should be directly and materially tied to the financial performance of Knight and us, and should be aligned with the interests of our unitholders. Therefore, the majority of our named executive officers' compensation is allocated to the "at risk" portion of our compensation program—the annual cash bonus. Accordingly, for 2007, our executive compensation was weighted toward the cash bonus, payable on the basis of achieving (i) an earnings before interest, taxes, depreciation, depletion and amortization (referred to as EBITDA) less capital spending target by Knight; and (ii) a cash distribution per common unit target by us.

We periodically compare our executive compensation components with market information. The purpose of this comparison is to ensure that our total compensation package operates effectively, remains both reasonable and competitive with the energy industry, and is generally comparable to the compensation offered by companies of similar size and scope as us. We also keep abreast of current trends, developments, and emerging issues in executive compensation, and if appropriate, will obtain advice and assistance from outside legal, compensation or other advisors.

We have endeavored to design our executive compensation program and practices with appropriate consideration of all tax, accounting, legal and regulatory requirements. Section 162(m) of the Internal Revenue Code limits the deductibility of certain compensation for our executive officers to $1,000,000 of compensation per year; however, if specified conditions are met, certain compensation may be excluded from consideration of the $1,000,000 limit. Since the bonuses paid to our executive officers are paid under Knight's Annual Incentive Plan as a result of reaching designated financial targets established by KMR's and Knight's compensation committees, we expect that all compensation paid to our executives would qualify for deductibility under federal income tax rules. Though we are advised that we and private companies, such as Knight, are not subject to section 162(m), we and Knight have chosen to generally operate as if this code section does apply to us and Knight as a measure of appropriate governance.

Prior to 2006, long-term equity awards comprised a third element of our executive compensation program. These awards primarily consisted of grants of restricted KMI stock and grants of non-qualified options to acquire shares of KMI common stock, both pursuant to the provisions of KMI's Amended and Restated 1999 Stock Plan, referred to in this report as the KMI stock plan. Prior to 2003, we used both KMI stock options and restricted KMI stock as the principal components of long-term executive compensation, and beginning in 2003, we used grants of restricted stock exclusively as the principal component of long-term executive compensation. For each of the years ended December 31, 2006 and 2007, no restricted stock or options to purchase shares of KMI, KMP or KMR were granted to any of our named executive officers.

Additionally, in connection with KMI's going-private transaction, Knight Holdco LLC awarded members of Knight's management Class A-1 and Class B units of Knight Holdco LLC. In accordance with SFAS No. 123R, Knight Holdco LLC is required to recognize compensation expense in connection with the Class A-1 and Class B units over the expected life of such units. As a subsidiary of Knight Holdco LLC, we are, under accounting rules, allocated a portion of this compensation expense, although none of us or any of our subsidiaries have any obligation, nor do we expect, to pay any amounts in respect of such units. For more information concerning the Knight Holdco LLC units, see Item 13. "Certain Relationships and Related Transactions, and Director Independence—Related Transactions—KMI Going-Private Transaction".

Behaviors Designed to Reward

Our executive compensation program is designed to reward individuals for advancing our business strategies and the interests of our stakeholders, and we prohibit engaging in any detrimental activities, such as performing services for a competitor, disclosing confidential information or violating appropriate business conduct standards. Each executive is held accountable to uphold and comply with company guidelines, which require the individual to maintain a discrimination-free workplace, to comply with orders of regulatory bodies, and to maintain high standards of operating safety and environmental protection.

Unlike many companies, we have no executive perquisites and, with respect to our United States-based executives, we have no supplemental executive retirement, non-qualified supplemental defined benefit/contribution, deferred compensation or split dollar life insurance programs. Additionally, we do not have employment agreements (other than with our Chairman and Chief Executive Officer, Richard D. Kinder), special severance agreements or change of control agreements for our U.S. executives. Our executives are eligible for the same severance policy as our workforce, which caps severance payments to an amount equal to six months of salary. We have no executive company cars or executive car allowances nor do we offer or pay for financial planning services. Additionally, we do not own any corporate aircraft and we do not pay for executives to fly first class. We believe that we are currently below competitive levels for comparable companies in this area of our overall compensation package; however, we have no current plans to change our policy of not offering such executive benefits, perquisite programs or special executive severance arrangements.

At his request, Mr. Richard D. Kinder, our Chairman and Chief Executive Officer, receives $1 of base salary per year. Additionally, Mr. Kinder has requested that he receive no annual bonus, unit grants, or other compensation from us. Mr. Kinder does not have any deferred compensation, supplemental retirement or any other special benefit, compensation or perquisite arrangement with us. Each year Mr. Kinder reimburses us for his portion of health care premiums and parking expenses. Mr. Kinder was awarded Class B units by and in Knight Holdco LLC in connection with KMI's going-private transaction, and while we are, under accounting rules, allocated compensation expense attributable to such Class B units, we have no obligation, nor do we expect, to pay any amounts in connection with the Class B units.

Elements of Compensation

As outlined above, our executive compensation program currently is principally comprised of the following two elements: (i) a base cash salary; and (ii) a possible annual cash bonus. With regard to our named executive officers other than our Chief Executive Officer, KMR's compensation committee reviews and approves annually the financial goals and objectives of both Knight and us that are relevant to the compensation of our named executive officers. Generally following the regularly scheduled fourth quarter board meeting in each year, the committee solicits information from other directors, the Chief Executive Officer and other relevant members of senior management regarding the performance of our named executive officers other than our Chief Executive Officer during that year. Our Chief Executive Officer makes compensation recommendations to the committee with respect to our named executive officers, other than himself. The committee obtains the information and the recommendations prior to the regularly scheduled first quarter board meeting.

Annually, at KMR's regularly scheduled first quarter board meeting, the committee evaluates the performance of our named executive officers other than our Chief Executive Officer and makes determinations regarding the terms of their continued employment and compensation for that year. If the committee deems it advisable, it may, rather than determine the terms of continued employment and compensation for the named executive officers (other than the Chief Executive Officer), make a recommendation with respect thereto to the independent members of the board, who make the determination at the first quarter board meeting. The committee also determines bonuses for the prior year based on the performance targets set therefor, and sets performance targets for the present year for bonus and other relevant purposes.

If any of KMR's or our general partner's executive officers is also an executive officer of Knight, the committee's compensation determination or recommendation (i) may be with respect to the aggregate compensation to be received by such officer from Knight, KMR, and our general partner that is to be allocated among them in accordance with procedures approved by the committee, if such aggregate compensation set by the committee and that set by the committee or the board of KMR are the same, or alternatively (ii) may be with respect to the compensation to be received by such executive officers from Knight, KMR or our general partner, as the case may be, in which case such compensation will not be allocated among Knight, on the one hand, and KMR, our general partner and us, on the other. Thereafter, the committee or the Chief Executive Officer will discuss the committee's evaluation and the determination as to compensation with the named executive officers.

In addition, the compensation committee has the sole authority to retain (and terminate as necessary) and compensate any compensation consultants, counsel and other firms of experts to advise it as it determines necessary or appropriate. The committee has the sole authority to approve any such firm's fees and other retention terms, and we and Knight, as applicable, will make adequate provision for the payment of all fees and other compensation, approved by the committee, to any such firm employed by the committee. The committee also has sole authority to determine if any compensation consultant is to be used to assist in the evaluation of director, Chief Executive Officer or senior executive compensation and will have sole authority to retain and terminate any such compensation consultant and to approve the consultant's fees and other retention terms.

Base Salary

Base salary is paid in cash. For each of the years 2007 and 2006, all of our named executive officers, with the exception of our Chairman and Chief Executive Officer who receives $1 of base salary per year as described above, were paid a base salary of $200,000 per year. At KMR's first quarter 2008 board meeting, the compensation committee agreed to raise the base salary cap for our executive officers, beginning in 2008, to an annual amount not to exceed $300,000. No increases above $200,000 have been implemented at this time. Generally, we believe that our executive officers' base salaries are (and will continue to be following any implementation of the previously described increase) below base salaries for executives in similar positions and with similar responsibilities at companies of comparable size and scope.

Possible Annual Cash Bonus (Non-Equity Cash Incentive)

Our possible annual cash bonuses are provided for under Knight's Annual Incentive Plan, which became effective January 18, 2005. The overall purpose of the Knight Annual Incentive Plan is to increase our executive officers' and our employees' personal stake in the continued success of Knight and us by providing them additional incentives through the possible payment of annual cash bonuses. Under the plan, annual cash bonuses may be paid to our executive officers and other employees depending on a variety of factors, including their individual performance, Knight's financial performance, the financial performance of Knight's subsidiaries (including us), safety and environmental goals and regulatory compliance.

The plan is administered by the compensation committee of Knight's board of directors. The compensation committee is authorized to grant awards under the plan, interpret the plan, adopt rules and regulations for carrying out the plan, and make all determinations necessary or advisable for the administration of the plan.

All of the employees of Knight and its subsidiaries, including KMGP Services Company, Inc., are eligible to participate in the plan, except employees who are included in a unit of employees covered by a collective bargaining agreement unless such agreement expressly provides for eligibility under the plan. However, only eligible employees who are selected by the KMR and Knight compensation committees will actually participate in the plan and receive bonuses.

The plan consists of two components: the executive plan component and the non-executive plan component. Our Chairman and Chief Executive Officer and all employees who report directly to the Chairman are eligible for the executive plan component; however, as stated elsewhere in this report, Mr. Richard D. Kinder, our Chairman and Chief Executive Officer, has elected to not participate under the plan. As of January 31, 2008, excluding Mr. Richard D. Kinder, eleven of our current executive officers were eligible to participate in the executive plan component. All other U.S. eligible employees were eligible for the non-executive plan component.

The KMR compensation committee determines which of our eligible employees will be eligible to participate under the executive plan component of the plan. At or before the start of each calendar year (or later, to the extent allowed under Internal Revenue Code regulations), performance objectives for that year are identified. The performance objectives are based on one or more of the criteria set forth in the plan. The KMR compensation committee establishes a bonus opportunity for each executive officer, which is our portion of the amount of the bonus the executive officer will earn if the performance objectives are fully satisfied. The compensation committee may specify a minimum acceptable level of achievement of each performance objective below which no bonus is payable with respect to that objective. The compensation committee may set additional levels above the minimum (which may also be above the targeted performance objective), with a formula to determine the percentage of the bonus opportunity to be earned at each level of achievement above the minimum. Performance at a level above the targeted performance objective may entitle the executive officer to earn a bonus in excess of 100% of the bonus opportunity. However, the maximum payout to any individual under the plan for any year is $2.0 million, and the KMR compensation committee has the discretion to reduce the bonus amount payable by us in any performance period.

Performance objectives may be based on one or more of the following criteria:

- Knight's EBITDA less capital spending, or the EBITDA less capital spending of one of its subsidiaries or business units;
- Knight's net income or the net income of one of its subsidiaries or business units;
- Knight's revenues or the revenues of one of its subsidiaries or business units;

- Knight's unit revenues minus unit variable costs or the unit revenues minus unit variable costs of one of its subsidiaries or business units;
- Knight's return on capital, return on equity, return on assets, or return on invested capital, or the return on capital, return on equity, return on assets, or return on invested capital of one of its subsidiaries or business units;
- Knight's cash flow return on assets or cash flows from operating activities, or the cash flow return on assets or cash flows from operating activities of one of its subsidiaries or business units;
- Knight's capital expenditures or the capital expenditures of one of its subsidiaries or business units;
- Knight's operations and maintenance expense or general and administrative expense, or the operations and maintenance expense or general and administrative expense of one of its subsidiaries or business units; or
- Knight's debt-equity ratios and key profitability ratios, or the debt-equity ratios and key profitability ratios of one of its subsidiaries or business units.

The KMR compensation committee set two performance objectives for 2007 under both the executive plan component and the non-executive plan component. The 2007 performance objectives were $3.44 in cash distributions per common unit at KMP, and $1,089.5 million of EBITDA less capital spending at Knight. These targets were the same as our and Knight's previously disclosed 2007 budget expectations. At the end of 2007, the KMR compensation committee determined and certified in writing the extent to which the performance objectives had been attained and the extent to which the bonus opportunity had been earned under the formula previously established by the KMR compensation committee. In 2007, both we and Knight exceeded our established targets.

The table below sets forth the bonus opportunities that could have been payable by us and Knight to our executive officers if the performance objectives established by the KMR compensation committee for 2007 had been 100% achieved. The KMR compensation committee may, at its sole discretion, reduce the amount of the portion of the bonus actually paid by us to any executive officer under the plan from the amount of any bonus opportunity open to such executive officer; and, because payments under the plan for our executive officers are determined by comparing actual performance to the performance objectives established by the compensation committee each year for eligible executive officers chosen to participate for that year, it is not possible to accurately predict any amounts that will actually be paid under the executive plan portion of the plan over the life of the plan. The compensation committee set bonus opportunities under the plan for 2007 for the executive officers at dollar amounts in excess of that which were expected to actually be paid under the plan. The actual payout amounts under the Non-Equity Incentive Plan Awards made in 2007 are set forth in the Summary Compensation Table in this report in the column entitled "Non-Equity Incentive Plan Compensation."

Knight Annual Incentive Plan
Bonus Opportunities for 2007

Name and Principal Position	Dollar Value	
Richard D. Kinder, Chairman and Chief Executive Officer..................	$ —	(1)
Kimberly A. Dang, Vice President and Chief Financial Officer.............	1,000,000	(2)
Steven J. Kean, Executive Vice President and Chief Operating Officer....	1,500,000	(3)
Scott E. Parker, Vice President (President, Natural Gas Pipelines)..........	1,500,000	(3)
C. Park Shaper, Director and President...	1,500,000	(3)

(1) Declined to participate.

(2) Under the plan, for 2007, if neither of the targets was met, no bonus opportunities would have been provided; if one of the targets was met, $500,000 in bonus opportunities would have been available; if both of the targets had been exceeded by 10%, $1,500,000 in bonus opportunities would have been available. The KMR compensation committee may, in its sole discretion, reduce the award payable by us to any participant for any reason.

(3) Under the plan, for 2007, if neither of the targets was met, no bonus opportunities would have been provided; if one of the targets was met, $750,000 in bonus opportunities would have been available; if both of the targets had been exceeded by 10%, $2,000,000 in bonus opportunities would have been available. The KMR compensation committee may, in its sole discretion, reduce the award payable by us to any participant for any reason.

Knight may amend the plan from time to time without shareholder approval except as required to satisfy the Internal Revenue Code or any applicable securities exchange rules. Awards may be granted under the plan for calendar years 2008 through 2009, unless the plan is terminated earlier by Knight. However, the plan will remain in effect until payment has been completed with respect to all awards granted under the plan prior to its termination.

Other Compensation

Knight Inc. Savings Plan. The Knight Inc. Savings Plan is a defined contribution 401(k) plan. The plan permits all full-time employees of Knight and KMGP Services Company, Inc., including the named executive officers, to contribute between 1% and 50% of base compensation, on a pre-tax basis, into participant accounts. In addition to a mandatory contribution equal to 4% of base compensation per year for most plan participants, our general partner may make special discretionary contributions. Certain employees' contributions are based on collective bargaining agreements. The mandatory contributions are made each pay period on behalf of each eligible employee. Participants may direct the investment of both their contributions and employer contributions into a variety of investments at the employee's discretion. Plan assets are held and distributed pursuant to a trust agreement.

Employer contributions for employees vest on the second anniversary of the date of hire. Effective October 1, 2005, for new employees of our Terminals business segment, a tiered employer contribution schedule was implemented. This tiered schedule provides for employer contributions of 1% for service less than one year, 2% for service between one and two years, 3% for service between two and five years, and 4% for service of five years or more. All employer contributions for employees of our Terminals business segment hired after October 1, 2005 vest on the fifth anniversary of the date of hire (effective January 1, 2008, this five year anniversary date for Terminals employees was changed to three years to comply with changes in federal regulations).

At its July 2007 meeting, the compensation committee of the KMR and Knight boards of directors approved a special contribution of an additional 1% of base pay into the Savings Plan for each eligible employee. Each eligible employee will receive an additional 1% company contribution based on eligible base pay each pay period beginning with the first pay period of August 2007 and continuing through the last pay period of July 2008. The additional 1% contribution does not change or otherwise impact, the annual 4% contribution that eligible employees currently receive. It may be converted to any other Savings Plan investment fund at any time and it will vest according to the same vesting schedule described in the preceding paragraph. Since this additional 1% company contribution is discretionary, KMR and Knight compensation committee approvals will be required annually for each additional contribution. During the first quarter of 2008, excluding our portion of the 1% additional contribution described above, we will not make any additional discretionary contributions to individual accounts for 2007.

Additionally, in 2006, an option to make after-tax "Roth" contributions (Roth 401(k) option) to a separate participant account was added to the Savings Plan as an additional benefit to all participants. Unlike traditional 401(k) plans, where participant contributions are made with pre-tax dollars, earnings grow tax-deferred, and the withdrawals are treated as taxable income, Roth 401(k) contributions are made with after-tax dollars, earnings are tax-free, and the withdrawals are tax-free if they occur after both (i) the fifth year of participation in the Roth 401(k) option, and (ii) attainment of age 59 ½, death or disability. The employer contribution will still be considered taxable income at the time of withdrawal.

Knight Inc. Cash Balance Retirement Plan. Employees of KMGP Services Company, Inc. and Knight, including our named executive officers, are also eligible to participate in a Cash Balance Retirement Plan. Certain employees continue to accrue benefits through a career-pay formula, "grandfathered" according to age and years of service on December 31, 2000, or collective bargaining arrangements. All other employees accrue benefits through a personal retirement account in the Cash Balance Retirement Plan. Under the plan, we make contributions on behalf of participating employees equal to 3% of eligible compensation every pay period. Interest is credited to the personal retirement accounts at the 30-year U.S. Treasury bond rate, or an approved substitute, in effect each year. Employees become fully vested in the plan after five years, and they may take a lump sum distribution upon termination of employment or retirement.

The following table sets forth the estimated actuarial present value of each named executive officer's accumulated pension benefit as of December 31, 2007, under the provisions of the Cash Balance Retirement Plan. With respect to our named executive officers, the benefits were computed using the same assumptions used for financial statement purposes, assuming current remuneration levels without any salary projection, and assuming participation until normal retirement at age sixty-five. These benefits are subject to federal and state income taxes, where applicable, but are not subject to deduction for social security or other offset amounts.

Name	Plan Name	Current Credited Yrs of Service	Pension Benefits Present Value of Accumulated Benefit(1)	Contributions During 2007
Richard D. Kinder	Cash Balance	7	$ —	$ —
Kimberly A. Dang	Cash Balance	6	31,408	7,294
Steven J. Kean	Cash Balance	6	41,724	7,767
Scott E. Parker	Cash Balance	9	71,515	9,130
C. Park Shaper	Cash Balance	7	51,079	8,194

____

(1) The present values in the Pension Benefits table are based on certain assumptions-including a 5.75% discount rate, RP 2000 mortality (post-retirement only), 5% cash balance interest crediting rate, and lump sums calculated using a 5% interest rate and IRS mortality. We assumed benefits would commence at normal retirement date or unreduced retirement date, if earlier. No death or turnover was assumed prior to retirement date.

Other Potential Post-Employment Benefits. On October 7, 1999, Mr. Richard D. Kinder entered into an employment agreement with Knight pursuant to which he agreed to serve as its Chairman and Chief Executive Officer. His employment agreement provides for a term of three years and one year extensions on each anniversary of October 7^{th}. Mr. Kinder, at his initiative, accepted an annual salary of $1 to demonstrate his belief in our and Knight's long term viability. Mr. Kinder continues to accept an annual salary of $1, and he receives no other compensation from us. Mr. Kinder was awarded Class B units by and in Knight Holdco LLC in connection with Knight's going-private transaction, and while we, as a subsidiary of Knight Holdco LLC, are allocated compensation expense attributable to such Class B units, we have no obligation, nor do we expect, to pay any amounts in connection with the Class B units.

Knight believes that Mr. Kinder's employment agreement contains provisions that are beneficial to Knight and its subsidiaries and accordingly, Mr. Kinder's employment agreement is extended annually at the request of Knight and KMR's Board of Directors. For example, with limited exceptions, Mr. Kinder is prevented from competing in any manner with Knight or any of its subsidiaries, while he is employed by Knight and for 12 months following the termination of his employment with Knight. The agreement contains provisions that address termination with and without cause, termination as a result of change in duties or disability, and death. At his current compensation level, the maximum amount that would be paid to Mr. Kinder or his estate in the event of his termination is three times $750,000, or $2.25 million. This payment would be made if Mr. Kinder were terminated by Knight without cause or if Mr. Kinder terminated his employment with Knight as a result of a change in duties (as defined in the employment agreement). There are no employment agreements or change-in-control arrangements with any of our other executive officers.

