<b>Marshall County, WV</b>									
17.5	SA8MR233	Unnamed Tributary of Grave Creek	PCR- Class B	N/A	Intermittent	Minor	4	N/A	Wet open-cut
<b>Hocking County, OH</b>									
14.2	SA1HO337	Unnamed Tributary of Siverly Creek	PCR- Class B	N/A	Ephemeral	Minor	1	N/A	Wet open-cut

APPENDIX K-1									
Waterbodies Crossed or Impacted by the Leach XPress Project									
Milepost/ Facility	Feature ID	Waterbody Name	State Water Quality Classification <sup>a, b</sup>	Fisheries Classification	Flow Regime	FERC Classification	Waterbody Width (feet)	Pipeline Crossing Length (feet)	Proposed Crossing Method
<p>'_DT' denotes features identified via desktop analysis.                      Waterbody data is based on field delineations conducted to date.                      N/A - Not Applicable                      HDD - Horizontal directional drill</p> <p><sup>a</sup> West Virginia water quality and fisheries classifications are based on the designated use of a waterbody and level of protection required to maintain the water's use, as determined by the West Virginia Water Quality Standards (47 CSR 2):                      A – Category A waterbody (public water supply)                      B1 – Category B1 waterbody (warmwater fishery)                      C – Category C waterbody (water contact recreation)                      E3 – Category E3 waterbody (industrial)                      Tier 1 – Maintains and protects existing uses of a water body and the water quality conditions necessary to support such uses. A waterbody that is listed as impaired on the states 303(d) list is considered a Tier 1 water as it pertains to the specific pollutant listed.                      Tier 2 – Maintains and protects "high quality" waters - waterbodies where the level of water quality exceeds levels necessary to support recreation and wildlife and the propagation and maintenance of fish and other aquatic life. Tier 2 is the default assignment for a waterbody not listed as impaired on the states 303(d) list.</p> <p><sup>b</sup> Ohio water quality and fisheries classifications are based on the designated use of a waterbody, as determined by the Ohio Water Quality Standards (OAC 3745-1).                      PCR – primary contact recreation waterbody (Class B)                      SCR - secondary contact recreation waterbody                      SRW – state resource water                      SHQ – superior high quality                      WWH - warmwater habitat                      WWH (*L) - limited warmwater habitat                      EWH - exceptional warmwater habitat                      CWH - coldwater habitat                      LRW - limited resource water                      AWS - agricultural water supply                      IWS - industrial water supply</p> <p><sup>c</sup> Waterbody will not be crossed by the pipeline centerline, but is located within the Project footprint.</p> <p><sup>d</sup> Waterbody will be crossed by HDD method.</p> <p><sup>e</sup> The Project crosses the Ohio River in both West Virginia and Ohio. Impacts associated with the crossing are only provided for the county and state where the Project first crosses the Ohio River.</p> <p><sup>f</sup> Denotes Section 10 waterbodies.</p> <p><sup>g</sup> Two manmade ponds located within the workspace at Pipe Yard 36 will be avoided during construction activities; therefore, impacts are not anticipated.</p> <p><sup>h</sup> Waterbody will be permanently filled to accommodate construction and operation of proposed compressor station facility.</p> <p><sup>i</sup> Waterbody will be permanently filled by placement of a new or replacement of an existing permanent culvert to accommodate access during operation of proposed facility.</p> <p><sup>j</sup> The Project crosses Dunkard Fork in both Pennsylvania and West Virginia. The collective impacts associated with the crossing for both states are only presented for the county and state where the Project first crosses Dunkard Fork.</p>
