Note: Totals may not sum correctly due to rounding.

--/ Does not meet criteria below.

a/ Areas identified as Prime Farmland are identified as lands that meet the All Prime Farmland or Farmland of Statewide and Local Importance criteria as determined by NRCS, SSURGO.

b/ Areas identified to have a severe compaction potential are limited to silt loam or finer based on particle size and ranked "somewhat poor", "poor", and "very poor" drainage as determined by SSURGO.

c/ Areas identified as Highly Water Erodible Soils are ranked as "Very Severe" or "Severe" by SSURGO Erosion Hazard (Off-Road, Off-Trail) criteria.

d/ Areas identified as Highly Wind Erodible Soils have a Wind Erodibility Index of 1 or 2 as determined by SSURGO.

e/ Areas identified to have poor re-vegetation potential are lands that have a Capability Class 3 or greater, a low available water capacity, and slopes greater than 8 percent as determined by SSURGO.

f/ Areas identified to have a hydric rating include all and partial criteria as determined by SSURGO.

g/ Areas identified to have shallow depth to water are described as having a water table of less than 1.5 feet from the surface as determined by SSURGO.

h/ Areas identified to have poor drainage potential are ranked as "poor" or "very poor" as determined by SSURGO.

i/ Areas identified to have Stoney/Rocky Soils are soils that are determined by SSURGO. Include stone, rocky, or cobbles in the soil name.

			Totals	845.7	0.0	1211.2	0.0	0.0	26.4	12.4	9.2	268.9

Source: NRCS 2016 (SSURGO) Available online at: <https://gdg.sc.egov.usda.gov/>. Accessed March 29, 2016.

Note: Totals may not sum correctly due to rounding.

-/ Does not meet criteria below.

a/ Areas identified as Prime Farmland are identified as lands that meet the All Prime Farmland or Farmland of Statewide and Local Importance criteria as determined by NRCS, SSURGO.

b/ Areas identified to have a severe compaction potential are limited to silt loam or finer based on particle size and ranked "somewhat poor", "poor", and "very poor" drainage as determined by SSURGO.

c/ Areas identified as Highly Water Erodible Soils are ranked as "Very Severe" or "Severe" by SSURGO Erosion Hazard (Off-Road, Off-Trail) criteria.

d/ Areas identified as Highly Wind Erodible Soils have a Wind Erodibility Index of 1 or 2 as determined by SSURGO.

e/ Areas identified to have poor revegetation potential are lands that have a Capability Class 3 or greater, a low available water capacity, and slopes greater than 8 percent as determined by SSURGO.

f/ Areas identified to have a hydric rating include all and partial criteria as determined by SSURGO.

g/ Areas identified to have shallow depth to water are described as having a water table of less than 1.5 feet from the surface as determined by SSURGO.

h/ Areas identified to have poor drainage potential are ranked as "poor" or "very poor" as determined by SSURGO.

Note: Totals may not sum correctly due to rounding.

--/ Does not meet criteria below

- a/ Areas identified as Prime Farmland are identified as lands that meet the All Prime Farmland or Farmland of Statewide and Local Importance criteria as determined by NRCS, SSURGO.
- b/ Areas identified to have a severe compaction potential are limited to silt loam or finer based on particle size and ranked "somewhat poor", "poor" and "very poor" drainage as determined by SSURGO.
- c/ Areas identified as Highly Water Erodible Soils are ranked as "Very Severe" or "Severe" by SSURGO Erosion Hazard (Off-Road, Off-Trail) criteria.
- d/ Areas identified as Highly Wind Erodible Soils have a Wind Erodibility Index of 1 or 2 as determined by SSURGO.
- e/ Areas identified to have poor revegetation potential are lands that have a Capability Class 3 or greater, a low available water capacity and slopes greater than 8 percent as determined by SSURGO.
- f/ Areas identified to have a hydric rating include the all and partial criteria as determined by SSURGO.
- g/ Areas identified to have shallow depth to water are described as having a water table of less than 1.5 feet from the surface as determined by SSURGO.
- h/ Areas identified to have poor drainage potential are ranked as "poor" or "very poor" as determined by SSURGO.
- i/ Areas identified to have Stoney/Rocky Soils are soils that as determined by SSURGO. Include stone, rocky or cobbles in the soil name.

Note: Totals may not sum correctly due to rounding.

-/ Does not meet criteria below.

a/ Areas identified as prime farmland are identified as lands that meet the "all prime farmland" or "farmland of statewide and local importance" criteria as determined by NRCS, SSURGO.

b/ Areas identified to have a severe compaction potential are limited to silt loam or finer based on particle size and ranked "somewhat poor," "poor," and "very poor" drainage as determined by SSURGO.

c/ Areas identified as highly water erodible soils are ranked as "very severe" or "severe" by SSURGO erosion hazard (Off-Road, Off-Trail) criteria.

d/ Areas identified as highly wind erodible soils have a wind erodibility index of 1 or 2 as determined by SSURGO.

e/ Areas identified to have poor revegetation potential are lands that have a Capability Class 3 or greater, a low available water capacity and slopes greater than 8 percent as determined by SSURGO.

f/ Areas identified to have a hydric rating include the all and partial criteria as determined by SSURGO.

g/ Areas identified to have poor drainage potential are ranked as "poor" or "very poor" as determined by SSURGO.

h/ Areas identified to have stoney/rocky soils are soils that as determined by SSURGO. Include stone, rocky or cobbles in the soil name (does not include rock outcrops).