Mr. Scott E. Parker elected to not participate in the going-private transaction. As a result, we offered Mr. Parker a retention agreement. The agreement was effective May 30, 2007, and lasts for three years. Mr. Parker is eligible for quarterly cash payments of $65,000, a one-time relocation payment of $100,000, and the right to participate in both the annual incentive plan and employee benefit plans. Under the terms of the agreement, Mr. Parker will also receive payments of $500,000 on May 30, 2008, $500,000 on May 30, 2009, and $2,000,000 on May 30, 2010, respectively, provided he is an active employee on each respective date. The agreement also contains confidential information, non-solicitation of employees and non-compete provisions.

Common Unit Option Plan. Pursuant to our Common Unit Option Plan, key personnel are eligible to receive grants of options to acquire common units. The total number of common units authorized under the option plan is 500,000. None of the options granted under the option plan may be "incentive stock options" under Section 422 of the Internal Revenue Code. If an option expires without being exercised, the number of common units covered by such option will be available for a future award. The exercise price for an option may not be less than the fair market value of a common unit on the date of grant. KMR's compensation committee determines the duration and vesting of the options to employees at the time of grant, and no individual employee may be granted options for more than 20,000 common units in any year. As of December 31, 2007, no options to purchase common units were outstanding under the plan. KMR's compensation committee administers the option plan, and the plan has a termination date of March 5, 2008.

For the year ended December 31, 2007, no options to purchase common units were granted to or exercised by any of our executive officers, and as of December 31, 2007, none of our executive officers owned unexercised common unit options. The plan may also grant, to each of our non-employee directors, options to purchase common units at an exercise price equal to the fair market value of the common units at the end of the trading day on such date. For the year ended December 31, 2007, no options to purchase common units were granted to our non-employee directors.

Summary Compensation Table

The following table shows compensation paid or otherwise awarded to (i) our principal executive officer; (ii) our principal financial officer; and (iii) our three most highly compensated executive officers (other than our principal executive officer and principal financial officer) serving at fiscal year end 2007 (collectively referred to as the "named executive officers") for services rendered to us, our subsidiaries or our affiliates, including Knight and Knight Holdco LLC (collectively referred to as the "Knight affiliated entities"), during fiscal years 2007 and 2006. The amounts in the columns below, except the column entitled "Unit Awards by Knight Holdco LLC", represent the total compensation paid or awarded to the named executive officers by all the Knight affiliated entities, and as a result the amounts are in excess of the compensation expense allocated to and recognized by us for services rendered to us. The amounts in the column entitled "Unit Awards by Knight Holdco LLC" consist of accounting expense calculated in accordance with SFAS No. 123R and allocated to us for the Knight Holdco LLC Class A-1 and Class B units awarded by Knight Holdco LLC to the named executive officers. As a subsidiary of Knight Holdco LLC, we are allocated a portion of the compensation expense recognized by Knight Holdco LLC with respect to such units, although none of us or any of our subsidiaries have any obligation, nor do we expect, to pay any amounts in respect of such units and none of the named executive officers has received any payments in respect of such units.

Name and Principal Position	Year	Salary	Bonus	(1) Stock Awards by KMI	(2) Option Awards by KMI	(3) Non-Equity Incentive Plan Compensation	(4) Change in Pension Value	(5) All Other Compensation	(6) Unit Awards by Knight Holdco LLC	Total

____

(1) Consists of expense calculated in accordance with SFAS No. 123R attributable to restricted KMI stock awarded in 2003, 2004 and 2005 according to the provisions of the KMI Stock Plan. No restricted stock was awarded in 2007 or 2006. For grants of restricted stock, we take the value of the award at time of grant and accrue the expense over the vesting period according to SFAS No. 123R. For grants made July 16, 2003—KMI closing price was $53.80, twenty-five percent of the shares in each grant vest on the third anniversary after the date of grant and the remaining seventy-five percent of the shares in each grant vest on the fifth anniversary after the date of grant. For grants made July 20, 2004—KMI closing price was $60.79, fifty percent of the shares vest on the third anniversary after the date of grant and the remaining fifty percent of the shares vest on the fifth anniversary after the date of grant. For grants made July 20, 2005—KMI closing price was $89.48, twenty-five percent of the shares in each grant vest on the third anniversary after the date of grant and the remaining seventy-five percent of the shares in each grant vest on the fifth anniversary after the date of grant. As a result of the KMI going-private transaction, all outstanding restricted shares vested in 2007 and therefore all remaining compensation expense with respect to restricted stock was recognized in 2007 in accordance with SFAS No. 123R. However, Knight bore all of the costs associated with this acceleration.

(2) Consists of expense calculated in accordance with SFAS No. 123R attributable to options to purchase KMI shares awarded in 2002 and 2003 according to the provisions of the KMI Stock Plan. No options were granted in 2007 or 2006. For options granted in 2002—volatility of 0.3912 using a 6 year term, 4.01% five year risk free interest rate return, and a 0.71% expected annual dividend rate. For options granted in 2003—volatility of 0.3853 using a 6.25 year term, 3.37% treasury strip quote at time of grant, and a 2.973% expected annual dividend rate. As a result of the KMI going-private transaction, all outstanding options vested in 2007 and therefore all remaining compensation expense with respect to options was recognized in 2007 in accordance with SFAS No. 123R. As a condition to their being permitted to participate in the KMI going-private transaction, Messrs. Kean and Shaper agreed to the cancellation of 10,467 and 22,031 options, respectively. These cancelled options had weighted average exercise prices of $39.12 and $24.75 per share, respectively. However, Knight bore all of the costs associated with this acceleration.

(3) Represents amounts paid according to the provisions of the Knight Annual Incentive Plan. In the case of Mr. Parker, for the year 2006, an additional $350,000 was paid outside of the plan, as reflected in the Bonus column. Amounts were earned in

the fiscal year indicated but were paid in the next fiscal year. Messrs. Kean and Shaper refused to accept a bonus for 2006. The committee agreed that this was not a reflection of performance on either person.

(4) Represents the 2007 and 2006, as applicable, change in the actuarial present value of accumulated defined pension benefit (including unvested benefits) according to the provisions of Knight's Cash Balance Retirement Plan.

(5) Amounts represent value of contributions to the Knight Savings Plan (a 401(k) plan), value of group-term life insurance exceeding $50,000, taxable parking subsidy and dividends paid on unvested restricted stock awards. Amounts each year include $10,000 representing the value of contributions to the Knight Savings Plan. Amounts representing the value of dividends paid on unvested restricted stock awards are as follows: for 2007—Mrs. Dang $21,875; Mr. Kean $136,500; Mr. Parker $77,000; and Mr. Shaper $144,375; for 2006—Mrs. Dang $35,875; Mr. Kean $273,000; Mr. Parker $154,000; and Mr. Shaper $336,875. Mr. Parker's 2007 amount also includes amounts for imputed income for company provided cellphone, a $100,000 relocation allowance, and a $130,000 payment to compensate for loss of dividends associated with the KMI going-private transaction.

(6) Such amounts represent the amount of the non-cash compensation expense calculated in accordance with SFAS No. 123R attributable to the Class A-1 and Class B units of Knight Holdco LLC and allocated to us for financial reporting purposes but does not include any such expense allocated to Knight or any of its other subsidiaries. None of the named executive officers has received any payments in connection with such units, and none of us or our subsidiaries are obligated, nor do we expect, to pay any amounts in respect of such units. See Item 13. "Certain Relationships and Related Transactions, and Director Independence—Related Transactions—KMI Going-Private Transaction" for further discussion of these units.

KMI Stock Options and Restricted Stock

Effective with the completion of the KMI going-private transaction on May 30, 2007, all of KMI's equity compensation awards (including awards held by our named executive officers) were subject to the following treatment:

- each option or other award to purchase shares of KMI common stock granted under any Kinder Morgan employee or director equity plan, whether vested or unvested, that was outstanding immediately prior to the effective time of the buyout, vested as of the effective time of the buyout, and was cancelled and converted into the right to receive a cash payment equal to the number of shares of KMI common stock underlying such options multiplied by the amount (if any) by which the $107.50 per share merger consideration issued in the going-private transaction exceeded the option exercise price, without interest and less any applicable withholding tax; and

- each share of restricted stock or restricted stock unit under any Kinder Morgan stock plan or benefit plan vested as of the effective time of the buyout and was cancelled and converted into the right to receive a cash payment equal to the number of outstanding shares of restricted stock or restricted stock units, multiplied by the $107.50 per share merger consideration, without interest and less any applicable withholding tax.

The following table sets forth, for each of our named executive officers (i) the number of KMI stock options (all of which were vested) held by such persons; (ii) the cash value realized with respect to such stock options upon consummation of the going-private transaction; (iii) the number of shares of restricted KMI stock held by such persons; and (iv) the aggregate cash value realized with respect to such shares of restricted stock upon consummation of the going-private transaction. A portion of the consideration received by the named executive officers with respect to their options to acquire shares of KMI common stock and their restricted shares of KMI common stock was reinvested in exchange for ownership interests in Knight Holdco LLC, and certain executive officers, as a condition to their being permitted to participate as investors in Knight Holdco LLC, agreed to the cancellation of certain of their options prior to the going-private transaction.

Name	Option Awards: Stock Options	Option Awards: Value Realized (1)	Stock Awards: Shares of Restricted Stock	Stock Awards: Value Realized (2)
Richard D. Kinder	—	$ —	—	$ —
Kimberly A. Dang	24,750	1,443,178	8,000	860,000
Steven J. Kean(3)	25,533	1,375,772	78,000	8,385,000
Scott E. Parker	10,000	537,000	44,000	4,730,000
C. Park Shaper(4)	197,969	12,529,810	82,500	8,868,750

____

(1) Calculated based on the actual exercise prices underlying the related options, as opposed to the weighted average exercise price per share of options.

(2) Calculated as $107.50 multiplied by the number of shares of restricted stock.

(3) Mr. Kean, as a condition to his being permitted to participate as an investor in Knight, agreed to the cancellation of 10,467 of his options shown above, with a weighted average exercise price of $39.12 per share, prior to the going-private transaction.

(4) Mr. Shaper, as a condition to his being permitted to participate as an investor in Knight, agreed to the cancellation of 22,031 of his options shown above, with a weighted average exercise price of $24.75 per share, prior to the going-private transaction.

Grants of Plan-Based Awards

The following supplemental compensation table shows compensation details on the value of all non-guaranteed and non-discretionary incentive awards granted during 2007 to our named executive officers, as well as awards of Knight Holdco LLC units received in 2007 by each named executive officer. The table includes the Knight Holdco LLC Class A-1 and Class B units awarded by Knight Holdco LLC to the named executive officers. As a subsidiary of Knight Holdco LLC, we are allocated a portion of the compensation expense recognized by Knight Holdco LLC with respect to such units, although none of us or any of our subsidiaries have any obligation to pay any amounts in respect of such units. The table includes awards made during or for 2007. The information in the table under the caption "Estimated Possible Payments Under Non-Equity Incentive Plan Awards" represents the threshold, target and maximum amounts payable under the Knight Annual Incentive Plan for performance in 2007. Amounts actually paid under that plan for 2007 are set forth in the Summary Compensation Table under the caption "Non-Equity Incentive Plan Compensation." There will not be any additional payouts under the Annual Incentive Plan for 2007.

Name	Grant date	Estimated Possible Payouts Under Non-Equity Incentive Plan Awards[1]			All other stock awards[2]	Grant date fair value of stock awards[3]
		Threshold	Target	Maximum	Number of units	
Richard D. Kinder	May 30, 2007				791,405,452	$ 9,200,000
Kimberly A. Dang	January 17, 2007	$ 500,000	$ 1,000,000	$ 1,500,000		
	May 30, 2007				49,893,032	674,887
Steven J. Kean	January 17, 2007	750,000	1,500,000	2,000,000		
	May 30, 2007				162,114,878	2,720,252
Scott E. Parker	January 17, 2007	500,000	1,500,000	2,000,000		
C. Park Shaper	January 17, 2007	750,000	1,500,000	2,000,000		
	May 30, 2007				225,436,274	4,315,475

____

1 Represents grants under the Knight Annual Incentive Plan for performance in 2007. See "Elements of Compensation—

Possible Annual Cash Bonus (Non-Equity Cash Incentive)" for a discussion of these awards.

2 Represents the sum of the number of Class A-1 units and the number of Class B units of Knight Holdco LLC awarded to the named executive officers in connection with the going-private transaction. See Item 13. "Certain Relationships and Related Transactions, and Director Independence—Related Transactions—KMI Going-Private Transaction" for detail regarding these awards.

3 Amounts represent the fair value calculated in accordance with SFAS No. 123R attributable to Class A-1 and Class B units of Knight Holdco LLC awarded by Knight Holdco LLC to the named executive officers in connection with the going-private transaction. None of the named executive officers has received any payments in connection with such units, and none of us or our subsidiaries are obligated to pay any amounts in respect of such units. See Item 13. "Certain Relationships and Related Transactions, and Director Independence—Related Transactions—KMI Going-Private Transaction" for further discussion of these units.

Outstanding Equity Awards at Fiscal Year-End

The only unvested equity awards outstanding at the end of fiscal 2007 were the Class B units of Knight Holdco LLC awarded by Knight Holdco LLC to the named executive officers. As a subsidiary of Knight Holdco LLC, we are allocated a portion of the compensation expense recognized by Knight Holdco LLC with respect to such units, although none of us or any of our subsidiaries have any obligation, nor do we expect, to pay any amounts in respect of such units.

	Stock awards:		
Name	**Type of units:**	**Number of units that have not vested**	**Market value of units of stock that have not vested[1]**
Richard D. Kinder	Class B units	791,405,452	N/A
Kimberly A. Dang	Class B units	49,462,841	N/A
Steven J. Kean	Class B units	158,281,090	N/A
C. Park Shaper	Class B units	217,636,499	N/A

____

1 Because the Class B units are equity interests of Knight Holdco LLC, a private limited liability company, the market value of such interests is not readily determinable. None of the named executive officers has received any payments in connection with such units, and none of us or our subsidiaries are obligated, nor do we expect, to pay any amounts in respect of such units. See Item 13. "Certain Relationships and Related Transactions, and Director Independence—Related Transactions—KMI Going-Private Transaction" for further discussion of these units.

Director Compensation

Compensation Committee Interlocks and Insider Participation. The compensation committee of KMR functions as our compensation committee. KMR's compensation committee, comprised of Mr. Edward O. Gaylord, Mr. Gary L. Hultquist and Mr. Perry M. Waughtal, makes compensation decisions regarding the executive officers of our general partner and its delegate, KMR. Mr. Richard D. Kinder, Mr. James E. Street, and Messrs. Shaper and Kean, who are executive officers of KMR, participate in the deliberations of the KMR compensation committee concerning executive officer compensation. None of the members of KMR's compensation committee is or has been one of our officers or employees, and none of our executive officers served during 2007 on a board of directors of another entity which has employed any of the members of KMR's compensation committee.

Directors Fees. Beginning in 2005, awards under our Common Unit Compensation Plan for Non-Employee Directors served as compensation for each of KMR's three non-employee directors. In addition, directors are reimbursed for reasonable expenses in connection with board meetings. Directors of KMR who are also employees of Knight (Messrs. Richard D. Kinder and C. Park Shaper) do not receive compensation in their capacity as directors.

Kinder Morgan Energy Partners, L.P. Common Unit Compensation Plan for Non-Employee Directors. On January 18, 2005, KMR's compensation committee established the Kinder Morgan Energy Partners, L.P. Common

Unit Compensation Plan for Non-Employee Directors. The plan is administered by KMR's compensation committee and KMR's board has sole discretion to terminate the plan at any time. The primary purpose of this plan was to promote our interests and the interests of our unitholders by aligning the compensation of the non-employee members of the board of directors of KMR with unitholders' interests. Further, since KMR's success is dependent on its operation and management of our business and our resulting performance, the plan is expected to align the compensation of the non-employee members of the board with the interests of KMR's shareholders.

The plan recognizes that the compensation to be paid to each non-employee director is fixed by the KMR board, generally annually, and that the compensation is payable in cash. Pursuant to the plan, in lieu of receiving cash compensation, each non-employee director may elect to receive common units. Each election will be generally at or around the first board meeting in January of each calendar year and will be effective for the entire calendar year. The election for 2006 was made effective January 17, 2006; the election for 2007 was made effective January 17, 2007; and the election for 2008 was made effective January 16, 2008. A non-employee director may make a new election each calendar year. The total number of common units authorized under this compensation plan is 100,000.

Each annual election will be evidenced by an agreement, the Common Unit Compensation Agreement, between us and each non-employee director, and this agreement will contain the terms and conditions of each award. Pursuant to this agreement, all common units issued under this plan are subject to forfeiture restrictions that expire six months from the date of issuance. Until the forfeiture restrictions lapse, common units issued under the plan may not be sold, assigned, transferred, exchanged, or pledged by a non-employee director. In the event the director's service as a director of KMR is terminated prior to the lapse of the forfeiture restriction either for cause, or voluntary resignation, each director will, for no consideration, forfeit to us all common units to the extent then subject to the forfeiture restrictions. Common units with respect to which forfeiture restrictions have lapsed will cease to be subject to any forfeiture restrictions, and we will provide each director a certificate representing the units as to which the forfeiture restrictions have lapsed. In addition, each non-employee director will have the right to receive distributions with respect to the common units awarded to him under the plan, to vote such common units and to enjoy all other unitholder rights, including during the period prior to the lapse of the forfeiture restrictions.

The number of common units to be issued to a non-employee director electing to receive the cash compensation in the form of common units will equal the amount of such cash compensation awarded, divided by the closing price of the common units on the New York Stock Exchange on the day the cash compensation is awarded (such price, the fair market value), rounded down to the nearest 50 common units. The common units will be issuable as specified in the Common Unit Compensation Agreement. A non-employee director electing to receive the cash compensation in the form of common units will receive cash equal to the difference between (i) the cash compensation awarded to such non-employee director and (ii) the number of common units to be issued to such non-employee director multiplied by the fair market value of a common unit. This cash payment will be payable in four equal installments generally around March 31, June 30, September 30 and December 31 of the calendar year in which such cash compensation is awarded.

On January 17, 2007, each of KMR's three non-employee directors was awarded cash compensation of $160,000 for board service during 2007. Effective January 17, 2007, each non-employee director elected to receive certain amounts of that compensation in the form of our common units and each was issued common units pursuant to the plan and its agreements (based on the $48.44 closing market price of our common units on January 17, 2007, as reported on the New York Stock Exchange). Mr. Gaylord elected to receive compensation of $95,911.20 in the form of our common units and was issued 1,980 common units; Mr. Waughtal elected to receive compensation of $159,852.00 in the form of our common units and was issued 3,300 common units; and Mr. Hultquist elected to receive cash compensation of $96,880.00 in the form of our common units and was issued 2,000 common units. All remaining compensation ($64,088.80 to Mr. Gaylord; $148.00 to Mr. Waughtal; and $63,120.00 to Mr. Hultquist) will be paid in cash to each of the non-employee directors as described above, and no other compensation will be paid to the non-employee directors during 2007.

On January 16, 2008, each of KMR's three non-employee directors was awarded cash compensation of $160,000 for board service during 2008; however, during a plan audit it was determined that each director was inadvertently paid an additional dividend in 2007. As a result, each director's cash compensation for service during 2008 was adjusted downward to reflect this error. The correction results in cash compensation awarded for 2008 in the amounts of $158,380.00 for Mr. Hultquist; $158,396.20 for Mr. Gaylord; and $157,327.00 for Mr. Waughtal.

Effective January 16, 2008, two of the three non-employee directors elected to receive certain amounts of that compensation in the form of our common units and each was issued common units pursuant to the plan and its agreements (based on the $55.81 closing market price of our common units on January 16, 2008, as reported on the New York Stock Exchange). Mr. Gaylord elected to receive compensation of $84,831.20 in the form of our common units and was issued 1,520 common units; and Mr. Waughtal elected to receive compensation of $157,272.58 in the form of our common units and was issued 2,818 common units. All remaining compensation ($73,565.00 to Mr. Gaylord; $54.42 to Mr. Waughtal; and $158,380.00 to Mr. Hultquist) will be paid in cash to each of the non-employee directors as described above, and no other compensation will be paid to the non-employee directors during 2008.

Directors' Unit Appreciation Rights Plan. On April 1, 2003, KMR's compensation committee established our Directors' Unit Appreciation Rights Plan. Pursuant to this plan, each of KMR's three non-employee directors was eligible to receive common unit appreciation rights. Upon the exercise of unit appreciation rights, we will pay, within thirty days of the exercise date, the participant an amount of cash equal to the excess, if any, of the aggregate fair market value of the unit appreciation rights exercised as of the exercise date over the aggregate award price of the rights exercised. The fair market value of one unit appreciation right as of the exercise date will be equal to the closing price of one common unit on the New York Stock Exchange on that date. The award price of one unit appreciation right will be equal to the closing price of one common unit on the New York Stock Exchange on the date of grant. Proceeds, if any, from the exercise of a unit appreciation right granted under the plan will be payable only in cash (that is, no exercise will result in the issuance of additional common units) and will be evidenced by a unit appreciation rights agreement.

All unit appreciation rights granted vest on the six-month anniversary of the date of grant. If a unit appreciation right is not exercised in the ten year period following the date of grant, the unit appreciation right will expire and not be exercisable after the end of such period. In addition, if a participant ceases to serve on the board for any reason prior to the vesting date of a unit appreciation right, such unit appreciation right will immediately expire on the date of cessation of service and may not be exercised.

On April 1, 2003, the date of adoption of the plan, each of KMR's three non-employee directors was granted 7,500 unit appreciation rights. In addition, 10,000 unit appreciation rights were granted to each of KMR's three non-employee directors on January 21, 2004, at the first meeting of the board in 2004. During the first board meeting of 2005, the plan was terminated and replaced by the Kinder Morgan Energy Partners, L.P. Common Unit Compensation Plan for Non-Employee Directors; however, all unexercised awards made under the plan remain outstanding. No unit appreciation rights were exercised during 2006. In 2007, Mr. Hultquist exercised 7,500 unit appreciation rights and received a cash amount of $116,250. As of December 31, 2007, 45,000 unit appreciation rights had been granted, vested and remained outstanding.

The following table discloses the compensation earned by each of KMR's three non-employee directors for board service during fiscal year 2007. In addition, directors are reimbursed for reasonable expenses in connection with board meetings. Directors of KMR who are also employees of Knight do not receive compensation in their capacity as directors.

Name	Fees Earned or Paid in Cash	Common Unit Awards(1)	All Other Compensation(2)	Total
Edward O. Gaylord	$ 64,089	$ 95,911	$ 111,466	$ 271,466
Gary L. Hultquist	63,120	96,880	65,840	225,840
Perry M. Waughtal	148	159,852	114,726	274,726

____

(1) Represents the value of cash compensation received in the form of our common units according to the provisions of our Common Unit Compensation Plan for Non-Employee Directors. Value computed as the number of common units elected to be received in lieu of cash times the closing price on date of election. For Mr. Gaylord, 1,980 units elected on January 17, 2007 times the closing price of $48.44; for Mr. Hultquist, 2,000 units elected times the closing price of $48.44; and for Mr. Waughtal, 3,300 units elected times the closing price of $48.44.

(2) For each, represents (i) the value of common unit appreciation rights earned according to the provisions of our Directors' Unit Appreciation Rights Plan for Non-Employee Directors, determined according to the provisions of SFAS No. 123R—for each common unit appreciation right, equal to the increase in value of a corresponding common unit from December 31, 2006 to December 31, 2007; and (ii) distributions paid on unvested common units awarded according to the provisions of our Common Unit Compensation Plan for Non-Employee Directors.

For 2007, for Mr. Gaylord, includes (i) value of $106,575 computed as the number of common unit appreciation rights held during 2007 (17,500) times the increase in common unit closing price from December 31, 2006 to December 31, 2007 ($6.09; equal to $53.99 at December 31, 2007 less $47.90 at December 31, 2006); and (ii) $4,891 for distributions paid on unvested common units awarded according to the provisions of our Common Unit Compensation Plan for Non-Employee Directors; for Mr. Hultquist, includes (i) value of $60,900 computed as the number of common unit appreciation rights held during 2007 (10,000) times the increase in common unit closing price from December 31, 2006 to December 31, 2007 ($6.09; equal to $53.99 at December 31, 2007 less $47.90 at December 31, 2006); and (ii) $4,940 for distributions paid on unvested common units awarded according to the provisions of our Common Unit Compensation Plan for Non-Employee Directors; for Mr. Waughtal, includes (i) value of $106,575 computed as the number of common unit appreciation rights held during 2007 (17,500) times the increase in common unit closing price from December 31, 2006 to December 31, 2007 ($6.09; equal to $53.99 at December 31, 2007 less $47.90 at December 31, 2006); and (ii) $8,151 for distributions paid on unvested common units awarded according to the provisions of our Common Unit Compensation Plan for Non-Employee Directors.

Compensation Committee Report

Throughout fiscal 2007, the compensation committee of KMR's board of directors was comprised of three directors, each of which the KMR board of directors has determined meets the criteria for independence under KMR's governance guidelines and the New York Stock Exchange rules.

The KMR compensation committee has discussed and reviewed the above Compensation Discussion and Analysis for fiscal year 2007 with management. Based on this review and discussion, the KMR compensation committee recommended to its board of directors, that this Compensation Discussion and Analysis be included in this annual report on Form 10-K for the fiscal year 2007.

KMR Compensation Committee:
Edward O. Gaylord
Gary L. Hultquist
Perry M. Waughtal

Item 12. ***Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.***

The following table sets forth information as of January 31, 2008, regarding (i) the beneficial ownership of (a) our common and Class B units and (b) KMR shares by all directors of our general partner and KMR, its delegate, by each of the named executive officers identified in Item 11 "Executive Compensation" and by all directors and executive officers as a group; and (ii) the beneficial ownership of our common and Class B units or shares of KMR by all persons known by our general partner to own beneficially at least 5% of our common and Class B units and KMR shares. For information regarding the beneficial ownership of Knight Holdco LLC's units by our named executive officers (and our executive officers who are also officers of Knight) and directors, see Item 13. "Certain Relationships and Related Transactions, and Director Independence—Related Transactions—KMI Going-Private Transaction." Unless otherwise noted, the address of each person below is c/o Kinder Morgan Energy Partners, L.P., 500 Dallas Street, Suite 1000, Houston, Texas 77002.

* Less than 1%.

(1) Except as noted otherwise, all units and KMR shares involve sole voting power and sole investment power. For KMR, see note (4). On January 18, 2005, KMR's board of directors initiated a rule requiring each director to own a minimum of 10,000 common units, KMR shares, or a combination thereof.

(2) As of January 31, 2008, we had 170,224,734 common units issued and outstanding.

(3) As of January 31, 2008, we had 5,313,400 Class B units issued and outstanding.

(4) Represent the limited liability company shares of KMR. As of January 31, 2008, there were 72,432,482 issued and outstanding KMR shares, including two voting shares owned by our general partner. In all cases, our i-units will be voted in proportion to the affirmative and negative votes, abstentions and non-votes of owners of KMR shares. Through the provisions in our partnership agreement and KMR's limited liability company agreement, the number of outstanding KMR shares, including voting shares owned by our general partner, and the number of our i-units will at all times be equal.

(5) Includes 7,879 common units owned by Mr. Kinder's spouse. Mr. Kinder disclaims any and all beneficial or pecuniary interest in these units.

(6) Includes 1,520 restricted common units.

(7) Includes 2,818 restricted common units.

(8) Includes 4,338 restricted common units. Also includes 671 KMR shares purchased by one of our executives for his children. The executive disclaims any beneficial ownership in such KMR shares.

(9) Includes common units owned by Knight Inc. and its consolidated subsidiaries, including 1,724,000 common units owned by Kinder Morgan G.P., Inc.

(10) As reported on the Schedule 13G/A filed February 13, 2008 by Kayne Anderson Capital Advisors, L.P. and Richard A. Kayne. Kayne Anderson Capital Advisors, L.P. reported that in regard to KMR shares, it had sole voting power over 0

shares, shared voting power over 7,867,883 shares, sole disposition power over 0 shares and shared disposition power over 7,867,883 shares. Mr. Kayne reports that in regard to KMR shares, he had sole voting power over 1,133 shares, shared voting power over 7,867,883 shares, sole disposition power over 1,133 shares and shared disposition power over 7,867,883 shares. Kayne Anderson Capital Advisors, L.P.'s and Richard A. Kayne's address is 1800 Avenue of the Stars, Second Floor, Los Angeles, California 90067.

(11) As reported on the Schedule 13G/A filed February 12, 2008 by Tortoise Capital Advisors, L.L.C. Tortoise Capital Advisors, L.L.C. reported that in regard to KMR shares, it had sole voting power over 0 shares, shared voting power over 4,202,836 shares, sole disposition power over 0 shares and shared disposition power over 4,314,123 shares. Tortoise Capital Advisors, L.L.C.'s address is 10801 Mastin Blvd., Suite 222, Overland Park, Kansas 66210.

(12) As reported on the Schedule 13G filed February 14, 2008 by Janus Capital Management LLC. Janus Capital Management LLC reported that in regard to KMR shares, it had sole voting power over 3,647,958 shares, shared voting power over 0 shares, sole disposition power over 3,647,958 shares and shared disposition power over 0 shares. Janus Capital Management LLC's address is 151 Detroit Street, Denver, Colorado 80206.

Equity Compensation Plan Information

The following table sets forth information regarding our equity compensation plans as of December 31, 2007. Specifically, the table provides information regarding our Common Unit Option Plan and our Common Unit Compensation Plan for Non-Employee Directors, both described in Item 11, "Executive Compensation.—Compensation Discussion and Analysis—Elements of Compensation—Other Compensation—Common Unit Option Plan," Item 11 "Executive Compensation—Director Compensation—Kinder Morgan Energy Partners, L.P. Common Unit Compensation Plan for Non-Employee Directors," and Note 13 of the notes to our consolidated financial statements included elsewhere in this report.

Plan category	Number of securities remaining available for future issuance under equity compensation plans
Equity compensation plans approved by security holders	—
Equity compensation plans not approved by security holders	141,820
Total	141,820

Item 13. ***Certain Relationships and Related Transactions, and Director Independence.***

Related Transactions

KMI Going-Private Transaction

On May 30, 2007, KMI completed the going-private transaction, whereby pursuant to a merger agreement, generally each share of KMI common stock was converted into the right to receive $107.50 in cash without interest. See Item 11. "Executive Compensation—KMI Stock Options and Restricted Stock" for a discussion of the disposition of options to purchase KMI common stock and shares of restricted KMI stock in the going-private transaction. For further information regarding this transaction, see "(a) General Development of Business" within Items 1 and 2 of this report.

In connection with the going-private transaction, some of our executive officers became investors in Knight Holdco LLC, Knight's parent company. None of our independent directors, Messrs. Gaylord, Hultquist and Waughtal, are investors in Knight Holdco LLC. Each of the investors in Knight Holdco LLC entered into an amended and restated limited liability company agreement of Knight Holdco LLC which governs the rights and obligations of the investors with respect to Knight Holdco LLC and Knight. Pursuant to the limited liability company agreement, Knight Holdco LLC is a "manager managed" limited liability company governed by an 11 member board of managers and initially by a "chief manager." Mr. Richard D. Kinder, our Chairman and Chief Executive Officer, is Knight Holdco LLC's initial chief manager. Mr. Kinder is also a member of the board of managers and has the right to appoint an additional four members of the board of managers. The chief manager has control over most of the operations of Knight Holdco LLC, subject to rights of the board of managers (and in some cases, the members of Knight Holdco LLC, acting in their capacity as such) to approve significant actions proposed to be taken by Knight Holdco LLC or its subsidiaries (generally other than us, KMR and our respective subsidiaries), including, among other things, liquidations, issuances of equity securities, distributions (other than identified tax related distributions), transactions with affiliates, settlement of litigation or entry into agreements with a value in excess of $50 million, entry into new lines of business and approval of the annual budget. Additionally, the members of Knight Holdco LLC (and in some cases, just certain members) have the ability to compel restructuring and liquidity events, including an initial public offering of Knight Holdco LLC or any of its subsidiaries or businesses, a sale or disposition of Knight Holdco LLC or any of its material subsidiaries or its businesses, or distributions of excess cash to the members of Knight Holdco LLC, although in some cases such actions may only be so compelled after specified time periods.

Generally, Knight Holdco LLC has three classes of units—Class A units, Class A-1 units, and Class B units. The Class A units were issued to investors, including members of senior management who directly or indirectly reinvested all or a portion of their KMI equity and/or cash, in respect of their capital contributions to Knight Holdco LLC. Generally, the holders of Class A units will share ratably in all distributions, subject to amounts allocated to the Class A-1 units and the Class B units as set forth below.

The Class B units were awarded by Knight Holdco LLC to members of Knight's management in consideration of their services to or for the benefit of Knight Holdco LLC. The Class B units represent interests in the profits of Knight Holdco LLC following the return of capital for the holders of Class A units and the achievement of predetermined performance targets over time. The Class B units will performance vest in increments of 5% of profits distributions up to a maximum of 20% of all profits distributions that would otherwise be payable with respect to the Class A units and Class A-1 units, based on the achievement of predetermined performance targets. The Class B units are subject to time based vesting, and with respect to any holder thereof, will vest 33 1/3% on each of the 3rd, 4th and 5th year anniversary of the issuance of such Class B units to such holder. The amended and restated limited liability company agreement also includes provisions with respect to forfeiture of Class B units upon termination for cause, Knight Holdco LLC's call rights upon termination and other related provisions relating to an employee's tenure. The allocation of the Class B units among Knight's management was determined prior to closing by Mr. Kinder, and approved by other, non-management investors.

The Class A-1 units were awarded by Knight Holdco LLC to members of Knight's management (other than Mr. Richard D. Kinder) who reinvested their equity interests in Knight Holdco LLC in connection with the going-private transaction in consideration of their services to or for the benefit of Knight Holdco LLC. Class A-1 units entitle a holder thereof to receive distributions from Knight Holdco LLC in an amount equal to distributions paid on Class A units (other than distributions on the Class A units that represent a return of the capital contributed in respect of such Class A units), but only after the Class A units have received aggregate distributions in an amount equal to the amount of capital contributed in respect of the Class A units.

The table below sets forth the beneficial ownership (as defined in Rule 13(d)(3) of the Exchange Act) of Knight Holdco LLC's units by each of our directors and named executive officers (and executive officers of ours who are also executive officers of Knight), detailing the contributions made by each in respect of their Class A units and the grant date fair value, as calculated in accordance with SFAS No. 123R, of the Class A-1 and Class B units received by each. In accordance with SFAS No. 123R, Knight Holdco LLC is required to recognize compensation expense in connection with the Class A-1 and Class B units over the expected life of such units. As a subsidiary of Knight Holdco LLC, we are allocated a portion of this compensation expense, although none of us or any of our subsidiaries have any obligation, nor do we expect, to pay any amounts in respect of such units. Please see Item 11. "Executive Compensation" for disclosure regarding the Class A-1 and Class B units received by each of the named executive officers and the expense as calculated in accordance with SFAS No. 123R allocated to us for 2007 in respect of each officer's units. Except as noted otherwise, each individual has sole voting power and sole disposition power over the units listed.

	Class A Units	% of Class A Units(1)	Class A-1 Units	% of Class A-1 Units(2)	Class B Units	% of Class B Units(3)

* Less than 1%.

(1) As of January 31, 2008, Knight Holdco LLC had 7,914,367,913 Class A Units issued and outstanding.

(2) As of January 31, 2008, Knight Holdco LLC had 27,225,694 Class A-1 Units issued and outstanding and 345,042 phantom Class A-1 Units issued and outstanding. The phantom Class A-1 Units were issued to Canadian management employees.

(3) As of January 31, 2008, Knight Holdco LLC had 1,922,620,621 Class B Units issued and outstanding and 55,893,008 phantom Class B Units issued and outstanding. The phantom Class B Units were issued to Canadian management employees.

(4) Includes 522,372 Class A units owned by Mr. Kinder's wife. Mr. Kinder disclaims any and all beneficial or pecuniary interest in the Class A units held by his wife. Also includes 263,801,817 Class B Units that Mr. Kinder transferred to a limited partnership. Mr. Kinder may be deemed to be the beneficial owner of these transferred Class B Units, because Mr. Kinder controls the voting and disposition power of these Class B Units, but he disclaims ninety-nine percent of any beneficial and pecuniary interest in them. Mr. Kinder contributed 23,994,827 shares of KMI common stock and his wife contributed 5,173 shares of KMI common stock to Knight Holdco LLC that were valued for purposes of Knight Holdco LLC's limited liability agreement at $2,423,477,628 and $522,372, respectively, in exchange for their respective Class A units. The Class B units received by Mr. Kinder had a grant date fair value as calculated in accordance with SFAS No. 123R of $9,200,000.

(5) Includes 217,636,499 Class B Units that Mr. Shaper transferred to a limited partnership. Mr. Shaper may be deemed to be the beneficial owner of these transferred Class B Units, because Mr. Shaper controls the voting and disposition power of these Class B Units, but he disclaims approximately twenty-two percent of any beneficial and pecuniary interest in them. Mr. Shaper made a cash investment of $13,598,785 of his after-tax proceeds from the conversion in the going-private transaction of 82,500 shares of KMI restricted stock and options to acquire 197,969 shares of KMI common stock in exchange for his Class A units. The Class A-1 units and Class B units received by Mr. Shaper had an aggregate grant date fair value as calculated in accordance with SFAS No. 123R of $4,315,475.

(6) Mr. Kean made a cash investment of $6,684,149 of his after-tax proceeds from the conversion in the going-private transaction of 78,000 shares of KMI restricted stock and options to acquire 25,533 shares of KMI common stock in exchange for his Class A units. The Class A-1 units and Class B units received by Mr. Kean had an aggregate grant date fair value as calculated in accordance with SFAS No. 123R of $2,720,252.

(7) Includes 49,462,841 Class B Units that Ms. Dang transferred to a limited partnership. Ms. Dang may be deemed to be the beneficial owner of these transferred Class B Units, because Ms. Dang has voting and disposition power of these Class B Units, but she disclaims ten percent of any beneficial and pecuniary interest in them. Ms. Dang made a cash investment of $750,032 of her after-tax proceeds from the conversion in the going-private transaction of 8,000 shares of KMI restricted stock and options to acquire 24,750 shares of KMI common stock in exchange for her Class A units. The Class A-1 units and Class B units received by Ms. Dang had an aggregate grant date fair value as calculated in accordance with SFAS No. 123R of $674,887.

(8) Includes 55,398,382 Class B Units that Mr. Kinder transferred to a limited partnership. Mr. Kinder may be deemed to be the benficial owner of these transferred Class B Units, because Mr. Kinder controls the voting and disposition power of these Class B Units, but he disclaims eight percent of any benficial and pecuniary interest in them. Mr. Kinder made a cash investment of $1,075,981 of his after-tax proceeds from the conversion in the going-private transaction of 15,750 shares of KMI restricted stock in exchange for his Class A units. The Class A-1 units and Class B units received by Mr. Kinder had an aggregate grant date fair value as calculated in accordance with SFAS No. 123R of $787,587.

(9) Mr. Listengart made a cash investment of $6,059,449 of his after-tax proceeds from the conversion in the going-private transaction of 52,500 shares of KMI restricted stock and options to acquire 48,459 shares of KMI common stock in exchange for his Class A units. The Class A-1 units and Class B units received by Mr. Listengart had an aggregate grant date fair value as calculated in accordance with SFAS No. 123R of $1,712,851.

(10) Mr. Street made a cash investment of $3,813,005 of his after-tax proceeds from the conversion in the going-private transaction of 30,000 shares of KMI restricted stock and options to acquire 34,588 shares of KMI common stock in exchange for his Class A units. The Class A-1 units and Class B units received by Mr. Street had an aggregate grant date fair value as calculated in accordance with SFAS No. 123R of $1,074,434.

Other

Our policy is that (i) employees must obtain authorization from the appropriate business unit president of the relevant company or head of corporate function, and (ii) directors, business unit presidents, executive officers and heads of corporate functions must obtain authorization from the non-interested members of the audit committee of the applicable board of directors, for any business relationship or proposed business transaction in which they or an immediate family member has a direct or indirect interest, or from which they or an immediate family member may derive a personal benefit (a "related party transaction"). The maximum dollar amount of related party transactions that may be approved as described above in this paragraph in any calendar year is $1.0 million. Any related party transactions that would bring the total value of such transactions to greater than $1.0 million must be referred to the audit committee of the appropriate board of directors for approval or to determine the procedure for approval.