-- Does not meet criteria below

a/ Areas identified as prime farmland are identified as lands that meet the "all prime farmland" or "farmland of statewide and local importance" criteria as determined by NRCS, SSURGO.

b/ Areas identified to have a severe compaction potential are limited to silt loam or finer based on particle size and ranked "somewhat poor," "poor," and "very poor" drainage as determined by SSURGO.

c/ Areas identified as highly water erodible soils are ranked as "very severe" or "severe" by SSURGO erosion hazard (Off-Road, Off-Trail) criteria.

d/ Areas identified as highly wind erodible soils have a wind erodibility index of 1 or 2 as determined by SSURGO.

e/ Areas identified to have poor revegetation potential are lands that have a Capability Class 3 or greater, a low available water capacity and slopes greater than 8 percent as determined by SSURGO.

f/ Areas identified to have a hydric rating include the all and partial criteria as determined by SSURGO.

g/ Areas identified to have poor drainage potential are ranked as "poor" or "very poor" as determined by SSURGO.

h/ Areas identified to have stoney/rocky soils are soils that as determined by SSURGO. Include stone, rocky or cobbles in the soil name (does not include rock outcrops).

Note: Totals may not sum correctly due to rounding.
Note: Includes acreages for associated Yards, Roads, and ATWS.

a/ Areas identified as prime farmland and farmland of statewide importance are identified as lands that meet the "all prime farmland" or "farmland of statewide and local importance" criteria as determined by NRCS, SSURGO.
b/ Areas identified to have a severe compaction potential are limited to silt loam or finer based on particle size and ranked "somewhat poor," "poor," and "very poor" drainage as determined by SSURGO.
c/ Areas identified as highly water erodible soils are ranked as "very severe" or "severe" by SSURGO erosion hazard (Off-Road, Off-Trail) criteria.
d/ Areas identified as highly wind erodible soils have a wind erodibility index of 1 or 2 as determined by SSURGO.
e/ Areas identified to have poor revegetation potential are lands that have a Capability Class 3 or greater, a low available water capacity and slopes greater than 8 percent as determined by SSURGO.
f/ Areas identified to have a hydric rating include the all and partial criteria as determined by SSURGO.
g/ Areas identified to have poor drainage potential are ranked as "poor" or "very poor" as determined by SSURGO.
h/ Areas identified to have stoney/rocky soils are soils that as determined by SSURGO. Include stone, rocky or cobbles in the soil name (does not include rock outcrops).

APPENDIX N-10

Soils and Soil Limitations at the Equitans Expansion Project Aboveground Facilities in Acres

USDA, 2015a; 2015b

Note: Totals may not sum correctly due to rounding.

Note: Includes acreages for associated Yards, Roads, and ATWS.

- a/ Areas identified as prime farmland and farmland of statewide importance are identified as lands that meet the “all prime farmland” or “farmland of statewide and local importance” criteria as determined by NRCS, SSURGO.
 - b/ Areas identified to have a severe compaction potential are limited to silt loam or finer based on particle size and ranked “somewhat poor,” “poor,” and “very poor” drainage as determined by SSURGO.
 - c/ Areas identified as highly water erodible soils are ranked as “very severe” or “severe” by SSURGO erosion hazard (Off-Road, Off-Trail) criteria.
 - d/ Areas identified as highly wind erodible soils have a wind erodibility index of 1 or 2 as determined by SSURGO.
 - e/ Areas identified to have poor revegetation potential are lands that have a Capability Class 3 or greater, a low available water capacity and slopes greater than 8 percent as determined by SSURGO.
 - f/ Areas identified to have a hydric rating include the all and partial criteria as determined by SSURGO.
 - g/ Areas identified to have poor drainage potential are ranked as “poor” or “very poor” as determined by SSURGO.
 - h/ Areas identified to have stoney/rocky soils are soils that as determined by SSURGO. Include stone, rocky or cobbles in the soil name (does not include rock outcrops).

APPENDIX N-11

Soils and Soil Limitations at the Equitans Expansion Project Additional Temporary Workspaces in Acres

*The values in each row do not necessarily add up to the total acreage for each facility, because of minor rounding or mapping inconsistencies.

- a/ The list of facilities includes the associated access roads, additional temporary workspaces, contractor yards, and staging areas in the acreage calculations for each facility. However, the additional temporary workspaces, access roads, contractor yards and staging areas are also reported separately.
- b/ As designated by the NRCS.
- c/ Based on K factor for the whole soil (Kw), the representative slope, and the nonirrigated land capability rating; a Kw rating of "moderate" was elevated to "high" when associated with steep slopes and when the Nonirrigated Capability Subclass included an "e," which indicates that erosion is a potential hazard for the soil type.
- d/ Based on the Wind Erodibility Group scale; soils with a rating of 1 to 4 were ranked with a high potential for erosion due to wind.
- e/ Based on 1) soils with poor drainage (somewhat poorly drained to poorly drained), 2) a high clay content (greater than 20 percent), or 3) a surface soil texture characterized as sandy clay loam or dominated by finer particles.
- f/ Based on soils 1) that have a surface texture of sandy loam or coarser, 2) are somewhat excessively drained to excessively drained, 3) have slopes greater than 15 percent, or 4) have severe limitations (i.e., a Nonirrigated Capability Class of 3 or higher).