For information regarding other related transactions, see Note 12 of the notes to our consolidated financial statements included elsewhere in this report.

Director Independence

Our limited partnership agreement provides for us to have a general partner rather than a board of directors. Pursuant to a delegation of control agreement, our general partner delegated to KMR, to the fullest extent permitted under Delaware law and our partnership agreement, all of its power and authority to manage and control our business and affairs, except that KMR cannot take certain specified actions without the approval of our general partner. Through the operation of that agreement and our partnership agreement, KMR manages and controls our business and affairs, and the board of directors of KMR performs the functions of and acts as our board of directors. Similarly, the standing committees of KMR’s board of directors function as standing committees of our board. KMR’s board of directors is comprised of the same persons who comprise our general partner’s board of directors. References in this report to the board mean KMR’s board, acting as our board of directors, and references to committees mean KMR’s committees, acting as committees of our board of directors.

The board has adopted governance guidelines for the board and charters for the audit committee, nominating and governance committee and compensation committee. The governance guidelines and the rules of the New York Stock Exchange require that a majority of the directors be independent, as described in those guidelines, the committee charters and rules, respectively. Copies of the guidelines and committee charters are available on our internet website at www.kindermorgan.com. To assist in making determinations of independence, the board has determined that the following categories of relationships are not material relationships that would cause the affected director not to be independent:

- if the director was an employee, or had an immediate family member who was an executive officer, of KMR or us or any of its or our affiliates, but the employment relationship ended more than three years prior to the date of determination (or, in the case of employment of a director as an interim chairman, interim chief executive officer or interim executive officer, such employment relationship ended by the date of determination);

- if during any twelve month period within the three years prior to the determination the director received no more than, and has no immediate family member that received more than, $100,000 in direct compensation from us or our affiliates, other than (i) director and committee fees and pension or other forms of deferred compensation for prior service (provided such compensation is not contingent in any way on continued service), (ii) compensation received by a director for former service as an interim chairman, interim chief executive officer or interim executive officer, and (iii) compensation received by an immediate family member for service as an employee (other than an executive officer);

- if the director is at the date of determination a current employee, or has an immediate family member that is at the date of determination a current executive officer, of another company that has made payments to, or received payments from, us and our affiliates for property or services in an amount which, in each of the three fiscal years prior to the date of determination, was less than the greater of $1.0 million or 2% of such other company's annual consolidated gross revenues. Contributions to tax-exempt organizations are not considered payments for purposes of this determination;

- if the director is also a director, but is not an employee or executive officer, of our general partner or another affiliate or affiliates of KMR or us, so long as such director is otherwise independent; and

- if the director beneficially owns less than 10% of each class of voting securities of us, our general partner, or KMR.

The board has affirmatively determined that Messrs. Gaylord, Hultquist and Waughtal, who constitute a majority of the directors, are independent as described in our governance guidelines and the New York Stock Exchange rules. Each of them meets the standards above and has no other relationship with us. In conjunction with all regular quarterly and certain special board meetings, these three non-management directors also meet in executive session without members of management. In January 2008, Mr. Waughtal was elected for a one year term to serve as lead director to develop the agendas for and preside at these executive sessions of independent directors.

The governance guidelines and our audit committee charter, as well as the rules of the New York Stock Exchange and the Securities and Exchange Commission, require that members of the audit committee satisfy independence requirements in addition to those above. The board has determined that all of the members of the audit committee are independent as described under the relevant standards.

Item 14. ***Principal Accounting Fees and Services***

The following sets forth fees billed for the audit and other services provided by PricewaterhouseCoopers LLP for the fiscal years ended December 31, 2007 and 2006 (in dollars):

	Year Ended December 31,	
	2007	2006
Audit fees(1)	$ 2,070,205	$ 2,038,215
Tax fees(2)	2,563,793	1,470,466
Total	$ 4,633,998	$ 3,508,681

(1) Includes fees for integrated audit of annual financial statements and internal control over financial reporting, reviews of the related quarterly financial statements, and reviews of documents filed with the Securities and Exchange Commission.

(2) For 2007 and 2006, amounts include fees of $2,352,533 and $1,356,399, respectively, billed for professional services rendered for tax processing and preparation of Forms K-1 for our unitholders. Amounts also include fees of $211,260 and $114,067, respectively, billed for professional services rendered for tax return review services and for general state, local and foreign tax compliance and consulting services.

All services rendered by PricewaterhouseCoopers LLP are permissible under applicable laws and regulations, and were pre-approved by the audit committee of KMR and our general partner. Pursuant to the charter of the audit committee of KMR, the delegate of our general partner, the committee's primary purposes include the following: (i) to select, appoint, engage, oversee, retain, evaluate and terminate our external auditors; (ii) to pre-approve all audit and non-audit services, including tax services, to be provided, consistent with all applicable laws, to us by our external auditors; and (iii) to establish the fees and other compensation to be paid to our external auditors. The audit committee has reviewed the external auditors' fees for audit and non audit services for fiscal year 2007. The audit committee has also considered whether such non audit services are compatible with maintaining the external auditors' independence and has concluded that they are compatible at this time.

Furthermore, the audit committee will review the external auditors' proposed audit scope and approach as well as the performance of the external auditors. It also has direct responsibility for and sole authority to resolve any disagreements between our management and our external auditors regarding financial reporting, will regularly review with the external auditors any problems or difficulties the auditors encountered in the course of their audit work, and will, at least annually, use its reasonable efforts to obtain and review a report from the external auditors addressing the following (among other items): (i) the auditors' internal quality-control procedures; (ii) any material issues raised by the most recent internal quality-control review, or peer review, of the external auditors; (iii) the independence of the external auditors; and (iv) the aggregate fees billed by our external auditors for each of the previous two fiscal years.

PART IV

Item 15. ***Exhibits and Financial Statement Schedules***

(a)(1) and (2) *Financial Statements and Financial Statement Schedules*

See "Index to Financial Statements" set forth on page 114.

(a)(3) *Exhibits*

*3.1 — Third Amended and Restated Agreement of Limited Partnership of Kinder Morgan Energy Partners, L.P. (filed as Exhibit 3.1 to Kinder Morgan Energy Partners, L.P. Form 10-Q (File No. 1-11234) for the quarter ended June 30, 2001, filed on August 9, 2001).

*3.2 — Amendment No. 1 dated November 19, 2004 to Third Amended and Restated Agreement of Limited Partnership of Kinder Morgan Energy Partners, L.P. (filed as Exhibit 99.1 to Kinder Morgan Energy Partners, L.P. Form 8-K, filed November 22, 2004).

*3.3 — Amendment No. 2 to Third Amended and Restated Agreement of Limited Partnership of Kinder Morgan Energy Partners, L.P. (filed as Exhibit 99.1 to Kinder Morgan Energy Partners, L.P. Form 8-K, filed May 5, 2005).

*4.1 — Specimen Certificate evidencing Common Units representing Limited Partner Interests (filed as Exhibit 4.1 to Amendment No. 1 to Kinder Morgan Energy Partners, L.P. Registration Statement on Form S-4, File No. 333-44519, filed on February 4, 1998).

*4.2 — Indenture dated as of January 29, 1999 among Kinder Morgan Energy Partners, L.P., the guarantors listed on the signature page thereto and U.S. Trust Company of Texas, N.A., as trustee, relating to Senior Debt Securities (filed as Exhibit 4.1 to the Partnership's Current Report on Form 8-K filed February 16, 1999, File No. 1-11234 (the "February 16, 1999 Form 8-K")).

*4.3 — First Supplemental Indenture dated as of January 29, 1999 among Kinder Morgan Energy Partners, L.P., the subsidiary guarantors listed on the signature page thereto and U.S. Trust Company of Texas, N.A., as trustee, relating to $250,000,000 of 6.30% Senior Notes due February 1, 2009 (filed as Exhibit 4.2 to the February 16, 1999 Form 8-K (File No. 1-11234)).

INDEX TO FINANCIAL STATEMENTS

Report of Independent Registered Public Accounting Firm

To the Partners of
Kinder Morgan Energy Partners, L.P.:

In our opinion, the accompanying consolidated balance sheets and the related statements of income and comprehensive income, of partners' capital and of cash flows present fairly, in all material respects, the financial position of Kinder Morgan Energy Partners, L.P. (the "Partnership") and its subsidiaries at December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2007 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Partnership maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Partnership's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting appearing in item 9A. Our responsibility is to express opinions on these financial statements and on the Partnership's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As described in Management's Report on Internal Control Over Financial Reporting, management has excluded:

- The Vancouver Wharves bulk marine terminal, acquired May 30, 2007; and
- The terminal assets and operations acquired from Marine Terminals, Inc., effective September 30, 2007,

(the "Acquired Businesses") from its assessment of internal control over financial reporting as of December 31, 2007 because these businesses were each acquired by the Partnership in a purchase business combination during 2007. We have also excluded the Acquired Businesses from our audit of internal control over financial reporting. These Acquired Businesses are wholly-owned subsidiaries whose total assets and total revenues, in the aggregate, represent 0.6% and 1.2%, respectively, of the related consolidated financial statement amounts as of and for the year ended December 31, 2007.

KINDER MORGAN ENERGY PARTNERS, L.P. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Organization

General

Kinder Morgan Energy Partners, L.P. is a Delaware limited partnership formed in August 1992. Unless the context requires otherwise, references to "we," "us," "our" or the "Partnership" are intended to mean Kinder Morgan Energy Partners, L.P. and its consolidated subsidiaries.

We own and manage a diversified portfolio of energy transportation and storage assets and presently conduct our business through five reportable business segments. These segments and the activities performed to provide services to our customers and create value for our unitholders are as follows:

- Products Pipelines - transporting, storing and processing refined petroleum products;
- Natural Gas Pipelines - transporting, storing, selling, gathering, treating and processing natural gas;
- CO_2 - producing, transporting and selling carbon dioxide, commonly called CO_2, for use in, and selling crude oil, natural gas and natural gas liquids produced from, enhanced oil recovery operations;
- Terminals - transloading, storing and delivering a wide variety of bulk, petroleum, petrochemical and other liquid products at terminal facilities located across North America; and
- Trans Mountain – transporting crude oil and refined petroleum products from Edmonton, Alberta, Canada to marketing terminals and refineries in British Columbia and the state of Washington.

We focus on providing fee-based services to customers, generally avoiding near-term commodity price risks and taking advantage of the tax benefits of a limited partnership structure. We trade on the New York Stock Exchange under the symbol "KMP," and we conduct our operations through the following five limited partnerships:

- Kinder Morgan Operating L.P. "A" (OLP-A);
- Kinder Morgan Operating L.P. "B" (OLP-B);
- Kinder Morgan Operating L.P. "C" (OLP-C);
- Kinder Morgan Operating L.P. "D" (OLP-D); and
- Kinder Morgan CO_2 Company (KMCO2).

Combined, the five limited partnerships are referred to as our operating partnerships, and we are the 98.9899% limited partner and our general partner is the 1.0101% general partner in each. Both we and our operating partnerships are governed by Amended and Restated Agreements of Limited Partnership, as amended and certain other agreements that are collectively referred to in this report as the partnership agreements.

Knight Inc. and Kinder Morgan G.P., Inc.

On August 28, 2006, Kinder Morgan, Inc., a Kansas corporation referred to as "KMI" in this report, entered into an agreement and plan of merger whereby generally each share of KMI common stock would be converted into the right to receive $107.50 in cash without interest. KMI in turn would merge with a wholly owned subsidiary of Knight Holdco LLC, a privately owned company in which Richard D. Kinder, Chairman and Chief Executive Officer of KMI, would be a major investor. On May 30, 2007, the merger closed, with KMI continuing as the surviving legal entity and subsequently renamed "Knight Inc.," referred to as "Knight" in this report. Additional investors in Knight Holdco LLC include the following: other senior members of Knight management, most of whom are also senior officers of Kinder Morgan G.P., Inc. (our general partner) and of Kinder Morgan Management, LLC (our general partner’s delegate); KMI co-founder William V. Morgan; KMI board members Fayez Sarofim and Michael C. Morgan; and affiliates of (i) Goldman Sachs Capital Partners; (ii) American International Group, Inc.; (iii) The Carlyle Group; and (iv) Riverstone Holdings LLC. This transaction is referred to in this report as the "going-private transaction."

Knight is privately owned, and remains the sole indirect common stockholder of our general partner. On July 27, 2007, our general partner issued and sold 100,000 shares of Series A fixed-to-floating rate term cumulative preferred stock due 2057. The consent of holders of a majority of these preferred shares is required with respect to a commencement of or a filing of a voluntary bankruptcy proceeding with respect to us, or two of our subsidiaries: SFPP, L.P. and Calnev Pipe Line LLC. At December 31, 2007, Knight and its consolidated subsidiaries owned, through its general and limited partner interests, an approximate 13.9% interest in us.

Kinder Morgan Management, LLC

Kinder Morgan Management, LLC, a Delaware limited liability company, was formed on February 14, 2001. Its shares represent limited liability company interests and are traded on the New York Stock Exchange under the symbol "KMR." Kinder Morgan Management, LLC is referred to as "KMR" in this report. Our general partner owns all of KMR’s voting securities and, pursuant to a delegation of control agreement, our general partner delegated to KMR, to the fullest extent permitted under Delaware law and our partnership agreement, all of its power and authority to manage and control our business and affairs, except that KMR cannot take certain specified actions without the approval of our general partner.

Under the delegation of control agreement, KMR manages and controls our business and affairs and the business and affairs of our operating limited partnerships and their subsidiaries. Furthermore, in accordance with its limited liability company agreement, KMR’s activities are limited to being a limited partner in, and managing and controlling the business and affairs of us, our operating limited partnerships and their subsidiaries. As of December 31, 2007, KMR owned approximately 29.2% of our outstanding limited partner units (which are in the form of i-units that are issued only to KMR).

2. Summary of Significant Accounting Policies

Basis of Presentation

Our consolidated financial statements include our accounts and those of our operating partnerships and their majority-owned and controlled subsidiaries. Our accounting records are maintained in United States dollars, and all references to dollars are United States dollars, except where stated otherwise. Canadian dollars are designated as C$. All significant intercompany items have been eliminated in consolidation. Certain amounts from prior years have been reclassified to conform to the current presentation.

Our consolidated financial statements were prepared in accordance with accounting principles generally accepted in the United States. We believe, however, that certain accounting policies are of more significance in our financial statement preparation process than others. Also, certain amounts included in or affecting our financial statements and related disclosures must be estimated, requiring us to make certain assumptions with respect to values or conditions which cannot be known with certainty at the time our financial statements are prepared.

These estimates and assumptions affect the amounts we report for assets and liabilities, our revenues and expenses during the reporting period, and our disclosure of contingent assets and liabilities at the date of our financial statements. We evaluate these estimates on an ongoing basis, utilizing historical experience, consultation with experts and other methods we consider reasonable in the particular circumstances. Nevertheless, actual results may differ significantly from our estimates. Any effects on our business, financial position or results of operations resulting from revisions to these estimates are recorded in the period in which the facts that give rise to the revision become known.

Cash Equivalents

We define cash equivalents as all highly liquid short-term investments with original maturities of three months or less.

Accounts Receivables

Our policy for determining an appropriate allowance for doubtful accounts varies according to the type of business being conducted and the customers being served. An allowance for doubtful accounts is charged to expense monthly, generally using a percentage of revenue or receivables, based on a historical analysis of uncollected amounts, adjusted as necessary for changed circumstances and customer-specific information. When specific receivables are determined to be uncollectible, the reserve and receivable are relieved. The following table shows the balance in the allowance for doubtful accounts and activity for the years ended December 31, 2007, 2006 and 2005 (in millions):

Valuation and Qualifying Accounts

Allowance for Doubtful Accounts	Balance at beginning of Period	Additions charged to costs and expenses	Additions charged to other accounts(1)	Deductions(2)	Balance at end of period
Year ended December 31, 2007	$ 6.8	$ 0.4	$ —	$ (0.2)	$ 7.0
Year ended December 31, 2006	$ 6.5	$ 0.3	$ 0.3	$ (0.3)	$ 6.8
Year ended December 31, 2005	$ 8.6	$ 0.2	$ —	$ (2.3)	$ 6.5

(1) Amount for 2006 represents the allowance recognized when we acquired Devco USA L.L.C. ($0.2) and Transload Services, LLC ($0.1).

(2) Deductions represent the write-off of receivables.

In addition, the balances of "Accrued other current liabilities" in our accompanying consolidated balance sheets include amounts related to customer prepayments of approximately $6.5 million as of December 31, 2007 and $10.8 million as of December 31, 2006.

Inventories

Our inventories of products consist of natural gas liquids, refined petroleum products, natural gas, carbon dioxide and coal. We report these assets at the lower of weighted-average cost or market. We report materials and supplies at the lower of cost or market. As of December 31, 2007, we owed certain customers a total of $8.3 million for the value of natural gas inventory stored in our underground storage facilities, and we reported this amount within "Accounts Payable—Trade" in our accompanying consolidated balance sheet. As of December 31, 2006, the value of natural gas in our underground storage facilities under the weighted-average cost method was $8.4 million, and we reported this amount within "Other current assets" in our accompanying consolidated balance sheet. We also maintain gas in our underground storage facilities on behalf of certain third parties. We receive a fee from our storage service customers but do not reflect the value of their gas stored in our facilities in our accompanying consolidated balance sheets.

Property, Plant and Equipment

Capitalization, Depreciation and Depletion and Disposals

We report property, plant and equipment at its acquisition cost. We expense costs for maintenance and repairs in the period incurred. The cost of property, plant and equipment sold or retired and the related depreciation are removed from our balance sheet in the period of sale or disposition. For our pipeline system assets, we generally charge the original cost of property sold or retired to accumulated depreciation and amortization, net of salvage and cost of removal. We do not include retirement gain or loss in income except in the case of significant retirements or sales. Gains and losses on minor system sales, excluding land, are recorded to the appropriate accumulated depreciation reserve. Gains and losses for operating systems sales and land sales are booked to income or expense accounts in accordance with regulatory accounting guidelines.

We compute depreciation using the straight-line method based on estimated economic lives. Generally, we apply composite depreciation rates to functional groups of property having similar economic characteristics. The rates range from 2.0% to 12.5%, excluding certain short-lived assets such as vehicles. Depreciation estimates are based on various factors, including age (in the case of acquired assets), manufacturing specifications, technological advances and historical data concerning useful lives of similar assets. Uncertainties that impact these estimates included changes in laws and regulations relating to restoration and abandonment requirements, economic conditions, and supply and demand in the area. When assets are put into service, we make estimates with respect to useful lives (and salvage values where appropriate) that we believe are reasonable. However, subsequent events could cause us to change our estimates, thus impacting the future calculation of depreciation and amortization expense. Historically, adjustments to useful lives have not had a material impact on our aggregate depreciation levels from year to year.

Our oil and gas producing activities are accounted for under the successful efforts method of accounting. Under this method costs that are incurred to acquire leasehold and subsequent development costs are capitalized. Costs that are associated with the drilling of successful exploration wells are capitalized if proved reserves are found. Costs associated with the drilling of exploratory wells that do not find proved reserves, geological and geophysical costs, and costs of certain non-producing leasehold costs are expensed as incurred. The capitalized costs of our producing oil and gas properties are depreciated and depleted by the units-of-production method. Other miscellaneous property, plant and equipment are depreciated over the estimated useful lives of the asset.

A gain on the sale of property, plant and equipment used in our oil and gas producing activities or in our bulk and liquids terminal activities is calculated as the difference between the cost of the asset disposed of, net of depreciation, and the sales proceeds received. A gain on an asset disposal is recognized in income in the period that the sale is closed. A loss on the sale of property, plant and equipment is calculated as the difference between the cost of the asset disposed of, net of depreciation, and the sales proceeds received or the maket value if the asset is being held for sale. A loss is recognized when the asset is sold or when the net cost of an asset held for sale is greater than the market value of the asset.

In addition, we engage in enhanced recovery techniques in which carbon dioxide is injected into certain producing oil reservoirs. In some cases, the acquisition cost of the carbon dioxide associated with enhanced recovery is capitalized as part of our development costs when it is injected. The acquisition cost associated with pressure maintenance operations for reservoir management is expensed when it is injected. When carbon dioxide is recovered in conjunction with oil production, it is extracted and re-injected, and all of the associated costs are expensed as incurred. Proved developed reserves are used in computing units of production rates for drilling and development costs, and total proved reserves are used for depletion of leasehold costs. The units-of-production rate is determined by field.

As discussed in "—Inventories" above, we maintain natural gas in underground storage as part of our inventory. This component of our inventory represents the portion of gas stored in an underground storage facility generally known as "working gas," and represents an estimate of the portion of gas in these facilities available for routine injection and withdrawal to meet demand. In addition to this working gas, underground gas storage reservoirs contain injected gas which is not routinely cycled but, instead, serves the function of maintaining the necessary pressure to allow efficient operation of the facility. This gas, generally known as "cushion gas," is divided into the categories of "recoverable cushion gas" and "unrecoverable cushion gas," based on an engineering analysis of whether the gas can be economically removed from the storage facility at any point during its life. The portion of the cushion gas that is determined to be unrecoverable is considered to be a permanent part of the facility itself (thus, part of our "Property, Plant and Equipment, net" balance in our accompanying consolidated balance sheets), and this unrecoverable portion is depreciated over the facility’s estimated useful life. The portion of the cushion gas that is determined to be recoverable is also considered a component of the facility but is not depreciated because it is expected to ultimately be recovered and sold.

Impairments

We evaluate the impairment of our long-lived assets in accordance with Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets." SFAS No. 144 requires that long-lived assets that are to be disposed of by sale be measured at the lower of book value or fair value less the cost to sell. We review for the impairment of long-lived assets whenever events or changes in circumstances indicate that our carrying amount of an asset may not be recoverable. We would recognize an impairment loss when estimated future cash flows expected to result from our use of the asset and its eventual disposition is less than its carrying amount.

We evaluate our oil and gas producing properties for impairment of value on a field-by-field basis or, in certain instances, by logical grouping of assets if there is significant shared infrastructure, using undiscounted future cash flows based on total proved and risk-adjusted probable and possible reserves. Oil and gas producing properties deemed to be impaired are written down to their fair value, as determined by discounted future cash flows based on total proved and risk-adjusted probable and possible reserves or, if available, comparable market values. Unproved oil and gas properties that are individually significant are periodically assessed for impairment of value, and a loss is recognized at the time of impairment.

Equity Method of Accounting

We account for investments greater than 20% in affiliates, which we do not control, by the equity method of accounting. Under this method, an investment is carried at our acquisition cost, plus our equity in undistributed earnings or losses since acquisition, and less distributions received.

Excess of Cost Over Fair Value

We account for our business acquisitions and intangible assets in accordance with the provisions of SFAS No. 141, "Business Combinations," and SFAS No. 142, "Goodwill and Other Intangible Assets." Accounting standards require that goodwill not be amortized, but instead should be tested, at least on an annual basis, for impairment. Pursuant to this SFAS No. 142, goodwill and other intangible assets with indefinite useful lives cannot be amortized until their useful life becomes determinable. Instead, such assets must be tested for impairment annually or on an interim basis if events or circumstances indicate that the fair value of the asset has decreased below its carrying value. We have selected an impairment measurement test date of January 1 of each year and we have determined that our goodwill was not impaired as of January 1, 2008; however, our consolidated income statement for the year ended December 31, 2007 included a goodwill impairment expense of $377.1 million, due to the inclusion of Knight's first quarter 2007 impairment of goodwill that resulted from a determination of the fair values of Trans Mountain pipeline assets prior to our acquisition of these assets on April 30, 2007. For more information on this acquisition and this impairment expense, see Notes 3 and 8, respectively.

Our total unamortized excess cost over fair value of net assets in consolidated affiliates was $1,077.8 million as of December 31, 2007 and $1,421.0 million as of December 31, 2006. Such amounts are reported as "Goodwill" on our accompanying consolidated balance sheets. Our total unamortized excess cost over underlying fair value of net assets accounted for under the equity method was$138.2 million as of both December 31, 2007 and December 31, 2006. Pursuant to SFAS No. 142, this amount, referred to as equity method goodwill, should continue to be recognized in accordance with Accounting Principles Board Opinion No. 18, "The Equity Method of Accounting for Investments in Common Stock." Accordingly, we included this amount within "Investments" on our accompanying consolidated balance sheets.

In almost all cases, the price we paid to acquire our share of the net assets of our equity investees differed from the underlying book value of such net assets. This differential consists of two pieces. First, an amount related to the difference between the investee's recognized net assets at book value and at current fair values (representing the appreciated value in plant and other net assets), and secondly, to any premium in excess of fair value (representing equity method goodwill as described above) we paid to acquire the investment. The first differential, representing the excess of the fair market value of our investees' plant and other net assets over its underlying book value at the date of acquisition totaled $174.7 million and $177.1 million as of December 31, 2007 and 2006, respectively, and similar to our treatment of equity method goodwill, we included these amounts within "Investments" on our accompanying consolidated balance sheets. As of December 31, 2007, this excess investment cost is being amortized over a weighted average life of approximately 30.9 years.

In addition to our annual impairment test of goodwill, we periodically reevaluate the amount at which we carry the excess of cost over fair value of net assets accounted for under the equity method, as well as the amortization period for such assets, to determine whether current events or circumstances warrant adjustments to our carrying value and/or revised estimates of useful lives in accordance with APB Opinion No. 18. The impairment test under APB No. 18 considers whether the fair value of the equity investment as a whole, not the underlying net assets, has declined and whether that decline is other than temporary. As of December 31, 2007, we believed no such impairment had occurred and no reduction in estimated useful lives was warranted. For more information on our investments, see Note 7.

Revenue Recognition Policies

We recognize revenues as services are rendered or goods are delivered and, if applicable, title has passed. We generally sell natural gas under long-term agreements, with periodic price adjustments. In some cases, we sell natural gas under short-term agreements at prevailing market prices. In all cases, we recognize natural gas sales revenues when the natural gas is sold to a purchaser at a fixed or determinable price, delivery has occurred and title has transferred, and collectibility of the revenue is reasonably assured. The natural gas we market is primarily purchased gas produced by third parties, and we market this gas to power generators, local distribution companies, industrial end-users and national marketing companies. We recognize gas gathering and marketing revenues in the month of delivery based on customer nominations and generally, our natural gas marketing revenues are recorded gross, not net of cost of gas sold.

We provide various types of natural gas storage and transportation services to customers. The natural gas remains the property of these customers at all times. In many cases (generally described as "firm service"), the customer pays a two-part rate that includes (i) a fixed fee reserving the right to transport or store natural gas in our facilities and (ii) a per-unit rate for volumes actually transported or injected into/withdrawn from storage. The fixed-fee component of the overall rate is recognized as revenue in the period the service is provided. The per-unit charge is recognized as revenue when the volumes are delivered to the customers' agreed upon delivery point, or when the volumes are injected into/withdrawn from our storage facilities. In other cases (generally described as "interruptible service"), there is no fixed fee associated with the services because the customer accepts the possibility that service may be interrupted at our discretion in order to serve customers who have purchased firm service. In the case of interruptible service, revenue is recognized in the same manner utilized for the per-unit rate for volumes actually transported under firm service agreements. In addition to our "firm" and "interruptible" transportation services, we also provide natural gas park and loan service to assist customers in managing short-term gas surpluses or deficits. Revenues are recognized based on the terms negotiated under these contracts.

We provide crude oil transportation services and refined petroleum products transportation and storage services to customers. Revenues are recorded when products are delivered and services have been provided, and adjusted according to terms prescribed by the toll settlements with shippers and approved by regulatory authorities.

We recognize bulk terminal transfer service revenues based on volumes loaded and unloaded. We recognize liquids terminal tank rental revenue ratably over the contract period. We recognize liquids terminal throughput revenue based on volumes received and volumes delivered. Liquids terminal minimum take-or-pay revenue is recognized at the end of the contract year or contract term depending on the terms of the contract. We recognize transmix processing revenues based on volumes processed or sold, and if applicable, when title has passed. We recognize energy-related product sales revenues based on delivered quantities of product.

Revenues from the sale of oil, natural gas liquids and natural gas production are recorded using the entitlement method. Under the entitlement method, revenue is recorded when title passes based on our net interest. We record our entitled share of revenues based on entitled volumes and contracted sales prices. Since there is a ready market for oil and gas production, we sell the majority of our products soon after production at various locations, at which time title and risk of loss pass to the buyer. As a result, we maintain a minimum amount of product inventory in storage.

Allowance For Funds Used During Construction

Included in the cost of our qualifying property, plant and equipment is an allowance for funds used during construction or upgrade, often referred to as AFUDC. AFUDC represents the estimated cost of capital, from borrowed funds, during the construction period. Total AFUDC resulting from the capitalization of interest expense in 2007, 2006 and 2005 was $31.4 million, $20.3 million and $9.8 million, respectively. Approximately $6.1 million and $2.2 million of AFUDC on equity, related to our Trans Mountain pipeline system assets, was also capitalized in the twelve months ended December 31, 2007 and 2006, respectively.

Unit-Based Compensation

We account for common unit options granted under our common unit option plan according to the provisions of SFAS No. 123R (revised 2004), "Share-Based Payment," which became effective for us January 1, 2006. However, we have not granted common unit options or made any other share-based payment awards since May 2000, and as of December 31, 2005, all outstanding options to purchase our common units were fully vested. Therefore, the adoption of this Statement did not have an effect on the accounting for these common unit options in our consolidated financial statements, as we had reached the end of the requisite service period for any compensation cost resulting from share-based payments made under our common unit option plan.

Environmental Matters

We expense or capitalize, as appropriate, environmental expenditures that relate to current operations. We expense expenditures that relate to an existing condition caused by past operations, which do not contribute to current or future revenue generation. We do not discount environmental liabilities to a net present value, and we record environmental liabilities when environmental assessments and/or remedial efforts are probable and we can reasonably estimate the costs. Generally, our recording of these accruals coincides with our completion of a feasibility study or our commitment to a formal plan of action. We recognize receivables for anticipated associated insurance recoveries when such recoveries are deemed to be probable.

We routinely conduct reviews of potential environmental issues and claims that could impact our assets or operations. These reviews assist us in identifying environmental issues and estimating the costs and timing of remediation efforts. We also routinely adjust our environmental liabilities to reflect changes in previous estimates. In making environmental liability estimations, we consider the material effect of environmental compliance, pending legal actions against us, and potential third-party liability claims. Often, as the remediation evaluation and effort progresses, additional information is obtained, requiring revisions to estimated costs. These revisions are reflected in our income in the period in which they are reasonably determinable. For more information on our environmental disclosures, see Note 16.

Legal

We are subject to litigation and regulatory proceedings as the result of our business operations and transactions. We utilize both internal and external counsel in evaluating our potential exposure to adverse outcomes from orders, judgments or settlements. When we identify specific litigation that is expected to continue for a significant period of time and require substantial expenditures, we identify a range of possible costs expected to be required to litigate the matter to a conclusion or reach an acceptable settlement, and we accrue for such amounts. To the extent that actual outcomes differ from our estimates, or additional facts and circumstances cause us to revise our estimates, our earnings will be affected. In general, we expense legal costs as incurred and all recorded legal liabilities are revised as better information becomes available. For more information on our legal disclosures, see Note 16.

Pensions and Other Post-retirement Benefits

We account for pension and other post-retirement benefit plans according to the provisions of SFAS No. 158, "Employers’ Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statement Nos. 87, 88, 106 and 132(R)." This Statement requires us to fully recognize the overfunded or underfunded status of our consolidating subsidiaries’ pension and post-retirement benefit plans as either assets or liabilities on our balance sheet. For more information on our pension and post-retirement benefit disclosures, see Note 10.

Gas Imbalances

We value gas imbalances due to or due from interconnecting pipelines at the lower of cost or market. Gas imbalances represent the difference between customer nominations and actual gas receipts from, and gas deliveries to, our interconnecting pipelines and shippers under various operational balancing and shipper imbalance agreements. Natural gas imbalances are either settled in cash or made up in-kind subject to the pipelines' various tariff provisions.

Minority Interest

Minority interest, sometimes referred to as noncontrolling interest, represents the outstanding ownership interests in our five operating limited partnerships and their consolidated subsidiaries that are not owned by us. In our consolidated income statements, the minority interest in the income (or loss) of a consolidated subsidiary is shown as a deduction from (or an addition to) our consolidated net income. In our consolidated balance sheets, minority interest represents the noncontrolling ownership interest in our consolidated net assets and is presented separately between liabilities and Partners' Capital.

As of December 31, 2007, minority interest consisted of the following:

- the 1.0101% general partner interest in each of our five operating partnerships;
- the 0.5% special limited partner interest in SFPP, L.P.;
- the 50% interest in Globalplex Partners, a Louisiana joint venture owned 50% and controlled by Kinder Morgan Bulk Terminals, Inc.;
- the 33 1/3% interest in International Marine Terminals Partnership, a Louisiana partnership owned 66 2/3% and controlled by Kinder Morgan Operating L.P. "C";
- the approximate 31% interest in the Pecos Carbon Dioxide Company, a Texas general partnership owned approximately 69% and controlled by Kinder Morgan CO_2 Company, L.P. and its consolidated subsidiaries;
- the 1% interest in River Terminals Properties, L.P., a Tennessee partnership owned 99% and controlled by Kinder Morgan River Terminals LLC; and
- the 30% interest in Guilford County Terminal Company, LLC, a limited liability company owned 70% and controlled by Kinder Morgan Southeast Terminals LLC.

Income Taxes

We are not a taxable entity for federal income tax purposes. As such, we do not directly pay federal income tax. Our taxable income or loss, which may vary substantially from the net income or net loss we report in our consolidated statement of income, is includable in the federal income tax returns of each partner. The aggregate difference in the basis of our net assets for financial and tax reporting purposes cannot be readily determined as we do not have access to information about each partner's tax attributes in us.

Some of our corporate subsidiaries and corporations in which we have an equity investment do pay U.S. federal, state, and foreign income taxes. Deferred income tax assets and liabilities for certain operations conducted through corporations are recognized for temporary differences between the assets and liabilities for financial reporting and tax purposes. Changes in tax legislation are included in the relevant computations in the period in which such changes are effective. Deferred tax assets are reduced by a valuation allowance for the amount of any tax benefit not expected to be realized.

Foreign Currency Transactions and Translation

We account for foreign currency transactions and the foreign currency translation of our consolidating foreign subsidiaries in accordance with the provisions of SFAS No. 52, "Foreign Currency Translation." Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which our foreign subsidiary operates, also referred to as its functional currency. Transaction gains or losses result from a change in exchange rates between (i) the functional currency, for example the Canadian dollar for a Canadian subsidiary; and (ii) the currency in which a foreign currency transaction is denominated, for example the U.S. dollar for a Canadian subsidiary.

We translate the assets and liabilities of each of our consolidating foreign subsidiaries to U.S. dollars at year-end exchange rates. Income and expense items are translated at weighted-average rates of exchange prevailing during the year and stockholders' equity accounts are translated by using historical exchange rates. Translation adjustments result from translating all assets and liabilities at current year-end rates, while stockholders' equity is translated by using historical and weighted-average rates. The cumulative translation adjustments balance is reported as a component of accumulated other comprehensive income/(loss) within Partners' Capital on our accompanying consolidated balance sheet.

Comprehensive Income

Statement of Financial Accounting Standards No. 130, "Accounting for Comprehensive Income," requires that enterprises report a total for comprehensive income. The difference between our net income and our comprehensive income resulted from (i) unrealized gains or losses on derivatives utilized for hedging our exposure to fluctuating expected future cash flows produced by price or interest rate risk; (ii) foreign currency translation adjustments; and (iii) unrealized periodic benefit costs from minimum pension liability adjustments and the reclassification of post-retirement benefit and pension plan actuarial gains/losses and prior service costs/credits to net income. For more information on our risk management activities, see Note 14.

Cumulative revenues, expenses, gains and losses that under generally accepted accounting principals are included within our comprehensive income but excluded from our earnings are reported as accumulated other comprehensive income/(loss) within Partners' Capital in our consolidated balance sheets. The following table summarizes changes in the amount of our "Accumulated other comprehensive loss" in our accompanying consolidated balance sheets for each of the two years ended December 31, 2006 and 2007 (in millions):

	Net unrealized gains/(losses) on cash flow hedge derivatives	Foreign currency translation adjustments	Pension and Other Post-retirement liability adjs.	Total Accumulated other comprehensive income/(loss)
December 31, 2005	$ (1,079.3)	$ (0.4)	$ —	$ (1,079.7)
Change for period	240.6	(19.6)	(7.4)	213.6
December 31, 2006	(838.7)	(20.0)	(7.4)	(866.1)
Change for period	(541.0)	132.5	(2.0)	(410.5)
December 31, 2007	$ (1,379.7)	$ 112.5	$ (9.4)	$ (1,276.6)

Net Income Per Unit

We compute Basic Limited Partners' Net Income per Unit by dividing our limited partners' interest in net income by the weighted average number of units outstanding during the period. Diluted Limited Partners' Net Income per Unit reflects the maximum potential dilution that could occur if units whose issuance depends on the market price of the units at a future date were considered outstanding, or if, by application of the treasury stock method, options to issue units were exercised, both of which would result in the issuance of additional units that would then share in our net income.

Emerging Issues Task Force Issue No. 03-6, or EITF 03-6, "Participating Securities and the Two-Class Method Under FASB Statement No 128" addresses the computation of earnings per share by entities that have issued securities other than common stock that contractually entitle the holder to participate in dividends and earnings of the entity when, and if, it declares dividends on its securities. For partnerships, under the two-class method, earnings per unit is calculated as if all of the earnings for the period were distributed regardless of whether a general partner has discretion over the amount of distribution to be made for any particular period. EITF 03-6 does not impact our overall net income or other financial results because we do not have undistributed earnings in any period presented in this report.

Asset Retirement Obligations

We account for asset retirement obligations pursuant to SFAS No. 143, "Accounting for Asset Retirement Obligations." For more information on our asset retirement obligations, see Note 4.

Risk Management Activities

We utilize energy commodity derivative contracts for the purpose of mitigating our risk resulting from fluctuations in the market price of natural gas, natural gas liquids and crude oil. In addition, we enter into interest rate swap agreements for the purpose of hedging the interest rate risk associated with our debt obligations.

Our derivative contracts are accounted for under SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities," as amended by SFAS No. 137, "Accounting for Derivative Instruments and Hedging Activities – Deferral of the Effective Date of FASB Statement No.133" and No. 138, "Accounting for Certain Derivative Instruments and Certain Hedging Activities."SFAS No. 133 established accounting and reporting standards requiring that every derivative contract (including certain derivative contracts embedded in other contracts) be recorded in the balance sheet as either an asset or liability measured at its fair value. SFAS No. 133 requires that changes in the derivative contract's fair value be recognized currently in earnings unless specific hedge accounting criteria are met. If a derivative contract meets those criteria, SFAS No. 133 allows a derivative contract's gains and losses to offset related results on the hedged item in the income statement, and requires that a company formally designate a derivative contract as a hedge and document and assess the effectiveness of derivative contracts associated with transactions that receive hedge accounting.

Furthermore, if the derivative transaction qualifies for and is designated as a normal purchase and sale, it is exempted from the fair value accounting requirements of SFAS No. 133 and is accounted for using traditional accrual accounting. Our derivative contracts that hedge our commodity price risks involve our normal business activities, which include the sale of natural gas, natural gas liquids and crude oil, and these derivative contracts have been designated as cash flow hedges as defined by SFAS No. 133. SFAS No. 133 designates derivative contracts that hedge exposure to variable cash flows of forecasted transactions as cash flow hedges and the effective portion of the derivative contract's gain or loss is initially reported as a component of other comprehensive income (outside earnings) and subsequently reclassified into earnings when the forecasted transaction affects earnings. The ineffective portion of the gain or loss is reported in earnings immediately. See Note 14 for more information on our risk management activities.

Accounting for Regulatory Activities

Our regulated utility operations are accounted for in accordance with the provisions of SFAS No. 71, "Accounting for the Effects of Certain Types of Regulation," which prescribes the circumstances in which the application of generally accepted accounting principles is affected by the economic effects of regulation. Regulatory assets and liabilities represent probable future revenues or expenses associated with certain charges and credits that will be recovered from or refunded to customers through the ratemaking process.

The following regulatory assets and liabilities are reflected within "Deferred charges and other assets" and "Other long-term liabilities and deferred credits," respectively, in our accompanying consolidated balance sheets as of December 31, 2007 and December 31, 2006 (in millions):

	As of December 31, 2007	As of December 31, 2006
Regulated Assets:		
Employee benefit costs	$ 0.6	$ 0.4
Fuel Tracker	2.4	1.6
Deferred regulatory expenses	3.4	3.2
Total regulatory assets	6.4	5.2
Regulated Liabilities:		
Deferred income taxes	—	0.9
Total regulatory liabilities	—	0.9
Net regulatory assets	$ 6.4	$ 4.3

As of December 31, 2007, all of our regulatory assets and regulatory liabilities were being recovered from or refunded to customers through rates over periods ranging from one to five years.

3. Acquisitions, Joint Ventures and Divestitures

Acquisitions and Joint Ventures Involving Unrelated Entities

During 2007, 2006 and 2005, we completed the following acquisitions, and except for our acquisition of the Trans Mountain pipeline system (discussed below), these acquisitions were accounted for as business combinations according to the provisions of Statement of Financial Accounting Standards No. 141, "Business Combinations." SFAS No. 141 requires business combinations involving unrelated entities to be accounted for using the purchase method of accounting, which establishes a new basis of accounting for the purchased assets and liabilities—the acquirer records all the acquired assets and assumed liabilities at their estimated fair market values (not the acquired entity's book values) as of the acquisition date.

The preliminary allocation of these assets (and any liabilities assumed) may be adjusted to reflect the final determined amounts, and although the time that is required to identify and measure the fair value of the assets acquired and the liabilities assumed in a business combination will vary with circumstances, generally our allocation period ends when we no longer are waiting for information that is known to be available or obtainable. The results of operations from these acquisitions accounted for as business combinations are included in our consolidated financial statements from the acquisition date.

			Allocation of Purchase Price (in millions)					
Ref.	Date	Acquisition	Purchase Price	Current Assets	Property Plant & Equipment	Deferred Charges & Other	Goodwill	Minority Interest
(1)	1/05	Claytonville Oil Field Unit	$ 6.5	$ —	$ 6.5	$ —	$ —	$ —
(2)	4/05	Texas Petcoke Terminal Region	247.2	—	72.5	161.4	13.3	—
(3)	7/05	Terminal Assets	36.2	0.5	35.7	—	—	—
(4)	7/05	General Stevedores, L.P.	10.4	0.6	5.2	0.2	4.4	—
(5)	8/05	North Dayton Natural Gas Storage Facility	109.4	—	71.7	11.7	26.0	—
(6)	8-9/05	Terminal Assets	4.3	0.4	3.9	—	—	—
(7)	11/05	Allied Terminal Assets	13.3	0.2	12.6	0.5	—	—
(8)	2/06	Entrega Gas Pipeline LLC	244.6	—	244.6	—	—	—
(9)	4/06	Oil and Gas Properties	63.6	0.1	63.5	—	—	—
(10)	4/06	Terminal Assets	61.9	0.5	43.6	—	17.8	—
(11)	11/06	Transload Services, LLC	16.6	1.6	6.6	—	8.4	—
(12)	12/06	Devco USA L.L.C.	7.3	0.8	—	6.5	—	—
(13)	12/06	Roanoke, Virginia Products Terminal	6.4	—	6.4	—	—	—
(14)	1/07	Interest in Cochin Pipeline	47.8	—	47.8	—	—	—
(15)	5/07	Vancouver Wharves Terminal.	57.2	6.5	50.7	—	—	—
(16)	9/07	Marine Terminals, Inc. Assets	101.5	0.2	60.8	40.5	—	—

(1) Claytonville Oil Field Unit

Effective January 31, 2005, we acquired an approximate 64.5% gross working interest in the Claytonville oil field unit located in Fisher County, Texas from Aethon I L.P. The field is located nearly 30 miles east of the SACROC unit in the Permian Basin of West Texas. Our purchase price was approximately $6.5 million, consisting of $6.2 million in cash and the assumption of $0.3 million of liabilities. Following our acquisition, we became the operator of the field, which at the time of acquisition was producing approximately 200 barrels of oil per day. The acquisition of this ownership interest complemented our existing carbon dioxide assets in the Permian Basin and we include the acquired operations as part of our CO_2 business segment.

(2) Texas Petcoke Terminal Region

Effective April 29, 2005, we acquired seven bulk terminal operations from Trans-Global Solutions, Inc. for an aggregate consideration of approximately $247.2 million, consisting of $186.0 million in cash, $46.2 million in common units, and an obligation to pay an additional $15 million on April 29, 2007, two years after the closing. We settled the $15 million liability by issuing additional common units. All of the acquired assets are located in the state of Texas, and include facilities at the Port of Houston, the Port of Beaumont and the TGS Deepwater Terminal located on the Houston Ship Channel. We combined the acquired operations into a new terminal region called the Texas Petcoke region, as certain of the terminals have contracts in place to provide petroleum coke handling services for major Texas oil refineries. The acquisition complemented our existing Gulf Coast terminal facilities and expanded our pre-existing petroleum coke handling operations. The acquired operations are included as part of our Terminals business segment.

Our allocation of the purchase price to assets acquired and liabilities assumed was based on an appraisal of fair market values, which was completed in the fourth quarter of 2005. A total of $13.3 million of goodwill was assigned to our Terminals business segment and the entire amount is expected to be deductible for tax purposes. We believe this acquisition resulted in the recognition of goodwill primarily due to the fact that certain advantageous factors and conditions existed that contributed to our acquisition price exceeding the fair value of acquired identifiable net assets and liabilities —in the aggregate, these factors represented goodwill. The $161.4 million of deferred charges and other assets in the table above represents the fair value of intangible customer relationships, which encompass both the contractual life of customer contracts plus any future customer relationship value beyond the contract life. In connection with the transaction, Trans-Global Solutions, Inc. agreed to indemnify Kinder Morgan G.P., Inc. for any losses relating to our failure to repay $50.9 million of indebtedness incurred to fund the acquisition, and we agreed to indemnify Trans-Global Solutions, Inc. for any taxes of Trans-Global Solutions, Inc. that may arise from the sale of any acquired assets. We have no current intention to sell any of the assets acquired in this transaction.

(3) July 2005 Terminal Assets

In July 2005, we acquired three terminal facilities in separate transactions for an aggregate consideration of approximately $36.2 million in cash. The largest of the transactions was the purchase of a refined petroleum products terminal in New York Harbor from ExxonMobil Oil Corporation. The second acquisition involved a dry-bulk river terminal located in the state of Kentucky, and the third involved a liquids/dry-bulk facility located in Blytheville, Arkansas. The operations of all three facilities are included in our Terminals business segment.

The New York Harbor terminal, located on Staten Island and referred to as the Kinder Morgan Staten Island terminal, complements our existing Northeast liquids terminal facilities located in Carteret and Perth Amboy, New Jersey. At the time of acquisition, the terminal had storage capacity of 2.3 million barrels for gasoline, diesel and fuel oil, and we expected to bring several idle tanks back into service that would add another 550,000 barrels of capacity. As part of the transaction, ExxonMobil entered into a long-term storage capacity agreement with us and has continued to utilize a portion of the terminal. Since our acquisition, we have invested approximately $25 million in terminal improvements, including funds used to rebuild a ship berth with the ability to accommodate tanker vessels. All expansion projects should be complete by the end of the first quarter of 2008.

The dry-bulk terminal, located along the Ohio River in Hawesville, Kentucky, primarily handles wood chips and finished paper products. The acquisition complemented our existing terminal assets located in the Ohio River

Valley and further expanded our wood-chip handling businesses. As part of the transaction, we assumed a long-term handling agreement with Weyerhauser Company, an international forest products company.

The assets acquired at the liquids/dry-bulk facility in Blytheville, Arkansas consisted of storage and supporting infrastructure for 40,000 tons of anhydrous ammonia, 9,500 tons of urea ammonium nitrate solutions and 40,000 tons of urea. As part of the transaction, we have entered into a long-term agreement to sublease all of the existing anhydrous ammonia and urea ammonium nitrate terminal assets to Terra Nitrogen Company, L.P. The terminal is one of only two facilities in the United States that can handle imported fertilizer and provide shipment west on railcars, and the acquisition of the facility positioned us to take advantage of the increase in fertilizer imports that has resulted from the recent decrease in domestic production.

(4) General Stevedores, L.P.

Effective July 31, 2005, we acquired all of the partnership interests in General Stevedores, L.P. for an aggregate consideration of approximately $10.4 million, consisting of $2.0 million in cash, $3.4 million in common units, and $5.0 million in assumed liabilities, including debt of $3.0 million. In August 2005, we paid the $3.0 million outstanding debt balance.

General Stevedores, L.P. owns, operates and leases barge unloading facilities located along the Houston, Texas ship channel. Its operations primarily consist of receiving, storing and transferring semi-finished steel products, including coils, pipe and billets. The acquisition complemented and further expanded our existing Texas Gulf Coast terminal facilities, and its operations are included as part of our Terminals business segment. A total of $4.4 million of goodwill was assigned to our Terminals business segment, and the entire amount is expected to be deductible for tax purposes. We believe this acquisition resulted in the recognition of goodwill primarily due to the fact that certain advantageous factors and conditions existed that contributed to our acquisition price exceeding the fair value of acquired identifiable net assets and liabilities —in the aggregate, these factors represented goodwill.

(5) North Dayton Natural Gas Storage Facility

Effective August 1, 2005, we acquired a natural gas storage facility in Liberty County, Texas, from Texas Genco LLC for an aggregate consideration of approximately $109.4 million, consisting of $52.9 million in cash and $56.5 million in assumed debt. The facility, referred to as our North Dayton storage facility, has approximately 6.3 billion cubic feet of total capacity, consisting of 4.2 billion cubic feet of working capacity and 2.1 billion cubic feet of pad (cushion) gas. The acquisition complemented our existing Texas intrastate natural gas pipeline group assets and positioned us to pursue expansions at the facility that will provide or offer needed services to utilities, the growing liquefied natural gas industry along the Texas Gulf Coast, and other natural gas storage users. Additionally, as part of the transaction, we entered into a long-term storage capacity and transportation agreement with NRG, one of the largest wholesale electric power generating companies in the United States, with over 13,000 megawatts of generation capacity. The agreement covers storage services for approximately 2.0 billion cubic feet of natural gas capacity and expires on March 1, 2017. The North Dayton storage facility's operations are included in our Natural Gas Pipelines business segment.

Our allocation of the purchase price to assets acquired and liabilities assumed was based on an appraisal of fair market values, which was completed in the fourth quarter of 2005. A total of $26.0 million of goodwill was assigned to our Natural Gas Pipelines business segment and the entire amount is expected to be deductible for tax purposes. We believe our acquisition of the North Dayton natural gas storage facility resulted in the recognition of goodwill primarily due to the fact that the favorable location and the favorable association with our pre-existing assets contributed to our acquisition price exceeding the fair value of acquired identifiable net assets and liabilities —in the aggregate, these factors represented goodwill. The $11.7 million of deferred charges and other assets in the table above represents the fair value of the intangible long-term natural gas storage capacity and transportation agreement.

(6) August and September 2005 Terminal Assets

In August and September 2005, we acquired certain terminal facilities and assets, including both real and personal property, in two separate transactions for an aggregate consideration of approximately $4.3 million in cash.

In August 2005, we spent $1.9 million to acquire the Kinder Morgan Blackhawk terminal from White Material Handling, Inc., and in September 2005, we spent $2.4 million to acquire a repair shop and related assets from Trans-Global Solutions, Inc.

The Kinder Morgan Blackhawk terminal consists of approximately 46 acres of land, storage buildings, and related equipment located in Black Hawk County, Iowa. The terminal primarily stores and transfers fertilizer and salt and further expanded our Midwest region bulk terminal operations. The acquisition of the repair shop, located in Jefferson County, Texas, near Beaumont, consists of real and personal property, including parts inventory. The acquisition facilitated and expanded the earlier acquisition of our Texas Petcoke terminals from Trans-Global Solutions in April 2005. The operations of both acquisitions are included in our Terminals business segment.

(7) Allied Terminal Assets

Effective November 4, 2005, we acquired certain terminal assets from Allied Terminals, Inc. for an aggregate consideration of approximately $13.3 million, consisting of $12.1 million in cash and $1.2 million in assumed liabilities. The assets primarily consisted of storage tanks, loading docks, truck racks, land and other equipment and personal property located adjacent to our Shipyard River bulk terminal in Charleston, South Carolina. The acquisition complemented an ongoing capital expansion project at our Shipyard River terminal that together, will add infrastructure in order to increase the terminal's ability to handle increasing supplies of imported coal. The acquired assets are counted as an external addition to our Shipyard River terminal and are included as part of our Terminals business segment.

(8) Entrega Gas Pipeline LLC

Effective February 23, 2006, Rockies Express Pipeline LLC acquired Entrega Gas Pipeline LLC from EnCana Corporation for $244.6 million in cash. West2East Pipeline LLC is a limited liability company and is the sole owner of Rockies Express Pipeline LLC. We contributed 66 2/3% of the consideration for this purchase, which corresponded to our percentage ownership of West2East Pipeline LLC at that time. At the time of acquisition, Sempra Energy held the remaining 33 1/3% ownership interest and contributed this same proportional amount of the total consideration.

On the acquisition date, Entrega Gas Pipeline LLC owned the Entrega Pipeline, an interstate natural gas pipeline that, when fully constructed, consisted of two segments: (i) a 136-mile, 36-inch diameter pipeline that extends from the Meeker Hub in Rio Blanco County, Colorado to the Wamsutter Hub in Sweetwater County, Wyoming and (ii) a 191-mile, 42-inch diameter pipeline that extends from the Wamsutter Hub to the Cheyenne Hub in Weld County, Colorado. In the first quarter of 2006, EnCana Corporation completed construction of the pipeline segment that extends from the Meeker Hub to the Wamsutter Hub, and interim service began on that portion of the pipeline on February 24, 2006. Under the terms of the purchase and sale agreement, Rockies Express Pipeline LLC constructed the segment that extends from the Wamsutter Hub to the Cheyenne Hub. Construction on this pipeline segment began in the second quarter of 2006, and both pipeline segments were placed into service on February 14, 2007. The acquired assets are included in our Natural Gas Pipelines business segment.

In April 2006, Rockies Express Pipeline LLC merged with and into Entrega Gas Pipeline LLC, and the surviving entity was renamed Rockies Express Pipeline LLC. Going forward, the entire pipeline system (including lines currently being developed by Rockies Express Pipeline LLC) will be known as the Rockies Express Pipeline. The combined 1,679-mile pipeline system will be one of the largest natural gas pipelines ever constructed in North America. The approximately $4.9 billion project will have the capability to transport 1.8 billion cubic feet per day of natural gas, and binding firm commitments have been secured for all of the pipeline capacity.

On June 30, 2006, ConocoPhillips exercised its option to acquire a 25% ownership interest in West2East Pipeline LLC. On that date, a 24% ownership interest was transferred to ConocoPhillips, and an additional 1% interest will be transferred once construction of the entire project is completed. Through our subsidiary Kinder Morgan W2E Pipeline LLC, we will continue to operate the project but our ownership interest decreased to 51% of the equity in the project (down from 66 2/3%). Sempra's ownership interest in West2East Pipeline LLC decreased to 25% (down from 33 1/3%). When construction of the entire project is completed, our ownership interest will be reduced to 50% at which time the capital accounts of West2East Pipeline LLC will be trued up to reflect our 50%

economics in the project. We do not anticipate any additional changes in the ownership structure of the Rockies Express Pipeline project.

West2East Pipeline LLC qualifies as a variable interest entity as defined by Financial Accounting Standards Board Interpretation No. 46 (Revised December 2003) (FIN 46R), "Consolidation of Variable Interest Entities-an interpretation of ARB No. 51," due to the fact that the total equity at risk is not sufficient to permit the entity to finance its activities without additional subordinated financial support provided by any parties, including equity holders. Furthermore, following ConocoPhillips' acquisition of its ownership interest in West2East Pipeline LLC on June 30, 2006, we receive 50% of the economics of the Rockies Express project on an ongoing basis, and thus, effective June 30, 2006, we were no longer considered the primary beneficiary of this entity as defined by FIN 46R. Accordingly, on that date, we made the change in accounting for our investment in West2East Pipeline LLC from full consolidation to the equity method following the decrease in our ownership percentage.

Under the equity method, we record the costs of our investment within the "Investments" line on our consolidated balance sheet and as changes in the net assets of West2East Pipeline LLC occur (for example, earnings and dividends), we recognize our proportional share of that change in the "Investment" account. We also record our proportional share of any accumulated other comprehensive income or loss within the "Accumulated other comprehensive loss" line on our consolidated balance sheet.

In addition, we have guaranteed our proportionate share of West2East Pipeline LLC's debt borrowings under a $2 billion credit facility entered into by Rockies Express Pipeline LLC. For more information on our contingent debt, see Note 9.

(9) April 2006 Oil and Gas Properties

On April 5, 2006, Kinder Morgan Production Company L.P. purchased various oil and gas properties from Journey Acquisition – I, L.P. and Journey 2000, L.P. for an aggregate consideration of approximately $63.6 million, consisting of $60.0 million in cash and $3.6 million in assumed liabilities. The acquisition was effective March 1, 2006. However, we divested certain acquired properties that are not considered candidates for carbon dioxide enhanced oil recovery, thus reducing our total investment. We received proceeds of approximately $27.1 million from the sale of these properties.

The properties are primarily located in the Permian Basin area of West Texas, produce approximately 400 barrels of oil equivalent per day, and include some fields with potential for enhanced oil recovery development near our current carbon dioxide operations. The acquired operations are included as part of our CO_2 business segment.

(10) April 2006 Terminal Assets

In April 2006, we acquired terminal assets and operations from A&L Trucking, L.P. and U.S. Development Group in three separate transactions for an aggregate consideration of approximately $61.9 million, consisting of $61.6 million in cash and $0.3 million in assumed liabilities.

The first transaction included the acquisition of equipment and infrastructure on the Houston Ship Channel that loads and stores steel products. The acquired assets complement our nearby bulk terminal facility purchased from General Stevedores, L.P. in July 2005. The second acquisition included the purchase of a rail terminal at the Port of Houston that handles both bulk and liquids products. The rail terminal complements our existing Texas petroleum coke terminal operations and maximizes the value of our existing deepwater terminal by providing customers with both rail and vessel transportation options for bulk products. Thirdly, we acquired the entire membership interest of Lomita Rail Terminal LLC, a limited liability company that owns a high-volume rail ethanol terminal in Carson, California. The terminal serves approximately 80% of the Southern California demand for reformulated fuel blend ethanol with expandable offloading/distribution capacity, and the acquisition expanded our existing rail transloading operations. All of the acquired assets are included in our Terminals business segment. A total of $17.8 million of goodwill was assigned to our Terminals business segment and the entire amount is expected to be deductible for tax purposes.

(11) Transload Services, LLC

Effective November 20, 2006, we acquired all of the membership interests of Transload Services, LLC from Lanigan Holdings, LLC for an aggregate consideration of approximately $16.6 million, consisting of $15.8 million in cash and $0.8 million of assumed liabilities. Transload Services, LLC is a leading provider of innovative, high quality material handling and steel processing services, operating 14 steel-related terminal facilities located in the Chicago metropolitan area and various cities in the United States. Its operations include transloading services, steel fabricating and processing, warehousing and distribution, and project staging. Specializing in steel processing and handling, Transload Services can inventory product, schedule shipments and provide customers cost-effective modes of transportation. The combined operations include over 92 acres of outside storage and 445,000 square feet of covered storage that offers customers environmentally controlled warehouses with indoor rail and truck loading facilities for handling temperature and humidity sensitive products. The acquired assets are included in our Terminals business segment, and the acquisition further expanded and diversified our existing terminals' materials services (rail transloading) operations.

A total of $8.4 million of goodwill was assigned to our Terminals business segment, and the entire amount is expected to be deductible for tax purposes. We believe this acquisition resulted in the recognition of goodwill primarily due to the fact that it establishes a business presence in several key markets, taking advantage of the non-residential and highway construction demand for steel that contributed to our acquisition price exceeding the fair value of acquired identifiable net assets and liabilities —in the aggregate, these factors represented goodwill.

(12) Devco USA L.L.C.

Effective December 1, 2006, we acquired all of the membership interests in Devco USA L.L.C., an Oklahoma limited liability company, for an aggregate consideration of approximately $7.3 million, consisting of $4.8 million in cash, $1.6 million in common units, and $0.9 million of assumed liabilities. The primary asset acquired was a technology based identifiable intangible asset, a proprietary process that transforms molten sulfur into premium solid formed pellets that are environmentally friendly, easy to handle and store, and safe to transport. The process was developed internally by Devco's engineers and employees. Devco, a Tulsa, Oklahoma based company, has more than 20 years of sulfur handling expertise and we believe the acquisition and subsequent application of this acquired technology complements our existing dry-bulk terminal operations. We allocated $6.5 million of our total purchase price to the value of this intangible asset, and we have included the acquisition as part of our Terminals business segment.

(13) Roanoke, Virginia Products Terminal

Effective December 15, 2006, we acquired a refined petroleum products terminal located in Roanoke, Virginia from Motiva Enterprises, LLC for approximately $6.4 million in cash. The terminal has storage capacity of approximately 180,000 barrels per day for refined petroleum products like gasoline and diesel fuel. The terminal is served exclusively by the Plantation Pipeline and Motiva has entered into a long-term contract to use the terminal. The acquisition complemented the other refined products terminals we own in the southeast region of the United States, and the acquired terminal is included as part our Products Pipelines business segment.

(14) Interest in Cochin Pipeline

Effective January 1, 2007, we acquired the remaining approximate 50.2% interest in the Cochin pipeline system that we did not already own for an aggregate consideration of approximately $47.8 million, consisting of $5.5 million in cash and a note payable having a fair value of $42.3 million. As part of the transaction, the seller also agreed to reimburse us for certain pipeline integrity management costs over a five-year period in an aggregate amount not to exceed $50 million. Upon closing, we became the operator of the pipeline.

The Cochin Pipeline is a multi-product liquids pipeline consisting of approximately 1,900 miles of 12-inch diameter pipe operating between Fort Saskatchewan, Alberta, and Windsor, Ontario, Canada. The entire Cochin pipeline system traverses three provinces in Canada and seven states in the United States, serving the Midwestern United States and eastern Canadian petrochemical and fuel markets. Its operations are included as part of our Products Pipelines business segment.

As of December 31, 2007, our allocation of the purchase price was preliminary, pending final determination of deferred income tax balances at the time of acquisition. We expect these final purchase price adjustments to be in the first quarter of 2008.

(15) Vancouver Wharves Terminal

On May 30, 2007, we purchased the Vancouver Wharves bulk marine terminal from British Columbia Railway Company, a crown corporation owned by the Province of British Columbia, for an aggregate consideration of $57.2 million, consisting of $38.8 million in cash and $18.4 million in assumed liabilities. The Vancouver Wharves facility is located on the north shore of the Port of Vancouver's main harbor, and includes five deep-sea vessel berths situated on a 139-acre site. The terminal assets include significant rail infrastructure, dry bulk and liquid storage, and material handling systems which allow the terminal to handle over 3.5 million tons of cargo annually. Vancouver Wharves also has access to three major rail carriers connecting to shippers in western and central Canada, and the U.S. Pacific Northwest. The acquisition both expanded and complemented our existing terminal operations, and all of the acquired assets are included in our Terminals business segment.

(16) Marine Terminals, Inc. Assets

Effective September 1, 2007, we acquired certain bulk terminals assets from Marine Terminals, Inc. for an aggregate consideration of approximately $101.5 million, consisting of $100.3 million in cash and an assumed liability of $1.2 million. The acquired assets and operations are primarily involved in the handling and storage of steel and alloys, and also provide stevedoring and harbor services, scrap handling, and scrap processing services to customers in the steel and alloys industry. The operations consist of two separate facilities located in Blytheville, Arkansas, and individual terminal facilities located in Decatur, Alabama, Hertford, North Carolina, and Berkley, South Carolina. Combined, the five facilities handled approximately 13.4 million tons of steel products in 2006. Under long-term contracts, the acquired terminal facilities will continue to provide handling, processing, harboring and warehousing services to Nucor Corporation, one of the nation's largest steel and steel products companies.

As of December 31, 2007, we have preliminarily allocated $60.8 million of our combined purchase price to "Property, Plant and Equipment, net". The $40.5 million allocated to deferred charges and other assets included $39.7 million of intangible assets, representing the fair value of intangible customer relationships which encompass both the contractual life of customer contracts plus any future customer relationship value beyond the contract life. We expect to make further purchase price adjustments to the acquired assets in the first half of 2008, based on further analysis of fair market values. The acquisition both expanded and complemented our existing ferro alloy terminal operations and will provide Nucor and other customers further access to our growing national network of marine and rail terminals. All of the acquired assets are included in our Terminals business segment.

Pro Forma Information

Pro forma income statement information that assumes all of the acquisitions we have made and joint ventures we have entered into since January 1, 2006, including the ones listed above, had occurred as of January 1, 2006, is not materially different from the information presented in our accompanying consolidated statements of income.

Trans Mountain Pipeline System

On April 30, 2007, we acquired the Trans Mountain pipeline system from Knight for $549.1 million in cash. The transaction was approved by the independent directors of both Knight and KMR following the receipt, by such directors, of separate fairness opinions from different investment banks. We paid $549 million of the purchase price on April 30, 2007, and we paid the remaining $0.1 million in July 2007.

Effective January 1, 2006, Knight (formerly KMI), our ultimate parent, according to the provisions of Emerging Issues Task Force Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights," was deemed to have control over us and no longer accounted for its investment in us under the equity method of accounting, but instead included our accounts, balances and results of operations in its consolidated financial statements. As required by the provisions of SFAS No. 141, we accounted for our acquisition of Trans Mountain as a transfer of net assets between entities under common control. For combinations of entities under common control, the purchase cost provisions (as they relate to purchase business combinations involving unrelated entities) of SFAS No. 141 explicitly do not apply; instead the method of accounting prescribed by SFAS No. 141 for such transfers is similar to the pooling-of-interests method of accounting. Under this method, the carrying amount of net assets recognized in the balance sheets of each combining entity are carried forward to the balance sheet of the combined entity, and no other assets or liabilities are recognized as a result of the combination (that is, no recognition is made for a purchase premium or discount representing any difference between the cash consideration paid and the book value of the net assets acquired).

Therefore, following our acquisition of Trans Mountain from Knight on April 30, 2007, we recognized the Trans Mountain assets and liabilities acquired at their carrying amounts (historical cost) in the accounts of Knight (the transferring entity) at the date of transfer. The accounting treatment for combinations of entities under common control is consistent with the concept of poolings as combinations of common shareholder (or unitholder) interests, as all of Trans Mountain's equity accounts were also carried forward intact initially, and subsequently adjusted due to the cash consideration we paid for the acquired net assets.

In addition to requiring that assets and liabilities be carried forward at historical costs, SFAS No. 141 also prescribes that for transfers of net assets between entities under common control, all income statements presented be combined as of the date of common control. Accordingly, our consolidated financial statements and all other financial information included in this report have been restated to assume that the transfer of Trans Mountain net assets from Knight to us had occurred at the date when both Trans Mountain and we met the accounting requirements for entities under common control (January 1, 2006). As a result, financial statements and financial information presented for prior periods in this report have been restated. These restatements include Knight's recognition of a goodwill impairment expense of $377.1 million recorded in the first quarter of 2007. For more information on this impairment expense, see Note 6.

The Trans Mountain pipeline system, which transports crude oil and refined products from Edmonton, Alberta, Canada to marketing terminals and refineries in British Columbia and the state of Washington, recently completed a pump station expansion and currently transports approximately 260,000 barrels per day. An additional 35,000 barrel per day expansion that will increase capacity of the pipeline to 300,000 barrels per day is expected to be in service by November 2008. In addition, due to the fact that Trans Mountain's operations are managed separately, involve different products and marketing strategies, and produce discrete financial information that is separately evaluated internally by our management, we have identified our Trans Mountain pipeline system as a separate reportable business segment.

Divestitures

Douglas Gas Gathering and Painter Gas Fractionation

Effective April 1, 2006, we sold our Douglas natural gas gathering system and our Painter Unit fractionation facility to Momentum Energy Group, LLC for approximately $42.5 million in cash. Our investment in the net assets we sold in this transaction, including all transaction related accruals, was approximately $24.5 million, most of which represented property, plant and equipment, and we recognized approximately $18.0 million of gain on the sale of these net assets. We used the proceeds from these asset sales to reduce the outstanding balance on our commercial paper borrowings.

Additionally, upon the sale of our Douglas gathering system, we reclassified a net loss of $2.9 million from "Accumulated other comprehensive loss" into net income on those derivative contracts that effectively hedged uncertain future cash flows associated with forecasted Douglas gathering transactions. We included the net amount of the gain, $15.1 million, within the caption "Other expense (income)" in our accompanying consolidated statement of income for the year ended December 31, 2006. For more information on our accounting for derivative contracts, see Note 14.

The Douglas gathering system is comprised of approximately 1,500 miles of 4-inch to 16-inch diameter pipe that gathers approximately 26 million cubic feet per day of natural gas from approximately 650 active receipt points.

Gathered volumes are processed at our Douglas plant (which we retained), located in Douglas, Wyoming. As part of the transaction, we executed a long-term processing agreement with Momentum Energy Group, LLC which dedicates volumes from the Douglas gathering system to our Douglas processing plant. The Painter Unit, located near Evanston, Wyoming, consists of a natural gas processing plant and fractionator, a nitrogen rejection unit, a natural gas liquids terminal, and interconnecting pipelines with truck and rail loading facilities. Prior to the sale, we leased the plant to BP, which operated the fractionator and the associated Millis terminal and storage facilities for its own account.

North System Natural Gas Liquids Pipeline System – Discontinued Operations

On July 2, 2007, we announced that we entered into an agreement to sell the North System natural gas liquids pipeline and our 50% ownership interest in the Heartland Pipeline Company (collectively referred to in this report as our North System) to ONEOK Partners, L.P. for approximately $298.6 million in cash. Our investment in net assets, including all transaction related accruals, was approximately $145.8 million, most of which represented property, plant and equipment, and we recognized approximately $152.8 million of gain on the sale of these net assets.

The North System consists of an approximately 1,600-mile interstate common carrier pipeline system that delivers natural gas liquids and refined petroleum products from south central Kansas to the Chicago area. Also included in the sale were eight propane truck-loading terminals, located at various points in three states along the pipeline system, and one multi-product terminal complex located in Morris, Illinois. Prior to the sale, all of the assets were included in our Products Pipelines business segment.

In accordance with SFAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets," we accounted for the North System business as a discontinued operation whereby the financial results of the North System have been reclassified to discontinued operations in our accompanying consolidated statements of income for all periods presented in this report. We reported the net amount of the gain, $152.8 million, with the caption "Gain on disposal of North System" within the discontinued operations section of our accompanying consolidated statement of income for the year ended December 31, 2007.

Summarized financial information of the North System is as follows (in millions):

	Year Ended December 31,		
	2007	**2006**	**2005**
Operating revenues	$ 41.1	$ 43.7	$ 41.2
Operating expenses	(14.8)	(22.7)	(35.2)
Depreciation and amortization	(7.0)	(8.9)	(8.2)
Earnings from equity investments	1.8	2.2	2.1
Amortization of excess cost of equity investments	—	(0.1)	(0.1)
Other, net – income (expense)	—	0.1	—
Income (loss) from operations	21.1	14.3	(0.2)
Income from disposal	152.8	—	—
Total earnings from discontinued operations	$ 173.9	$ 14.3	$ (0.2)

In our accompanying consolidated statements of cash flows, we elected to not separately present the North System's operating and investing cash flows as discontinued operations, and, due to the fact that the sale of the North System does not change the structure of our internal organization in a manner that causes a change to our reportable business segments pursuant to the provisions of SFAS No. 131, "Disclosures about Segments of an Enterprise and Related Information," we have included the North System's financial disclosures within our Products Pipelines business segment disclosures for all periods presented in this report.

4. Asset Retirement Obligations

We account for our legal obligations associated with the retirement of long-lived assets pursuant to Statement of Financial Accounting Standards No. 143, "Accounting for Asset Retirement Obligations." SFAS No. 143 provides accounting and reporting guidance for legal obligations associated with the retirement of long-lived assets that result from the acquisition, construction or normal operation of a long-lived asset.

SFAS No. 143 requires companies to record a liability relating to the retirement and removal of assets used in their businesses. Under SFAS No. 143, the fair value of asset retirement obligations are recorded as liabilities on a discounted basis when they are incurred, which is typically at the time the assets are installed or acquired. Amounts recorded for the related assets are increased by the amount of these obligations. Over time, the liabilities will be accreted for the change in their present value and the initial capitalized costs will be depreciated over the useful lives of the related assets. The liabilities are eventually extinguished when the asset is taken out of service.

In our CO_2 business segment, we are required to plug and abandon oil and gas wells that have been removed from service and to remove our surface wellhead equipment and compressors. As of December 31, 2007 and 2006, we have recognized asset retirement obligations relating to these requirements at existing sites within our CO_2 segment in the aggregate amounts of $49.2 million and $47.2 million, respectively.

In our Natural Gas Pipelines business segment, if we were to cease providing utility services, we would be required to remove surface facilities from land belonging to our customers and others. We believe we can reasonably estimate both the time and costs associated with the retirement of these facilities. As of December 31, 2007 and 2006, we have recognized asset retirement obligations relating to the businesses within our Natural Gas Pipelines segment in the aggregate amounts of $3.0 million and $3.1 million, respectively.

We have included $1.4 million of our total asset retirement obligations as of both December 31, 2007 and December 31, 2006 within "Accrued other current liabilities" in our accompanying consolidated balance sheets. The remaining $50.8 million obligation as of December 31, 2007 and $48.9 million obligation as of December 31, 2006 are reported separately as non-current liabilities in our accompanying consolidated balance sheets. No assets are legally restricted for purposes of settling our asset retirement obligations. A reconciliation of the beginning and ending aggregate carrying amount of our asset retirement obligations for each of the years ended December 31, 2007 and 2006 is as follows (in millions):

	Year Ended December 31,	
	2007	**2006**
Balance at beginning of period	$ 50.3	$ 43.2
Liabilities incurred	0.4	6.8
Liabilities settled	(1.1)	(2.2)
Accretion expense	2.6	2.5
Revisions in estimated cash flows	—	—
Balance at end of period	$ 52.2	$ 50.3

We have various other obligations throughout our businesses to remove facilities and equipment on rights-of- way and other leased facilities. We currently cannot reasonably estimate the fair value of these obligations because the associated assets have indeterminate lives. These assets include pipelines, certain processing plants and distribution facilities, and certain bulk and liquids terminal facilities. An asset retirement obligation, if any, will be recognized once sufficient information is available to reasonably estimate the fair value of the obligation.

5. Income Taxes

Components of the income tax provision applicable to continuing operations for federal, foreign and state taxes are as follows (in millions):

	Year Ended December 31,		
	2007	2006	2005
Taxes currently payable:			
Federal	$ 12.7	$ 12.8	$ 9.6
State	8.2	2.3	2.1
Foreign	31.5	11.2	0.4
Total	52.4	26.3	12.1
Taxes deferred:			
Federal	11.8	1.6	8.1
State	6.2	0.2	0.8
Foreign	0.6	0.9	3.5
Total	18.6	2.7	12.4
Total tax provision	$ 71.0	$ 29.0	$ 24.5
Effective tax rate	14.6%	2.8%	2.9%

The difference between the statutory federal income tax rate and our effective income tax rate is summarized as follows:

	Year Ended December 31,		
	2007	2006	2005
Federal income tax rate	35.0%	35.0%	35.0%
Increase (decrease) as a result of:			
Partnership earnings not subject to tax	(35.0)%	(35.0)%	(35.0)%
Corporate subsidiary earnings subject to tax	3.0%	1.0%	1.1%
Income tax expense attributable to corporate equity earnings	2.3%	0.5%	1.1%
Income tax expense attributable to foreign corporate earnings	6.6%	1.1%	0.5%
State taxes	2.7%	0.2%	0.2%
Effective tax rate	14.6%	2.8%	2.9%

Our deferred tax assets and liabilities as of December 31, 2007 and 2006 result from the following (in millions):

	December 31,	
	2007	2006
Deferred tax assets:		
Book accruals	$ 13.1	$ 1.4
Net Operating Loss/Alternative minimum tax credits	1.2	3.0
Other	1.7	1.3
Total deferred tax assets	16.0	5.7
Deferred tax liabilities:		
Property, plant and equipment	189.9	106.9
Other	28.5	84.0
Total deferred tax liabilities	218.4	190.9
Net deferred tax liabilities	$202.4	$185.2

We had available, at December 31, 2007, approximately $0.13 million of foreign minimum tax credit carryforwards, which will expire between the years 2013 and 2016, and $1.1 million of state net operating loss carryforwards, which will expire between the years 2008 and 2025. We believe it is more likely than not that the net operating loss carryforwards will be utilized prior to their expiration; therefore, no valuation allowance is necessary.

6. Property, Plant and Equipment

Classes and Depreciation

As of December 31, 2007 and 2006, our property, plant and equipment consisted of the following (in millions):

	December 31, 2007	December 31, 2006
Natural gas, liquids, crude oil and carbon dioxide pipelines	$ 5,498.4	$ 4,795.9
Natural gas, liquids, carbon dioxide pipeline, and terminals station equipment	5,076.2	4,549.3
Natural gas, liquids (including linefill), and transmix processing	168.3	172.7
Other	1,060.4	844.9
Accumulated depreciation and depletion	(2,044.0)	(1,641.2)
	9,759.3	8,721.6
Land and land right-of-way	551.5	532.9
Construction work in process	1,280.5	851.6
Property, Plant and Equipment, net	$ 11,591.3	$ 10,106.1

Depreciation and depletion expense charged against property, plant and equipment consisted of $529.3 million in 2007, $416.6 million in 2006 and $339.6 million in 2005.

Casualty Gain

On August 29, 2005, Hurricane Katrina made landfall in the United States Gulf Coast causing widespread damage to residential and commercial real and personal property. In addition, on September 23, 2005, Hurricane Rita struck the Texas-Louisiana Gulf Coast causing additional damage to insured interests. The primary assets we operate that were impacted by these storms included several bulk and liquids terminal facilities located in the states of Louisiana and Mississippi, and certain of our Gulf Coast liquids terminals facilities, which are located along the Houston Ship Channel. Specifically, with regard to physical property damage, our International Marine Terminals facility suffered extensive property damage and a general loss of business due to the effects of Hurricane Katrina. IMT is a Louisiana partnership owned 66 2/3% by us. It operates a multi-purpose bulk commodity transfer terminal facility located in Port Sulphur, Louisiana.

All of our terminal facilities affected by these storms are currently open, and all of the facilities are covered by property casualty insurance. Some of the facilities are also covered by business interruption insurance. To account for our property casualty damage, we recognized repair expense related to hurricane damage as incurred. We also transferred off our books the net book value of the assets that were damaged or destroyed, and we offset the book value of all damaged and destroyed assets with indemnity proceeds received (and receivable in the future) according to the provisions of the insurance policies in force. We also incurred capital expenditures related to the repair and replacement of damaged assets.

When an insured asset is damaged or destroyed, the relevant accounts must be adjusted to the date of the casualty, and settlement with the insurance companies must be completed. The maximum amount recoverable from property damage is the fair market value of the property at the date of loss (the replacement value), or the amount stipulated in the insurance contract. Although net book values are irrelevant in determining indemnifications from insurers, under current accounting provisions, asset book values are used for accounting purposes to measure the gain or loss resulting from casualty settlements. Also, because indemnifications under insurance policies are based upon fair market values, indemnifications often exceed the book value of the assets destroyed or damaged, and any excess of insurance indemnifications over the book value of damaged assets represents a book casualty gain.

In the fourth quarter of 2006, we reached settlements with our insurance carriers on all of our property damage claims related to the 2005 hurricane season, including IMT’s claims. As a result of these settlements, we recognized a property casualty gain of $15.2 million, excluding all hurricane repair and clean-up expenses. This casualty gain represented the excess of indemnity proceeds received or recoverable over the book value of damaged or destroyed assets. We also collected, in 2006, property insurance indemnities of $13.1 million, and we disclosed these cash receipts separately as "Property casualty indemnifications" within investing activities on our accompanying consolidated statement of cash flows. In addition, as of December 31, 2006, we signed proofs of loss totaling $8.0 million for expected future property damage proceeds, and we received these indemnity proceeds in January 2007.

With the settlement of these claims, we released all remaining estimated property insurance receivables and estimated property insurance-related damage claim amounts, as these hurricane property damage claims are now closed; however, we did recognize additional casualty gains of approximately $1.8 million in the first quarter of 2007 (before minority interest allocations), based upon our final determination of the book value of the fixed assets destroyed or damaged, and indemnities pursuant to flood insurance coverage.

In addition to this casualty gain, 2006 income and expense items related to hurricane activity included the following: (i) a $2.8 million increase in operating and maintenance expenses from hurricane repair and clean-up activities, (ii) a $1.1 million increase in income tax expense associated with overall hurricane income and expense items, (iii) a $0.4 million decrease in general and administrative expenses from the allocation of overhead expenses to hurricane related capital projects, and (iv) a $3.1 million increase in minority interest expense related to the allocation of IMT's earnings from hurricane income and expense items to minority interest. Combined, the hurricane income and expense items, including the casualty gain, resulted in a total increase in net income of $8.6 million in 2006. For the year 2006, we spent approximately $12.2 million for hurricane repair and replacement costs and including accruals, sustaining capital expenditures for hurricane repair and replacement costs totaled $14.2 million.

7. Investments

Our significant equity investments as of December 31, 2007 consisted of:

- Plantation Pipe Line Company (51%);
- West2East Pipeline LLC (51%);
- Red Cedar Gathering Company (49%);
- Midcontinent Express Pipeline LLC (50%);
- Thunder Creek Gas Services, LLC (25%); and
- Cortez Pipeline Company (50%).

We operate and own an approximate 51% ownership interest in Plantation Pipe Line Company, and an affiliate of ExxonMobil owns the remaining approximate 49% interest. Each investor has an equal number of directors on Plantation's board of directors, and board approval is required for certain corporate actions that are considered participating rights. Therefore, we do not control Plantation Pipe Line Company, and we account for our investment under the equity method of accounting.

Similarly, we operate and own a 51% ownership interest in West2East Pipeline LLC, a limited liability company that is the sole owner of Rockies Express Pipeline LLC. ConocoPhillips owns a 24% ownership interest in West2East Pipeline LLC and Sempra Energy holds the remaining 25% interest. As discussed in Note 3, when construction of the entire Rockies Express Pipeline project is completed, our ownership interest will be reduced to 50% at which time the capital accounts of West2East Pipeline LLC will be trued up to reflect our 50% economics in the project. According to the provisions of current accounting standards, due to the fact that we will receive 50% of the economics of the Rockies Express project on an ongoing basis, we are not considered the primary beneficiary of West2East Pipeline LLC and thus, we account for our investment under the equity method of accounting. Prior to June 30, 2006, we owned a 66 2/3% ownership interest in West2East Pipeline LLC and we accounted for our investment under the full consolidation method. Following the decrease in our ownership interest to 51% effective June 30, 2006, we deconsolidated this entity and began to account for our investment under the equity method. As of December 31, 2006, we had no material investment in the net assets of West2East Pipeline LLC due to the fact that the amount of its assets, primarily property, plant and equipment, was largely offset by the amount of its liabilities, primarily debt.

We also own a 50% interest in Midcontinent Express Pipeline LLC, which filed an application with the FERC in October 2007 requesting a certificate of public convenience and necessity that would authorize construction and operation of an approximate 500-mile natural gas transmission system. Energy Transfer Partners, L.P. owns the remaining 50% interest. The Midcontinent Express Pipeline will create long-haul, firm natural gas transportation takeaway capacity, either directly or indirectly, from natural gas producing regions located in Texas, Oklahoma and Arkansas. The total project is expected to cost approximately $1.3 billion, and will have an initial transportation capacity of approximately 1.4 billion cubic feet per day of natural gas. Furthermore, in January 2008, Midcontinent Express and MarkWest Pioneer, L.L.C., a subsidiary of MarkWest Energy Partners, L.P., entered into an option agreement which provides MarkWest a one-time right to purchase a 10% ownership interest in Midcontinent Express after the pipeline is fully constructed and placed into service. If the option is exercised, we and Energy Transfer Partners will each own 45% of Midcontinent Express, while MarkWest will own the remaining 10%.

Our total investments consisted of the following (in millions):

	December 31,	
	2007	**2006**
Plantation Pipe Line Company	$ 195.4	$ 199.6
West2East Pipeline LLC	191.9	—
Red Cedar Gathering Company	135.6	160.6
Midcontinent Express Pipeline LLC	63.0	—
Thunder Creek Gas Services, LLC	37.0	37.2
Cortez Pipeline Company	14.2	16.2
All Others	18.3	12.7
Total Equity Investments	$ 655.4	$ 426.3

Our earnings (losses) from equity investments were as follows (in millions):

	Year Ended December 31,		
	2007	**2006**	**2005**
Red Cedar Gathering Company	$ 28.0	$ 36.3	$ 32.0
Cortez Pipeline Company	19.2	19.2	26.3
Plantation Pipe Line Company	29.4	12.8	24.9
Thunder Creek Gas Services, LLC	2.2	2.4	2.8

Earnings before extraordinary items and cumulative effect of a change in accounting principle	117.9	142.4	161.1
Net income	$ 117.9	$ 142.4	$ 161.1

	December 31,	
Balance Sheet	**2007**	**2006**

Current assets	$ 138.3	$ 95.5
Non-current assets	3,519.5	1,506.0
Current liabilities	319.5	213.2
Non-current liabilities	2,624.1	1,127.3
Partners'/owners' equity	714.2	261.0

8. Intangibles

Our intangible assets include goodwill, lease value, contracts, customer relationships, technology-based assets and agreements.

Goodwill and Excess Investment Cost

As an investor, the price we pay to acquire an ownership interest in an investee will most likely differ from the underlying interest in book value, with book value representing the investee's net assets per its financial statements. This differential relates to both discrepancies between the investee's recognized net assets at book value and at current fair values and to any premium we pay to acquire the investment. Under ABP No. 18, any such premium paid by an investor, which is analogous to goodwill, must be identified.

For our investments in affiliated entities that are included in our consolidation, the excess cost over underlying fair value of net assets is referred to as goodwill and reported separately as "Goodwill" in our accompanying consolidated balance sheets. Goodwill is not subject to amortization but must be tested for impairment at least annually. This test requires goodwill to be assigned to an appropriate reporting unit and to determine if the implied fair value of the reporting unit's goodwill is less than its carrying amount.

Changes in the carrying amount of our goodwill for each of the two years ended December 31, 2006 and 2007 are summarized as follows (in millions):

	Products Pipelines	Natural Gas Pipelines	CO_2	Terminals	Trans Mountain(a)	Total
Balance as of December 31, 2005	$ 263.2	$ 288.4	$ 46.1	$ 201.3	$ —	$ 799.0
Acquisitions and purchase price adjs.	—	—	—	30.0	593.2	623.2

Currency translation adjustments	—	—	—	—	(1.2)	(1.2)
Balance as of December 31, 2006	$ 263.2	$ 288.4	$ 46.1	$ 231.3	$ 592.0	$ 1,421.0
Acquisitions and purchase price adjs.	—	—	—	(2.2)	—	(2.2)
Disposals	—	—	—	—	—	—
Impairments	—	—	—	—	(377.1)	(377.1)
Currency translation adjustments	—	—	—	—	36.1	36.1
Balance as of December 31, 2007	$ 263.2	$ 288.4	$ 46.1	$ 229.1	$ 251.0	$ 1,077.8

(a) On April 18, 2007, we announced that we would acquire the Trans Mountain pipeline system from Knight (formerly KMI), and this transaction was completed April 30, 2007 (discussed in Note 3). Following the provisions of generally accepted accounting principles, this transaction caused Knight to consider the fair value of the Trans Mountain pipeline system, and to determine whether goodwill related to these assets was impaired. Knight recorded a goodwill impairment charge of $377.1 million in the first quarter of 2007.

For our investments in entities that are not fully consolidated but instead are included in our financial statements under the equity method of accounting, the premium we pay that represents excess cost over underlying fair value of net assets is referred to as equity method goodwill, and under SFAS No. 142, this excess cost is not subject to amortization but rather to impairment testing pursuant to APB No. 18. The impairment test under APB No. 18 considers whether the fair value of the equity investment as a whole, not the underlying net assets, has declined and whether that decline is other than temporary. Therefore, in addition to our annual impairment test of goodwill, we periodically reevaluate the amount at which we carry the excess of cost over fair value of net assets accounted for under the equity method, as well as the amortization period for such assets, to determine whether current events or circumstances warrant adjustments to our carrying value and/or revised estimates of useful lives in accordance with APB Opinion No. 18. As of both December 31, 2007 and 2006, we have reported $138.2 million in equity method goodwill within the caption "Investments" in our accompanying consolidated balance sheets.

We also periodically reevaluate the difference between the fair value of net assets accounted for under the equity method and our proportionate share of the underlying book value (that is, the investee's net assets per its financial statements) of the investee at date of acquisition. In almost all instances, this differential, relating to the discrepancy between our share of the investee's recognized net assets at book values and at current fair values, represents our share of undervalued depreciable assets, and since those assets (other than land) are subject to depreciation, we amortize this portion of our investment cost against our share of investee earnings. We reevaluate this differential, as well as the amortization period for such undervalued depreciable assets, to determine whether current events or circumstances warrant adjustments to our carrying value and/or revised estimates of useful lives in accordance with

APB Opinion No. 18. The caption "Investments" in our accompanying consolidated balance sheets includes excess fair value of net assets over book value costs of $174.7 million as of December 31, 2007 and $177.1 million as of December 31, 2006.

Other Intangibles

Excluding goodwill, our other intangible assets include customer relationships, contracts and agreements, technology-based assets, and lease value. These intangible assets have definite lives, are being amortized on a straight-line basis over their estimated useful lives, and are reported separately as "Other intangibles, net" in our accompanying consolidated balance sheets. Following is information related to our intangible assets subject to amortization (in millions):

	December 31, 2007	December 31, 2006
Customer relationships, contracts and agreements		
Gross carrying amount	$ 264.1	$ 224.4
Accumulated amortization	(36.9)	(23.1)
Net carrying amount	227.2	201.3
Technology-based assets, lease value and other		
Gross carrying amount	13.3	13.3
Accumulated amortization	(1.9)	(1.4)
Net carrying amount	11.4	11.9
Total Other intangibles, net	$ 238.6	$ 213.2

The increase in the carrying amount of customer relationships, contracts and agreements since December 31, 2006 was primarily due to the acquisition of intangible customer relationships included in our purchase of certain assets from Marine Terminals, Inc. effective September 1, 2007. As of the acquisition date, we preliminarily allocated $39.8 million of our combined purchase price for Marine Terminals, Inc.'s assets to intangible customer relationships, and we estimated the expected useful life of these intangibles to be 20 years. For more information on this acquisition, see Note 3.

Amortization expense on our intangibles consisted of the following (in millions):

	Year Ended December 31,		
	2007	2006	2005
Customer relationships, contracts and agreements	$ 13.8	$ 13.5	$ 8.6
Technology-based assets, lease value and other	0.5	0.2	0.1
Total amortization	$ 14.3	$ 13.7	$ 8.7

As of December 31, 2007, our weighted average amortization period for our intangible assets was approximately 18.25 years. Our estimated amortization expense for these assets for each of the next five fiscal years is approximately $15.5 million, $14.4 million, $14.2 million, $14.1 million and $14.1 million, respectively.

9. Debt

Short-Term Debt

Our outstanding short-term debt as of December 31, 2007 and 2006 consisted of the following (in millions):

	December 31, 2007	December 31, 2006
Commercial paper borrowings	$ 589.1	$ 1,098.2
Short-term portion of:		
5.35% senior notes due August 15, 2007	—	250.0
5.40% note due March 31, 2012(a)	9.9	—

5.23% senior notes due January 2, 2014(b)	6.2	5.9
7.84% senior notes due July 23, 2008(c)	5.0	5.0
Total short-term debt	$ 610.2	$ 1,359.1

(a) Our subsidiaries, Kinder Morgan Operating L.P. "A" and Kinder Morgan Canada Company, are the obligors on the note.

(b) Our subsidiary, Kinder Morgan Texas Pipeline, L.P., is the obligor on the notes.

(c) Our subsidiary, Central Florida Pipe Line LLC, is the obligor on the notes.

The weighted average interest rate on all of our borrowings was approximately 6.40% during 2007 and 6.18% during 2006.

Credit Facilities

On February 22, 2006, we entered into a second unsecured bank credit facility, a nine-month credit facility in the amount of $250 million, expiring on November 21, 2006. This facility contained borrowing rates and restrictive financial covenants that were similar to the borrowing rates and covenants under our pre-existing five-year unsecured $1.6 billion bank facility due August 18, 2010.

Effective August 28, 2006, we terminated our $250 million nine-month facility and we increased our five-year bank credit facility from $1.6 billion to $1.85 billion. The five-year unsecured bank credit facility remains due August 18, 2010; however, the bank facility can be amended to allow for borrowings up to $2.1 billion. There were no borrowings under our five-year credit facility as of December 31, 2007 or as of December 31, 2006.

Our five-year credit facility is with a syndicate of financial institutions and Wachovia Bank, National Association is the administrative agent. As of December 31, 2007, the amount available for borrowing under our credit facility was reduced by an aggregate amount of $1,126.9 million, consisting of (i) our outstanding commercial paper borrowings ($589.1 million as of December 31, 2007); (ii) a combined $298 million in three letters of credit that support our hedging of commodity price risks associated with the sale of natural gas, natural gas liquids and crude oil; (iii) a $100 million letter of credit that supports certain proceedings with the California Public Utilities Commission involving refined products tariff charges on the intrastate common carrier operations of our Pacific operations' pipelines in the state of California; (iv) a combined $46.6 million in two letters of credit that support tax-exempt bonds; (v) a $19.9 million letter of credit that supports the construction of our Kinder Morgan Louisiana Pipeline (a natural gas pipeline); (vi) a $37.5 million letter of credit that supports our indemnification obligations on the Series D note borrowings of Cortez Capital Corporation; and (vii) a combined $35.8 million in other letters of credit supporting other obligations of us and our subsidiaries.

Our five-year credit facility permits us to obtain bids for fixed rate loans from members of the lending syndicate. Interest on our credit facility accrues at our option at a floating rate equal to either (i) the administrative agent's base rate (but not less than the Federal Funds Rate, plus 0.5%); or (ii) LIBOR, plus a margin, which varies depending upon the credit rating of our long-term senior unsecured debt.

Our credit facility included the following restrictive covenants as of December 31, 2007:

- total debt divided by earnings before interest, income taxes, depreciation and amortization for the preceding four quarters may not exceed:
  - 5.5, in the case of any such period ended on the last day of (i) a fiscal quarter in which we make any Specified Acquisition, or (ii) the first or second fiscal quarter next succeeding such a fiscal quarter; or
  - 5.0, in the case of any such period ended on the last day of any other fiscal quarter;
- certain limitations on entering into mergers, consolidations and sales of assets;
- limitations on granting liens; and
- prohibitions on making any distribution to holders of units if an event of default exists or would exist upon making such distribution.

In addition to normal repayment covenants, under the terms of our credit facility, the occurrence at any time of any of the following would constitute an event of default (i) our failure to make required payments of any item of indebtedness or any payment in respect of any hedging agreement, provided that the aggregate outstanding principal amount for all such indebtedness or payment obligations in respect of all hedging agreements is equal to or exceeds $75 million; (ii) our general partner's failure to make required payments of any item of indebtedness, provided that the aggregate outstanding principal amount for all such indebtedness is equal to or exceeds $75 million; (iii) adverse judgments rendered against us for the payment of money in an aggregate amount in excess of $75 million, if this same amount remains undischarged for a period of thirty consecutive days during which execution shall not be effectively stayed; and (iv) voluntary or involuntary commencements of any proceedings or petitions seeking our liquidation, reorganization or any other similar relief under any federal, state or foreign bankruptcy, insolvency, receivership or similar law.

Excluding the relatively non-restrictive specified negative covenants and events of defaults, our credit facility does not contain any provisions designed to protect against a situation where a party to an agreement is unable to find a basis to terminate that agreement while its counterparty's impending financial collapse is revealed and perhaps hastened through the default structure of some other agreement. The credit facility also does not contain a material adverse change clause coupled with a lockbox provision; however, the facility does provide that the margin we will pay with respect to borrowings and the facility fee that we will pay on the total commitment will vary based on our senior debt investment rating. None of our debt is subject to payment acceleration as a result of any change to our credit ratings.

Commercial Paper Program

In April 2006, we increased our commercial paper program by $250 million to provide for the issuance of up to $1.85 billion. Our $1.85 billion unsecured five-year bank credit facility supports our commercial paper program, and borrowings under our commercial paper program reduce the borrowings allowed under our credit facility. As of December 31, 2007, we had $589.1 million of commercial paper outstanding with a weighted average interest rate of 5.58%. As of December 31, 2006, we had $1,098.2 million of commercial paper outstanding with an average interest rate of 5.42%. The borrowings under our commercial paper program were used principally to finance the acquisitions and capital expansions we made during 2007 and 2006.

Long-Term Debt

Our outstanding long-term debt, excluding the value of interest rate swaps, as of December 31, 2007 and 2006 was $6,455.9 million and $4,384.3 million, respectively. The balances consisted of the following (in millions):

	December 31,	
	2007	2006
Kinder Morgan Energy Partners, L.P. borrowings:		
5.35% senior notes due August 15, 2007	$ —	$ 250.0
6.30% senior notes due February 1, 2009	250.0	250.0
7.50% senior notes due November 1, 2010	250.0	250.0
6.75% senior notes due March 15, 2011	700.0	700.0
7.125% senior notes due March 15, 2012	450.0	450.0
5.85% senior notes due September 15, 2012	500.0	—
5.00% senior notes due December 15, 2013	500.0	500.0
5.125% senior notes due November 15, 2014	500.0	500.0
6.00% senior notes due February 1, 2017	600.0	—
7.400% senior notes due March 15, 2031	300.0	300.0
7.75% senior notes due March 15, 2032	300.0	300.0
7.30% senior notes due August 15, 2033	500.0	500.0
5.80% senior notes due March 15, 2035	500.0	500.0
6.50% senior notes due February 1, 2037	400.0	—
6.95% senior notes due January 15, 2038	550.0	—
Commercial paper borrowings	589.1	1,098.2
Subsidiary borrowings:		
Central Florida Pipe Line LLC-7.840% senior notes due July 23, 2008	5.0	10.0
Arrow Terminals L.P.-IL Development Revenue Bonds due January 1, 2010	5.3	5.3
Kinder Morgan Operating L.P. "A"-5.40% BP note, due March 31, 2012	23.6	—
Kinder Morgan Canada Company-5.40% BP note, due March 31, 2012	21.0	—
Kinder Morgan Texas Pipeline, L.P.-5.23% Senior Notes, due January 2, 2014	43.2	49.1
Kinder Morgan Liquids Terminals LLC-N.J. Development Revenue Bonds due Jan. 15, 2018	25.0	25.0
Kinder Morgan Operating L.P. "B"-Jackson-Union Cos. IL Revenue Bonds due April 1, 2024	23.7	23.7
International Marine Terminals-Plaquemines, LA Revenue Bonds due March 15, 2025	40.0	40.0
Other miscellaneous subsidiary debt	1.4	1.4
Unamortized debt discount on senior notes	(11.2)	(9.3)
Current portion of long-term debt	(610.2)	(1,359.1)
Total Long-term debt	$ 6,455.9	$ 4,384.3

Senior Notes

During 2007, we completed three separate public offerings of senior notes, and on August 15, 2007, we repaid $250 million of 5.35% senior notes that matured on that date. With regard to the three offerings, we received proceeds, net of underwriting discounts and commissions, as follows:

- $992.8 million from a January 30, 2007 public offering of a total of $1.0 billion in principal amount of senior notes, consisting of $600 million of 6.00% notes due February 1, 2017, and $400 million of 6.50% notes due February 1, 2037;
- $543.9 million from a June 21, 2007 public offering of $550 million in principal amount of 6.95% senior notes due January 15, 2038; and
- $497.8 million from an August 28, 2007 public offering of $500 million in principal amount of 5.85% senior notes due September 15, 2012.

We used the proceeds from each of these offerings to reduce the borrowings under our commercial paper program. As of December 31, 2007 and 2006, the outstanding balance on the various series of our senior notes (excluding unamortized debt discount) was $6,288.8 million and $4,490.7 million, respectively. For a listing of the various outstanding series of our senior notes, see the table above included in "—Long-Term Debt."

On February 12, 2008, we completed an additional public offering of senior notes. We issued a total of $900 million in principal amount of senior notes, consisting of $600 million of 5.95% notes due February 15, 2018, and

$300 million of 6.95% notes due January 15, 2038. We received proceeds from the issuance of the notes, after underwriting discounts and commissions, of approximately $894.1 million, and we used the proceeds to reduce the borrowings under our commercial paper program. The notes due in 2038 constitute a further issuance of the $550 million aggregate principal amount of 6.95% notes issued on June 21, 2007 (referred to above) and will form a single series with those notes.

Interest Rate Swaps

Information on our interest rate swaps is contained in Note 14.

Subsidiary Debt

Our subsidiaries are obligors on the following debt. The agreements governing these obligations contain various affirmative and negative covenants and events of default. We do not believe that these provisions will materially affect distributions to our partners.

Central Florida Pipeline LLC Debt
